Sensors and local digital switches also provide after hour override control.

NOTES

GENERAL NOTES
All occupancy/vacancy sensors shall turn off respective lighting fixtures 20 min after vacancy.

Afterhour override control shall have a maximum override of no more than two hours per activation during scheduled off periods.

Confirm the exact dimming requirements of each purchased lighting fixture, prior to ordering the corresponding dimming room controller. Compatibility must be verified.

Lower case letter (example "a") located next to lighting fixture indicates the local switch zone.

All engraving of switches shall be coordinated with the owner prior to ordering.

EMERGENCY NOTES
All fixtures indicated with "EM" shall have an emergency branch circuit fed from a generator or an inverter. An emergency bypass relay shall be provided to bypass local control, bringing fixture to full brightness during emergency operation.

LIGHTING CONTROL NOTES

1. All sensor locations are approximate. Refer to the Manufacture's installation instructions prior to installation.

2. If any questions arise regarding sensor placement, contact SLS Lighting and Controls prior to installation to schedule a field visit.

3. If pendant mounted fixtures are present, location and coverage of sensors should be reviewed.

4. All corner mount sensors located in rooms with recessed fixtures should be mounted on ceiling instead of the wall. Please review installation diagram for instructions.

5. Ceiling mounted sensors require to be located no closer than 6-8' from air supply/return registers.

6. Maximum number of sensors that can be wired in parallel to a single room controller or power pack, depends on sensor model (see individual sheets for mA consumption).

7. Contractor is responsible for field verification of required number of power packs (if apply).

8. One power pack is required for each circuit that is to be controlled.

9. Power packs and/or DLM Room Controllers are shown for zoning purposes only. Contractor is responsible for determining actual location and circuiting.

10. Power packs (if apply) should be mounted at least 6-12 inches from any sensor.

11. Locations of photocells (if shown) are diagrammatic and for quantitative purposes only. Actual mounting locations of photocells should be determined in an onsite pre-installation meeting prior to roughing in equipment.

12. Per the requirements of the electrical code, areas labeled as "mechanical" or "electrical" where work may occur are not to be controlled by automated lighting controls alone.

13. Turn off any power at the circuit breaker before wiring any product.

14. Free-topology DLM local network segments may include digital load controllers, switches and sensors; Cat 5e cable, 150' per device to 1,000' max, per each local network.

LIGHTING CONTROL NOTES

1. All sensor locations are approximate. Refer to the Manufacture's installation instructions prior to installation.

2. If any questions arise regarding sensor placement, contact SLS Lighting and Controls prior to installation to schedule a field visit.

3. If pendant mounted fixtures are present, location and coverage of sensors should be reviewed.

4. All corner mount sensors located in rooms with recessed fixtures should be mounted on ceiling instead of the wall. Please review installation diagram for instructions.

5. Ceiling mounted sensors require to be located no closer than 6-8' from air supply/return registers.

6. Maximum number of sensors that can be wired in parallel to a single room controller or power pack, depends on sensor model (see individual sheets for mA consumption).

7. Contractor is responsible for field verification of required number of power packs (if apply).

8. One power pack is required for each circuit that is to be controlled.

9. Power packs and/or DLM Room Controllers are shown for zoning purposes only. Contractor is responsible for determining actual location and circuiting.

10. Power packs (if apply) should be mounted at least 6-12 inches from any sensor.

11. Locations of photocells (if shown) are diagrammatic and for quantitative purposes only. Actual mounting locations of photocells should be determined in an onsite pre-installation meeting prior to roughing in equipment.

12. Per the requirements of the electrical code, areas labeled as "mechanical" or "electrical" where work may occur are not to be controlled by automated lighting controls alone.

13. Turn off any power at the circuit breaker before wiring any product.

14. Free-topology DLM local network segments may include digital load controllers, switches and sensors; Cat 5e cable, 150' per device to 1,000' max, per each local network.

FOR THE AVAILABLE FAULT CURRENT CALCULATIONS WE HAVE ASSUMED A 2500kVA UTILITY TRANSFORMER WITH INFINITE AVAILABLE FAULT CURRENT (AFC)

Z = 3%
AFC = 111,374

THE CONTRACTOR SHALL COORDINATE THE FINAL AVAILABLE FAULT CURRENT WITH THE UTILITY COMPANY PRIOR TO ORDERING EQUIPMENT. ONCE THE AVAILABLE FAULT CURRENT IS KNOWN THE CONTRACTOR SHALL CONTACT THE ENGINEER. THE ENGINEER WILL PROVIDE THE CALCULATED AVAILABLE FAULT CURRENT FOR ALL OF THE ELECTRICAL EQUIPMENT AND INFORM THE ELECTRICIAN THE AVAILABLE FAULT CURRENT AND THE DATE THE FAULT CURRENT WAS CALCULATED. THIS INFORMATION WILL BE PLACED ON A WATERPROOF PERMANENT ENGRAVED PLACARD THAT WILL BE PLACED ON THE SERVICE EQUIPMENT.

DRAWING NOTES:
