Description

The project consists of the removal and disposal of 2 existing water softening tanks and their replacement with 2 high pressure fiberglass reinforced plastic tanks, the charging of those tanks with new, vapor phase granular activated carbon, the fabrication of a schedule 80 PVC valve tree system complete with manually and electrically actuated valves, and the connection of this new valve tree system to the existing water supply piping from the Village of Florida, the connection of the new valve tree system to the existing exterior discharge manhole for the discharge of carbon backflush water, and the connection of the new valve tree system to the existing clearwell inside the building for the discharge of the processed water after treatment by the vapor phase activated carbon to remove the trihalometanes.
