D. The Local Unions shall exert their utmost efforts to recruit a sufficient number of skilled craft workers to fulfill the manpower requirements of the Contractor. When a Contractor of any tier is contracted to perform Project Work and such Contractor is not signatory to a Schedule A agreement (not including signatory through this Agreement) and the Union cannot provide ample labor to support the construction schedule or project, then the Contractor may hire outside the Union hiring halls and the Contractor may, at the Contractor's discretion, replace the non-Union or non-dispatched employee when notified by the Union that labor has become available through the Union. The Contractor shall consider and may use other employees affiliated with the Council before any non-Union hiring except where specifically addressed in this Agreement, if those employees from the other Unions have the required trade skills to perform the Project Work. Those hired through this provision shall be laid off before those of an affiliated Union. In the absence of a General Contractor or Construction Manager, the Owner shall decide based upon a review of the construction schedule and its latest updates if and when the Union is unable to provide ample labor to support the construction schedule or Project Work.

E. Notwithstanding the foregoing, THE TOWN OF NEW WINDSOR or a representative thereof, shall have the sole discretion to request that a person be removed from working on this Project.

SECTION 4.3 NON-DISCRIMINATION IN REFERRALS

The Local Unions represent that their hiring halls and referral systems shall be operated in a non-discriminatory manner and in full compliance with all applicable federal, state and local laws and regulations which require equal employment opportunities. Referrals shall not be affected in any way by the rules, regulations, bylaws, constitutional provisions or any other aspects or obligations of Union membership, policies, or requirements and shall be subject to such other conditions as are

established in this Article. No employment applicant shall be discriminated against by any referral system or hiring hall because of the applicant's Union membership, or lack thereof.

SECTION 4.4 WORKFORCE DIVERSITY UTILIZATION

The Unions recognize and acknowledge that workforce diversity of minorities and women are employment goals consistent with our values of fair play. The Environmental Facilities Corporation funded the Project with minority and women-owned business goals of $4,435,560 and service-disabled veteran-owned business goals of $887,112. The Local Unions agree and will strive to utilize their best efforts to provide qualified minority and female and service-disabled veteran applicants.

SECTION 4.5 CROSS AND QUALIFIED REFERRALS

The Local Unions shall not knowingly refer to a Contractor an employee then employed by another Contractor working under this Agreement. The Local Unions shall exert their utmost efforts to recruit sufficient numbers of skilled and qualified crafts employees to fulfill the requirements of each Contractor.

SECTION 4.6 UNION DUES

Nothing in this Agreement requires employees to join a Union or pay dues or fees to a Union as a condition of working on the Project. This Agreement is not, however, intended to supersede independent requirements in applicable Local Union Agreements as to Contractors that are otherwise signatory to those Agreements in relation to employees of such Contractors performing Project Work.

V. ARTICLE 5 – UNION REPRESENTATION

SECTION 5.1 LOCAL UNION REPRESENTATIVE

Each Local Union signatory to this Agreement shall be entitled to designate a representative and/or Business Manager who shall be afforded access to the Project site only during times when Project Work is being conducted.

SECTION 5.2 STEWARDS

A. Each Local Union shall have the right to designate from among those referred to the Project a working journey person as a Steward or Lead Engineer per shift, and shall notify the Construction Manager or Clerk of Works if applicable, or general contractor, of the identity of the designated Steward or Lead Engineer (and alternate) prior to the assumption of such duties. Stewards or Lead Engineer shall not exercise supervisory functions. There will be no non-working Stewards or Lead Engineer on the Project.

B. In addition to his/her work as an employee, the Steward or Lead Engineer shall have the right to receive complaints or grievances and to discuss and assist in their adjustment with the Contractor's appropriate supervisor; such activities, however, are not to interfere with the Contractor's work unless an emergency situation exists. Each Steward or Lead Engineer shall be concerned with the employees of the Steward's Contractor and, if applicable, Subcontractors of that Contractor, but not with the employees of any other Contractor. The Contractor will not discriminate against the Steward or Lead Engineer in the proper performance of Union duties.

C. Requirements for Stewards or Lead Engineer shall be as per the applicable Schedule A agreement.

D. The Construction Manager or Clerk of Works, if applicable, may employ the laborer steward or another craft steward.

SECTION 5.3 LAYOFF OF A STEWARD

Contractors agree to notify the appropriate Union 24 hours prior to the layoff of a Steward or Lead Engineer, except in cases of discipline or discharge for just cause. If a Steward is protected against layoff by a Schedule A agreement, such provisions shall be recognized to the extent the Steward or Lead Engineer possesses the necessary qualifications to perform the Project Work required. In any case in which a Steward or Lead Engineer is discharged or disciplined for just cause, the Local Union involved shall be notified immediately by the Contractor. Contractor and the Union shall take any and all steps necessary to ensure that the layoff or discharge or discipline of a Steward or Lead Engineer minimizes any delay to the Project Work. The Owner and/or Construction Manager must be consulted prior to such a layoff, discharge, or discipline of a Steward or Lead Engineer to provide any input or opportunity to object to the decision.

SECTION 5.4 UNION STANDARDS

A. The Council and its affiliates have a legitimate interest in preventing the undermining of the work opportunities and standards gained through collective bargaining and desire to preserve and protect work opportunities for its members.

B. THE TOWN OF NEW WINDSOR, while recognizing this interest, must maintain its ability to utilize the services of off-site fabricators and those entities involved in deliveries of construction materials, except those materials included in Section 3.3, when not covered under New York State Labor Law 220.

C. While the scope of the Agreement is limited to Project Work as defined and subject to exceptions herein, Contractors should, in their sole discretion, make reasonable efforts to use Union signatory vendors, which includes, but is not limited to, UA Yellow Label and SMW Blue Label products for off-site assemblies or fabrications.

D. This Section does not refer to construction material normally purchased pre-

assembled or manufactured, it references Project Work normally and historically done on-site or in Local Union fabrications shops.

E. If any dispute should arise with respect to this Section, the Contractors agree to install any off-site assemblies or fabricated items regardless of the source, at the Owner or its Project Manager's instruction. The parties shall endeavor to settle such dispute in the Labor Management forum or appropriate sub-committee before a grievance is filed under Article 9.

VI. ARTICLE 6 – MANAGEMENT RIGHTS

SECTION 6.1 RESERVATION OF RIGHTS

Except as expressly limited by a specific provision of this Agreement, Contractors retain full and exclusive authority for the management of their operations including, but not limited to: the right to direct the Project Work force, including determination as to the number to be hired and the qualifications therefore; the promotion, transfer, layoff of its employees; or the discipline or discharge for just cause of its employees; the assignment and schedule of Project Work; the promulgation of reasonable Project Work rules; and the requirement, timing and number of employees to be utilized for overtime Project Work. Nothing contained herein shall be construed so as to allow direction of an employee to perform Project Work outside the jurisdiction of that employee's Labor Union affiliation, if any. No rules, customs, or practices which limit or restrict productivity or efficiency of the individual and/or joint working efforts of employees shall be permitted or observed. The Contractor may utilize any methods or techniques of construction of its choosing which are consistent with the Contractor's agreement(s) with Owner. Contractors hereby agree that the Owner may require additional employees and/or overtime as necessary to ensure the Project Work is not delayed, by providing written notice of same to the Contractor.

SECTION 6.2 MATERIALS, METHODS & EQUIPMENT

Except as expressly limited by a specific provision of this Agreement and in any Contractor's agreement(s) with Owner, there shall be no limitation or restriction upon the Contractor's choice of materials, techniques, methods, technology or design, nor, regardless of source or location, upon the full use and installation of equipment, machinery, package units, pre-cast, pre-fabricated, pre-finished, or pre-assembled materials, tools, or other labor-saving devices. Except for those items of equipment, machinery, package units, pre-cast, pre-fabricated, pre-finished, or pre-assembled materials, tools or other labor-saving devices specified in the contract (which must be provided in accordance with the technical specifications), Contractors may, without restriction, install or use materials, supplies, or equipment regardless of their source. The on-site installation or application of such items shall be performed by the craft having jurisdiction over such Project Work; provided, however, it is recognized that other personnel having special qualifications may participate in the installation, check-off or testing of specialized or unusual equipment or facilities as designated by the Contractor.

SECTION 6.3 NEW MATERIALS, TOOLS, DEVICES, TECHNOLOGY, EQUPMENT &

METHODS

It is recognized that the use of new materials, tools, labor-saving devices, technology, equipment and/or methods of performing work will be initiated by Contractor from time to time during the Project. The Unions agree that they will not in any way restrict the implementation of such new materials, tools, labor-saving devices, technology, equipment or work methods. If there is any disagreement between the Contractor and Unions concerning the manner or implementation of such new items, the implementation shall proceed as directed by the Contractor, and the Unions shall have the right to grieve and/or arbitrate the dispute as set forth below.

VII. ARTICLE 7 – WORK STOPPAGES AND LOCKOUTS

SECTION 7.1 NO STRIKES-NO LOCK OUT

There shall be no strikes, sympathy strikes, picketing, work stoppages, slowdowns, demonstrations, or other disruptive activity on Project Work site for any reason by any signatory to this Agreement. There shall be no Union or concerted or employee activity which disrupts or interferes with the Project Work. Should any employee breach this provision, the Local Unions will use their best efforts to immediately end the breach of this section and return all employees to work. There shall be no lockout by any signatory to this Agreement.

In accordance with Section 220-f of the Labor Law and Section 139-h of the State Finance Law, if any contract exceeds $5,000, the Contractor agrees, as a material condition of the contract, that neither the Contractor nor any substantially owned or affiliated person, firm, partnership or corporation has participated, is participating, or shall participate in an international boycott in violation of the federal Export Administration Act of 1979 (50 USC App. Sections 2401 et seq.) or regulations thereunder. If such Contractor, or any of the aforesaid affiliates of Contractor, is convicted or is otherwise found to have violated said laws or regulations upon the final determination of the United States Commerce Department or any other appropriate agency of the United States subsequent to the contract's execution, such contract, amendment or modification thereto shall be rendered forfeit and void. The Contractor shall so notify the Owner within five (5) business days of such conviction, determination or disposition of appeal (2 NYCRR § 105.4).

SECTION 7.2 DISCHARGE FOR VIOLATION

Contractor may discharge any employee violating Section 7.1, above, and any such employee will not be eligible thereafter for referral under this Agreement for a period of 100 working days.

SECTION 7.3 NOTIFICATION

If a Contractor contends that any employee has violated this Article, it shall notify the Council of such fact, with copies of the notification to the Local Union involved. The Council and Local Union shall instruct, order, and otherwise use their best efforts to cause the employee(s) to immediately cease and desist from any violation of this Article and return all employees to work. The Council shall not be liable for the unauthorized acts of a Local Union or its members. Similarly, a Local Union and its members shall not be liable for any unauthorized acts of the Council or of

another Local Union.

SECTION 7.4 EXPEDITED ARBITRATION

Contractor or Union alleging a violation of Section 7.1 of this Article or Section 8.3(D)(2) of Article 8 shall utilize the expedited procedure set forth below (in lieu of, or in addition to, any actions at law or equity) that may be brought.

A. A party invoking this procedure shall notify J. J. Pierson, Esq. (tel: (833) 359-8100; email: insert), Neal M. Eiseman, Esq. (tel: (917) 603-3725; email: neal@eisemanadr.com), and Thomas Hines (tel: (518) 469-7111; email: tomehinesri@gmail.com), who shall alternate as Arbitrator under this expedited arbitration procedure. If the Arbitrator next on the list is not available to hear the matter within 24 hours of notice, the next Arbitrator on the list shall be called. Copies of such notification will be simultaneously sent to all parties (the alleged violator, the Council, the Local Union, the Contractor, and the Owner).

B. The Arbitrator shall hold a hearing within 48 hours of receiving the notice invoking the procedure if it is contended that the violation still exists. The Arbitrator shall provide at least 24 hours' notice (excluding Sundays and holidays) to all parties as to time and place of the hearing. In the event overnight delivery is used to supply notice, the 24 hours' notice shall commence upon delivery of the notice.

C. All notices pursuant to this Article must be delivered to all parties (alleged violator, the Council, Local Union, Contractor, and Owner) and may be provided by telephone, hand delivery, fax, email, or confirmed overnight delivery. The hearing may be held on any day including Saturdays or Sundays. The hearing shall be completed in one session which shall not exceed 8 hours duration (no more than 4 hours being allowed to either side to present their case and conduct their cross examination) unless otherwise agreed. A failure of any party to attend the hearing shall not delay the hearing of evidence by those present or the issuance of an award by the Arbitrator.

D. (i) Section 7.1 hearings:

The sole issue at the hearing shall be whether a violation of Section 7.1 occurred. If a violation is found to have occurred, the Arbitrator shall issue a Cease-and-Desist Award restraining such violation and serve copies on all parties. The Arbitrator shall have no authority to consider any matter in justification, explanation or mitigation of such violation or to award damages (any damages issue is reserved solely for court proceedings, if any). The Award shall be issued in writing within 3 hours after the close of the hearing, and may be issued without an Opinion. If any involved party desires an Opinion, one shall be issued within 15 calendar days, but its issuance shall not delay compliance with, or enforcement of, the Award.

(ii) Section 8.3(D)(2) hearings:

The sole issue at the hearing shall be whether a violation of Section 8.3(D)(2)

occurred. If a violation is found to have occurred, it shall be prima facie evidence of intentional mis-assignment, and the Arbitrator shall issue an immediate stop- work order with respect to the Project Work involved and reassign the Project Work as necessary. The Arbitrator is also authorized to (a) award damages or back pay in order to make the aggrieved trade whole, and (b) remove the offending Contractor from the job in egregious situations.

E. An Award issued under this procedure may be enforced in the Supreme Court of the State of New York, Orange County, upon the filing of this Agreement together with the Award. Notice of the filing of such enforcement proceedings shall be given to all parties. In any court proceeding to obtain a temporary or preliminary order enforcing the Arbitrator's Award as issued under this expedited procedure, the involved Union and Contractor waive their right to a hearing and agree that such proceeding may be commenced by order to show cause. Such agreement does not waive any party's right to participate in a hearing for a final court order of enforcement or in any contempt proceeding.

F. Any rights created by statute or law governing arbitration proceedings which are inconsistent with the procedure set forth in this Article, or which interfere with compliance thereto, are hereby waived by the Contractors and Unions to whom they accrue.

G. The fees and expenses of the Arbitrator shall be equally divided between the involved Contractor and Union.

SECTION 7.5 ARBITRATION OF DISCHARGES FOR VIOLATION

Procedures contained in Article 9 shall not be applicable to any alleged violation of this Article, with the single exception that an employee discharged for violation of Section 7.1, above, may have recourse to the procedures of Article 9 to determine only if the employee did, in fact, violate the provisions of Section 7.1 of this Article; but not for the purpose of modifying the discipline imposed where a violation is found to have occurred.

VIII. ARTICLE 8 – LABOR MANAGEMENT COMMITTEE

SECTION 8.1 SUBJECTS

The Project Labor Management Committee ("Committee") will meet as established by the Committee to: (1) promote harmonious relations among the Contractors and Unions; (2) enhance safety awareness, cost effectiveness, and productivity of construction operations; (3) protect the public interest; (4) discuss matters relating to staffing and scheduling with safety and productivity as considerations; (5) review Affirmative Action and equal employment opportunity matters pertaining to the Project, if any, and increase work opportunity within THE TOWN OF NEW WINDSOR for Town residents.

SECTION 8.2 COMPOSITION

The Committee shall be jointly chaired by a designee of the Owner and the Council. It may include representatives of the Local Unions and Contractors involved in the issues being discussed. The Committee may conduct business through mutually agreed upon sub-committees.

SECTION 8.3 PRE-JOB CONFERENCE

So that the start and continuation of Project Work may progress without interruption, the Committee shall require each Contractor and Subcontractor of whatever tier to conduct a pre-job conference with the Council prior to commencing work. The Construction Manager or General Contractor shall be advised in advance of such conferences and may participate if they wish. This pre-job conference with the Council is in addition to any pre-job/pre-construction conferences required by the Project Contract Documents.

The purpose of the pre-job conference with the Council shall be for the parties to gain an understanding of each Contractor's proposed work assignments, the standard work day and work week, the number of employees to be employed, the method of referral, the applicable wage rates and fringe benefit contributions and any other matters in accordance with this Agreement.

Proposed Trade Assignments.

(1) In conjunction with the pre-job conference with the Council required by this Section, each Contractor shall fill out the attached Schedule E - Proposed Trade Assignments identifying all Subcontractors and indicating what trades will be used to perform the Project Work. This form shall be submitted to the Council at least fourteen (14) days in advance of the commencement of Project Work.

(2) If any Local Union(s) objects to or disagrees with the Proposed Trade Assignment of either the Contractor or Subcontractor, the Local Union will state its objection within three (3) days of the submission of the Proposed Trade Assignments and there shall be a good faith discussion among the Contractor or Subcontractor and the objecting Local Union and other affected Unions to resolve the matter.

(3) If no resolution is reached, any involved Local Union may submit their objection position in writing, together with support documentation, within seven (7) calendar days of the submission of the Proposed Trade Assignments to the Contractor or Subcontractor with a copy to all affected Local Unions. Failure of any objecting Local Union and/or other affected Unions to timely object or submit such objection positions in writing waives any objection to the Proposed Trade Assignments.

(4) The Contractor or Subcontractor will review all submitted supporting documentation regarding the Proposed Trade Assignments and will submit to the Construction Manager or Clerk of Works, the Council, and all affected Local Unions a "Final Trade Assignment" letter within fourteen (14) days calendar days of the pre-job meeting at which the Proposed Trade

Assignments were made.

Disputes and Violations.

(5) Unresolved disputes concerning trade assignments shall be handled in accordance with Section 10.1, 10.2, and 10.3 of Article 10 in accordance with the National Plan for Settlement of Jurisdictional Dispute in the Construction Industry established by the Building and Construction Trades Department, incorporated by reference in Schedule D, provided however, that disputes concerning intra-trade assignments (assignments between trades within the same International Union) will be determined by the applicable International Union.

(6) Contractor's failure to conduct a pre-job conference with the Council, failure to include all required parties in a pre-job conference with the Council, or failure to adhere to agreed-upon Schedule E trade assignments is a violation of this Agreement and prima facie evidence of intentional mis-assignment. Alleged violations of this provision shall be considered a lock-out and subject to the expedited arbitration procedures of Article 7, Section 7.4.

(7) All remaining unresolved issues shall be subject to the provisions of Article 9.

IX. ARTICLE 9 - GRIEVANCE & ARBITRATION PROCEDURE

SECTION 9.1 CLOSE COOPERATION

The Contractors, Unions, and employees, collectively and individually, realize the importance to all parties to maintain continuous and uninterrupted performance of Project Work and agree to resolve disputes in accordance with the grievance-arbitration provisions set forth in this Article.

SECTION 9.2 PROCEDURE

Any question, dispute or claim arising during the term of this Agreement involving the interpretation or application of this Agreement (other than jurisdictional disputes and alleged violations of Section 7.1, and Section 8.3(D)(2)), shall be considered a grievance and shall be resolved pursuant to the following procedure.

Step 1:

A. When any employee covered by this Agreement feels aggrieved by a claimed violation of this Agreement, the employee shall give notice of the claimed violation to the Local Union representative or job steward, who shall notify the Project Work site representative of the involved Contractor and the Construction

Manager or Clerk of Works. To be timely, such notice must be in writing given within 7 calendar days after the act, occurrence or event giving rise to the grievance. Strict compliance with this 7-day notice is a condition precedent to proceeding with such grievance. The Local Union representative or the job steward shall meet with the Project Work site representative of the involved Contractor and the Construction Manager or Clerk of Works, if applicable, and endeavor to adjust the matter within 7 calendar days after timely notice has been given. The representative of the involved Contractor shall keep the minutes of the meeting and shall respond to the Union representative in writing, with copy to the Construction Manager or Clerk of Works, within twenty-four (24) hours after the conclusion of the meeting. If they fail to resolve the matter within the prescribed period, the grieving party, may, within 7 calendar days thereafter, pursue Step 2 of the grievance procedure by serving the involved Contractor with written copies of the grievance setting forth a description of the claimed violation, the date on which the grievance occurred, and the provisions of the Agreement alleged to have been violated. Grievances and disputes settled at Step 1 are non-precedential except as to the specific Local Union, employee and Contractor directly involved, unless the settlement is accepted in writing by the Labor-Management Committee as creating a precedent with respect to Project Work.

B. Should any signatory to this Agreement have a dispute [excepting jurisdictional disputes and alleged violations of Section 7.1 or Section 8.3(D)(i) or (ii) with any other signatory to this Agreement and, if after conferring, a settlement is not reached within 7 calendar days, the dispute may be reduced to writing and the grieving party may proceed to Step 2 in the same manner as outlined in subparagraph (a) for the adjustment of employee grievances.

Step 2:

Upon timely receiving a written grievance, the involved Contractor shall notify and schedule a meeting with the Business Manager of the involved Local Union, the Council, and the Construction Manager or Clerk of Works, if applicable, and their respective representatives, for the purpose of arriving at a satisfactory settlement. Such meeting shall be held within 7 calendar days of the involved Contractor's receipt of the written grievance. Meeting minutes shall be kept by the Contractor with copies to the parties within twenty-four (24) hours.

Step 3:

A. If the grievance shall have been submitted but not resolved after Step 1 and Step 2, any of the participating Step 2 entities may, within 21 calendar days after the initial Step 2 meeting, submit the grievance in writing (copies to other participants, including the Construction Manager) along with copies of the minutes from Step 1 and Step 2, to the acting Arbitrator under this procedure alternating between J.J. Pierson, Neal M. Eiseman, and Thomas Hines. The Labor Arbitration Rules of the American Arbitration Association shall govern the conduct of the arbitration hearing, at which all Step 2 participants shall be parties. The decision of the

Arbitrator shall be final and binding on the involved Contractor, Local Union, and employees, and the fees and expenses of such arbitration shall be borne equally by the involved Contractor and Local Union. Said decision shall be issued within 7 days of the arbitration hearing. Work on the Project must continue in the meantime.

B. Failure of the grieving party to adhere to the time limits set forth in this Article shall render the grievance null and void. These time limits may be extended only by written consent of the Construction Manager, if applicable, the involved Contractor, and the involved Local Union at the particular step where the extension is agreed upon. The Arbitrator shall have authority to make decisions only on the issues presented to him and shall not have the authority to change, add to, delete or modify any provision of this Agreement.

X. ARTICLE 10 - JURISDICTIONAL DISPUTES

SECTION 10.1 ASSIGNMENT

The assignment of Project Work shall be solely the responsibility of the Contractor performing the Project Work involved, subject to the pre-job conference with the Council and the procedures set forth in Section 8.3(C), and such Project Work assignments shall be in accordance with the National Plan for the Settlement of Jurisdictional Disputes in the Construction Industry ("National Plan"), incorporated by reference into Schedule D, or any successor Plan approved by the Building & Construction Trades Department, AFL-CIO

SECTION 10.2 PROCEDURE FOR SETTLEMENT OF JURISDICTIONAL DISPUTES

All jurisdictional disputes involving Project Work shall be settled according to the National Plan, provided however, that disputes concerning intra-trade assignments (assignments between trades within the same International Union) will be determined by the applicable International Union.

SECTION 10.3 NO DISRUPTIONS

There will be no strikes, work stoppages, or slowdowns, arising out of any jurisdictional dispute. Pending the resolution of the dispute, the Project Work shall continue uninterrupted and as assigned by each Contractor. No jurisdictional dispute shall excuse a violation of Article 7.

SECTION 10.4 AWARD

Any jurisdictional award pursuant to this Article shall be final and binding on the disputing Unions and the involved Contractor on this Project only and may be enforced in the Supreme Court of the State of New York, Orange County. Such award or resolution shall not establish a precedent on any other construction work not covered by this Agreement.

SECTION 10.5. LIMITATIONS

Awards made under this Article shall determine only to whom the disputed Project Work belongs. The deciding person or group hereunder shall have no authority to (a) assign Project Work to a double crew, that is, to more employees than the minimum required by the Contractor to perform the Project Work involved; (b) assign work to employees who are not qualified to perform the work involved; or (c) assign Project Work being performed by non-Union employees to Union employees. This provision does not prohibit the establishment, with the agreement of the involved Contractor, of composite crews where more than one (1) employee is needed for the job.

XI. ARTICLE 11 - WAGES AND BENEFITS

SECTION 11.1 CLASSIFICATION AND HOURLY RATE

All employees covered by this Agreement shall be classified in accordance with the work performed and paid the wage rates applicable for those classifications as required by the Schedule A applicable to the work. The term "straight time" in this Agreement shall mean the hourly wage rate applicable for those classifications as required by the applicable New York State Labor Law Section 220 ("Section 220") prevailing wage determination. The Davis Bacon rates required by the Environmental Facilities Corporation are set forth in the EFC packet attached to this Agreement. In no event shall an employee covered by this Agreement be paid less than the applicable rate required per Schedule A.

SECTION 11.2 EMPLOYEE BENEFITS

A. Unless expressly provided differently in this Agreement, Contractors agree to pay employee benefits/supplements on behalf of all of their employees covered by this Agreement in the amounts required by the applicable Section 220 schedule in effect. Except as provided herein, the Contractors agree that such payments shall be made to those established jointly trusteed employee benefit funds designated in the applicable Schedule A agreement, and in the amounts so designated, to the extent such payments are required by and satisfy the Section 220 obligation. Bona fide jointly trusteed fringe benefit plans established or negotiated through collective bargaining during the life of this Agreement may be added if they similarly fall within Section 220. Contractors not otherwise contractually bound to do so, shall not be required to contribute to non-Section 220 benefits, trusts or plans; however, this provision does not relieve Contractors which are signatory to local collective bargaining agreements with any Local Union from complying with the benefit requirements for all funds contained in those collective bargaining agreements.

C. Notwithstanding Section 11.2(A):

(1) Contractors who designate employees pursuant to Article 4 may satisfy the above benefits obligation with respect to those employees by: (1) providing those employees with coverage under their private benefit plans for health, welfare, pension, annuity and 401(k); or (2) paying the full amount of such benefit to the employee in employees' wages. The total benefit payments

to be made on behalf of each such employee must equal the total Section 220 benefit/supplement amount. If the Contractor's contribution into the private benefit plan for the above funds is less than the amount required by Section 220, the difference must be paid to the employee in cash. Payments of other benefits covered under Section 220 shall be paid to the respective Unions on behalf of each employee.

(2) This same option shall apply with respect to any other employee who is referred to the Contractor through the hiring hall process provided such employee was previously employed by the Contractor and was a participant in a bona fide private benefit plan maintained by the Contractor which satisfies the requirements of Section 220.

(3) The option for a private plan equivalent supplement shall not apply to contributions into Joint Apprentice Training Committee (JATC), or similar apprentice funds designated in the applicable Schedule A agreement, if the Contractor does not have an apprentice training program approved by the Department of Labor (However, all Contractors with contracts for this Project in excess of $500,000 must participate in apprenticeship training programs pursuant to New York State Labor Law §222(2)(e)). Upon request by the Council, any Contractor providing coverage under this provision will provide the Council with documentation of benefit payments made to individual employees during the term of their employment on the Project.

(4) Contractors who exercise the option under Section 11.2(B) of this Article to pay into their own private benefit plans rather than the applicable jointly trusteed funds designated in the applicable Schedule A agreement shall be responsible for and guarantee employee benefit/supplement payments and shall indemnify and hold harmless the jointly trusteed funds designated in the applicable Schedule A agreement against any and all benefit/ supplement claims by its employees.

D. Contractors who contribute to jointly trusteed funds under this Section agree to be bound by the written terms of the legally-established jointly trusteed Trust agreements specifying the detailed basis on which payments are to be paid into, and benefits paid out of, such trust funds but only with regard to Project Work done and only for those employees for whom this Agreement requires such benefit payments. Notwithstanding the foregoing, a Contractor's liability shall be at all times limited to the amount of contributions required to be made to the Trust Funds.

E. Each Contractor shall be responsible for and guarantee the payment of all required fringe benefits on the Project. The Local Unions and/or the Council shall notify the Construction Manager or Clerk of Works within 120 hours excluding weekends whenever a Contractor or Subcontractor fails to make a required benefit payment and such delinquency remain outstanding after 30 calendar days. Notification must be in writing and may be by email. If written notice of such a delinquency is received by the Construction Manager or Clerk of Works within that 120-hour period

it shall withhold from any funds due to the delinquent Contractor the amount of that delinquency, up to the total amount due, until any dispute regarding the delinquency has been resolved. The Construction Manager or Clerk of Works shall have no other obligation with respect to contributions owed by any Contractor (or its Subcontractor); but that each Contractor shall continue to be obligated with respect to contributions based on Project Work done by that respective Contractor. If notice of a delinquency is not received by the Construction Manager or Clerk of Works within the required time periods, Owner shall have no basis upon which to withhold, with respect to that delinquency, any part of a payment which is otherwise due. Construction Manager or Clerk of Works shall require Contractors to submit proof of benefit payment with pay request.

XII. ARTICLE 12 - HOURS OF WORK, PREMIUM PAYMENTS, SHIFTS AND HOLIDAYS

SECTION 12.1 WORK WEEK AND WORK DAY

A. Unless otherwise provided for in this Agreement, the standard work week shall be five days, Monday through Friday, eight hours per day plus ½ hour unpaid lunch period each day. The starting time for the standard work week shall start at either 7:00 a.m., 7:30 a.m., or 8:00 a.m. Multiple starting times shall be allowed.

B. Four-tens: notwithstanding any other provision of the Agreement, when working a four-day work week, the work shall consist of 4 days, Monday through Thursday, ten hours per day plus½ hour unpaid lunch period at the straight time rate. The starting time for four-tens shall be 7:00 a.m., 7:30 a.m., or 8:00 a.m. A three-day minimal notice shall be required for four-tens to the respective involved Unions.

C. On a 5-day work week, Saturday may be used as a make-up day at straight time to fulfill the 40-hour work week due to inclement weather. On Saturday, the earliest start time shall be 8:00 am. On a 4-day work week, Friday may be used as a make-up day at straight time to fulfill the 40-hour work week. Make-up days shall be scheduled for a minimum of 8 hours, except in the case of inclement weather in which Section 12.5 shall apply. This minimum shall also apply when more than one shift or multiple shifts are worked.

D. The changing of the regular starting time, except in the case of overtime and the switch from a 5- day and 4-day work weeks shall be a 4-week minimum.

SECTION 12.2 OVERTIME

Overtime pay for hours outside of the standard work week and work day, defined in Section 12.1, and all work on Saturdays shall be paid at time and one half the hourly rate and benefits will be paid on straight time. All work on Sundays shall be paid at two times the hourly rate and benefits will be paid at straight time.

SECTION 12.3 SHIFTS

A. Flexible Schedules - Scheduling of shift work, including Saturday and Sunday work, shall be within the discretion of the Contractor in order to meet Project Work schedules and existing Project Work conditions. Shifts must have prior approval of the Construction Manager or Clerk of Works and Owner and must be scheduled with not less than three work days' notice to the Local Union.

B. Second and/or Third Shifts - Saturday and/or Sunday Work.

The second shift shall start between 3 p.m. and 6 p.m. and the third shift shall start between 11 p.m. and 2 a.m. Shift differentials shall be straight time plus fifty percent (50%) of the applicable Schedule A agreement shift differential. No other premium or payments for such work shall be required unless such work is in excess of 40 hours during the week. There shall be no reduction in hours worked on a second and/or third shift, except that when 3 shifts are working together, the length of one or more shifts can be reduced to accommodate a 24- hour day and only actual hours worked will be paid. Work performed on Saturdays or Sundays shall be paid as provided in the applicable Schedule A Agreement.

C. To clarify above, Schedule A Shift Differential designated percentage rates vary according to each trade's prevailing Collective Bargaining Agreement. Shift work as part of this Project Labor Agreement is 50% of the designated percentage of the shift percentages of each trade, for example if a trade's shift differential is 15% it would be 7.5%.

SECTION 12.4 HOLIDAYS

A. Schedule - There shall be seven (7) recognized holidays:

- New Year's Day,
- President's Day,
- Memorial Day
- Fourth of July
- Labor Day
- Thanksgiving Day
- Christmas Day

All said holidays shall be observed on the dates designated by New York State Law. In the absence of such designation, they shall be observed on the calendar date, except that holidays which occur on Sunday shall be observed on the following Monday and holidays which occur on a Saturday shall be observed on the previous Friday.

B. Payment-Regular holiday pay, if any, for work performed on a recognized holiday shall be in accordance with the applicable Schedule A agreement. There will be no benefits paid on holidays unless worked. Pay for a recognized holiday when not worked shall be paid as per Schedule A.

C. Exclusivity - No holidays other than those listed in Section 12.4 shall be recognized or observed in relation to holiday pay and benefits.

SECTION 12.5 REPORTING PAY

A. When on a five-day work week, employees who report to the work location pursuant to a regular schedule and who are not provided with work for whatever reason, shall receive two (2) hours reporting pay, four (4) hours if work starts and eight (8) hours pay if work occurs after the 4th hour except in the case of inclement weather in which hours worked after the four hours shall be paid and when on a four-day work week with a 10-hour day, workers shall receive three (3) hours reporting pay, four (4) hours if work starts and ten (10) hours pay if work occurs after the 5th hour except in the case of inclement weather in which hours worked after the five (5) hours shall be paid.

B. When an employee who has completed his or her scheduled shift and has left the Project site is "called out" to perform special work of a casual, incidental, or irregular nature, the employee shall receive pay for actual hours worked at applicable straight time or overtime rates in accordance with this Agreement, but no less than a minimum guarantee of two (2) hours at the employee's straight time rate.

C. When an employee leaves the job or work location of their own volition, is discharged for cause, or is not working as a result of the Contractor's invocation of Section 12.8 below, he or she shall be paid only for the actual time worked.

D. There shall be no pay for time not actually worked except as specifically set forth in this Article 12 and where an applicable Schedule A agreement applies to Forepersons, Stewards and Lead Engineer in reference to pay.

SECTION 12.6 PAYMENT OF WAGES

A. Payday: Payment shall be made by check, drawn on a New York bank with branches located within commuting distance of the job site. Paychecks shall be issued by the Contractor at the job site by 3:00 p.m. on Thursdays. In the event that the following Friday is a bank holiday, paychecks shall be issued on Wednesday of that week. Not more than one week's wages shall be held back in any pay period. Paycheck stubs shall contain the name and business address of the Contractor, together with an itemization of deductions from gross wages.

B. Termination: Employees who are laid off or discharged for cause shall be paid in full for that which is due them at the time of termination. The Contractor shall also provide the employee with a written statement setting forth the date of layoff or discharge.

SECTION 12.7 INJURY/DISABILITY

An employee who, after commencing Project Work, suffers a work-related injury or disability while performing Project Work duties, shall receive no less than eight (8) hours wages

for that day. Further, the employee shall be rehired at such time as the employee is able to return to duties provided there is still Project Work available for which the employee is qualified and able to perform.

SECTION 12.8 EMERGENCY WORK SUSPENSION

A Contractor may, if considered necessary for the protection of life, property, and/or safety of employees or others, suspend all or a portion of Project Work. In such instances, employees shall be paid for actual time worked; provided however, that when a Contractor requests that employees remain at the job site available for Project Work, employees shall be paid for "stand-by" time at their hourly rate of pay.

SECTION 12.9 TIME KEEPING

Contractors may utilize brassing or other systems to check employees in and out. Each employee must check in and out. Contractors will provide adequate facilities for checking in and out in an expeditious manner.

SECTION 12.10 BREAK PERIODS

There will be no rest periods, organized coffee breaks or other non-working time established during working hours. Individual coffee containers will be permitted at the employee's work location.

XIII. ARTICLE 13 - APPRENTICESHIP & HELMETS TO HARDHATS

SECTION 13.1 APPRENTICE RATIOS

Recognizing the need to maintain continuing supportive programs designed to develop adequate numbers of competent workers in the construction industry and to provide craft entry opportunities for minorities, women, service-disabled veterans, and economically-disadvantaged non-minority males and females, Contractors will employ apprentices in their respective crafts to perform such Project Work as is within their capabilities and that is customarily performed by the craft in which they are indentured. Contractors may utilize apprentices and such other appropriate classifications as are contained in the applicable Schedule A agreement in a ratio of not less than twenty-five percent (25%) of the work force by craft (without regard to whether a lesser ratio is set forth in the applicable Schedule A agreement), unless the applicable Schedule A agreement provides for a higher percentage. The first person assigned to the job shall be a Journeyman. The second person assigned may be an apprentice. Subsequent assignments shall be Journeymen until the applicable ratio is achieved. This assignment shall be repeated until staffing needs are satisfied. Apprentices and such other classifications as are appropriate will be employed in a manner consistent with the provisions of the applicable Schedule A agreement.

SECTION 13.2 NYS DEPARTMENT OF LABOR - APPRENTICESHIP

To assist the Contractors in attaining a maximum effort on this Project, the Unions agree to work in close cooperation with, and accept monitoring by, the New York State Department of Labor to ensure that minorities and women are afforded every opportunity to participate in apprenticeship programs that result in the placement of apprentices on this Project.

SECTION 13.3 NEW YORK HELMETS TO HARDHATS

The Contractors and the Unions desire to facilitate the entry into the building and construction trades of veterans who are interested in careers in the building and construction industry. The Contractors and the Unions agree to utilize the services of the Center for Military Recruitment, Assessment and Veterans Employment (the "Center") and the Center's "New York Helmets to Hardhats" program as a resource for preliminary orientation and assessment of construction aptitude; referral to apprenticeship programs or hiring halls; counseling and mentoring; and support networks, employment opportunities, and other needs as identified by the parties.

The Unions and the Contractors agree to work with the Center to create and maintain an integrated database of veterans interested in working on the Project as well as information about apprenticeship and employment opportunities related to this Project. To the extent permitted by law, the Unions will give credit to such veterans for bona fide, provable past experience.

SECTION 13.4 PARTICIPATION GOALS (MBE, WBE, SDVOB, LABOR SURPLUS AREA)

A. The Environmental Facilities Corporation funded the Project with minority and women-owned business goals of $4,435,560 and service-disabled veteran-owned business goals of $887,112. THE TOWN OF NEW WINDSOR, Construction Manager or Clerk of Works, Contractors, the Hudson Valley Building and Construction Trades Council and its affiliated Unions are committed to meeting these and any other federal and New York State Participation Goals applicable to the Project, and shall perform the Project Labor Agreement in alignment with the current goals or standards set for by federal or New York State requirements for Minority Business Enterprises (MBE), Woman Owned Business Enterprise (WBE), Service-Disabled Veteran Owned Business (SVDOB), and federal Labor Surplus Area requirements, to ensure participation on the project by MBE, WBE and SVDOB firms and job-seekers from federal Labor Surplus Areas (for 2022, City of Middletown, Town of Monroe, and City of Newburgh) while maintaining fiscal responsibility.

B. Outreach by the Construction Manager or Clerk of Works, if applicable, Contractors, Hudson Valley Building and Construction Trades and affiliated Unions and contractor associations to ensure participation goals of NYS Certified MBE, WBE and SDVOB firms and Labor Surplus Area recruitment are met will be required through the project.

C. Where the above requirements of Section 13.4 do not apply, reference in this section shall not apply.

XIV. ARTICLE 14 - NO DISCRIMINATION

SECTION 14.1 COOPERATIVE EFFORTS

The Contractors and Unions agree that they shall not discriminate against any employee or applicant for employment because of race, creed, color, religion, sex, national origin, disability, marital status, age, Union or non-Union status, real or perceived sexual orientation or any other status protected by law, in any manner prohibited by law or regulation. It is recognized that special procedures may be established by Contractors and Local Unions and the New York State Department of Labor for the training and employment of persons who have not previously qualified to be employed on construction projects of the type covered by this Agreement. The parties to this Agreement shall assist in such programs and agree to use their best efforts to ensure that the goals for female and minority employment are met on this Project. In this regard, the Contractor shall request of each employment agency, labor union, or authorized representative of workers with which it has a collective bargaining or other agreement or understanding, to furnish a written statement that such employment agency, labor union, or representative will not so discriminate on the basis of race, creed, color, religion, sex, national origin, disability, marital status, age, Union or non-Union status, real or perceived sexual orientation or any other status protected by law, and that such employment agency, labor union, or representative will affirmatively cooperate in the implementation of the Contractor's obligations herein. Nothing in this section shall be grieveable.

SECTION 14.2 LANGUAGE OF AGREEMENT

The use of the masculine or feminine gender in this Agreement shall be construed as including all genders.

XV. ARTICLE 15 - GENERAL TERMS SECTION 15.1 PROJECT RULES

SECTION 15.1 PROJECT RULES

A THE TOWN OF NEW WINDSOR, the Construction Manager or Clerk of Works, if applicable, and Contractors may establish from time to time such reasonable Project rules as are necessary for the good order of the Project. These rules shall be outlined at the pre-job conference with the Council, detailed in the contract documents, approved by the President of the Council, posted at the Project site, and may be amended thereafter as necessary.

B. Security Protocols - The Construction Manager or Clerk of Works, if applicable, with Owner's approval and in their sole discretion, will determine security protocols for the entire Project Site. Strict compliance by all Contractors and subcontractors of all tiers and their respective personnel with security procedures, protocols, and directives issued by these entities or its delegated, is required at all times.

SECTION 15.2 TOOLS OF THE TRADE

The welding/cutting torch and chain fall are tools of the trade having jurisdiction over the Project Work performed. Employees using these tools shall perform any of the Project Work of the trade. There shall be no restrictions on the emergency use of any tools or equipment by any qualified employee or on the use of any tools or equipment for the performance of Project Work within the employee's jurisdiction.

SECTION 15.3 SUPERVISION

Employees or other personnel shall work under the supervision of the craft foreperson or general foreperson for the applicable hiring or subcontracting contractor.

SECTION 15.4 FULL WORKDAY

A. Employees shall be at their Project Work area at the starting time established by the Contractor.

B. The signatories to this Agreement reaffirm their policy of a fair day's work for a fair day's wage.

XVI. ARTICLE 16 - SAFETY PROTECTION OF PERSON AND PROPERTY

SECTION 16.1 SAFETY REQUIREMENTS

It shall be the responsibility of each Contractor to ensure safe working conditions and employee compliance with any safety rules contained herein or established by Contractor. The Contractors shall establish their own safety programs implementing safety measures, policies, and standards conforming to those required or recommended by governmental and quasi-governmental authorities having jurisdiction. Each Contractor will ensure that applicable OSHA and New York State mandated safety requirements are at all times maintained on the Project and the employees and Unions agree to cooperate fully with these efforts. Employees must perform their Project Work at all times in a safe manner and protect themselves and the property of the Contractor and Owner from injury or harm. Failure to do so may be grounds for discipline, including discharge.

The Owner, Construction Manager, or Clerk of Works is not responsible for identifying unsafe practices, nor for failure to stop the Contractors' unsafe practices; and the Owner, Construction Manager's, or Clerk of Works' failure to stop the Contractors' unsafe practices shall not relieve the Contractors of complete responsibility for harm, injury and damages that may result.

SECTION 16.2 CONTRACTOR RULES

Employees covered by this Agreement shall at all times be bound by the reasonable safety, security, and visitor rules as established by the Contractor(s). Such rules will be referenced in the Contract Documents and may be distributed to Contractors for further distribution to personnel and/or posted in conspicuous places throughout the Project.

SECTION 16.3 INSPECTIONS

The Contractors, Owner, Architect/Engineer, and Construction Manager or Clerk of Works, if applicable, retain the right to inspect incoming shipments of equipment, apparatus, machinery, and construction materials of every kind.

The use, sale, transfer, purchase and/or possession of a controlled substance, and/or alcohol while on the Owner's premises at any time during the workday are prohibited. Contractors will implement a drug policy meeting minimum standards for Drug-Free Workplace Program. Consistent with the standards, reasonable searches as permitted under the law, including random searches, may be conducted of all employees on site. Any employee found to possess or be under the influence of an article prohibited by the standards, or refusing to be tested or consent to search, in the Construction Manager's sole discretion, may be removed from the Project site and denied future access.

The unauthorized use or possession of firearms, weapons, explosives, or incendiary material on or near the premises is prohibited. Any employee found to use or possess such firearms, weapons, explosives, or incendiary material, in the Construction Manager's sole discretion, may be removed from the Project site and denied future access.

XVII. ARTICLE 17 - TEMPORARY SERVICES

Temporary light, power, cooling, ventilation and other services shall only be required on the specific request of a Contractor and when requested shall be assigned in accordance with the Contract Documents. Temporary coverage may be provided by the supplying Contractor's employees already working under this Agreement during regular work hours. The supplying Contractor will determine the need for temporary coverage requirements during non-work hours. For safety reasons, temporary light and power panels will only be accessed by employees of the Contractor responsible for supplying the temporary light and power panels. Coverage requirements shall not require a standby employee who is not performing Project Work. There shall be no stacking of trades on temporary services. In the event temporary services are claimed by multiple trades, the matter shall be resolved pursuant to Article 10.

XVIII. ARTICLE 18 - SAVINGS AND SEPARABILITY

SECTION 18.1 THIS AGREEMENT

In the event that the application of any provision of this Agreement is enjoined, on either an interlocutory or permanent basis, or is otherwise determined to be in violation of law, the provision involved (and/or its application to a particular part of the Project, as necessary) shall be rendered, temporarily or permanently, null and void, but the remainder of the Agreement shall remain in full force and effect to the extent allowed by law. In such event, the Agreement shall remain in full force and effect for already bid and awarded or in construction aspects where the Contractor voluntarily accepts the Agreement, as altered, and the parties will immediately enter into negotiations for a substitute provision in conformity with the law and the intent of the parties hereto for contracts to be let in the future. It is understood and agreed that no work stoppage shall ensue.

SECTION 18.2 NON-LIABILITY AND NON-WAIVER

In the event of an occurrence referenced in Section 18.1 of this Article, neither Owner nor any Contractor, nor any signatory Union, shall be liable, directly or indirectly, for any action taken, to comply with any court order, inunction or determination; Project bid specifications will be issued in conformance with court orders then in effect and no retroactive payments or other action will be required if the original court determination is ultimately reversed.

Notwithstanding the foregoing, nothing in this Agreement is intended to be or shall be construed as a waiver by any Union(s) of any prevailing wage determination or schedule that is applicable to their trade for any public work that has been or may be performed in the future on any work outside the scope of this Agreement.

XIX. ARTICLE 19 - FUTURE CHANGES IN SCHEDULE A AREA CONTRACTS

SECTION 19.1 CHANGES TO AREA CONTRACTS

Each Schedule A agreement incorporated by reference into this Agreement by Schedule A shall continue in full force and effect until the Contractor and/or Union parties to the area collective bargaining agreements which are the basis for the applicable Schedule A agreement notify the Owner and Construction Manager or Clerk of Works, if applicable, in writing of the agreed upon changes in the Schedule A agreement which is applicable to the Project, and their effective dates. Such changes shall only be effective to the extent consistent with this Agreement. Any disagreement between signatories to this Agreement over the incorporation into Schedule A of provisions agreed upon in the renegotiation of area collective bargaining agreements shall be resolved in accordance with the procedure set forth in Article 9 of this Agreement.

SECTION 19.2 LABOR DISPUTES DURING AREA CONTRACT NEGOTIATIONS

The Unions agree that there shall be no strikes, work stoppages, sympathy actions, picketing, slowdowns or other disruptive activity or other violations of Article 7 affecting the Project by any Local Union involved in the renegotiation of area local collective bargaining agreements, nor shall there be any lock-out on this Project affecting a Local Union during the course of such renegotiations.

XX. ARTICLE 20 - PROJECT SPECIFIC

SECTION 20.1 WORKERS COMPENSATION ADR

At the written option of the Contractor and with the written approval of the Hudson Valley Building Trades Council, all Local Unions, Contractors and subcontractors working on this Project agree to be bound by the Collectively Bargained Workers Compensation Alternative Dispute Resolution Agreement (ADR Agreement), incorporated by reference into Schedule F to this Agreement, and to the ADR program set forth therein, by and between the Construction Industry Council of Westchester and the Hudson Valley, Inc., and the Building and Construction Trades Council of Westchester and Putnam County, New York, entered into on January 26, 2007, as amended.

SECTION 20.2 LABOR MANAGEMENT ALLIANCE

Where allowable by law, contributions on behalf of the employee and employer contributions shall be made to the Hudson Valley Building and Construction Trades Labor Management Alliance.

SECTION 20.3 CLEAN UP

A clean work site results in a safe and more productive job site. All cleanup during construction shall be performed by the trade having jurisdiction for cleanup in accordance with the Project Contract Documents. The Owner will ensure a clean and safe workplace. The Owner, Construction Manager, or General Contractor may back charge Contractors accordingly if clean

up becomes unsatisfactory.

Once construction is complete and a building, section, or floor is turned over to a professional cleaning company for final cleaning, including but not limited to, windows and floor prep, up to 33.3% of the Employees may be a direct employee of the cleaning company. Those direct employees shall be exempt from this Agreement.

SECTION 20.4 FURNITURE, FIXTURES AND EQUIPMENT (FFE)

Project work related to furniture, fixtures, and equipment that is free standing and requires no onsite assembly and is not fastened, mounted, anchored, hardwired or hard piped to any part of the building structure or surface by glue, screws, nails, mechanical fastener or by any other means is excluded from this agreement. Accordingly, for avoidance of doubt, all unloading, handling, assembly, installation and clean-up of all furniture, fixture, and equipment which requires fastening, mounting, anchoring, hardwiring or hard piped to any part of the building structure or surface by glue, nails, screws, mechanical fasteners, wire, pipe or by other means, or requires any onsite assembly shall be included Project Work under this agreement.

When the owner, construction manager or general contractor directs or contracts excluded work under this Section (20.4) to be performed, this Agreement shall apply.

XXI. ARTICLE 21 - MISCELLANEOUS

SECTION 21.1 GOVERNING LAW

This contract shall be governed by the laws of the State of New York without regard to choice of law provisions.

SECTION 21.2 ENTIRE AGREEMENT

This Agreement constitutes the entire agreement of the Parties with regard to the subject matter hereof, and supersedes all previous written or oral representations, agreements and understandings between the parties, whether expressed or implied. The Parties acknowledge and represent, by their signatures below, that the Parties have not relied on any representation, understanding, information, discussion, assertion, guarantee, warranty, collateral contract or other assurance, except those expressly set forth in the Lease and this Amendment, made by or on behalf of any other Party or any other person whatsoever, prior to the execution of this Amendment. The Parties waive all rights and remedies, at law or in equity, arising or which may arise as the result of a Party's reliance on such representation, understanding, information, discussion, assertion, guarantee, warranty, collateral contract or other assurance.

SECTION 21.3 NO ORAL MODIFICATION

No modification or amendment of any of the provisions of this Agreement will be valid unless it is in writing and signed by authorized representatives of the Parties.

SECTION 21.4 OWNER'S APPROVAL

In accordance with laws of the State of New York, if the Agreement may be made only by specified officers or board and in a specified manner that requires the approval of the Owner Board after a public hearing, the Agreement shall not be valid, effective or binding upon the Owner until it has been approved by the Owner following such public hearing.

IN WITNESS WHEREOF the parties have caused this Agreement to be executed and effective as of the 12th day of ~~December 2024~~ March, 2025.

Specification Section: 26 0912 - Control Panels and Integration

AquaLogics Systems, Inc. is pleased to offer the following proposal for your consideration.

Control Panel(s):

Qty.1- Control Building Main Control Panel (MCP) inclusive of the following:

- 72” H x 36” W x 18” D, NEMA 12 painted steel, free standing enclosure with door activated LED light, lockable handle and three-point latching system.
- Input Power: 120VAC, 1-phase, 60 Hz.
- CITEL 120VAC, 1-phase, 60 Hz. incoming power surge protector.
- Allen-Bradley branch circuit rated 120VAC control power circuit breakers as required.
- CyberPower 1000VA Uninterruptible Power Supply (UPS), 120VAC.
- Allen-Bradley, AC fuse disconnects with neon blown fuse indicator, qty. as required.
- Allen-Bradley, DC fuse disconnects with LED blown fuse indicator, qty. as required.
- PULS 240-watt, 24VDC power supply with input and output fuses as required.
- Allen-Bradley CompactLogix 5069-L320ER Programmable Logic Controller (PLC) with all required 5069 series I/O modules and accessories.
- Panel mounted Allen-Bradley PanelView Plus 7, 15” color touch screen Operator Interface Unit (OIU).
- Antaira LMX-2004G-SFP, twenty (20) port managed Ethernet switch, (16) TX ports, (4) SFP slots.
- Antaira SFP-M-T, 1GB fiber SFP transceivers as required, multimode, LC type fiber connections.
- RLH Industries Slimline fiber optic patch panel, DIN rail mount, LC-LC multimode fiber adapter plate.
- RLH Industries LC-LC duplex fiber patch cable, multimode, 2M/6.56 ft.
- Automation Direct StrideLinx SE-SL3011 Industrial VPN router.
- DCB XT-3305 Encrypted Ethernet Tunnel, supports up to eight (8) clients.
- Allen-Bradley panel mounted common alarm pilot light, red, 30-mm, push-to-test.
- Floyd Bell panel mounted alarm horn.
- Allen-Bradley panel mounted, alarm silence/reset pushbutton.
- Finder Wet floor Sensor (WFS) relays with SPDT relay output as required.
- All required relays, wire, terminal blocks and misc. control panel hardware.
- Completely factory programmed, assembled, wired and tested for proper functionality.
- UL508A Listed and Labeled.

Qty.1- MBR Building Remote I/O Panel (RIO-1) inclusive of the following:

- 72” H x 36” W x 18” D, NEMA 12 painted steel, free standing enclosure with door activated LED light, lockable handle and three-point latching system.
- Input Power: 120VAC, 1-phase, 60 Hz.
- CITEL 120VAC, 1-phase, 60 Hz. incoming power surge protector.
- Allen-Bradley branch circuit rated 120VAC control power circuit breakers as required.
- CyberPower 1000VA Uninterruptible Power Supply (UPS), 120VAC.
- Allen-Bradley, AC fuse disconnects with neon blown fuse indicator, qty. as required.
- Allen-Bradley, DC fuse disconnects with LED blown fuse indicator, qty. as required.
- PULS 240-watt, 24VDC power supply with input and output fuses as required.
- Allen-Bradley CompactLogix 5069-L330ER Programmable Logic Controller (PLC) with all required 5069 series I/O modules and accessories.
- Panel mounted Allen-Bradley PanelView Plus 7, 15” color touch screen Operator Interface Unit (OIU).
- Antaira LMX-2004G-SFP, twenty (20) port managed Ethernet switch, (16) TX ports, (4) SFP slots.
- Antaira SFP-M-T, 1GB fiber SFP transceivers as required, multimode, LC type fiber connections.
- RLH Industries Slimline fiber optic patch panel, DIN rail mount, LC-LC multimode fiber adapter plate.
- RLH Industries LC-LC duplex fiber patch cable, multimode, 2M/6.56 ft.
- Allen-Bradley panel mounted common alarm pilot light, red, 30-mm, push-to-test.
- Floyd Bell panel mounted alarm horn.
- Allen-Bradley panel mounted, alarm silence/reset pushbutton.
- Pepperl + Fuchs intrinsically safe relays/barriers as required.
- CITEL DLA-24D3 plug in analog input surge protectors as required.
- Phoenix Contact 2794903, varistor type discrete input surge protectors as required.
- Finder Wet floor Sensor (WFS) relays with SPDT relay output as required.
- All required relays, wire, terminal blocks and misc. control panel hardware.
- Completely factory programmed, assembled, wired and tested for proper functionality.
- UL698A Listed and Labeled.

Qty.1- Dewatering Building Remote I/O Panel (RIO-2) inclusive of the following:

- 72” H x 36” W x 18” D, NEMA 12 painted steel, free standing enclosure with door activated LED light, lockable handle and three-point latching system.
- Input Power: 120VAC, 1-phase, 60 Hz.
- CITEL 120VAC, 1-phase, 60 Hz. incoming power surge protector.
- Allen-Bradley branch circuit rated 120VAC control power circuit breakers as required.
- CyberPower 1000VA Uninterruptible Power Supply (UPS), 120VAC.
- Allen-Bradley, AC fuse disconnects with neon blown fuse indicator, qty. as required.
- Allen-Bradley, DC fuse disconnects with LED blown fuse indicator, qty. as required.
- PULS 240-watt, 24VDC power supply with input and output fuses as required.
- Allen-Bradley CompactLogix 5069-L320ER Programmable Logic Controller (PLC) with all required 5069 series I/O modules and accessories.
- Panel mounted Allen-Bradley PanelView Plus 7, 15” color touch screen Operator Interface Unit (OIU).
- Antaira LMX-2004G-SFP, twenty (20) port managed Ethernet switch, (16) TX ports, (4) SFP slots.
- Antaira SFP-M-T, 1GB fiber SFP transceivers as required, multimode, LC type fiber connections.
- RLH Industries Slimline fiber optic patch panel, DIN rail mount, LC-LC multimode fiber adapter plate.
- RLH Industries LC-LC duplex fiber patch cable, multimode, 2M/6.56 ft.
- Allen-Bradley panel mounted common alarm pilot light, red, 30-mm, push-to-test.
- Floyd Bell panel mounted alarm horn.
- Allen-Bradley panel mounted, alarm silence/reset pushbutton.
- All required relays, wire, terminal blocks and misc. control panel hardware.
- Completely factory programmed, assembled, wired and tested for proper functionality.
- UL508A Listed and Labeled.

Qty.1- Headworks Building Remote I/O Panel (RIO-3) inclusive of the following:

- 72” H x 36” W x 18” D, NEMA 12 painted steel, free standing enclosure with door activated LED light, lockable handle and three-point latching system.
- Input Power: 120VAC, 1-phase, 60 Hz.
- CITEL 120VAC, 1-phase, 60 Hz. incoming power surge protector.
- Allen-Bradley branch circuit rated 120VAC control power circuit breakers as required.
- CyberPower 1000VA Uninterruptible Power Supply (UPS), 120VAC.
- Allen-Bradley, AC fuse disconnects with neon blown fuse indicator, qty. as required.
- Allen-Bradley, DC fuse disconnects with LED blown fuse indicator, qty. as required.
- PULS 240-watt, 24VDC power supply with input and output fuses as required.
- Allen-Bradley CompactLogix 5069-L320ER Programmable Logic Controller (PLC) with all required 5069 series I/O modules and accessories.
- Panel mounted Allen-Bradley PanelView Plus 7, 15” color touch screen Operator Interface Unit (OIU).
- Antaira LMX-2004G-SFP, twenty (20) port managed Ethernet switch, (16) TX ports, (4) SFP slots.
- Antaira SFP-M-T, 1GB fiber SFP transceivers as required, multimode, LC type fiber connections.
- RLH Industries Slimline fiber optic patch panel, DIN rail mount, LC-LC multimode fiber adapter plate.
- RLH Industries LC-LC duplex fiber patch cable, multimode, 2M/6.56 ft.
- Allen-Bradley panel mounted common alarm pilot light, red, 30-mm, push-to-test.
- Floyd Bell panel mounted alarm horn.
- Allen-Bradley panel mounted, alarm silence/reset pushbutton.
- Pepperl + Fuchs intrinsically safe relays/barriers as required.
- CITEL DLA-24D3 plug in analog input surge protectors as required.
- Finder Wet floor Sensor (WFS) relays with SPDT relay output as required.
- All required relays, wire, terminal blocks and misc. control panel hardware.
- Completely factory programmed, assembled, wired and tested for proper functionality.
- UL698A Listed and Labeled.

Qty.1- ATAD Building Remote I/O Panel (RIO-4) inclusive of the following:

- 72” H x 36” W x 18” D, NEMA 12 painted steel, free standing enclosure with door activated LED light, lockable handle and three-point latching system.
- Input Power: 120VAC, 1-phase, 60 Hz.
- CITEL 120VAC, 1-phase, 60 Hz. incoming power surge protector.
- Allen-Bradley branch circuit rated 120VAC control power circuit breakers as required.
- CyberPower 1000VA Uninterruptible Power Supply (UPS), 120VAC.
- Allen-Bradley, AC fuse disconnects with neon blown fuse indicator, qty. as required.
- Allen-Bradley, DC fuse disconnects with LED blown fuse indicator, qty. as required.
- PULS 240-watt, 24VDC power supply with input and output fuses as required.
- Allen-Bradley CompactLogix 5069-L320ER Programmable Logic Controller (PLC) with all required 5069 series I/O modules and accessories.
- Panel mounted Allen-Bradley PanelView Plus 7, 15” color touch screen Operator Interface Unit (OIU).
- Antaira LMX-2004G-SFP, twenty (20) port managed Ethernet switch, (16) TX ports, (4) SFP slots.
- Antaira SFP-M-T, 1GB fiber SFP transceivers as required, multimode, LC type fiber connections.
- RLH Industries Slimline fiber optic patch panel, DIN rail mount, LC-LC multimode fiber adapter plate.
- RLH Industries LC-LC duplex fiber patch cable, multimode, 2M/6.56 ft.
- Allen-Bradley panel mounted common alarm pilot light, red, 30-mm, push-to-test.
- Floyd Bell panel mounted alarm horn.
- Allen-Bradley panel mounted, alarm silence/reset pushbutton.
- All required relays, wire, terminal blocks and misc. control panel hardware.
- Completely factory programmed, assembled, wired and tested for proper functionality.
- UL508A Listed and Labeled.

Qty.1- Microscreen Building Remote I/O Panel (RIO-5) inclusive of the following:

- 72” H x 36” W x 18” D, NEMA 12 painted steel, free standing enclosure with door activated LED light, lockable handle and three-point latching system.
- Input Power: 120VAC, 1-phase, 60 Hz.
- CITEL 120VAC, 1-phase, 60 Hz. incoming power surge protector.
- Allen-Bradley branch circuit rated 120VAC control power circuit breakers as required.
- CyberPower 1000VA Uninterruptible Power Supply (UPS), 120VAC.
- Allen-Bradley, AC fuse disconnects with neon blown fuse indicator, qty. as required.
- Allen-Bradley, DC fuse disconnects with LED blown fuse indicator, qty. as required.
- PULS 240-watt, 24VDC power supply with input and output fuses as required.
- Allen-Bradley CompactLogix 5069-L320ER Programmable Logic Controller (PLC) with all required 5069 series I/O modules and accessories.
- Panel mounted Allen-Bradley PanelView Plus 7, 15” color touch screen Operator Interface Unit (OIU).
- Antaira LMX-2004G-SFP, twenty (20) port managed Ethernet switch, (16) TX ports, (4) SFP slots.
- Antaira SFP-M-T, 1GB fiber SFP transceivers as required, multimode, LC type fiber connections.
- RLH Industries Slimline fiber optic patch panel, DIN rail mount, LC-LC multimode fiber adapter plate.
- RLH Industries LC-LC duplex fiber patch cable, multimode, 2M/6.56 ft.
- Allen-Bradley panel mounted common alarm pilot light, red, 30-mm, push-to-test.
- Floyd Bell panel mounted alarm horn.
- Allen-Bradley panel mounted, alarm silence/reset pushbutton.
- Pepperl + Fuchs intrinsically safe relays/barriers as required.
- CITEL DLA-24D3 plug in analog input surge protectors as required.
- Phoenix Contact 2794903, varistor type discrete input surge protectors as required.
- All required relays, wire, terminal blocks and misc. control panel hardware.
- Completely factory programmed, assembled, wired and tested for proper functionality.
- UL698A Listed and Labeled.

Qty.1- Sodium Hypochlorite Fill Station Control Panel (NACLO-FS-CP) inclusive of the following:

- Hoffman 20” H x 16” W x 12” D, NEMA 4X fiberglass wall mount enclosure.
- Input Power: 120VAC, 1-phase, 60 Hz.
- CITEL 120VAC, single-phase power surge protector.
- Allen-Bradley branch circuit rated 120VAC control power circuit breaker.
- (1) RedLion door mounted tank level indicators.
- (1) Allen-Bradley door mounted 90% full pilot lights, amber.
- (1) Allen-Bradley door mounted high level alarm pilot lights, red.
- Allen-Bradley door mounted, alarm silence/reset pushbutton.
- Federal Signal door mounted alarm horn.
- 125-watt thermostatically controlled; fan driven panel heater.
- All required relays, wire, cabling, terminal blocks and misc. control panel hardware.
- Completely factory assembled, wired and tested for proper functionality.
- UL508A listed and labeled.

Qty.1- Sodium Hydroxide Fill Station Control Panel (NAOH-FS-CP) inclusive of the following:

- Hoffman 20” H x 16” W x 12” D, NEMA 4X fiberglass wall mount enclosure.
- Input Power: 120VAC, 1-phase, 60 Hz.
- CITEL 120VAC, single-phase power surge protector.
- Allen-Bradley branch circuit rated 120VAC control power circuit breaker.
- (2) RedLion door mounted tank level indicators.
- (2) Allen-Bradley door mounted 90% full pilot lights, amber.
- (2) Allen-Bradley door mounted high level alarm pilot lights, red.

- Allen-Bradley door mounted, alarm silence/reset pushbutton.
- Federal Signal door mounted alarm horn.
- 125-watt thermostatically controlled; fan driven panel heater.
- All required relays, wire, cabling, terminal blocks and misc. control panel hardware.
- Completely factory assembled, wired and tested for proper functionality.
- UL508A listed and labeled.

Qty.1- Disinfection Building SCADA Panel Hardware Modifications inclusive of the following:

AquaLogics will provide and install the following components withing the existing Disinfection System SCADA Panel. Existing spare I/O points will be used to accommodate the I/O signals as outlined on the I/O Matrix and as required by the project. All hardware will be installed within the existing control panel, wired, programmed and tested for proper functionality.

- (2) Aeration Blower Operator Control Stations inclusive of the following:
  Nameplate, large, white w/black lettering.
  Allen-Bradley panel mounted 22mm Hand-Off-Auto (H-O-A) selector switch.
  Allen-Bradley panel mounted 18mm call, run and fail pilot lights.
  ENM panel mounted elapsed runtime meter, 5-digit.
- All required relays, wire, terminal blocks and misc. control panel hardware.
- Completely programmed, assembled, wired and tested for proper functionality.

<u>SCADA Hardware System and Software (WWTP and Butterhill Water System)</u>

Qty.2 - SCADA Workstations; Dell Precision T5860 Tower Computer Workstation inclusive of the following:

<u>Hardware</u>:

- Intel Xeon 4.2 GHz Six Core Processor.
- 32GB DDR4 Memory.
- Dual 1 TB solid state hard disk drives.
- Six (6) USB 2.0 ports.
- 10BaseT Ethernet adapter.
- USB Keyboard.
- USB optical mouse.
- (2) 27” flat panel monitors with adjustable stands and HDMI cables.

<u>Factory Configured and Installed Software</u>:

- Allen-Bradley 9701M-VWSTNST20 FactoryTalk View SE Standard, 250 display runtime.
- Allen-Bradley 9701M-VWSSPT30 FactoryTalk View SE, Studio for Development.
- XLReporter Reporting Software; XLR-BASIC-P perpetual and XLR-HIST-P Historian perpetual.
- WIN-911(upgrade at no charge as New Windsor has ongoing WIN-911 support).
- Microsoft Windows 11 PRO Operating System.
- Latest version of Microsoft Office Professional.
- Backup Software, latest version.

<u>Accessories</u>:

- Western Digital external USB drive, 1 TB.
- Workstation UPS; CyperPower 1000VA Uninterruptible Power Supply (UPS).
- DELL networkable color laser printer.
- Misc. Network Cabling.

Instrumentation:

Qty.5- VEGAPULS 31 radar level transmitters (15-LT-301, 15-LT-302, 15-LIT-303, 23-LIT-101, 23-LIT-102).

Qty.2- Keller America LevelRat submersible wetwell level transmitters with suspension kits (LT-5, LT-6).

Qty.2- Hach SC4500 Dissolved Oxygen Controller with LDO Dissolved Oxygen sensor, pole mount kit and 100' extension cable and controller UV screen (DOS-1/DOS-AE-1, DOS-2/DOS-AE-2).

Qty.13- SJE Rhombus normally-closed, non-mercury float switches with 30'cable and SS wall mount bracket for Flood Detection Sensors (FDS-200, FDS-201, FDS-400, FDS-401, FDS-500, FDS-501, FDS-502, FDS-503, FDS-700, FDS-701, FDS-800, FDS-801, FDS-802).

Qty.4- SJE Rhombus (2 normally-open, 2 normally-closed) non-mercury float switches with 50'cable and SS wall mount bracket for wetwell high and low level floats (FL-3, FL-4, FL-5, FL-6).

Qty.1- Combination Smoke and Carbon Monoxide Detector; Gentex model GN-503FF smoke/carbon monoxide detector (Headworks Electrical Room).

Qty.4- PULSAR/Greyline OCF 6.1 open channel flow meters with PZ15 sensor, 100' transducer cable and SS transducer mounting bracket (FIT-01, FIT-02, FIT-03, FIT-04).

Qty.4 - Pfannenberg PYRA Series Red/Green stack lights with sound. Chemical Leak Detection Alarming Lights and Horns (H/S-504, H/S-505, H/S-506, H/S-507).

Qty.12- Room Temperature Transmitters, non-classified area, Omega model EWS-TX with EWS-MB wall plate and gasket (TEMP-200, TEMP-400, TEMP-401, TEMP-500, TEMP-501, TEMP-502, TEMP-503, TEMP-504, TEMP-700, TEMP-701, TEMP-900, TEMP-901)

Qty.2- Room Temperature Transmitters, classified area, DWYER Instruments model TTE-104-W-LCD with wall mount bracket (TEMP-201, TEMP-202).

Qty.4- Wet Floor Sensors, FINDER model 072.11 floor mount sensor (WFS-200, WFS-500, WFS-900, WFS-901).

Spare Parts:

Qty.1- Lot Spare Parts as follows:

- One (1) PLC CPU of each type.
- One (1) PLC Power Supply of each type.
- One (1) PLC I/O module of each type.
- One (1) 24VDC panel power supply of each type.
- One (1) intrinsically safe barrier of each type.
- Two (2) surge protectors of each type.
- Five (5) fuses of each type.
- Five (5) pilot light bulbs of each type
- One (1) Horn/Strobe.

SCADA Integration and Programming Services:

Qty.1- Lot engineering services to provide integration of AquaLogics and OEM supplied control panels and instrumentation in conformance with project specifications. All required PLC, HMI and SCADA system programming, including screen development, data logging, historical logging, local and remote

alarming, operational reporting and remote access/control features will be fully configured, programmed and tested to ensure a fully operational control system in which meets all project requirements.

Field Services:

Qty.2- Day onsite service to provide installation instruction to the contractor.

Qty.25- Days onsite service to provide equipment start-up, final calibration, system programming and testing.

Qty.3- Days onsite service to provide operator training.

Documentation:

Qty.1- Electronic Submittal in PDF format, delivered via email.

Qty.1- Electronic Operations & Maintenance Manual in PDF format, USB thumb drive.

Qty.3- Hard Copy Operations & Maintenance Manuals, three-ring binders.

Pricing:

Taxes:

Sales or Use Taxes are not included.

Warranty:

All proposed equipment is warranted against system failure due to defects in workmanship and/or materials for a period of twelve (12) months from equipment start-up, not to exceed eighteen (18) months from date of shipment from our factory. This warranty does not cover failures due to human negligence and/or acts of nature.

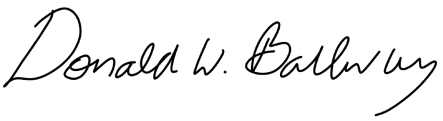
Not Included:

Equipment installation, field wiring, conduits or piping unless specifically stated above.

Freight:

Prepaid and included to New Windsor, NY.

Delivery:



Submittals: 6-8 weeks after receipt of order.
Equipment: 16-20 weeks after drawing approvals.

Terms:

95% Net 30 days, 5% retainage allowed, not to exceed 90 days from shipment.

Thank you for the opportunity to provide you with our quotation. Should you have any questions or desire additional information please don't hesitate to contact our office.

Best regards,
AquaLogics Systems, Inc.

ADVERTISEMENT FOR BIDS

Town of New Windsor
Orange County, New York
Caesar's Lane WWTP MBR System Pre-Selection

General Notice

The **Town of New Windsor** (Owner) is requesting Bids for the supply of the following equipment:

Caesars Lane WWTP MBR System Pre-Selection

Bids for the Project will be received at the **Town of New Windsor Town Hall** located at **555 Union Avenue, New Windsor, NY 12553** until **19 July 2022** at **2:00 PM** local time. At that time the Bids received will be **publicly** opened and read.

The Project includes the following Work:

A. The Work includes furnishing materials and equipment, supply, start-up, commissioning, performance testing, and operator training of the proposed membrane bioreactor (MBR) system.

B. One contract will be awarded for this Work by the Town. The awarded contract will be assumed by a General Contractor as part of the Caesars Lane WWTP Plant Expansion Project which will be bid at a later date.

C. Installation of membrane system equipment will be by a General Contractor as part of the Caesars Lane WWTP Plant Expansion Project.

Obtaining the Bidding Documents

Bidding Documents will be provided electronically, becoming available 13 May 2022 via a shared file link by submitting an email to the Town's Engineer/Issuing Office MHE Engineering, D.P.C., **dsorvillo@mhepc.com or jzajac@mhepc.com.** Prospective Bidders are required to register as a plan holder, by requesting these documents in electronic format through the issuing office. Those who obtain documents through other sources for the purposes of viewing are not considered plan holders and will be ineligible to bid.

The Issuing Office for the Bidding Documents is:

MHE Engineering, D.P.C.
33 Airport Center Drive, Suite 202
New Windsor, NY 12553
Attn: Jamison Zajac
845-567-3100

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

Instructions to Bidders.

For all further requirements regarding bid submittal, qualifications, procedures, and contract award, refer to the Instructions to Bidders that are included in the Bidding Documents.

Each bid shall be accompanied by an acceptable form of Bid Guarantee in an amount equal to at least five (5) percent of the amount of the Bid payable to the Town of New Windsor as a guarantee that if the Bid is accepted, the Bidder will, within fifteen (15) days after the award of the Contract, execute the Contract and file acceptable Performance and Labor and Material Payment Bonds and Certificate(s) of Insurance.

OWNERS RIGHTS RESERVED: The Town of New Windsor, hereinafter called the Owner, reserves the right to reject any or all Bids and to waive any informality or technicality in any Bid in the interest of the Owner.

STATEMENT OF NON-COLLUSION: Bidders on Contracts are required to execute a non-collusive bidding affidavit pursuant to Section 103d of the General Municipal Law of the State of New York.

IRAN DIVESTMENT ACT: By submission of this bid, each bidder and each person signing on behalf of any bidder certifies, and in the case of a joint bid, each party thereto certifies as to its own organization, under penalty of perjury, that to the best of its knowledge and belief, each bidder is not on the list created pursuant to paragraph (b) of subdivision 3 of section 165-a of the State Finance Law.

Attention of bidders is particularly called to the requirement as to conditions of employment to be observed and the minimum wage rates to be paid under the Contract (Section 3, Segregated Facilities, Section 109) and Executive Order 11246.

Bidders are also required to comply with the provisions of Section 291-299 of the Executive Law of the State of New York.

No bidder may withdraw their bid within forty-five (45) days after the actual date of the opening thereof.

Subject to the provisions of Article 28, Part III of the New York State Tax Law and the provisions of the Contract Documents, the Owner is exempt from payment of sales and compensating use taxes of the State of New York, and cities and counties, on all materials supplied to the Owner pursuant to this contract.

The Town of New Windsor hereby notifies all bidders that it will affirmatively ensure that in regard to any contract entered into pursuant to this advertisement, minority business enterprises will be afforded full opportunity to submit bids in response to this invitation and will not be discriminated against on the ground of race, gender, color or national origin in consideration of an award.

American Iron and Steel

Section 746 of Title VII of the Consolidated Appropriations Act of 2017 (Division A - Agriculture, Rural Development, Food and Drug Administration, and Related Agencies Appropriations Act, 2017) and subsequent statutes mandating domestic preference applies an American Iron and Steel requirement to this project. All iron and steel products used in this project must be produced in the United States. The term "iron and steel products" means the following products made primarily of iron or steel: lined or unlined pipes and fittings, manhole covers and other municipal castings, hydrants, tanks, flanges, pipe clamps and restraints, valves, structural steel, reinforced precast concrete, and Construction Materials.

The following waivers apply to this Contract:
***De Minimis*,**
Minor Components,
Pig iron and direct reduced iron

INSTRUCTIONS TO BIDDERS FOR PROCUREMENT CONTRACT

ARTICLE 1—DEFINED TERMS

1.01 Terms used in these Instructions to Bidders will have the meanings indicated in the General Conditions and Supplementary Conditions. Additional terms used in these Instructions to Bidders have the meanings indicated below.

A. *Issuing Office*—The office from which the Procurement Bidding Documents are to be issued.

ARTICLE 2—PROCUREMENT BIDDING DOCUMENTS

2.01 Bidder may obtain complete sets of the Procurement Bidding Documents, in the number and for the deposit sum, if any, stated in the advertisement or invitation to bid, from the Issuing Office. The deposit will be refunded to each document holder of record who returns a complete set of Procurement Bidding Documents in good condition within 30 days after opening of Bids. Bidders must obtain a complete set of the Procurement Contract Documents as listed in the Procurement Agreement.

2.02 Bidder must use a complete set of the Procurement Bidding Documents in preparing the Bid; neither Buyer nor Engineer assumes any responsibility for errors or misinterpretations resulting from the use of incomplete sets of Procurement Bidding Documents.

2.03 Buyer and Engineer make copies of Procurement Bidding Documents available on the above terms only for obtaining Bids for furnishing Goods and Special Services, and do not authorize or confer a license for any other use.

ARTICLE 3—QUALIFICATIONS OF BIDDERS

3.01 Buyer may at any time conduct such investigations as Buyer deems necessary to establish the responsibility, qualifications, and financial ability of Bidder, and after the opening of Bids may require a Bidder to submit documentation of its qualifications, including but not limited to financial data and documentation of previous experience providing goods and services comparable to the specified Goods and Special Services.

3.02 Bidder is to carefully review those portions of the Bid Form requiring Bidder's representations and certifications.

3.03 Bidder shall submit a qualifications statement with the Bid, including financial data and documentation of previous experience providing comparable goods and services, to demonstrate Bidder's qualifications to furnish the specified Goods and Special Services.

ARTICLE 4—SITE VISIT; PRE-BID CONFERENCE

4.01 Buyer recommends that Bidder visit the Point of Destination and the site where the Goods are to be installed and Special Services will be provided, taking into account observable local and site conditions that may affect the delivery, cost, progress, and furnishing of the Goods and Special

Services. Arrangements for such a visit may be made through Engineer. Point of destination is designated as: 145 Caesars Lane, New Windsor, NY 12553.

4.02 A pre-bid conference will not be held for this procurement.

ARTICLE 5—INTERPRETATIONS AND ADDENDA

5.01 All questions about the meaning or intent of the Procurement Bidding Documents are to be submitted to Engineer in writing **via email to jzajac@mhepc.com & dsorvillo@mhepc.com.**

5.02 Interpretations or clarifications considered necessary by Engineer in response to such written questions will be issued by Addenda digitally to all parties recorded as having received the Procurement Bidding Documents. Questions received less than 10 days prior to the date for opening of Bids will not be answered. Only answers in the Addenda will be binding. Oral statements, interpretations, and clarifications may not be relied upon in the preparation of a Bid, and will not be binding or legally effective.

5.03 Addenda may be issued to clarify, correct, or change the Procurement Bidding Documents as deemed advisable by Buyer or Engineer.

ARTICLE 6—BID SECURITY

6.01 A Bid must be accompanied by Bid security made payable to Buyer in an amount of **five (5)** percent of Bidder's maximum Bid price (determined by adding the base bid and all alternates) and in the form of a Bid bond issued by a surety meeting the requirements of Paragraph 5.01 of the General Conditions. Such Bid bond will be issued in the form included in the Procurement Bidding Documents.

6.02 The Bid security of the apparent Successful Bidder will be retained until Buyer (Project Owner) awards the Procurement Contract to such Bidder, and such Bidder has executed the Procurement Contract, furnished the required contract security, and met the other conditions of the Notice of Award, whereupon the Bid security will be released. If the Successful Bidder fails to execute and deliver the Procurement Contract and furnish the required contract security within 15 days after the Notice of Award, Buyer (Project Owner) may consider Bidder to be in default and annul the Notice of Award, and the Bid security of that Bidder will be forfeited, in whole in the case of a penal sum bid bond, and to the extent of Buyer's damages in the case of a damages-form bond. Such forfeiture will be Buyer's exclusive remedy if Bidder defaults.

6.03 The Bid security of other Bidders that Buyer believes to have a reasonable chance of receiving the award may be retained by Buyer until the earlier of 7 days after the Effective Date of the

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

Procurement Contract or 61 days after the Bid opening, whereupon Bid security furnished by such Bidders will be released.

6.04 Bid security of other Bidders that Buyer believes do not have a reasonable chance of receiving the award will be released within 7 days after the Bid opening.

ARTICLE 7—PROCUREMENT CONTRACT TIMES

7.01 See applicable provisions in the Procurement Agreement.

ARTICLE 8—LIQUIDATED DAMAGES

8.01 Any provisions for liquidated damages, such as those for Seller's failure to attain a specified Milestone such as the delivery of the Goods, are set forth in the Procurement Agreement.

ARTICLE 9—CONFIDENTIALITY OF BID INFORMATION

9.01 Confidential information is information in the Bid, or in documents submitted by Bidder with the Bid or submitted subsequent to the opening of Bids in support of the Bid, that Bidder clearly and prominently labels in writing to be a trade secret, proprietary, or confidential. Bids will be opened and accompanying documents, if any, will be maintained in a manner that endeavors to avoid disclosing confidential information to third parties, to the extent allowed by Laws and Regulations.

9.02 Bidder shall clearly and prominently mark confidential information with the word "CONFIDENTIAL" on each page or sheet or on the cover of bound documents. Place "CONFIDENTIAL" stamps or watermarks so that they do not obscure any of the required information on the document, either in the original or in a way that would obscure any of the required information in a photocopy of the document.

9.03 If Buyer is requested to disclose confidential information, becomes legally compelled to disclose confidential information, or is required by a regulatory body, governing agency, or controlling authority to disclose confidential information, or make any other disclosure that is prohibited or otherwise constrained by these Procurement Bidding Requirements, Buyer will provide Bidder with prompt notice so Bidder may seek a protective order or other appropriate remedy. Bidder will be solely responsible for submitting to the regulatory body, governing agency, or controlling authority any arguments, briefs, memoranda, motions, authorities, or other information in opposition to disclosure.

9.04 Buyer's obligations with respect to confidential information are nullified by the following exceptions:

A. Confidential information becomes a part of the public domain through publication or otherwise, through no fault of the Buyer;

B. Buyer can demonstrate through suitable documentation that the confidential information was already in the Buyer's possession, and not previously marked as confidential, or was otherwise publicly available prior to the date of Bid submittal;

C. The confidential information is subsequently and independently disclosed to the Buyer by a third party who has a lawful right to disclose such information;

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

D. Buyer concludes in good faith that the information is not confidential, or that disclosure is required or justified; or

E. Buyer is required to disclose the confidential information by court order or by applicable Laws and Regulations.

9.05 Notwithstanding any other provision of the Procurement Bidding Documents, it is stipulated and agreed that by accepting a Bid, Buyer has not and does not waive its legal immunity (if any) from suit or liability.

ARTICLE 10—"OR-EQUAL" ITEMS

10.01 The Procurement Contract, if awarded, will be based on material and equipment specified in the Procurement Bidding Documents without consideration of possible "or-equal" items. Whenever it is specified or described in the Procurement Bidding Documents that an "or-equal" item of material or equipment may be furnished or used by Seller if acceptable to Engineer, application for such acceptance will not be considered by Engineer until after the Effective Date of the Procurement Contact. The procedure for submittal of any such application by Seller and consideration by Engineer is set forth in the General Conditions and may be supplemented in the Procurement Specifications.

10.02 Deleted.

ARTICLE 11—PREPARATION OF BID

11.01 The Bid Form is included with the Procurement Bidding Documents. Additional copies of Procurement Bidding Documents may be obtained from the Issuing Office.

11.02 All blanks on the Bid Form must be completed and the Bid Form must be signed by an individual authorized to act on behalf of the Bidder. Alterations must be initialed by an individual authorized to act on behalf of the Bidder. A Bid price must be indicated for each item in the Bid Form. In the case of optional alternates, the words "No Bid" may be entered.

11.03 Bidder must acknowledge all Addenda by filling in the number and date of each Addendum in the Bid Form and sign where indicated to verify that the Addenda were received. A Bid that does not acknowledge receipt of all Addenda may be considered non-responsive.

11.04 Bidder shall:

A. Sign the Bid Form as indicated in the Bid Form.

B. Include evidence of authority to sign.

C. Provide information on the individual to be contacted for any communications regarding the Bid.

D. Provide evidence of the Bidder's authority and qualification to do business in the locality of the Project, to the extent required, or indicate the ability to obtain such authority and qualification prior to award of the Procurement Contract.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

11.05 The responsibilities of each Bidder submitting a Bid are described in the Bidder's representations and certifications set forth in Article 6 of the Bid Form.

ARTICLE 12—BASIS OF BID; COMPARISON OF BIDS

12.01 TYPE OF BID

A. Membrane system equipment shall be an evaluated bid considering, but not limited to capital cost of membrane system equipment and design support services, and 10-year life cycle analysis. Life cycle analysis is based on Bid Worksheets , which outline annual and construction cost of process tanks, cleaning chemical consumption, power costs of pumps and blower operations, annual service contract including remote monitoring and support, and membrane replacement. MBR System Capital Cost Table Bid Worksheets are identified in the Bid Form.

ARTICLE 13—SUBMITTAL OF BID

13.01 Bidder shall refer to the **advertisement** for specific identification of the date, time, and place where Bids are to be submitted.

13.02 Bidder must submit one separate unbound copy of the completed Bid Form, and, if required, the Bid Security and the other documents required to be submitted under the terms of Article 4 of the Bid Form.

13.03 A Bid must be submitted no later than the date and time prescribed and at the place indicated in the advertisement or invitation to bid. Submit the Bid in an envelope plainly marked with the Project title (and, if applicable, the designated portion of the Project for which the Bid is submitted) and the name and address of Bidder. Enclose the Bid security and other documents required to be submitted with the Bid as listed in the Bid Form. If a Bid is sent by mail or other delivery system, the sealed envelope containing the Bid shall be enclosed in a separate package plainly marked on the outside with the notation "BID ENCLOSED."

ARTICLE 14—MODIFICATION OR WITHDRAWAL OF BID

14.01 A Bid may be modified or withdrawn by a document duly signed in the same manner that a Bid must be signed and delivered to the place where Bids are to be submitted prior to the date and time for the opening of Bids.

14.02 If, within 24 hours after Bids are opened, any Bidder files a duly signed written notice with Buyer and promptly thereafter demonstrates to the reasonable satisfaction of Buyer that there was a material and substantial mistake in the preparation of its Bid, that Bidder may withdraw its Bid, and the Bid security will be returned.

ARTICLE 15—OPENING OF BIDS

15.01 Bids will be publicly opened at the time and place indicated in the advertisement or invitation to bid and read aloud, unless obviously non-responsive. An abstract of the amounts of the Base Bids

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

and Alternate Bids, if any, will be made available to Bidders after Bids have been opened and reviewed by the Buyer.

15.02 Deleted.

ARTICLE 16—BIDS TO REMAIN SUBJECT TO ACCEPTANCE

16.01 All Bids will remain subject to acceptance for the period stated in the Bid Form, but Buyer may, in its sole discretion, release any Bid and return the Bid security prior to the end of this period.

ARTICLE 17—EVALUATION OF BIDS AND AWARD OF PROCUREMENT CONTRACT

17.01 Buyer reserves the right to reject any and all Bids, including without limitation, nonconforming, nonresponsive, unbalanced, or conditional Bids. Buyer also reserves the right to waive all informalities not involving price, time, or changes in the Goods and Special Services.

17.02 Buyer will reject the Bid of any Bidder that Buyer finds, after reasonable inquiry and evaluation, to not be responsible.

17.03 In evaluating Bids, Buyer will consider whether the Bids comply with the prescribed requirements, and such alternates, unit prices, and other data as may be requested in the Bid Form or may be requested from Bidders prior to a Notice of Award.

17.04 Buyer reserves the right to reject any and all bids that do not meet the experience requirements.

17.05 If Buyer awards the Procurement Contract, such award will be to the lowest responsive and responsible proposal as determined by the Buyer to be in its best interest.

ARTICLE 18—BONDS AND INSURANCE

18.01 Article 5 of the General Conditions and Article 5 of the Supplementary Conditions set forth Buyer's requirements as to performance and payment bonds and insurance. When the Successful Bidder delivers the signed Procurement Agreement to Buyer, it must be accompanied by such bonds and acceptable evidence of insurance.

ARTICLE 19—SIGNING OF PROCUREMENT AGREEMENT

19.01 When Buyer issues a Notice of Award to the Successful Bidder, it will be accompanied by the unsigned counterparts of the Procurement Agreement along with the other Procurement Contract Documents identified in the Procurement Agreement. Within 15 days thereafter, Successful Bidder must execute and deliver the required number of counterparts of the Procurement Agreement and any bonds and insurance documentation required to be delivered by the Procurement Contract Documents to Buyer. Within 10 days thereafter, Buyer will deliver one fully executed counterpart of the Procurement Agreement to Successful Bidder, together

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

with printed and electronic copies of the Procurement Contract Documents as stated in Paragraph 2.02 of the General Conditions.

ARTICLE 20—SALES AND USE TAXES

20.01 Buyer is exempt from **New York** State sales and use taxes on materials and equipment to be incorporated in the Project (Exemption No. **14-6002338**). Exempt taxes must not be included in the Bid. Refer to P-800, Paragraph SC-7.05 for additional information.

ARTICLE 21—PROCUREMENT CONTRACT TO BE ASSIGNED

21.01 Bidder's attention is directed to the provisions of Article 5 of the Procurement Agreement which provide for the assignment of the Procurement Contract to a construction contractor designated by the Buyer to construct the **Caesars Lane WWTP Expansion Project.** Successful Bidder (Seller) will be required to perform the Procurement Contract after it has been assigned to the construction contractor (Contractor Assignee) in accordance with the provisions in the Procurement Contract. Timing of the assignment is addressed in the Procurement Agreement. Forms documenting the assignment of the Procurement Contract and for the agreement of the Seller's surety to such assignment are included as attachments to the Procurement Agreement.

3 Bid Bond

BID FORM FOR PROCUREMENT CONTRACT

The terms used in this Bid with initial capital letters have the meanings stated in the Instructions to Bidders, the General Conditions, and the Supplementary Conditions.

ARTICLE 1—BUYER AND BIDDER

1.01 This Bid for Caesars Lane WWTP MBR System Pre-Selection is submitted to:

Town of New Windsor

555 Union Avenue

New Windsor, NY 12553

1.02 The undersigned Bidder proposes and agrees, if this Bid is accepted, to enter into a Procurement Contract with Buyer in the form included in the Procurement Bidding Documents, and to furnish the Goods and Special Services as specified or indicated in the Procurement Bidding Documents, for the prices and within the times indicated in this Bid, and in accordance with the other terms and conditions of the Procurement Bidding Documents.

ARTICLE 2—BASIS OF BID

2.01 *Base Bid Price*

A. Bidder shall complete the attached Bid Tables and Worksheets that contain the required formulas and submit with their bid. Bids received without a completed Worksheets shall be deemed unresponsive. Bids received with Worksheets completed incorrectly (i.e., provided formulas not used, miscalculated, or doesn't match submittal information) shall be deemed unresponsive.

B. Bidder acknowledges that the MBR System Capital Cost line item below represents the actual price for the equipment to be paid by the Buyer and will reflect the amount to be used in the Agreement.

C. Bidder acknowledges that any discrepancy between the attached Worksheets and the Bid Summary Table below shall be resolved by using the lower cost/value when comparing bid costs.

D. Bidder acknowledges that the formulas and definitions provided in the attached Worksheets were developed to provide a fair estimate of the 10-year cost value to the Buyer, as a result of selecting the Bidder's equipment.

E. Bidder acknowledges that the other line items in the table below are considered in addition to the MBR System Capital Costs for purposes of bid comparison; providing the highest probability of determining the most cost-effective bid for the buyer over the next 10 years for this project.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

F. Bidder hereby agrees to perform all Work as described in the Specifications and as shown on the Drawings of these Contract Documents, complete for the following Total Bid Cost price indicated in the following Bid Summary Table:

(Note: Total Bid Cost includes Items 1, 2, 4, and 5)

BID SUMMARY TABLE

Item No.	Description	Extended Total Price
1.	Capital MBR System Costs (See Table in Section 2.01.G)	$ 3,826,000
2.	Annual Service Cost (Table A-12, Line A) x 7.4	$ Included in the Capital MBR Cost
3.	Annualized Maintenance Cost (Table B)	$ 451,339
4.	Construction Costs (Table C-4, Line C.12)	$ 5,322,402
5.	Present Worth O&M (Line 3 x 7.4)	$ 3,339,908
	TOTAL BID COST (Sum of all rows)	**$ 12,488,310**

TOTAL BID COST TWELVE MILLION AND FOUR HUNDRED EIGHTY EIGHT THOUSAND AND THREE HUNDRED TEN

(in words)

G. The MBR System Capital Cost Schedule summarizes the corresponding Unit Price and Extended Total Price for each Cost Item. Bidder acknowledges that the Extended Total Price shall be full compensation for all Base Bid Work complete, as described for each scheduled Bid Item.

MBR SYSTEM CAPITAL COST SCHEDULE

Item No.	Description	Unit	Estimated Quantity	Unit Price	Extended Total Price
1.	Bonds and Insurance	LS	1	$ 65,821	$ 65,821
2.	Submittals	LS	1	$ 167,437	$ 167,437
3.	Membrane Units and MBR Integral Interconnecting	LS	1	$ 1,996,209	$ 1,996,209
4.	Pumps, Mixers, Blowers, Diffusers, Valves etc.	LS	1	$ 1,043,983	$ 1,043,983
5.	Chemical Cleaning Systems	LS	1	$ 73,127	$ 73,127
6.	Instrumentation and Controls	LS	1	$ 233,167	$ 233,167
7.	Start-up, Commissioning and Training	LS	1	$ 85,365	$ 85,356
8.	Miscellaneous	LS	1	$ 160,900	$ 160,900
				TOTAL MBR SYSTEM CAPITAL COST	**$ 3,826,000**

TOTAL MBR SYSTEM CAPITAL COST THREE MILLION AND EIGHT HUNDRED TWENTY SIX THOUSAND

(in words)

H. Estimated annual operation and maintenance costs are based on the Average Daily Flow and wastewater characteristics listed in the Section 455000 Membrane Filtration System. Costs should be stated for continuous steady state operation at ADF. Assumed diurnal curve modeling will not be accepted.

I. Bidder shall attach all tables and worksheets as part of evaluated bid submittal package.

J. Bidder shall attach Bid Submittals required in Section 455000 Membrane Filtration System.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

2.02 *Major Equipment and Systems Suppliers*

A. In connection with major items of equipment to be furnished and installed in this Project, Bidder expressly agrees to the following provisions:

1. That the Total Base Bid Price stated above includes the furnishing of major equipment, products, and systems furnished by the Supplier which Bidder has selected from those suppliers listed in table "Schedule of Proposed Major Equipment and Systems Suppliers" completed as part of this Bid Form; and Bidder has circled the name of the selected Supplier in the "Schedule of Proposed Equipment Suppliers" form in this Section.

B. The "Schedule of Proposed Major Equipment and Systems Suppliers" in this Bid Form shall be binding in terms of the selected equipment, products, systems, and suppliers to be provided by the Bidder under the Total Base Bid Price.

2.03 Substitutions for Major Equipment and Systems

A. Substitutions offered by Bidder shall be governed by the requirements of the General Conditions; and Product Requirements of these Specifications. Bidder expressly agrees to the following provisions:

1. Where proposed substitutions for major equipment and system items listed in the "Schedule of Proposed Major Equipment and Systems Suppliers" form are to be considered, they must be designated by Bidder in the spaces provided on the Schedule Form.

2. Contract Price will be determined on the basis of the lowest Total Base Bid Price or adjusted Total Base Bid Price. Substitutions for Major Equipment and Systems proposed by Bidder and deemed by Buyer to be acceptable shall be considered only after Contract Award.

The remainder of this page was left blank intentionally.

Notes:

(1) Instructions for listing supplier or manufacturer included in Bidder's Base Bid Price under Column E:

a. Circle name of one supplier or manufacturer for each item listed under Column A to be included in the Bidder's Base Bid Price.

b. Proposal shall be considered irregular and subject to rejection if Bidder:

1) Fails to list (by circling) an approved Supplier or Manufacturer listed under Column E;

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

ARTICLE 3—TIME OF COMPLETION

3.01 Bidder agrees that the furnishing of Goods and Special Services will conform to the schedule of Procurement Contract Times set forth in Article 2 of the Procurement Agreement.

3.02 Bidder accepts the provisions of the Procurement Agreement as to liquidated damages.

ARTICLE 4—ATTACHMENTS TO THIS BID

4.01 The following documents are attached to and made a condition of this Bid:

A. Required Bid security in the form prescribed in the Instructions to Bidders.

B. Evidence of authority to do business in the state of the Project; or a written covenant to obtain such authority within the time for acceptance of Bids.

C. Evaluated bid submittal in accordance with Specification 455000.

D. Required Bidder Qualification Statement with supporting data.

ARTICLE 5—BIDDER'S ACKNOWLEDGMENTS

5.01 Bidder accepts all terms and conditions of the Instructions to Bidders. This Bid will remain subject to acceptance for 45 days after the Bid opening, or for such longer period that Bidder may agree to in writing upon request of Buyer.

5.02 Bidder has examined and carefully studied the Procurement Bidding Documents, the related data identified in the Procurement Bidding Documents, and the following Addenda, receipt of which is hereby acknowledged:

Addendum No.	Addendum Date
1	June 29, 2022
2	July 08, 2022

ARTICLE 6—BIDDER'S REPRESENTATIONS AND CERTIFICATIONS

6.01 *Bidder's Representations*

A. In submitting this Bid, Bidder represents that:

1. Bidder has examined and carefully studied the Procurement Contract Documents.

2. If required by the Instructions to Bidders to visit the Point of Destination and the site where the Goods are to be installed or Special Services will be provided, or if, in Bidder's judgment, any observable local or site conditions may affect the delivery, cost, progress, or furnishing of the Goods and Special Services, then Bidder has visited the Point of Destination and site where the Goods are to be installed or Special Services will be provided (as applicable) and become familiar with and is satisfied as to the observable local and site conditions that may affect delivery, cost, progress, and furnishing of the Goods and Special Services.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

3. Bidder is familiar with and is satisfied as to all Laws and Regulations that may affect the cost, progress, and performance of Seller's obligations under the Procurement Contract.

4. Bidder has carefully studied, considered, and correlated the information known to Bidder with respect to the effect of such information on the cost, progress, and performance of Seller's obligations under the Procurement Contract.

5. Bidder has given Engineer written notice of all conflicts, errors, ambiguities, or discrepancies that Bidder has discovered in the Procurement Contract Documents, and the written resolution (if any) thereof by Engineer is acceptable to Bidder.

6. The Procurement Contract Documents are generally sufficient to indicate and convey understanding of all terms and conditions for performance of Seller's obligations under the Procurement Contract.

7. The submission of a Bid will constitute an incontrovertible representation by Bidder that Bidder has complied with every requirement of the Bidding Requirements, that without exception the Bid (including all Bid prices) is premised upon furnishing the Goods and Special Services as required by the Procurement Contract Documents.

6.02 *Bidder's Certifications*

A. Bidder certifies that:

1. This Bid is genuine and not made in the interest of or on behalf of any undisclosed individual or entity and is not submitted in conformity with any collusive agreement or rules of any group, association, organization, or corporation;

2. Bidder has not directly or indirectly induced or solicited any other Bidder to submit a false or sham Bid;

3. Bidder has not solicited or induced any individual or entity to refrain from bidding; and

4. Bidder has not engaged in corrupt, fraudulent, collusive, or coercive practices in competing for the Procurement Contract. For the purposes of this Paragraph 6.02.A.4:

a. "corrupt practice" means the offering, giving, receiving, or soliciting of anything of value likely to influence the action of a public official in the bidding process;

b. "fraudulent practice" means an intentional misrepresentation of facts made (a) to influence the bidding process to the detriment of Buyer, (b) to establish bid prices at artificial non-competitive levels, or (c) to deprive Buyer of the benefits of free and open competition;

c. "collusive practice" means a scheme or arrangement between two or more Bidders, with or without the knowledge of Buyer, a purpose of which is to establish bid prices at artificial, non-competitive levels; and

d. "coercive practice" means harming or threatening to harm, directly or indirectly, persons or their property to influence their participation in the bidding process.

Bid Analysis
Overview

MBR System proposals shall be evaluated based upon the base bid schedule, present work cost and as noted below:

The evaluation shall consider both financial and non-financial criteria. In addition to the quantitative evaluation of the MBR System Cost and Total Present Worth, the evaluator(s) shall allow careful consideration for non-quantitative evaluation parameters of System Flexibility, Warranty, and Reliability and Technical Support Capabilities. If the Town of New Windsor awards the procurement contract, such award will be to the responsible bidder submitting the bid that best suits the Town's needs.

The following general notes for the basis for the quantitative analyses:

A. Costs and operational requirements are to be based on the Scopes of Supply, process treatment requirements, and hydraulic design requirements as stated in this Specification. If the bidder requires additional information, such as water chemistry, bidder shall request such information a minimum of 30 days prior to bid opening.

B. Membrane replacement shall be set equal to the Warranty Period.

C. Please note that information regarding the Membrane Service Conditions and expected maintenance requirements shall be set equal to the minimum replacement frequency as stated in related O&M materials. For example, if the replacement frequency in the O&M manual that suggests wear items such as seals, retaining rubbers or diffusers shall be replaced every 3-7 years, the System Supplier shall assume a replacement of every 3 years in the Proposal.

D. Annualized operations and maintenance costs are based on Average Daily Flow conditions.

E. Calculation of the present worth of annual costs shall use a Present Worth Factor of 7.4, equal to 10 years at a 6% discount rate.

F. The average electrical Energy costs are assumed to be $0.20/kWh.

G. The calculation of present worth is based on a 10-year plant life cycle for operating and maintenance.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

Note: SUEZ's base design is based on a full siphon. With a siphon design, there will be no permeate pumps, and the overall plant power requirement will be reduced. So this table is not applicable.

Table A-1: Permeate Pumps Power Consumption - Siphon Design

Line ID	Parameter	Unit	Value
A	Total Number of Pumps Provided	#	0
B	Total Number of Duty Pumps	#	0
C	Design Capacity of Pumps	gpm @ TDH	n/a
D	Operating Capacity at ADF (total for all operating pumps)	gpm	n/a
E	Average Operating Transmembrane Pressure (average value of the minimum and maximum values provided by the Supplier.)	ft	n/a
F	Static Discharge Head	ft	-2
G	Suction Piping HL	ft	n/a
H	Total Head (E+F+G, ignore discharge piping HL)	ft	n/a

Table A-5: Sodium Hypochlorite Cleaning Consumption

Line ID	Description of Cleaning Event	Frequency (#/yr)	Volume (gal/each)	Total Volume (gal/yr)
A	Sodium Hypochlorite Maintenance Clean	156 (per plant)	12.4	1,940
B	Sodium Hypochlorite Other Clean (Recoery Cleaning)	6 (per plant)	144.8	869
C	Sodium Hypochlorite Other Clean (n/a)	n/a	n/a	n/a
D	Total Usage (12.5% solution)	N/A	N/A	2,809
E	Annual Cost @ $1.80/gallon	$ 3,491 (MCs)	$ 1,564 (RCs)	$ 5,055

Note: Membrane sodium hypochlorite cleaning is based on ADF condition: 1 MC/train per week, and 2 RC per year per train.

Table A-6: Citric Acid Cleaning Consumption

Line ID	Description of Cleaning Event	Frequency (#/yr)	Volume (gal/each)	Total Volume (gal/yr)
A	Citric Acid Maintenance Clean	0	n/a	0
B	Citric Acid Other (Recovery Cleaning)	6 (per plant)	70.1	421
C	Citric Acid Other (n/a)	n/a	n/a	n/a
D	Total Usage (50% solution)	N/A	N/A	421
E	Annual Cost @ $1.90/gallon	$ 0	$ 800	$ 800

Note: Membrane citric acid cleaning is based on ADF condition: 2 RC per year per train and no MC is required.

Tank and Building Cost Calculations

Bidders Notes

A. PROCESS BASIN COSTS

The construction costs of equalization and biological basins are based on the total liquid volume required for the proposed MBR System's hydraulic balancing and biological processes. For the purposes of comparison, a unit cost of $4 per gallon of liquid volume will be used, which includes excavation, backfill, and installed concrete costs.

Process basin square footage shall take the following into account:

1. Minimum Anoxic HRT is 1 hour.

2. For design purposes it is assumed that MBR MLSS inventory shall contribute to biological process requirements. Membrane Tank volume shall not be considered when determining SRT requirements unless otherwise requested by the MBR System Supplier

B. MBR BASIN COSTS

The construction costs of MBR basins are based on the total liquid volume required for the proposed MBR System's membrane units. For the purposes of comparison, a unit cost of $4 per gallon of liquid volume will be used, which includes excavation, backfill, and installed concrete costs.

C. MEMBRANE TREATMENT BUILDING COSTS

The construction cost for the new, 1-story membrane treatment building is based on the required footprint, in square feet, for the proposed system pumps, blowers, bulk chemical storage and feed systems, and instrumentation, MCC, and control panels. The total footprint shall include adequate space for equipment access and maintenance. The MBR System Supplier shall provide a breakdown of the space needed, listing area requirements by subsystem. For purposes of comparison, a unit cost of $500 per square foot will be used for building construction.

The evaluators reserve the right to compare each MBR System Supplier's recommended building footprint and may adjust the proposed value or request additional information if it does not appear reasonable.

Space allowance shall take the following into account:

1. A minimum of 3ft clearance around mechanical equipment & electrical

2. Permeate Collection System

3. Supplemental Aeration System

4. Membrane Zone Aeration System

5. Internal Recycle System

6. Integration and Controls System

7. Chemical Dosing System

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

a. Including storage and containment for a minimum of 1-mo. supply.

b. Incompatible chemicals (as defined by the International Fire Code) must be stored in separate, dedicated containment. Include all necessary containment areas to meet code

c. Chemical containment sized for 150% of the container/tank volume with a 1 foot wall height

8. Adequate height for lifting any equipment for maintenance activities

Table C-1: Construction Costs – Aerobic Volumes

Item	Parameter	Value	Unit	Notes
C.1	Aerobic Volumes	700,000	gal	Provide layout with dimensions.
C.2	Aerobic HRT	2.1	Hr	
C.3	Aerobic Construction Cost	2,800,000	$	C.1 x $4.00/gal

Table C-2: Construction Costs – Anoxic Volumes

Item	Parameter	Value	Unit	Notes
C.4	Anoxic Volumes	330,000	gal	Provide layout with dimensions.
C.5	Anoxic HRT	1.0	Hr	Min. 1.0 hr HRT
C.6	Anoxic Construction Cost	1,320,000	$	C.4 x $4.00/gal

Table C-3: Construction Costs – Membrane Basin

Item	Parameter	Value	Unit	Notes
C.7	Total Membrane Basin Volume	124,476	gal	Total basin volume, not displaced volume. Provide layout with dimensions
C.8	MBR Basin HRT	0.37	hr	
C.9	Membrane Zone Tank Cost	497,902	$	C.7 x $4.00/gal

Table C-4: Construction Costs – Treatment Building

Item	Parameter	Value	Unit	Notes
C.10	Treatment Building Plan Area	1,409	ft2	Provide layout with dimensions.
C.11	Building Cost	704,500	$	= C.10 x $500/ft2

Table C-5 Construction Costs – Tank

Item	Parameter	Value	Unit	Notes
C.12	Tank Cost	4,617,902	$	= C.3 + C.6 + C.9

Table C-6 – TOTAL CONSTRUCTION COSTS

Item	Parameter	Value	Unit	Notes
C.13	Total Construction Costs	5,322,402	$	= C.11 + C.12

Experience and Qualifications

The intent of this section is to establish the qualifications of the Supplier to provide adequate support before, during and after commissioning at the System level. To establish stability, each bidder shall provide an organization chart for each of the last five years including the names of the MBR (or Membrane) Manager, General Manager and President of the company and parent company if applicable. The bidder shall also provide the resumes of applicable lead operations staff.

The prospective Supplier shall submit the following information:

A. Identify the year that the MBR Equipment Manufacturer first began manufacturing MBR equipment for the treatment of municipal wastewater

B. Furnish a list of North American MBR Equipment installations for the treatment of municipal wastewater. The list shall be organized into three sections, including installations of less than 1 MGD, installations ranging in capacity from 1 to 5 MGD, and installations of 5 MGD or greater. The following information shall be provided with each listing:

   1. Owner and Location
   2. Peak Hydraulic Rated Capacity in MGD
   3. Annual Average Rated Capacity in MGD
   4. Biological Nitrogen Removal (yes or no)
   5. Type of WAS Thickening Equipment, if any
   6. Type of Dewatering Equipment, if any
   7. Identify System by Model or Type
   8. First Year of Operation (or identify as under construction)
   9. Reference Contact Name, Title, and Phone Number
   10. Installation Contractor Contact Name, Title, and Phone Number

C. Complete the MBR questionnaire, below, for a minimum of three operating plants in North America of larger than 1 MGD average capacity and with at least 12 consecutive months of operation. If the manufacturer has fewer than three MBR installations of this capacity or larger in North America, installations outside North America may be included.

D. Furnish a list of worldwide MBR Equipment installations, 1.0 MGD or greater, for the treatment of municipal wastewater separate from the North American installations. The list shall be organized in two sections: installations ranging from 1 to 5 MGD in capacity and installations of 5 MGD and greater. Provide the same information as requested for North American installations with each listing.

E. The supplier shall have at least three (3) operational installations in New York State, or if not, at least three (3) operational installations within states participating in Ten States Standards.

F. Identify which of the North American utilize the manufacturer's same model/type anticipated for the Caesars Lane WWTP.

Copyright© 2018 National Society of Professional Engineer, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

1. Bidder and Surety, jointly and severally, bind themselves, their heirs, executors, administrators, successors, and assigns to pay to Owner upon default of Bidder any difference between the total amount of Bidder's Bid and the total amount of the Bid of the next lowest, responsible Bidder that submitted a responsive Bid, as determined by Owner, for the work required by the Contract Documents, provided that:

    1.1. If there is no such next Bidder, and Owner does not abandon the Project, then Bidder and Surety shall pay to Owner the bond amount set forth on the face of this Bond, and

    1.2. In no event will Bidder's and Surety's obligation hereunder exceed the bond amount set forth on the face of this Bond.

    1.3. Recovery under the terms of this Bond will be Owner's sole and exclusive remedy upon default of Bidder.

2. Default of Bidder occurs upon the failure of Bidder to deliver within the time required by the Bidding Documents (or any extension thereof agreed to in writing by Owner) the executed Agreement required by the Bidding Documents and any performance and payment bonds required by the Bidding Documents.

3. This obligation will be null and void if:

    3.1. Owner accepts Bidder's Bid and Bidder delivers within the time required by the Bidding Documents (or any extension thereof agreed to in writing by Owner) the executed Agreement required by the Bidding Documents and any performance and payment bonds required by the Bidding Documents, or

    3.2. All Bids are rejected by Owner, or

    3.3. Owner fails to issue a Notice of Award to Bidder within the time specified in the Bidding Documents (or any extension thereof agreed to in writing by Bidder and, if applicable, consented to by Surety when required by Paragraph 5 hereof).

4. Payment under this Bond will be due and payable upon default of Bidder and within 30 calendar days after receipt by Bidder and Surety of written notice of default from Owner, which notice will be given with reasonable promptness, identifying this Bond and the Project and including a statement of the amount due.

5. Surety waives notice of any and all defenses based on or arising out of any time extension to issue Notice of Award agreed to in writing by Owner and Bidder, provided that the total time for issuing Notice of Award including extensions will not in the aggregate exceed 120 days from Bid due date without Surety's written consent.

6. No suit or action will be commenced under this Bond prior to 30 calendar days after the notice of default required in Paragraph 4 above is received by Bidder and Surety, and in no case later than one year after the Bid due date.

7. Any suit or action under this Bond must be commenced only in a court of competent jurisdiction located in the state in which the Project is located.

8. Notices required hereunder must be in writing and sent to Bidder and Surety at their respective addresses shown on the face of this Bond. Such notices may be sent by personal delivery, commercial courier, or by United States Postal Service registered or certified mail, return receipt requested, postage pre-paid, and will be deemed to be effective upon receipt by the party concerned.

9. Surety shall cause to be attached to this Bond a current and effective Power of Attorney evidencing the authority of the officer, agent, or representative who executed this Bond on behalf of Surety to execute, seal, and deliver such Bond and bind the Surety thereby.

10. This Bond is intended to conform to all applicable statutory requirements. Any applicable requirement of any applicable statute that has been omitted from this Bond will be deemed to be included herein as if set forth at length. If any provision of this Bond conflicts with any applicable statute, then the provision of said statute governs and the remainder of this Bond that is not in conflict therewith continues in full force and effect.

11. The term "Bid" as used herein includes a Bid, offer, or proposal as applicable.

CORPORATE ACKNOWLEDGMENT

PROVINCE
STATE OF ONTARIO

COUNTY OF HALTON

On this 27TH day of JUNE, 2022 before me

personally came

MICHAEL BENSON to me known,

who, being by me duly sworn, did depose and say that he/she resides in

OAKVILLE that he/she is the

COMM. CONTRACTS MGR. of SUEZ WTS Systems USA, Inc.

that corporation described in and which executed the above instrument; that he/she knows the seal of said corporation; that the seal affixed to said instrument is such corporate seal; that it was so affixed by order of the Board of Directors of said corporation, and he/she signed his/her name thereto by like order.

(SEAL)

David Blair Bingham, Notary Public,
Regional Municipality of Halton, limited to the attestation of instruments and the taking of affidavits, for SUEZ Water Technologies & Solutions Canada and its affiliates.
Expires December 18, 2023.

State of New Jersey
County of Morris } ss:

On June 22, 2022, before me, a Notary Public in and for said County and State, residing therein, duly commissioned and sworn, personally appeared

Jessica Iannotta

known to me to be Attorney-in-Fact of Euler Hermes North America Insurance Company the corporation described in and that executed the within and foregoing instrument, and known to me to be the person who executed the said instrument in behalf of the said corporation, and he duly acknowledged to me that such corporation executed the same.

IN WITNESS WHEREOF, I have hereunto set my hand and affixed my official seal, the day and year stated in this certificate above.

My Commission Expires April 16, 2024

April Perez Notary Public

EULER HERMES NORTH AMERICA INSURANCE COMPANY
800 Red Brook Boulevard * Owings Mills, Maryland 21117

The number of persons authorized by this Power of Attorney is not more than: 6

POWER OF ATTORNEY

KNOW ALL MEN BY THESE PRESENTS: That EULER HERMES NORTH AMERICA INSURANCE COMPANY (EULER HERMES), a corporation organized and existing under the laws of the state of Maryland, does hereby nominate, constitute, and appoint the person or persons named below, each individually if more than one is named, its true and lawful attorney-in-fact, for and in its name, place, and stead to execute on behalf of EULER HERMES, as surety, any and all bonds, undertakings, and contracts of suretyship, or other written obligations in the nature thereof; provided that the liability of EULER HERMES on any such bond, undertaking, or contract of suretyship executed under this authority shall not exceed the limit stated below.

NAME		ADDRESS	LIMIT OF POWER
Megan J. Schlueter	Kristin S. Bender	445 South Street	Unlimited
Jessica Iannotta	Kelly O'Malley	Suite 210	
April D. Perez	Joanne Czlapinski	Morristown, NJ 07960	

This Power of Attorney revokes all previous powers issued on behalf of the attorney(s)-in-fact named above.

IN WITNESS WHEREOF, EULER HERMES has caused these presents to be signed and attested by its appropriate officers and its corporate seal hereunder affixed this 1st day of January, 20 21.

James Daly, President and CEO-The Americas

Keith Sherman, Senior Vice President and Chief Operating Officer-Surety

State of Maryland, County of Baltimore

On this 1st day of January, 20 21, before me personally appeared Keith Sherman, to me known, being duly sworn, deposes and says that he resides in Phoenix, MD; that he is the Senior Vice President and Operating Officer-Surety of EULER HERMES, the Company described herein and which executed the above instrument; that he know the seal of EULER HERMES; that the seal affixed to said instrument is such corporate seal; that it was so affixed by authority of the Board of Directors of EULER HERMES; and that he signed his name thereto by like authority.

Notary Public

Notarial Seal

This Commission Expires April 4, 2023

This Power of Attorney is granted by authority of the following resolutions adopted by the Board of Directors of EULER HERMES NORTH AMERICA INSURANCE COMPANY (Company) by unanimous consent on October 1, 2015.

RESOLVED: That the President, Executive Vice President, Senior Vice President, Vice President, Secretary, Assistant Vice Secretary, and Senior Vice President and Chief Operating Officer-Surety, be and hereby are authorized from time to time to appoint one or more Attorneys-in-Fact to execute on behalf of the Company, as surety, any and all bonds, undertakings and contracts of suretyship, or other written obligation in the nature thereof; to proscribe their respective duties and all respective limits of their authority; and to revoke any such appointment at any time.

RESOLVED FURTHER: That the Company seal and signature of the aforesaid officers and may be affixed by facsimile to any Power of Attorney given for the execution of any bond, undertaking, contract of suretyship, or other written obligations in the nature thereof, such signature and seal when so used being hereby adopted by the Company as the original signature of such officer and the original seal of the Company, to be valid and binding upon the Company with the same force and effect as thought manually affixed.

CERTIFICATION

I, Keith Sherman, Senior Vice President and Chief Operating Officer-Surety of EULER HERMES NORTH AMERICA INSURANCE COMPANY, do hereby certify that the foregoing Power of Attorney and the Resolutions of the Board of Directors of October 1, 2015, have not been revoked and are now in full force and effect.

Signed and sealed this 22nd day of June, 20 22.

Keith Sherman, Senior Vice President and Chief Operating Officer-Surety

AGREEMENT BETWEEN BUYER AND SELLER FOR PROCUREMENT CONTRACT

This Procurement Agreement is by and between the **Town of New Windsor** ("Buyer") and **Suez WTS Systems USA Inc.** ("Seller").

Terms used in this Procurement Agreement have the meanings stated in the General Conditions of the Procurement Contract and the Supplementary Conditions of the Procurement Contract.

Buyer and Seller hereby agree as follows:

ARTICLE 1—PROCUREMENT CONTRACT

1.01 *Goods and Special Services*

A. Seller shall furnish the Goods and Special Services as specified or indicated in the Procurement Contract Documents. The Goods and Special Services are generally described as follows:

The Work includes furnishing labor, materials, and equipment for the fabrication, supply, start-up, commissioning, performance testing, and operator training of the proposed membrane bioreactor (MBR) system including but not limited to the following equipment and control system components:

1. Membrane equipment
2. Permeate pumps
3. Feed forward or RAS pumps
4. WAS pumps
5. Membrane Air Scour Blowers
6. Fine Bubble Diffusers
7. Tank Mixers
8. Chemical feed equipment for membrane cleaning
9. Membrane system process instrumentation, controls, and integration
10. System start-up, commissioning, performance testing, and training
11. Critical Spare Parts and Tools
12. Operation and Maintenance Manuals and Materials

1.02 *The Project*

A. The Project, of which the Goods and Special Services are a part, is generally described as follows: **Caesars Lane WWTP MBR System Pre-Selection**

1.03 *Engineer*

A. Buyer has retained **MHE Engineering, D.P.C.** ("Engineer"), to prepare Procurement Contract Documents and act as Buyer's representative. Engineer assumes all duties and

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

responsibilities and has the rights and authority assigned to Engineer in the Procurement Contract Documents in connection with Seller's furnishing of Goods and Special Services.

1.04 *Point of Destination*

A. The Point of Destination is designated as: **145 Caesars Lane, New Windsor, NY 12553.**

ARTICLE 2—PROCUREMENT CONTRACT TIMES

2.01 *Time of the Essence*

A. All time limits for Milestones, including the submittal of Shop Drawings and Samples, the delivery of Goods, and the furnishing of Special Services as stated in the Procurement Contract Documents, are of the essence of the Procurement Contract.

2.02 *Schedule of Procurement Contract Times*

A. Refer to Section 3.2 in Membrane Filtration System Technical Specification 455000.

2.03 *Shop Drawings and Samples*

A. *Submittal of Shop Drawings and Samples*: Seller shall submit all Shop Drawings and Samples required by the Procurement Contract Documents to Engineer for its review and approval.

B. *Engineer's Review*: It is the intent of the parties that Engineer will conduct its review of Shop Drawings and Samples and issue its approval, or a denial accompanied by substantive comments regarding information needed to gain approval, within **15** days after Seller's submittal of such Shop Drawings and Samples, or within such longer period that is needed because of the quantity and quality of such submittals. Resubmittals will be limited whenever possible.

2.04 *Liquidated Damages*

A. Buyer and Seller recognize that time is of the essence as stated in Paragraph 2.01, and that Buyer will suffer financial and other losses if the Goods are not delivered to the Point of Destination and ready for receipt of delivery by Buyer within the time specified in Paragraph 2.02, plus any extensions thereof allowed in accordance with this Procurement Contract. The parties also recognize that the timely performance of services by others involved in the Project is materially dependent upon Seller's specific compliance with the delivery requirements of Paragraph 2.02. Liquidated damages in the sum of Two Hundred dollars ($200.00) per day plus engineering charges, will be assessed as provided in the Contract Documents.

B. In view of the difficulty in accurately ascertaining the loss in which the Owner will suffer by reason of such delay in the completion of work, said per diem sum is hereby fixed and agreed to by the Selleras the liquidated damages, upon the execution of the Agreement.

C. Separate and in addition to the per day liquidated damages, shall be added, engineering costs, inspection fees and administrative costs for that time after the expiration of the time of completion incurred by the Owner, and any penalties which may be assessed against the Owner by other agencies as a result of the delay to complete the work. Such costs shall be at the set rate for services paid by the Owner for the firm providing the services. Seller's obligation to pay liquidated damages pursuant to the Agreement shall be limited to an amount equal to twenty percent (20%) of the Seller's contract price.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

ARTICLE 3—PROCUREMENT CONTRACT PRICE

3.01 *Procurement Contract Price and Total Price*

A. The Procurement Contract Price is comprised of the Lump Sum and Unit Price amounts set forth in the following paragraphs.

B. Buyer shall pay Seller a Lump Sum of $**3,826,000.00** for furnishing the Goods and Special Services (other than any Unit Price Goods and Special Services) in accordance with the Procurement Contract Documents. Such Lump Sum amount accounts for the following Buyer-accepted alternates: **None.**

C. Buyer's Contingency Allowance is stipulated as $**0.0**. If no amount is stated, the Buyer's Contingency Allowance is zero. Buyer's use of such allowance, including resulting compensation of Buyer, is governed by Paragraph 11.06 of the General Conditions.

D. The Total Price is **$3,826,000.00** Such Total Price is comprised of the Lump Sum amount (taking into account any accepted alternates), Unit Price Goods and Special Services amount (if any) (subject to final adjustment), and Buyer's Contingency Allowance (if any) (subject to final adjustment).

3.02 *Procurement Contract Price and Total Price—Based on Attached Bid*

A. For furnishing the Goods and Special Services in accordance with the Procurement Contract Documents, Buyer shall pay Seller the prices stated in Seller's Bid, attached hereto as an exhibit, subject to final adjustments for Unit Price Goods and Special Services and Buyer's Contingency Allowance, if any, and subject to the following Buyer-accepted alternates: **None.**

3.03 Price Escalation

The buyer is currently considering the inclusion of a price escalation clause. If one is incorporated it will be provided via an addendum.

ARTICLE 4—PAYMENT PROCEDURES

4.01 *Submittal and Processing of Applications for Payment*

A. Seller shall submit Applications for Payment in accordance with Article 13 of the General Conditions and the following paragraphs. Engineer and Buyer will process such Applications for Payment in accordance with said Article 13.

4.02 *Progress Payments; Final Payment*

A. Seller may submit an Application for Payment requesting the stated percentage of Procurement Contract Price upon attainment of each of the following Payment Line Items:

Payment Line Item (Lump Sum)	Percentage of Lump Sum
1. **Receipt of Approval of Engineering Design and Shop Drawings**	**5**
2. **Notice to Commence Fabrication**	**5**
3. **Delivery of Goods to Point of Destination in accordance with the Procurement Contract Documents**	**70**

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

4. **Completion of Special Services in accordance with Procurement Contract Documents**	**15**
5. Final Payment: **Correction of non-conformities, provision of final Operations and Maintenance manuals, submittal of warranties and other final documentation required by the Procurement Contract Documents**	**5**
Total Procurement Contract Price (Lump Sum)	100

B. For Unit Price Goods and Special Services, if any, or for payments owed to Seller as a result of authorizations by Buyer under the Buyer's Contingency Allowance (if any), Seller shall submit a separate Application for Payment, no more frequently than monthly, that states (1) the actual quantities of such Unit Price Goods and Special Services that have been furnished, and the applicable unit prices; and (2) the services or items performed or furnished under the Buyer's Contingency Allowance, and the amounts owed. If practical, and at Seller's option, Seller may apply for such unit price and Buyer's Contingency Allowance payments in a separate section of an Application for Payment submitted under Paragraph 4.02.A for lump sum items.

C. Buyer shall pay Seller the amount owed under an Application for Payment within 30 days after Engineer's presentation to Buyer of the Application for Payment and Engineer's recommendation.

ARTICLE 5—ASSIGNMENT OF PROCUREMENT CONTRACT

5.01 *Assignment of Contract*

A. Buyer has the right to assign this Procurement Contract for furnishing Goods and Special Services, but only to a person or entity with sufficient apparent ability to satisfy all of Buyer's obligations under this Procurement Contract, and Seller hereby consents to such assignment. Forms documenting the assignment of the Procurement Contract, and consent of Seller's surety to the assignment, have been executed by Buyer, Seller, and Seller's surety, and are attached as exhibits to this Procurement Agreement. If so, assigned the following provisions apply:

1. The Procurement Contract is initially executed in the name of the entity identified herein as Buyer, and will be assigned by such Buyer (as assignor) to a construction contractor (Contractor/Assignee) designated by such Buyer. The assignment will occur on the effective date of the construction contract between such Buyer (Project Owner) and the Contractor/Assignee, which is expected to occur on or about **June 2024.** Commencing on the date of acceptance of assignment by the Contractor/Assignee, all references in the Procurement Contract to "Buyer" shall mean the designated Contractor/Assignee.

2. The assignment of this Procurement Contract relieves the assignor from all further obligations and liabilities under this Procurement Contract. After assignment, Seller shall become a subcontractor or supplier to the Contractor/Assignee and, except as noted herein, all rights, duties, and obligations of Buyer under the Procurement Contract become the rights, duties, and obligations of the Contractor/Assignee.

3. After assignment:

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

1. The Procurement Drawings and Procurement Specifications, and any modifying Addenda will become "Contract Documents" under the construction contract.
2. If the Procurement Drawings or Procurement Specifications, as "Contract Documents" under the construction contract, are duly modified under such construction contract, then Seller and Contractor/Assignee shall enter into a corresponding Change Order under the applicable provisions of this Procurement Contract.
3. The Procurement Drawings and Procurement Specifications may not be modified by Seller or Contractor/Assignee, singly or in tandem, except as such Procurement Drawings or Procurement Specifications, as "Contract Documents" under the construction contract, have been duly modified under such construction contract.
4. All performance warranties, guarantees, and indemnifications required by the Procurement Contract will continue to run for the benefit of assignor (Project Owner) and, in addition, for the benefit of the Contractor/Assignee. However, if assignor (Project Owner) and Contractor/Assignee make the same warranty or guarantee claim, then Seller shall only be liable once for such claim. Other than its remedies under such warranties, guarantees, and indemnifications, assignor will not retain direct rights under this Procurement Contract, but will have rights and remedies as a party to the construction contract, whose scope of work will encompass the Procurement Drawings, Procurement Specifications, and modifying Addenda; provided, however, that any limitations on Seller's liability in this Procurement Contract will continue to bind the original Buyer (assignor) after assignment.
5. The Contractor/Assignee shall have all the rights of the Buyer under the Performance Bond and Payment Bond.
6. Seller shall submit all Applications for Payment directly to Contractor/Assignee.
    1) Contractor/Assignee shall review each Application for Payment promptly, determine the amount that Contractor/Assignee approves for payment, and then include the amount approved in the next application for payment submitted to Project Owner (or Engineer) under the construction contract.
    2) Contractor/Assignee shall pay Seller within **15** days of receipt of payment from the Project Owner under the construction contract.
    3) After assignment Engineer will review, approve, or deny the content of Applications for Payment under the Procurement Contract only to the extent that Contractor/Assignee, as construction contractor, has incorporated such content into payment applications that Engineer reviews under the construction contract.
7. The Contractor/Assignee shall have all the rights of the Buyer under any pending Claim by Buyer.
8. All Claims and supporting documentation will be submitted directly by the claimant party (either Buyer **[Contractor/Assignee]** or Seller), to the other party, without submittal to Engineer.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

1) The other party will render a response in writing within 30 days of receipt of the last submittal of claimant.

2) If the other party does not render a written response to a Claim within 30 days after receipt of the last submittal of the claimant, the other party shall be deemed to have approved the Claim in its entirety.

3) The other party's written response to a Claim, or the approval of the Claim in its entirety as a function of failure to respond within 30 days, will be final and binding upon Buyer and Seller 30 days after it is issued, unless within such 30 days of issuance either Buyer or Seller appeals the result by initiating the mediation of the Claim in accordance with the dispute resolution procedures set forth in Paragraph 12.02 of the General Conditions.

4) Any Claim by Seller that Contractor/Assignee may choose to submit, present, or forward to Project Owner must be submitted to Buyer within sufficient time for Contractor/Assignee to preserve its rights under the construction contract, notwithstanding any procedures or time limits in this Procurement Contract.

9. Seller's recovery of additional cost, time, or both cost and time for any Claim attributable to the Project Owner will be limited to the proportionate recovery by Contractor/Assignee against Project Owner for such Claim. Seller will cooperate and assist Contractor/Assignee in pursuing any Claim by Contractor/Assignee against Project Owner on behalf of Seller, including the timely preparation and delivery of supporting documentation.

10. If the pursuit of any claim by Contractor/Assignee against Project Owner on Seller's behalf requires the expenditure by Contractor/Assignee of legal or consulting fees, or results in litigation, arbitration, or any dispute resolution procedures, Seller agrees to pay for a proportionate share of attorneys' fees, consultant fees, and litigation, arbitration, and other resolution costs incurred by Contractor/Assignee in pursuing the claim on behalf of Seller, based upon the amount claimed by Seller as compared to the total value of the claim pursued by the Contractor/Assignee.

11. All rights, duties, and obligations of Engineer to Contractor/Assignee and Seller under this Procurement Contract will cease.

12. Subject to the foregoing provisions, all references in the Procurement Contract to submitting items to Engineer, or to Engineer having tasks or obligations, will be read after such an assignment as requiring submittal to Contractor/Assignee, or as Contractor/Assignee having such tasks or obligations (which Contractor/Assignee may delegate when appropriate).

13. If the Procurement Contract includes a Buyer's Contingency Allowance, upon assignment such allowance will be automatically reduced to the amount previously authorized by Buyer (Project Owner), and cease to be operational.

B. No other assignment by a party hereto of any rights under or interests in the Procurement Contract will be binding on another party hereto without the written consent of the party sought to be bound. Specifically, but without limitation, Procurement Contract payments or other money that may become due, and Procurement Contract payments or other money that are due, may not be assigned without such consent (except to the extent that the effect

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

of this restriction may be limited by Laws and Regulations). Unless specifically stated to the contrary in any written consent to such an assignment, such an assignment will not release or discharge the assignor from any duty or responsibility under the Procurement Contract Documents.

ARTICLE 6—PROCUREMENT CONTRACT DOCUMENTS

6.01 *List of Procurement Contract Documents*

A. The Procurement Contract Documents consist of the following:

1. This Procurement Agreement.
2. General Conditions of the Procurement Contract.
3. Supplementary Conditions of the Procurement Contract.
4. Procurement Specifications as listed in the Procurement Specifications table of contents
5. Procurement Drawings (not attached but incorporated by reference)
6. Addendas
    1. Addendum No. 1 dated 29 June 2022.
    2. Addendum No. 2 dated 8 July 2022.
7. Bonds:
    1. Performance bond (together with power of attorney).
    2. Payment bond (together with power of attorney).
8. Exhibits to this Procurement Agreement (enumerated as follows):
    1. Exhibit A, Assignment of Contract, Consent to Assignment, and Acceptance of Assignment.
    2. Exhibit B, Surety's Consent to Assignment.
    3. Documentation submitted by Seller **Suez Proposal No. 360077 dated July 20, 2022**; and
9. The following which may be delivered or issued on or after the Effective Date of the Procurement Contract and are not attached hereto:
    1. Change Orders;
    2. Change Directives; and
    3. Field Orders.

B. The documents listed in Paragraph 6.01.A are attached to this Procurement Agreement (except as expressly noted otherwise above).

C. There are no Procurement Contract Documents other than those listed above.

D. The Procurement Contract Documents may only be amended or supplemented as provided in Paragraph 11.01 of the Procurement General Conditions.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

ARTICLE 7—SELLER'S REPRESENTATIONS AND CERTIFICATIONS

7.01 *Seller's Representations*

A. In order to induce Buyer to enter into this Procurement Agreement, Seller makes the following representations:

1. Seller has examined and carefully studied the Procurement Contract Documents.

2. If required by the Instructions to Bidders to visit the Point of Destination and the site where the Goods are to be installed or Special Services will be provided, or if, in Seller's judgment, any observable local or site conditions may affect the delivery, cost, progress, or furnishing of the Goods and Special Services, then Seller has visited the Point of Destination and site where the Goods are to be installed or Special Services will be provided (as applicable) and become familiar with and is satisfied as to the observable local and site conditions that may affect delivery, cost, progress, and furnishing of the Goods and Special Services.

3. Seller is familiar with and is satisfied as to all Laws and Regulations that may affect the cost, progress, and performance of Seller's obligations under the Procurement Contract.

4. Seller has carefully studied, considered, and correlated the information known to Seller with respect to the effect of such information on the cost, progress, and performance of Seller's obligations under the Procurement Contract.

5. Seller has given Engineer written notice of all conflicts, errors, ambiguities, or discrepancies that Seller has discovered in the Procurement Contract Documents, and the written resolution (if any) thereof by Engineer is acceptable to Seller.

6. The Procurement Contract Documents are generally sufficient to indicate and convey understanding of all terms and conditions for performance of Seller's obligations under the Procurement Contract.

7. Seller's entry into this Procurement Contract constitutes an incontrovertible representation by Seller that without exception all prices in the Procurement Agreement are premised upon furnishing the Goods and Special Services as required by the Procurement Contract Documents.

7.02 *Seller's Certifications*

A. Seller certifies that it has not engaged in corrupt, fraudulent, collusive, or coercive practices in competing for or in executing the Procurement Contract. For the purposes of this Paragraph 7.02:

1. "corrupt practice" means the offering, giving, receiving, or soliciting of anything of value likely to influence the action of a public official in the bidding process or in the Procurement Contract execution;

2. "fraudulent practice" means an intentional misrepresentation of facts made (a) to influence the bidding process or the execution of the Procurement Contract to the detriment of Buyer, (b) to establish bid or contract prices at artificial non-competitive levels, or (c) to deprive Buyer of the benefits of free and open competition;

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

3. "collusive practice" means a scheme or arrangement between two or more Bidders, with or without the knowledge of Buyer, a purpose of which is to establish bid prices at artificial, non-competitive levels; and

4. "coercive practice" means harming or threatening to harm, directly or indirectly, persons or their property to influence their participation in the bidding process or affect the execution of the Procurement Contract.

ARTICLE 8—CONFIDENTIALITY

8.01 *Confidential Information*

A. Confidential information is information in documents submitted by Seller that Seller clearly and prominently labels in writing to be a trade secret, proprietary, or confidential. Such documents, if any, will be maintained in a manner that endeavors to avoid disclosing confidential information to third parties, to the extent allowed by Laws and Regulations.

B. Seller shall clearly and prominently mark confidential information with the word "CONFIDENTIAL" on each page or sheet or on the cover of bound documents. Place "CONFIDENTIAL" stamps or watermarks so that they do not obscure any of the required information on the document, either in the original or in a way that would obscure any of the required information in a photocopy of the document.

8.02 *Disclosure of Confidential Information*

A. If Buyer is requested to disclose confidential information, or becomes legally compelled (by oral questions, interrogatories, requests for information or documents, subpoena, civil or criminal investigative demand, public information requests, or other requests under Laws and Regulations) to disclose confidential information, or is required by a regulatory body, governing agency, or controlling authority to disclose confidential information, or make any other disclosure that is prohibited or otherwise constrained by the Procurement Contract, Buyer will provide Seller with prompt notice so Seller may seek an appropriate protective order or other remedy. Seller will be solely responsible for submitting to the regulatory body, governing agency, or controlling authority any arguments, briefs, memoranda, motions, authorities, or other information in opposition to disclosure.

B. Buyer's obligations with respect to confidential information are nullified by the following exceptions:

1. Confidential information becomes a part of the public domain through publication or otherwise, through no fault of the Buyer;

2. Buyer can demonstrate through suitable documentation that the confidential information was already in the Buyer's possession, and not previously marked as confidential, or was otherwise publicly available prior to the Effective Date of the Procurement Contract;

3. The confidential information is subsequently and independently disclosed to the Buyer by a third party who has a lawful right to disclose such information;

4. Buyer has a good faith belief that disclosure is required or justified; or

5. Buyer is required to disclose the confidential information by court order or by applicable Laws and Regulations.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

8.03 *Waiver of Immunity*

A. Notwithstanding any other provision of the Procurement Contract, it is stipulated and agreed that by accepting confidential information, Buyer has not and does not waive its legal immunity (if any) from suit or liability.

ARTICLE 9—MUTUAL WAIVER

Deleted.

EXHIBIT A—ASSIGNMENT OF PROCUREMENT CONTRACT, CONSENT TO ASSIGNMENT, AND ACCEPTANCE OF ASSIGNMENT

This assignment will be effective on the effective date of the construction contract between Buyer (as "Owner") and Contractor/Assignee (as "Contractor").

The Procurement Contract between_____ ("Buyer") and _____("Seller") for furnishing Goods and Special Services entitled_____(Procurement Contract) is hereby assigned, transferred, and set over to Contractor/Assignee, as assignee, by Buyer, as assignor. Upon assignment the Contractor/Assignee shall have the duties, rights, and obligations of Buyer under the terms of the Procurement Contract, and will be responsible to Owner under the construction contract for the performance of obligations by Seller, which will become a Subcontractor or Supplier to Contractor/Assignee. Buyer, Seller, and Contractor/Assignee hereby acknowledge and agree to be bound by the terms and conditions of assignment set forth in Article 5 of the Agreement Between Buyer and Seller for Procurement Contract.

ARTICLE 1—DEFINITIONS AND TERMINOLOGY

1.01 *Defined Terms*

A. Whenever used in the Procurement Bidding Requirements or Procurement Contract Documents and printed with initial capital letters, the terms listed below will have the meanings indicated, which are applicable to the singular or plural thereof. In addition to terms specifically defined, terms with initial capital letters in the Procurement Contract Documents include references to identified articles and paragraphs, and the titles of other documents or forms.

1. *Addenda*—Written or graphic instruments issued prior to the opening of Bids which clarify, correct, or change the Bidding Requirements or the proposed Procurement Contract Documents.

2. *Application for Payment*—The document prepared by Seller, in a form acceptable to Buyer, to request progress or final payments, and which is to be accompanied by such supporting documentation as is required by the Procurement Contract Documents.

3. *Bid*—An offer or proposal of a prospective Seller submitted on the prescribed form setting forth the prices for the Goods and Special Services to be provided.

4. *Bidder*—An individual or entity that, as a prospective Seller, submits a Bid to Buyer.

5. *Buyer*—The individual or entity purchasing the Goods and Special Services.

6. *Change Directive*—A written directive from Buyer to Seller issued on or after the Effective Date of the Procurement Contract, ordering an addition, deletion, or revision in the Goods and Special Services.

7. *Change Order*—A document which is signed by Seller and Buyer and authorizes an addition, deletion, or revision to the Procurement Contract Documents or an adjustment in the Procurement Contract Price or the Procurement Contract Times, issued on or after the Effective Date of the Procurement Contract. Change Orders may be the result of mutual agreement by Buyer and Seller, or of resolution of a Claim.

8. *Claim*—A demand or assertion by Buyer or Seller seeking an adjustment of Procurement Contract Price or Procurement Contract Times, or both, or other relief with respect to the terms of the Procurement Contract. A demand for money or services by a third party is not a Claim.

9. *Contractor/Assignee*—A construction contractor with which Project Owner enters into a construction contract, and to which Project Owner, as initial Buyer, assigns this Procurement Contract.

10. *Effective Date of the Procurement Contract*—The date indicated in the Procurement Agreement on which the Procurement Contract becomes effective.

11. *Electronic Document*—Any Project-related correspondence, attachments to correspondence, data, documents, drawings, information, or graphics, including but not limited to Shop Drawings and other Submittals, that are in an electronic or digital format.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

12. *Electronic Means*—Electronic mail (e-mail), upload/download from a secure Project website, or other communications methods that allow: the transmission or communication of Electronic Documents; the documentation of transmissions, including sending and receipt; printing of the transmitted Electronic Document by the recipient; the storage and archiving of the Electronic Document by sender and recipient; and the use by recipient of the Electronic Document for purposes permitted by this Procurement Contract. Electronic Means does not include the use of text messaging, or of Facebook, Twitter, Instagram, or similar social media services for transmission of Electronic Documents.

13. *Engineer*—The individual or entity designated as such in the Procurement Agreement.

14. *Field Order*—A written order issued by Engineer which requires minor changes in the Goods or Special Services, but which does not involve a change in the Procurement Contract Price or Procurement Contract Times.

15. *Goods*—The tangible and movable personal property that is described in the Procurement Contract Documents, regardless of whether the property is to be later attached to realty.

16. *Goods and Special Services*—The full scope of materials, equipment, other items, and services to be furnished by Seller, including Goods, as defined herein, and Special Services, if any, as defined herein. This term refers to both the Goods and the Special Services, or to either the Goods or the Special Services, and to any portion of the Goods or the Special Services, as the context requires.

17. *Laws and Regulations; Laws or Regulations*—Any and all applicable laws, statutes, rules, regulations, ordinances, codes, and binding decrees, resolutions, and orders of any and all governmental bodies, agencies, authorities, and courts having jurisdiction.

18. *Milestone*—A principal event specified in the Procurement Contract that Seller must attain by the date or within the number of days indicated, including but not limited to the delivery of the Goods and the furnishing of Special Services.

19. *Notice of Award*—The written notice, by Buyer to a Bidder, of Buyer's acceptance of the Bid.

20. *Point of Destination*—The specific address of the location where delivery of the Goods will be made, as stated in the Procurement Agreement.

21. *Procurement Agreement*—The written instrument, executed by Buyer and Seller, that sets forth the Procurement Contract Price and Procurement Contract Times, identifies the parties and the Engineer, and designates the specific items that are Procurement Contract Documents.

22. *Procurement Bidding Documents*—The Procurement Bidding Requirements and the proposed Procurement Contract Documents (including all Addenda).

23. *Procurement Bidding Requirements*—The advertisement or invitation to bid, Instructions to Bidders, Bid security of acceptable form, if any, and Bid Form with any supplements.

24. *Procurement Contract*—The entire and integrated written agreement between Buyer and Seller concerning the Goods and Special Services.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

25. *Procurement Contract Documents*—Those items so designated in the Procurement Agreement, and which together comprise the Procurement Contract. Shop Drawings and other Seller submittals are not Procurement Contract Documents, even if accepted, reviewed, or approved by Engineer or Buyer.

26. *Procurement Contract Price*—The money that Buyer has agreed to pay Seller for furnishing the Goods and Special Services in accordance with the Procurement Contract Documents.

27. *Procurement Contract Times*—The times stated in the Procurement Agreement by which the Goods must be delivered, Special Services must be furnished, and other Milestones must be attained.

28. *Procurement Drawings*—That part of the Procurement Contract Documents prepared or approved by Engineer which graphically shows the scope, extent, and character of the Goods and Special Services to be furnished by Seller. Shop Drawings and other Seller submittals are not Procurement Drawings as so defined.

29. *Procurement Specifications*—That part of the Procurement Contract Documents consisting of written requirements for materials, equipment, systems, standards and workmanship as applied to the furnishing of the Goods and Special Services, and certain administrative requirements and procedural matters applicable thereto.

30. *Project*—The total undertaking to be accomplished for Project Owner by engineers, contractors, and others, including planning, study, design, construction, testing, commissioning, and start-up, and of which the Goods and Special Services are a part.

31. *Project Owner*—The entity that has retained (or will retain) engineers, contractors, and others for the planning, study, design, construction, testing, commissioning, and start-up of facilities and improvements. As of the Effective Date of the Procurement Contract, the Project Owner is the Buyer.

32. *Samples*—Physical examples of materials, equipment, or workmanship that are representative of some portion of the Goods and Special Services and which establish the standards by which such portion of the Goods and Special Services will be judged.

33. *Schedule of Submittals*—A schedule, prepared and maintained by Seller, of required Submittals and the time requirements for Engineer's review of the Submittals.

34. *Seller*—The individual or entity furnishing the Goods and Special Services.

35. *Shop Drawings*—All drawings, diagrams, illustrations, schedules, and other data or information which are specifically prepared or assembled by or for Seller and submitted by Seller to illustrate some portion of the Goods and Special Services. Shop Drawings, whether approved or not, are not Procurement Drawings and are not Procurement Contract Documents.

36. *Special Services*—Services to be performed by Seller (or its agents or subcontractors) in association with the Goods to be furnished by Seller, as required by the Procurement Contract Documents.

37. *Submittal*—A written or graphic document, prepared by or for Seller, which the Procurement Contract Documents require Seller to submit to Engineer, or that is indicated as a Submittal in the Schedule of Submittals accepted by Engineer. Submittals

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

may include Shop Drawings and Samples; schedules; product data; sustainable design information; information on special procedures; testing plans; results of tests and evaluations, source quality-control testing and inspections, and field or site quality-control testing and inspections; warranties and certifications; suppliers' instructions and reports; records of delivery of spare parts and tools; operations and maintenance data; record documents; and other such documents required by the Procurement Contract Documents. Submittals, whether or not approved or accepted by Engineer, are not Procurement Contract Documents. Change proposals, Change Orders, Claims, notices, Applications for Payment, and requests for interpretation or clarification are not Submittals.

38. *Successful Bidder*—The Bidder whose Bid the Buyer accepts, and to which Buyer makes an award of the Procurement Contract.

39. *Supplementary Conditions*—The part of the Procurement Contract that amends or supplements these General Conditions.

40. *Unit Price Goods and Special Services*—Goods and Special Services to be paid for on the basis of unit prices (if any).

1.02 *Terminology*

A. The words and terms discussed in Paragraphs 1.02.B and 1.02.C are not defined, but have the indicated meanings when used in the Bidding Requirements or Procurement Contract Documents.

B. *Intent of Certain Terms or Adjectives*

1. The Procurement Contract Documents include the terms "as allowed," "as approved," "as ordered," "as directed" or terms of like effect or import to authorize an exercise of professional judgment by Engineer. In addition, the adjectives "reasonable," "suitable," "acceptable," "proper," "satisfactory," or adjectives of like effect or import are used to describe an action or determination of Engineer as to the Goods and Special Services. It is intended that such exercise of professional judgment, action, or determination will be commercially reasonable and will be solely to evaluate, in general, the Goods and Special Services for compliance with the requirements of and information in the Procurement Contract Documents and conformance with the design concept of the completed Project as a functioning whole, as shown or indicated in the Procurement Contract Documents (unless there is a specific statement indicating otherwise). The use of any such term or adjective will not be effective to assign to Engineer any duty or authority to supervise or direct the furnishing of Goods or Special Services or any duty or authority to undertake responsibility contrary to any other provision of the Procurement Contract Documents.

2. The word "non-conforming" when modifying the words "Goods and Special Services," "Goods," or "Special Services," refers to Goods and Special Services that are unsatisfactory, faulty, or deficient in that they:

a. do not conform to or comply with the requirements of the Procurement Contract Documents;

b. do not meet the requirements of any applicable inspection, reference standard, test, or approval referred to in the Procurement Contract Documents; or

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

c. in the case of Special Services, have not been completed.

3. The word “receipt” when referring to the Goods, means the physical taking and possession by the Buyer under the conditions specified in Paragraph 9.02.B.2.

4. The word “day” means a calendar day of 24 hours measured from midnight to the next midnight.

5. The word "furnish," when used in connection with the Goods and Special Services means to supply and deliver said Goods to the Point of Destination (or some other specified location) and to perform said Special Services fully, all in accordance with the Procurement Contract Documents.

C. *Procurement Contract Price or Procurement Contract Times*: References to a change in “Procurement Contract Price or Procurement Contract Times” or “Procurement Contract Times or Procurement Contract Price” or similar, indicate that such change applies to (1) Procurement Contract Price, (2) Procurement Contract Times, or (3) both Procurement Contract Price and Procurement Contract Times, as warranted, even if the term “or both” is not expressed.

D. Unless stated otherwise in the Procurement Contract Documents, words or phrases that have a well-known technical or construction industry or trade meaning are used in the Procurement Contract Documents in accordance with such recognized meaning.

ARTICLE 2—PRELIMINARY MATTERS

2.01 *Delivery of Bonds and Evidence of Insurance*

A. When Seller delivers the executed counterparts of the Procurement Agreement to Buyer, the Seller also shall deliver to Buyer the performance bond and payment bond (if the Procurement Contract requires Seller to furnish such bonds).

B. *Evidence of Seller’s Insurance*: When Seller delivers the signed counterparts of the Procurement Agreement to Buyer, the Seller also shall deliver to Buyer, with copies to each additional insured (as identified in the Procurement Contract), the certificates, endorsements, and other evidence of insurance required to be provided by Seller in accordance with Article 5. Evidence of insurance to be obtained at a later date, such as insurance relating to transit or storage of the Goods, will be provided to Buyer at the time of such insurance is obtained.

C. *Evidence of Buyer’s Insurance*: After receipt of the signed counterparts of the Procurement Agreement and all required bonds and insurance documentation, Buyer shall promptly deliver to Seller, with copies to each additional insured (as identified in the Procurement Contract), certificates and other evidence of insurance (if any) required to be provided by Buyer.

2.02 *Copies of Documents*

A. Buyer shall furnish to Seller four printed copies of the Procurement Contract (including one fully executed counterpart of the Procurement Agreement), and one copy in electronic portable document format (PDF). Additional printed copies will be furnished upon request at the cost of reproduction.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

2.03 *Electronic Transmittals*

A. Except as otherwise stated elsewhere in the Procurement Contract, the Buyer, Seller, and Engineer may send, and shall accept, Electronic Documents transmitted by Electronic Means.

B. If the Procurement Contract does not establish protocols for Electronic Means, then Buyer, Seller, and Engineer shall jointly develop such protocols.

C. Subject to any governing protocols for Electronic Means, when transmitting Electronic Documents by Electronic Means, the transmitting party makes no representations as to long-term compatibility, usability, or readability of the Electronic Documents resulting from the recipient's use of software application packages, operating systems, or computer hardware differing from those used in the drafting or transmittal of the Electronic Documents.

2.04 *Preliminary Schedules*

A. Within 15 days after the Effective Date of the Procurement Contract, Seller shall submit to Buyer and Engineer for timely review:

1. a progress schedule of activities, consistent with the Procurement Contract Times, including at a minimum, Shop Drawing and Sample submittals, tests, and deliveries as required by the Procurement Contract Documents.

a. The progress schedule will be acceptable to Buyer and Engineer if it provides an orderly progression of the Submittals, tests, and deliveries to completion within the specified Milestones of the Procurement Contract Times.

b. Such acceptance will not impose on Buyer or Engineer responsibility for the progress schedule, for sequencing, scheduling, or progress of Seller's performance of its obligations under the Procurement Contract, nor interfere with or relieve Seller from Seller's full responsibility therefor.

c. Such acceptance will not be deemed as an acknowledgment of the reasonableness and attainability of the schedule.

2. a preliminary schedule of Submittals.

B. No progress payment will be made to Seller until an acceptable progress schedule and acceptable schedule of Submittals are submitted to Buyer and Engineer (and other conditions applicable to progress payments are met).

2.05 *Preliminary Conference*

A. Within 20 days after the Procurement Contract Times start to run, a conference attended by Seller, Buyer, Engineer and others as appropriate will be held to establish a working understanding among the parties as to the Goods and Special Services and to discuss the schedules referred to in Paragraph 2.04.A, procedures for handling Shop Drawings and other Submittals, processing Applications for Payment, and maintaining required records.

2.06 *Safety*

A. Buyer and Seller shall comply with all applicable Laws and Regulations relating to the safety of persons or property, and to the protection of persons or property from damage, injury, or loss.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

B. When Seller's personnel, or the personnel of any subcontractor to Seller, are present at the Point of Destination or any work area or site controlled by Buyer, the Seller shall be responsible for the compliance by such personnel with any applicable requirements of Buyer's safety programs that are made known to Seller.

C. If Buyer or its representatives visit the Seller's manufacturing or storage facilities, for testing, inspection, or other purposes, Seller shall inform Buyer in advance of any safety preparations, standards, or programs with which Buyer and its representatives must comply.

ARTICLE 3—PROCUREMENT CONTRACT DOCUMENTS

3.01 *Intent*

A. The Procurement Contract Documents are complementary; what is called for by one is as binding as if called for by all.

B. Any labor, documentation, services, materials, or equipment that may reasonably be inferred from the Procurement Contract Documents or from prevailing custom or trade usage as being required to produce or furnish the indicated Goods and Special Services will be provided, whether or not specifically called for, at no additional cost to Buyer.

C. Unless otherwise stated in the Procurement Contract Documents, if there is a discrepancy between the electronic or digital versions of the Procurement Contract Documents (including any printed copies derived from such electronic or digital versions) and the printed record version, the printed record version will govern.

D. The Procurement Contract supersedes prior negotiations, representations, and agreements, whether written or oral.

E. Engineer will issue clarifications and interpretations of the Procurement Contract Documents, as provided in Paragraph 3.04.

F. Any provision or part of the Procurement Contract Documents held to be void or unenforceable under any Law or Regulation will be deemed stricken, and all remaining provisions will continue to be valid and binding upon Buyer and Seller.

3.02 *Reference Standards*

A. Reference to standards, specifications, manuals, or codes of any technical society, organization, or association, or to Laws and Regulations, whether such reference be specific or by implication, means the standard, specification, manual, code, or Laws and Regulations in effect at the time of opening of Bids (or on the Effective Date of the Procurement Agreement if there were no Bids), except as may be otherwise specifically stated in the Procurement Contract Documents.

B. No provision of any such standard specification, manual, reference standard, or code, and no instruction of a supplier, will be effective to change the duties or responsibilities of Buyer, Seller, or Engineer from those set forth in the part of the Procurement Contract Documents prepared by or for Engineer. No such provision or instruction will be effective to assign to Buyer or Engineer any duty or authority to supervise or direct the performance of Seller's obligations, or any duty or authority to undertake responsibility inconsistent with the provisions of the part of the Procurement Contract Documents prepared by or for Engineer.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

C. Compliance with Laws and Permits. All permits and licenses which are required to construct, install and/or operate Buyer's facility or equipment, to use the Equipment, or to manage and dispose of any wastes and residues resulting from Buyer's use of the Equipment, shall be obtained and maintained by Buyer at Buyer's sole expense. Buyer is responsible for compliance with all laws and regulations applicable to the storage, use, handling, installation, maintenance, removal, registration and labeling of all Equipment after delivery of the Equipment, as well as for the proper management and disposal of all wastes and residues.

3.03 *Reporting and Resolving Discrepancies*

A. *Reporting Discrepancies*

1. *Seller's Review of Procurement Contract Documents*: If, before or during the performance of Seller's obligations, Seller discovers any conflict, error, ambiguity, or discrepancy within the Procurement Contract Documents, or between the Procurement Contract Documents and (a) any applicable Law or Regulation, (b) actual field conditions, (c) any standard specification, manual, reference standard, or code, or (d) any instruction of any supplier to Seller, then Seller shall promptly report it to Engineer (or if the Procurement Contract is assigned, then directly to Contractor/Assignee) in writing. Seller shall not proceed with the Goods and Special Services affected thereby until the conflict, error, ambiguity, or discrepancy is resolved, by a clarification or interpretation by Engineer (or if the Procurement Contract is assigned, then by Contractor/Assignee) or by an amendment or supplement to the Procurement Contract Documents issued pursuant to Article 11.

2. Seller shall not be liable to Buyer or Engineer for failure to report any conflict, error, ambiguity, or discrepancy in the Procurement Contract Documents unless Seller had actual knowledge thereof.

B. *Resolving Discrepancies*: Except as may be otherwise specifically stated in the Procurement Contract Documents, the provisions of the Procurement Contract Documents will take precedence in resolving any conflict, error, ambiguity, or discrepancy between the provisions of the Procurement Contract Documents and:

1. the provisions of any standard, specification, manual, code, or instruction (whether or not specifically incorporated by reference in the Procurement Contract Documents); or

2. the provisions of any Laws or Regulations applicable to the furnishing of the Goods and Special Services (unless such an interpretation of the provisions of the Procurement Contract Documents would result in violation of such Law or Regulation).

3.04 *Requirements of the Procurement Drawings and Procurement Specifications*

A. During the performance of Seller's obligations and until final payment, Seller and Buyer shall submit to the Engineer all matters in question concerning the requirements of the Procurement Drawings and Procurement Specifications (sometimes referred to as requests for information or interpretation—RFIs), or relating to the acceptability of the Goods and Special Services, as soon as possible after such matters arise. Engineer will be the initial interpreter of the requirements of the Procurement Drawings and Procurement Specifications, and judge of the acceptability of the Goods and Special Services thereunder.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

1. After assignment (if any) Seller shall submit such matters directly to Contractor/Assignee for response or administration, and the Procurement Contract provisions in Paragraphs 3.04.B and C will not apply.

B. Engineer will issue with reasonable promptness a written clarification, interpretation, or decision on the issue submitted, and if necessary, initiate an amendment or supplement to the Procurement Drawings or Procurement Specifications. Engineer's written clarification, interpretation, or decision will be consistent with the overall intent of the Procurement Contract Documents, and will be final and binding on Seller and Buyer. If either Buyer or Seller believes that a written clarification or interpretation justifies an adjustment in the Procurement Contract Price or Procurement Contract Times, either may make a Claim for such adjustment as provided in Article 12.

C. If a submitted matter in question concerns terms and conditions of the Procurement Contract Documents that do not involve (1) the performance or acceptability of the Goods and Services, (2) the design (as set forth in the Procurement Drawings, Procurement Specifications, or otherwise), or (3) other engineering or technical matters, then Engineer will promptly give written notice to Buyer and Seller that Engineer is unable to provide a decision or interpretation.

3.05 *Reuse of Documents*

A. Seller and its subcontractors and suppliers shall not:

1. have or acquire any title to or ownership rights in any of the Procurement Drawings, Procurement Specifications, or other documents (or copies of any thereof) prepared by or bearing the seal of Engineer or its consultants, including electronic media editions, or reuse any such Procurement Drawings, Procurement Specifications, other documents, or copies thereof, on extensions of the Project or any other project, without written consent of Buyer and Engineer and specific written verification or adaptation by Engineer; or

2. have or acquire any title or ownership rights in any other Procurement Contract Documents, reuse any such Procurement Contract Documents for any purpose without Buyer's express written consent, or violate any copyrights pertaining to such Procurement Contract Documents.

B. The prohibitions of this Paragraph 3.05 will survive final payment, or termination of the Procurement Contract. Nothing herein precludes Seller from retaining copies of the Procurement Contract Documents for record purposes.

ARTICLE 4—COMMENCEMENT AND SCHEDULE

4.01 *Commencement of Procurement Contract Times*

A. The Procurement Contract Times will commence to run on the Effective Date of the Procurement Contract.

4.02 *Continuing Performance*

A. Seller shall adhere to the progress schedule established in accordance with Paragraph 2.04.A., as duly adjusted, and the Goods will be delivered and the Special Services furnished within the Procurement Contract Times.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

B. Seller shall carry on furnishing of the Goods and Special Services and adhere to the progress schedule during all disputes or disagreements with Buyer. No furnishing of Goods and Special Services will be delayed or postponed pending resolution of any disputes or disagreements, except as expressly permitted herein, or as Buyer and Seller may otherwise agree in writing.

4.03 *Adjustments to Progress Schedule*

A. The progress schedule established in accordance with Paragraph 2.04 may be adjusted from time to time as provided below.

1. Seller shall submit to Buyer for acceptance (to the extent indicated in Paragraph 2.04) proposed adjustments in the progress schedule that will not result in changing the Procurement Contract Times. Such adjustments will comply with any applicable provisions of the Procurement Specifications.

2. Proposed adjustments in the progress schedule that will change the Procurement Contract Times must be submitted in accordance with the requirements of Article 11. Adjustments in Procurement Contract Times may only be made by a Change Order.

4.04 *Delays*

A. If Buyer, Engineer, or anyone for whom Buyer is responsible, delays, disrupts, or interferes with Seller's performance or progress, then Seller shall be entitled to an equitable adjustment in Procurement Contract Price or Procurement Contract Times.

B. Seller shall not be entitled to an adjustment in Procurement Contract Price or Procurement Contract Times for delay, disruption, or interference caused by or within the control of Seller or anyone for whom Seller is responsible.

C. If Seller's performance or progress is delayed, disrupted, or interfered with by unanticipated causes not the fault of and beyond the control of Buyer, Seller, and those for which they are responsible, then Seller shall be entitled to an equitable adjustment in Procurement Contract Times. Such an adjustment will be Seller's sole and exclusive remedy for the delays, disruption, and interference described in this paragraph. Causes of delay, disruption, or interference that may give rise to an adjustment in Procurement Contract Times under this paragraph include but are not limited to the following:

1. severe and unavoidable natural catastrophes such as fires, floods, epidemics, and earthquakes;

2. abnormal weather conditions;

3. inspection delays by governmental authorities, and custom delays;

4. international shipping delays;

5. acts or failures to act of third-party entities; and

6. acts of war or terrorism.

D. *Adjustments of Procurement Contract Times or Procurement Contract Price—General Provisions*: Seller's entitlement to an adjustment of Procurement Contract Times or Procurement Contract Price is limited as follows:

1. Seller's entitlement to an adjustment of the Procurement Contract Times is conditioned on the delay, disruption, or interference adversely affecting an activity on the critical

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

path to completion of Seller's obligations, as of the time of the delay, disruption, or interference.

2. Seller shall not be entitled to an adjustment in Procurement Contract Price for any delay, disruption, or interference if such delay is concurrent with a delay, disruption, or interference caused by or within the control of Seller. Such a concurrent delay by Seller does not preclude an adjustment of Procurement Contract Times to which Seller is otherwise entitled.

3. Adjustments of Procurement Contract Times or Procurement Contract Price are subject to the provisions of Articles 11 and 12.

E. Each Seller request seeking a delay-related increase in Procurement Contract Times or Procurement Contract Price must be supplemented by supporting data that sets forth in detail the following: (1) the circumstances that form the basis for the requested adjustment; (2) the date upon which each cause of delay, disruption, or interference began to affect Seller's progress; (3) the date upon which each cause of delay, disruption, or interference ceased to affect Seller's progress; (4) the number of days' increase in Procurement Contract Times claimed as a consequence of each such cause of delay, disruption, or interference; and (5) the impact on Procurement Contract Price. Seller shall also furnish such additional supporting documentation as Buyer or Engineer may require including, where appropriate, a revised progress schedule indicating all the activities affected by the delay, disruption, or interference, and an explanation of the effect of the delay, disruption, or interference on the critical path to completion.

ARTICLE 5—BONDS AND INSURANCE

5.01 *Performance, Payment, and Other Bonds*

A. Seller shall furnish a performance bond and a payment bond, each in an amount at least equal to the Procurement Contract Price, as security for the faithful performance and payment of Seller's obligations under the Procurement Contract. These bonds must remain in effect until one year after the date when final payment becomes due or until completion of the correction period specified in Paragraph 9.04, whichever is later, except as provided otherwise by Laws or Regulations, the terms of a prescribed bond form, the Supplementary Conditions, or other provisions of the Procurement Contract.

B. Seller shall also furnish such other bonds (if any) as are required by the Supplementary Conditions or other provisions of the Procurement Contract.

C. All bonds must be in the form included in the Bidding Documents or otherwise specified by Buyer prior to execution of the Procurement Contract, except as provided otherwise by Laws or Regulations, and must be issued and signed by a surety named in "Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds and as Acceptable Reinsuring Companies" as published in Department Circular 570 (as amended and supplemented) by the Bureau of the Fiscal Service, U.S. Department of the Treasury. A bond signed by an agent or attorney-in-fact must be accompanied by a certified copy of that individual's authority to bind the surety. The evidence of authority must show that it is effective on the date the agent or attorney-in-fact signed the accompanying bond.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

D. Seller shall obtain the required bonds from surety companies that are duly licensed or authorized, in the state or jurisdiction in which the Project is located, to issue bonds in the required amounts.

E. If the surety on a bond furnished by Seller is declared bankrupt or becomes insolvent, or the surety ceases to meet the requirements above, then Seller shall promptly notify Buyer and Engineer and shall, within 20 days after the event giving rise to such notification, provide another bond and surety, both of which shall comply with the bond and surety requirements of this Procurement Contract.

F. If Seller has failed to obtain a required bond, Buyer may exercise Buyer's termination rights under Article 14.

G. Upon request to Buyer from any subcontractor, supplier, or other person or entity claiming to have furnished labor, services, materials, or equipment used in the performance of Seller's obligations, Buyer shall provide a copy of the payment bond to such person or entity.

H. Upon request to Seller from any subcontractor, supplier, or other person or entity claiming to have furnished labor, services, materials, or equipment used in the performance of Seller's obligations, Seller shall provide a copy of the payment bond to such person or entity.

5.02 *Insurance*

A. Seller shall provide insurance of the types and coverages and in the amounts stipulated in the Supplementary Conditions.

B. Failure of Buyer to demand certificates of insurance or other evidence of Seller's full compliance with these insurance requirements or failure of Buyer to identify a deficiency in compliance from the evidence provided will not be construed as a waiver of Seller's obligation to maintain such insurance.

C. Upon assignment of this Procurement Contract, Seller shall name the Contractor/Assignee as an additional insured and comply with the written request of Contractor/Assignee to provide evidence of insurance.

D. Buyer does not represent that insurance coverage and limits established in this Procurement Contract necessarily will be adequate to protect Seller.

E. The insurance and insurance limits required herein will not be deemed as a limitation on Seller's liability under the indemnities and other rights granted to Buyer in the Procurement Contract.

5.03 *Surety or Insurance Companies*

A. All bonds and insurance required by the Procurement Contract Documents to be purchased and maintained by Buyer or Seller shall be obtained from surety or insurance companies that are duly licensed or authorized in the jurisdiction in which the Project is located to issue bonds or insurance policies for the limits and coverages so required. Such surety and insurance companies must also meet such additional requirements and qualifications as may be provided in the Supplementary Conditions.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

ARTICLE 6—LICENSES AND FEES

6.01 *Intellectual Property and License Fees*

A. Except to the extent stated elsewhere in the Procurement Contract Documents, Seller is not transferring any patent rights, copyrights, or other intellectual property rights for the Goods delivered.

B. To the extent Seller is manufacturing to Buyer's design, Buyer retains all patent rights, copyrights, and other intellectual property rights in such design.

C. If an invention, design, process, product, or device is specified in the Procurement Contract Documents for incorporation in the Goods or for the performance of Special Services, and if, to the actual knowledge of Buyer or Engineer, its use is subject to patent rights, copyrights, or other intellectual property rights calling for the payment of a license fee or royalty to others, then the existence of such rights and payment obligations will be disclosed to Seller in the Procurement Contract Documents.

D. Seller shall pay all license fees and royalties and assume all costs incident to the use or the furnishing of the Goods, unless specified otherwise by the Procurement Contract Documents.

6.02 *Seller's Infringement*

A. Subject to Paragraph 6.01, to the fullest extent permitted by Laws and Regulations, Seller shall indemnify and hold harmless Buyer, Engineer, and their officers, directors, members, partners, employees, agents, consultants, contractors, and subcontractors, from and against all claims, costs, losses, damages, and judgments (including but not limited to all reasonable fees and charges of engineers, architects, attorneys and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to any infringement or alleged infringement of any patent, copyright, or other intellectual property right by any of the Goods as delivered or Special Services as performed.

B. Buyer will promptly notify Seller in writing of any claim, suit, or threat of suit by a third party for any infringement or alleged infringement of any patent, copyright, or other intellectual property right with respect to the Goods as delivered or Special Services as performed.

C. Seller shall promptly defend or settle the claim or suit. Seller shall have control over such claim or suit, bear all expenses, and satisfy any adverse judgment.

1. If Seller fails to defend such suit or claim after written notice by Buyer, Seller will be bound, in any subsequent suit or claim against Seller by Buyer, by any factual determination in the prior suit or claim.

2. If Buyer fails to provide Seller the opportunity to defend such suit or claim, Buyer shall be barred from any remedy against Seller for such suit or claim.

D. If a determination is made that Seller has infringed upon the intellectual property rights of another, Seller may, at Seller's own expense, obtain the necessary licenses for Buyer's benefit, or replace the Goods and provide related design and construction, consistent with the requirements of the Procurement Contract Documents, to avoid the infringement.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

6.03 *Buyer's Infringement*

A. Subject to Paragraph 6.01, and to the fullest extent permitted by Laws and Regulations, Buyer shall be responsible to Seller for any infringement or alleged infringement of any patent, copyright, or other intellectual property right caused by Seller's compliance with the Procurement Drawings or Procurement Specifications, and will reimburse Seller for any license fee or royalties paid by Seller to others if such payment resulted from any invention, design, process, product, or device specified to be furnished or performed in the Procurement Drawings or Procurement Specifications, but not identified as being subject to payment of such license fee or royalty.

B. Seller will promptly notify Buyer in writing of any claim, suit, or threat of suit by a third party for intellectual property infringement arising from Seller's compliance with the Procurement Drawings or Procurement Specifications.

C. Buyer shall defend or settle the claim or suit. Buyer shall have control over such claim or suit, bear all expenses, and satisfy any adverse judgment.

1. If Buyer fails to defend such suit or claim after written notice by Seller, Buyer will be bound, in any subsequent suit or claim against Buyer by Seller, by any factual determination in the prior suit or claim.

2. If Seller fails to provide Buyer the opportunity to defend such suit or claim, Seller shall be barred from any remedy against Buyer for such suit or claim.

ARTICLE 7—SELLER'S RESPONSIBILITIES

7.01 *Performance of Obligations*

A. Seller shall be solely responsible for the means, methods, techniques, sequences, and procedures necessary to perform its obligations in accordance with the Procurement Contract Documents.

B. Seller shall supervise, inspect, and direct the furnishing of the Goods and Special Services competently and efficiently, devoting such attention thereto and applying such skills and expertise as may be necessary to perform its obligations in accordance with the Procurement Contract Documents.

C. Seller shall coordinate the provision of Special Services to avoid or limit interference or disruption of other activities at the location where the Special Services are to occur, including but not limited to ongoing facility operations and construction activities.

7.02 *Labor, Materials and Equipment*

A. Seller shall provide competent, qualified and trained personnel in all aspects of its performance of the Procurement Contract.

B. All Goods, and all equipment and material incorporated into the Goods, must be as specified, and unless specified otherwise in the Procurement Contract Documents, must be:

1. new, and of good quality;

2. protected, assembled, connected, cleaned, and conditioned in accordance with the original manufacturer's instructions; and

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

3. shop-assembled to the greatest extent practicable.

7.03 *Laws and Regulations*

A. Seller shall give all notices required by and shall comply with all Laws and Regulations applicable to the performance of its obligations in accordance with the Procurement Contract Documents. Except where otherwise expressly required by such Laws and Regulations, neither Buyer nor Engineer shall be responsible for monitoring Seller's compliance with any Laws or Regulations.

B. If Seller furnishes Goods and Special Services knowing or having reason to know that such furnishing is contrary to Laws or Regulations, Seller shall bear all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to such performance. It will not be Seller's responsibility to make certain that the Procurement Specifications and Procurement Drawings are in accordance with Laws and Regulations, but this provision will not relieve Seller of Seller's obligations under Paragraph 3.03.

C. Changes in Laws or Regulations not known at the time of opening of Bids (or, on the Effective Date of the Procurement Contract if there were no Bids) that have a direct effect on the cost or time of Seller's performance will be the subject of an adjustment in Procurement Contract Price or Procurement Contract Times. If Buyer and Seller are unable to agree on entitlement to or on the amount or extent, if any, of any such adjustment, a Claim may be made therefor as provided in Article 12.

7.04 *"Or Equals"*

A. Whenever an item of material or equipment to be incorporated into the Goods is specified or described in the Procurement Contract Documents by using the names of one or more proprietary items or specific suppliers or manufacturers, the specification or description is intended to establish the type, function, appearance, and quality required. Unless the specification or description contains or is followed by words reading that no like, equivalent, or "or equal" item is permitted, other items of material or equipment or material or equipment of other suppliers or manufacturers may be submitted to Buyer for Engineer's review.

1. If in Engineer's sole discretion, such an item of material or equipment proposed by Seller is functionally equal to that named and sufficiently similar so that no change in related work will be required, it may be considered by Engineer as an "or equal" item.

2. For the purposes of this paragraph, a proposed item of material or equipment may be considered functionally equal to an item so named only if in the exercise of reasonable judgment, Engineer determines that: 1) it is at least equal in quality, durability, appearance, strength, and design characteristics; 2) it will reliably perform at least equally well the function imposed by the design concept of the completed Project as a functioning whole; 3) it has an acceptable record of performance and availability of responsive service; and (4) Seller certifies that if approved: a) there will be no increase in any cost, including capital, installation or operating costs, to Buyer; and b) the proposed item will conform substantially to the detailed requirements of the item named in the Procurement Contract Documents.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

B. *Engineer's Evaluation*: Engineer will be allowed a reasonable time within which to evaluate each proposal or Submittal made pursuant to Paragraph 7.04.A. Engineer will be the sole judge of whether to accept or reject such a proposal or Submittal. No "or equal" will be ordered, manufactured or utilized until Engineer's review is complete, which will be evidenced by an approved Shop Drawing. Engineer will advise Buyer and Seller in writing of any negative determination. Notwithstanding Engineer's approval of an "or-equal" item, Seller shall remain obligated to comply with the requirements of the Procurement Contract Documents.

C. *Special Guarantee*: Buyer may require Seller to furnish at Seller's expense a special performance guarantee or other surety with respect to any such proposed "or-equal."

D. *Data*: Seller shall provide all data in support of any such proposed "or equal" at Seller's expense.

7.05 *Taxes*

A. Seller shall pay all taxes and duties arising out of the sale of the Goods and the performance of Special Services. All taxes and duties are included in the Procurement Contract Price, except as noted in the Supplementary Conditions.

7.06 *Submittals*

A. *Shop Drawing and Sample Requirements*

1. Before submitting a Shop Drawing or Sample, Seller shall:

a. review and coordinate the Shop Drawing or Sample with other Shop Drawings and Samples and with the requirements of the Procurement Contract Documents;

b. determine and verify:

1) all field measurements, quantities, dimensions, specified performance and design criteria, installation requirements, materials, catalog numbers, and similar information with respect to the Submittal; and

2) the suitability of all materials and equipment offered with respect to the indicated application, fabrication, shipping, handling, storage, assembly, and installation pertaining to the performance of Seller's obligations.

c. confirm that the Submittal is complete with respect to all related data included in the Submittal.

2. Each Shop Drawing or Sample must bear a stamp or specific written certification that Seller has satisfied its obligations under the Procurement Contract Documents with respect to Seller's review of that Submittal, and that Seller approves the Submittal.

3. With each Shop Drawing or Sample, Seller shall give Engineer specific written notice of any variations that the Submittal may have from the requirements of the Procurement Contract Documents. This notice will be set forth in a written communication separate from the Submittal; and, in addition, in the case of a Shop Drawing by a specific notation made on the Shop Drawing itself.

B. *Submittal Procedures for Shop Drawings and Samples*: Seller shall label and submit Shop Drawings and Samples to Engineer for review and approval in accordance with the accepted Schedule of Submittals.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

1. *Shop Drawings*

    a. Seller shall submit the number of copies required in the Procurement Specifications.

    b. Data shown on the Shop Drawings must be complete with respect to quantities, dimensions, specified performance and design criteria, materials, and similar data to show Engineer the services, materials, and equipment Seller proposes to provide, and to enable Engineer to review the information for the limited purposes required by Paragraph 7.06.C.

2. *Samples*

    a. Seller shall submit the number of Samples required in the Procurement Specifications.

    b. Seller shall clearly identify each Sample as to material, supplier, pertinent data such as catalog numbers, the use for which intended and other data as Engineer may require to enable Engineer to review the Submittal for the limited purposes required by Paragraph 7.06.C.

3. Where a Shop Drawing or Sample is required by the Procurement Contract Documents or the Schedule of Submittals, any related work performed by Seller prior to Engineer's review and approval of the pertinent Submittal will be at the sole expense and responsibility of Seller.

C. *Engineer's Review of Shop Drawings and Samples*

1. Engineer will provide timely review of Shop Drawings and Samples in accordance with the accepted Schedule of Submittals. Engineer's review and approval will be only to determine if the items covered by the Submittals will, after installation or incorporation in the Goods, comply with the requirements of the Procurement Contract Documents, and be compatible with the design concept of the completed Project as a functioning whole as indicated by the Procurement Contract Documents.

2. Engineer's review and approval will not extend to means, methods, techniques, sequences, or procedures of construction, manufacturing, fabrication, installation, or shipping, or to safety precautions or programs incident thereto.

3. Engineer's review and approval of a separate item as such will not indicate approval of the assembly in which the item functions.

4. Engineer's review and approval of a Shop Drawing or Sample will not relieve Seller from responsibility for any variation from the requirements of the Procurement Contract Documents unless Seller has complied with the requirements of Paragraph 7.06.A.3 and Engineer has given written approval of each such variation by specific written notation thereof incorporated in or accompanying the Shop Drawing or Sample. Engineer will document any such approved variation from the requirements of the Procurement Contract Documents in a Field Order or other appropriate Procurement Contract modification.

5. Engineer's review and approval of a Shop Drawing or Sample will not relieve Seller from responsibility for complying with the requirements of Paragraphs 7.06.A and B.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

6. Engineer's review and approval of a Shop Drawing or Sample, or of a variation from the requirements of the Procurement Contract Documents, will not, under any circumstances, change the Procurement Contract Times or Procurement Contract Price, unless such changes are included in a Change Order.

7. Neither Engineer's receipt, review, acceptance or approval of a Shop Drawing or Sample will result in such item becoming a Procurement Contract Document.

8. Seller shall furnish Goods that comply with the requirements and commitments set forth in approved Shop Drawings and Samples, subject to the provisions of Paragraph 7.06.C.4.

D. *Resubmittal Procedures for Shop Drawings and Samples*

1. Seller shall make corrections required by Engineer and shall return the required number of corrected copies of Shop Drawings and submit, as required, new Samples for review and approval. Seller shall direct specific attention in writing to revisions other than the corrections called for by Engineer on previous Submittals.

2. Seller shall furnish required Shop Drawing and Sample Submittals with sufficient information and accuracy to obtain required approval of an item with no more than two resubmittals. Engineer will record Engineer's time for reviewing a third or subsequent resubmittal of a Shop Drawing or Sample, and Seller shall be responsible for Engineer's charges to Buyer for such time. Buyer may impose a set-off against payments due Seller to secure reimbursement for such charges.

3. If Seller requests a change of a previously approved Shop Drawing or Sample, Seller shall be responsible for Engineer's charges to Buyer for its review time, and Buyer may impose a set-off against payments due Seller to secure reimbursement for such charges, unless the need for such change is beyond the control of Seller.

E. *Submittals Other than Shop Drawings and Samples*

1. The following provisions apply to all Submittals other than Shop Drawings and Samples:

   a. Seller shall submit all such Submittals to the Engineer in accordance with the schedule of Submittals and pursuant to the applicable terms of the Procurement Contract Documents.

   b. Engineer will provide timely review of all such Submittals in accordance with the schedule of Submittals and return such Submittals with a notation of either Accepted or Not Accepted. Any such Submittal that is not returned within the time established in the schedule of Submittals will be deemed accepted.

   c. Engineer's review will be only to determine if the Submittal is acceptable under the requirements of the Procurement Contract Documents as to general form and content of the Submittal.

   d. If any such Submittal is not accepted, Seller shall confer with Engineer regarding the reason for the non-acceptance, and resubmit an acceptable document.

2. Procedures for the submittal and acceptance of the Progress Schedule, the Schedule of Submittals, and the Schedule of Values are set forth in Paragraphs 2.04 and 2.05.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

7.07 *Indemnification*

A. To the fullest extent permitted by Laws and Regulations, Seller shall indemnify and hold harmless Buyer, Engineer, Project Owner, and any assignee of Buyer, including Contractor/Assignee, and their officers, directors, members, partners, employees, agents, consultants, contractors, and subcontractors, from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to the performance of Seller's obligations under the Procurement Contract, provided that any such claim, cost, loss, or damage is attributable to bodily injury, sickness, disease, or death, or to injury to or destruction of tangible property (other than the Goods themselves), including the loss of use resulting therefrom, but only to the extent caused by any negligent act or omission of Seller, or any individual or entity directly or indirectly employed by Seller or anyone for whose acts Seller may be liable.

B. In any and all claims against Buyer, Engineer, Project Owner, or any assignee of Buyer, including Contractor/Assignee, or their officers, directors, members, partners, employees, agents, consultants, contractors, or subcontractors, by any employee (or the survivor or personal representative of such employee) of Seller, any subcontractor, any supplier, or any individual or entity directly or indirectly employed by any of them to furnish any of the Goods and Special Services, or anyone for whose acts any of them may be liable, the indemnification obligation under Paragraph 7.07.A will not be limited in any way by any limitation on the amount or type of damages, compensation, or benefits payable by or for Seller or any such subcontractor, supplier, or other individual or entity under workers' compensation acts, disability benefit acts, or other employee benefit acts.

7.08 *Concerning Subcontractors and Suppliers*

A. Seller may retain subcontractors and suppliers for the performance of parts of the furnishing of the Goods and Special Services. The Seller's retention of a subcontractor or supplier will not relieve Seller's obligation to Buyer to perform and complete the furnishing the Goods and Special Services in accordance with the Procurement Contract Documents.

ARTICLE 8—SHIPPING AND DELIVERY

8.01 *Shipping*

A. Seller shall select the carrier and bear all costs of packaging, transportation, insurance, special handling, and all other costs associated with shipment and delivery.

8.02 *Delivery*

A. Seller shall deliver the Goods free on board (FOB) to the Point of Destination, freight prepaid, in accordance with the Procurement Contract Times set forth in the Procurement Agreement, or other date agreed to by Buyer and Seller.

B. At least 10 days before shipment, Seller shall provide written notice to Buyer of the manner of shipment and the anticipated delivery date. The notice must also include any instructions concerning special equipment or services required at the Point of Destination to unload and care for the Goods. Seller shall also require the carrier to give Buyer at least 24 hours' notice by telephone prior to the anticipated time of delivery.

C. Buyer will be responsible and bear all costs for unloading the Goods from carrier.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

D. Buyer will assure that adequate facilities are available to receive delivery of the Goods at the time established for delivery, or on another date agreed to by Buyer and Seller.

E. No partial deliveries will be allowed, unless permitted or required by the Procurement Contract Documents or agreed to in writing by Buyer.

F. Provisions governing inspection on delivery are set forth in Paragraph 9.02.

8.03 *Risk of Loss*

A. Risk of loss and insurable interests transfer from Seller to Buyer upon Buyer's receipt of the Goods.

B. Notwithstanding the provisions of Paragraph 8.03.A, if Buyer rejects the Goods as non-conforming, the risk of loss on such Goods will remain with Seller until Seller corrects the non-conformity or Buyer accepts the Goods. If rejected Goods remain at the Point of Destination pending modification and acceptance, then Seller shall be responsible for arranging adequate protection and maintenance of the Goods at Seller's expense.

ARTICLE 9—BUYER'S RIGHTS

9.01 *Seller's Warranties and Guarantees*

A. Seller warrants and guarantees to Buyer that the title to the Goods conveyed will be proper, its transfer rightful, and free from any security interest, lien, or other encumbrance. Seller shall defend, indemnify, and hold Buyer harmless against any liens, claims, or demands contesting or affecting title of the Goods conveyed.

B. Seller warrants and guarantees to Buyer that all Goods and Special Services will conform with the Procurement Contract Documents, and with the standards established by any Samples approved by Engineer. Engineer shall be entitled to rely on Seller's warranty and guarantee. If the Procurement Contract Documents do not otherwise specify the characteristics or the quality of the Goods, the Goods must comply with the requirements of Paragraph 7.02.B.

C. Seller's warranty and guarantee hereunder excludes defects or damage caused by:

1. abuse, improper modification, improper maintenance, or improper operation by persons other than Seller;

2. excessive corrosion or chemical attack, unless corrosive or chemically-damaging conditions were disclosed by Buyer in the Procurement Contract Documents and the Procurement Contract Documents required the Goods to withstand such conditions;

3. use in a manner contrary to Seller's written instructions for installation, operation, and maintenance; or

4. normal wear and tear under normal usage.

D. Seller's obligation to furnish the Goods and Special Services in accordance with the Procurement Contract Documents will be absolute. None of the following will constitute an acceptance of Goods and Special Services that are non-conforming, or a release of Seller's obligation to furnish the Goods and Special Services in accordance with the Procurement Contract Documents:

1. observations by Buyer, Engineer, or Project Owner;

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

2. recommendation by Engineer or payment by Buyer of any progress or final payment;

3. use of the Goods by Buyer or Project Owner;

4. any acceptance by Buyer, Engineer, or Project Owner, or any failure to do so;

5. the end of the correction period established in Paragraph 9.04;

6. the issuance of a notice of acceptance;

7. any inspection, test or approval by others; or

8. any correction of non-conforming Goods and Special Services by Buyer or Project Owner.

E. Buyer shall promptly notify Seller of any breach of Seller's warranties or guarantees.

9.02 *Inspections and Testing*

A. *General Provisions*

1. The Procurement Contract Documents specify required inspections and tests. Buyer shall have the right to perform, or cause to be performed, reasonable inspections and require reasonable tests of the Goods at Seller's facility, and at the Point of Destination. Seller shall allow Buyer a reasonable time to perform such inspections or tests.

2. Seller shall reimburse Buyer for all expenses, except for travel, lodging, and subsistence expenses of Buyer's and Engineer's representatives, for inspections and tests specified in the Procurement Contract Documents. If as the result of any such specified testing the Goods are determined to be non-conforming, then Seller shall also bear the travel, lodging, and subsistence expenses of Buyer's and Engineer's representatives, and all expenses of re-inspection or retesting.

3. Buyer shall bear all expenses of inspections and tests that are not specified in the Procurement Contract Documents (other than any re-inspection or retesting resulting from a determination of non-conformity, as set forth in Paragraph 9.03); provided, however, that if as the result of any such non-specified inspections or testing the Goods are determined to be non-conforming, then Seller shall bear all expenses of such inspections and testing, and of any necessary re-inspection and retesting.

4. Seller shall provide Buyer timely written notice of the readiness of the Goods for all inspections, tests, or approvals which the Procurement Contract Documents specify are to be observed by Buyer prior to shipment.

5. Buyer will give Seller timely notice of all specified tests, inspections, and approvals of the Goods which are to be conducted at the Point of Destination, and a representative of Seller will attend such tests, inspections, and approvals.

6. If, on the basis of inspections or testing, the Goods appear to be conforming, Buyer will give Seller prompt notice thereof. If on the basis of inspections or testing, the Goods appear to be non-conforming, Buyer will give Seller prompt notice thereof and will advise Seller of the remedy Buyer elects under the provisions of Paragraph 9.03.

7. Neither payments made by Buyer to Seller prior to any tests or inspections, nor any tests or inspections, will constitute acceptance of non-conforming Goods, or prejudice Buyer's rights under the Procurement Contract.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

B. *Visual Inspection on Delivery*

1. Buyer will visually inspect the Goods upon delivery solely for purposes of identifying the Goods, general verification of quantities, and observation of apparent condition. Such visual inspection will not be construed as final or as receipt of any Goods and Special Services that, as a result of subsequent inspections and tests, are determined to be non-conforming.

2. If, on the basis of the visual inspection specified in Paragraph 9.02.B.1, the Goods appear to comply with the requirements of the Procurement Contract Documents as to quantities and condition, then within 10 days of delivery Buyer shall issue to Seller Buyer's acknowledgment of the receipt of Goods.

C. *Final Inspection*

1. After all of the Goods have been incorporated into the Project, tested in accordance with such testing requirements as are specified, and are functioning as required, and Seller has performed and completed all Special Services, Buyer will make a final inspection.

2. If, on the basis of the final inspection, Buyer determines that the Goods and Special Services are conforming, Buyer's notice thereof will constitute Buyer's acceptance of the Goods and Special Services, subject to any limitations stated in the notice.

3. If, on the basis of the final inspection, the Goods and Special Services are non-conforming, Buyer will identify the non-conformity in writing.

9.03 *Non-Conforming Goods and Special Services*

A. If, on the basis of inspections and testing prior to delivery, the Goods and Special Services are found to be non-conforming, or if at any time after Buyer has acknowledged receipt of delivery and before the expiration of the correction period described in Paragraph 9.04, Buyer determines that the Goods and Special Services are non-conforming, then Seller shall promptly, without cost to Buyer and in response to written instructions from Buyer, either correct such non-conforming Goods and Special Services, or, if Goods are rejected by Buyer, remove and replace the non-conforming Goods with conforming Goods, including all work required for reinstallation.

B. *Buyer's Rejection of Non-Conforming Goods*

1. If Buyer elects to reject the Goods in whole or in part, Buyer's notice to Seller will describe in sufficient detail the non-conforming aspect of the Goods. If Goods have been delivered to Buyer, Seller shall promptly, and within the Procurement Contract Times, remove and replace the rejected Goods.

2. Seller shall bear all costs, losses and damages attributable to the removal, replacement, reinspection, and retesting of the non-conforming Goods.

3. Upon rejection of the Goods, Buyer retains a security interest in the Goods to the extent of any payments made and expenses incurred in their testing and inspection.

C. *Buyer's Rejection of Non-Conforming Special Services*

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

1. If at any time Buyer elects to reject the Special Services in whole or in part, Buyer's notice to Seller will describe in sufficient detail the non-conforming aspect of the Special Services.

2. Seller shall promptly provide conforming Special Services acceptable to Buyer.

3. If Seller fails to provide conforming Special Services, Buyer may remove the Special Services from the scope of the Procurement Contract, and equitably reduce the Procurement Contract Price.

D. *Remedying Non-Conforming Goods*: If Buyer elects to permit the Seller to modify the Goods to correct the non-conformance, then Seller shall promptly provide a schedule for such modifications and shall make the Goods conforming within a reasonable time.

E. *Buyer's Acceptance of Non-Conforming Goods*: Instead of requiring correction or removal and replacement of non-conforming Goods discovered either before or after final payment, Buyer may accept the non-conforming Goods. Seller shall bear all reasonable costs, losses, and damages attributable to Buyer's evaluation of and determination to accept such non-conforming Goods.

F. *Seller Obligations*: Seller shall pay all claims, costs, losses, and damages, including but not limited to all fees and charges for re-inspection, retesting and for any engineers, architects, attorneys and other professionals, and all court or arbitration or other dispute resolution costs arising out of or relating to the non-conforming Goods and Special Services. Seller's obligations will include the costs of the correction or removal and replacement of the non-conforming Goods and the replacement of property of Buyer and others destroyed by the correction or removal and replacement of the non-conforming Goods, and obtaining conforming Special Services from others.

G. *Buyer's Rejection of Conforming Goods*: If Buyer asserts that Goods and Special Services are non-conforming and such Goods and Special Services are determined to be conforming, or if Buyer rejects as non-conforming Goods and Special Services that are later determined to be conforming, then Seller shall be entitled to reimbursement from Buyer of costs incurred by Seller in inspecting, testing, correcting, removing, or replacing the conforming Goods and Special Services, including but not limited to fees and charges of engineers, architects, attorneys and other professionals, and all court or arbitration or other dispute resolution costs associated with the incorrect assertion of non-conformance or rejection of conforming Goods and Special Services.

9.04 *Correction Period*

A. Seller's responsibility for correcting all non-conformities in the Goods and Special Services will extend for a period of one year after the acceptance of the Goods and Special Services in accordance with Paragraph 9.02.C.2.

B. Where non-conforming Goods and Services (and damage to other work resulting therefrom) have been corrected or removed and replaced under this paragraph, the correction period hereunder with respect to such Goods and Services will be extended for an additional period of one year after such correction or removal and replacement has been satisfactorily completed.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

C. Seller's obligations under this paragraph are in addition to all other obligations and warranties. The provisions of this paragraph may not be construed as a substitute for, or a waiver of, the provisions of any applicable statute of limitation or repose.

ARTICLE 10—ENGINEER'S STATUS

10.01 *Engineer's Role Defined*

A. Engineer will be Buyer's representative until assignment (if any) of the Procurement Contract.

B. The duties and responsibilities and the limitations of authority of Engineer prior to assignment, if any, of the Procurement Contract, are set forth in the Procurement Contract Documents.

C. Engineer's responsibilities, if any, after an assignment (if any) of the Procurement Contract, are set forth in the Procurement Agreement.

10.02 *Duties and Responsibilities; Authority; Limitations*

A. As set forth in Article 3, Engineer will be the initial interpreter of the Procurement Contract Documents and judge of the acceptability of the Goods and Special Services, and will issue clarifications, interpretations, and decisions regarding such issues.

B. Acting on behalf of Buyer under the provisions of Article 9, Engineer has the authority to disapprove or reject Goods and Special Services that Engineer believes to be non-conforming. Engineer also has the authority to require special inspection or testing of the Goods or Special Services as provided in Paragraph 9.02, whether or not the Goods are fabricated or installed, or the Special Services are completed.

C. Engineer may authorize minor deviations or variations in the Procurement Contract Documents by: 1) written approval of specific variations set forth in Shop Drawings when Seller has duly noted such variations as required in Paragraph 7.06.A.3, or 2) a Field Order.

D. As set forth in Article 12, Engineer will review Claims, and render decisions on Claims.

E. In rendering any interpretations, clarifications, reviews, decisions, disapprovals, acceptances, rejections, authorizations, and judgments, Engineer will not show partiality to Buyer or Seller. Engineer will not be liable to Buyer, Seller, or others in connection with any interpretations, clarifications, reviews, decisions, disapprovals, acceptances, rejections, authorizations, or judgments conducted or rendered by Engineer in good faith.

F. Engineer will not supervise, direct, control, or have authority over or be responsible for the means, methods, techniques, sequences, or procedures used by Seller to perform its obligations under this Procurement Contract, or the safety precautions and programs incident thereto, or for any failure of Seller to comply with Laws and Regulations applicable to the performance of its obligations. Engineer will not be responsible for Seller's failure to furnish the Goods and Special Services in accordance with the Procurement Contract Documents.

ARTICLE 11—CHANGES

11.01 *Amending and Supplementing the Procurement Contract*

A. The Procurement Contract may be amended or supplemented by a Change Order, a Change Directive, or a Field Order.

B. If an amendment or supplement to the Procurement Contract includes a change in the Procurement Contract Price or the Procurement Contract Times, such amendment or supplement must be set forth in a Change Order.

C. All changes to the Procurement Contract that involve (1) the conformance or acceptability of the Goods and Special Services, (2) the design (as set forth in the Procurement Drawings, Procurement Specifications, or otherwise), or (3) other engineering or technical matters, must be supported by Engineer's recommendation. Buyer and Seller may amend other terms and conditions of the Procurement Contract without the recommendation of the Engineer.

11.02 *Change Orders*

A. Buyer and Seller shall execute appropriate Change Orders covering:

1. Changes in Procurement Contract Price or Procurement Contract Times which are agreed to by the parties, including any undisputed sum or amount of time for Goods and Special Services furnished in accordance with a Change Directive;

2. Changes in Procurement Contract Price resulting from a Buyer set-off, unless Seller has duly contested such set-off;

3. Changes in the Goods and Special Services which are: (a) ordered by Buyer pursuant to Paragraph 11.05, (b) required because of Buyer's acceptance of non-conforming Goods and Services under Paragraph 9.03 or (c) agreed to by the parties, subject to the need for Engineer's recommendation if the change in the Goods and Special Services involves the design (as set forth in the Procurement Drawings, Procurement Specifications, or otherwise) or other engineering or technical matters; and

4. Changes that embody the substance of any final and binding results under: Paragraph 11.03.B, resolving the impact of a Change Directive; Article 12, Claims; and similar provisions.

B. If Buyer or Seller refuses to execute a Change Order that is required to be executed under the terms of Paragraph 11.02.A, it will be deemed to be of full force and effect, as if fully executed.

11.03 *Change Directives*

A. A Change Directive will not change the Procurement Contract Price or the Procurement Contract Times but is evidence that the parties expect that the modification ordered or documented by a Change Directive will be incorporated in a subsequently issued Change Order, following negotiations by the parties as to the Change Directive's effect, if any, on the Procurement Contract Price and Procurement Contract Times; or, if negotiations are unsuccessful, by a determination under the terms of the Procurement Contract Documents governing adjustments, expressly including Paragraph 11.08 regarding change of Procurement Contract Price.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

B. If Buyer has issued a Change Directive and Buyer or Seller believes that an adjustment in Procurement Contract Times or Procurement Contract Price is necessary, then such party shall submit a Claim seeking such an adjustment no later than 30 days after the completion of the Goods and Services set out in the Change Directive.

11.04 *Field Orders*

A. Engineer may authorize minor changes in the Goods and Services if the changes do not involve an adjustment in the Procurement Contract Price or the Procurement Contract Times and are compatible with the design concept as indicated by the Procurement Contract Documents. Such changes will be accomplished by a Field Order and will be binding on Buyer and also on Seller, which shall perform the Goods and Special Services involved promptly.

B. If Seller believes that a Field Order justifies an adjustment in the Procurement Contract Price or Procurement Contract Times, then before proceeding with the Goods and Special Services at issue, Seller shall submit a Claim as provided herein.

11.05 *Buyer-Authorized Changes in the Goods and Special Services*

A. Without invalidating the Procurement Contract and without notice to any surety, Buyer may, at any time or from time to time, order additions, deletions, or revisions in the Goods and Special Services. Changes involving the design (as set forth in the Procurement Drawings, Procurement Specifications, or otherwise) or other engineering or technical matters will be supported by Engineer's recommendation.

B. Such changes in the Goods and Special Services may be accomplished by a Change Order, if Buyer and Seller have agreed as to the effect, if any, of the changes on Procurement Contract Times or Procurement Contract Price; or by a Change Directive. Upon receipt of any such document, Seller shall promptly proceed with the Goods and Special Services involved; or, in the case of a deletion in the Goods and Special Services, promptly cease activities with respect to such deletion. Added or revised Goods and Special Services must be performed under the applicable conditions of the Procurement Contract Documents.

11.06 *Buyer's Contingency Allowance*

A. The Buyer's Contingency Allowance, if any such is set forth in the Procurement Agreement, is for the sole use of Buyer to cover unanticipated costs.

B. If Buyer exercises its unilateral right to use all or a portion of the Buyer's Contingency Allowance, Buyer will issue a written directive that documents the costs to which the allowance is applied, Seller's entitlement to compensation, and the consequent reduction in such allowance.

C. Prior to final payment, the Total Price, as set forth in the Procurement Agreement, will be duly adjusted to account for any unused portion of the Buyer's Contingency Allowance.

D. The Procurement Agreement, Article 5, addresses the impact on Buyer's Contingency Allowance of an assignment of the Procurement Contract.

11.07 *Unauthorized Changes in the Goods and Special Services*

A. Seller shall not be entitled to an increase in the Procurement Contract Price or an extension of the Procurement Contract Times with respect to any work performed that is not required by the Procurement Contract Documents, as amended, modified, or supplemented.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

11.08 *Change of Procurement Contract Price*

A. The Procurement Contract Price may only be changed by a Change Order. Any Claim for an adjustment of Procurement Contract Price must comply with the provisions of Article 12.

B. An adjustment in the Procurement Contract Price will be determined as follows:

1. For changes in Unit Price Goods and Special Services, by application of the unit prices to the quantities of the items involved;

2. To the extent the cost of the change is not covered by unit prices, then by a mutually agreed lump sum; or

3. To the extent the cost of the change is not covered by unit prices and the parties do not reach mutual agreement to a lump sum, then on the basis of documented costs plus a Seller's fee for overhead and profit of 15%.

11.09 *Change of Procurement Contract Times*

A. The Procurement Contract Times may only be changed by a Change Order. Any Claim for an adjustment in the Procurement Contract Times must comply with the provisions of Article 12.

11.10 *Notification to Surety*

A. If the provisions of any bond require notice to be given to a surety of any change affecting the general scope of the Goods and Special Services or the provisions of the Procurement Contract (including, but not limited to, Procurement Contract Price or Procurement Contract Times), the giving of any such notice will be Seller's responsibility. The amount of each applicable bond will be adjusted to reflect the effect of any such change.

ARTICLE 12—CLAIMS, DISPUTES, AND DISPUTE RESOLUTION

12.01 *Claims*

A. The parties agree to endeavor to avoid or resolve Claims through direct, good faith discussions and negotiations whenever practicable. Such discussions and negotiations should at the outset address whether the parties mutually agree to suspend the Claims process, including the time periods established in this Paragraph 12.01; if so, a written record of such mutual agreement should be made and jointly executed.

B. Claimant shall deliver to Engineer and the other party to the Procurement Contract written notice of each Claim within 15 days after the occurrence of the event giving rise to the Claim.

C. Claimant shall deliver written supporting data to Engineer and the other party within 45 days after such occurrence unless Engineer allows an additional period of time.

D. Engineer will review each such Claim and render a decision in writing within 30 days after receipt of the last submittal of the claimant or the last submittal of the opposing party, if any.

E. If Engineer does not render a formal written decision on a Claim within the time stated in Paragraph 12.01.D., Engineer shall be deemed to have issued a decision denying the Claim in its entirety 31 days after receipt of the last submittal of the claimant or the last submittal of the opposing party, if any.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

F. The rendering of a decision by Engineer pursuant to this Paragraph 12.01 with respect to any such Claim, dispute, or other matter (except any which have been waived by the making or acceptance of final payment) will be a condition precedent to any exercise by Buyer or Seller of such rights or remedies as either may otherwise have under the Procurement Contract Documents or by Laws or Regulations in respect of any such Claim, dispute, or other matter. If the exercise of such rights or remedies will imminently be time-barred, a party may take actions necessary to preserve such rights and remedies notwithstanding the lack of the condition precedent referred to in this paragraph.

G. If a submitted matter in question concerns terms and conditions of the Procurement Contract Documents that do not involve (1) the performance or acceptability of Goods and Special Services under the Procurement Contract Documents, (2) the design (as set forth in the Procurement Drawings, Procurement Specifications, Addenda, or otherwise), or (3) other engineering or technical matters, then Engineer will promptly give written notice to Buyer and Seller that Engineer is unable to provide a decision or interpretation. If Buyer and Seller are unable to agree on resolution of such a matter in question, either party may pursue resolution as provided in Paragraph 12.02.

H. Engineer's written decision on such Claim or a decision denying the Claim in its entirety that is deemed to have been issued pursuant to Paragraph 12.01, will be final and binding upon Buyer and Seller 30 days after it is issued unless within 30 days of issuance Buyer or Seller appeals Engineer's decision by initiating the mediation of such Claim in accordance with the dispute resolution procedures set forth in Paragraph 12.02.

I. If Article 12 has been amended to delete the mediation requirement, then Buyer or Seller may appeal Engineer's decision within 30 days of issuance by following the alternative dispute resolution process set forth in Article 12, as amended; or if no such alternative dispute resolution process has been set forth, Buyer or Seller may appeal Engineer's decision by 1) delivering to the other party within 30 days of the date of such decision a written notice of intent to submit the Claim to a court of competent jurisdiction, and 2) within 60 days after the date of such decision instituting a formal proceeding in a court of competent jurisdiction.

J. No Claim for an adjustment in Procurement Contract Price or Procurement Contract Times will be valid if not submitted in accordance with Article 12.

K. The effect on Claims of an assignment of the Procurement Contract by Buyer to a Contractor/Assignee is addressed in the Procurement Agreement, Article 5.

12.02 *Dispute Resolution Method*

A. Either Buyer or Seller may initiate the mediation of (1) any Claim decided in writing by Engineer under Paragraph 12.01 before such decision becomes final and binding, or (2) any other dispute between the parties, including but not limited to any dispute arising after final inspection of the Goods and Services. The mediation will be governed by the Construction Industry Mediation Rules of the American Arbitration Association in effect as of the Effective Date of the Procurement Contract. The request for mediation must be submitted in writing to the American Arbitration Association and the other party to the Procurement Contract. Timely submission of the request will stay Engineer's decision from becoming final and binding.

B. Mediation is a condition precedent to seeking final dispute resolution under Paragraph 12.01.C. Buyer and Seller shall participate in the mediation process in good faith.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

The process must be concluded within 60 days of filing of the request. The date of termination of the mediation will be determined by application of the mediation rules referenced above.

C. If the mediation process does not result in resolution of the dispute, then Engineer's written Claim decision under Paragraph 12.01.D or a Claim denial pursuant to Paragraph 12.01.E becomes final and binding, or if applicable such other dispute is deemed resolved in favor of respondent, unless, within 30 days after termination of the mediation, Buyer or Seller:

1. elects in writing to invoke any final dispute resolution process provided for in the Supplementary Conditions, or

2. agrees with the other party to submit the Claim or dispute to another final dispute resolution process, or

3. if no final dispute resolution process has been provided for in the Supplementary Conditions, delivers to the other party written notice of the intent to submit the Claim or dispute to a court of competent jurisdiction, and within 60 days of the termination of the mediation institutes such formal proceeding.

ARTICLE 13—PAYMENT

13.01 *Applications for Progress Payments*

A. Seller shall submit to Buyer for Engineer's review Applications for Payment filled out and signed by Seller and accompanied by such supporting documentation as is required by the Procurement Contract Documents and also as Buyer or Engineer may reasonably require.

B. The timing and amounts of progress payments will be as stipulated in the Procurement Agreement.

C. Any Application for Payment that is based in whole or in part on the delivery of Goods must be accompanied by a bill of sale, invoice, or other documentation reasonably satisfactory to Buyer warranting that Buyer has rightfully received good title to the Goods from Seller and that, upon payment, the Goods will be free and clear of all liens. Such documentation will include releases and waivers from all parties with viable lien rights.

D. Buyer shall notify Seller promptly of any deficiency in the required documentation.

13.02 *Review of Applications for Progress Payments*

A. *Review of Applications*

1. Engineer will, within 10 days after receipt of each Application for Payment, including each resubmittal, either indicate in writing a recommendation of payment and present the Application to Buyer, or return the Application to Seller indicating in writing Engineer's reasons for refusing to recommend payment.

2. Engineer's recommendation of any payment requested in an Application for Payment will constitute a representation by Engineer to Buyer, based on Engineer's observations of Seller's progress, as an experienced and qualified design professional, and on Engineer's review of the Application for Payment and the accompanying data and schedules, that to the best of Engineer's knowledge, information and belief:

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

a. the Goods and Special Services or other obligations of Seller have progressed to the point indicated;

b. the quality of the Goods and Special Services or other obligations of Seller are generally in accordance with the Procurement Contract Documents; and

c. the conditions precedent to Seller being entitled to such payment appear to have been fulfilled in so far as it is Engineer's responsibility to observe the Seller's progress.

3. By recommending any such payment Engineer will not thereby be deemed to have represented that:

a. inspections made to check the quality or the quantity of the Goods and Special Services or other obligations of Seller have been exhaustive, extended to every aspect of the Goods and Special Services or other obligations of Seller in progress, or involved detailed inspections of the Goods and Special Services or other obligations of Seller beyond the responsibilities specifically assigned to Engineer in the Procurement Contract; or

b. there may not be other matters or issues between the parties that might entitle Seller to be paid additionally by Buyer, or entitle Buyer to withhold payment to Seller.

4. Neither Engineer's review of Seller's progress for the purposes of recommending payments nor Engineer's recommendation of any payment, including final payment, will impose responsibility on Engineer:

a. to supervise, direct, or control the Seller's performance or furnishing of Goods and Special Services or other obligations of Seller; or

b. for the means, methods, techniques, sequences, or procedures of construction, manufacturing, fabrication, installation, or shipping, or the safety precautions and programs incident thereto; or

c. for Seller's failure to comply with Laws and Regulations applicable to Seller's performance under the Procurement Contract; or

d. to make any examination to ascertain how or for what purposes Seller has used the money paid for the Procurement Contract Price; or

e. to determine that title to any of the Goods or component parts have passed to Buyer free and clear of any Liens.

5. Engineer may refuse to recommend the whole or any part of any payment if, in Engineer's opinion, it would be incorrect to make the representations to Buyer stated in Paragraph 13.02.A.2.

6. Engineer will recommend reductions in payment (set-offs) necessary in Engineer's opinion to protect Buyer from loss because:

a. the Goods and Services are non-conforming, requiring correction or replacement;

b. the Procurement Contract Price has been reduced by Change Orders;

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

c. Buyer has been required to correct non-conforming Goods and Special Services in accordance with Paragraph 9.03.C, or has accepted non-conforming Goods and Special Services pursuant to Paragraph 9.03.E; or

d. Engineer has actual knowledge of the occurrence of any of the events that would constitute a default by Seller and therefore justify termination for cause under the Procurement Contract Documents.

13.03 *Basis and Amount of Progress Payments*

A. The basis and amounts of the progress payments will be as provided in the Procurement Agreement, subject to the provisions of this Article 13 regarding reductions in payment.

13.04 *Suspension of or Reduction in Payment*

A. Buyer may temporarily cease making progress payments, or reduce the amount of a progress payment, even though recommended for payment by Engineer, under the following circumstances:

1. Buyer has reasonable grounds to conclude that Seller will not furnish the Goods or the Special Services in accordance with the Procurement Contract Documents, and

2. Buyer has requested in writing assurances from Seller that the Goods and Special Services will be delivered or furnished in accordance with the Procurement Contract Documents, and Seller has failed to provide adequate assurances within ten days of Buyer's written request.

3. In addition to any reductions in payment (set-offs) recommended by Engineer, Buyer is entitled to impose a set-off against payment based on any of the following:

a. claims have been made against Buyer based on Seller's conduct in the performance or furnishing of the Goods and Special Services, or has incurred costs, losses, or damages resulting from Seller's conduct in the performance or furnishing of the Goods and Special Services, including but not limited to claims, costs, losses, or damages from workplace injuries, adjacent property damage, non-compliance with Laws and Regulations, and patent infringement;

b. Seller has failed to take reasonable and customary measures to avoid damage, delay, disruption, and interference with other work at or adjacent to the Point of Destination or the worksite;

c. Seller has failed to provide and maintain required bonds or insurance;

d. Buyer has incurred extra charges or engineering costs related to Submittal reviews, evaluations of proposed substitutes, tests and inspections, or return visits to manufacturing or assembly facilities;

e. the Goods and Special Services are non-conforming, requiring correction or replacement;

f. Buyer has been required to correct non-conforming Goods and Special Services, in accordance with Paragraph 9.03.C, or has accepted non-conforming Goods and Special Services pursuant to Paragraph 9.03.E;

g. the Procurement Contract Price has been reduced by Change Orders;

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

h. an event that would constitute a default by Seller and therefore justify a termination for cause has occurred;

i. liquidated or other damages have accrued as a result of Seller's failure to achieve Milestones, Substantial Completion, or final completion of the Goods and Special Services; or

j. liens have been filed in connection with the Procurement Contract, except where Seller has delivered a specific bond satisfactory to Buyer to secure the satisfaction and discharge of such liens.

B. If Buyer refuses to make payment of the full amount recommended by Engineer, Buyer will provide Seller and Engineer immediate written notice stating the reason for such action and promptly pay Seller any amount remaining after deduction of the amount withheld. Buyer shall promptly pay Seller the amount withheld when Seller corrects the reason for such action to Buyer's satisfaction.

13.05 *Final Payment*

A. After Seller has corrected all non-conformities to the reasonable satisfaction of Buyer and Engineer and furnished all Special Services, Seller may submit its final Application for Payment following the procedures for progress payments.

B. The final Application for Payment will be accompanied by all documentation called for in the Procurement Contract Documents (including but not limited to all final operations and maintenance manuals, and any special warranties), a list of all unsettled Claims, and the written consent of surety to the making of final payment.

C. If, on the basis of final inspection and the review of the final Application for Payment and accompanying documentation, Engineer is reasonably satisfied that Seller has furnished the Goods and Special Services in accordance with the Procurement Contract Documents, and that Seller has fulfilled all other obligations under the Procurement Contract Documents, then Engineer will, within 10 days after receipt of the final Application for Payment, indicate in writing Engineer's recommendation of final payment subject to the provisions of Paragraph 13.02, and present the final Application for Payment to Buyer. Such recommendation will account for any set-offs against payment that are necessary in Engineer's opinion to protect Buyer from loss for the reasons stated in Paragraph 13.02.

D. If Engineer does not recommend final payment, Engineer will return the final Application for Payment to Seller, indicating the reasons for refusing to recommend final payment, in which case Seller shall make the necessary corrections and resubmit the final Application for Payment.

E. In support of its recommendation of final payment Engineer will also give written notice to Buyer and Seller that the Goods and Special Services are acceptable, subject to stated limitations in the notice and to the provisions of Paragraph 13.06.

F. If the final Application for Payment and accompanying documentation are appropriate as to form and substance, Buyer shall, within 30 days after receipt thereof, pay Seller the amount recommended by Engineer, less any sum Buyer is entitled to set off against Engineer's recommendation, pursuant to the provisions of Paragraph 13.04.

G. Buyer will not make final payment, or return or release included retainage (if any) at any time, unless Seller submits written consent of the surety to such payment, return, or release.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

13.06 *Waiver of Claims*

A. By making final payment, Buyer waives its claim or right to liquidated damages or other damages for late completion by Seller, except as set forth in an outstanding Claim, appeal, set-off, or express reservation of rights by Buyer. Buyer reserves all other claims or rights after final payment.

B. The acceptance of final payment by Seller will constitute a waiver by Seller of all claims and rights against Buyer other than those pending matters that have been duly submitted or appealed under the provisions of Article 12.

ARTICLE 14—CANCELLATION, SUSPENSION, AND TERMINATION

14.01 *Cancellation*

A. Buyer has the right to cancel the Procurement Contract, without cause, at any time prior to delivery of the Goods by written notice. Cancellation pursuant to the terms of this paragraph will not constitute a breach of contract by Buyer. Upon cancellation:

1. Buyer shall pay Seller for the direct costs incurred in producing any Goods that Seller has specially manufactured for the Project, plus a fair and reasonable amount for overhead and profit.

2. For Goods that are not specially manufactured for the Project, Seller shall be entitled to a restocking charge of 10 percent of the unpaid Procurement Contract Price of such Goods.

14.02 *Suspension of Performance by Buyer*

A. Buyer has the right to suspend performance of the Procurement Contract for up to 90 days, without cause, by written notice. Upon suspension under this paragraph, Seller shall be entitled to an increase in the Procurement Contract Times and Procurement Contract Price caused by the suspension, provided that performance would not have been suspended or delayed for causes attributable to Seller.

14.03 *Suspension of Performance by Seller*

A. Seller may suspend the furnishing of the Goods and Special Services only under the following circumstance:

1. Seller has reasonable grounds to conclude that Buyer will not perform its future payment obligations under the Procurement Contract; and

2. Seller has requested in writing assurances from Buyer that future payments will be made in accordance with the Procurement Contract, and Buyer has failed to provide such assurances within ten days of Seller's written request.

14.04 *Breach and Termination*

A. *Buyer's Breach*

1. Seller shall have the right to terminate the Procurement Contract for cause by declaring a breach if Buyer fails to comply with any material provision of the Procurement Contract. Upon termination, Seller shall be entitled to all remedies provided by Laws and Regulations.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

2. If Seller believes Buyer is in breach of its obligations under the Procurement Contract, Seller shall provide Buyer with reasonably prompt written notice setting forth in sufficient detail the reasons for declaring that it believes a breach has occurred. Buyer shall have 7 days from receipt of the written notice declaring the breach (or such longer period of time as Seller may grant in writing) within which to cure or to proceed diligently to cure such alleged breach.

B. *Seller's Breach*

1. Buyer may terminate Seller's right to perform the Procurement Contract for cause by declaring a breach should Seller fail to comply with any material provision of the Procurement Contract Documents. Upon termination, Buyer shall be entitled to all remedies provided by Laws and Regulations.

2. In the event Buyer believes Seller is in breach of its obligations under the Procurement Contract, Buyer shall provide Seller with reasonably prompt written notice setting forth in sufficient detail the reasons for declaring that it believes a breach has occurred. Seller shall have 7 days from receipt of the written notice declaring the breach (or such longer period of time as Buyer may grant in writing) within which to cure or to proceed diligently to cure such alleged breach.

3. If and to the extent that Seller has provided a performance bond under the provisions of Paragraph 5.01, the notice and cure procedures of that bond, if any, will supersede the notice and cure procedures of Paragraph 14.04.B.2.

ARTICLE 15—MISCELLANEOUS

15.01 *Giving Notice*

A. Whenever any provision of the Procurement Contract requires the giving of written notice to Buyer, Seller, or Engineer, it will be deemed to have been validly given if delivered:

1. in person, by a commercial courier service or otherwise, to the recipient's place of business;

2. by registered or certified mail, postage prepaid, to the recipient's place of business; or

3. by e-mail to the recipient, with the words "Formal Notice" or similar in the e-mail's subject line.

15.02 *Controlling Law*

A. This Procurement Contract is to be governed by the law of the state in which the Goods are to be installed.

B. In the case of any conflict between the express terms of this Procurement Contract and the Uniform Commercial Code, as adopted in the state whose law governs, it is the intent of the parties that the express terms of this Procurement Contract will apply.

15.03 *Computation of Time*

A. When any period of time is referred to in the Procurement Contract by number of days, it will be computed to exclude the first and include the last day of such period. If the last day of any such period falls on a Saturday or Sunday or on a day made a legal holiday by the law of the applicable jurisdiction, such day will be omitted from the computation.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

15.04 *Cumulative Remedies*

A. The duties and obligations imposed by these General Conditions and the rights and remedies available hereunder to the parties hereto are in addition to, and are not to be construed in any way as a limitation of, any rights and remedies available to any or all of them which are otherwise imposed or available by Laws or Regulations, by special warranty or guarantee, or by other provisions of the Procurement Contract, and the provisions of this paragraph will be as effective as if repeated specifically in the Procurement Contract in connection with each particular duty, obligation, right, and remedy to which they apply.

15.05 *Survival of Obligations*

A. All representations, indemnifications, warranties, and guarantees made in, required by, or given in accordance with the Procurement Contract, as well as all continuing obligations indicated in the Procurement Contract, will survive final payment, completion, and acceptance of the Goods and Special Services or termination or completion of the Procurement Contract or of the services of Seller.

15.06 *Entire Agreement*

A. Buyer and Seller agree that this Procurement Contract is the complete and final agreement between them, and supersedes all prior negotiations, representations, or agreements, either written or oral. This Procurement Contract may not be altered, modified, or amended except in writing signed by an authorized representative of both parties.

15.07 *No Waiver*

A. A party's non-enforcement of any provision will not constitute a waiver of that provision, nor will it affect the enforceability of that provision or of the remainder of this Procurement Contract.

15.08 *Headings*

A. Article and paragraph headings are inserted for convenience only and do not constitute parts of these General Conditions.

15.09 *Successors and Assigns*

A. Buyer and Seller each binds itself, its partners, successors, assigns, and legal representatives to the other party hereto, its partners, successors, assigns, and legal representatives in respect to all covenants, agreements, and obligations contained in the Procurement Contract.

SUPPLEMENTARY CONDITIONS OF THE PROCUREMENT CONTRACT

These Supplementary Conditions amend or supplement EJCDC® P-700, Standard General Conditions of the Procurement Contract (2019). The General Conditions remain in full force and effect except as amended.

The terms used in these Supplementary Conditions have the meanings stated in the General Conditions. Additional terms used in these Supplementary Conditions have the meanings stated below, which are applicable to both the singular and plural thereof.

The address system used in these Supplementary Conditions is the same as the address system used in the General Conditions, with the prefix "SC" added—for example, “Paragraph SC-4.05.”

ARTICLE 1—DEFINITIONS AND TERMINOLOGY

No suggested Supplementary Conditions in this Article.

ARTICLE 2—PRELIMINARY MATTERS

2.01 *Copies of Documents*

SC-2.02 Amend the first sentence of Paragraph 2.02.A. to read as follows:

Buyer shall furnish to Seller **two (2)** printed copies of the Procurement Contract Documents (including one fully signed counterpart of the Procurement Agreement), and **one (1) copy** in electronic portable document format (PDF).

ARTICLE 3—PROCUREMENT CONTRACT DOCUMENTS

No suggested Supplementary Conditions in this Article.

ARTICLE 4—COMMENCEMENT AND PROGRESS OF WORK

No suggested Supplementary Conditions in this Article.

ARTICLE 5—BONDS AND INSURANCE

5.01 *Performance, Payment, and Other Bonds*

SC-5.01 Add the following paragraphs immediately after Paragraph 5.01.A:

1. *Required Performance Bond Form*: The performance bond that Seller furnishes will be in the form of EJCDC® P-610, Performance Bond (2010 or 2019 edition).
2. *Required Payment Bond Form*: The payment bond that Contractor furnishes will be in the form of EJCDC® P-615, Payment Bond (2010 or 2019 edition).

5.02 *Insurance*

SC-5.02 Add the following new paragraphs immediately after Paragraph 5.02.E:

F. Seller shall purchase and maintain such liability and other insurance as is appropriate for the furnishing of Goods and Special Services and as will provide protection from claims set forth

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

below which may arise out of or result from Seller's furnishing of the Goods or Special Services and Seller's other obligations under the Procurement Contract Documents, whether the furnishing of Goods and Special Services or other obligations are to be performed by Seller, any subcontractor or supplier, or by anyone directly or indirectly employed by any of them to furnish the Goods and Special Services, or by anyone for whose acts any of them may be liable:

1. claims under workers' compensation, disability benefits, and other similar employee benefit acts;
2. claims for damages because of bodily injury, occupational sickness or disease, or death of Seller's employees;
3. claims for damages because of bodily injury, sickness or disease, or death of any person other than Seller's employees;
4. claims for damages insured by reasonably available personal injury liability coverage which are sustained: (a) by any person as a result of an offense directly or indirectly related to the employment of such person by Seller, or (b) by any other person for any other reason;
5. claims for damages, other than to the Goods, because of injury to or destruction of tangible property wherever located; and
6. claims for damages because of bodily injury or death of any person or property damage arising out of the ownership, maintenance or use of any motor vehicle.

G. The policies of insurance so required by this Paragraph 5.02 to be purchased and maintained must:

1. with respect to insurance required by Paragraphs SC-5.02.F.3 through SC-5.02.F.6 inclusive, include as additional insureds (subject to any customary exclusion in respect of professional liability) Buyer, Engineer, their consultants, and all of whom must be listed as additional insureds, but only in respect of work performed by or on behalf of the named insured, Seller, and only to the extent that the additional insured is held liable for the negligence or other culpability of Seller. Coverage under Seller's policy does not extend to liability arising out of the additional insured's own negligence. Also include coverage for the respective officers, directors, partners, employees, agents, and other consultants and subcontractors of each and any of all such additional insureds, and the insurance afforded to these additional insureds must provide primary coverage for all claims covered thereby;
2. include the specific coverages and be written for the limits of liability provided below or required by Laws or Regulations, whichever is greater;
3. include completed operations insurance;
4. include contractual liability insurance covering Seller's indemnity obligations under Paragraph 7.07;
5. contain a provision or endorsement that the coverage afforded will not be canceled, or renewal refused, until at least 30 days prior written notice has been given to the purchasing policyholder. Within three days of receipt of any such written notice, the

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

purchasing policyholder will provide a copy of the notice to the other party, each other insured, and Engineer;

6. remain in effect at least until final payment and at all times thereafter when Seller may be correcting, removing, or replacing non-conforming Goods in accordance with Paragraph 9.03 and 9.04; and

7. with respect to completed operations insurance, and any insurance coverage written on a claims-made basis, remain in effect for at least two years after final payment (and Seller shall furnish Buyer and each other additional insured identified in these Supplementary Conditions, to whom a certificate of insurance has been issued, evidence satisfactory to Buyer and any such additional insured of continuation of such insurance at final payment and one year thereafter).

H. The limits of liability for the insurance required by Paragraph SC-5.02.F must provide coverage for the following amounts or greater where required by Laws and Regulations:

1. Workers' Compensation, and related coverages under Paragraphs SC-5.02.F.1 and F.2:

a. The Seller shall procure and maintain, at their own expense, during the contract period, in accordance with the provisions of the laws of the state in which the work is performed, Workmen's Compensation Insurance, including occupational disease provisions, for all of his employees at the site of the project and in case any work is sublet, the Seller shall require such subcontractor similarly to provide Workmen's Compensation Insurance, including occupational disease provisions for all of the latter's employees unless such employees are covered by the protection afforded by the Seller. In case any class of employees engaged in hazardous work under this contract at the site of the project is not protected under Workmen's Compensation statute, the Seller shall provide, and shall cause each subcontractor to provide, adequate and suitable insurance for the protection of his employees not otherwise protected.

2. Seller's General Liability and Property Damage Insurance, including vehicle coverage issued to the Contractor and protecting him from all claims for personal injury, including death, and all claims for destruction of or damage to property, arising out of or in connection with any operations under the Contract Documents, whether such operations be by himself or by any subcontractor under him, or anyone directly or indirectly employed by the Contractor or by a subcontractor under him. The insurance shall be written with a limit of liability of $2,000,000 for all damages arising out of bodily injury, including death, at any time resulting there from, sustained by any one person in any one accident; and a limit of liability of $2,000,000 aggregate for any such damages sustained by two or more persons in any one accident. Insurance shall be written with a limit of liability of $2,000,000 for all property damage sustained by any one person in any one accident; and a limit of liability of $2,000,000 aggregate for any such damage sustained by two or more persons in any one accident.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

3. Professional Liability (if the Special Services include professional services):

Seller's Professional Liability	Policy limits
Each Claim	$2,000,000
Annual Aggregate	$2,000,000

I. Seller shall deliver to Buyer, with copies to each additional insured identified in these Supplementary Conditions, certificates of insurance which Seller is required to purchase and maintain.

ARTICLE 6—LICENSES AND FEES

6.01 Intellectual Property and License Fees

SC 6.01 Replace paragraph 6.01 in its entirety with the following:

A. Unless specifically stated elsewhere in the Contract Documents, Seller is not transferring any intellectual property rights, patent rights, or licenses for the Goods delivered. However, in the event the Seller is manufacturing to Buyer's design, Buyer retains all intellectual property rights in such design excluding Seller's proprietary intellectual property and any improvements to Seller's proprietary intellectual property which shall be and remain the sole and exclusive property of Seller.

B. Seller shall pay all license fees and royalties and assume all costs incident to the use or the furnishing of the Goods, unless specified otherwise by the Contract Documents. Seller grants to Buyer a non-exclusive, non-terminable, royalty free license to use the intellectual property embedded in Equipment delivered to and paid for by the Buyer, as well as any drawings, design or data delivered to and paid for by the Buyer, for the purposes of owning, financing, using, operating and maintaining the relevant Equipment at the Project site. Such license may only be assigned to a future owner of the Equipment or to an operations and maintenance subcontractor. Such license does not extend to the re-creation of the Equipment or the manufacture of spares or consumables by Buyer or third parties.

C. Any software Seller owns and provides pursuant to this Contract shall remain Seller's property. Seller provides to Buyer a limited, non-exclusive and terminable royalty free project-specific license to such software for the term of this Contract. Buyer agrees not to copy, sub-license, translate, transfer, reverse engineer, or decode the software. Unless otherwise expressly agreed by Seller, this license shall terminate and the software shall be returned to Seller upon termination of this Contract, or the material breach of the terms in this section.

D. Both parties agree to keep confidential the other party's proprietary non-public information, if any, which may be acquired in connection with this Contract. Buyer will not, without Seller's advance written consent, subject Equipment to testing, analysis, or any type of reverse engineering. Seller retains all intellectual property rights including copyright which it has in all drawings and data or other deliverables supplied or developed under this Contract. Buyer acknowledges that Seller is in the business of selling the Equipment subject to this Contract and agrees that it will not file patent applications on the Equipment, or processes and methods of using the Equipment, without Seller's express written permission. Buyer further agrees that in any

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

event any such patents will not be asserted against Seller or its other Buyers based upon purchase and use of such Equipment.

ARTICLE 7—SELLER'S RESPONSIBILITIES

7.03 *Laws and Regulations*

7.04 *"Or Equals"*

7.05 *Taxes*

SC-7.05 Add a new paragraph immediately after Paragraph 7.05.A:

B. Buyer is exempt from payment of sales and compensating use taxes of the State of **New York** and of cities and counties thereof on all materials and equipment to be incorporated into the Project facilities.

1. Buyer will furnish the required certificates of tax exemption to Seller with respect to materials and equipment to be incorporated into the Project facilities.

2. Buyer's exemption does not apply to construction tools, machinery, equipment, or other property purchased by or leased by Seller, or to supplies or materials not incorporated into the Project facilities.

3. The Procurement Contract Price does not include the cost of sales or compensating use taxes to the extent such are exempted by this paragraph.

7.07 *Indemnification*

SC-7.07 Replace paragraph 7.07A in its entirety with the following:

A. To the fullest extent permitted by Laws and Regulations, Seller shall indemnify and hold harmless Buyer, Engineer, Project Owner, and any assignee of Buyer, including Contractor/Assignee, and their officers, directors, members, partners, employees, agents, consultants, contractors, and subcontractors, from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) to the extent arising out of or relating to the performance of Seller's obligations under the Procurement Contract, provided that any such claim, cost, loss or damage is attributable to bodily injury, sickness, disease, or death, or to injury to or destruction of tangible third-party property (other than the Goods themselves), but only to the extent caused by any negligent act or omission of Seller, or any individual or entity directly or indirectly employed by Seller or anyone for whose acts Seller may be liable.

ARTICLE 8—SHIPPING AND DELIVERY

No suggested Supplementary Conditions in this Article.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

ARTICLE 9—BUYER'S RIGHTS

9.01

SC 9.01 Add the following paragraph after 9.01.C.4:

A. Improper handling, storage, installation, or commissioning of the Equipment by Buyer or third parties, to the extent Buyer or third parties are made aware of same, in writing, by Seller.

9.02 *Limitation of Seller's Liability*

9.04 *Correction Period*

SC-9.04.B Replace paragraph 9.04B in its entirety with the following:

B. Warranty repair, replacement or re-performance by Seller shall not extend or renew the applicable warranty period of the Work, except for malfunction of material or equipment more than two (2) times under the Work that shall be caused for replacement by Seller of the affected equipment with a redesigned component and extension of the Warranty Period for that equipment of the Work for a period of twelve (12) months from completion of the required warranty work.

SC-9.04.C Replace paragraph 9.04C in its entirety with the following:

C. The warranties and remedies set forth in this article are in lieu of and exclude all other warranties and remedies, statutory, express or implied, for a specified purpose.

SC-9.05 Add the following new paragraph after Paragraph 9.04:

9.05 *Limitation of Seller's Liability*

A. Notwithstanding anything else contained in this Agreement, to the maximum extent permitted by law, and regardless of whether a claim is based in contract (including warranty or indemnity), extra-contractual liability, tort (including negligence or strict liability), statue, equity or any other legal theory; Buyer and Seller agree that the total liability of Seller to Buyer for claims, costs, losses, and damages arising from this Procurement Contract will be limited to the amount established in the Procurement Agreement as the Procurement Contract Price.

B. Upon assignment the terms of this Paragraph 9.05 will be binding upon both the assignor and assignee with respect to Seller's liability, The terms of this limitation do not apply to or limit any claim by Buyer against Seller based on any of the following: (a) contribution or indemnification with respect to third-party claims, losses, and damages; (b) costs, losses, or damages attributable to personal or bodily injury, sickness, disease, or death, or to injury to or destruction of the tangible property of others, (c) intentional or reckless wrongful conduct, or (d) rights conferred by any bond provided by Seller under this Contract.

C. In no event shall either party be liable for any loss of profit or revenues, loss of production, loss of use of equipment or services or any associated equipment, interruption of business, cost of capital, cost of replacement water or power, downtime costs, increased operating costs, claims of company's customers for such damages, or for any special, consequential, incidental, indirect, punitive or exemplary damages.

9.06 Buyer's Responsibilities

SC 9.06 Add the following new paragraph after Paragraph 9.05:

A. Unless otherwise stipulated in the Contract, the unloading, handling, storage and installation of the Equipment shall be the responsibility of the Buyer. Seller will not control the actual operation of either Buyer's systems or the Equipment at the Site. Buyer shall also:

1. provide Seller with complete and accurate data concerning all relevant conditions at the Site, including but not limited to any existing Buyer facility, equipment or processes, influent water or other substances to be treated or measured with the Equipment;

2. operate and maintain its facility and all related systems in good operating condition and within the agreed parameters or, if no parameters have been agreed, within generally accepted industry practice;

3. operate and maintain the Equipment in accordance with Seller's operations and maintenance manuals or where such manuals are silent, in accordance with generally accepted industry practice.

If Buyer's fails to fulfill the foregoing obligations, Seller shall be relieved of any obligations with respect to warranties or any other commitments under the Contract, and Seller shall have no liability for any loss, damage or injury which Buyer may sustain as a result.

ARTICLE 10—ENGINEER'S STATUS

No suggested Supplementary Conditions in this Article.

ARTICLE 11—CHANGES

No suggested Supplementary Conditions in this Article.

ARTICLE 12—CLAIMS, DISPUTES, AND DISPUTE RESOLUTION

No suggested Supplementary Conditions for this Article.

ARTICLE 13—PAYMENT

No suggested Supplementary Conditions in this Article.

ARTICLE 14—CANCELLATION, SUSPENSION, AND TERMINATION

No suggested Supplementary Conditions in this Article.

TECHNICAL SPECIFICATIONS

SECTION 013300 – SUBMITTAL PROCEDURES

PART 1 – GENERAL

1.1 SUMMARY

A. This Section includes administrative and procedural requirements for submitting Design Submittals, Shop Drawings, Product Data, Samples, and other miscellaneous submittals.

1.2 DEFINITIONS

A. Action Submittals: Written and graphic information that requires Engineer's responsive action.

B. Informational Submittals: Written information that does not require Engineer's approval. Submittals may be rejected for not complying with requirements.

C. File Transfer Protocol (FTP): Communications protocol that enables transfer of files to and from another computer over a network and that serves as the basis for standard Internet protocols. An FTP site is a portion of a network located outside of network firewalls within which internal and external users are able to access files.

D. Portable Document Format (PDF): An open standard file format licensed by Adobe Systems used for representing documents in a device-independent and display resolution-independent fixed-layout document format.

1.3 SUBMITTAL ADMINISTRATIVE REQUIREMENTS:

A. Engineer's Digital Data Files: Electronic digital data files of the Contract Documents will be provided by Engineer upon request for Supplier's use in preparing submittals.

B. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.
   1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
   2. Submit all submittal items required for each Specification Section concurrently unless partial submittals for portions of the Work are indicated on approved submittal schedule.
   3. Submit action submittals and informational submittals required by the same Specification Section as separate packages under separate transmittals.
   4. Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for coordination.
      a. Engineer reserves the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.

C. Processing Time: Allow time for submittal review, including time for resubmittals, as follows. Time for review shall commence on Engineer's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.
   1. Initial Review: Allow 15 days for initial review of each submittal. Allow additional time if coordination with subsequent submittals is required. Engineer will advise Supplier when a submittal being processed must be delayed for coordination.

2. Intermediate Review: If intermediate submittal is necessary, process it in same manner as initial submittal.
3. Resubmittal Review: Allow 15 days for review of each resubmittal.

D. Electronic Submittals: Identify and incorporate information in each electronic submittal file as follows:
1. Assemble complete submittal package into a single indexed file incorporating submittal requirements of a single Specification Section and transmittal form with links enabling navigation to each item.
2. Name file with submittal number or other unique identifier, including revision identifier.
a. File name shall use project identifier and Specification Section number followed by a decimal point and then a sequential number (e.g., LNHS-061000.01). Resubmittals shall include an alphabetic suffix after another decimal point (e.g., LNHS-061000.01.A).
3. Provide means for insertion to permanently record Supplier's review and approval markings and action taken by Engineer.
4. Transmittal Form for Electronic Submittals: Use electronic form acceptable to Owner**,** containing the following information:
a. Project name.
b. Date.
c. Name and address of Engineer.
d. Name of Supplier.
e. Name of firm or entity that prepared submittal.
f. Category and type of submittal.
g. Submittal purpose and description.
h. Specification Section number and title.
i. Specification paragraph number or drawing designation and generic name for each of multiple items.
j. Drawing number and detail references, as appropriate.
k. Location(s) where product is to be installed, as appropriate.
l. Related physical samples submitted directly.
m. Indication of full or partial submittal.
n. Transmittal number.
o. Submittal and transmittal distribution record.
p. Other necessary identification.
q. Remarks.
5. Metadata: Include the following information as keywords in the electronic submittal file metadata:
a. Project name.
b. Number and title of appropriate Specification Section.
c. Supplier name.
d. Product name.

E. Options: Identify options requiring selection by Engineer.

F. Submittals for Utilizing Web-Based Project Management Software: Prepare submittals as PDF files, or other format indicated by Project management software.

G. Deviations and Additional Information: On an attached separate sheet, prepared on Supplier's letterhead, record relevant information, requests for data, revisions other than those requested by Engineer on previous submittals, and deviations from requirements in the Contract Documents,

including minor variations and limitations. Include same identification information as related submittal.

H. Resubmittals: Make resubmittals in same form and number of copies as initial submittal.
   1. Note date and content of previous submittal.
   2. Note date and content of revision in label or title block and clearly indicate extent of revision.
   3. Resubmit submittals until they are marked with approval notation from Engineer's action stamp.

I. Distribution: Furnish copies of final submittals to manufacturers, subcontractors, suppliers, fabricators, installers, authorities having jurisdiction, and others as necessary for performance of activities. Show distribution on transmittal forms.

PART 2 – PRODUCTS

2.1 SUBMITTAL PROCEDURES

A. General Submittal Procedure Requirements: Prepare and submit submittals required by individual Specification Sections. Types of submittals are indicated in individual Specification Sections.
   1. Post electronic submittals as PDF electronic files directly to Engineer's FTP site specifically established for Project.
      a. Engineer will return annotated file. Annotate and retain one copy of file as an electronic Project record document file.
   2. Submit electronic submittals via email as PDF electronic files.
      a. Engineer will return annotated file. Annotate and retain one copy of file as an electronic Project record document file.
   3. Action Submittals: Submit electronic submittals.
   4. Informational Submittals: Submit 2 paper copies of each submittal unless otherwise indicated. Engineer will not return copies.
   5. Certificates and Certifications Submittals: Provide a statement that includes signature of entity responsible for preparing certification. Certificates and certifications shall be signed by an officer or other individual authorized to sign documents on behalf of that entity.
      a. Provide a digital signature with digital certificate on electronically submitted certificates and certifications where indicated.
      b. Provide a notarized statement on original paper copy certificates and certifications where indicated.

B. Product Data: Collect information into a single submittal for each element of construction and type of product or equipment.
   1. If information must be specially prepared for submittal because standard published data are not suitable for use, submit as Shop Drawings, not as Product Data.
   2. Mark each copy of each submittal to show which products and options are applicable.
   3. Include the following information, as applicable:
      a. Manufacturer's catalog cuts.
      b. Manufacturer's product specifications.
      c. Standard color charts.
      d. Statement of compliance with specified referenced standards.
      e. Testing by recognized testing agency.
      f. Application of testing agency labels and seals.
      g. Notation of coordination requirements.

h. Availability and delivery time information.

4. For equipment, include the following in addition to the above, as applicable:
   a. Wiring diagrams showing factory-installed wiring.
   b. Printed performance curves.
   c. Operational range diagrams.
   d. Clearances required to other construction, if not indicated on accompanying Shop Drawings.
5. Submit Product Data before or concurrent with Samples.
6. Submit Product Data in the following format:
   a. PDF electronic file.

C. Shop Drawings: Prepare Project-specific information, drawn accurately to scale. Do not base Shop Drawings on reproductions of the Contract Documents or standard printed data.

1. Preparation: Fully illustrate requirements in the Contract Documents. Include the following information, as applicable:
   a. Identification of products.
   b. Schedules.
   c. Compliance with specified standards.
   d. Notation of coordination requirements.
   e. Notation of dimensions established by field measurement.
   f. Relationship and attachment to adjoining construction clearly indicated.
   g. Seal and signature of professional engineer if specified.
2. Sheet Size: Except for templates, patterns, and similar full-size drawings, submit Shop Drawings on sheets at least 8-1/2 by 11 inches (215 by 280 mm), but no larger than 22 by 34 inches (750 by 1067 mm).
3. Submit Shop Drawings in the following format:
   a. PDF electronic file.
4. BIM File Incorporation: Develop and incorporate Shop Drawing files into Building Information Model established for Project.
   a. Prepare Shop Drawings in the following format: Same digital data software program, version, and operating system as the original Drawings.

D. Samples: Submit Samples for review of kind, color, pattern, and texture for a check of these characteristics with other elements and for a comparison of these characteristics between submittal and actual component as delivered and installed.

1. Transmit Samples that contain multiple, related components such as accessories together in one submittal package.
2. Identification: Attach label on unexposed side of Samples that includes the following:
   a. Generic description of Sample.
   b. Product name and name of manufacturer.
   c. Sample source.
   d. Number and title of applicable Specification Section.
   e. Specification paragraph number and generic name of each item.
3. For projects where electronic submittals are required, provide corresponding electronic submittal of Sample transmittal, digital image file illustrating Sample characteristics, and identification information for record.

a. Samples that may be incorporated into the Work are indicated in individual Specification Sections. Such Samples must be in an undamaged condition at time of use.
b. Samples not incorporated into the Work, or otherwise designated as Owner's property, are the property of Supplier.

4. Samples for Initial Selection: Submit manufacturer's color charts consisting of units or sections of units showing the full range of colors, textures, and patterns available.
   a. Number of Samples: Submit 1 full set of available choices where color, pattern, texture, or similar characteristics are required to be selected from manufacturer's product line. Engineer will return submittal with options selected.

E. Product Schedule: As required in individual Specification Sections, prepare a written summary indicating types of products required for the Work and their intended location. Include the following information in tabular form:
1. Type of product. Include unique identifier for each product indicated in the Contract Documents or assigned by Supplier if none is indicated.
2. Manufacturer and product name, and model number if applicable.
3. Number and name of room or space.
4. Location within room or space.
5. Submit product schedule in the following format:
   a. PDF electronic file.

F. Test and Inspection Reports and Schedule of Tests and Inspections Submittals: Comply with requirements specified in Division 01 Section "Quality Requirements."

G. Maintenance Data: Comply with requirements specified in Division 01 Section "Operation and Maintenance Data."

H. Qualification Data: Prepare written information that demonstrates capabilities and experience of firm or person. Include lists of completed projects with project names and addresses, contact information of Engineers and owners, and other information specified.

I. Welding Certificates: Prepare written certification that welding procedures and personnel comply with requirements in the Contract Documents. Submit record of Welding Procedure Specification and Procedure Qualification Record on AWS forms. Include names of firms and personnel certified.

J. Installer Certificates: Submit written statements on manufacturer's letterhead certifying that Installer complies with requirements in the Contract Documents and, where required, is authorized by manufacturer for this specific Project.

K. Manufacturer Certificates: Submit written statements on manufacturer's letterhead certifying that manufacturer complies with requirements in the Contract Documents. Include evidence of manufacturing experience where required.

L. Product Certificates: Submit written statements on manufacturer's letterhead certifying that product complies with requirements in the Contract Documents.

M. Material Certificates: Submit written statements on manufacturer's letterhead certifying that material complies with requirements in the Contract Documents.

N. Material Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting test results of material for compliance with requirements in the Contract Documents.

O. Product Test Reports: Submit written reports indicating that current product produced by manufacturer complies with requirements in the Contract Documents. Base reports on evaluation of tests performed by manufacturer and witnessed by a qualified testing agency, or on comprehensive tests performed by a qualified testing agency.

P. Research Reports: Submit written evidence, from a model code organization acceptable to authorities having jurisdiction, that product complies with building code in effect for Project. Include the following information:

1. Name of evaluation organization.
2. Date of evaluation.
3. Time period when report is in effect.
4. Product and manufacturers' names.
5. Description of product.
6. Test procedures and results.
7. Limitations of use.

Q. Preconstruction Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of tests performed before installation of product, for compliance with performance requirements in the Contract Documents.

R. Compatibility Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of compatibility tests performed before installation of product. Include written recommendations for primers and substrate preparation needed for adhesion.

S. Field Test Reports: Submit written reports indicating and interpreting results of field tests performed either during installation of product or after product is installed in its final location, for compliance with requirements in the Contract Documents.

T. Design Data: Prepare and submit written and graphic information, including, but not limited to, performance and design criteria, list of applicable codes and regulations, and calculations. Include list of assumptions and other performance and design criteria and a summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Include page numbers.

2.2 DELEGATED-DESIGN SERVICES

A. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Supplier by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.

1. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Engineer.

B. Delegated-Design Services Certification: In addition to Shop Drawings, Product Data, and other required submittals, submit digitally signed PDF electronic file of certificate, signed and sealed by the responsible design professional, for each product and system specifically assigned to Supplier to be designed or certified by a design professional.

1. Indicate that products and systems comply with performance and design criteria in the Contract Documents. Include list of codes, loads, and other factors used in performing these services.

C. BIM File Incorporation: Engineer delegated-design drawing and data files into Building Information Model established for Project.

1. Prepare delegated-design drawings in the following format: Revit.

PART 3 – EXECUTION

3.1 SUPPLIER'S REVIEW

A. Review each submittal and check for compliance with the Contract Documents. Note corrections and field dimensions. Mark with approval stamp before submitting to Engineer.

B. Approval Stamp: Stamp each submittal with a uniform, approval stamp. Include Project name and location, submittal number, Specification Section title and number, name of reviewer, date of Supplier's approval, and statement certifying that submittal has been reviewed, checked, and approved for compliance with the Contract Documents.

3.2 ENGINEER'S ACTION

A. General: Engineer will not review submittals that do not bear Supplier's approval stamp and will return them without action.

B. Action Submittals: Engineer will review each submittal, make marks to indicate corrections or modifications required, and return it. Engineer will stamp each submittal with an action stamp and will mark stamp appropriately to indicate action taken, as follows:

1. Final Unrestricted Release: Where submittals are marked "No Exceptions Taken," that part of the Work covered by the submittal may proceed provided it complies with requirements of the Contract Documents; final acceptance will depend upon that compliance.
2. Final-But-Restricted Release: When submittals are marked "Make Corrections Noted," that part of the Work covered by the submittal may proceed provided it complies with notations or corrections on the submittal and requirements of the Contract Documents; final acceptance will depend on that compliance.
3. Returned for Resubmittal: When submittal is marked "Revise and Resubmit," "Rejected," or "Submit Specified Item," do not proceed with that part of the Work covered by the submittal, including purchasing, fabrication, delivery, or other activity. Revise or prepare a new submittal in accordance with the notations; resubmit without delay. Repeat if necessary to obtain a different action mark.
    a. Do not permit submittals marked "Revise and Resubmit," "Rejected," or "Submit Specified Item" to be used at the Project site, or elsewhere where Work is in progress.
4. Other Action: Where a submittal is primarily for information or record purposes, special processing or other activity, the submittal will be returned, marked "Action Not Required."

C. Informational Submittals: Engineer will review each submittal and will not return it or will reject and return it if it does not comply with requirements. Engineer will forward each submittal to appropriate party.

D. Submittals not required by the Contract Documents will not be reviewed and may be discarded.

END OF SECTION

SECTION 014000 – QUALITY REQUIREMENTS

PART 1 – GENERAL

1.1 SUMMARY

A. This Section includes administrative and procedural requirements for quality assurance and quality control.

B. Testing and inspecting services are required to verify compliance with requirements specified or indicated. These services do not relieve Seller of responsibility for compliance with the Contract Document requirements.

1. Specific quality-control requirements for individual construction activities are specified in the Sections that specify those activities. Requirements in those Sections may also cover production of standard products.
2. Specified tests, inspections, and related actions do not limit Seller's quality-control procedures that facilitate compliance with the Contract Document requirements.
3. Requirements for Seller to provide quality-control services required by Engineer, Owner, or authorities having jurisdiction are not limited by provisions of this Section.

1.2 DEFINITIONS

A. Quality-Assurance Services: Activities, actions, and procedures performed before and during execution of the Work to guard against defects and deficiencies and ensure that proposed construction complies with requirements.

B. Quality-Control Services: Tests, inspections, procedures, and related actions during and after execution of the Work to evaluate that completed construction complies with requirements. Services do not include contract enforcement activities performed by Engineer.

C. Testing Agency: An entity engaged to perform specific tests, inspections, or both. Testing laboratory shall mean the same as testing agency.

1.3 DELEGATED DESIGN

A. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Supplier by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.

1. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Engineer.

1.4 SUBMITTALS

A. Qualification Data: For testing agencies specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include proof of qualifications in the form of a recent report on the inspection of the testing agency by a recognized authority.

B. Delegated-Design Submittal: In addition to Shop Drawings, Product Data, and other required submittals, submit a statement, signed and sealed by the responsible design professional, for each product and system specifically assigned to Supplier to be designed or certified by a design professional, indicating that the products and systems are in compliance with performance and design criteria indicated. Include list of codes, loads, and other factors used in performing these services.

C. Schedule of Tests and Inspections: Prepare in tabular form and include the following:
   1. Specification Section number and title.
   2. Description of test and inspection.
   3. Identification of applicable standards.
   4. Identification of test and inspection methods.
   5. Number of tests and inspections required.
   6. Time schedule or time span for tests and inspections.
   7. Entity responsible for performing tests and inspections.
   8. Requirements for obtaining samples.
   9. Unique characteristics of each quality-control service.

D. Reports: Prepare and submit certified written reports that include the following:
   1. Date of issue.
   2. Project title and number.
   3. Name, address, and telephone number of testing agency.
   4. Dates and locations of samples and tests or inspections.
   5. Names of individuals making tests and inspections.
   6. Description of the Work and test and inspection method.
   7. Identification of product and Specification Section.
   8. Complete test or inspection data.
   9. Test and inspection results and an interpretation of test results.
   10. Ambient conditions at time of sample taking and testing and inspecting.
   11. Comments or professional opinion on whether tested or inspected Work complies with the Contract Document requirements.
   12. Name and signature of laboratory inspector.
   13. Recommendations on retesting and reinspecting.

E. Permits, Licenses, and Certificates: For Owner's records, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, correspondence, records, and similar documents, established for compliance with standards and regulations bearing on performance of the Work.

1.5 QUALITY ASSURANCE

A. Fabricator Qualifications: A firm experienced in producing products similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

B. Factory-Authorized Service Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to inspect installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.

C. Manufacturer Qualifications: A firm experienced in manufacturing products or systems similar to those indicated for this Project and with a record of successful in-service performance.

D. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of the system, assembly, or products that are similar to those indicated for this Project in material, design, and extent.

E. Specialists: Certain sections of the Specifications require that specific construction activities shall be performed by entities who are recognized experts in those operations. Specialists shall satisfy qualification requirements indicated and shall be engaged for the activities indicated.
   1. Requirement for specialists shall not supersede building codes and similar regulations governing the Work, nor interfere with local trade-union jurisdictional settlements and similar conventions.

F. Testing Agency Qualifications: An agency with the experience and capability to conduct testing and inspecting indicated, as documented by ASTM E548, and that specializes in types of tests and inspections to be performed. Each testing agency shall be authorized by the authorities having jurisdiction in the state in which the project is located.

G. Preconstruction Testing: Testing agency shall perform preconstruction testing for compliance with specified requirements for performance and test methods.
   1. Testing Agency Responsibilities: Submit a certified written report of each test, inspection, and similar quality-assurance service to Engineer with copy to Seller. Interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from the Contract Documents.

1.6 QUALITY CONTROL

A. Owner Responsibilities: Where quality-control services are indicated as Owner's responsibility, Owner will engage a qualified testing agency to perform these services.
   1. Owner will furnish Supplier with names, addresses, and telephone numbers of testing agencies engaged and a description of the types of testing and inspecting they are engaged to perform.
   2. Payment for these services shall be included in Bid Form.
   3. Costs for retesting and reinspecting construction that replaces or is necessitated by work that failed to comply with the Contract Documents will be charged to Supplier**,** and the Contract Sum will be adjusted by Change Order.

B. Supplier Responsibilities: Unless otherwise indicated, provide quality-control services specified and required by authorities having jurisdiction.
   1. Where services are indicated as Supplier's responsibility, engage a qualified testing agency to perform these quality-control services.
   2. Notify testing agencies at least 24 hours in advance of time when Work that requires testing or inspecting will be performed.
   3. Where quality-control services are indicated as Supplier's responsibility, submit a certified written report, in duplicate, of each quality-control service.
   4. Testing and inspecting requested by Supplier and not required by the Contract Documents are Supplier's responsibility.
   5. Submit additional copies of each written report directly to authorities having jurisdiction, when they so direct.

C. Special Tests and Inspections: Owner will engage a testing agency to conduct special tests and inspections required by authorities having jurisdiction as the responsibility of Owner.
   1. Testing agency will notify Engineer and Seller promptly of irregularities and deficiencies observed in the Work during performance of its services.
   2. Testing agency will submit a certified written report of each test, inspection, and similar quality-control service to Engineer with copy to Seller and to authorities having jurisdiction.
   3. Testing agency will submit a final report of special tests and inspections at Substantial Completion, which includes a list of unresolved deficiencies.

4. Testing agency will interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from the Contract Documents.
5. Testing agency will retest and reinspect corrected work.

D. Supplier's Field Services: Where indicated, engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including service connections. Report results in writing.

E. Retesting/Reinspecting: Regardless of whether original tests or inspections were Supplier's responsibility, provide quality-control services, including retesting and reinspecting, for construction that revised or replaced Work that failed to comply with requirements established by the Contract Documents.

F. Testing Agency Responsibilities: Cooperate with Engineer and Supplier in performance of duties. Provide qualified personnel to perform required tests and inspections.
1. Notify Engineer and Supplier promptly of irregularities or deficiencies observed in the Work during performance of its services.
2. Interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from requirements.
3. Submit a certified written report, in duplicate, of each test, inspection, and similar quality-control service through Supplier.
4. Do not release, revoke, alter, or increase requirements of the Contract Documents or approve or accept any portion of the Work.
5. Do not perform any duties of Supplier.

G. Associated Services: Cooperate with agencies performing required tests, inspections, and similar quality-control services and provide reasonable auxiliary services as requested. Notify agency sufficiently in advance of operations to permit assignment of personnel. Provide the following:
1. Access to the Work.
2. Incidental labor and facilities necessary to facilitate tests and inspections.
3. Adequate quantities of representative samples of materials that require testing and inspecting. Assist agency in obtaining samples.
4. Facilities for storage and field-curing of test samples.
5. Delivery of samples to testing agencies.
6. Preliminary design mix proposed for use for material mixes that require control by testing agency.
7. Security and protection for samples and for testing and inspecting equipment at Project site.

H. Coordination: Coordinate sequence of activities to accommodate required quality-assurance and quality-control services with a minimum of delay and to avoid necessity of removing and replacing construction to accommodate testing and inspecting.
1. Schedule times for tests, inspections, obtaining samples, and similar activities.

I. Schedule of Tests and Inspections: Prepare a schedule of tests, inspections, and similar quality-control services required by the Contract Documents. Submit schedule within [30] days of date established for commencement of the Work (i.e., Notice to Proceed).
1. Distribution: Distribute schedule to Owner, Engineer, testing agencies, and each party involved in performance of portions of the Work where tests and inspections are required.

PART 2 – PRODUCTS (Not Used)

PART 3 – EXECUTION (Not used)

END OF SECTION

SECTION 016000 – PRODUCT REQUIREMENTS

PART 1 – GENERAL

1.1 SUMMARY

A. This Section includes the following administrative and procedural requirements: selection of products for use in Project; product delivery, storage, and handling; manufacturers' standard warranties on products; special warranties; product substitutions; and comparable products.

1.2 DEFINITIONS

A. Products: Items purchased for incorporating into the Work, whether purchased for Project or taken from previously purchased stock. The term "product" includes the terms "material," "equipment," "system," and terms of similar intent.
   1. Named Products: Items identified by manufacturer's product name, including make or model number or other designation, shown or listed in manufacturer's published product literature that is current as of date of the Contract Documents.
   2. New Products: Items that have not previously been incorporated into another project or facility. Products salvaged or recycled from other projects are not considered new products.
   3. Comparable Product: Product that is demonstrated and approved through submittal process, or where indicated as a product substitution, to have the indicated qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of specified product.

B. Substitutions: Changes in products, materials, equipment, and methods of construction from those required by the Contract Documents and proposed by Supplier.

C. Basis-of-Design Product Specification: Where a specific manufacturer's product is named or accompanied by the words "basis of design," including make or model number or other designation, to establish the significant qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics for purposes of evaluating comparable products of other named manufacturers.

D. Supplier's Warranty: Preprinted written warranty published by individual manufacturer for a particular product and specifically endorsed by manufacturer to Owner.

E. Special Warranty: Written warranty required by or incorporated into the Contract Documents, either to extend time limit provided by Supplier's warranty or to provide more rights for Owner.

1.3 SUBMITTALS

A. Product List: Submit a list, in tabular from, showing specified products. Include generic names of products required. Include manufacturer's name and proprietary product names for each product.
   1. Coordinate product list with the Submittals Schedule.
   2. Form: Tabulate information for each product under the following column headings:
      a. Specification Section number and title.
      b. Generic name used in the Contract Documents.
      c. Proprietary name, model number, and similar designations.
      d. Manufacturer's name and address.
      e. Supplier's name and address.

f. Installer's name and address.
g. Projected delivery date or time span of delivery period.
h. Identification of items that require early submittal approval for scheduled delivery date.

B. Basis-of-Design Product Specification Submittal: Comply with requirements in Division 1 Section "Submittal Procedures." Show compliance with requirements.

C. Warranty and Bond Submittals: Submit written warranties to the Engineer prior to the date certified for Substantial Completion. If the Engineer's Certificate of Substantial Completion designates a commencement date for warranties other than the date of Substantial Completion for the Work, or a designated portion of the Work, submit written warranties upon request of the Engineer.

1.4 QUALITY ASSURANCE

A. Compatibility of Options: If Seller is given option of selecting between two or more products for use on Project, product selected shall be compatible with products previously selected, even if previously selected products were also options.

B. Source Limitations: To the fullest extent possible, provide products of the same kind, from a single source.
1. When specified products are available only from sources that do not or cannot produce a quantity adequate to complete project requirements in a timely manner, consult with the Engineer for a determination of the most important product qualities before proceeding. Qualities may include attributes relating to visual appearance, strength, durability, or compatibility. When a determination has been made, select products from sources that produce products that possess these qualities, to the fullest extent possible.

1.5 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle products using means and methods that will prevent damage, deterioration, and loss, including theft. Comply with manufacturer's written instructions.
1. Schedule delivery to minimize long-term storage at Project site and to prevent overcrowding of construction spaces.
2. Coordinate delivery with installation time to ensure minimum holding time for items that are flammable, hazardous, easily damaged, or sensitive to deterioration, theft, and other losses.
3. Deliver products to Project site in an undamaged condition in manufacturer's original sealed container or other packaging system, complete with labels and instructions for handling, storing, unpacking, protecting, and installing.
4. Inspect products on delivery to ensure compliance with the Contract Documents and to ensure that products are undamaged and properly protected.
5. Store products to allow for inspection and measurement of quantity or counting of units.
6. Store materials in a manner that will not endanger Project structure.
7. Store products that are subject to damage by the elements, under cover in a weathertight enclosure above ground, with ventilation adequate to prevent condensation.
8. Comply with product manufacturer's written instructions for temperature, humidity, ventilation, and weather-protection requirements for storage.
9. Protect stored products from damage.

1.6 PRODUCT WARRANTIES

A. Warranties specified in other Sections shall be in addition to, and run concurrent with, other warranties required by the Contract Documents. Manufacturer's disclaimers and limitations on product warranties do not relieve Seller of obligations under requirements of the Contract Documents.

B. Special Warranties: Prepare a written document that contains appropriate terms and identification, ready for execution. Submit a draft for approval before final execution.
   1. Manufacturer's Standard Form: Modified to include Project-specific information and properly executed.

C. Warranty Requirements: Related Damages and Losses: When correcting warranted Work that has failed, remove and replace other Work that has been damaged as a result of such failure or that must be removed and replaced to provide access for correction of warranted Work.
   1. Reinstatement of Warranty: When Work covered by a warranty has failed and been corrected by replacement or rebuilding, reinstate the warranty by written endorsement. The reinstated warranty shall be equal to the original warranty with an equitable adjustment for depreciation.
   2. Replacement Cost: Upon determination that Work covered by a warranty has failed, replace or rebuild the Work to an acceptable condition complying with requirements of Contract Documents. The Seller is responsible for the cost of replacing or rebuilding defective Work regardless of whether the Owner has benefited from use of the Work through a portion of its anticipated useful service life.
   3. Owner's Recourse: Written warranties made to the Owner are in addition to implied warranties, and shall not limit the duties, obligations, rights and remedies otherwise available under the law, nor shall warranty periods be interpreted as limitations on time in which the Owner can enforce such other duties, obligations, rights, or remedies.
      a. Rejection of Warranties: The Owner reserves the right to reject warranties and to limit selections to products with warranties not in conflict with requirements of the Contract Documents.
   4. The Owner reserves the right to refuse to accept Work for the Project where a special warranty, certification, or similar commitment is required on such Work or part of the Work, until evidence is presented that entities required to countersign such commitments are willing to do so.

PART 2 – PRODUCTS

2.1 PRODUCT OPTIONS

A. General Product Requirements: Provide products that comply with the Contract Documents, that are undamaged, and unless otherwise indicated, that are new at time of installation.
   1. Provide products complete with accessories, trim, finish, fasteners, and other items needed for a complete installation and indicated use and effect.
   2. Standard Products: If available, and unless custom products or nonstandard options are specified, provide standard products of types that have been produced and used successfully in similar situations on other projects.
   3. Owner reserves the right to limit selection to products with warranties not in conflict with requirements of the Contract Documents.
   4. Where products are accompanied by the term "as selected," Engineer will make selection.
   5. Where products are accompanied by the term "match sample," sample to be matched is Engineer's.

6. Descriptive, performance, and reference standard requirements in the Specifications establish "salient characteristics" of products.
7. Or Equal: Where products are specified by name and accompanied by the term "or equal" or "or approved equal" or "or approved," comply with provisions in "Comparable Products" Article to obtain approval for use of an unnamed product.

B. Product Selection Procedures: Procedures for product selection include the following:
1. Product: Where Specification paragraphs or subparagraphs titled "Product" name a single product and manufacturer, provide the product named.
   a. Substitutions may be considered unless otherwise indicated.
2. Manufacturer/Source: Where Specification paragraphs or subparagraphs titled "Manufacturer" or "Source" name single manufacturers or sources, provide a product by the manufacturer or from the source named that complies with requirements.
   a. Substitutions may be considered, unless otherwise indicated.
3. Products: Where Specification paragraphs or subparagraphs titled "Products" introduce a list of names of both products and manufacturers, provide one of the products listed that complies with requirements.
   a. Substitutions may be considered, unless otherwise indicated.
4. Manufacturers: Where Specification paragraphs or subparagraphs titled "Manufacturers" introduce a list of manufacturers' names, provide a product by one of the manufacturers listed that complies with requirements.
   a. Substitutions may be considered, unless otherwise indicated
5. Available Products: Where Specification paragraphs or subparagraphs titled "Available Products" introduce a list of names of both products and manufacturers, provide one of the products listed or another product that complies with requirements. Comply with provisions in "Comparable Products" Article to obtain approval for use of an unnamed product.
6. Available Manufacturers: Where Specification paragraphs or subparagraphs titled "Available Manufacturers" introduce a list of manufacturers' names, provide a product by one of the manufacturers listed or another manufacturer that complies with requirements. Comply with provisions in "Comparable Products" Article to obtain approval for use of an unnamed product.
7. Product Options: Where Specification paragraphs titled "Product Options" indicate that size, profiles, and dimensional requirements on Drawings are based on a specific product or system, provide either the specific product or system indicated or a comparable product or system by another manufacturer. Comply with provisions in "Product Substitutions" Article.
8. Basis-of-Design Products: Where Specification paragraphs or subparagraphs titled "Basis-of-Design Product[**s**]" are included and also introduce or refer to a list of manufacturers' names, provide either the specified product or a comparable product by one of the other named manufacturers. Drawings and Specifications indicate sizes, profiles, dimensions, and other characteristics that are based on the product named. Comply with provisions in "Comparable Products" Article to obtain approval for use of an unnamed product.
   a. Substitutions will not be considered.

2.2 PRODUCT SUBSTITUTIONS

A. Timing: Engineer will consider requests for substitution if received within 7 days after the Notice to Proceed. Requests received after that time may be considered or rejected at discretion of Engineer.

B. Conditions: Engineer will consider Seller's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, Engineer will return requests without action, except to record noncompliance with these requirements:

1. Requested substitution offers Owner a substantial advantage in cost, time, energy conservation, or other considerations, after deducting additional responsibilities Owner must assume. Owner's additional responsibilities may include compensation to Engineer for redesign and evaluation services, increased cost of other construction by Owner, and similar considerations.
2. Requested substitution does not require extensive revisions to the Contract Documents.
3. Requested substitution is consistent with the Contract Documents and will produce indicated results.
4. Substitution request is fully documented and properly submitted.
5. Requested substitution will not adversely affect Construction Schedule.
6. Requested substitution has received necessary approvals of authorities having jurisdiction.
7. Requested substitution is compatible with other portions of the Work.
8. Requested substitution has been coordinated with other portions of the Work.
9. Requested substitution provides specified warranty.
10. The specified product or method of construction cannot be provided in a manner that is compatible with other materials, and where the Seller certifies that the substitution will overcome the incompatibility.
11. The specified product or method of construction cannot be coordinated with other materials, and where the Seller certifies that the proposed substitution can be coordinated.
12. The specified product or method of construction cannot provide a warranty required by the Contract Documents and where the Seller certifies that the proposed substitution provide the required warranty.

2.3 COMPARABLE PRODUCTS

A. Where products or manufacturers are specified by name, submit the following, in addition to other required submittals, to obtain approval of an unnamed product:

1. Evidence that the proposed product does not require extensive revisions to the Contract Documents that it is consistent with the Contract Documents and will produce the indicated results, and that it is compatible with other portions of the Work.
2. Detailed comparison of significant qualities of proposed product with those named in the Specifications. Significant qualities include attributes such as performance, weight, size, durability, visual effect, and specific features and requirements indicated.
3. Evidence that proposed product provides specified warranty.
4. List of similar installations for completed projects with project names and addresses and names and addresses of Engineers and owners, if requested.
5. Samples, if requested.

PART 3 – EXECUTION (Not Used)

END OF SECTION

SECTION 017516 – SYSTEM START-UP

PART 1 – GENERAL

1.1 SUMMARY

A. Section Includes:
1. Procedures and actions, required of the Supplier, which are necessary to achieve and demonstrate Substantial Completion.
2. Requirements for Substantial Completion Submittals.

1.2 QUALITY ASSURANCE

A. Qualifications:
1. Operations and maintenance specialist for liaison:
a. Licensed in any state at a level equivalent to a Class 4A operator's license issued by the State of New York.
b. Alternate to licensed operator:
1) Registered Professional Engineer in New York with Master of Sciences degree in sanitary or environmental engineering.

1.3 DEFINITIONS

A. Project Classified System (PCS): A defined part of the Project, consisting of an arrangement of items, such as equipment, structures, components, piping, wiring, materials, or incidentals, so related or connected to form an identifiable, unified, functional, operational, safe, and independent system.

B. Pre-Demonstration Period: The period of time, of unspecified duration after initial construction and installation activities during which Construction Contractor, with assistance from Supplier's representatives, performs in the following sequence:
1. Finishing type construction work to ensure the Project or each PCS has reached a state of Substantial Completion.
2. Equipment start-up.
3. Personnel training.

C. Demonstration Period: A period of time, of specified duration, following the Pre-Demonstration Period, during which the Construction Contractor and Supplier initiates process flow through the Membrane System and starts up and operates the System, without exceeding specified downtime limitations, to prove the functional integrity of the mechanical and electrical equipment and components and the control interfaces of the respective equipment and components comprising the System as evidence of Substantial Completion.

D. Substantial Completion: See Division 0, General Conditions.

1.4 SUBMITTALS

A. Submit in the chronological order listed below prior to the completion of the Pre-Demonstration Period.
1. Master operation and maintenance training schedule:
a. Submit 30 days (minimum) prior to first training session for Owner's personnel.

b. Schedule to include:
    1) Target date and time for Owner witnessing of each system initial start-up.
    2) Target date and time for Operation and Maintenance training for each system, both field and classroom.
    3) Target date for initiation of Demonstration Period.
c. Submit for review and approval by Owner.
d. Include holidays observed by Owner.
e. Attend a schedule planning and coordination meeting 90 calendar days prior to first anticipated training session.
    1) Provide a status report and schedule-to-complete for requirements prerequisite to manufacturer's training.
    2) Identify initial target dates for individual manufacturer's training sessions.
f. Owner reserves the right to insist on a minimum days' notice of rescheduled training session not conducted on master schedule target date for any reason.
g. Schedule to be resubmitted until approved.

2. Substantial Completion Submittal:
    a. Approved Operation and Maintenance manuals received by Engineer minimum 14 days prior to scheduled training.
    b. Written request for Owner to witness each system pre-demonstration start up. Request to be received by Owner minimum one week before scheduled training of Owner's personnel on that system.
    c. Equipment installation and pre-demonstration start up certifications.
    d. Letter verifying completion of all pre-demonstration start up activities including receipt of all specified items from manufacturers or suppliers as final item prior to initiation of Demonstration Period.

1.5 SEQUENCING AND SCHEDULING

A. Project Classified Systems (PSCs) established as follows:
    1. PCS #1: Membrane Filtration System as described in Section 455000 Membrane Filtration System and all incidentals necessary for complete system.

1.6 COST OF START-UP

A. Supplier to assist with System Start-Up, and include all costs associated with such assistance in their bid price.

PART 2 – PRODUCTS – NOT APPLICABLE

PART 3 – EXECUTION

3.1 GENERAL

A. Facility Start up Divided into Two Periods:
   1. Pre-Demonstration Period including:
      a. Completion of construction work to bring Project to a state of Substantial Completion, including resolution of punch list items crucial to process and safe operations.
      b. Start-Up of Equipment.
      c. Training of Personnel.
      d. Completion of the filing of all required submittals.
      e. Filing of Construction Contractor's Notice of Substantial Completion and Request for Inspection.
   2. Demonstration Period including:
      a. Demonstration of functional integrity of facility or PCS.

3.2 PRE-DEMONSTRATION PERIOD

A. Completion of Construction Work:
   1. Construction Contractor to complete the work to bring the System to a state substantial completion.

B. Equipment Start up:
   1. Requirements for individual items of equipment are included in Divisions 2 through 48 of these Specifications.
   2. Prepare the equipment so it will operate properly and safely and be ready to demonstrate functional integrity during the Demonstration Period.
   3. Perform equipment start-up to extent possible without introducing product flow.
   4. Test tanks, pumping and similar equipment requiring a fluid, using chlorinated treated plant-effluent water.
   5. Dispose of water used for equipment start-up.
   6. Procedures include but are not necessarily limited to the following:
      a. Test or check and correct deficiencies of:
         1) Power, control, and monitoring circuits for continuity prior to connection to power source.
         2) Voltage of all circuits.
         3) Phase sequence.
         4) Cleanliness of connecting piping systems.
         5) Alignment of connected machinery.
         6) Vacuum and pressure of all closed systems.
         7) Lubrication.
         8) Valve orientation and position status for manual operating mode.
         9) Tankage for integrity using clean water.
         10) Pumping equipment using clean water.
         11) Instrumentation and control signal generation, transmission, reception, and response.
         12) Tagging and identification systems.
         13) All equipment: Proper connections, alignment, calibration, and adjustment.
      b. Calibrate all safety equipment.

c. Manually rotate or move moving parts to assure freedom of movement.
d. "Bump" start electric motors to verify proper rotation.
e. Perform other tests, checks, and activities required to make the equipment ready for Demonstration Period.
f. Documentation:
1) Prepare a log showing each equipment item subject to this paragraph and listing what is to be accomplished during Equipment Start up. Provide a place for the Supplier to record date and person accomplishing required work. Submit completed document before requesting inspection for Substantial Completion certification.

7. Obtain certifications, without restrictions or qualifications, and deliver to Engineer:
a. Manufacturer's equipment installation check letters.
b. Instrumentation Supplier's Instrumentation Installation and Calibration Certificate.

C. Personnel Training:
1. See individual equipment specification sections.
2. Conduct all personnel training after completion of Equipment Start up for the equipment for which training is being conducted.
a. Personnel training on individual equipment or systems will not be considered completed unless:
1) All pretraining deliverables are received and approved before commencement of training on the individual equipment or system.
2) No system malfunctions occur during training.
3) All provisions of field and classroom training specifications are met.
b. Training not in compliance with the above will be performed again in its entirety by the manufacturer at no additional cost to Owner.
3. Field and classroom training requirements:
a. Hold classroom training on site.
b. Notify each manufacturer specified for on-site training that the Owner reserves the right to video record any or all training sessions. Organize each training session in a format compatible with video recording.
c. Training instructor: Factory trained and familiar with giving both classroom and "hands-on" instructions.
d. Training instructors: Be at classes on time. Session beginning and ending times to be coordinated with the Owner and indicated on the master schedule. Normal time lengths for class periods can vary, but brief rest breaks should be scheduled and taken.
e. Organize training sessions into maintenance verses operation topics and identify on schedule.
f. Plan for minimum class attendance of 6 people at each session and provide sufficient classroom materials, samples, and handouts for those in attendance.
g. Instructors to have a typed agenda and well prepared instructional material. The use of visual aids, e.g., films, pictures, and slides is recommended for use during the classroom training programs. Deliver agendas to the Engineer a minimum of 7 days prior to the classroom training. Provide equipment required for presentation of films, slides, and other visual aids.
h. In the on-site training sessions, cover the information required in the Operation and Maintenance manuals submitted according to Section 013300 “Submittal Procedures” and the following areas as applicable to PCSs.
1) Operation of equipment and Process Adjustments.

2) Operational safety.
3) Capabilities.
4) Optimizing equipment performance.
5) Emergency situation response.
6) Troubleshooting of equipment.
7) Takedown procedures (disassembly and assembly).
8) Maintenance and repair of equipment.
9) Lubrication of equipment.
10) Preventive maintenance procedures.
11) Adjustments to equipment.
12) Inventory of spare parts.

i. At a minimum, address above paragraphs 1 through 6 in the operation session and paragraphs 7 through 12 in the maintenance sessions.

j. Maintain a log of classroom training provided including: Instructors, topics, dates, time, and attendance.

D. Complete the filing of all required submittals:
1. Shop drawings.
2. Operation and Maintenance Manuals.
3. Training material.

3.3 DEMONSTRATION PERIOD

A. General:
1. Demonstrate the functional integrity of the mechanical, electrical, and control interfaces of the respective equipment and components comprising the System as evidence of Substantial Completion.
2. Duration of Demonstration Period: 120 consecutive hours.
3. If, during the Demonstration Period, the aggregate amount of time used for repair, alteration, or unscheduled adjustments to any equipment or systems that renders the affected equipment or system inoperative exceed 10 percent of the Demonstration Period, the demonstration of functional integrity will be deemed to have failed. In the event of failure, a new Demonstration Period will recommence after correction of the cause of failure. The new Demonstration Period shall have the same requirements and duration as the Demonstration Period previously conducted.
4. Conduct the demonstration of functional integrity under full operational conditions.
5. Owner will provide operational personnel to provide process decisions affecting plant performance. Owner's assistance will be available only for process decisions. Supplier will perform all other functions including but not limited to equipment operation and maintenance until successful completion of the Demonstration Period.
6. Owner reserves the right to simulate operational variables, peak flow events, equipment failures, routine maintenance scenarios, etc., to verify the functional integrity of automatic and manual backup systems and alternate operating modes.
7. Demonstration by PCS:
a. Supplier may demonstrate by PCS, either individually or a combination of two or more PCS.

8. Time of beginning and ending any Demonstration Period shall be agreed upon by Construction Contractor, Supplier, Owner, and Engineer in advance of initiating Demonstration Period.
9. Throughout the Demonstration Period, provide knowledgeable personnel to answer Owner's questions, provide final field instruction on select systems and to respond to any system problems or failures which may occur.
10. Provide all labor, supervision, utilities, chemicals, maintenance, equipment, vehicles, or any other item necessary to operate and demonstrate all systems being demonstrated.

END OF SECTION

SECTION 017823 – OPERATION AND MAINTENANCE DATA

PART 1 – GENERAL

1.1 SUMMARY

A. This Section includes administrative and procedural requirements for preparing operation and maintenance manuals, including the following:
   1. Operation and maintenance documentation directory.
   2. Emergency manuals.
   3. Operation manuals for systems, subsystems, and equipment.
   4. Maintenance manuals for the care and maintenance of systems and equipment.

1.2 DEFINITIONS

A. System: An organized collection of parts, equipment, or subsystems united by regular interaction.

B. Subsystem: A portion of a system with characteristics similar to a system.

1.3 SUBMITTALS

A. Initial Submittal: Submit electronic PDF draft copies of each manual at least 15 days before requesting inspection for Substantial Completion. Include a complete operation and maintenance directory. Engineer will mark whether general scope and content of manual are acceptable.

B. Final Submittal: Submit electronic PDF of each manual in final form at least 15 days before final inspection. Engineer will return copy with electronic comments within 15 days after final inspection.
   1. Correct or modify each manual to comply with Engineer's comments. Submit three (3) hard copies and one (1) searchable PDF of each corrected manual within 15 days of receipt of Engineer's comments.

1.4 COORDINATION

A. Where operation and maintenance documentation include information on installations by more than one factory-authorized service representative, assemble and coordinate information furnished by representatives and prepare manuals.

PART 2 – PRODUCTS

2.1 OPERATION AND MAINTENANCE DOCUMENTATION DIRECTORY

A. Organization: Include a section in the directory for each of the following:
   1. List of documents.
   2. List of systems.
   3. List of equipment.
   4. Table of contents.

B. List of Systems and Subsystems: List systems alphabetically. Include references to operation and maintenance manuals that contain information about each system.

C. List of Equipment: List equipment for each system, organized alphabetically by system. For pieces of equipment not part of system, list alphabetically in separate list.

D. Tables of Contents: Include a table of contents for each emergency, operation, and maintenance manual.

E. Identification: In the documentation directory and in each operation and maintenance manual, identify each system, subsystem, and piece of equipment with the same designation used in the Contract Documents.

2.2 MANUALS, GENERAL

A. Organization: Unless otherwise indicated, organize each manual into a separate section for each system and subsystem, and a separate section for each piece of equipment not part of a system. Each manual shall contain the following materials, in the order listed:
   1. Title page.
   2. Table of contents.
   3. Manual contents.

B. Title Page: Enclose title page in transparent plastic sleeve. Include the following information:
   1. Subject matter included in manual.
   2. Name and address of Project.
   3. Name and address of Owner.
   4. Date of submittal.
   5. Name, address, and telephone number of Seller.
   6. Name and address of Engineer.
   7. Cross-reference to related systems in other operation and maintenance manuals.

C. Table of Contents: List each product included in manual, identified by product name, indexed to the content of the volume, and cross-referenced to Specification Section number in Project Manual.
   1. If operation or maintenance documentation requires more than one volume to accommodate data, include comprehensive table of contents for all volumes in each volume of the set.

D. Manual Contents: Organize into sets of manageable size. Arrange contents alphabetically by system, subsystem, and equipment. If possible, assemble instructions for subsystems, equipment, and components of one system into a single binder.
   1. Binders: Heavy-duty, 3-ring, vinyl-covered, loose-leaf binders, in thickness necessary to accommodate contents, sized to hold 8-1/2-by-11-inch (115-by-280-mm) paper; with clear plastic sleeve on spine to hold label describing contents and with pockets inside covers to hold folded oversize sheets.
      a. If two or more binders are necessary to accommodate data of a system, organize data in each binder into groupings by subsystem and related components. Cross-reference other binders if necessary to provide essential information for proper operation or maintenance of equipment or system.
      b. Identify each binder on front and spine, with printed title "OPERATION AND MAINTENANCE MANUAL," Project title or name, and subject matter of contents. Indicate volume number for multiple-volume sets.
   2. Dividers: Heavy-paper dividers with plastic-covered tabs for each section. Mark each tab to indicate contents. Include typed list of products and major components of equipment included

in the section on each divider, cross-referenced to Specification Section number and title of Project Manual.

3. Protective Plastic Sleeves: Transparent plastic sleeves designed to enclose diagnostic software diskettes for computerized electronic equipment.
4. Supplementary Text: Prepared on 8-1/2-by-11-inch (115-by-280-mm), 20-lb/sq. ft. (75-g/sq. m) white bond paper.
5. Drawings: Attach reinforced, punched binder tabs on drawings and bind with text.
    a. If oversize drawings are necessary, fold drawings to same size as text pages and use as foldouts.
    b. If drawings are too large to be used as foldouts, fold and place drawings in labeled envelopes and bind envelopes in rear of manual. At appropriate locations in manual, insert typewritten pages indicating drawing titles, descriptions of contents, and drawing locations.

2.3 EMERGENCY MANUALS

A. Content: Organize manual into a separate section for each of the following:
1. Type of emergency.
2. Emergency instructions.
3. Emergency procedures.

B. Type of Emergency: Where applicable for each type of emergency indicated below, include instructions and procedures for each system, subsystem, piece of equipment, and component:
1. Power failure.
2. System, subsystem, or equipment failure.
3. Fire.
4. Flood.

C. Emergency Instructions: Describe and explain warnings, trouble indications, error messages, and similar codes and signals. Include responsibilities of Owner's operating personnel for notification of Installer, supplier, and manufacturer to maintain warranties.

D. Emergency Procedures: Include the following, as applicable:
1. Instructions on stopping.
2. Shutdown instructions for each type of emergency.
3. Operating instructions for conditions outside normal operating limits.
4. Required sequences for electric or electronic systems.
5. Special operating instructions and procedures.

2.4 OPERATION MANUALS

A. Content: In addition to requirements in this Section, include operation data required in individual Specification Sections and the following information:
1. System, subsystem, and equipment descriptions.
2. Performance and design criteria.
3. Operating standards and troubleshooting.
4. Operating procedures.
5. Operating logs.
6. Wiring diagrams.
7. Control diagrams.
8. Piped system diagrams.
9. Precautions against improper use.

10. License requirements including inspection and renewal dates.

B. Descriptions: Include the following:
   1. Product name and model number.
   2. Manufacturer's name.
   3. Equipment identification with serial number of each component.
   4. Equipment function.
   5. Operating characteristics.
   6. Limiting conditions.
   7. Performance curves.
   8. Engineering data and tests.
   9. Complete nomenclature and number of replacement parts.

C. Operating Procedures: Include the following, as applicable:
   1. Startup procedures.
   2. Equipment or system break-in procedures.
   3. Routine and normal operating instructions.
   4. Regulation and control procedures.
   5. Instructions on stopping.
   6. Normal shutdown instructions.
   7. Seasonal and weekend operating instructions.
   8. Required sequences for electric or electronic systems.
   9. Special operating instructions and procedures.

D. Systems and Equipment Controls: Describe the sequence of operation, diagram controls as installed, and screen shots of HMI with descriptions of operation.

E. Piped Systems: Diagram piping as installed and identify color-coding where required for identification.

2.5 PRODUCT MAINTENANCE MANUAL

A. Content: Organize manual into a separate section for each product, material, and finish. Include source information, product information, maintenance procedures, repair materials and sources, and warranties and bonds, as described below.

B. Source Information: List each product included in manual, identified by product name and arranged to match manual's table of contents. For each product, list name, address, and telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual.

C. Product Information: Include the following, as applicable:
   1. Product name and model number.
   2. Manufacturer's name.
   3. Color, pattern, and texture.
   4. Material and chemical composition.
   5. Reordering information for specially manufactured products.

D. Maintenance Procedures: Include manufacturer's written recommendations and the following:
   1. Inspection procedures.

2. Types of cleaning agents to be used and methods of cleaning.
3. List of cleaning agents and methods of cleaning detrimental to product.
4. Schedule for routine cleaning and maintenance.
5. Repair instructions.

E. Repair Materials and Sources: Include lists of materials and local sources of materials and related services.

F. Warranties and Bonds: Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.
1. Include procedures to follow and required notifications for warranty claims.

2.6 SYSTEMS AND EQUIPMENT MAINTENANCE MANUAL

A. Content: For each system, subsystem, and piece of equipment not part of a system, include source information, manufacturers' maintenance documentation, maintenance procedures, maintenance and service schedules, spare parts list and source information, maintenance service contracts, and warranty and bond information, as described below.

B. Source Information: List each system, subsystem, and piece of equipment included in the manual, identified by product name and arranged to match manual's table of contents. For each product, list name, address, and telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual.

C. Manufacturers' Maintenance Documentation: Manufacturers' maintenance documentation including the following information for each component part or piece of equipment:
1. Standard printed maintenance instructions and bulletins.
2. Drawings, diagrams, and instructions required for maintenance, including disassembly and component removal, replacement, and assembly.
3. Identification and nomenclature of parts and components.
4. List of items recommended to be stocked as spare parts.

D. Maintenance Procedures: Include the following information and items that detail essential maintenance procedures:
1. Test and inspection instructions.
2. Troubleshooting guide.
3. Precautions against improper maintenance.
4. Disassembly; component removal, repair, and replacement; and reassembly instructions.
5. Aligning, adjusting, and checking instructions.
6. Demonstration and training videotape, if available.

E. Maintenance and Service Schedules: Include service and lubrication requirements, list of required lubricants for equipment, and separate schedules for preventive and routine maintenance and service with standard time allotment.
1. Scheduled Maintenance and Service: Tabulate actions for daily, weekly, monthly, quarterly, semiannual, and annual frequencies.
2. Maintenance and Service Record: Include manufacturers' forms for recording maintenance.

F. Spare Parts List and Source Information: Include lists of replacement and repair parts, with parts identified and cross-referenced to manufacturers' maintenance documentation and local sources of maintenance materials and related services.

G. Maintenance Service Contracts: Include copies of maintenance agreements with name and telephone number of service agent.

H. Warranties and Bonds: Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.
   1. Include procedures to follow and required notifications for warranty claims.

PART 3 – EXECUTION

3.1 MANUAL PREPARATION

A. Operation and Maintenance Documentation Directory: Prepare a separate manual that provides an organized reference to emergency, operation, and maintenance manuals.

B. Emergency Manual: Assemble a complete set of emergency information indicating procedures for use by emergency personnel and by Owner's operating personnel for types of emergencies indicated.

C. Product Maintenance Manual: Assemble a complete set of maintenance data indicating care and maintenance of each product, material, and finish incorporated into the Work.

D. Operation and Maintenance Manuals: Assemble a complete set of operation and maintenance data indicating operation and maintenance of each system, subsystem, and piece of equipment not part of a system.
   1. Engage a factory-authorized service representative to assemble and prepare information for each system, subsystem, and piece of equipment not part of a system.
   2. Prepare a separate manual for each system and subsystem, in the form of an instructional manual for use by Owner's operating personnel.

E. Manufacturers' Data: Where manuals contain manufacturers' standard printed data, include only sheets pertinent to product or component installed. Mark each sheet to identify each product or component incorporated into the Work. If data include more than one item in a tabular format, identify each item using appropriate references from the Contract Documents. Identify data applicable to the Work and delete references to information not applicable.
   1. Prepare supplementary text if manufacturers' standard printed data are not available and where the information is necessary for proper operation and maintenance of equipment or systems.

F. Drawings: Prepare drawings supplementing manufacturers' printed data to illustrate the relationship of component parts of equipment and systems and to illustrate control sequence and flow diagrams. Coordinate these drawings with information contained in Record Drawings to ensure correct illustration of completed installation.
   1. Do not use original Project Record Documents as part of operation and maintenance manuals.
   2. Comply with requirements of newly prepared Record Drawings in Division 1 Section "Project Record Documents."

G. Comply with Specification 455000 Membrane Filtration System, Table 3-1 Project Schedule for submitting operation and maintenance documentation.

END OF SECTION

SECTION 017900 – DEMONSTRATION AND TRAINING

PART 1 – GENERAL

1.1 SUMMARY

A. This Section includes administrative and procedural requirements for instructing Owner's personnel, including the following:
   1. Demonstration of operation of systems, subsystems, and equipment.
   2. Training in operation and maintenance of systems, subsystems, and equipment.

1.2 SUBMITTALS

A. Instruction Program: Submit five copies of outline of instructional program for demonstration and training, including a schedule of proposed dates, times, length of instruction time, and instructors' names for each training module. Include learning objective and outline for each training module.
   1. At completion of training, submit 2 complete training manual**s** for Owner's use.

B. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of ENGINEERs and owners, and other information specified.

C. Attendance Record: For each training module, submit list of participants and length of instruction time.

D. Evaluations: For each participant and for each training module, submit results and documentation of performance-based test.

1.3 QUALITY ASSURANCE

A. Facilitator Qualifications: A firm or individual experienced in training or educating maintenance personnel in a training program similar in content and extent to that indicated for this Project, and whose work has resulted in training or education with a record of successful learning performance.

B. Instructor Qualifications: A factory-authorized service representative, complying with requirements in Division 1 Section "Quality Requirements," experienced in operation and maintenance procedures and training.

1.4 COORDINATION

A. Coordinate instruction schedule with Owner's operations. Adjust schedule as required to minimize disrupting Owner's operations.

B. Coordinate instructors, including providing notification of dates, times, length of instruction time, and course content.

C. Coordinate content of training modules with content of approved emergency, operation, and maintenance manuals. Do not submit instruction program until operation and maintenance data has been reviewed and approved by Engineer.

PART 2 – PRODUCTS

2.1 INSTRUCTION PROGRAM

A. Program Structure: Develop an instruction program that includes individual training modules for each system and equipment not part of a system, as required by individual Specification Sections, and as follows:
   1. All systems, equipment, and process included in Section 455000 Membrane Filtration System.
   2. Laboratory equipment

B. Training Modules: Develop a learning objective and teaching outline for each module. Include a description of specific skills and knowledge that participant is expected to master. For each module, include instruction for the following:
   1. Basis of System Design, Operational Requirements, and Criteria: Include the following:
      a. System, subsystem, and equipment descriptions.
      b. Performance and design criteria.
      c. Operating standards.
      d. Regulatory requirements.
      e. Equipment function.
      f. Operating characteristics.
      g. Limiting conditions.
      h. Performance curves.
   2. Documentation: Review the following items in detail:
      a. Emergency manuals.
      b. Operations manuals.
      c. Maintenance manuals.
      d. Project Record Documents.
      e. Identification systems.
      f. Warranties and bonds.
      g. Maintenance service agreements and similar continuing commitments.
   3. Emergencies: Include the following, as applicable:
      a. Instructions on meaning of warnings, trouble indications, and error messages.
      b. Instructions on stopping.
      c. Shutdown instructions for each type of emergency.
      d. Operating instructions for conditions outside of normal operating limits.
      e. Sequences for electric or electronic systems.
      f. Special operating instructions and procedures.
   4. Operations: Include the following, as applicable:
      a. Startup procedures.
      b. Equipment or system break-in procedures.
      c. Routine and normal operating instructions.
      d. Regulation and control procedures.
      e. Control sequences.
      f. Safety procedures.
      g. Instructions on stopping.
      h. Normal shutdown instructions.
      i. Operating procedures for emergencies.

j. Operating procedures for system, subsystem, or equipment failure.
k. Seasonal and weekend operating instructions.
l. Required sequences for electric or electronic systems.
m. Special operating instructions and procedures.

5. Adjustments: Include the following:
   a. Alignments.
   b. Checking adjustments.
   c. Noise and vibration adjustments.
   d. Economy and efficiency adjustments.
6. Troubleshooting: Include the following:
   a. Diagnostic instructions.
   b. Test and inspection procedures.
7. Maintenance: Include the following:
   a. Inspection procedures.
   b. Types of cleaning agents to be used and methods of cleaning.
   c. List of cleaning agents and methods of cleaning detrimental to product.
   d. Procedures for routine cleaning
   e. Procedures for preventive maintenance.
   f. Procedures for routine maintenance.
   g. Instruction on use of special tools.
8. Repairs: Include the following:
   a. Diagnosis instructions.
   b. Repair instructions.
   c. Disassembly; component removal, repair, and replacement; and reassembly instructions.
   d. Instructions for identifying parts and components.
   e. Review of spare parts needed for operation and maintenance.

PART 3 – EXECUTION

3.1 PREPARATION

A. Assemble educational materials necessary for instruction, including documentation and training module. Assemble training modules into a combined training manual.

B. Set up instructional equipment at instruction location.

3.2 INSTRUCTION

A. Facilitator: Engage a qualified facilitator to prepare instruction program and training modules, to coordinate instructors, and to coordinate between Construction Contractor and Owner for number of participants, instruction times, and location.

B. Engage qualified instructors to instruct Owner's personnel to adjust, operate, and maintain systems, subsystems, and equipment not part of a system.

C. Scheduling: Provide instruction at mutually agreed on times. For equipment that requires seasonal operation, provide similar instruction at start of each season.

1. Schedule training with Owner through Construction Contractor with at least 7 days' advance notice.

D. Evaluation: At conclusion of each training module, assess and document each participant's mastery of module by use of demonstration performance-based test.

E. Cleanup: Collect used and leftover educational materials and remove from Project Site. Remove instructional equipment. Restore systems and equipment to condition existing before initial training use.

END OF SECTION

SECTION 019113 – GENERAL COMMISSIONING REQUIREMENTS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUPPLIER SUMMARY

A. Section includes general requirements that apply to implementation of commissioning without regard to specific systems, assemblies, or components.

1.3 SUPPLIER DEFINITIONS

A. BoD: Basis of Design. A document that records concepts, calculations, decisions, and product selections used to meet the OPR and to satisfy applicable regulatory requirements, standards, and guidelines. The document includes both narrative descriptions and lists of individual items that support the design process.

B. Commissioning Plan: A document that outlines the organization, schedule, allocation of resources, and documentation requirements of the commissioning process.

C. CxA: Commissioning Authority (Supplier).

D. OPR: Owner's Project Requirements. A document that details the functional requirements of a project and the expectations of how it will be used and operated. These include Project goals, measurable performance criteria, cost considerations, benchmarks, success criteria, and supporting information.

E. Systems, Subsystems, Equipment, and Components: Where these terms are used together or separately, they shall mean "as-built" systems, subsystems, equipment, and components.

1.4 COMMISSIONING TEAM

A. Members Appointed by Supplier(s): Individuals, each having the authority to act on behalf of the entity he or she represents, explicitly organized to implement the commissioning process through coordinated action. The commissioning team shall consist of, but not be limited to, representatives of the Supplier, including specialists deemed appropriate by the Supplier.

B. Members Appointed by Owner:
   1. Supplier: The designated person, company, or entity that plans, schedules, and coordinates the commissioning team to implement the commissioning process. Representatives of the facility user and operation and maintenance personnel.
   2. engineering design professionals.

1.5 OWNER'S RESPONSIBILITIES

A. Provide the OPR documentation to the Supplier and Construction Contractor for information and use.

B. Assign operation and maintenance personnel and schedule them to participate in commissioning team activities.

1.6 SUPPLIER'S RESPONSIBILITIES

A. Supplier shall assign representatives with expertise and authority to act on its behalf and shall schedule them to participate in and perform commissioning process activities including, but not limited to, the following:
   1. Evaluate performance deficiencies identified in test reports and, in collaboration with entity responsible for system and equipment installation, recommend corrective action.
   2. Cooperate with the Engineer for resolution of issues recorded in the Issues Log.
   3. Attend commissioning team meetings held on an as needed basis.
   4. Integrate and coordinate commissioning process activities with construction schedule.
   5. Review and accept construction checklists provided by the Supplier.
   6. Complete paper construction checklists as Work is completed and provide to the Engineer on a daily basis.
   7. Review and accept commissioning process test procedures provided by the Supplier.
   8. Complete commissioning process test procedures.

1.7 SUPPLIER'S RESPONSIBILITIES

A. Organize and lead the commissioning team.

B. Provide commissioning plan.

C. Convene commissioning team meetings.

D. Provide Project-specific construction checklists and commissioning process test procedures.

E. Verify the execution of commissioning process activities using random sampling. The sampling rate may vary from 1 to 100 percent. Verification will include, but is not limited to, equipment submittals, construction checklists, training, operating and maintenance data, tests, and test reports to verify compliance with the OPR. When a random sample does not meet the requirement, the Supplier will report the failure in the Issues Log.

F. Prepare and maintain the Issues Log.

G. Prepare and maintain completed construction checklist log.

H. Witness systems, assemblies, equipment, and component startup.

I. Compile test data, inspection reports, and certificates; include them in the systems manual and commissioning process report.

PART 2 – PRODUCTS (NOT USED)

PART 3 – EXECUTION (NOT USED)

END OF SECTION

SECTION 455000 – MEMBRANE FILTRATION SYSTEM

PART 1 – GENERAL

1.1 SUMMARY

A. Scope:
1. The Supplier shall provide labor, materials, equipment, incidentals design documentation installation instructions and commissioning services as shown, specified and required to furnish the membrane bioreactor equipment complete, for installation by the Contractor.

B. Membrane filtration system includes membrane bioreactor equipment and services, including:
1. Membrane units, including membranes, cassettes, cassette mounting brackets and/or support beams, and piping associated with the membrane unit.
2. Complete Basis of Design documentation; P&IDS, Process Calculations including interconnecting piping and layout.
3. Headers, piping and fittings, associated with each membrane unit or cassette including permeate collection and air distribution headers within the interior limits of the membrane tank. Each membrane unit shall include cassette air and permeate isolation valves and integral air scour distribution aerators. .
4. MBR permeate pumps, recirculation system, sludge wasting, and backwashing system, as applicable.
5. RAS or Feed Forward pumping units and equipment
6. WAS Pumps (if applicable)
7. Air scour blowers for membrane aeration, cleaning and mixing.
8. Compressed air systems including compressors and dryers for instrument air and pneumatic valve operations.
9. VFDs for equipment furnished.
10. Process blowers for aeration tanks
11. Fine bubble diffuser systems for mixing and biological treatment in aerobic biological reactors.
12. Submersible mixers designed for complete-mix in anoxic biological reactors.
13. Chemical systems for Clean-In-Place (CIP) or other membrane cleaning requirements.
14. Process chemical dosing systems for biological operation excluding bulk storage. Process chemical systems are to include NaOH.
15. Membrane system and bioreactor process instrumentation and control including MBR HMI programming and alarms.
16. System start-up, commissioning, performance testing, and training operation and maintenance manuals.
17. Compliance with American Iron and Steel (AIS) requirements.

C. Supplier shall provide equipment in accordance with specifications herein and the following Sections:
1. Section 013300: Submittal Procedure
2. Section 014000: Quality Requirements
3. Section 016000: Product Requirements
4. Section 017516: System Startup
5. Section 017823: Operation and Maintenance Data
6. Section 017900: Demonstration and Training
7. Section 019113: General Commissioning Requirements

D. Excluded equipment: Equipment and services for the following are specifically excluded. Engineer will coordinate with Supplier during design phase to ensure the overall facility design,

procurement drawings and specification meets Supplier's requirements and will result in successful implementation of the Supplier's membrane system.

1. Screening and grit removal
2. Disinfection
3. Bulk chemical storage
4. MCC's
5. Plant SCADA
6. All interconnecting piping and pipe supports between manufacturer supplied equipment unless specified otherwise.

1.2 SUPPLIERS AND MANUFACTURERS

A. The Supplier shall take full responsibility of membrane system and bioreactor equipment design, equipment manufacture, integration and supply, process control, startup, commissioning, performance testing, training and warranty support and shall be fully responsible for all elements of this specification, including membrane warranty requirements.

B. Membrane System Suppliers shall be as follows:
   1. SUEZ WTS - Polyvinylidene Fluoride (PVDF) Hollow Fiber Membrane System
   2. Kubota Chlorinated Polyethylene Flat Sheet Membrane System
   3. Or Approved Equal

1.3 REFERENCE STANDARDS

A. Comply with the latest edition of the following standards, as applicable:
   1. American Water Works Association (AWWA), ANSI/AWWA B130-18, Membrane Bioreactor Systems
   2. US Environmental Protection Agency. 2005. Membrane Filtration Guidance Manual. EPA 815-R-06-009. Washington, DC. Office of Water.
   3. American National Standards Institute, (ANSI)/National Sanitation Foundation, (NSF):
   4. American Society for Testing and Materials (ASTM):
      a. ASTM D 6161, Standard Terminology Used for Microfiltration, Ultrafiltration, Nanofiltration and Reverse Osmosis Membrane Processes.
      b. ASTM A312, Pipe Specifications.
      c. ASTM A240, Stainless Steel Material Specifications.
   5. American Welding Society (AWS):
      a. AWS B2.1, Specification for Resistance Welding for Aerospace Applications.
      b. AWS D1.3, Structural Welding Code Sheet Steel.
      c. AWS D1.6, Structural Welding Code Stainless Steel.
      d. AWS D9.1, Sheet Metal Welding Code.
      e. AWS D17.2, Specification for Resistance Welding – Spot Welding by Machine.
      f. AWS G2.1, Guide for the Joining of Wrought Nickel-based Alloys.
   6. American National Standard Institute (ANSI).
   7. ISO 9000 Certification – Quality Management.
   8. NFPA 820
   9. Ten State Standards
   10. NEIWPCC TR-16
   11. WEF MOP 36

1.4 DEFINITIONS

A. Contractor is defined as the entity responsible for construction and installation of the MBR system, including but not limited to site preparation, process and membrane tank construction, and mechanical and electrical installation.

B. MBR Process:
   1. Bioreactor Train: A secondary treatment train consisting of anoxic and aerobic zones. Each treatment train operates in parallel with other trains, processing a portion of the total plant flow.
   2. Membrane Train: A membrane basin comprising modules and cassettes for liquid-solid separation and connected to a dedicated permeate pump. Each membrane train operates in parallel with other membrane trains and processes a portion of the mixed liquor from the bioreactor trains.
   3. Dry Weather Flow (DWF): Daily flow occurring during dry weather conditions.
   4. Average Daily Flow (ADF): The average flow rate occurring over a 24-hour period based on annual flow rate data'
   5. Maximum Monthly Average Flow (MMAF): The average flow rate occurring over a 24-hour period during the 30-day period with the highest flow based on annual flow rate data.
   6. Maximum Day Flow (MDF): The maximum flow rate averaged over a 24-hour period occurring within annual flow rate data.

C. Peak Hourly flow (PHF): The maximum flow rate sustained over a 2-hour period based on annual flow rate data.

D. Backwash: Synonymous with backpulse and backflushing. Backwashing is any instance where membrane filtered water is charged to the membranes in the reverse direction of permeate flow. A Backwash is performed in-situ and in mixed liquor or activated sludge.

E. Maintenance Clean: Maintenance cleaning is an instance where chemical solution is charged to the membranes in the reverse direction of permeate flow either continuously or in series of pulses combined with soak times. Maintenance cleaning durations are typically less than 0.5hr. Maintenance cleaning is performed in-situ and in mixed liquor or activated sludge.

F. Flux: Permeate flow rate per unit membrane surface area, also filtration rate through a given area of membrane, measured as gallons per square foot of membrane area per day (gallons per day per square foot, gfd)
   1. Instantaneous flux: The flux at any given time, calculated by dividing the measured permeate flow rate by the working membrane area.
   2. Maximum instantaneous flux: The maximum flux at any time or temperature during operation.
   3. Net flux: The average flux over a given period including non-production periods of no flow. Net flux is calculated by dividing actual production capacity over a specified time interval by the working membrane area.

G. In-situ: in the membrane tank and submerged in mixed liquor.

H. Maintenance Clean (MC): Synonymous with chemically enhanced backwash. A Maintenance Cleaning is performed in-situ and in mixed liquor or activated sludge. The procedure is conducted by charging cleaning chemicals to membranes in the reverse direction of permeate flow with a soak time lasting less than 0.5hr.

I. Membrane Element: An element (synonymous with module) is the smallest membrane subunit, which is comprised of either a plate, sheet, or hollow fiber module. The elements are combined to make a membrane cassette.

J. Membrane Cassette: A cassette is comprised of multiple membrane elements or modules that are combined and assembled with an air scour assembly in a single support structure that is connected to a common permeate manifold and capable of being withdrawn from the bioreactor tank for cleaning, inspection, or other purposes.

K. Membrane Unit: A membrane unit is synonymous with cassette.

L. MLSS: Mixed Liquor Suspended Solids, reported as mg/L.

M. Permeability or specific flux: Net flux divided by the transmembrane pressure (gfd/psi).

N. Permeate: Wastewater filtered through the membrane.

O. Recovery Clean: Synonymous with intensive cleaning and CIP. A Recovery Cleaning is performed in-situ with chemicals. A Recovery Clean is any single MBR basin clean that lasts for more than 6.0 hours. The procedure is conducted by charging cleaning chemicals to membranes in either direction with variable soak times.

P. Relaxation: A temporary suspension of membrane filtration with continued air scouring for the purpose of maintaining treatment capacity or reducing cleaning requirements.

Q. Retentate: Water and other materials retained in the MBR tank by the membrane.

R. Seed: Active biomass, described in terms of volatile fraction and TSS concentrations, that is required to charge the MBR

S. Transmembrane pressure (TMP): The pressure drop across a membrane during operation, normalized for the static water head relative to the pressure sensor, measured in units of pounds per square inch, psi.

1.5 QUALITY ASSURANCE

A. Membrane System Supplier Qualifications:

1. Membrane System Supplier shall maintain a quality control program in the design, supply, installation, and servicing of Membrane Systems in accordance with ISO 9001:2015. Provide letter or certificate describing quality control program.
2. Aggregate bonding capability: Supplier shall demonstrate $10 million bonding capability. Provide bonding capacity letter from Supplier's bonding agent.
3. The Supplier shall have a minimum 15-year history of furnishing system design; design and construction administration assistance; equipment manufacture, integration and supply; process controls; project management; startup and commissioning; and warranty support with at least ten (10) full scope MBR wastewater installations in the United States with an ADF capacity larger than 1 MGD. The supplier shall have at least three (3) operational installations in New York State, or if not, at least three (3) operational installations within states participating in Ten States Standards. Provide installation list with facility name, location, startup date, and capacity.
4. The Supplier shall submit a reference list for five (5) installations in operation, treating municipal wastewater in the United States with an ADF capacity larger than or equal to 5 MGD. In order for the installation to qualify, the membrane system procurement contract must have included, at a minimum, membranes, membrane equipment, membrane cleaning equipment, MBR HMI programming, startup, commissioning, training, and warranty.
    a. Valid references for fulfilling this requirement must use a membrane product that is reasonably identical to the product being offered where performance and operations can be reasonably compared to this project. For clarity, reasonably identical shall mean having the same membrane chemistry, pore size, porosity, rejection characteristics, and potting material, but shall allow for minor manufacturing, material and dimensional differences associated with product development and optimization.
    b. Reference information shall include Owner contact information including email, phone number, and address; facility name and location; start-up date; design hydraulic capacity including average and maximum day flowrates; current average and maximum day flowrates applied to the membranes; membrane model number, membrane surface area, design net flux rate; and warranty terms and duration. Note, this information will be used to verify design Flux Rates as provided in Evaluated Bid tables.
5. The Supplier shall have North America based employees qualified in MBR design, field services, operator training, and system support. Contracted services do not qualify. Provide organization chart with personnel names, title, years of experience with MBR systems, and current role or position. Supplier shall have process control and systems integration services within the organization that includes design and programming, of control panels.

6. Supplier shall provide a list of field service technicians and locations that could be used for routine support of the system.

1.6 SUBMITTALS

A. Evaluated Bid Submittals: All items under this heading shall be submitted as part of the Evaluated Bid Proposal.

1. Manufacturer Information:
   a. Manufacturer's Quality Control Program letter or certificate, including ISO 9001 certification per Paragraph 1.5A.2
   b. Manufacturer's Qualified Installation List with Fabrication Facility per Paragraph 1.5A.3.
2. Supplier Qualifications:
   a. Supplier Quality Control Program letter or certificate, including ISO 9001 certification per Paragraph 1.5A.1
   b. Bonding letter per Paragraph 1.5A.2.
   c. Supplier installation list per Paragraph 1.5A.3. & 1.5A.4
   d. Suppler Reference List per Paragraph 1.5A.4.
   e. Supplier organization chart per Paragraph 1.5A.5.
   f. Service technical and location list per Paragraph 1.5A.6.
   g. Compliance Statement per Paragraph 1.7D.
   h. Acknowledgement of American Iron and Steel requirements[BG(1].
3. Design Submittals:
   a. Scope of supply including equipment, design capacity (flow and pressure), and horsepower indicating if equipment will be supplied with ancillary components such as with a VFD, enclosure, filter, silencer, lifting mechanism, etc.
   b. Membrane element, module, cassette, and unit drawings, detailing dimensions, materials, weights, locations of lifting lugs/points, and anchor bolt locations. Information shall also include piping, tubing, valves, and fittings on the membrane unit, including permeate and air-scour piping and connections clearly indicating factory installed and field installed materials.
   c. MBR basin mechanical layout showing number of membrane units and all other components comprising the MBR basin system with reactor dimensions and volume. Layout shall also show proposed air and permeate piping distribution, in-basin instrumentation and valves, and all other components comprising MBR basin systems. Drawings shall detail information in plan and elevation/section views.
   d. Process flow diagram: showing reactor configuration, pumps and flowrates; mixers; blowers and capacity; process and membrane air, recycle, RAS, WAS, and interconnecting piping.
   e. Preliminary Process and Instrumentation Diagram: showing reactor configuration, piping with flow direction and connections, process equipment, and instrumentation and control devices. Diagram shall clearly indicate or delineate Supplier and Contractor scope of supply.
   f. Examples of MBR HMI screen layouts and content for membranes and ancillary facilities including air scour, cleaning, permeation, and backwashing operations.
   g. Biowin model or equivalent modeling software:
      1) Native Biowin model files showing performance at all design conditions, including between each process.
      2) Process flow diagram
      3) Design summary report
      4) biological kinetic rates, oxygen transfer kinetic rates, average MLSS at average and maximum day flow, sludge production volume with all inputs and assumptions

clearly stated.

h. Design calculations report including:
   1) membrane surface area, membrane bioreactor tank size,
   2) flow, flux, and transmembrane pressure (TMP) per unit and number of units at design conditions including ADF, PHF, MDF, and MMAF, MLSS, and water temperature.
   3) Membrane scour air flow and pressure requirements for normal operation, backwashing, and cleaning.
   4) Description of the system design flexibility and ability to consistently meet permit and redundancy requirements over range of design influent flow and load conditions.

i. Membrane cleaning: description of cleaning processes with protocol, chemical cleaning equipment and chemical storage requirements, bulk chemical list, flow and chemical concentration (if diluted), and chemical use estimates for cleaning-related systems including, but not limited to membrane backwash, membrane relaxation, clean in place.

   Protocols shall clearly outline duration, frequency and annual chemical use estimates, tank status (drain prior to chemical addition, chemical addition with tank mixed liquor in place, etc.), neutralization requirements (if applicable), spent chemical disposal location or method for maintenance clean, recovery cleans, and any other routine or periodic membrane cleaning. Protocol shall describe the procedure for taking membrane tank off-line and on-line. Proprietary chemicals are not allowed.

j. Supplier shall define the fine screening requirements for their membrane system including maximum screen aperture and opening type. A maximum screen aperture of 2 mm with punched hole or woven wire mesh shall be incorporated into the facility by the General Contractor. The Supplier shall clearly indicate if a smaller opening size or aperture type is required.

k. Schedule: Supplier shall provide schedule of shop drawings and equipment lead times.

4. Description of Training Services
5. Description of Technical Support Services including but not limited to 24/7 phone support, web-based support, operator forums, remote dial-in Supplier assistance, and availability of optional service and support.
6. Bidding Documents, including but not limited to Bid Form and Evaluated Bid Tables.
7. Maintenance Documents, including but not limited to:
   a. Replacement procedures for replacing or repairing the smallest membrane component that can be replaced for maintenance or failure independently of the entire unit.
   b. Cassette removal and reinstallation procedures.
   c. Cassette levelling and adjustment procedures, if applicable.

B. Design and Shop Drawing Submittals: Following the evaluated bid and selection of the successful Supplier, Selected Supplier shall submit the following:
   1. Design Submittals:
      a. Updated Design Calculations: Provide any updated or revised design submittals as outlined in Paragraph 1.6A.3 based upon final layout and general management plan supplied by the engineer.
      b. Supplier shall perform analysis of biological process design using EnviroSim Biowin wastewater modeling software or approved alternative sofrware and support Engineer in verification.
      c. For all scope of supply equipment:
         1) Cut sheets, including materials of construction, dimensions, size, material of construction, installation details, power supply voltage, wiring, and location
         2) Pump performance curves with minimum, maximum, and design duty flow and TDH; efficiency data, motor horsepower and voltage. If VFD, provide turndown

curves.

3) Aeration blower performance curves with minimum, maximum, and design air flow and discharge pressure, efficiency data, motor horsepower and voltage. Turndown curves. If VFD, provide turndown curves.
4) Mixer velocity distribution profiles or CMD modeling.
5) Chemical cleaning systems
6) Valves: Provide valve schedule with information on valve type, diameter, materials of construction, end type, operator, and pressure rating.

d. Power supply, wiring and control diagrams. Complete wiring and control diagrams that show the point of connection for the power supply and control system.
e. Instrumentation schedule: Device listing, tag number, manufacturer, model number, measured parameter, and ranges for instruments and devices, accessories for installation and accompanying mounting details, etc.
f. Process control narratives (functional control description) and electronic files associated with programming logic, screen layouts of the control and data screens, and a list of all information exchanged with plant control system.
g. Electronic drawings for all process equipment, including process tanks, membrane units, permeate pumps, and other major equipment listed in the Scope of Supply.
h. Control panels:
    1) Drawings with interior and exterior layouts, components, panel dimensions, and panel materials of construction and NEMA rating.
    2) Control panel component manufacturer's literature, clearly denoting model numbers of all PLC components, relays, terminal blocks, power supplies, buttons, switches, fuse blocks, etc.
    3) Control panel wiring schematics
i. Description of the control system and PLC's distribution control systems or other control platform software and integration of the MBR system in the overall plant control system. MBR system controls include but not limited to bioreactor equipment, membranes, permeate pumps, blowers, chemical feed systems, backwash pumps, and process monitoring.
j. Permitting support, if requested, including design information, updated plans, procedures, and testing.
k. Any specialized installation instructions which need to be included in General Contractor Installation Contract Bid Documents.

2. Description of Supplier's remote monitoring application including security protection.
3. Shop Drawings:
    1) Submit detail drawings showing installation and assembly details including piping connection details, setting drawings, cast-in-place items, templates, location of lifting lugs/points, and details of anchorage.
    2) The supplying equipment manufacturer shall note any dimensional deviations from the construction plans. Differences shall be duly noted for approval by the Engineer.
    3) Complete installation procedures of sufficient detail to facilitate direct field construction and erection by the Contractor.
    4) System Startup and Functional Testing Procedures: Detailed start-up procedures, forms, and checklists.,
    5) Commissioning and performance testing schedule and procedures: Membrane cleaning, flux and transmembrane pressure validation test procedures, inlet water quality verification requirements, effluent water quality verification requirements, test reports requirements, panel FAT.
    6) Product Data: Catalog data consisting of specifications, illustrations and a parts schedule that identifies the materials to be used for the various system components

and accessories. Submit list of materials of construction.

7) Training submittals: Submit electronic copies of all training materials prior to system startup, testing, and demonstration.

8) Qualifications Statements:

a) Submit welding certifications, as per the above requirements.

C. Closeout Submittals, including the following:

1. Operation and Maintenance Data per Section 017823 and as follows:

a. Submit complete installation, operation, and maintenance manuals including general arrangement drawings, complete bill of materials, safety data sheets, test reports, maintenance data and schedules, description of operation and spare parts information. Manuals shall describe the system components, system and component specifications, standard operating procedures, limitations (including conditions to be avoided or that could damage the equipment), and operation and maintenance procedures. Data tables shall be included to show typical operating set points and conditions. Manuals shall also include programming logic, control and data screens, and list of information exchanged with plant control system.

2. Record Drawings: After start-up of the system, supplier shall provide "as built" plans and drawings, control and wiring schematics for Supplier scope of supply.

1.7 WARRANTY

A. Membrane warranties shall cover the following items:

1. Repair or replacement of any failed membranes or modules. Failure is defined as any of the following:

a. Inability to meet production capacity requirements as specified herein.

b. Inability to meet TSS and turbidity requirements as specified herein.

c. Frequent fouling replacement of membranes.

2. The MBR System Supplier shall provide field service supervision for inspection and dismantling, and reinstallation of the equipment.

B. Membrane Warranty:

1. The Supplier's warranty shall be applicable for a period of ten (10) years from substantial completion.

a. If membrane replacement is necessary, the first 60 months shall be a full replacement, with the remaining 60 months pro-rated.

2. The membrane system Supplier shall provide field service supervision, labor and tool activities of all warranty related repairs during the first 60 months and the Owner will pay for any of the warranty-related labor and tool activities during the remaining 60 months.

3. The Owner will be responsible for providing a nearby laydown area for the storage of equipment or membrane modules removed or delivered during any warranty related activities as well as any utilities required to perform the warranty work.

4. The Owner shall not be required to monitor, report, record instrument data for the purpose of maintaining warranty coverage outside of providing a reliable, high-speed internet connection to the MBR system controls and maintaining manual records of influent and effluent quality, MBR basin MLSS, membrane cleaning activities and chemical use data. In the event where internet connection is lost, Supplier shall notify Owner and request local SCADA download for missing data.

C. Equipment and Controls Warranty: The Supplier's warranty shall extend for a period of two (2) years from the date of substantial completion for all other (i.e., non-membrane) equipment and process systems provided by the Supplier.

D. Compliance Statement: The Supplier shall submit a Compliance Statement confirming the type of membrane proposed and that the proposed MBR system meets performance and operating criteria as outlined in Contract Documents. Compliance Statement shall list deviations to the specifications. Compliance Statement shall acknowledge Warranty and Performance Bond requirements. Compliance Statement shall state specific exclusions to failure conditions covered by Membrane Warranty.

1.8 SPARE PARTS AND SPECIAL TOOLS

A. Provide the following in addition to any other process-critical recommended spare parts:

SPARE PART	QUANTITY
Membrane lifting tool (Overhead monorail or crane will be provided by Buyer)	As Needed
One repair kit for sealing off or replacement of damaged membrane element.	As Needed
One set of special tools required for normal operation and maintenance of the MBR Units.	1 Set
Pressure Gauge	2 of each range
Level Probe & Transmission	1 of each type
ORP/DO/PH/Turbidity/Temp Probes	1 of each type
Chemical Feed Pumps	-
Pump Seals	1 for each pump/each type
Blower Belts	3 sets
Blower Inlet Filters	3 sets
Valves and Actuators	1 of each size
Diffusers	2% of total

PART 2 – PRODUCTS

2.1 SYSTEM PERFORMANCE CRITERIA

A. Performance Criteria: The equipment shall be designed and installed to meet or exceed the following effluent water quality limits at the PHF Maximum Monthly Daily Flow and water quality characteristics in Paragraph 2.1B:

1. Effluent Water Quality:
   a. BOD : ≤ 5.0 mg/L, monthly average
   b. TSS : ≤ 5.0 mg/L, monthly average
   c. Turbidity : ≤ 1.0 NTU,
   d. Ammonia (Oct 1ST – May 31ST) : < 1.8 mg-N/L
   e. Ammonia (Jun 1st – Sep 30th) : <1.2 mg-N/L
   f. Phenuls :5ugll

B. Design Criteria: The membrane and bioreactor system equipment shall be designed to perform satisfactorily and as specified when operated under the following conditions:

1. Bioreactor:
   a. Provide bioreactor equipment specified herein for three parallel treatment trains, each capable of operating completely independent of the other. Influent, effluent, interconnecting and drain valves will be sized and provided by Others.
   b. Hydraulic capacity of each parallel train shall be designed for Peak Hourly Flow[BG(2)] with all treatment trains in service.
   c. Bioreactor volume and SRT shall be selected as follows:
      1) Minimum aerobic SRT (excluding membrane tanks): 13 days
   d. Biological treatment capacity of MBR system, including process tank volume, aeration, and membranes, shall be designed for Maximum Month Daily Flow at Design Influent Average Water Quality loading, with all treatment trains in service.

2. Influent Flow Rates:

a.	Minimum Flow	:3.0 [BG(3)]MGD
b.	Average Daily Flow (ADF)	:5.0 MGD
c.	Maximum Monthly Average Daily Flow (MMAF)	:8.0 MGD
d.	Maximum Day Flow (MDF)	:11.0 MGD
e.	Peak Hourly Flow (UPHF)	:16.5 MGD

3. Design Influent Average Water Quality to the MBR post-clarification assuming clarification removed of 60% TSS and 30% BOD:

a.	Temperature (minimum design temperature)	: 10 degrees C
b.	pH	: 6 to 9 S.U.
c.	BOD	: 98 mg/L
d.	TSS	: 74 mg/L
e.	Ammonia	: 18 mg/L
f.	Total Kjeldahl Nitrogen (TKN)	: 27 mg/L
g.	Total Phosphorus (TP)	: 6.0 mg/L
h.	Alkalinity (as calcium carbonate)	: 225 mg/L
i.	Phenuls	:11 ugll

4. Process Configuration:
   a. Reactor configuration is required to provide biological removal of BOD and ammonia nitrogen based on:
      1) MLE, consisting of Anoxic and Aeration, zones. The membrane tank volume shall not be included in determination of the Aeration zone sizing for nitrification.
      2) Maximum MLSS: 8,000 mg/L under data demonstrating installations operating successfully at higher concentration is provided.
   b. Bioreactor dimensions:
      1) Bioreactor basins shall be sized to accommodate site constraints as shown on the project site plans.
      2) Total depth shall include a minimum freeboard of 36-inches.
   c. Treatment trains shall be capable of independent operation.
   d. Channels and piping between reactors and within a reactor (recycle, bypass/overflow) shall be sized for the Peak Hour Flow with consideration given to maintaining self-cleansing

velocities to keep solids in suspension at minimum flows.

e. Reactor inlet, effluent and drain valves will be provided by the General Contractor. The supplier shall provide recommended signing and location.

5. Process characteristics
   a. Site elevation (approximate) : 140 feet
   b. Ambient air temperature : 15 to 100 degrees Fahrenheit
   c. Hydraulic Retention Time (HRT) at MMAF:
      1) Anoxic Tanks : ≥ 1 hour
   d. MLSS (see 2.1.B.4.b.2)
      1) Anoxic Zone MLSS : ≤ 8,000 mg/L
      2) Aeration Zone MLSS : ≤ 8,000 mg/L
      3) MBR Zone MLSS :10,000 to 12,000 mg/L
   e. Recycle rate from membrane tanks: :3-5 times influent flow at MMF
   f. Aeration:
      1) Oxygen requirement: At least 1.25 pounds oxygen per pound of influent BOD and 4.6 pounds oxygen per pound of influent TKN at MMAF.
      2) Dissolved oxygen levels in the Aerobic Zone shall be ≥2.0 mg/L at MMAF and ≥1.0 mg/L at MDF.

6. Membrane System Configuration:
   a. Four (4) to six (6) parallel membrane trains shall be provided.
   b. The membrane system must be sized to hydraulically treat 100% of MDF with one train out of service for ≤ 24-hours with one complete membrane train out of service for any reason.
   c. Membrane tank inlet valves will be provided by the General Contractor.
   d. Provide a level transmitter and two-level switches for each membrane train.
   e. Provide tank drain valves and telescoping valves (if applicable) for RAS if a feed forward design if proposed.
7. Membrane Characteristics:
   a. Membrane shall be chemically resistant to high (>1,000 mg/L) chlorine concentrations and any other chemicals used in cleaning procedures and be able to tolerate a pH range of 1 to 10.
   b. Membrane shall be non-biodegradable.
   c. Membrane shall be made from the following materials:
      1) Hollow fiber or flat sheet membrane
         a) Polyvinylidene fluoride (PVDF)
         b) Chorinated polyethylene
   d. Nominal pore size: 0.1 to 0.4 µm
   e. Maximum Design Net Flux Rates
      1) ADF: 12.5 gfd
      2) MMF: 14.0 gfd
      3) MDF: 19.6 gfd
      4) PHF: 22.2 gfd
   f. Transmembrane Pressure:
      1) TMP range shall be between 0.1 psi and 8.0 psi.
8. Membrane cleaning: Membrane cleaning shall include:
   a. Air scour as recommended by the manufacturer to prevent localized dewatering and

solids accumulation.

b. Manufacturer recommended cleaning protocol to maintain specified flux requirements while maintaining maximum membrane life. Cleaning protocols may include in-situ back-flushing, membrane relaxation, and/or chemical cleaning; however, all cleaning protocols must be fully automated. Chemicals used in cleaning at recommended concentrations shall not impact biological treatment and must be accounted for in membrane life.

9. Area classification shall be as follows:
   a. Per NFPA 820, open to atmosphere biological reactors preceded by primary sedimentation) are unclassified.
   b. Permeate pump room is unclassified.

C. Process Instrumentation and Control:
1. The Supplier shall provide all instruments that they require to operate and control the biological and membrane systems in their scope of supply regardless if the instrument is identified in the specification. All instruments shall be monitored and trended on the Supplier's operator interface/HMI.
2. Control systems: Automatic systems shall be provided to control all Supplier provided equipment. Status and performance data shall be communicated to Suppliers PLC and HMI control panel. Local indication of instantaneous and cumulative (if applicable) shall be provided for all process instrumentation including but not limited to flow meters, dissolved oxygen, pH, and pressure transmitters.
3. Bioreactors:
   a. Control of inlet and outlet slide gates if automated. Slide gates to be provided by General Contractor.
4. Anoxic basins:
   a. Level, ORP, PH probes and transmitters (if feed forward pumping employed)
5. Aeration basins:
   a. DO probe and transmitters
   b. pH probe and transmitters (transmitter may be common with DO probe)
   c. Level switch high
6. RAS Pumps
   a. Discharge and suction side pressure gauges, each pump
   b. Flow meter
7. Feed Forward Pumps:
   a. Discharge pressure gauge, each pump
   b. Flow meter (one per bioreactor train)
8. Permeate Pumps:
   a. Discharge and suction side pressure transmitter and gauges, each pump
   b. High pressure switch – pump shutoff in each direction, each pump
   c. Flow meter
   d. Turbidity probe and transmitters (Inline or Sidestream)
   e. Temperature probe and transmitter (Common permeate header)
9. WAS Pumps:
   a. Suction and discharge pressure gauges, each pump
   b. Flow meter
   c. High pressure switch – pump shutoff, each pump
10. Backpulse Tank (if applicable):

a. Level transmitter

11. Membrane CIP:
    a. Bulk chemical storage will by provided by the General Contractor
    b. Skid or wall panel mounted chemical metering pumps (duty and standby units, each chemical)
    c. Flow meter (each chemical) for centrifugal chemical pumps. Flow meters are not required for PD style chemical metering pumps.
    d. Level probe and transmitter (each day tank)
12. Process Chemicals:
    a. Bulk chemical storage will be provided by the General Contractor
    b. Skid or wall panel mounted chemical metering pumps (duty and standby units, each chemical)
    c. Provide with each metering pumps: pressure control valves, backpressure valves, pulsation dampeners, pressure gauges, calibration column, suction and discharge isolation valves, and drain valves.
    d. Provide isolation valve, manual flow control valve and backpressure valve at each chemical dosing location.
    e. Level probe and transmitter (each day tank)
13. At a minimum, provide the following membrane and permeate data measurements at 15 min intervals, local display, and recording up to 30-day duration:
    a. Permeate turbidity shall be monitored in each train
    b. Membrane process control:
        1) Analog values for:
            a) Dissolved oxygen in Aeration tank
            b) Permeate pressure during filtration
            c) Permeate pressure during backwash, cleaning, and/or relaxation
            d) Permeate flow during filtration
            e) Permeate turbidity
            f) Permeate temperature
            g) pH in Aeration tank
            h) Mixed liquor feed or RAS return flow
            i) MBR tank level
            j) Waste activated sludge flow
        2) Digital counts:
            a) Permeate quantity during filtration
            b) WAS volume
        3) Calculated results for:
            a) Transmembrane pressure (TMP)
            b) Permeate flux rate (gfd)

2.2 MATERIALS

A. All fabricated items inside the membrane reactor shall be constructed from 316L stainless steel materials unless noted otherwise.

B. All fasteners inside the membrane reactor shall be constructed from 316L stainless steel materials. Fasteners for anchoring cassette wall brackets to the basin walls will be provided by the General Contractor.

C. The equipment manufacturer shall supply all materials necessary for properly installing the

membrane reactor system unless noted otherwise.

2.3 MEMBRANE UNITS

A. Membrane units shall be installed in individual membrane trains connected to dedicated permeate pumps and separated from the bioreactor tanks by a common influent distribution channel.

B. Supplier shall provide in-basin interconnecting membrane air and permeate headers, drop pipes and isolation valves to a flanged connection of the permeate and aeration headers located at discharge end of the collection headers. Each membrane unit shall have an isolation valve on the permeate and aeration pipes such that a single unit can be removed from service while keeping the others in operation.

C. With the exception of concrete wall anchors, Suppler shall provide all fasteners, nuts, bolts, screws, cables, washers and other appurtenances associated with membrane units and in-basin piping and appurtenances.

D. All pipe supports shall be provided by the General Contractor.

E. Supplier shall provide the tank mounting frames and hardware for membrane units. Hot retrieval mounting shall have the ability to readily remove one complete membrane unit, with a single pick without draining the membrane bioreactor and without taking other membrane units within the same tank off-line. **Double pick cassette removal will not be accepted.**

2.4 CHEMICAL SYSTEMS FOR MEMBRANE CLEANING

A. The Cleaning Systems shall include backwash, maintenance clean, and recovery clean systems as required by the Supplier's specific systems.

B. Cleaning Systems shall be inclusive of all chemical feed day tanks, panel mounted or skid mounted chemical feed pumps (duty and standby), valves, instrumentation, controls, and all other ancillary equipment necessary for a complete cleaning operation. Chemical bulk storage tanks and chemical loading and transfer facilities and equipment will be provided by the General Contractor.

C. Supplier shall define chemical volumes and estimated building space to be allotted for all Cleaning systems, including space for:
   1. Day tanks (30-hour supply)
   2. Cleaning system equipment
   3. Neutralization of spent chemicals (if applicable)

D. The system shall be designed to clean the membranes in-place without requiring their removal from the membrane tanks.

E. The cleaning systems shall be sized to clean one Membrane train at a time and allow the other Membrane trains to remain in production. The remaining trains online must hydraulically treat 100% of MDF at all times during the cleaning event.

F. All components of the cleaning systems shall be compatible with cleaning solutions recommended by the Supplier for its system.

G. Potable water (if required) shall be provided by the Owner for dilution water.

H. All equipment shall be provided with shutoff valves for isolation or bypass, to allow continued

operation of other equipment.

I. Centrifugal Chemical Pumps for membrane cleaning shall be as specified below:

quantity	determined by Supplier; at least two (1 duty and 1 standby) per system
capacity range	sized by Supplier;
manufacturer	Finish Thompson or approved equal
assembly and accessories	Skid mounted including suction and discharge pressure gauges, electromagnetic flow meter, suction and discharge isolation valves, discharge control valves (as required) and drain valves.

J. Metering pumps for membrane cleaning shall be as specified below:

quantity	determined by Supplier; at least two (1 duty and 1 standby) per system
capacity range	sized by Supplier;
manufacturer	Prominent, LMI or approved equal
assembly and accessories	Panel or skid mounted including pressure control valves, backpressure valves, pulsation dampeners, pressure gauges, calibration column, suction and discharge isolation valves, and drain valves.

2.5 PERMEATE, BACKWASH SYSTEM

A. Provide permeate pumps as specified below:

quantity	determined by Supplier; minimum four, maximum six units
capacity range	sized by Supplier, as specified

pump manufacturer	Boerger, Vogelsang or approved equal
pump type	rotary lobe positive displacement (if centrifugal pumps are used, refer to Section 2.7 WAS pump requirements)
flanges	drilled to ANSI B16.1 Class 150 raised face
configuration	reversible (Bi-directional)
casing	cast or ductile iron
lobes	NBR
shaft & sleeve	non-product wetted, materials manufacturer standard
lubrication	flooded oil bath / quench lubricated; no seal flush required
bearings	manufacturer standard
seal type	single acting, oil quenched mechanical seal. Material: SIC/SIC (silicon carbide)
seal lubrication	Light weight oil
base plate	carbon steel, hot dipped galvanized
coupling	KTR flexible coupling
motor	TEFC, premium efficiency; NEMA design B; Class F insulation; Class F temperature rise; maximum Speed: 1800 rpm; service factor: 1.15 suitable for constant torque inverter duty (6-60 Hz; minimum turndown)

instruments	Magnetic flow meter, turbidity meter, membrane unit TMP transducer for each train
accessories	VFD , check valves, shutoff valves, inlet and discharge pressure gauges and pressure switches, and priming air ejector for each pump

B. The pumps shall convey permeate from membranes to the disinfection system in accordance with the design flows previously specified. The permeate pumps shall provide the capability of pumping a portion of the treated permeate back through the membranes in reverse direction of the normal flow path to reduce fouling of the membranes. Pumps shall be sized to handle peak instantaneous flow specified, as well as rates associated with backwashing, maintenance and recovery cleaning.

C. Permeate subsystem (pumps, instruments, accessories) shall be dedicated to each train.

2.6 FEED FORWARD (IF APPLICABLE)

A. Provide feed forward pumps as specified below:

quantity	determined by Supplier; minimum six (two per bioreactor train)
capacity range	sized by Supplier, as specified
pump manufacturer	Sulzer, Flygt, Wilo, KSB or approved equal
pump type	submersible non-clog sewage pump
drive	direct drive, no coupling
flanges	drilled to ANSI class 125 flange fitting

casing	cast iron
impeller	cast iron
shaft	1.4021 (ASTM 420) stainless steel
shaft seal	double seal system consisting of tandem double silicon carbide mechanical seal (up to 30hp); triple seal system consisting of tandem double silicon carbide mechanical seal and one lip seal (30hp above)
seal lubrication	oil lubricated
leakage protection	moisture sensor in oil chamber for bearing and motor protection
motor	submersible; squirrel cage; 3 phase induction shell type B design; maximum 3,600 rpm; stator insulation to Class H; three (3) thermal switches – one per phase wired in series
cable entry	cylindrical elastomer grommet with junction chamber on AFP/XFP (above 15hp)
mounting	submersible guide rail (2” or 3”)
accessories	VFD, cooling jacket, full monitoring system; lifting hoist and davit

B. Provide duty/standby feed forward pumps per bioreactor basin.

C. Provide check valves, shutoff valves to isolate or bypass one pump, while the other pump(s) remain in operation.

D. Provide magnetic flowmeter for feed forward flow per bioreactor basin.

E. If feed forward pumps are provided, RAS pumping may be eliminated. In such cases, return activated sludge may be gravity returned from the common RAS channel to the secondary influent distribution channel. Supplier shall provide necessary controls and instrumentation to automatically maintain feed forward flowrates over the range of 5 times influent max month flowrates.

2.7 RAS PUMPS

A. Provide RAS pumps as specified below:

quantity	determined by Supplier; minimum four (duty per train)
capacity range	sized by Supplier
pump manufacturer	Flowserve, Sulzer, Pentair Fairbanks, KSB or approved equal
pump type	end-suction centrifugal horizontal
flanges	drilled to ANSI B16.5 Class 150 Flange
casing / stuffing box cover	cast iron ASTM A48 CL35B (53/F0067)
impeller	ductile iron / 316 SS or duplex SS
shaft/sleeve	duplex steel (EN1.4460/AISI 329/SS2324)
lubrication	flooded oil
seal	cartridge single, open seal chamber, sleeve installation, SiC/SiC
seal lubrication	water - internal flush (no waste seal water generated)
base plate	Carbon steel
coupling	Rex-omega elastomeric / flexible or equal
motor	TEFC; foot mounted, 1,800 rpm maximum speed; variable speed
accessories	VFD

B. Provide check valves, shutoff valves to isolate or bypass one pump, while the other pump(s) remain in operation.

2.2 WAS PUMPS (IF APPLICABLE)

A. Provide WAS pumps as specified below:

quantity	determined by Supplier; minimum two (duty and standby)
capacity range	sized by Supplier
pump manufacturer	Flowserve, Sulzer, Pentair Fairbanks, KSB or approved equal
pump type	end-suction centrifugal horizontal
flanges	drilled to ANSI B16.5 Class 150 Flange
casing / stuffing box cover	cast iron – ASTM A48 CL35B (53/F0067)

impeller	ductile iron / 316 SS or duplex SS
shaft/sleeve	duplex steel (EN1.4460/AISI 329/SS2324)
lubrication	flooded oil
seal	cartridge single, open seal chamber, sleeve installation, SiC/SiC
seal lubrication	water - internal flush (no waste seal water generated)
base plate	carbon steel
coupling	Rex-omega elastomeric / flexible or equal
motor	TEFC; foot mounted, 1,800 rpm maximum speed; variable speed
accessories	VFD

B. Provide check valves, shutoff valves to isolate or bypass one pump, while the other pump(s) remain in operation.

C. In lieu of WAS pumps, Supplier shall supply a magnetic flowmeter, control valve and isolation valve for a sidestream WAS line to the sludge holding tank sized based on continuous wasting and to maintain MLSS in the bioreactors at <8,000 mg/L at all times.

2.3 MIXERS

A. Provide mixers as specified below:

quantity	determined by Supplier; minimum of one per anoxic reactor
capacity range	sized by Supplier; at least 5.0 hp, each
manufacturer	Sulzer, Flygt, Wilo, KSB or approved equal
type	submersible, retractable
impeller type	axial flow 2 or 3 self-cleaning backward curved blades
wetted parts	316 stainless steel
drive	direct drive, with gear box on large mixers
shaft seal type	Lower – silicon carbide/silicon carbide, nitrile, 316 SS Upper - silicon carbide/silicon carbide, nitrile, 316 SS
seal lubrication	oil lubricated
leakage protection	Moisture detection probe in oil chamber, motor and cable connection chamber
solid deflection ring	Nitrile (Buna-N)
mounting	submersible guide rail
motor	submersible; squirrel cage; 3 phase induction shell NEMA type B design; maximum 1,800 rpm; stator insulation to class F; 3 (three) thermal switches – one per phase wired in series
cable entry	compressible rubber grommet and o-ring
accessories	full SS construction; flow ring (316 SS); lifting hoist and davit

B. Mixing equipment shall be of the number, size, and location to provide adequate mixing at the proposed length, width, and depth throughout the intended mixing phase. This determination shall be

based on Supplier test data on tanks of similar geometry or CFD modeling.

C. Mixing system shall be:
   1. Effective to provide a complete basin mix with unobstructed mixing pattern.

2.4 BLOWERS

A. Provide blowers as specified below:

quantity	determined by Supplier; minimum three process aeration (2 duty, 1 standby), 3 membrane air scour (2 duty, 1 standby)
capacity range	Sized and located by Supplier
blower type	positive displacement rotary lobe, oil free
manufacturer	Aerzen, Kaeser Gardner Denver or approved equal
connections	plain pipe; silicone or rubber sleeve and clamps used to connect to discharge piping
casing & head plates	cast iron EN-GJL-200 (~ ASTM A48 class 30)
shaft	C45N (~ AISI 1043) to 2500 cfm and EN-G75-500-7 (~ ASTM 65-45-12) above 2500 cfm
rotors	ductile iron or forge steel C45N (~ AISI 1043) to 2500 cfm and EN-G75-500-7 (~ ASTM 65-45-12) above 2500cfm
drive	v-belt drive, automatic tension
guard	plate OSHA-rated V-belt drive guard
motor	TEFC, premium efficiency, NEMA frame, foot-mounted for belt-driven applications; 1800 or 3600 rpm, inverter duty rated
turndown	minimum 4 to 1
noise level	69 to 72 dBa with acoustic enclosure at 3 ft free-field conditions
accessories	air intake filter-inlet silencer, filter indication gauge, discharges silencer/base frame/hinged motor plate/anti-vibration mounts, discharge pressure gauge, discharge connection housing, spring-loaded discharge pressure relief valve, flapper-style integrated discharge check valve, discharge flexible sleeve and clamps for connection to process piping, auto-tensioned v-belt drive, v-belt safety guard, drive motor.
additional accessories	Indoor/outdoor sound enclosure built to meet MVSS 302 flammability standards. mechanical cooling fan (indoor or outdoor installation), High discharge temperature switch, mechanical unloading valve). Recommended spares (filter, V-belts, oil)

B. If one blower serves multiple bioreactor or membrane trains, there shall be sufficient turn down to service just one train, while the other train(s) is out of service for extended periods.

2.5 DIFFUSERS

A. Provide bioreactor diffusers as specified below:

quantity	determined by Supplier
capacity range	sized by Supplier
type	fine-bubble diffusers

manufacturer	EDI, Sanitaire, SSI, Ovivo or approved equal
membrane	disk or tube or panel
max design air flow rate per diffuser at max AOR	not to exceed 80% of diffuser's rated continuous operation capacity
droplegs & supports	316L stainless steel (AIS certification required on air headers, drop legs, and supports, but not on diffusers)
process connection	ANSI Flange 24" above tank wall
piping, connecting sleeve, tee and elbow	PVC (SDR 33.5 Sch 40, 80), CPVC, SS 304L, 316L
diffuser grid pipe supports and hardware	Included
check valve	n/a (the membrane is the check valve)
header pipe / mounting bracket	PVC
spare space	allowance for 10% blanked connections to install diffusers in the future, as necessary

2.6 VALVES AND ACTUATORS

A. Isolation valves on mixed liquor lines shall be plug or knife gate style as specified.

B. Wastewater check valves:

quantity	specified by Supplier with bid
type	wafer style double door / Swing style
manufacturer	Centreline 800 Series, RitePRO, or approved equal
style	wafer suitable for installation between ANSI # 150 flanges
body	cast iron
disc	316 stainless steel
shaft	316 stainless steel
seat	BUNA-N / EPDM

C. Butterfly valves:

quantity	specified by Supplier with bid
type	butterfly valve, resilient seated
manufacturer	Asahi, Keystone, Bray or approved equal
style	Lug pattern
operator	Asahi, Keystone, Bray
body	cast iron, epoxy coated
disc	nylon coated ductile iron

shaft	stainless steel
seat	EPDM

D. Wastewater plug valves:

quantity	specified by Supplier with bid
type	rectangular full port plug
manufacturer	DeZurik, Henry Pratt or approved equal
style	flanged ends, ANSI B16.1, Class 125
body	cast iron ASTM A126, Class B
plug	non-lubricated, eccentric type design with resilient plug facing
seat	raised seat with 1/8” welded nickel overlay
packing	Multiple V-ring type
operators	manual hand or chain wheel or electric modulating

E. Knife gate valves:

quantity	specified by Supplier with bid
manufacturer	Orbinox, trueline or equal
style	Lugged, AR series
body	GG25 (cast iron)
gate	304 stainless steel
shaft	carbon steel
seat	EPDM
manual operators	ll sizes handwheel operated

F. Ball valves:

quantity	specified by Supplier with bid
type	ball
applications	chemical feed lines
manufacturer	George Fischer, Asahi or approved equal
style	Tru-union
body, plug, shaft	PVC
seals	EPDM or viton (chemical dependent)
manual operators	manual lever
actuator	George Fischer, Asahi or approved equal

G. Solenoid valves:

quantity	specified by Supplier with bid
type	solenoid valve
service	air / water
manufacturer	Burkert, Asco or approved equal
style	FNPT, normally closed
body	316 stainless steel / brass
seal	EPDM
power	120VAC or 24VDC
power connection	0.5” NPT conduit, type H electrical

H. Pneumatic Valve Operators – General Service:

quantity	specified by Supplier with bid
manufacturer	Bray series 92 (series 94 for <24”), rotork or equal
operating pressure	550 kPa (80 psig)
body material	extruded aluminum alloy, anodized
travel stop	±5° at 0° and 90° positions
end caps	die cast aluminum alloy
pistons	die cast aluminum alloy
output shaft	carbon steel (zinc plated)
shaft bearings	Acetal
fasteners	stainless steel
‘o’-rings	Buna-N
air solenoid	NAMUR direct mount, 110VAC or 24VDC, NEMA 4, 4X
additional features	open and closing speed control
position control	electro-pneumatic bray 6A digital positioner; 4-20mA Input; NEMA4X enclosure (note: position control is only needed and therefore supplied on control valve applications).

I. Pneumatic Valve Operators – Knifegate Valve Service:

quantity	specified by Supplier with bid
manufacturer	Tyco, CMO or equal
operating pressure	550 kPa (80 psig)
tie rods for cover coupling	zinc coated steel
cylinder covers	cast iron, 2”-12” aluminum, 14” – 30” cast iron
piston connection	self-locking nut to assure fixation with nitrile o-ring
body	drawn aluminum jacket

upper piston seal	solid cast gum moulded on steel
piston	solid stainless steel
piston guide	RCH 1000 for low friction
'o' rings	Buna-N (nitrile)
air solenoid	4-way, NEMA 4
positional control	electro-pneumatic with 4-20 mA input (note: a positioner is only required on control valve applications)

2.7 PROCESS INSTRUMENTS

A. Electromagnetic Flowmeters:

quantity	specified by Supplier with bid
manufacturer	E&H or approved equal
series	Promag W400
process connections	ANSI #150 flanged
housing	Aluminum NEMA 4X
flowtube	304 stainless steel
liner	PTFE, polyurethane
accuracy	+/- 0.5%
operator interface	Local

output	4-20 mA DC, scaled pulse output
power / connection	85-260 VAC 60 Hz / 0.5" NPT
accessories	316 stainless mounting hardware, grounding rings/straps, spool piece for bypassing, calibrator suitable to calibrate all flow tubes

B. Rotameter:

quantity	specified by Supplier with bid
manufacturer	USGI Chemical, ABB or approved equal
series	Varea Meter
end fittings	Type 316 stainless
construction	Stainless steel frame, Borosilicate glass tube, stainless steel float
turndown	10:1
accuracy	2% of maximum flow
accessories	Check and needle valves, polycarbonate shield

C. Hydrostatic Level Transmitters:

quantity	specified by Supplier with bid
manufacturer	E&H or approved equal

application	top entry or side entry
series	FMB or FMX
process connections	1-1/2” to 3” 150 # flange (316 stainless steel)
mounting	1-1/2”, 2”, and 3” 150 # Flange (316 stainless steel) & 1-1/2” NPT connections available.
output signal	4-20 mA

voltage	10 to 30 VDC
diaphragm	ceramic
housing	aluminum NEMA 4X
integral LCD	yes

D. Pressure Transmitters:

quantity	specified by Supplier with bid
manufacturer	E&H or approved equal
model	Cerabar S PMC-71
mounting	0.5” NPT
output signal	4-20 mA
voltage	11.0 to 30 VDC
diaphragm	ceramic
housing	aluminum NEMA 4X
integral LCD	yes

E. Temperature Transmitters:

quantity	specified by Supplier with bid
manufacturer	E&H or approved equal
type	head mounted temperature, TH13
model	TR 11 RTD assembly
mounting	0.75” NPT process connection
power supply	24 V DC
output signal	4-20 mA
voltage	– 125 to 1200 mV
housing	transmitter installed in aluminum enclosure mounted directly on sensor
ambient temperature range	– 40 to 85 deg C

F. Turbidimeters:

quantity	specified by Supplier with bid
manufacturer	Hach or approved equal
model	TU5300 SC with SC200 controller
range	0-700 NTU
inlet	0.25” FNPT
outlet	0.25” FNPT
output signal	4-20 mA

power supply	120V/1ph/60 Hz
accessories	sensor, analyzer unit, interconnecting cable, alarm relays for indication of alarm conditions and one (1) Formazin Calibration Kit

G. Dissolved Oxygen Sensors/Analyzers:

quantity	specified by Supplier with bid
manufacturer	E&H, Hach or approved equal
model	LDO, with SC200 controller
range	0-20 mg/L
resolution	0.01 mg/L
output signal	2 x 4-20 mA
power supply	120V/1ph/60 Hz
display	LCD supplied on Signal Convertor
accessories	air blast cleaning assembly, sensor & float mounting assembly, signal converter.

H. pH Transmitters:

quantity	specified by Supplier with bid
manufacturer	E&H, Hach or approved equal
model	pHD-SC, with SC200 controller
range	0-14 pH
accuracy	+/- .05 pH
output signal	2 x 4-20 mA
power	120 VAC / 60 Hz / 1 phase
display	LCD
enclosure	NEMA 4X
Electrode	yiton body, glass filled flat electrode

I. Pressure Gauges:

quantity	specified by Supplier with bid
manufacturer	Ashcroft, Wika, McDaniel or approved equal
type	Liquid filled, with 316SS wetted parts
range	specified by Supplier
accessories	Isolation ball valve

J. Level Float Switch:

quantity	specified by Supplier with bid
manufacturer	Conery or approved equal
model	2900 series
type	enclosed, narrow angle, mechanical float switch
switch	single-pole, double throw (SPDT) type
float	ABS or polypropylene material, leak proof, shock proof, and impact resistant
electrical rating	10 amps at 120VAC

K. Pressure Switches:

quantity	specified by Supplier with bid
manufacturer	United Electric, Ashcroft or approved equal
type	Electronic, Digital Display, Programmable Dead band, Self-Diagnostic
material	316SS wetted parts and bellows
range	specified by Supplier
output signal	2 x 4-20 mA
power supply	24 V DC

L. Flow Switches:

quantity	specified by Supplier with bid
manufacturer	McDonnell and Miller, E&H or approved equal
type	swinging vane or piston type, variable orifice type; dual switches, each SPDT, minimum rating 5 A at 120 VAC
material	Type 316 stainless steel internal moving parts
range	Field adjustable switch setting
accuracy	switch accuracy and deadband shall be 5% of full range

2.8 PIPING

A. General:
1. MBR System air scour piping shall be schedule 10 Type 304 stainless steel.
2. Permeate piping shall be schedule 10 Type 316L.
3. Piping shall have welded, and/or ANSI Class 150 flanged connections.
4. Transitions from MBR Supplier piping to Contractor's piping shall use ANSI 150 pound flanges unless otherwise noted or coordinated with the Contractor.

B. PVC Schedule 80:
1. Piping conforming to ASTM D1785
2. Fittings conforming to ASTM D2467
3. Flanges: Schedule 80 solid socket flange

C. CPVC Schedule 80:
1. Piping conforming to ASTM F441
2. Fittings injection molded type
3. Flanges: Schedule 80 solid socket flange

D. Stainless Steel Piping:
1. Rolled pipe conforming to ASTM A778 for pipe >12". ASTM A312 for <12", ANSI B36.19
2. Cast fittings conforming to ASTM A778, ANSI B36.19 and ANSI B16.9
3. Fabricated pipe from sheet conforming to ASTM A240
4. Fabricated fittings from sheet conforming to ASTM A240
5. Fitting dimensions conform to ANSI B16.9
6. Flanges: weld neck or slip-on, Class 150

2.9 PROCESS CONTROL SYSTEM

A. General:
1. The MBR System controls shall be housed in a control panel. The control panel shall house the MBR system PLC, Operator Interface Terminal (OIT), software package, datalinks among control panels and Ethernet Network link with the Main Plant Control System. The control panel PLC shall be sized to handle all I/O from membrane equipment supplier, with 10% spare I/O available for other WWTP equipment.
2. The membrane equipment supplier shall be responsible for all programming for the MBR System PLC and OIT to control the operation of the Membrane Equipment System. The OIT shall contain graphical representations of all equipment and instrumentation and indication and trending of all process values.
3. The control panel design and IO distribution shall be as such that that a maximum of one train goes offline when one PLC IO rack is removed or taken out of service.
4. Contractor shall be responsible for installing wiring from field devices to the control paenl including the Ethernet links that may be required between the control panels.
5. Supplier shall reasonably demonstrate the basis for programming in the context of proven, standardized logic including applicable sub-routines, addressing strategy and nomenclature.
6. Source code shall be primarily programmed in ladder logic and made available to the Owner.
7. Human Machine Interface (HMI) or Graphical User Interface (GUI) screens shall be configured to accurately represent the process and process flow.

8. Representative HMI screenshots shall be provided that accurately represent the navigation and functionality of the proposed system.

B. MBR Control Panel:

1. Cabinet:
   a. Cabinets and panels with dimension 36 inches or greater shall be provided with removable lifting lugs. All doors shall be fitted with common keyed locks.
   b. Main control panel shall be located in the main electrical room and shall be painted carbon steel NEMA/UL Type 12 construction.
   c. All control panels located in the Process Area shall be minimum NEMA/UL Type 4 construction painted carbon steel.
   d. Cabinets and panels shall be provided with drawing pockets for panel drawings. One copy of the appropriate panel as-built drawings shall be furnished and left in the pocket of each panel.
   e. Cabinets and panels shall be prefabricated cabinets and panels by Hoffman, Rittal, Saginaw, or approved equal.
2. Programmable Logic Controller (PLC):
   a. Control and data acquisition associated with the MBR equipment shall be performed by a PLC.
   b. Each PLC shall be equipped with its own regulated power supply module energized from a standard, commercial 120 VAC 60 Hz, single phase source provided by the Uninterruptible Power Supply. Any power transformation, rectification, regulation, or other conditioning necessary shall be provided as part of the unit's power supply package. The module shall have sufficient capability to handle the power requirements for all the PLC components and I/O points, including the required, installed spare I/O capacity.
   c. The PLC shall be Allen-Bradley ControlLogix 1756-L7 Logix 5673. A minimum of 8 MB of user memory shall be installed. The memory supplied shall be sufficient to provide 20% unused capacity when the entire PLC program, as provided, is loaded and running. Provide industrial SD Card to maintain memory integrity of the PLC program following short-term power failures. PLC shall be capable of executing ladder logic, function blocks, structured text, and sequential flow chart logic.
   d. All I/O modules shall be provided with screw-type terminal blocks with barriers between adjacent terminals for connection of field inputs. Terminals shall be suitable for accepting up to and including No. 14 AWG wire. All terminals shall be provided with unique identification. All I/O modules shall be Allen-Bradley 1794 Series.
   e. The PLC shall communicate with the MBR SCADA system over an Ethernet network.
   f. I/O count shall be as required to implement the functional requirements of the system, with specified spare.
3. Network Switches and Modems:
   a. The MBR system control panel shall be provided with an industrial grade managed Ethernet Switch.
      1) Combined unit: Allen-Bradley Stratix 5700.
4. Operator Interface Terminal (OIT):
   a. The OIT shall be Allen Bradley PanelView graphic terminals with 9-inch or larger screens. The OIT shall display alarm messages, and provide fault and troubleshooting information.
5. Miscellaneous Requirements:

a. Provide ten percent (rounded up) spare fuses (minimum of 10) of each type and rating supplied.

PART 3 – EXECUTION

3.1 DESIGN ASSISTANCE

A. Design review: Supplier shall provide draft and final design submittals and review ancillary specifications provided by Engineer.

B. Electronic Files: Supplier shall provide electronic files for all process equipment in the Supplier's Scope of Supply.

C. BioWin Modeling: Supplier shall provide BioWin or equivalent modeling files for Engineer review and verification.

3.2 PROJECT SCHEDULE

A. Supplier shall provide equipment and services in accordance with Table 3-1. In addition to the time necessary to complete the requirements established within this specification and Contract Documents, Table also specifies the location and on-site days that shall be allowed for on-site visits in support of the services.

Table 3-1: Project Schedule

Deliverable	Due Date	On-Site Days	Location
Design Submittals Schedule Update (1.6B.1.a)	To be completed within 15 Days after Notice to Proceed.	N/A	N/A
Design Kick-off Meeting	To be completed within 20 Days after Notice to Proceed.	N/A	Teams
Bi-Weekly Status Conference Calls	For duration of design scope	N/A	Teams

Deliverable	Due Date	On-Site Days	Location
Submittal of 50% Design and Shop Submittals	12 weeks after Notice to Proceed	N/A	N/A
Submittal of 100% Design Documents	16 weeks after Notice to Proceed	N/A	N/A
Fabrication and Delivery	Per Contractor's schedule, construction contract anticipated to bid in March 2024 with Notice to Proceed in June 2024.	N/A	N/A
Mechanical Inspection	Per Contractor's schedule	5	New Windsor, NY
Start-Up, Testing and Commissioning	To be scheduled upon successful completion of Mechanical Inspection	45	New Windsor, NY
Demonstration/Performance Test	To be scheduled after successful start-up and testing.	10	New Windsor, NY
Operations and Maintenance Manuals	A minimum of 14 Days prior to start of Training		
Training	Training to be provided at the conclusion of the System Startup	5	New Windsor, NY
Minimum Total Days		65	
Minimum # Trips		7	

B. Supplier shall perform material inspection to verify completed shipment of material at unload, in accordance with its requirements.

C. Time spent remedying equipment deficiencies/problems shall not count toward the listed durations and trips.

3.3 CONTROL SYSTEM FACTORY ACCEPTANCE TEST

A. The Supplier shall coordinate and conduct a factory acceptance test (FAT) of the MBR control system during which:
   1. The PLC control logic and HMI operability shall be demonstrated by systematically forcing I/O to verify all controls functions and HMI screen representations defined in the system control narrative.
   2. The MBR control panel shall be inspected for completeness, and workmanship.

B. The Supplier shall provide a minimum of 2 weeks notice to the Owner and Engineer prior to the FAT. The Owner and Engineer may, at their option and expense, choose to attend and witness the FAT.

C. Whether or not the Owner and/or Engineer attend the FAT, the Supplier shall provide written documentation and certification of the completed FAT.

3.4 MECHANICAL AND INSTALLATION INSPECTION, AND START-UP

A. Inspection and start-up services shall be provided by a factory-trained representative of the Supplier who is a direct, full time employee of the Supplier.

B. The field service representative shall submit to the Engineer a written report stating that the MBR systems, including but not limited to MBR operation and cleaning operation(s), have been checked and are suitable for operation.

C. The start-up and demonstration testing protocol to be executed by the Supplier shall be submitted for approval to the Engineer.

D. Supplier shall furnish material, instrumentation, testing equipment, and personnel for conducting inspection, start-up, training, and commissioning services. All analytical testing will be provided by the Owner.

E. Supplier shall provide at least 7 trips for on-site mechanical inspection, start-up, demonstration, and training services as specified.

F. The representative shall be present on site for the following items:
   1. The first visit shall be for instruction and observation of the installation of equipment. At the start of the installation process, the Supplier shall inspect the tanks and MBR components to be installed in it to verify that the tank has been properly cleaned and prepared and the components are prepared for installation. The field service representative shall instruct the Contractor's personnel in what to observe and document. The field service representative shall also train the personnel performing the installation of the MBR system in the proper procedures for installation.
   2. The second visit shall be for checking and approving installation, prior to flow, or start-up, or demonstration.
   3. Visits 3-5 shall include the startup, testing, and demonstration of the MBR system including MBR trains, bioreactor equipment and ancillary systems. Training shall be conducted during this visit. Due to the length of this phase duration, and/or the need to utilize multiple team members, a minimum of three visits should be assumed for this phase.
   4. The sixth visit shall include commencement of Performance Testing. The supplier shall be onsite for the initial ten days of the performance test. If the system is operating satisfactorily, the supplier may leave site and provide remote monitoring of system performance for the duration of the performance test.
   5. One additional visit for support of the Engineer and Contractor as required shall be assumed by the system supplier.

G. All costs including travel, lodging, meals, and incidentals shall be considered as included in the Bid price.

3.5 PERFORMANCE TESTING

A. A 30-day performance test shall be conducted to confirm compliance of the biological and membrane equipment with the capacity and effluent quality parameters specified.

B. Commencement of performance testing shall begin within 14 days of completion of start-up, testing and commissioning of the facility, or 6 months after membrane delivery whichever occurs sooner.

C. Performance testing shall be provided by a factory-trained representative of the Supplier who is a direct, full time employee of the Supplier. Supplier shall be on-site for the initial 10 days of the testing and provide remote monitoring for the duration of the testing unless otherwise agreed in writing by Engineer and Owner.

D. Supplier shall be responsible for supporting the Engineer and Contractor during the test and shall

coordinate as necessary with the Engineer, Contractor and plant staff.

E. Testing shall begin after the MBR system is operational, the biological process is fully stabilized and the mixed liquor characteristics into the membrane tanks are within requirements.

F. The performance test shall be considered complete upon 30 consecutive days of operation without a significant failure due to the membrane system, and demonstration that the membrane system meets all performance requirements given herein.

G. A significant failure of the membrane system is one that:
   1. Decreases capacity below 75% for more than 24 hours
   2. Requires operator intervention to restart or re-establish normal operation of the control system

H. Failure to pass the Performance Test shall require a re-test of the system. The failure to pass the Performance Test shall require the Supplier to submit a written explanation for the failure and proposed remedy for evaluation by the Engineer prior to re-testing, subject to acceptance by the Engineer. If after a re-test, a repeat failure occurs and is determined to be due to non-performance by the Supplier or their equipment, remedy by the Supplier shall be up to and including installation of alternative or additional membranes or membrane equipment at no cost to the Owner.

3.6 TRAINING

A. Supplier shall provide training in the maintenance and operation of all systems included in the Supplier's control system and ancillary equipment as necessary to operate the biological (activated sludge) and membrane filtration processes to achieve treatment goals.

B. Supplier shall submit to Engineer written training materials at least 1 months prior to commissioning. Training shall be completed by Supplier prior to the completion of commissioning. All training shall be conducted at the Owner's office location (New Windsor, NY) or at the plant location (New Windsor, NY) by a factory-certified representative and full-time employee of the Supplier.

C. Training shall include classroom sessions on:
   1. Total nitrogen removal treatment process and configuration
   2. MBR operations, theory and important factors impacting flux and operation
   3. Membrane cleaning,
   4. MBR System troubleshooting, and maintenance.

D. Training shall also include hands-on training:
   1. Automatic and manual operation of process control panels and instrumentation such that operators can fully operate the biological and MBR system in manual or automatic mode, including but not limited to blowers, RAS pumps, feed pumps, permeate pumps, and cleaning systems.
   2. Navigation of all control panel and HMI screens and menus
   3. Changing process set-points
   4. All membrane cleaning operations (Backwash, Extended Maintenance Clean, Recovery Clean)
   5. Alarm conditions and power failure
   6. Troubleshooting

3.7 POST-CONSTRUCTION SUPPORT SERVICES

A. Supplier shall provide a digital database and monitoring system that contains operations and maintenance manuals, equipment information, and the ability to monitor the plant remotely by the

operators and the Supplier. The Owner shall only need to maintain internet access for the monitoring system to function with remote viewing access.

1. Supplier shall provide 24/7 technical phone support for the duration of the ten year warranty period.
2. Supplier shall provide remote monitoring of the membrane performance and annual performance reports highlighting concerns or suggestions for improvement for the first two years of the warranty period.
3. During the first year of the warranty period, Supplier shall provide (post-commissioning and as part of ongoing support services) a total of two service visits (two days on site each visit) by a field service representative at Owner's request.
4. Annual service visits for the remaining four years of the full (non-prorated) membrane warranty period, each visit lasting a minimum of two days (16 hours) onsite.

Caesars Lane WWTP Expansion Phase
MBR Pre-Selection

ADDENDUM NO. 1

Prospective Bidders are advised of the following revisions, additions and/or deletions to the contract documents.

RFI's

1. *Question: Please review notes and discussions with DEC to determine if the 19.6 gfd MDF flux cap applies to an N-1 scenario or with all MBR basins online.*

   Response: The membranes need to be able to pass peak hourly flow at the N-1 scenario. Flux requirements specified are most critical to sustained flows, in particular average and maximum monthly flows. Bidders can take exception to flux rates outside of the sustained flow that occur at shorter intervals such as maximum daily flow and peak hourly flow as long as Bidders are comfortable this will not require excessive cleaning after this condition and will still provide the required performance guarantee and warranty requirements. Any exception to the bid requirements must include proper documentation and basis of such exception including documentation of other facilities that operate outside the recommended flux rates at non-sustained flows. It should also be noted that any exception must meet DEC review requirements.

2. *Question: Valves and in-basin pricing are very volatile right now and determining the appropriate price to use given the length of time before the project will get built exposes the owner and/or the Bidder to significant risk. Placing these items in the contractor's scope of supply allows the owner to get the price point available at the time the project bids.*

   Response: MHE is willing to waive the requirement of the purchase of these valves and in-basin piping as part of the bidding process. As such, the Bidder shall disregard Section 1.1.B.3 from the scope of supply, however, a valve and piping list and/or drawings with specifications should still be submitted with proposal bid as this is an important aspect to understand with respect to the overall installation requirements and cost respective to each technology. The list will then be referenced in the General Contract scope of supply. For clarification, the elimination of valves and piping in the Bidder's scope of supply should be documented as an exception to the bid and reflected in Cost Item #4 in the MBR System Capital Cost Schedule in Section 2.01.G in the Bid Form.

3. *Question: Bidder has inquired about whether an automated CIP system is necessary as stated in the contract specifications, as compared to a manual CIP system.*

   Response: For Bid comparison, the Bidder shall include pricing for automated cleaning as noted in the contract documents, however the Bidder is welcome to include an alternative cleaning method with cost differentials for Owner consideration.

4. *Question: Bidder has inquired whether the 316L stainless steel requirement for materials within membrane tank is necessary, or whether an alternative material such as 304 stainless steel may be used.*

Response: If the Bidder feels that this material of construction is acceptable for their MBR tank, outside of the specified material of construction and will still provide the required performance guarantee and warranty requirements, the Bidder may submit with said material along with appropriate justification and documentation of alternate materials.

5. *Question: Filling the MBR tanks with cleaning chemicals should necessitate the installation of a tank liner to prevent the premature corrosion of the basin concrete. While the capital cost section asks whether a tank liner is needed there is no provision to include this added cost in the evaluation. It should be required to include tank liners in the cost evaluation, if applicable, and the cost of those liners should be defined on a $/sq ft basis.*

   Response: Bidders shall provide recommendations on protection of exposed concrete from membrane cleaning chemicals in their submission. This recommended protection will be factored into overall installation costs. Bidders shall provide recommendations to protect concrete to promote 30-year life span on the tank without excessive touch-up of any coatings or provide proof that other facilities are operating without adverse impact to concrete in this tank.

6. *Question: Bidder has inquired whether the phenol removal requirements stated in the contract specifications are valid, or whether these requirements should be removed.*

   Response: Phenols can be highly biodegradable and is anticipated that at levels experienced in the influent these will be treated to acceptable levels with activated sludge given the longer SRT and more robust microorganisms, in comparison, if present. However, MHE understands that there are many factors that could affect removal of these compounds and that pilot testing has not been performed. Therefore, Bidders will not be required to provide performance guarantee for phenol removal requirements stated in the contract specifications.

7. *Question: While backpulsing is mentioned in the discussion of controls and instrumentation, there does not appear to be any provision in the RFP to capture the costs related to the backpulse tank itself. Bidders should need to determine the appropriate size of the backpulse tank, include the cost for it in their scope, and include the space it requires in the membrane equipment building.*

   Response: It should be emphasized that the Bidder's proposed MBR system should be a COMPLETE system with all required support tankage necessary identified for operation and cleaning, including bulk chemical storage and utilities. Bidder will need to include the costs as additional concrete basin volume, if required.

8. *Question: The current specifications exclude MBR tank process volume from aerobic SRT considerations. It is believed to be reasonable to include the volume of the MBR tanks in the calculation for overall aerobic SRT purposes. If acceptable, the RFP specification language should be revised to allow for MBR tank volume inclusion.*

Response: For clarification, Bidders can consider volume of MBR tanks in the calculation for overall aerobic SRT purposes if the design will still provide the required performance guarantee and warranty requirements, as long as proper documentation and justification is included. Examples should be provided of other facilities that operate successfully including the MBR tank process volume within the SRT calculations. Resulting SRT including MBR Tank process volume must be clearly identified as required by the bid documents. It should be noted that the submitted design must meet DEC approval.

9. *Question: Please confirm bottom of tank elevation for bioreactors (re: Hydraulic Profile).*

   Response: The Hydraulic Profile provided in the contract documents is included for reference. Also for reference, approximate bedrock location is noted at two preliminary boring locations on Sheet SK-1. Bidders shall clearly note tank depth requirements for their respective systems for evaluation during the review process.

10. *Question: Consider replacing paragraph 5.01.6.2 in the Agreement in its entirety with the following: Contractor/Assignee shall pay Seller within 7 days of receipt of payment from the Project Owner under the construction contract.*

    Response: MHE will revise the Agreement to require the Contractor/Assignee to pay the Seller within 15 days of receipt of payment from the Project Owner under the construction contract.

11. *Question: Consider revising the Bid Form, Page 23,as follows:*
    a. *Reword "Owner and Location" to Facility Name and Location.*
    b. *Delete: "Peak Hydraulic Rated Capacity in MGD"*
    c. *Delete: "Biological Nitrogen Removal (yes or no)*
    d. *Delete: "Type of WAS Thickening Equipment, if any*
    e. *Delete: Type of Dewater Equipment, if any*
    f. *Delete: Reference Contact Name, Title, and Phone Number*
    g. *Delete: Installation Contractor Contact Name, Title, and Phone Number.*

    These edits will allow the MBR system supplier to provide their standard NAM reference list which may comprise several hundred installations. Alternatively, please consider reducing the number of installations to a minimum of 5 installations in each size category.

    Response: MHE finds the proposed changes acceptable and will revise the Bid Form accordingly.

12. *Question: MBR Spec 455000, Page 10: Please consider deleting: "under data demonstrating installations operating successfully at higher concentration is provided." This deletion will ensure that 8 g/L MLSS is used as the basis of design for the bioreactor and provide a common basis for system evaluation.*

Response: For clarification, Bidders may propose MLSS concentrations that are consistent with WEF Manual of Practice No. 36, 2011, so long as at least three years of operating data at the consistent and sustained higher concentrations greater than 8,000 mg/L are provided.

CLARIFICATIONS

1. The Owner has received requests for revisions to the General and Supplemental Conditions, and unless revised in this addendum, has decided to leave the standard contract conditions as provided in the bid documents.

2. The following sentence will be added at the end of paragraph in Section 2.01.E of the Bid Form:

   The Owner reserves the right to consider additional factors that may cause an increase or decrease in actual construction costs, such as more costly materials due to bidder specified requirements in materials, equipment, or construction method and system configuration.

ATTACHMENTS

1. Section 2.05 Price Escalation shall be added in Article 2 of the Agreement.

ALL BIDDERS MUST SUBMIT ACKNOWLEDGEMENT OF RECEIPT OF ALL ADDENDUMS WITH BID

New Windsor, NY 12553

2.05 Price Escalation

A. Certain markets providing essential materials and services to the Project may experience significant, industry-wide economic fluctuation during the performance of this agreement that may impact costs prior to fabrication. This section provides a fair allocation of the risk of such market conditions between the Owner and the Seller.

B. Thus, the contract price may be subject to adjustment based on market fluctuation prior to assignment of this contract to the General Construction Contract for the overall WWTP Expansion project. Any contract adjustment is subject to Owner acceptance.

C. The contract price will be adjusted based on the following:

   1. Seller's actual realized cost increases for materials and services (i.e., finished materials, raw materials, freight, fabrication, etc.) starting from the bid opening date of this contract and ending on the bid available date for the General Construction Contract of the overall WWTP Expansion project.

D. The Seller must submit with their bid documentation of present costs, internal or outsourced, to be considered for future price adjustment. Submitted documentation should include actual invoices that detail the Seller's present costs. At minimum this should include the following:

   1. Description of material, product, or service being considered
   2. Name of source vendor or supplier if applicable
   3. Date of invoice, quote, or cost estimate
   4. Lump sum cost or unit price
   5. Make and model of product if applicable

E. Within three (3) weeks after the Bid Available Date for the General Construction Contract, the Seller must submit, in writing, to the Owner a request for contract adjustment. The Seller must clearly state their proposed net adjustment to the contract price while providing supporting documentation showing the proposed adjustment reasonably reflects the change in costs experienced by the Seller. The Seller shall provide updated pricing for cost items submitted during their bid.

F. After award of this contract, the Seller may propose an alternative method of price escalation for consideration by the Owner, however, the alternative method must be agreed upon in writing by the Seller and the Owner prior to the signing of the Agreement, and will then be memorialized via Change Order.

G. The total adjusted contract price will be included in the General Construction Contract as applicable.

ADDENDUM NO. 2

Prospective Bidders are advised of the following revisions, additions and/or deletions to the contract documents.

CLARIFICATIONS

1. There was a misprint in the RFI #1 Response in Addendum #1. The first sentence of that response should read: *The membranes need to be able to pass Maximum Day Flow at the N-1 scenario.*

2. To clarify further, the proposed MBR system must treat the Maximum Day Flow (MDF) of 11.0 MGD with one train out of service (N-1 scenario) for up to 24 hours. The proposed system must also be able to treat the Peak Hourly Flow of 16.5 MGD for at least 2 hours with all trains in service.

TIME EXTENSION

1. A new bid opening date has been scheduled for Tuesday, July 26th 2022 at 2:00PM.

1. The Seller and Surety, jointly and severally, bind themselves, their heirs, executors, administrators, successors, and assigns to the Buyer for the performance of the Procurement Contract, which is incorporated herein by reference.

2. If the Seller performs the Procurement Contract, the Surety and the Seller shall have no obligation under this Bond, except when applicable to participate in a conference as provided in Paragraph 3.

3. If there is no Buyer Default under the Procurement Contract, the Surety's obligation under this Bond will arise after:

    3.1. The Buyer first provides notice to the Seller and the Surety that the Buyer is considering declaring a Seller Default. Such notice may indicate whether the Buyer is requesting a conference among the Buyer, Seller, and Surety to discuss the Seller's performance. If the Buyer does not request a conference, the Surety may, within five (5) business days after receipt of the Buyer's notice, request such a conference. If the Surety timely requests a conference, the Buyer shall attend. Unless the Buyer agrees otherwise, any conference requested under this Paragraph 3.1 will be held within ten (10) business days of the Surety's receipt of the Buyer's notice. If the Buyer, the Seller, and the Surety agree, the Seller shall be allowed a reasonable time to perform the Procurement Contract, but such an agreement does not waive the Buyer's right, if any, subsequently to declare a Seller Default;

    3.2. The Buyer declares a Seller Default, terminates the Procurement Contract, and notifies the Surety; and

    3.3. The Buyer has agreed to pay the Balance of the Procurement Contract Price in accordance with the terms of the Procurement Contract to the Surety or to a seller selected to perform the Procurement Contract.

4. Failure on the part of the Buyer to comply with the notice requirement in Paragraph 3.1 does not constitute a failure to comply with a condition precedent to the Surety's obligations, or release the Surety from its obligations, except to the extent the Surety demonstrates actual prejudice.

5. When the Buyer has satisfied the conditions of Paragraph 3, the Surety shall promptly and at the Surety's expense take one of the following actions:

    5.1. Arrange for the Seller, with the consent of the Buyer, to perform and complete the Procurement Contract;

    5.2. Undertake to perform and complete the Procurement Contract itself, through its agents or independent contractors;

    5.3. Obtain bids or negotiated proposals from qualified sellers acceptable to the Buyer for a contract for performance and completion of the Procurement Contract, arrange for a contract to be prepared for execution by the Buyer and a seller selected with the Buyer's concurrence, to be secured with performance and payment bonds executed by a qualified surety equivalent to the bonds issued on the Procurement Contract, and pay to the Buyer the amount of damages as described in Paragraph 7 in excess of the Balance of the Procurement Contract Price incurred by the Buyer as a result of the Seller Default; or

    5.4. Waive its right to perform and complete, arrange for completion, or obtain a new seller, and with reasonable promptness under the circumstances:

        5.4.1. After investigation, determine the amount for which Surety may be liable to the Buyer and, as soon as practicable after the amount is determined, make payment to the Buyer; or

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

5.4.2. Deny liability in whole or in part and notify the Buyer, citing the reasons for denial.

6. If the Surety does not proceed as provided in Paragraph 5 with reasonable promptness, the Surety shall be deemed to be in default on this Bond seven (7) days after receipt of an additional written notice from the Buyer to the Surety demanding that the Surety perform its obligations under this Bond, and the Buyer shall be entitled to enforce any remedy available to the Buyer. If the Surety proceeds as provided in Paragraph 5.4, and the Buyer refuses the payment, or the Surety has denied liability, in whole or in part, without further notice, the Buyer shall be entitled to enforce any remedy available to the Buyer.

7. If the Surety elects to act under Paragraph 5.1, 5.2, or 5.3, then the responsibilities of the Surety to the Buyer will not be greater than those of the Seller under the Procurement Contract, and the responsibilities of the Buyer to the Surety will not be greater than those of the Buyer under the Procurement Contract. Subject to the commitment by the Buyer to pay the Balance of the Procurement Contract Price, the Surety is obligated, without duplication for:

   7.1. the responsibilities of the Seller for correction of defective or non-conforming Goods and Special Services, and completion of the Procurement Contract;

   7.2. additional legal, design professional, and delay costs resulting from the Seller's Default, and resulting from the actions or failure to act of the Surety under Paragraph 5; and

   7.3. liquidated damages, or if no liquidated damages are specified in the Procurement Contract, actual damages caused by delayed performance or non-performance of the Seller.

8. If the Surety elects to act under Paragraph 5.1, 5.3, or 5.4, the Surety's liability is limited to the amount of this Bond.

9. The Surety shall not be liable to the Buyer or others for obligations of the Seller that are unrelated to the Procurement Contract, and the Balance of the Procurement Contract Price will not be reduced or set off on account of any such unrelated obligations. No right of action will accrue on this Bond to any person or entity other than the Buyer or its heirs, executors, administrators, successors, and assigns.

10. The Surety hereby waives notice of any change, including changes of time, to the Procurement Contract or to related subcontracts, purchase orders, and other obligations.

11. Any proceeding, legal or equitable, under this Bond must be instituted in any court of competent jurisdiction where the Point of Destination is located and must be instituted within two years after a declaration of Seller Default, or within two years after the Seller ceased working, or within two years after the Surety refuses or fails to perform its obligations under this Bond, whichever occurs first. If the provisions of this Paragraph are void or prohibited by law, the minimum periods of limitations available to sureties as a defense in the jurisdiction of the suit will be applicable.

12. Notice to the Surety, the Buyer, or the Seller must be mailed or delivered to the address shown on the page on which their signature appears.

13. When this Bond has been furnished to comply with a statutory or other legal requirement in the location of the Point of Destination, any provision in this Bond conflicting with said statutory or legal requirement will be deemed deleted herefrom and provisions conforming to such statutory or other legal requirement will be deemed incorporated herein. When so furnished, the intent is that this Bond will be construed as a statutory bond and not as a common law bond.

14. Definitions

   14.1. *Balance of the Procurement Contract Price*—The total amount payable by the Buyer to the Seller under the Procurement Contract after all proper adjustments have been made including

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

allowance for the Seller for any amounts received or to be received by the Buyer in settlement of insurance or other claims for damages to which the Seller is entitled, reduced by all valid and proper payments made to or on behalf of the Seller under the Procurement Contract.

14.2. *Buyer Default*—Failure of the Buyer, which has not been remedied or waived, to pay the Seller as required under the Procurement Contract or to perform and complete or comply with the other material terms of the Procurement Contract.

14.3. *Goods and Special Services*—The full scope of materials, equipment, other items, and services to be furnished by Seller, as defined in the Procurement Contract.

14.4. *Point of Destination*—The location where delivery of the Goods shall be made, as stated in the Procurement Contract.

14.5. *Procurement Contract*—The contractual agreement between the Buyer and Seller identified on the cover page, including all Procurement Contract Documents and changes made to the Procurement Contract.

14.6. *Seller Default*—Failure of the Seller, which has not been remedied or waived, to perform or otherwise to comply with a material term of the Procurement Contract.

14.7. *Procurement Contract Documents*—All the documents that comprise the contractual agreement between the Buyer and Seller.

Notes: (1) Provide supplemental execution by any additional parties, such as joint venturers. (2) Any singular reference to Seller, Surety, Buyer, or other party is considered plural where applicable.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

1. The Seller and Surety, jointly and severally, bind themselves, their heirs, executors, administrators, successors, and assigns to the Buyer to pay for labor, materials, and equipment furnished for use in the performance of the Procurement Contract, which is incorporated herein by reference, subject to the following terms.
2. If the Seller promptly makes payment of all sums due to Claimants, and defends, indemnifies, and holds harmless the Buyer from claims, demands, liens, or suits by any person or entity seeking payment for labor, materials, or equipment furnished for use in the performance of the Procurement Contract, then the Surety and the Seller shall have no obligation under this Bond.
3. If there is no Buyer Default under the Procurement Contract, the Surety's obligation to the Buyer under this Bond will arise after the Buyer has promptly notified the Seller and the Surety (at the address described in Paragraph 13) of claims, demands, liens, or suits against the Buyer or the Buyer's property by any person or entity seeking payment for labor, materials, or equipment furnished for use in the performance of the Procurement Contract, and tendered defense of such claims, demands, liens, or suits to the Seller and the Surety.
4. When the Buyer has satisfied the conditions in Paragraph 3, the Surety shall promptly and at the Surety's expense defend, indemnify, and hold harmless the Buyer against a duly tendered claim, demand, lien, or suit.
5. The Surety's obligations to a Claimant under this Bond will arise after the following:
    5.1. Claimants who do not have a direct contract with the Seller
        5.1.1. have furnished a written notice of non-payment to the Seller, stating with substantial accuracy the amount claimed and the name of the party to whom the materials were, or equipment was, furnished or supplied or for whom the labor was done or performed, within ninety (90) days after having last performed labor or last furnished materials or equipment included in the Claim; and
        5.1.2. have sent a Claim to the Surety (at the address described in Paragraph 13).
    5.2. Claimants who are employed by or have a direct contract with the Seller have sent a Claim to the Surety (at the address described in Paragraph 13).
6. If a notice of non-payment required by Paragraph 5.1.1 is given by the Buyer to the Seller, that is sufficient to satisfy a Claimant's obligation to furnish a written notice of non-payment under Paragraph 5.1.1.
7. When a Claimant has satisfied the conditions of Paragraph 5.1 or 5.2, whichever is applicable, the Surety shall promptly and at the Surety's expense take the following actions:
    7.1. Send an answer to the Claimant, with a copy to the Buyer, within sixty (60) days after receipt of the Claim, stating the amounts that are undisputed and the basis for challenging any amounts that are disputed; and
    7.2. Pay or arrange for payment of any undisputed amounts.
    7.3. The Surety's failure to discharge its obligations under Paragraph 7.1 or 7.2 will not be deemed to constitute a waiver of defenses the Surety or Seller may have or acquire as to a Claim, except as to undisputed amounts for which the Surety and Claimant have reached agreement. If, however, the Surety fails to discharge its obligations under Paragraph 7.1 or 7.2, the Surety shall indemnify the Claimant for the reasonable attorney's fees the Claimant incurs thereafter to recover any sums found to be due and owing to the Claimant.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

8. The Surety's total obligation will not exceed the amount of this Bond, plus the amount of reasonable attorney's fees provided under Paragraph 7.3, and the amount of this Bond will be credited for any payments made in good faith by the Surety.

9. Amounts owed by the Buyer to the Seller under the Procurement Contract will be used for the performance of the Procurement Contract and to satisfy claims, if any, under any procurement performance bond. By the Seller furnishing and the Buyer accepting this Bond, they agree that all funds earned by the Seller in the performance of the Procurement Contract are dedicated to satisfying obligations of the Seller and Surety under this Bond, subject to the Buyer's priority to use the funds for the completion of the Goods and Special Services.

10. The Surety shall not be liable to the Buyer, Claimants, or others for obligations of the Seller that are unrelated to the Procurement Contract. The Buyer shall not be liable for the payment of any costs or expenses of any Claimant under this Bond, and shall have under this Bond no obligation to make payments to or give notice on behalf of Claimants, or otherwise have any obligations to Claimants under this Bond.

11. The Surety hereby waives notice of any change, including changes of time, to the Procurement Contract or to related subcontracts, purchase orders, and other obligations.

12. No suit or action will be commenced by a Claimant under this Bond other than in a court of competent jurisdiction in the state in which the Point of Destination is located or after the expiration of one year from the date (1) on which the Claimant sent a Claim to the Surety pursuant to Paragraph 5.1.2 or 5.2, or (2) on which the last labor or service was performed by anyone or the last materials or equipment were furnished by anyone under the Procurement Contract, whichever of (1) or (2) first occurs. If the provisions of this paragraph are void or prohibited by law, the minimum period of limitation available to sureties as a defense in the jurisdiction of the suit will be applicable.

13. Notice and Claims to the Surety, the Buyer, or the Seller must be mailed or delivered to the address shown on the page on which their signature appears. Actual receipt of notice or Claims, however accomplished, will be sufficient compliance as of the date received.

14. When this Bond has been furnished to comply with a statutory or other legal requirement where the Point of Destination is located, any provision in this Bond conflicting with said statutory or legal requirement will be deemed deleted herefrom and provisions conforming to such statutory or other legal requirement will be deemed incorporated herein. When so furnished, the intent is that this Bond will be construed as a statutory bond and not as a common law bond.

15. Upon requests by any person or entity appearing to be a potential beneficiary of this Bond, the Seller and Buyer shall promptly furnish a copy of this Bond or shall permit a copy to be made.

16. Definitions

    16.1. *Buyer Default*—Failure of the Buyer, which has not been remedied or waived, to pay the Seller as required under the Procurement Contract or to perform and complete or comply with the other material terms of the Procurement Contract.

    16.2. *Claim*—A written statement by the Claimant including at a minimum:

        16.2.1. The name of the Claimant;

        16.2.2. The name of the person for whom the labor was done, or materials or equipment furnished;

        16.2.3. A copy of the agreement or purchase order pursuant to which labor, materials, or equipment was furnished for use in the performance of the Procurement Contract;

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

16.2.4. A brief description of the labor, materials, or equipment furnished;

16.2.5. The date on which the Claimant last performed labor or last furnished materials or equipment for use in the performance of the Procurement Contract;

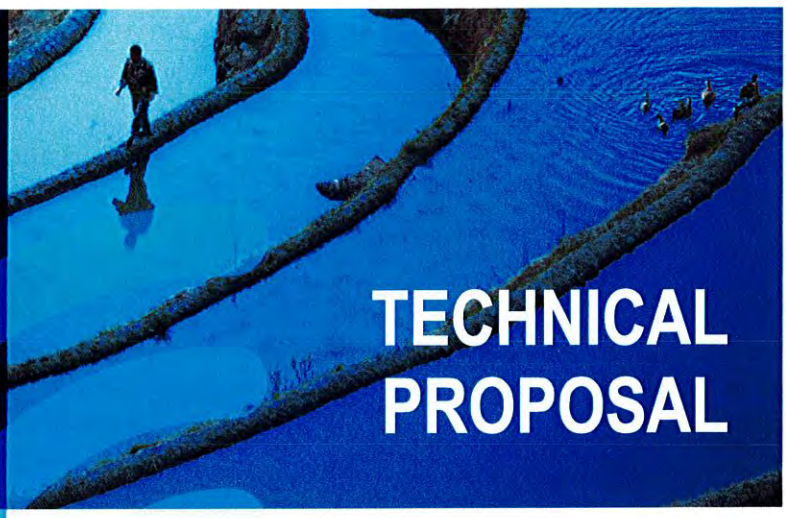
16.2.6. The total amount earned by the Claimant for labor, materials, or equipment furnished as of the date of the Claim;

16.2.7. The total amount of previous payments received by the Claimant; and

16.2.8. The total amount due and unpaid to the Claimant for labor, materials, or equipment furnished as of the date of the Claim.

16.3. *Claimant*—An individual or entity having a direct contract with the Seller or with a subcontractor of the Seller to furnish labor, materials, or equipment for use in the performance of the Procurement Contract. The term Claimant also includes any individual or entity that has rightfully asserted a claim under an applicable mechanic's lien or similar statute against the real property upon which the Point of Destination is located or where the Goods and Special Services are to be installed or furnished. The intent of this Bond is to include without limitation in the terms of "labor, materials, or equipment" that part of the water, gas, power, light, heat, oil, gasoline, telephone service, or rental equipment used in the Procurement Contract, architectural and engineering services required for performance of the work of the Seller and the Seller's subcontractors, and all other items for which a mechanic's lien may be asserted in the jurisdiction where the labor, materials, or equipment were furnished.

16.4. *Goods and Special Services*—The full scope of materials, equipment, other items, and services to be furnished by Seller, as defined in the Procurement Contract.



16.5. *Point of Destination*—The location where delivery of the Goods shall be made, as stated in the Procurement Contract.

16.6. *Procurement Contract*—The contractual agreement between the Buyer and Seller identified on the cover page, including all Procurement Contract Documents and all changes made to the Procurement Contract.

16.7. *Procurement Contract Documents*—All the documents that comprise the contractual agreement between the Buyer and Seller.

17. Modifications to this Bond are as follows: **None.**

Executive Summary

1 Introduction

SUEZ is pleased to submit our ZeeWeed MBR System proposal for the Caesars Lane Wastewater Treatment Facility for consideration by the Town of New Windsor. Our proposal is fully compliant with the Pre-Selection Document and the issued Addenda prepared by MHE Engineering. Key aspects of the proposal and the SUEZ offer are highlighted below:

2 Why Select SUEZ?

As the pioneer and world leader in MBR technology, SUEZ is committed to this important project and will deliver a world class MBR. SUEZ's commitment extends beyond the supply of our proven, reliable MBR equipment. It includes unmatched knowledge, support, and the ability to maintain a long-term relationship that will continue to meet the Town's needs after commissioning of the facility.

By selecting SUEZ, you will be purchasing a membrane treatment system of the highest quality, lowest evaluated life-cycle costs and longest proven membrane life while working with an experienced, trusted partner.

Experienced MBR Company with Strong Financials

SUEZ's offer combines ZENON patented technologies and 30 years of MBR experience with SUEZ's corporate leadership, financial depth and focus on water and wastewater treatment. MBR membranes and equipment are a core technology offering of SUEZ. We not only design the systems, but also manufacture the ZeeWeed membrane. SUEZ has the largest hollow fiber membrane manufacturing capacity in the world.

Project Approach to Meet the Town's Objectives

SUEZ approaches the design of an MBR facility as a collaborative effort and believes that partnering with the Town and MHE is essential to ensure that the expectations of the team are exceeded.

The SUEZ project execution team available for this project has experience with similar sized MBR plants, extensive MBR process knowledge, and includes a senior project manager to coordinate and deliver the system. Detailed project support from the design phase through to the commissioning phase will ensure deliverables and budget are constantly achieved.

Proven Product

Long-term membrane performance is provided by the ZeeWeed 500 membrane: the industry's most durable and longest-lasting membrane. The reinforced ZeeWeed 500 membrane is designed for maximum durability and has demonstrated over 20 years of life in a municipal installation.

Membrane life is critical to the success of an MBR facility as noted in the following graphic:

Many performance challenges with the flat-plate technology over the last 10-years at the Leoni WWTP and other WWTPs in Michigan and Ohio. Membrane life expectancy of 3-7 years.

FLEIS&VANDENBRINK

Excerpt: Table 2. Leoni WWTP Membrane Comparison Table, Kubota SP600, Report to Leoni Township prepared by Robert W. Wilcox, P.E., Fleis & Vandenbrink, March 19, 2020. Tel: 616.977.1000

In addition to the financial impact of membrane replacement, unplanned, premature membrane replacement can result in treatment disruption and potentially untreated discharge or overflow,

Conversely, SUEZ has provided five membrane facility references (> 1 MGD, ADF) with **membrane life of 14-15 years prior to the first membrane train replacement**. The Town of New Windsor can reasonably expect an average membrane life greater than 15 years for the proposed membrane system.

Significant MBR Experience in the USA

SUEZ's 370 municipal MBR installations and years of operating experience in the United States should provide security and peace of mind to the Town. Our large MBR plant experience in the USA includes 23 operating MBR facilities greater than 5 MGD and 14 greater than or equal to 10.0 MGD. To demonstrate our experience, SUEZ has selected 5 specification compliant reference sites to demonstrate the design criteria for the project including design flux, MLSS, chemical cleaning regime and membrane life.

Superior Services, Maintenance Program & Local Support

Long term customer service and satisfaction is paramount to SUEZ. As such, we have provided a specification compliant package of services including Insight Pro monitoring and process consulting service for 2 years, 24/7 technical phone support for 10 years, and the opportunity to participate annually in SUEZ's ZeeWeed MBR Users Group.

The Town will also be supported by Sherwood-Logan & Associates, SUEZ's local representative. Sherwood-Logan can assist with client communication, warranty repair work, as well as requests for components and parts.

SUEZ also provides a regional lifecycle manager to provide product support for the lifecycle of the plant. They will act as an accessible point of contact in providing technical support, information on product upgrades, spare parts, scheduled service visits and support plant audits.

3 Conservative Design

Responsible Flux Selection

A conservative design approach is an ingrained philosophy at SUEZ. **As such, we have used fully compliant MDF, MDF (N-1) and PHF fluxes for the SUEZ LEAPmbr.** These conservative, demonstrated fluxes are based on years of design experience treating municipal wastewater throughout North America and will ensure that the facility operates reliably. The selected fluxes allow for operation of the system at ADF with one train out of operation at 10°C on a continuous basis.

Addendum No. 1 allows the seller to propose more aggressive fluxes based on demonstrated experience. However, SUEZ believes the specified maximum fluxes for peak day and peak hour flow are appropriate and consistent with best engineering practice for large MBR facilities and should be retained.

Selection of conservative fluxes is particularly important in facilities treating cold water with limited equalization or high influent flow peaking factors such as Caesars Lane. Peak flows can frequently destabilize upstream clarification and biological treatment and negatively affect membrane filtration.

For this important selection, SUEZ recommends the Town of New Windsor limit peak hour fluxes to 22.2 gfd as specified in the Pre-selection Document.

Practical, Energy Efficient Mixed Liquor Concentrations (MLSS)

SUEZ has proposed a maximum bioreactor MLSS of 8.5 g/L. As aeration α value decreases exponentially and process aeration costs increase with increased MLSS concentrations, SUEZ has proposed an ideal balance between bioreactor capital construction costs and process aeration costs.

SUEZ has also proposed a MLSS concentration that is consistent with guidance provided in WEF Manual of Practice 36 and SUEZ design guidelines at the proposed fluxes. While SUEZ can design for higher MLSS concentrations, i.e., for membrane thickening applications to 4 g/L, SUEZ recognizes that **the combination of high fluxes and high solids concentrations can result in solids dewatering**, unnecessary cleaning, and premature membrane failure.

There are numerous, reported examples of aggressive flux and MLSS selections resulting in solids dewatering within plate packs and membrane modules. In some cases, these have resulted in either membrane replacement or a membrane supplier change. Two SUEZ reference facilities in Michigan are Kubota flat plate membrane system replacements.

SUEZ recommends that any proposed membrane system limit the allowable MLSS concentration to <8.5 g/L in the bioreactor.

4 Siphon

SUEZ has proposed a siphon design as the base design for our proposal. If the Town would prefer not to use siphon, we have also provided information and partial bid forms for a pumped alternative, and information related to a partial siphon alternative. These options are discussed in Section 10 – Value Engineering.

SUEZ believes use of a siphon configuration will offer important capital and operational cost savings for the project and have provided two detailed relevant references operating in siphon mode: Brush Creek WRF (7.2 MGD) and Linwood WRF (4.6 MGD).

5 Absolute Guarantees and Warranties by SUEZ

In addition to the specified mechanical and process warranties, SUEZ is offering a **15-year pro-rated membrane warranty (initial 5 year full membrane warranty)** for this project. Our proven membrane and extended membrane warranty will provide the Town with the longest possible and most cost effective membrane life.

6 Beating Murphy's Law

Murphy's Law is typically stated as "Anything that can go wrong will go wrong". Beating Murphy's Law requires planning and implementing "hard won" experience in product development. When designing, delivering, and operating MBR facilities, SUEZ has learned the importance of having flexible and comprehensive operational tools in any MBR system. These tools allow you to plan for, respond to, and avoid undesirable operational outcomes. The proposed ZeeWeed system includes standard process tools that **enhance** membrane operation: backwashes, tank drains, maintenance cleans and chemical recovery cleaning.

7 Summary

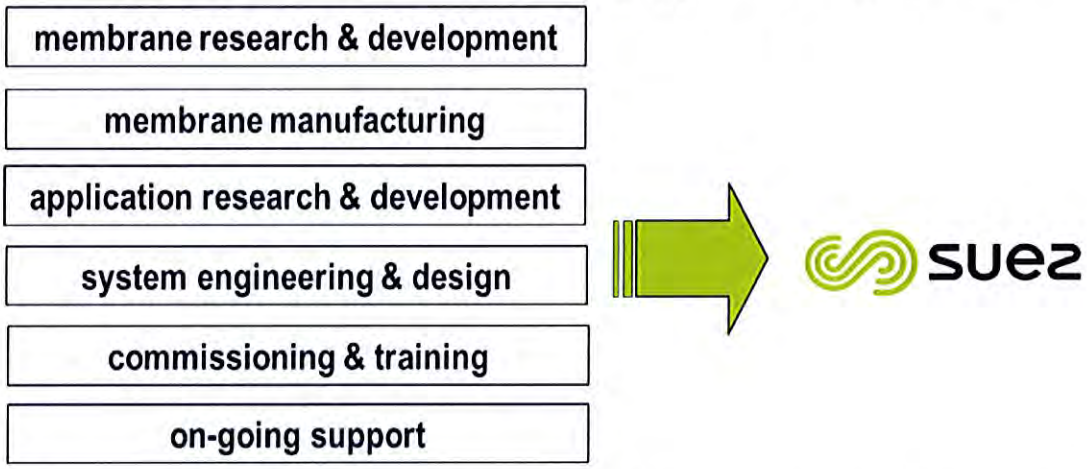
The Caesars Lane WWTP is an important project that will benefit from a technology partner with the commitment, resources, and project team to design an MBR of this size and complexity.

The combination of SUEZ's demonstrated MBR operating experience, mature product design, extensive service and support capability, and proven membrane makes SUEZ the best partner with the lowest risk for the Town.

SUEZ is 100% committed to the successful delivery and implementation of the Caesars Lane WWTP MBR. We look forward to your favorable consideration of our proposal

Regards,

Graham Best,
Regional Sales Manager
SUEZ Water Technologies & Solutions



1 Manufacturer and Supplier Information

1.a SUEZ – A Leading Membrane Manufacturer and Equipment Supplier

SUEZ Offers A Simple, Single Point of Accountability.

SUEZ is 100% committed to the development of hollow fiber membrane-based technologies and their integration with wastewater and water treatment processes. The membrane polymers, modules, cassettes, and systems are entirely designed, tested, manufactured, delivered, and supported by SUEZ.

The benefit to the Town of New Windsor is that you will have a single, knowledgeable point of contact at all times for your system. Any questions can be answered quickly, and any process adjustment can be made promptly by your SUEZ support team.

SUEZ is a proven leader in delivering tangible value to our clients over the life of the plant. Our measure of success is how well we deliver solutions that help our clients meet their critical objectives in each and every year of operation.

SUEZ has distinguished itself from other UF-MBR membrane manufacturers with its exceptional membrane products, deep technical expertise, mature service culture, and the quality and range of commissioning and post-commissioning service support offered to its clients. From interactive facility design meetings, detailed engineering, start-up, commissioning, performance testing and after-market services, the Town of New Windsor and MHE will have access to comprehensive support from SUEZ's skilled and experienced team and service packages.

We are at the ready to ensure that the successful delivery, implementation, and long term support of the **Caesar's Lane MBR.**

1.b Company History

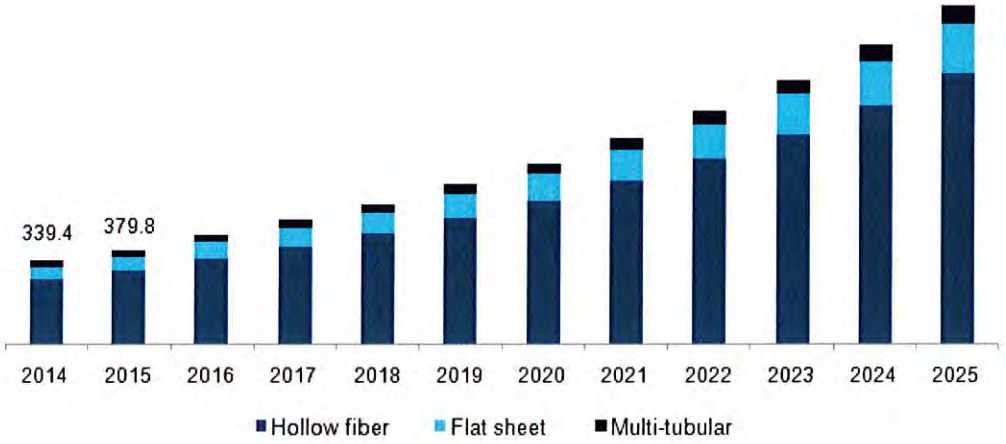
From modest beginnings in 1980, ZENON Environmental Inc. became the global leader of low pressure membrane filtration technology. Spurred by the vision that membranes are the world's answer to water shortages, overuse, and pollution, the company has always focused on a single goal—to make superior membrane systems a cost-effective solution for everyone who needs them.

ZENON

Water for the World

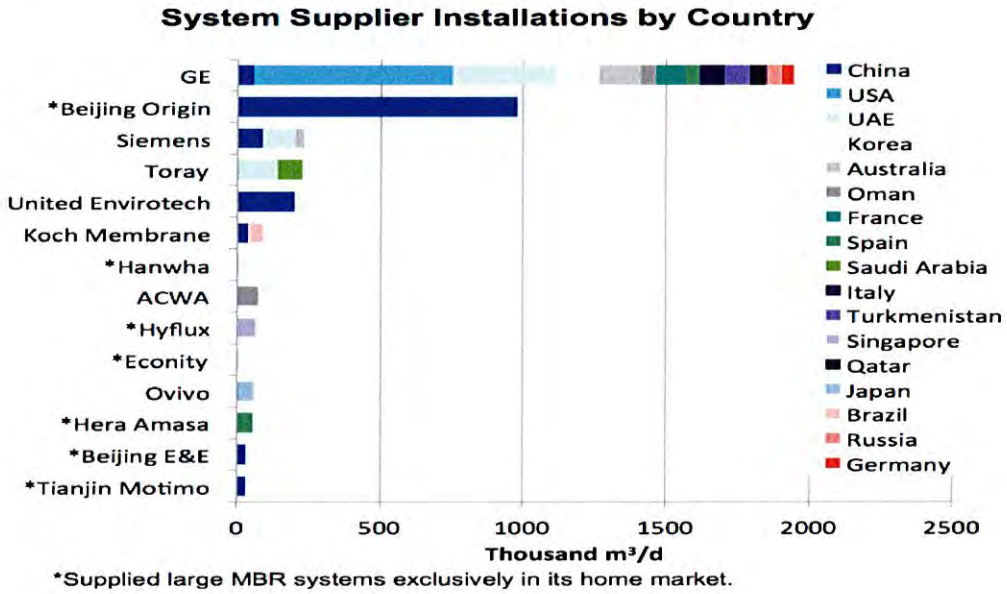
The ZeeWeed ultrafiltration membrane, developed in 1990, was a paradigm shift in membrane technology. At that time, membrane systems were primarily using pressurized cartridges with many components and high energy requirements. ZENON transformed the industry with the introduction of membranes that are immersed directly into process tanks and need only a slight vacuum to filter water.

GE Water & Process Technologies acquired ZENON Environmental Inc. on June 1, 2006, uniting patented ZENON technologies with GE's corporate leadership and financial depth to provide unparalleled performance and the best overall water treatment solutions. GE Water & Process Technologies became a worldwide leading systems and services provider for municipal and industrial customers, supplying state-of-the-art water, wastewater and process system solutions. GE Water & Process Technologies generated ~$2.1 billion USD in revenues in 2016 with 7,500 highly skilled salesmen and engineers with strong digital capabilities.



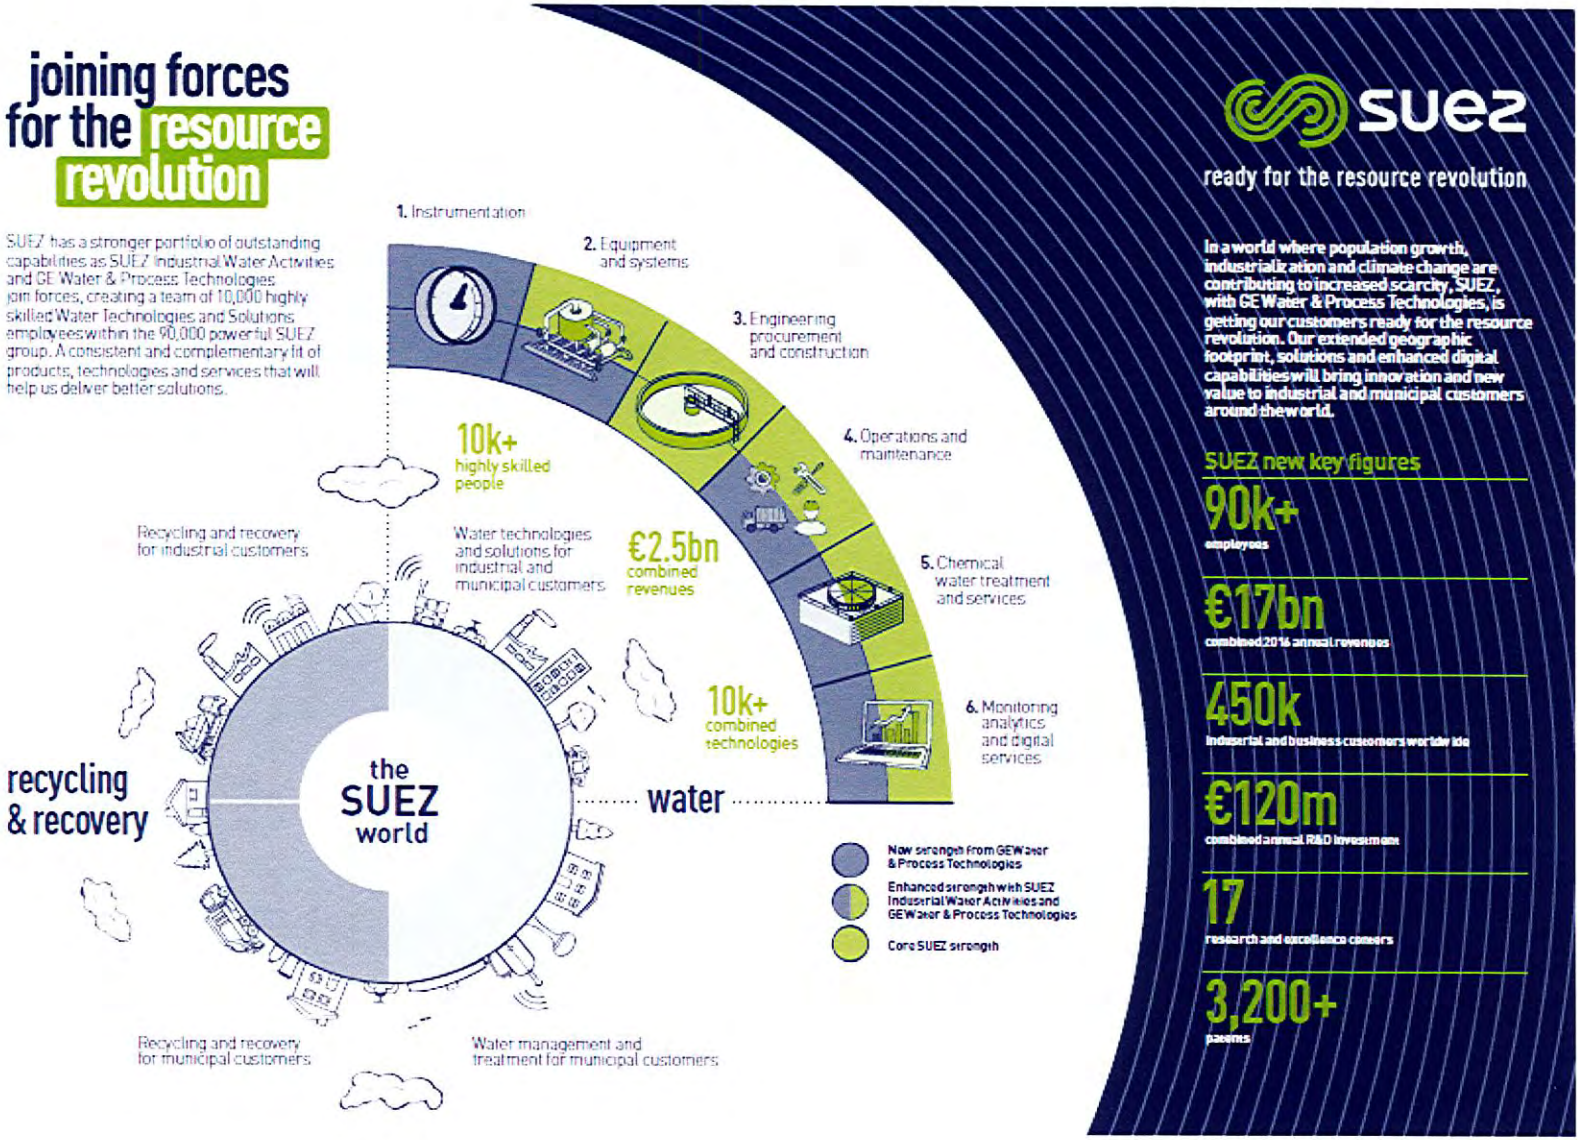
On October 1, 2017, SUEZ purchased GE Water & Process Technologies. GE Water & Process Technologies now joins forces with SUEZ's Industrial Water activities to create the **Water Technologies & Solutions** business unit within the SUEZ Group. With a solid financial position and a wide breadth of portfolios, this business unit aims to be a worldwide leader in water and treatment solutions for the industrial and municipal markets.

ready for the resource revolution



SUEZ Water Technologies & Solutions now operates with over 10,000 employees and addresses the needs of over 50,000 customers worldwide. Additionally, relying on SUEZ's over 650 R&D staff and 17 Research & Excellence Centers, the business unit is committed to expanding its water treatment offerings and digital capabilities to deliver best-in-class solutions.

SUEZ WTS is the leading MBR company in the world and has achieved nearly 50% global market share and around 70 - 80% North American market share. Examples of available third-party research are provided below.



U.S. membrane bioreactor market revenue by product, 2014 - 2025 (USD Million)

joining forces for the resource revolution
SUEZ has a stronger portfolio of outstanding capabilities as SUEZ Industrial Water Activities and GE Water & Process Technologies join forces, creating a team of 10,000 highly skilled Water Technologies and Solutions employees within the 90,000 powerful SUEZ group. A consistent and complementary fit of products, technologies and services that will help us deliver better solutions.

1.c UF/MBR operations

From its inception 42-years ago, the company had endeavored to listen to customers and anticipate the needs of the market in order to respond with practical solutions for drinking water, wastewater treatment, and water reuse. Today, SUEZ carries on with a complete family of UF/MBR membrane products which provide large-, medium- and small-scale solutions for municipalities, industries, land development and emergency applications.

ZeeWeed ultrafiltration membranes are utilized for drinking water, wastewater, tertiary, and water reuse applications, as well as industrial feedwater and reverse osmosis (RO) pretreatment. The advanced technology is operational in thousands of municipal, industrial, and commercial applications worldwide

SUEZ's global UF/MBR center of excellence in Oakville Ontario, Canada, is the focal point of SUEZ's ultrafiltration (UF) membrane research and development, as well as the design and delivery of UF-based water and wastewater treatment systems. The UF membrane division is 100% focused on developing, manufacturing, and supporting leading-edge, hollow fiber water and wastewater treatment solutions. **All design and engineering for the Caesars Lane MBR project will be directed out of the Oakville, Ontario UF/MBR center of excellence.**

SUEZ's global UF/MBR center of excellence located in Oakville, Ontario, Canada

1.d Membrane Manufacturing

With a world-class manufacturing facility located in Oroszlány, Hungary (the plant where the ZeeWeed 500 membrane modules proposed for the **Caesars Lane MBR** project would be produced), SUEZ leads the membrane industry with the world's largest capacity for membrane manufacturing. By leveraging the capabilities of this manufacturing hub, SUEZ can assure customers of on-time and on-budget product delivery no matter where treatment plants are located.

Built on a solid foundation of dedication and excellence, the SUEZ membrane manufacturing division is committed to delivering high quality membrane products to global customers. SUEZ owns and operates all of its manufacturing resources to ensure strict controls over the manufacturing process and rigid quality standards for every membrane module that leaves the plants.

membrane manufacturing plant located in Oroszlány, Hungary

SUEZ employs the industry's most advanced manufacturing techniques, which enables the production of top-quality membranes with maximum efficiency. The manufacturing process is almost completely automated, which minimizes quality issues and maximizes product consistency.

While the manufacturing facilities maintain an inventory of products, we constantly monitor bidding activity to confirm that sufficient manufacturing capacity is available to

meet customer demand and that adequate product supplies are available to avoid project delays.

Prior to shipping, all of our products undergo a rigorous inspection to verify that all system components meet the quality and performance standards that SUEZ customers have come to expect.

Over the next several years, membranes are expected to comprise more than 20 percent of the global market for water and wastewater treatment equipment. Our proactive manufacturing plan has accounted for this growth, and SUEZ is well positioned to increase manufacturing capacity over this period.

Our production increases, coupled with continued efficiencies in manufacturing, will enable our manufacturing teams to deliver high quality membrane products quickly and efficiently while constantly improving system performance and value. Through these streamlining efforts, SUEZ also strives to improve on a key success metric shared by both the company and its customers—reducing the cost of each gallon of water treated.

Globally, SUEZ currently has over 300,000 square feet of manufacturing and production area at its disposal. Over 660 employees are utilized in the manufacturing of the ZeeWeed membranes and assembling of process equipment.

2 Qualifications

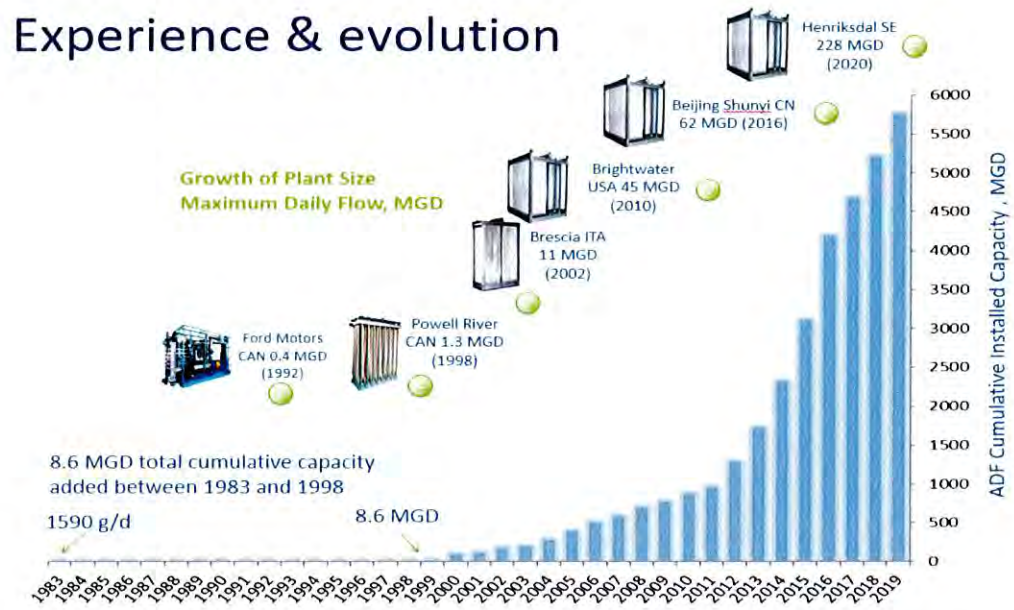
2.a Quality Assurance and Quality Control

SUEZ is committed to always meet and exceed customer expectations and continuously improving the quality of our products, services and processes. Please see **Appendix B** for SUEZ quality policies and ISO certifications.

2.b Bonding Capacity Letter

Surety bonds are a valuable tool to manage the risk of a large infrastructure project, and can be mandated on federally funded projects. SUEZ Water Technologies & Solutions is able to supply all forms of surety bonds. For a single project, SUEZ WTS System USA bonded obligation can reach $200 million.

Please see Appendix C – Bonding Capacity Letter for SUEZ WTS System USA.



2.c MBR Experience and Installation Lists

SUEZ is the world leader in membrane filtration technology for wastewater treatment and has been a pioneer in the development of membranes for all water and wastewater treatment applications. Developed in the early 1990's, the patented ZeeWeed membrane is well-proven, with hundreds of ZeeWeed MBR plants in operation around the world, in a variety of wastewater treatment applications.

SUEZ has more experience related to the design, delivery, commissioning, operation, and after-sales support of MBR systems than any other supplier in the world. From a small Canadian company started in 1980 by a university professor, to the delivery of the world's largest membrane wastewater treatment plants, SUEZ Water Technologies & Solutions has the knowledge, experience and capabilities to make the **Caesars Lane MBR** a successful one.

Treatment plants currently in operation using ZeeWeed membranes (including both wastewater and water treatment applications) range in size from less than 5,000 gallons per day to over 100 million gallons per day.

Total Number of ZeeWeed Membrane Treatment Plants Worldwide	> 2,300
Total Number of North American SUEZ MBR Installations	> 560
Total Number of ZeeWeed Municipal MBR Systems in USA	370
Years in Operation for Submerged SUEZ MBR System	29 years
Number of SUEZ MBR Facilities 5.0 mgd or greater in North America	24 operating
Date of First MBR Installation in North America	1993 (ZeeWeed MBR)
Largest Design Capacity in Operation in North America, AADF (mgd)	31 MGD

The **Caesars Lane MBR** will benefit from the experience gained and lessons learned through the completion of these previous MBR projects. SUEZ's regional knowledge combined with our experience in delivering membrane treatment projects of all sizes means that choosing SUEZ as a partner will substantially reduce risk and minimize additional project costs.

Highlights of SUEZ's extensive MBR experience include:

- ❑ First MBR installations, using Permaflow tubular membranes, in the early 1980s
- ❑ Earliest ZeeWeed immersed MBR systems in operation for more than 25 years
- ❑ Largest operating municipal MBR worldwide
- ❑ Largest operating industrial MBR worldwide
- ❑ Total MBR online treatment capacity that is more than double that of the next largest membrane supplier
- ❑ ZeeWeed wastewater treatment installations in 58 countries.
- ❑ 11 of the 12 largest MBR plants operating in the United States

2.c.1 Membrane Life

The following table shows a list of our installations with membrane life greater than 10 years and up to 22 years (based on first train or cassette replacement). The average SUEZ ZeeWeed membrane module life is 15.3 years. Based on the information provided we conservatively estimate an average membrane life greater than 15 years for the **Caesars Lane MBR**.

2.c.2 SUEZ MBR Installation in USA and Canada

SUEZ Installations ≥ 0.05 MGD and less than 1 MGD

SUEZ has over 120 plants ranging between 0.05 and 1 MGD in the USA and Canada. The names of the plants, locations and commissioned dates can be provided as requested. A list has not been included to better highlight plants of higher capacity and those more closely relevant in scope and size to the **Caesars Lane MBR.**

SUEZ Installations between 1 and 5 MGD

SUEZ has over 50 plants with capacities ranging between 1 and 5 MGD in the USA and Canada. A partial list with the names of the plants, their locations and commissioned dates is provided below. Of these, a significant number have been in operation since before 2010.

Facility Name	City	State/ Province	Plant Capacity ADF (MGD)	Start-Up Date

2.c.3 SUEZ MBR Global Installations (Excluding USA and Canada)

SUEZ Installations ≥ 1 MGD and less than 5 MGD

SUEZ has an extensive global installation list of facilities between 1 and 5 MGD treating municipal wastewater. A partial list with the names of the plants, locations, and

commissioned dates can be provided as requested, but is confidential and has not been included in this proposal.

SUEZ Installations greater than 5 MGD (partial list)

SUEZ has designed and delivered numerous MBR facilities throughout the world with capacities greater than 5 MGD that treat municipal wastewater. They demonstrate SUEZ's global presence, capabilities, and depth of experience delivering large MBRs. A partial list with the names of the plants, location, and capacity is provided below for reference.

Water Technologies & Solutions
fact sheet

2.c.4 - Large MBR Experience

We are proud to say that most of the world's largest MBRs use SUEZ ZeeWeed technology and SUEZ can bring this kind of experience to benefit our clients.

Experience, Expand, Evolve with ZeeWeed

Addressing the everchanging needs of Municipal customers looking to:

- Lower the CAPEX associated with expanding capacity
- Increase treatment capacity in a smaller footprint
- Reduce annual energy and maintenance costs
- Enjoy longer membrane life with simplified maintenance

Performance

- High flux dedicated MBR membrane chemistry since 2007 with permeability > 900 lmh/bar
- True UF membrane for over 25 years with proven 0.035 µm nominal pore size
- Patented LEAPmbr aeration providing exceptional energy consumption savings
- Superior fiber strength, 60x greater than non-reinforced PVDF membranes

Reliability

Exceptional membrane reliability and product life with many municipal customers achieving 12 to 16 years operation; longest proven life 21 years!

SUEZ stands by its product offering Peace of mind with warranties up to 15 years in duration.

Proven Experience

Nearly 2500 MBRs globally running with ZeeWeed 500 membranes. More than 1.3 million operating modules treating over 27000 MLD (7200 MGD) daily.

Flexibility & Simplicity

Configurable product to provide plant layout versatility for easy future expansion even for those with footprint constraints.

Demonstrated simple retrofit solutions for conventional upgrades and more than 15 other MBR membrane suppliers.

2.d Reference Installations

The Preselection Documents request the supplier to provide references as specified in EJCDC P-400 Bid Form Procurement Document, as well as in Section 455000, Item 1.5.A.3-A.4.

EJCDC P-400 Bid Form Compliant References

SUEZ has provided detailed **Bid Form references** for the following facilities:

- Broad Run Water Reclamation Facility
- Linwood Water Reclamation Facility (siphon)
- Brush Creek Water Reclamation Facility (siphon)
- Loch Sheldrake WWTP

Refer to **Section 6 – Bidding Documents**

A summary list of SUEZ North American MBR installations for the treatment of municipal wastewater is provided in Section 2.c.2. The references are tabulated for installations of less than 1 MGD, installations ranging in capacity from 1 to 5 MGD, and installations of 5 MGD or greater.

A summary list of SUEZ International MBR installations for the treatment of municipal wastewater is provided in Section 2.c.3. The references are tabulated for installations ranging from 1 to 5 MGD and installations of 5 MGD and greater.

New York State and Ten States Standard Installations

The following states are signatory and have a member represented on the board of the Great Lakes-Upper Mississippi River Board of State and Provincial Public Health and Environmental Managers. Each state and province generally adhere to the Ten State Standards - Recommended Standards for Wastewater Facilities:

Illinois - Indiana - Iowa - Michigan - Minnesota - Missouri - New York - Ohio - Ontario - Pennsylvania - Wisconsin

As specified, SUEZ has provided a list of SUEZ MBR installations in each of the Ten States and Ontario that have an ADF ≥ 1 MGD in the following table. **Two of the references are retrofits of flat plate membrane systems including the Dundee, MI WWTP retrofit where SUEZ replaced Kubota membranes with ZW500 membranes in 2017.**

Facility Name	City	State/ Province	Plant Capacity ADF (MGD)	Start-Up Date

Section 455000 Compliant References

SUEZ has 24 reference installations in North America with an ADF ≥5 MGD. Of these, eight have been in operation since before 2010. A list of the North American facilities including their location, ADF and commissioned date is provided in Section 2.C.2. Examples include the following:

Johns Creek, GA
ADF 10.9 MGD & MDF 24.6 MGD
Commissioned September 2009

Broad Run, VA
ADF 10 MGD & MDF 18.8 MGD
Commissioned March 2008

Yellow River, GA
ADF 18.3 MGD & MDF 22 MGD
Commissioned May 2011

Visalia, CA
ADF 22 MGD & MDF 44 MGD
Commissioned July 2016

Riverside, CA
ADF 26 MGD & MDF 48 MGD
Commissioned March 2016

Cox Creek, MD
ADF 15 MGD & MDF 30 MGD
Commissioned June 2017

Of the SUEZ facilities with an ADF ≥5 MGD, the following were selected as specification compliant references of municipal wastewater MBRs delivered by SUEZ.

1. Broad Run Water Reclamation Facility
2. Brush Creek Wastewater Treatment Plant
3. Beaver Creek Water Reclamation Facility
4. Cox Creek WRF
5. Ballenger-McKinney Water Reclamation facility

In addition to the plants referenced above, these facilities highlight SUEZ's wide-ranging experience with the design and delivery of membrane bioreactor projects. Each incorporates SUEZ's ZW500 membrane and process equipment designed and supplied by SUEZ. Detailed information sheets for each facility follow:

Broad Run Water Reclamation Facility

plant name	**Broad Run Water Reclamation Facility**
owner (*location*):	Loudoun Water (*Ashburn, Virginia*)
installation type:	new facility
project method:	design, bid, build
commissioned:	March 2008, expansion in 2010, expansion in 2024

contract information	
owner/operator contact:	Mike Rumke – Superintendent of BRWRF Tel: (703) 717-1859 Email: *mrumke@loudounwater.com*
design engineer	Hazen & Sawyer
general contractor	PC Contruction

description of facility	
system type:	ZeeWeed MBR
feed source:	municipal wastewater (12 to 25°C)
process:	enhanced nutrient removal
effluent use:	surface water discharge, water reuse for non-potable purposes
unit operations:	influent pumping, course screens, grit removal, primary clarification, fine screens, biological treatment, membrane filtration, sludge thickening, anaerobic digestion, GAC, dewatering UV disinfection
process configuration:	modified 5-stage Bardenpho process (anaerobic, pre-anoxic, aerobic, post-anoxic, aerobic zones, 2 recycles + RAS recycle)
membrane configuration:	12 membrane trains (L:40ft x W:9ft x D:12.3ft SWD:9.5-10.3ft) 4 cassettes per train in two rows (space for 5 cassettes) 192 modules per train in 48-module cassettes, 2,304 modules total
membrane type:	ZeeWeed 500D 340 ft^2 & 370 ft^2 modules manufactured by SUEZ
aeration type:	cyclic aeration, 225 dcfm per cassette
cassette access:	aluminum covers on membrane tanks, lifting bracket for cassette removal, cassette laydown on membrane tank grating
membrane life:	14.3 years to date
membrane replacement history:	no modules replaced or repaired facility will be expanded by upgrading to LEAP aeration and ZeeWeed 500D 430 ft^2 in 2024
Warranty Information	2 + 8 pro-rated membrane warranty

design & operational information	parameter	influent	effluent

PFD	Broad Run Water Reclamation Facility

Brush Creek Water Reclamation Facility

plant name	**Brush Creek Water Pollution Control Facility**
owner (*location*):	Cranberry Township (*Cranberry, Pennsylvania*)
installation type:	retrofit of existing facility
project method:	design, bid, build
commissioned:	August 2018

contract information	
owner/operator contact:	Mike P. Sedon - Plant Operations Manager *Cranberry Township* Tel: 724-776-4806 Email: mike.sedon@cranberrytownship.org
design engineer:	GHD
general contractor:	Wayne Crouse Inc.

description of facility	
system type:	ZeeWeed LEAPmbr
feed source:	municipal primary effluent (11 to 20°C)
process:	enhanced biological nutrient removal, **gravity/siphon design**
effluent use:	surface water discharge to Brush Creek
unit operations:	influent pumping, bar screens, vortex grit removal, primary clarification, 2-mm fine screens, biological treatment, rotary drum thickener, belt filter press, sludge holding tanks, membrane filtration, chlorination, post aeration
process configuration:	Bardenpho process (pre-anoxic & aerobic zones, 1 recycle)
membrane configuration:	currently 6 membrane trains expanding to 8 trains in the future membrane tank dimensions: (L:70ft x W:9ft x D:13ft) 10 cassettes per train in a single row (48-module cassettes) 444 modules per train, 2664 modules total
membrane type:	ZeeWeed 500D 370 ft^2 modules manufactured by SUEZ
aeration type:	LEAPmbr aeration 80/160 dcfm per cassette in LEAP-Lo & LEAP-Hi respectively
cassette access:	aluminum grating on membrane tanks, lifting bracket for cassette removal, cassette laydown on membrane tank grating
membrane life:	4 years to date
warranty information	2+8 years

Water Technologies & Solutions

plant name	Brush Creek Water Pollution Control Facility
membrane replacement history:	no modules repaired or replaced to date
Current additional services provided:	Insight basic, 24/7 technical support services, two 3-day service visits during the first 2 years of operations

Beaver Creek Water Reclamation Facility

plant name	**Beaver Creek Water Reclamation Facility**
owner (*location*):	Hallsdale Power Utility District (*Powell, Tennessee*)
installation type:	expansion
project method:	design, bid, build
commissioned:	December 2009
contract information	
owner/operator contact:	Nick Jackson - Plant Manager *Hallsdale Power Utility District* Tel: 865-922-7547 Email: *Njackson@hpud.org*
design engineer:	*JJ&G*
general contractor:	*3D Enterprises Contracting Corp.*
description of facility	
system type:	ZeeWeed MBR
feed source:	municipal wastewater (9 to 24°C)
process:	biological nutrient removal
effluent use:	surface water discharge to Beaver Creek
unit operations:	influent pumping, course screens, grit removal, 1-mm drum screens, biological treatment, membrane filtration, aerobic digestion, chlorine disinfection
process configuration:	two-stage nitrification/denitrification (3 pre-anoxic zones, 1 aerobic zone, RAS recycle)
membrane configuration:	4 membrane trains (L:78ft x W:9ft x D:13ft SWD:9.9-10.3ft) 10 cassettes per train in a single row (space for 11 cassettes) 456 modules per train in 48-module cassettes, 1824 modules total
membrane type:	ZeeWeed 500D modules manufactured by SUEZ
cassette access:	aluminum covers on membrane tanks, lifting bracket for cassette removal, cassette laydown on membrane tank covers
membrane life:	12.5 years to date
membrane replacement history:	no modules replaced or repaired
warranty information	2+8 prorated membrane warranty

plant name	Beaver Creek Water Reclamation Facility
additional services provided:	InSight-Basic, service visits

Ballenger McKinney Water Reclamation Facility

plant name	**Ballenger McKinney WWTP**
owner (*location*):	Frederick County (*Frederick, Maryland*)
installation type:	upgrade of existing facility
project method:	design, bid, build
commissioned:	December 2013
contract information	
owner/operator contact:	Charles Phelps - Plant Operator *Frederick Country* Tel: 301-600-3412 Email: cphelps@FrederickCountyMD.gov
design engineer	Jacobs
general contractor	Allan A. Myers
description of facility	
system type:	ZeeWeed MBR
feed source:	municipal wastewater (9 to 25°C)
process:	enhanced nutrient removal
effluent use:	surface water discharge to Monocacy River
unit operations:	25-mm course screens, vortex grit removal, oil & grease removal, primary clarification, 2-mm fine screens, biological treatment, membrane filtration, UV-post treatment disinfection
process configuration:	Bardenpho process (pre-anoxic + aerobic, 1 recycle)
membrane configuration:	10 membrane trains (L:54ft x W:21ft x D:18ft) 14 cassettes per train in two rows (48 module cassettes) 4400 modules total
membrane type:	ZeeWeed 500D 340 ft² modules manufactured by SUEZ
aeration type:	cyclic aeration, 225 dcfm per cassette
cassette access:	covers on membrane tanks, lifting bracket for cassette removal, cassette laydown on membrane tank covers
membrane life:	9.5 years to date
membrane replacement history:	no modules repaired or replaced.
warranty information	2+8 prorated membrane warranty
additional services provided:	membrane services agreement

design & operational information	parameter	influent	effluent
influent & effluent design criteria:	BOD (mg/L)	200	<2.0

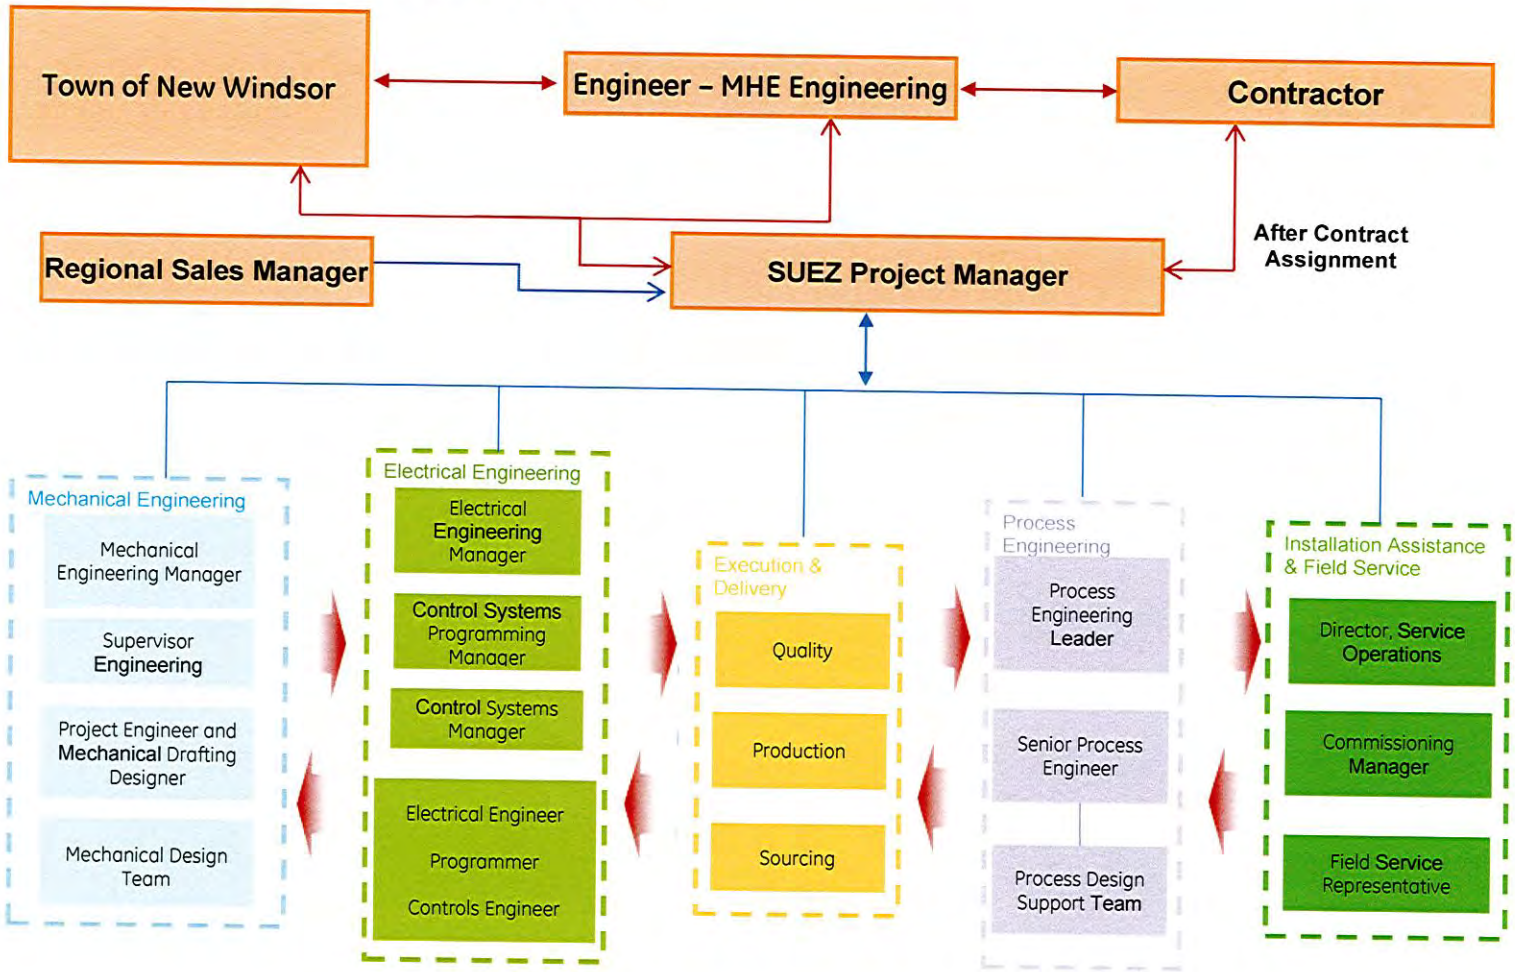
2.e Project Organization Chart

SUEZ believes that successful projects are built on quality teams and communication. Our proven approach is to provide a dedicated project team for the **Caesars Lane MBR** project that will provide the most extensive municipal membrane WWTP delivery experience in the industry. The project team in place for the project will remain consistent throughout the life of the project and collectively shares the goal to ensure overall project success through:



- ❑ Frequent communication to strengthen the relationship with the Owner, Design Engineer, Installation Contractor;
- ❑ Comprehensive technical and commercial understanding and knowledge of the project ensuring milestones are met - including budget, schedule, regulatory, technical and other issues;
- ❑ Partnerships and communication protocols that will remain in place for the duration of the project.
- ❑ On-time delivery and the successful start-up of the project.

This defined project approach guarantees the Owner, Design Engineer and the Installation Contractor will receive the best possible support from SUEZ and therefore the best value for all stakeholders.

The design team currently assembled for the project is listed below. With all engineering and design being conducted out of SUEZ's Global UF/MBR Center of Excellence located in Oakville, Ontario, Canada.

Project Team Function	Team Member	Phone Number	Years of Experience Within SUEZ
Project Manager	Jonathan Lieberman	905 465 3030 x3109	19
Regional Manager	Graham Best	905 330 0881	25
NAM Process Leader	Joel Jackson	(289) 208-1045	13
Process Lead Engineer	Joel Citulski	(905) 334-7645	11
Mechanical Leader	Khasha Shafaei	(905) 465-3030 x 3625	11
Mechanical Engineer	John Siegner	(905) 465-3030 x 3302	19
Electrical Lead	Henry Xu	(905) 465-3030 x 3367	13
Electrical/Control Engineer	Dorothy Courtney	(905) 465-3030 x 3455	19
Programming Engineer	Anil Varma	(905) 465-3030 x 3262	21
NAM Field Operations Manager	Gilberto Perkins	(425) 828-2400 x 1458	18
Commissioning Field Representative	Sandor Tulok	(905) 465-3030 x 3413	23
Regional Lifecycle Manager	Matt Stapleford	(416) 402-9869	21

Proposed Organizational Chart for the Caesars Lane MBR:

A brief description of the roles of the project team members and their respective groups are provided below. SUEZ has the most extensive expertise and depth of resources dedicated to MBR projects in the industry. This will guarantee the successful delivery and implementation of the MBR system for the **Caesars Lane MBR** project.

Project Manager –The project manager will be the primary contact for the project from project inception in the engineering design phase through facility start-up. He will be responsible for overall schedule control, communications and SUEZ's team coordination and will be the single point of contact for the Owner, Consulting Engineer and Construction Contractor during the project. The Project Manager proposed for this project has extensive experience working on similar large scale MBR projects.

Project Engineer – The project engineer will be responsible for the primary technical details of the project, including all process equipment, valve and instrumentation selection, final design of the layout and other components. The Project Engineer will actively participate in any design workshops and support the on-site activities, including the construction phase of the project to ensure that the design and systems integration are correctly implemented in the field.

Process Engineer – The process engineer will be responsible for the membrane and biological process design of the wastewater system; ensuring it is optimized and incorporates best practices. The Process Engineer will assist with equipment selection and specification, plant start-up, commissioning, and performance testing.

Mechanical Engineering – The project engineer will be responsible for the primary technical details of the project, including all piping design, process equipment, systems integration, valves and instrumentation selection, final design of the layout and other components. The Mechanical Engineer will actively participate in the design workshops and support the on-site activities, including the construction phase of the project to ensure that the design and systems integration are correctly implemented in the field.

Instrumentation & Controls Engineer – The instrumentation & controls engineer is responsible for ensuring a seamless integration of SUEZ controls with other processes in the plant. They will also take part in controls workshops with the Owner, Consulting Engineer and the Construction Contractor to ensure seamless integration with the overall control philosophy of the wastewater treatment plant.

Electrical Engineer – The electrical engineer is responsible for designing the hardware system associated with the SUEZ process. Our group of electrical engineers has significant wastewater treatment controls engineering experience that spans from designing and programming small controllers to plant wide SCADA systems, from relay logic controls to starter and VFD panels.

PLC Programming Engineer– The PLC programming engineer will write and test the control system PLC code for the SUEZ system. They will also assist the Owner, Consulting Engineer and Construction Contractor with the inclusion of the SUEZ controls in the overall plant SCADA system. They may also be available for site work during the commissioning phase of the project to ensure that the control system start-up is completed in a timely fashion.

Regional Sales Manager – The regional sales manager will be responsible for communicating with SUEZ's project manager and other parties on a regular basis to

ensure that the needs of the Owner, the Consulting engineer and the Contractor are being met.

Field Service Representative – The FSR is dedicated to on-site plant start up and commissioning activities. This individual will verify the proper installation and functionality of all facilities, to confirm that they perform as specified and to accomplish the transition to a routine operation.

Global Lifecycle Operations Leader – The global lifecycle operations leader manages the global team of product experts that provide direct support to SUEZ's installed equipment base of Ultrafiltration plants. The leader deals with post capital sale customer warranty management, client technical support, R&D, process support and upgrade project management.

Regional Lifecycle Manager – The regional lifecycle manager provides product support for the lifecycle of the plant, and provides a single point of contact to provide assistance with technical support, product upgrades and insight Process Support. The Regional Lifecycle Manager will visit the facility during scheduled service visits and support plant audits. Any additional operator training and spare parts can be coordinated with the regional lifecycle manager.

SUEZ's Center of Excellence in Oakville Ontario, Canada, is the focal point of SUEZ's ultrafiltration membrane research and development. The SUEZ UF Membrane division employs over 1,400 people worldwide with 850 staff employed in North America. As a result, SUEZ has a very large pool of resources from which new team members can be selected should a team member no longer be available.

The **Caesars Lane MBR** team members' resumes are available on request.

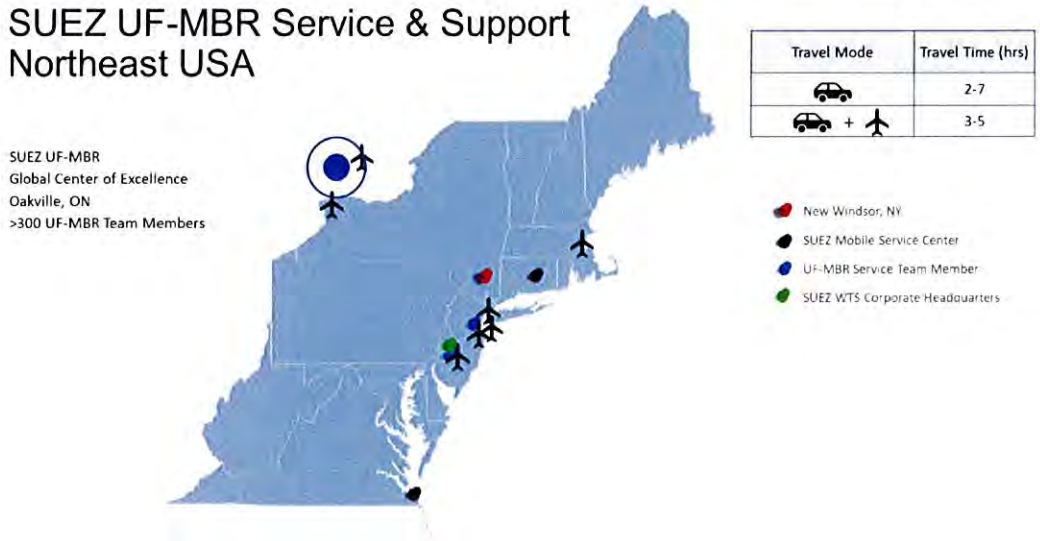
2.f Number and Location of Staff, Representatives, and Offices

The following table summarizes the main SUEZ Water Technologies & Solutions (WTS) North American locations related to the design, delivery, and service support of ZeeWeed membrane treatment systems. Three key locations with respect to the **Caesars Lane MBR** project should be noted:

- **Oakville, Ontario, Canada** – Head office location for ZeeWeed-related piloting, product management, design, project management, commissioning, and after-market service.
- **Guelph, ON** – Manufacturing and assembly facility for process equipment
- **Trevose, PA** – SUEZ Water & Technologies Service world headquarters – sales, engineering, service
- **Oroszlány, Hungary** – Manufacturing facility for ZeeWeed membranes.

Location	Function	Number of Staff
Trevose, PA	SUEZ Water & Process Technologies world headquarters – sales, engineering, service	331
Richmond, VA	Sales, Engineering, Services, Technical/Process Support	150
Norfolk, VA	Mobile water logistics center – sales, engineering, service	101
Oakville, ON	UF/MBR Centre of Excellence – R&D, product management, sales, project design, project management, commissioning, post-commissioning service	420
Oroszlány, Hungary	Membrane manufacturing	660
Edmonton, AB	Service	30
Guelph, ON	Sales, engineering, fabrication, service	130
Minnetonka, MN	Sales, engineering, service	485
Vista & Southern California	Service/technical support/process support/sales	106
Baytown, TX	Sales, service	42
Bellevue, WA	Sales, Engineering, Services	80

The SUEZ WTS office located in Oakville, Ontario is the Global UF/MBR Centre of Excellence and North American membrane design headquarters. The Oakville office employs approximately 420 staff, and is focused on developing, designing, and supporting water and wastewater treatment solutions using leading-edge membrane technologies. The Oakville facility is the focal point for SUEZ's expertise with membrane-based treatment systems, including:



- Product research and development
- Sales and applications engineering
- Water and Wastewater process engineering

- ❑ Project execution, including project engineering, project management, and commissioning services
- ❑ Long Term Post-commissioning field service support

All technical design and engineering for the Caesars Lane MBR project will be directed out of the Oakville Ontario Center of Excellence.

2.f.1 Local Presence

SUEZ is fully committed to providing service and support to our facilities in New York State. We can provide **same day in-person technical support** for the few issues that can't be handled remotely by our 24/7 remote support specialists, with trained field service representatives based out of either our UF-MBR Center of Excellence, or the multiple satellite office locales providing regional coverage across the United States.

Travel to the site can occur by car or plane in less than 7 hours from Oakville. Alternatively, we have UF-MBR service team members located in NJ and PA that can drive in less than 2.5 hours. When it comes to meeting your after-market service requirements, SUEZ has the resource depth needed:

- Technical Support staff for 24/7 Emergency Telephone Support
- System Controls staff and Process Support engineers and technicians
- Local Field Service Representatives
- Pre- or post-commissioning training staff
- Spare Parts personnel
- Warranty Support and Service Planning specialists
- Regional Lifecycle Managers

As part of this local presence, SUEZ maintains inventory of replacement membrane modules at our Oakville, Ontario Center of Excellence for single, or small quantity

membrane replacements. Typical lead times subject to EPA clearance are typically 2-3 days.

2.f.2 Local Contacts

SUEZ Trevose Headquarters
Sales, Engineering, Services
No. of Employees = 331

Gilberto Perkins – Lifecycle Services
Ph. 425 828 2400 x1458
E-mail: *Gilberto.Perkins@suez.com*

Matt Stapleford – Regional Lifecycle Manager
Ph: 905 334-4035
E-mail : *mathew.stapleford@suez.com*

Graham Best, P.E. – Regional Manager
Ph: 905 330-0881
E-mail: *graham.best@suez.com*

Dan Kelly – Process Analyst
Ph: 760 685 8562
E-mail: *Dan.Kelly1@suez.com*

Kirt Perry – Customer Service Manager
Ph: 805 440 0712
E-mail: *Kirt.Perry@suez.com*

2.f.3 Local Representation

In New York State, SUEZ is represented locally by Sherwood-Logan & Associates, a manufacturer's representative for municipal water and wastewater treatment.

Sherwood-Logan has served New York's engineering and municipal community as a leading manufacturer's representative since 1980. Sherwood-Logan's 40 years in the water and wastewater business provides expertise in all aspects of the engineering process, regulatory requirements, equipment design and manufacturing, startup, training and operations as well as aftermarket parts and service capabilities.

James Konatsotis, Sales Representative will be the Sherwood-Logan & Associates contact for the **Caesars Lane MBR** project.

Sherwood-Logan & Associates, 379 Danbury Rd, Wilton CT 06897

Ph: (203) 210-7180

jkonatsotis@sherwoodlogan.com

2.g Compliance Statement

Town Of New Windsor, Orange County, New York
Caesars Lane Wastewater Treatment Facility (WTF) MBR System Pre-Selection

Bidder has reviewed the Caesars Lane Wastewater Treatment Facility (WTF) MBR System Pre-Selection Specifications (Job # 18-732; 13 May 2022; and Addendum #1 dated June 29, 2022; and Addendum #2 dated July 18, 2022). SUEZ believes our proposal meets or exceeds the specifications technically. Commercially, SUEZ provides the following clarifications, and Appendix E - Supplementary Conditions of the Procurement Contract amending or supplementing EJCDC® P-700.

1. ***Agreement Between Buyer and Seller for Procurement Contract: Article 2 – Procurement Contract Times***
   SC-2.04.C: Please replace paragraph 2.04.C in its entirety with the following:
   The liquidated damages set forth in this Article shall constitute the Buyer's sole and exclusive remedy for delay by Seller in achieving completion of the Work within the time specified in the Procurement Contract. Seller's obligation to pay liquidated damages pursuant to this Article shall be limited to an amount equal to ten percent (10%) of the Seller's Contract Price.

2.h Acknowledgement of American Iron and Steel (AIS) Requirements

Ref : Caesars Lane WWTP MBR System Pre-Selection

I, David Bingham, Commercial Director for Zenon Environmental Corporation, certify that the equipment to be provided to the subject project are in full compliance with the American Iron and Steel requirement as mandated in EPA's State Revolving Fund Programs.

As per the following excerpt from a Memorandum from the USEPA Dated March 20, 2014 where in it is stated that "membrane bioreactor systems" and "membrane filtration systems" are not considered construction materials and therefore are not subject to AIS requirements.

"Mechanical and electrical components, equipment and systems are not considered construction materials. Mechanical equipment is typically that which has motorized parts and/or is powered by a motor. Electrical equipment is typically any machine powered by electricity and includes components that are part of the electrical distribution system."

"The following examples (including` their appurtenances necessary for their intended use and operation) are NOT considered construction materials: pumps, motors, gear reducers, drives (including variable frequency drives (VFDs)), electric/pneumatic/manual accessories used to operate valves (such as electric valve actuators), mixers, gates, motorized screens (such as traveling screens), blowers/aeration equipment, compressors, meters, sensors, controls and switches, supervisory control and data acquisition (SCADA), membrane bioreactor systems, membrane filtration systems, filters, clarifiers and clarifier mechanisms, rakes, grinders, disinfection systems, presses (including belt presses), conveyors, cranes, HVAC (excluding ductwork), water heaters, heat exchangers, generators, cabinetry and housings (such as electrical boxes/enclosures), lighting fixtures, electrical conduit, emergency life systems, metal office furniture, shelving, laboratory equipment, analytical instrumentation, and dewatering equipment."

Based on the above the scope of equipment and products being provided for this project consist of the Membrane Bioreactor and associated ancillaries.

If any of the above compliance statements change while providing these products to this project we will notify the prime contractor and the engineer as soon as it becomes known.

David Bingham
Commercial Director
SUEZ WTS Systems USA, Inc.

3 Design Submittals

3.a Scope of Supply

3.a.1 Basis of Design

The proposed ZeeWeed membrane ultrafiltration system for the **Caesars Lane MBR** is offered based on the design parameters provided in the Preselection Documents and as summarized in the following sections.

3.a.1.1 Influent Flow Data

The influent design flows were based on Section 455000, Item 2.1.B.2, and are summarized in the table below.

Parameter	Value	Unit
Average day flow (ADF)	5.0	mgd
Maximum month flow (MMF)	8.0	mgd
Maximum day flow (MDF)	11.0	mgd
Peak hour flow (PHF)	16.5	mgd
Maximum flow with one train offline for maintenance or cleaning (for less than 24 hours)	11.0	mgd
Maximum flow with one train offline for maintenance or cleaning (for less than 7 days)	8.0	mgd

Note: Any flow conditions that exceed the above-noted flow limits must be equalized prior to treatment in the ZeeWeed membrane bioreactor system.

- ADF – the average flow rate occurring over a 24-hour period based on annual flow rate data.
- MMF – the average flow rate occurring over a 24-hour period during the 30-day period with the highest flow based on annual flow rate data.
- MDF – the maximum flow rate averaged over a 24-hour period occurring within annual flow rate data.
- PHF – the instantaneous flow rate averaged over a 2-hour period occurring within annual flow rate data.

SUEZ notes that the membrane design provided will allow for operation of the facility at two separate N-1 flow conditions:

Condition 1: Maximum Day Flow (11.0 MGD) Operation for up to 24 hours with one train offline for maintenance or cleaning.

Condition 2: Maximum Month Flow (8.0 MGD) Operation for up to 7 days with one train offline for maintenance or cleaning.

3.a.1.2 Influent Quality

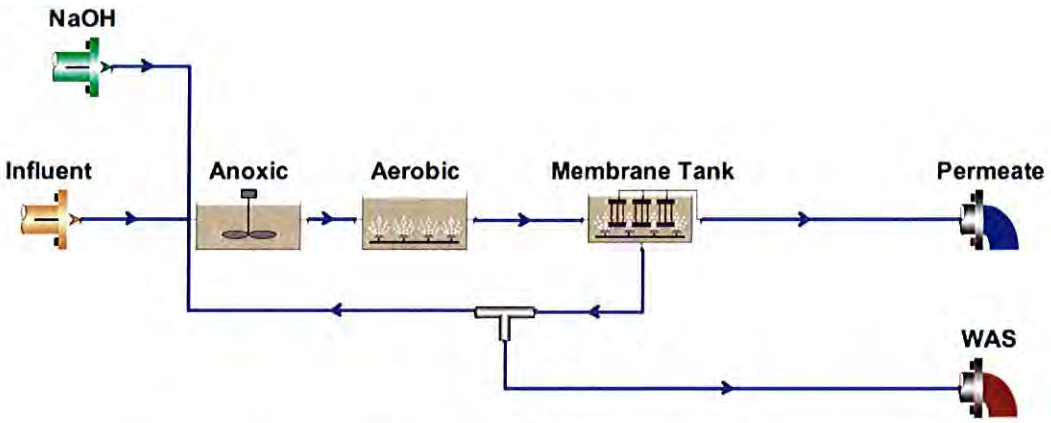
The design solution proposed is based on the wastewater characteristics provided in Section 455000, Item 2.1.B.3, and as detailed in the following table.

Parameter	Value	Unit
Design influent temperature	10	°C
BOD_5	98	mg/L
TSS	74	mg/L
NH_3-N	18	mg/L
TKN	27	mg/L
TP	6.0	mg/L
Alkalinity	225	mg/L as $CaCO_3$

3.a.1.3 Effluent Quality

The following performance parameters are expected upon equipment startup and once the biological system has stabilized. These are consistent with the effluent quality specified in Section 455000, Item 2.1.A, and Addendum No. 1, Item 6.

Parameter	Value	Unit
BOD_5	≤ 5.0 (monthly average)	mg/L
NH_3-N	≤ 1.8 (Oct 1st – May 31st) ≤ 1.2 (Jun 1st – Sep 30th)	mg/L
TSS	≤ 5.0 (monthly average)	mg/L
Turbidity	≤ 1.0	NTU



3.a.1.4 Biological System Design

Overview

For the **Caesars Lane MBR** project, the screened influent wastewater enters the anoxic tanks for alkalinity recovery through partial denitrification. Mixed liquor will then be transferred to aerobic TREA treatment, where BOD is oxidized and most of NH3-N is converted into NO3-N. Finally, the mixed liquor enters the membrane tanks by gravity, where biomass is separated from the mixed liquor by the ZeeWeed 500 membranes. The flow sheet is shown on the following page.

The water level difference between the membrane tank and the chlorination/de-chlorination tank is approximately 22 feet. A siphon design will be used to utilize the water level difference for permeation to minimize equipment requirements, optimize building space, and maximize energy savings. Permeate will flow through the membranes by gravity to the existing chlorination/de-chlorination processes.

Waste sludge is diverted from the RAS line to the sludge holding tank (by Others). The frequency of wasting is a function of influent characteristics, reactor design and operation, and operator preferences.

The proposed modified Ludzack-Ettinger (MLE) biological system design consisting of anoxic and aerobic zones is as follows.

Design Parameter	Value	Units
Flow basis for biological design	8.0	mgd
Number of biological trains	3	
Anoxic working volume, total / per train	330,000 / 110,000	gal
Aerobic working volume (excluding membranes), total / per train	700,000 / 233,333	gal
Design aerobic SRT (including membrane tank volume)	13.0	days
Estimated waste sludge flow rate at 10,625 mg/L	50,500	gpd
Design MLSS concentration in bioreactor	8,500	mg/L
Design liquid depth in aerobic zone	17.5	ft

Notes:

1) Tank volumes are preliminary only and may change once final detail design commences.
2) The biological system is designed for installation within concrete tanks supplied by buyer.

Fine Screening

Details on SUEZ's requirements for fine screening are provided in Section 3.j of this proposal.

Reactor Sizing and Hydraulics

An influent flow splitter (by others) is proposed to evenly distribute screened effluent and RAS to each of three (3) equally sized bioreactors. The reactors are hydraulically sized for the peak hour flow (16.5 MGD) with all of the basins in service. Refer to the GA Drawing of the Bioreactors in Section 3.c. Primary reactor water levels in each zone are indicated on the GA Drawing and can be adjusted during detailed design. SUEZ has assumed a total bioreactor depth of 21.0 ft. This depth can be adjusted during detailed design to suit specific site requirements including any anticipated rock interference.

In general, flow will occur diagonally across each zone through partially submerged openings. A cascade from the anoxic to aerobic zone is anticipated to direct foam toward the end of the bioreactor and to separate reactor biological function.

Influent and effluent downward opening sluice gates are anticipated as shown on the GA drawing. Drain valves for each reactor have not been shown.

Mixed Liquor Concentration (MLSS)

SUEZ typically designs their MBR systems for a MLSS concentration of 8 and 10 g/L in the bioreactor and membrane tanks, respectively to ensure the overall energy consumption of the biological treatment system is optimized (see below recent research about dependencies of alpha factors on MLSS in the bioreactor).

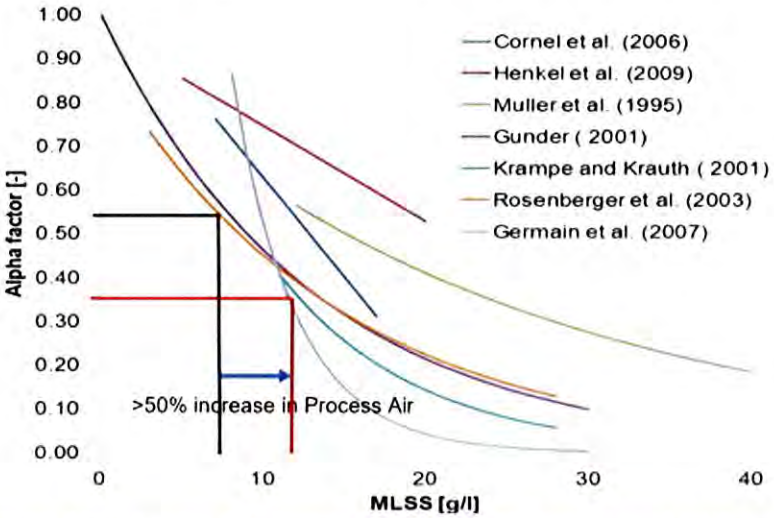


Figure: Alpha Factor at Different MLSS Concentrations Based on Various Research Results

However, many of our existing and potential clients encounter circumstances like footprint or soil loading limitations, concrete cost, sludge handling and removal, or RAS pumping restrictions that require them to operate the plant temporarily, or permanently, at higher MLSS concentrations in the bioreactor and/or in the membrane basins. Although based on unique drivers, the following references are all operating at elevated MLSS concentrations in the membrane tanks.

To demonstrate that the ZeeWeed 500D membranes are able to withstand higher MLSS concentrations without compromising performance, we have identified five full scale MBR facilities that have operated at high MLSS concentrations and have correlated the MLSS data to the transmembrane pressure as an indicator of membrane performance and reliability.

The following figures show that MLSS concentrations up to 20 g/L have limited-to-no impact on TMP/membrane performance as long as the membranes are operated with the recommended air scour and relaxation scheme.

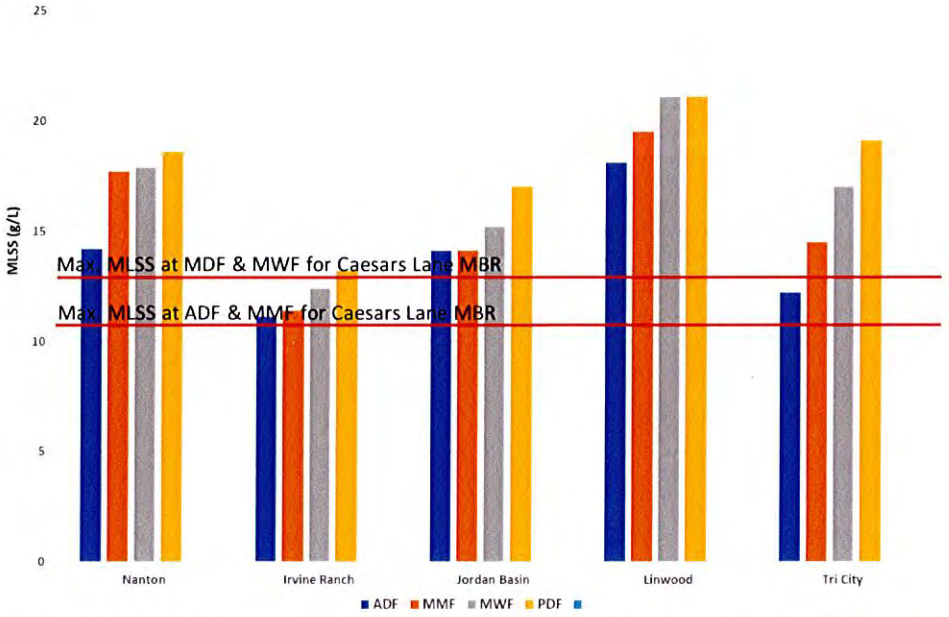

Figure: Historical Operating MLSS in the RAS from the Membrane Basins for Five Full Scale MBRs Compared to the Proposed Caesars Lane MBR Operating MLSS Concentrations

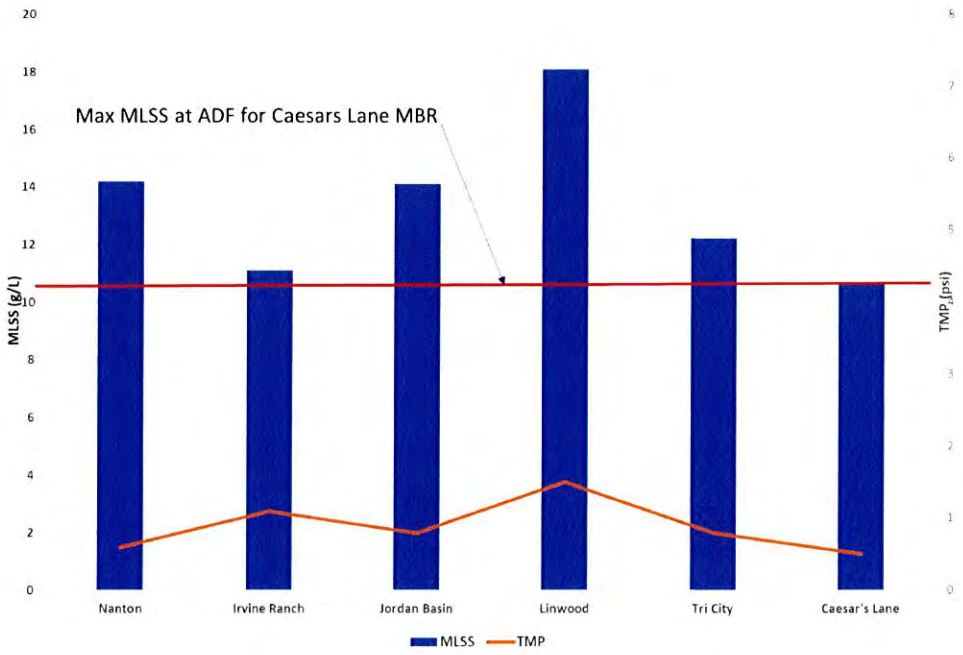

Figure: Operating TMP for Five Full Scale MBRs at Elevated MLSS Concentrations Compared to the Caesars Lane MBR Proposed TMP at ADF

As presented in the previous figures, plants like Linwood (siphon-operated MBR), Nanton (LEAPmbr), and Jordan Basin (MBR) have been routinely operated at MLSS concentrations from 14 to over 20 g/L at TMPs below 2 psi. The performance of the membranes was not compromised in any of these cases.

For this project, SUEZ has proposed a maximum MLSS concentration of 8.5 g/L in the bioreactors; resulting in membrane tank MLSS concentrations as shown below at the following flow conditions:

Parameter	Membrane Tank Concentration	Units
Average Day Flow (ADF)	10,625	mg/L
Maximum Month Flow (MMF)	10,625	mg/L
Maximum Day Flow (MDF)	12,750	mg/L
Peak Hour Flow (PHF)	12,750	mg/L

This approach is consistent with SUEZ's membrane design guidelines that consider two design criteria for MBR sizing:

Net Hydraulic Flux: The net volume of permeate produced over a period of time (e.g., one day) divided by the membrane surface area. The units for flux are gfd (US gallons/ft^2/d) or lmh (L/m^2/h))

Solids Mass Flux (SMF): The amount of solids that are brought to the membrane surface during filtration. SMF combines the effects of the hydraulic flux and the MLSS concentration in the membrane tank. SMF is calculated by multiplying the net hydraulic flux by the MLSS in the membrane tank (g/L). The units for SMF are g/m^2/h

The proposed net hydraulic flux and SMF values proposed for the Caesars Lane MBR are less than SUEZ's design guidelines, and well below the design maximum MLSS concentration of 15 g/L for the ZW500 membrane.

SUEZ's proposed minor increase in maximum MLSS concentration is compliant with Addendum No. 1., "Bidder may propose MLSS concentrations that are consistent with WEF Manual of Practice No. 36, 2011, so long as at least three years of operating data at the consistent and sustained higher than 8,000 mg/L are provided."

In addition to the reference facilities provided above, which consistently operate their bioreactor at MLSS concentrations ≥ 8.5 g/L, two additional facilities listed in the Bid Form References also operate their bioreactors at average MLSS concentrations ≥ 8.5 g/L. – Broad Run WRF, VA (9.84 g/L) and Linwood WRF, GA (10.85 g/L).

SUEZ notes that WEF Manual of Practice No. 36 includes the following wording:

Article 3.2.4, P.8: "Typically, high MLSS concentrations decrease the transfer efficiency of aeration systems, …"

Table 3.2: Typical MLSS in Activated Sludge Basins: 4,000 to 10,000 mg/L (activated sludge basins).

As such, SUEZ recommends that any MBR system proposed with bioreactor MLSS concentrations greater than 10 g/L be rejected, or re-evaluated at 10 g/L.

SUEZ is confident the ZW500 membrane system proposed for Caesars Lane will operate reliably at the proposed MLSS concentration. This is substantiated with existing plant performance data and backed by the proposed 15 years membrane warranty.

Anoxic Tank Design and Mixing

SUEZ has sized the anoxic zones based on a minimum HRT of one (1) hour at the design flow condition of 8.0 MGD, as specified in Section 455000, Item 2.1.B.5.c.1. This volume will provide partial de-nitrification, maximize alkalinity recovery and minimize the requirement for NaOH addition. A smaller anoxic volume is proposed as an alternative for consideration in Section 10 – Value Engineering for consideration.

For the specified influent alkalinity of 225 mg/L (Section 45000, Item 2.1.B.3.h), alkalinity supplementation will not be required. However, for lower influent alkalinities, supplemental alkalinity will be required to maintain a minimum soluble alkalinity in the bioreactors of 50 mg/L for nitrification and biomass stability.

SUEZ has included a NaOH dosing system in our scope of supply and in the process building layout to allow for potentially lower influent wastewater alkalinity.

Typical submersible mixer in the anoxic tank

Each anoxic zone is mechanically mixed to maintain solids in suspension within each reactor. The proposed mixers are submersible, propeller type with guide rails, brackets, and removal cables. One (1) lifting davit and mounting brackets have been included to allow for removal and servicing of the mixers if required.

Aerobic Tank Design and Equipment

Each aeration tank will be equipped with fine bubble diffusers. The diffusers and process blowers have been selected to provide dissolved oxygen as specified in Section 455000, i.e., ≥ 2.0 mg/L at maximum month flow and ≥ 1.0 mg/L at maximum day flow. If desired, during detailed design, …

Each bioreactor will be equipped with pH and DO probes with a common transmitter, and level switch high, as specified.

Process Blowers

SUEZ has proposed three (3) process blowers, two(2) duty + one (1) standby unit. The blowers will be Aerzen Delta Blowers equipped with sound enclosures and winterization packages for outdoor installation as shown on the GA drawing. This approach reduces the size of the process building, eliminates unnecessary heat load, and has been utilized at numerous facilities in cold, winter environments such as in London, Ontario.

Oxford Street MBR, London, ON, Canada

Effluent Collection and Scum Management

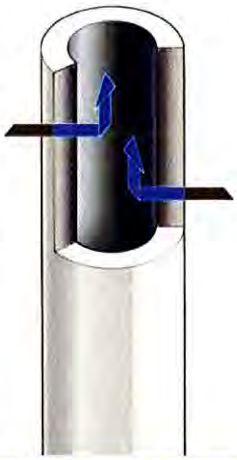
Nitrified effluent from each aerobic zone will flow into a common effluent collection and membrane distribution channel as shown on the GA drawings. This channel distributes the effluent to each membrane train.

A scum box, with downward opening slide gate at the end of the channel is proposed for scum removal. Typically, the scum system consists of duty/standby submersible pumps

and level control. This equipment is not included in SUEZ's scope of supply but can be added as required. SUEZ has allocated design and engineering costs, as well as control and programming hours in our offer for control of the scum box equipment.

RAS Collection and Pumping

SUEZ has proposed dedicated, end-suction centrifugal RAS pumps that will draw RAS from each membrane train and discharge it to a common RAS collector located above the pumps. For consideration, axial flow RAS pumps, and/or relocation of the RAS collector to below the equipment room may be considered. Refer to Section 10 – Value Engineering. This collector will be located above the RAS pumps in the process building and be routed to the influent splitter box, ensuring a homogenous distribution of solids between the biological process trains.



Utilizing dedicated RAS pumps per train ensures that equal RAS splitting occurs. Each RAS pump will be equipped with a VFD and flow meter to allow the RAS rate to be adjusted as required.

Facilities with poor RAS distribution can be problematic. This is particularly common at plants using RAS effluent collection channels with fixed, or manually adjusted effluent overflow weirs. These weirs can contribute to poor solids distribution across the membrane trains resulting in poor membrane performance.

3.a.1.5 Ultrafiltration System Design

Overview of ZeeWeed membrane system

The proposed ZeeWeed Membrane filtration system for the Caesars Lane MBR is designed to ensure reliable long-term performance and to maximize operational flexibility. At the core of the MBR process is the ZeeWeed 500 series hollow fiber membrane. The ZeeWeed 500 series membrane is a reinforced hollow fiber ultrafiltration membrane that was designed specifically for high solids applications. The membrane fiber has a nominal pore size of 0.04 mm, a tensile strength of 100 lbs and is highly resistant to chemicals, including acids, bases and chlorine, allowing for flexible cleaning regimes.

The ZeeWeed 500 series membrane is a reinforced hollow fiber ultrafiltration membrane with a nominal pore size of 0.04 µm.

The membrane is manufactured and assembled into discrete units called "modules" or small membrane subunits. These are the basic building blocks of the membrane system that are manifolded together to create a "cassette" or large membrane subunits. The ZeeWeed 500 cassette proposed for the Caesars Lane MBR, will contain 64 modules. Each module has 530 ft^2 of membrane area, for a total available installed membrane area of 33,920 ft^2 per ZeeWeed 500 cassette.

In the ZeeWeed membrane filtration process, the membrane cassettes are immersed directly in the mixed liquor in separate membrane compartments. A series of cassettes connected to a common permeate header is called a "membrane train". Mixed liquor flows into the membrane basins and flows by gravity by the natural hydraulic profile at the WRF to create a siphon and draw treated water through the hollow fiber membranes, leaving the mixed liquor solids on the outside of the membrane.

Dedicated RAS pumps are used to recirculate mixed liquor back to the head of the bioreactor where it is blended with the screened primary effluent. To take advantage of the increased mixed liquor solids concentration, wasted activated sludge is taken from the RAS piping.

LEAPmbr aeration

LEAPmbr aeration is a specially designed and highly efficient aeration system used to scour the outside surface of the membranes and move mixed liquor solids away from the membrane fibers. The patented LEAPmbr aeration system uses factory-installed LEAP aerators which are integrated into the base of each ZeeWeed 500 cassette simplifying installation.

ZeeWeed 500 Membrane Cassette

LEAPmbr aeration devices release large air bubbles which create higher scouring forces along the surface of the membrane fiber and therefore have more effective solid removal capability than smaller bubbles. Because the large mushroom-cap bubbles generated by LEAPmbr aeration devices are so effective, less air is required to achieve the same solids removal performance.

With LEAPmbr, aeration to the train is either on (during production) or off (during stand-by). There are no cyclic valves required and only one air connection per train is required. When a train is in operation, air is continuously supplied to the cassette aeration device from the membrane train aeration header. When sufficient air volume has built up in the aeration device to overcome the static head above it, the air releases through the multi-stage coarse-bubble diffuser built into the aeration device.

ZeeWeed 500 LEAPmbr Membrane Trains (Riverside, CA – 26 MGD)

Membrane system configuration

The proposed ZeeWeed membrane filtration system for Caesars Lane MBR has four essentially identical membrane trains with six cassette spaces and six cassettes installed. The membrane system is designed to process maximum day flows with only three trains in operation. The following table summarizes the configuration and design flux data for the proposed membrane filtration system.

The trains are arranged in pairs of two with mirrored permeate and air headers to allow installation of the headers on the exterior tank walls and improve operator access.

Parameter	Value
Number of membrane trains	4
Number of cassette spaces per train	6
Number of cassettes installed per train	6
Type of cassette	64
Type of module	ZW500-530
Module design per train	5 x 64 + 1 x 32
Total number of modules installed per train	352
Total number of modules installed per plant	1,408
Total number of cassettes installed per plant	24
Spare space (%)	8.3
Membrane tank internal dimensions (L x W x H) (ft)	40 x 8 x 13
Membrane design flux rates (gfd)	Please see Bid Worksheets in Section 6 of this proposal

Notes:

1) Tank dimensions and volumes are preliminary only and may change slightly once final detail design commences.
2) The ultrafiltration system is designed for installation within concrete tanks supplied by buyer.

Membrane Trains in Operation

For ADF flows, three trains only three trains are required to be in operation. The system will be able to operate at LEAP-Lo in relaxation mode, i.e., without backpulsing.

As the flow increases above ADF, the standby train will automatically come on-line to treat the increased capacity. The aeration system will automatically adapt to LEAP-Hi as required by the flow or TMP. This aeration strategy allows operation of the optimal number of membrane trains at their optimum energy efficiency point without compromising performance.

Details of membrane operation and cleaning is provided in Section 3i.

Membrane Tanks

SUEZ recommends that the membrane tanks are covered to prevent the re-introduction of blown or dropped debris downstream of the fine screens. While aluminum covers are typically used, opening grating with rollout mats has also been successfully applied. These covers also provide access for membrane access and periodic removal if required.

In response to Addendum No. 1, Item 5, SUEZ confirms that a membrane tank coating is not required to allow a 30-year life span for the concrete tanks. The chemical exposure associated with chemical recovery cleaning is limited to 2 times per year at low concentration (NaOCl – 1 g/L, citric acid – 2 g/L for less than 8 hours per clean. Maintenance cleaning is conducted with the membrane tanks full of activated sludge and as such has no impact on the concrete as the cleaning chemicals do not directly contact the tank surfaces.

While some SUEZ membrane tanks have been coated, coatings have in some instances been problematic with peeling and coating failure reported at several facilities. Many facilities such as Oxford WRF in London, ON and Brush Creek WRF in Cranberry Township, PA have uncoated membrane tanks. Oxford has been in operation for more than13 years and has not experienced any adverse impact on their concrete membrane tanks.

Membrane Tank Piping and Cassette Isolation

SUEZ permeate piping is typically Sch 10s, 316L stainless steel. Air header piping is Sch. 80 CPVC. All cassettes are typically provided with butterfly valves with hand levers for isolation of the permeate and air headers. Refer to the SUEZ P&ID drawings in Section 3.e.

The permeate and air headers are reasonably simple to fabricate and install; compared to more complex plate and frame membrane systems. Both the permeate and air piping each require a single point connection to each cassette using Straub-style connectors. As per Addendums No. 1 and No. 2, in-basin valves and piping have not been included in SUEZ proposed scope.

3.a.1.6 Siphon Design

A total water level differential of 21.0 feet between the membrane tanks and the chlorination/de-chlorination tank (based on the hydraulic profile provided in RFQ. Please see Appendix D – Hydraulic Profile Markup) is available at the **Caesars Lane MBR** site. This driving head is large enough to allow a maximum transmembrane pressure of 7.2 psi (16.6 ft) assuming approximately 5 ft of piping and valve losses. The available head will allow the system to use a full siphon (gravity) over the range of plant flows. With a siphon design, there will be no process (permeate) pumps, and the overall plant power requirement will be reduced.

SUEZ's Experience with Siphon Designs

SUEZ has the proven knowledge, experience and capability to make siphon design projects a success. While every site is different; for **Caesars Lane MBR**, there is a sufficient difference in the water level from the membrane tank to the point of discharge such that a full siphon design can be implemented; allowing the water to be filtered without the use of any permeate pumps. Alternatively, if less head is available, a partial siphon may be utilized. Refer to Section 10 – Value Engineering.

SUEZ's experience designing and executing municipal water and wastewater plants with full or partial siphon is provided in the table below with the oldest facilities in operation for 19 years:

Project Name & Location	ADF Capacity (mgd)	Type of Siphon	Type of Plant	Year Commissioned
Chestnut, Singapore	72	Full	DW	2003
Manatee County, FL	50	Partial	DW	2020
CCK, Singapore	48	Partial	DW	2008
Nanaimo, British Columbia	30	Full	DW	2015
Bray Park, Australia	26	Partial	DW	2007
Park Cities WTP, Dallas, TX	24	Full	DW	2012
Mid-Dakota RWS, Pierre, SD	13.5	Partial	DW	2010

Sudbury, Ontario	10	Full	DW	2004
Cranberry Township, PA	7.2	Full	WW (MBR)	2018
Borghetto Santo Spirito, Italy	7.1	Partial	WW (MBR)	2012
Pendleton, OR	6	Full	DW	2003
Linwood, Gainesville, GA	4.6	Full	WW (MBR)	2007
Saugeen Shores, Ontario	4	Partial	DW	2006
Buxton, UK	2.4	Full	WW (MBR)	2004
Noci, Italy	1.3	Partial	WW (MBR)	2009

Using siphon for permeate extraction will reduce capital, operating and labor costs, while providing several additional less-obvious benefits listed below.

Additional Reliability

Power interruptions are obviously a concern for any WWTP. Power interruptions can impact equipment and operation, and backup generators need to be able to support plant operation for critical equipment. With a siphon design, the plant can be configured to produce water during a power outage, as power required for operating the pneumatic flow control valves is minimal.

Quiet Operation

The incorporation of a siphon design provides a quieter plant as the operational noise from the permeate pumps is eliminated.

Siphon is Green!

Utilization of a siphon for wastewater treatment is consistent with the Town of New Windsor's priorities related to energy efficiency and conservation; particularly recognizing the cost of power at the facility.

Installation and Construction Unique to Siphon Design

V-Port Ball Valves

The design for siphon operation requires a flow control valve instead of a permeate pump per train. SUEZ has included high performance flow control valves for this application to provide exceptional flow control over the full range of operating conditions; particularly during low flow conditions.

DeZurik V-Port Ball Valve

Backpulsing and Backpulse Pumps

While backpulsing is not required for normal operation, SUEZ has provided a system with backpulse capability. This will ensure the MBR system can operate reliably during extreme conditions including poor mixed liquor filterability or biological system deterioration. To provide for this, a set of submersible backpulse pumps (duty and installed standby) has been provided for periodic backpulsing and cleaning purposes. These pumps are proposed to be installed in the existing chlorination/dechlorination tank onsite. These pumps and their associated valves and VFD's are included in SUEZ's scope of supply. SUEZ has assumed the existing tank would remain uncovered and has included a small basket strainer (located

at the process building) to protect the membranes from debris. If the tank were to be covered, the strainer can be eliminated.

SUEZ notes that a separate backpulse tank is not required, for either the siphon design, or alternatively for a permeate pump design. For the pumped alternative, the combined permeate header will have sufficient volume to provide filtrate for backpulsing and chemical cleaning.

Sample Pumps

As the permeate header will be under vacuum created by the siphon, small sample pumps are provided per train for each turbidimeter.

3.a.1.7 Process Building

The proposed process building layout is provided in Section 3.c. This layout has been optimized to include appropriate space for the RAS pumps, compressors, and chemical storage, as well as the electrical equipment. A separate electrical room has been shown consistent with applicable codes and good engineering practice.

SUEZ has proposed the use of IBC mother-daughter chemical storage systems for each membrane cleaning and process chemical. The IBC totes are available in either 275 or 330 US gallon sizes and can be readily switched without interrupting chemical dosing. Use of IBC totes ensures fresh chemical is available for use and eliminates expensive intermediate bulk deliveries.

SUEZ has confirmed that a one mother-daughter tote will provide a one-month supply of chemical storage. Separate containment areas have been shown and will provide 150% of the container/tank volume as specified.

IBC Chemical Tote

3.a.2 Scope of Supply by SUEZ

The following sections should be read in conjunction with the P&ID drawings provided. In case of conflict, the P&ID drawings take precedence for SUEZ supplied equipment and devices.

Quantity	Description
Membrane Blower & Associated Equipment – DS-002 Sheet 1 of 2	
4+1	Inlet filters and silencers
4+1	PD membrane blowers (*Aerzen, 60 HP*)
4+1	Sound enclosures with space heaters
2	Wall-mounted PD Blower VFDs: Note: three (3) motor starters for remaining blowers by Others
4+1	Discharge silencers
4+1	Discharge pressure relief valves
4+1	Discharge pressure indicators c/w isolation valves
4+1	Discharge check valves
4+1	Discharge flexible connectors with clamps
4+1	Blower discharge low flow switches

Quantity	Description
4+1	Membrane blower isolation valves
Process Blower & Associated Equipment – DS-002 Sheet 2 of 2	
2+1	Inlet filters and silencers
2+1	PD membrane blowers (*Aerzen, 125 HP*)
2+1	Sound enclosures with space heaters
2+1	Wall-mounted PD Blower VFDs
2+1	Discharge silencers
2+1	Discharge pressure relief valves
2+1	Discharge pressure indicators c/w isolation valves
2+1	Discharge check valves
2+1	Discharge flexible connectors with clamps
2+1	Blower discharge low flow switches
2+1	Membrane blower isolation valves
Biological Equipment – DS-003	
3	Anoxic tank submersible mixers (*Sulzer, 8.0 HP*) and associated installation rail guides and brackets
3 grids	Fine-bubble diffuser grids for process aerobic tanks, with associated downcomers
3	Manual air isolation valves
3	Aerobic tank level switches
3	Biological tank controllers (Hach or E+H, each with associated one (1) pH sensor and one (1) DO sensor)
MBR ZeeWeed Membrane & Associated Equipment – DS-004	
1 lot	Membrane cassette installation assemblies for concrete membrane tanks
24	ZeeWeed 500 64-module membrane cassettes (*SUEZ*)
1,408	ZeeWeed 500 530 ft^2 membrane modules (*SUEZ*)
8	Membrane tank level switches
4	Membrane tank level transmitters (*E+H*)
4	Pressure transmitters (*E+H*)
4	Ejector assemblies (*Piab*)
1	Level transmitter (*E+H*) for membrane tank distribution channel
Permeate Siphon & Associated Equipment – DS-005	
4	Suction side isolation valves
4	Backpulse isolation valves
4	Suction side ball valves
4	Permeate electro-magnetic flow meter (*E+H*)
4	Suction side pressure gauge and associated ball valve
4	V-Port modulating valve (*DeZurik*)
4	Discharge side pressure gauge and associated ball valve
4	Drain valves
4	Discharge side permeate isolation valves

Quantity	Description
4	Sampling pumps
4	Turbidity transmitters with associated valves and degassing columns
Backpulse System – DS-006	
1+1	Submersible backpulse pumps, and associated installation rail guides and brackets (*Sulzer, 57.6 HP*)
1+1	Wall-mounted backpulse pump VFDs
1+1	Check valves
1+1	Isolation valves
1	Level transmitter (*E+H*)
1	Temperature transmitter (*E+H*) on the common permeate discharge line
1	Pressure gauge and associated valve
1	Electro-magnetic flow meter (*E+H*)
1	Backpulse pump discharge side isolation valve
1+1	Pressure switches - high
1	Basket strainer
1	Sodium hypochlorite dosing isolation valve
1	Sodium hypochlorite dosing check valve
1	Sodium hypochlorite dosing automatic valve
1	Citric acid dosing isolation valve
1	Citric acid dosing check valve
1	Citric acid dosing automatic valve
RAS/WAS/Drain Pump & Associated Equipment – DS-010	
4	RAS/WAS/drain pump suction pressure gauges w/hand isolation valves
4	RAS/WAS/drain pump suction drain valves
4	Centrifugal RAS/WAS/drain pumps (*Sulzer 40 HP*)
4	Wall-mounted RAS/WAS/drain pump VFDs
4	RAS/WAS/drain pump discharge pressure gauges w/hand isolation valves
4	RAS/WAS/drain pump discharge check valves
4	RAS/WAS/drain pump discharge drain valves
4	RAS/WAS/drain pump electro-magnetic flow meters (*E+H*)
4	RAS/WAS/drain pump discharge isolation valves
1	Sludge wasting system, including • one (1) ON/OFF automatic valve • one (1) electro-magnetic flow meter (*E+H*) • one (1) isolation valve
Process Chemical Dosing System – DS-011 Sheet 1 of 2	
1	Skid-mounted NaOH dosing system (*Prominent*), including one (1) duty and one (1) standby chemical metering pumps, and associated instruments and valves
1	NaOH IBC day tank (330 gallons)
1	Movable level switch for NaOH IBC day tank

Quantity	Description
Membrane Cleaning System – DS-011 Sheet 2 of 2	
1	Skid-mounted sodium hypochlorite dosing system (*Prominent*), including one (1) duty and one (1) standby mag-drive centrifugal chemical dosing pumps (*Finish Thompson, 1.0 HP*), one (1) electric-magnetic flow meter (*E+H*), and associated pressure indicators and valves
2	Wall-mounted sodium hypochlorite dosing pump VFDs
1	Sodium hypochlorite IBC day tank (330 gallons)
1	Movable level switch for sodium hypochlorite IBC day tank
1	Skid-mounted citric acid dosing system (*Prominent*), including one (1) duty and one (1) standby mag-drive centrifugal chemical dosing pumps (*Finish Thompson, 1.0 HP*), one (1) electric-magnetic flow meter (*E+H*), and associated pressure indicators and valves
2	Wall-mounted citric acid dosing pump VFDs
1	Citric acid IBC day tank (330 gallons)
1	Movable level switch for citric acid IBC day tank
Compressed Air System – DS-012	
1+1	Air compressors (*Atlas Copco, 7.5 HP*), each compressor mounted on an 80-gallon vertical receiver tank
1	Compressed air assembly (loose shipped) includes: • one (1) coalescing filter • one (1) low air pressure switch • one (1) pressure regulator • one (1) low-low air pressure switch • associated valves
1+1	Refrigerated air driers and associated valves
Master Control Panel	
1	Master control panel (NEMA12) w/ Allen Bradley ControlLogix PLC and PanelView Plus 7 HMI and Allen Bradley I/O as specified in Section 455000, Item 2.9
General	
Incl.	Engineering service as shown in Section 3.a.2.1
Incl.	Operating & maintenance manuals
Incl.	Service and support – see Section 5 for details (1)
Incl.	InSight Pro – online monitoring and service – 2 years
Incl.	24/7 emergency phone support – 10 years
Incl.	Equipment mechanical warranty - 2 years from the date of substantial completion or 30 months from the shipment, which occurs first
Incl.	Membrane warranty – 15 years with the first 5 years full replacement membrane warranty and the following 10 years prorated membrane warranty

Notes:

1) Additional man-hours will be billed separately from the proposed system capital cost at a rate per day plus living and traveling expenses. Detailed SUEZ service rates are available upon request.
2) All SUEZ supplied equipment is designed for installation in an unclassified area unless noted in the P&ID drawings.
3) To receive complete 24/7 Emergency Telephone Technical Support Service and to allow for InSight Monitor Service, a suitable secure remote internet connection, by buyer, is required.

3.a.2.1 SUEZ Engineering Services

As part of the **Caesars Lane MBR** project, SUEZ will provide the following engineering services:

- Process Flow Diagram, List of Symbols, Piping and Instrumentation Drawings - in accordance with SUEZ's drafting and tagging standards
- Equipment bill of materials and vendor cut sheet binder.
- Detailed membrane tank general arrangement drawings, ZW cassette assembly drawings, cassette, support beam and bracket detail drawings, backpulse and / or CIP tank drawings. Suez has assumed detailed GA and layout drawings will be provided by Others.
- Preliminary biological tank GA, MBR equipment room GA, and MBR plant general layout drawings
- Electrical engineering submittal, to include, single line drawing, power and control wiring schematics, panel layout drawings, and bill of materials.
- Functional description, control narrative and operations sequence charts per SUEZ P&IDs
- PLC Programming for the supplied SUEZ system
- Operation and maintenance manuals per SUEZ standard
- Membrane storage and installation detail, draft commissioning schedule, contractor installation check list.

Engineering review and/or approval of documents for equipment not in SUEZ scope of supply is by Others.

3.a.3 Special Tools and Spare Parts

The following special tools and spare parts are included in SUEZ scope.

Special Tools & Spare Parts	
1	ZW500 64M cassette lifting bracket
1	Membrane fiber repair kit
1	Membrane module removal tool
4	Safety hoist ring for 64M cassettes
2	Pressure gauges
1	Level transmitter
1	Temperature transmitter
1	DO probe
1	pH probe

1	RAS pump seal kit
1	Backpulse pump seal kit
3	Membrane blower maintenance kits (Each kit includes one (1) blower V-belt and one (1) intake filter)
3	Process blower maintenance kits (Each kit includes one (1) blower V-belt and one (1) intake filter)
1	¼" ball valve
1	½" ball valve
1	1" ball valve
1	1½" ball valve
1	¼" solenoid valve
1	1" solenoid valve
1	1" pneumatic ball valve
1	3" butterfly valve
1	4" butterfly valve
1	8" butterfly valve
1	16" butterfly valve
1	10" pneumatic butterfly valve
1	Pneumatic actuator for 16" butterfly valve
1	4" pneumatic knife gate valve
1	18" knife gate valve
1	1" check valve
1	16" check valve
1	18" check valve
40	SSI fine bubble diffuser disc (2% of the total)
1	V-Port valve spare part kit (kit includes gasket graphoil, packing V-set PTFE, washer thrust BRG upper body, seat nick PI/HT 317, BRG lower body 317L, bearing thrust, gasket graphoil, seal O-ring PFA)

3.a.4 Scope of Supply by Others

The following items are for supply by buyer and will include but are not limited to:

- overall plant design responsibility
- review and approval of design parameters related to the biological process and/or membrane separation system
- review and approval of SUEZ-supplied tank and equipment drawings and specifications
- detail drawings of all termination points where SUEZ equipment or materials tie into equipment or materials supplied by buyer
- design, supply and installation of lifting devices including overhead traveling bridge crane able to lift 10,000 lb for membrane removal, lifting davits c/w a hoist.
- civil works, provision of main plant tank structure, buildings, equipment foundation pads etc. including but not limited to:

- common channels, housekeeping pads, equipment access platforms, walkways, handrails, stairs etc.
- equalization tank – as required
- bioreactor tank – complete with anoxic and aerobic zones
- scum box and associated pumps and instrument

- membrane tanks c/w tank solid covers and their support over membrane tanks.
- Based on Addendum #1 dated June 29, 2022, the following valves and piping inside the membrane tanks:

Valves and Piping inside Membrane Tanks	
4	Permeate headers (316 SS)
24	Permeate collection piping (8") and Straub couplings
24	Permeate isolation butterfly valves (8")
4	Air headers (304 SS)
24	Air distribution piping (6") and Straub couplings
24	Air isolation butterfly valves (3")
4	Air automatic isolation valves with limit switches

- treated water storage tank, as required
- HVAC equipment design, specifications and installation (where applicable)
- UPS, power conditioner, emergency power supply and specification (where applicable)
- 2 mm punched-hole pretreatment fine screens
- Starters and MCC for all SUEZ supplied equipment
- plant SCADA system
- process and utilities piping, pipe supports, hangers, valves, etc. including but not limited to:
  - piping, pipe supports and valves between SUEZ-supplied equipment and other plant process equipment
  - piping between any loose-supplied SUEZ equipment
  - process tank aeration system air piping, equalization tank system piping, etc.
  - interconnecting piping between SUEZ-supplied skidded equipment and tanks (as applicable)
- electrical wiring, conduit and other appurtenances required to provide power connections as required from the electrical power source to the SUEZ control panel and from the control panel to any electrical equipment, pump motors and instruments external to the SUEZ-supplied enclosure

- supply and installation of suitable, secure remote internet connection for 24/7 emergency telephone technical support service and InSight remote monitoring & diagnostics service
- design, supply and installation of equipment anchor bolts and fasteners for SUEZ supplied equipment, all seismic structural analysis and anchor bolt sizing.
- receiving (confirmation versus packing list), unloading and safe storage of SUEZ-supplied equipment at site until ready for installation
- installation on site of all SUEZ supplied loose-shipped equipment
- alignment of rotating equipment
- lubricating oil for all rotating equipment
- raw materials, chemicals, and utilities during equipment start-up and operation
- disposal of initial start-up wastewater and associated chemicals
- supply of seed sludge for biological process start-up purposes
- laboratory services, operating and maintenance personnel during equipment checkout, start-up and operation
- touch up primer and finish paint surfaces on equipment as required at the completion of the project
- weather protection as required for all SUEZ-supplied equipment. Skids and electrical panels are designed for indoor operation and will need shelter from the elements.

3.b SUEZ Membrane Module and Cassette

Cassette Properties

Table 1: Cassette Dimensions

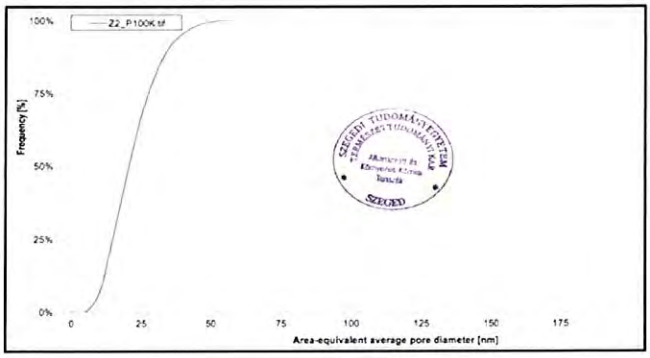
Product	Width (A) mm (in)	Length (B) mm (in)	Height (C) mm (in)
500EV-64M	1,744 (68.7)	2,136 (84.1)	2,735 (107.7)
500D-52M			2,562 (100.9)

Table 2: Cassette Tie Points and Weights

Application	Product	Max. # of Modules	Min. # of Modules	Permeate Connection	Air Connection	Max. Shipping Weight [1] kg (lb)	Wet Weight [2] kg (lb)	Lifting Design Weight [3] kg (lb)	Cassette Material [4]
LEAPmbr	EV-64M	64	32	1 x 8" vert. pipe	1 x 3" FNPT half coupling	2,091 (4,610)	2,329 (5,135)	4,536 (10,000)	316L SS frame with engineered plastics
	D-52M	52	26	1 x 6" vert. pipe	1 x 3" FNPT half coupling	1,892 (4,172)	2,184 (4,816)	4,536 (10,000)	

[1] Crated with maximum number of modules

[2] Wet weight of a clean, fully populated cassette. Lower module population will reduce this value. Cassette support method and lifting module can also vary this weight, depending on design. An estimate is used based on several standard designs.



[3] Product lifting design weight assumes a fully populated cassette with solids accumulation, standard lifting module and hanging arms. Alternative support and lifting methods could vary this value.

[4] Alternative grades of stainless steel offered for cassettes are 304L, 2205 and SMO254 as required.

Membrane Properties

Membrane cross-section

3rd party certified UF pore size

Table 3: module dimensions

Application	Product	Width – A mm (in)	Length- B mm (in) Header-to-Header	Depth – C mm (in)
MBR	500EV	861 (33.9)	2,051 (80.7)	51 (2.0)
	500D	844 (33.2)	1,940 (76.4)	49 (1.9)

Table 4: Module Properties

Application	Membrane Surface Area m² (ft²)	Lifting Weight [1] kg (lb)	Material	Nominal Pore Size [2] (µm)	Fiber Diameter [3] (mm)	Surface Properties	Fiber Tensile Strength [4] (N)	Flow Path
MBR	500EV 49.2 (530)	29 (64)	PVDF	0.04	2.2	Non-ionic & Hydrophilic	>600	Submerged, Outside-In
	500D 40.0 (430)	28 (61)						

[1] Clean wet weight excluding any solids accumulation

[2] Nominal pore size is often rounded to 40nm (0.04 micron) for simplicity.

[3] Fiber dimensions have been rounded to the nearest decimal place for simplicity.

[4] Tensile strength measured using a modification of ASTM protocol (D 3822)

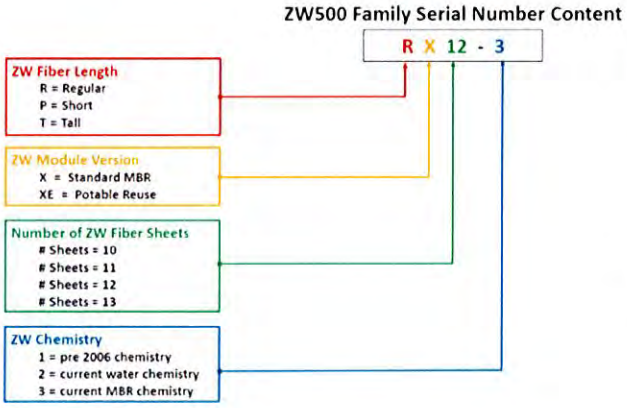


Table 5: Operating & Cleaning Specifications [1]

Application	TMP Range kPa (psig)	Typ. Aeration Nm³/h/cassette (scfm/cassette)	Max. Operating Temp. °C (°F)	Operating pH Range	Backpulse Type	Max. Cleaning Temp. °C (°F)	Cleaning pH Range	Max. lifetime exposure Cl2 (ppm)
MBR	-55 to 55 (-8 to +8)	500EV 222-445 Nm³/h (132-264 SCFM) 500D 182-363 Nm³/h (108-215 SCFM)	40 (104)	5.0-9.5	Relax Aeration (Standard) Backpulse-capable (as-required)	40 (104)	2.0 – 10.5 (<30°C) 2.0 -10.0 (30-40°C)	1,000,000

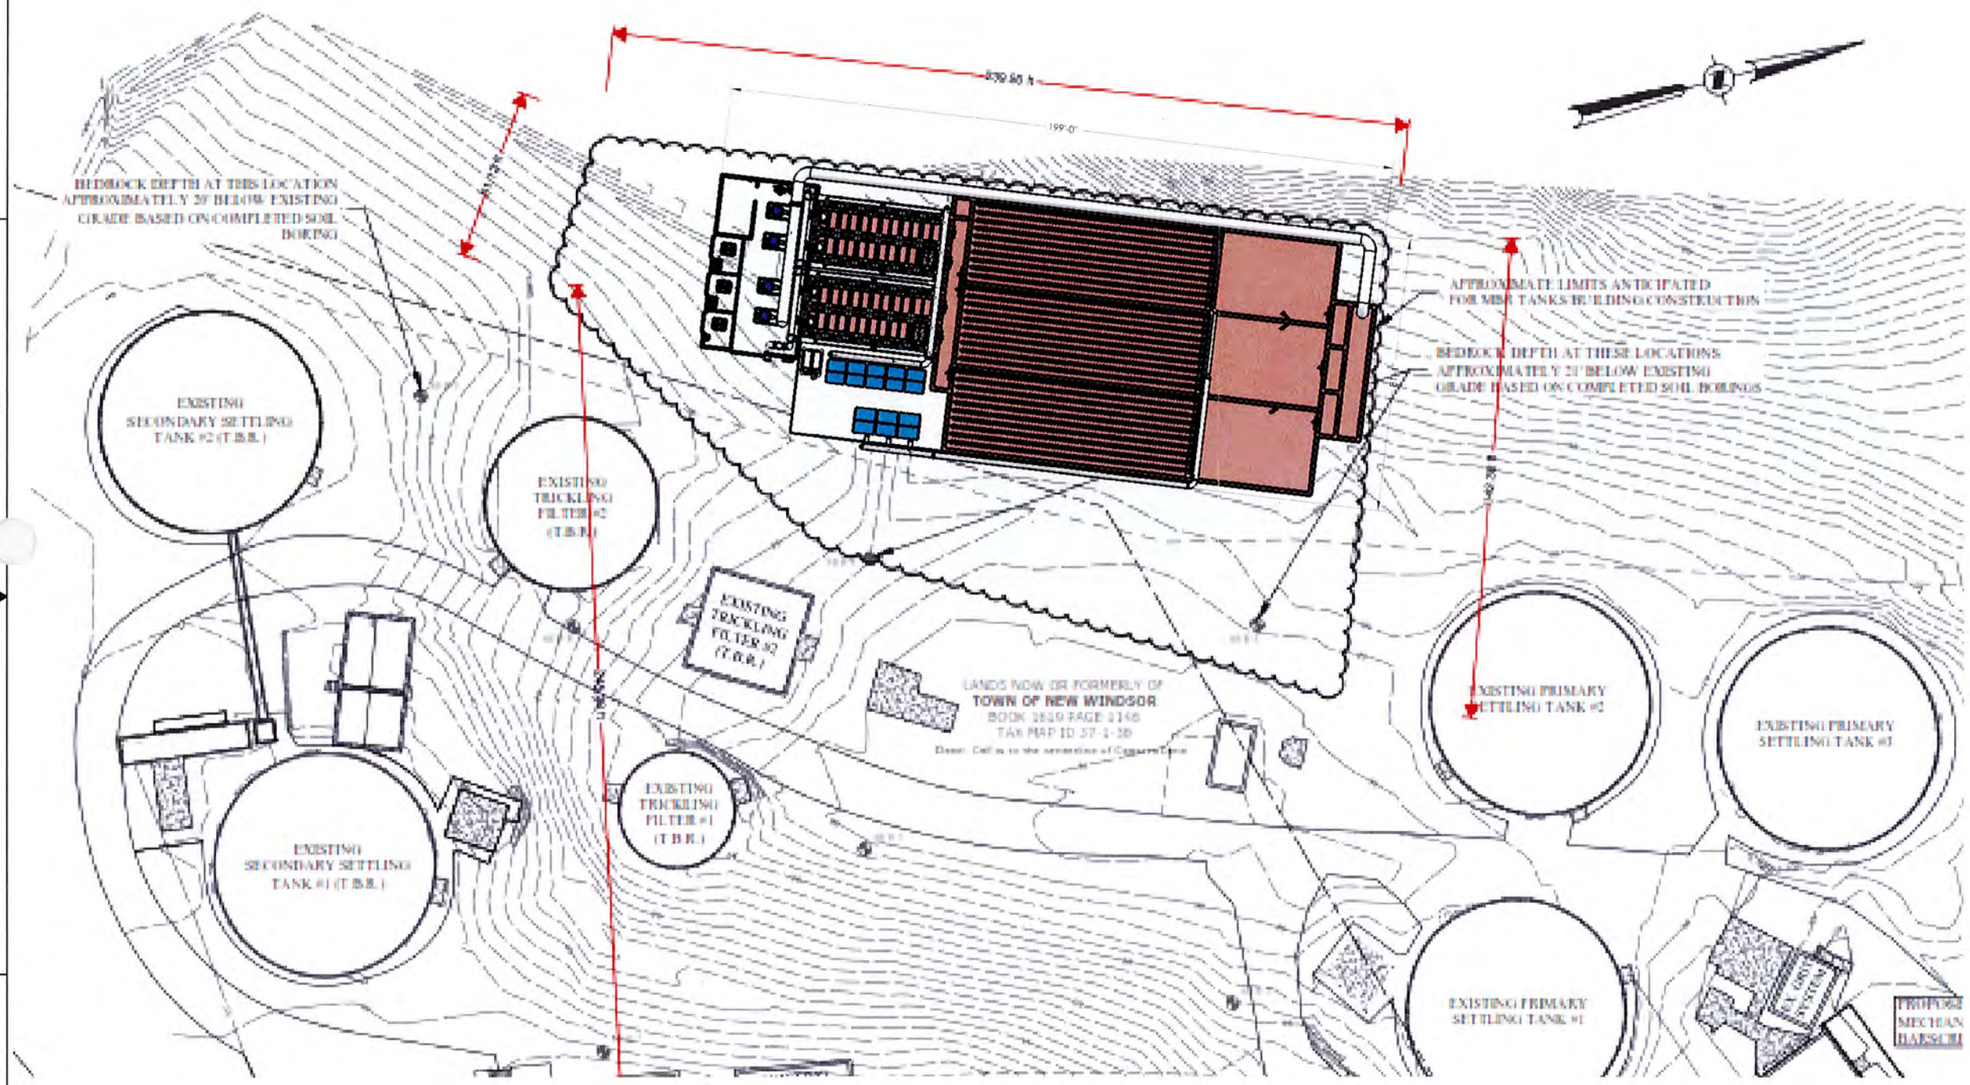
[1] Cassettes can be populated with 26 to 52 modules (500D), or 32 to 64 modules (500EV). Normalized ADF flow for fully populated cassette at 150m ASL, 20°C wastewater temperature. Delivered value at modules will differ based on site conditions. Lower cassette populations will have a lower aeration rate.

ZeeWeed 500 Series Products

The ZeeWeed 500 series of membranes have been applied to MBR applications since 1997 when the ZW500A was introduced. There are four products within the current 5th generation – the ZW500M (laboratory use), ZW500S, ZW500D and ZW500EV. All ZeeWeed 500 series MBR products use the same PVDF chemistry formulation, designed specifically for membrane bioreactor application.

ZeeWeed 500 Product Identification

All ZeeWeed 500 series products have a product type identification code tied to the product specification. The code provides information on the version of the module, the fiber length, the number of sheets, and the membrane chemistry. It is typically found with the module serial number and takes the format of 1 to 3 letters, a number, and usually, but not always, a dash and third number.



Contact Us

If you would like to learn more about how SUEZ can provide MBR solutions for your large municipal projects, contact your SUEZ representative or visit our website.

NOTES:

1. ALL DOTTED-LINE EQUIPMENT TO BE SUPPLIED BY OTHERS ---------- VERIFICATION OF ANY POSTED VALUES IS THE RESPONSIBILITY OF THE SYSTEM INTEGRATOR.
2. THE ACTUAL BLOWER DISCHARGE PRESSURE IS DETERMINED BASED ON MAXIMUM POSSIBLE LIQUID LEVEL IN TANKS BEING AERATED.
3. SYSTEM INTEGRATOR IS RESPONSIBLE FOR HOT AIR PIPE THERMO-INSULATION AS APPLICABLE.
4. BLOWER DISCHARGE FLEXIBLE SLEEVE.
5. ALL EQUIPMENT ON THIS SHEET IS DESIGNED TO BE INSTALLED IN A NON-CLASSIFIED AREA (PER NFPA 820).
6. EQUIPMENT IS PROVIDED BY SUEZ (UNLESS OTHERWISE NOTED). INTERCONNECTING PIPING/WIRING AND INSTALLATION BY OTHERS.
7. A PORTION OF THE AIR LINE NEEDS TO BE ROUTED A MINIMUM OF 2 FT HIGHER THAN THE MAXIMUM TANK LEVEL TO PREVENT WATER BACKFLOW.
8. FINAL SIZING AND DESIGN TO BE VERIFIED DURING DETAILED PROJECT ENGINEERING.

INTERNAL LENGTH	480"	INCH
INTERNAL WIDTH	96"	INCH
TOTAL DEPTH	156"	INCH
MAX OPERATING LIQUID LEVEL	128"	INCH
MIN OPERATING LIQUID LEVEL	108"	INCH
CLEANING LEVEL	95"	INCH
TOP OF FIBERS (LSL) ELEVATION	92.3"	INCH

MEMBRANE DATA	
CASSETTE AND MODULE SERIES	ZW500 – LEAP
MODULE SURFACE AREA	530 FT2
MAX # OF MEMBRANE MODULES PER CASSETTE	64
# OF CASSETTE SPACES PER TANK	6
MAX # OF MEMBRANE MODULES PER TANK	384
TOTAL # OF MODULES INSTALLED PER TRAIN	352
TOTAL # OF MODULES INSTALLED PER PLANT	1408
TOTAL # OF CASSETTES INSTALLED PER PLANT	24
SPARE SPACE	8.3%

NOTES:

1. ALL DOTTED-LINE EQUIPMENT BY OTHERS. STAINLESS STEEL PIPING OPTIONAL. VERIFICATION OF ANY POSTED VALUES IS THE RESPONSIBILITY OF THE SYSTEM INTEGRATOR.
2. DRAWING TYPICAL FOR EACH MEMBRANE TRAIN WITH EXCEPTION OF THE COMMON CHANNEL. THERE ARE 4 MEMBRANE TRAINS IN TOTAL, X = 1, 2, 3 AND 4.
3. A PORTION OF THE AIR LINE NEEDS TO BE ROUTED A MINIMUM OF 2 FT (610 MM) ABOVE MAXIMUM LIQUID LEVEL IN TANK BEING AERATED TO PREVENT WATER BACK FLOW.
4. ALL EQUIPMENT ON THIS SHEET IS DESIGNED TO BE INSTALLED IN A NON-CLASSIFIED AREA (PER NFPA 820).
5. BOTH EJECTOR AND INSTRUMENT AIR SUPPLY ASSEMBLIES ARE TO BE LOCATED INDOORS OR TO BE TEMPERATURE AND UV PROTECTED.
6. CONNECTION TO BE PROVIDED AT HIGHEST POINT ON PIPING BETWEEN PERMEATE HEADER AND PUMP.
7. AIR GAP IS REQUIRED ON EJECTOR DISCHARGE LINE EXHAUST TO MEMBRANE TANK OR DRAIN.
8. KNIFE GATE VALVES ARE RECOMMENDED FOR ALL WASTE WATER AND SLUDGE APPLICATIONS. UNDER CERTAIN CIRCUMSTANCES, BUTTERFLY VALVES COULD BE ACCEPTABLE; THIS WILL BE A MUTUAL DECISION BETWEEN CUSTOMER AND SUEZ ENGINEERS.
9. TANK RAS/WAS/DRAIN VALVES ARE RECOMMENDED TO BE FULL LUG STYLE.
10. MEMBRANE TANK SPLITTER CHANNEL IS COMMON FOR ALL TRAINS, AND PROVIDES A HYDRAULIC LINK AND EVEN DISTRIBUTION.
11. LEVEL SWITCH IS PLACED 1 FT BELOW THE TOP OF THE TANK.
12. TANK COVERS(BY OTHERS) ARE REQUIRED; NOT SHOWN FOR CLARITY.
13. BASED ON ADDENDUM #1 DATED JUNE 29,2022, ALL VALVES AND PIPING INSIDE MEMBRANE TANKS ARE BY THE CONTRACTOR.
14. FINAL SIZING AND DESIGN TO BE VERIFIED DURING DETAILED PROJECT ENGINEERING.

3.h Design Calculation Report

3.h.1 Membrane Surface Area, Membrane Bioreactor Tank Size

3.h.1.1 Membrane Surface Area

SUEZ's ZeeWeed 500 wastewater membrane will be used for this project. The flux selection is conservative and reflects years of full-scale experience and research and development. Similar design fluxes can be found in Section 2.d – Reference Installations.

Parameter	Unit	Flow Condition					
		ADF	MMF	MDF	PHF	MMF N-1	MDF N-1
Flow	mgd	**5**	**8**	**11**	**16**	**8**	**11**
Number of mem. trains in operation	#	3	4	4	4	3	3
Duration of the condition		No limit	≤ 30 days	≤ 1 day	≤ 1 hour	≤ 7 days	≤ 1 day
Minimum design temperature	°C	10					
SUEZ typical maximum allowable net flux	gfd	12.5	13.9	19.6	22.2	16.7	19.6
Selected net flux	gfd	8.9	10.7	14.7	22.1	14.3	19.6
Selected flux below Max flux by:	%	28.5	22.9	24.8	0.4	14.4	0
Membrane tank spare space	%	8.3					

As shown in the table above, the selected membrane design strikes a balance between providing flux 'bandwidth' during longer-duration flow conditions, such as ADF and MMF, while respecting flux cap requirements at the more intermittent but critical peak-flow and N-1 flow conditions. There is ~ 8% available membrane module space in each membrane tank for flux reduction if required. However, there is also "in-built spare space" in that there is the safety factor of sizing the membranes such that operating fluxes during sustained flow conditions are significantly lower than our guideline maximums for the minimum design temperature.

Presented below is a reverse calculation of the flows to demonstrate that with the selected net fluxes, the design flows will be achieved.

Parameter	Unit	Flow Condition					
		ADF	MMF	MDF	PHF	MMF N-1	MDF N-1
Selected net flux	gfd	8.9	10.7	14.7	22.1	14.3	19.6
Number of mem. trains in operation	#	3	4	4	4	3	3
Installed modules per train	#	352					
Membrane module area	ft^2	530					
Membrane area per train	ft^2	186,560					
Net flow per train	mgd	**1.66**	**2.0**	**2.75**	**4.13**	**2.66**	**3.67**
Plant flow	mgd	**5**	**8**	**11**	**16.5**	**8**	**11**

Each of the flows was calculated as follows:

Flow (mgd) = Flux (gfd) x Membrane Area (ft^2) / 1,000,000 (gal/Mgal).

As shown, the calculated net plant flows match the design flows.

3.h.1.2 Membrane Tank Size

To house 364 membrane modules per train we will use six (6) cassette frames, each of which can carry a maximum of 64 modules for a total maximum per train of 384 modules.

Each ZW500 cassette has dimensions of 84.1" (7') L x 68.7" (5.72') W x 107.7" (8.97') H.

Standard membrane tank dimensions SUEZ would propose for 6 x 64-module cassettes in this configuration, based on cassette dimensions, clearances around the cassettes, and sufficient space for appurtenances such as RAS piping inverts, air/permeate downcomers, etc., are:

- L = 40 feet
- W = 8 feet
- H = 13 feet

3.h.2 Flow, Flux, And Transmembrane Pressure (TMP) per Unit and Number of Units at Design Conditions Including ADF, PHF, MDF, MMAF, MLSS, and Water Temperature.

Per the request, all the indicated parameters are summarized in the table below.

Parameter	Unit	Flow Condition					
		ADF	MMF	MDF	PHF	MMF N-1	MDF N-1
Plant daily flow	mgd	**5**	**8**	**11**	**16.5**	**8**	**11**
Minimum design temperature	°C	10					
Number of mem. trains in operation	#	3	4	4	4	3	3
Resulting net flux	gfd	8.9	10.7	14.7	22.1	14.3	19.6
Design MLSS concentration	mg/L	10,625	10,625	12,750	12,750	11,900	12,750
TMP estimate at startup (avg.)	psi	**0.6**	**0.75**	**1.2**	**2**	**1.2**	**1.75**

3.h.3 Membrane Scour Air Flow and Pressure Requirements for Normal Operation, Backwashing, and Cleaning.

Per the request, all the indicated parameters are summarized in the table below.

Parameter	Unit	Flow Condition					
		ADF	MMF	MDF	PHF	MMF N-1	MDF N-1
Plant daily flow	mgd	**5**	**8**	**11**	**16.5**	**8**	**11**
Number of mem. trains in operation	#	3	4	4	4	3	3
Airflow – LEAP Lo or Hi	n/a	Lo	Lo	Hi	Hi	Hi	Hi
Airflow per train	scfm	674	674	1,348	1,348	1,348	1,348
Airflow per plant	scfm	2,022	2,696	5,392	5,392	4,044	4,044
Blower discharge pressure	psig	4.65	4.65	5.5	5.5	5.5	5.5

Please note that airflow/pressure during backpulsing or cleaning sequence (at their steps where aeration is required) will remain the same as in the preceding production cycle.

3.h.4 Description of the System Design Flexibility and Ability to Consistently Meet Permit and Redundancy Requirements over Range of Design Influent Flow and Load Conditions

The proposed system is specifically configured to meet the effluent requirements at both the design flows/loads (MMAF) as well as during more challenging peaking events such as MDF and PHF. As required, the biotreatment process was sized on Maximum Monthly Daily Flow and water quality characteristics, with a 13-day total aerobic solids retention time (SRT; counting aerobic tanks and membrane tanks). This SRT incorporates a safety factor of over 50% versus the recommended minimum SRT to achieve nitrification to less than 1 mg/L of ammonia-N at the 10 °C design temperature – i.e. below both the summer and winter treatment requirements of ≤ 1.2 and ≤ 1.8 mg/L ammonia-N. As such, the biological process design has the capacity to accommodate ammonia loads that may exceed the 'average' water quality design conditions. To be conservative, the performance of the biological treatment process under maximum day flow (MDF) was modelled in Biowin 6.2 assuming that the MMAF design influent concentrations apply – i.e. that the wastewater load increases linearly between MMAF and MDF flows. This is typically not the case, as the main causes of increased MDF flow, such as storm events and/or snowmelt, tend to result in dilution of the municipal wastewater, and influent loads of BOD_5, TSS, TKN, etc., that do not scale up in proportion to temporarily increased flow. At MDF, an aerobic SRT of 9 days is maintained, which represents – with 25% safety factor – the SRT required at 10 °C to achieve nitrification to < 1 mg/L of ammonia-N. Therefore, even if the maximum day flow was to occur at the minimum wastewater temperature with a conservatively high load of ammonia, the biological treatment system is sized to meet the stricter of the two permeate ammonia requirements – i.e. ≤ 1.2 mg/L. Likewise, the biological treatment train's BOD_5 removal performance under all modelled flow conditions (ADF, MMAF, MDF) at the minimum design temperature and assuming the design influent BOD_5 concentration of 98 mg/L applies at all flowrate was routinely < 1 mg/L, versus a treatment requirement of BOD_5 ≤ 5 mg/L.

The design specifications noted a minimum plant flow of 3.0 MGD. While the duration of minimum flow was not stated, even if this represents a prolonged condition, SUEZ's ZeeWeed MBR systems do not require a minimum MLSS concentration threshold for the membranes to be able to achieve the required effluent quality. Our ultrafiltration membranes have a nominal pore size of 0.04 micron. Therefore, at low flows, lower sludge concentrations can be maintained in the bioreactor tanks to maintain an F:M ratio in the range of 0.1-0.2 lb BOD/lb MLVSS without pore fouling or turbidity exceedances.

With regards to flexibility, the membrane design allows for the system to be run at the ADF condition with a membrane train offline indefinitely; and during higher flow conditions such as MMAF and MDF, the system can run with N-1 membrane trains online for up to 7 days, and 24 hours, respectively. This redundancy allows for a membrane train to be temporarily removed from service for cleaning or for emergency maintenance/repair operations during critical maximum day and maximum month flows, while allowing for a membrane train to be constantly offline – for maintenance or for energy savings – during periods of average daily flows. Note that at the minimum design

flow of 3.0 MGD, or at the ADF flow of 5.0 MGD and wastewater temperatures > 12 °C, only two membrane trains need to be in production; the remaining two can be in standby, or the membrane trains can rotate between duty and standby. An alternate approach is to keep all 4 membrane trains online even during flows at or below ADF – by running all of the membranes continuously, but at low flux, the already-long ZW500 membrane life can be further enhanced.

Depending on the length of an off-line period, procedures for membrane train inactivity can vary for short- and long-term durations.

For short durations offline (days to weeks) due to low flow, membrane trains are typically alternated, with each train remaining available for service if required. The standby membrane train will be automatically aerated twice per hour for 2-5 minutes. Mixed liquor is also periodically introduced to ensure sludge consistency and prevent sludge degradation due to endogenous respiration processes.

For a long duration (weeks to months), the out-of-service membrane train can be drained of mixed liquor, recovery cleaned and filled with permeate. For this scenario, a minimal chlorine dose should be maintained in the tank to prevent biological growth on the membrane fibers and tank walls. Sodium hypochlorite can be used for this purpose. It can be pumped into the tank through the membranes (similar to membrane cleaning). After that, LEAP Lo aeration should be turned on for 2-5 minutes for mixing the chemical with water. Air mixing for longer than that is not recommended (to prevent air stripping of chlorine). Chemical addition can be done intermittently to ensure the chlorine residual is maintained above 2-3 mg/L. If required, the PLC can be programmed to automatically complete these functions.

Dry storage of the membranes for long periods of time, while possible, is not recommended as it entails the labor-intensive procedure of refilling the membrane fibers with a glycerin solution. SUEZ should be contacted for guidance and/or service and support if the membranes are to be dry stored.

3.i Membrane Operation and Cleaning

3.i.1 Membrane Operation

Filtration

Ultrafiltration, or permeation, consists of drawing clean water from the mixed liquor through the membrane fibers via the permeate piping and siphon control valve and discharging it into the common siphon header. During normal operation, the membrane filtration system is operated with a repeated filtration cycle consisting of a production period (permeation) followed by a relaxation or backpulse period. Under normal conditions the system is operated in relaxation mode, where the vacuum pressure across the membrane is briefly stopped, allowing solids to release, and be scoured away from the membrane surface. During start-up or conditions of poor sludge filterability, the system can be operated in backpulse mode if required to provide a more powerful means of removing solids from the surfaces of the membrane fibers.

Relaxation

Under normal operating conditions, the ZeeWeed membrane filtration system operates on a 10 -15 minute permeation cycle followed by a relaxation (no flow) for 30-60 seconds. During relaxation, the siphon control valve closes, and the membranes are allowed to relax with aeration for a short period. Neither chemicals nor backpulsing are used during the relaxation cycle.

Backpulse

While the ZeeWeed MBR normally operates in Relaxation, inclusion of backpulse equipment allows the plant operator to select Backpulse mode, if required. Whereas most flat plate manufacturers cannot backpulse without risk of damaging the seam between the membrane and supporting panel, the reinforced ZeeWeed hollow fiber membrane is designed to allow flow reversal through the membrane (i.e., backpulse). This provides more effective physical cleaning of the membrane and can be used when warranted by operating conditions.

3.i.2 Membrane Cleaning

Key to a successful wastewater MBR design is the ability to operate consistently, even during extreme operating conditions, without significant operator attention. A membrane filtration system must therefore be designed with cleaning systems to support both normal operation and periodic process upset events.

When a membrane bioreactor system experiences process upsets due to variations in the composition of the feed water quality, the membranes **must** be able to respond. The ability to clean the membranes quickly is critical to ensure a smooth operating plant. ZeeWeed membrane modules are purposely designed with a flexible reinforced hollow fiber geometry which allows automatic membrane cleaning, as required, to maintain reliable and continuous operation. This feature ensures that the ZeeWeed MBR system is always online and prepared for any operating condition.

The ZeeWeed MBR membrane cleaning "toolkit" consists of chemical and non-chemical cleaning features including the following:

We offer several cleaning strategies to maintain the membranes in an optimum condition.

- ❑ low energy, low maintenance LEAPmbr air scour
- ❑ energy saving relax mode
- ❑ ability to backpulse with or without cleaning chemicals
- ❑ ability to isolate individual membrane trains to perform extended chemical soak cleaning (recovery cleaning)
- ❑ ability to maintain treatment capacity during cleaning
- ❑ ability to easily clean quickly, within minutes, remotely from the control room or the MCP, without operator action.
- ❑ ability to begin permeating immediately after cleaning without having to form a filtering "gel" layer on the membranes to achieve product water quality requirements, as would be the case for microfilters and flat sheet membranes.
- ❑ ability to remove individual membrane cassettes or individual membrane modules from the process tank during operation for manual inspection without lowering normal tank operating levels or turning off permeate pumps
- ❑ ability to manually clean the membranes, if necessary, without complicated membrane cleaning machinery or fear of damaging the membranes.

The **Caesars Lane MBR** design will incorporate two fully automated types of chemical cleaning – shorter duration, lower concentration Maintenance Cleans (MCs) and longer duration, higher concentration Recovery Cleans (RCs) to optimize membrane performance and longevity. **All cleaning is performed in-situ**.

Several membrane competitors utilize out of tank membrane cleaning instead of maintenance or recovery cleaning as described below:

- In February and March of 2006 The WWTP Experienced Several Thickening Events that Impaired the Membranes
- The Upset was due to a Combination of Conditions that Occurred Simultaneously
- The Remedy for this Unlikely Event was to Remove and Individually Clean all 17,600 Membrane Panels
- Physical and Operational Changes were Implemented to Correct the Problem

Converting a Small WWTP to MBR Treatment Process: Village of New Dundee, Arcadis, 2006

Our competitors may also state that annual or semi-annual recovery chemical cleaning is not required for their membrane systems. Unfortunately, this hasn't proven to be correct.

Kubota proposed no recovery cleans. Past 10-years of operation demonstrates recovery cleans are necessary.

FLEIS&VANDENBRINK

Excerpt: Table 2. Leoni WWTP Membrane Comparison Table, Kubota SP600, Report to Leoni Township prepared by Robert W. Wilcox, P.E., Fleis & Vandenbrink, March 19, 2020. Tel: 616.977.1000

Maintenance Cleaning

The goal of regularly scheduled maintenance cleaning is to maintain sustainable operating TMP and therefore increase the interval between recovery cleanings. The maintenance clean is performed with a low chemical concentration over a short duration, without any need to drain mixed liquor from the membrane tanks. The maintenance cleaning procedure is **entirely automated** and typically scheduled to occur during off-peak hours of the day. The operator can set it to be performed when they prefer.

When performing the maintenance cleaning procedure, the feed to the membrane tank is stopped and the train is aerated for five minutes. Over a series of pulse and relax cycles, the chemical solution is backpulsed through the membranes for ~40 mins total. There is a final backpulse for 2 minutes with permeate only to flush the headers and membranes, followed by 5 minutes of aeration. When the maintenance cleaning procedure is completed, the isolation valves are opened, and the train is brought back into service.

The following table summarizes the maintenance cleaning frequency and duration anticipated for the **Caesars Lane MBR** system. Sodium hypochlorite has been chosen for MCs to control and remove biological foulants, which dominate in typical municipal wastewater treatment settings such as Caesars Lane. Given that the usage of metal-based coagulants is not planned for the biological treatment process, nor does the raw wastewater have excessive alkalinity/hardness, citric acid MCs for inorganic foulant removal are not required. However, the chemical dosing pumps that have been chosen for dosing citric acid RCs (see below) are equally capable of dosing citric acid for MCs if the latter are ever required or desired.

Maintenance Cleaning Information

Maintenance Cleaning	Sodium Hypochlorite (10.3% w/w)
Anticipated frequency	Once per week
Anticipated concentration	200 ppm
Train status	Offline for < 60 minutes
Disposal requirement	None (1)

Note:
1) Cleaning chemical solution is consumed by mixed liquor during the clean (cleaning is performed in situ without tank drain).

Recovery Cleaning

Recovery cleans are performed at higher concentrations of chemicals than MCs, with a longer duration of chemical contact. The cassettes are cleaned in-situ, one train at a time. The train to be cleaned is isolated from the rest of the system, permeation from that train

is suspended, but aeration is continued for a short period to remove solids away from the membrane surface. The mixed liquor in the membrane tank represents a small portion of the total mixed liquor volume and is transferred to the front of the treatment plant (bioreactor).

The membrane tank is filled with permeate and drained to wash residual solids from the tank. Cleaning chemicals are pumped into the tank through the membranes, and finally permeate is used to top up the membrane tank to fully submerge the fibers. The membranes are then soaked in cleaning solution for a period of 6–16 hours, at the operator's preference – 6 hours is sufficient, but some operators prefer overnight soaks for convenience. This extended soak time using higher concentrations of cleaning chemical provides more robust removal of membrane foulants than MCs. Subsequently, the tank contents can be neutralized by letting in some mixed liquor and aerating for mixing if required. Otherwise, the sequence can be repeated with the other chemical, if needed, or the train can be returned to production.

The table below details the recovery cleaning frequency and duration anticipated for the **Caesars Lane MBR** system.

Recovery Cleaning Information

Recovery Clean	Sodium Hypochlorite (10.3% w/w)	Citric Acid (50% w/w)
Anticipated frequency	Twice per year	Twice per year
Anticipated concentration	1,000 ppm	2,000 ppm
Train status	Offline for 6 – 12 hours	Offline for 6 – 12 hours
Disposal requirement	None (1)	None (1)

Note:

1) Cleaning chemical solution is neutralized by mixed liquor as the clean is completed.

The estimated membrane cleaning chemical consumption is shown in Table A-5, A-6, and A-7 in the Bid Worksheets of Section 6.

3.j Fine Screen Requirements

Based on the Preselection Documents a maximum screen aperture of 2 mm with punched hole or woven wire mesh will be incorporated into the facility by the General Contractor. The 2 mm punched hole or woven wire mesh screening recommendation is consistent with SUEZ's extensive experience evaluating the performance of various screen types and opening sizes, as well as the cost, commercial availability, and performance of each.

SUEZ notes that other membrane systems may require 1 mm or finer screens. These can result in increased hydraulic losses and increased maintenance, and are not required for the SUEZ membrane system.

SUEZ also notes that re-screening of the mixed liquor is not proposed, or required for the SUEZ membrane system.

3.k Preliminary Schedule

SUEZ has provided a timeline for the major project milestones that is compliant with Table 3-1: Project Schedule in the specification. A detailed project schedule will be developed after Notice to Proceed.

Table 3-1 (From Section 455000)

Deliverable	Due Date
Design Submittals Schedule Update	To be completed within 15 days after Notice to Proceed
Design Kick-off Meeting	To be completed within 20 days after Notice to Proceed
Bi-Weekly Status Conference Calls	For duration of design scope
Submittal of 50% Design and Shop Submittals	12 weeks after Notice to Proceed
Submittal of 100% Design Documents	16 weeks after Notice to Proceed
Fabrication and Delivery	Per Contractor's schedule, construction contract anticipated to bid in March 2024 with Notice to Proceed in June 2024. Refer to Section 3.k.2
Mechanical Inspection	Per Contractor's schedule
Start-Up, Testing and Commissioning	To be scheduled after successful completion of Mechanical Inspection
Demonstration/Performance Test	To be scheduled after successful start-up and testing
Operations and Maintenance Manuals	A minimum of 14 days prior to start of training
Training	Training to be provided at the conclusion of System Startup

3.k.1 Design Submittals

The 50% Design and Shop Drawing Submittal will comprise mechanical submittals outlined in Section 3.a.2.1 Engineering Services. The 100% Design and Shop Drawing Submittal will comprise the electrical submittals outlined in Section 3.a.2.1

SUEZ has assumed that the MHE and the Town of New Windsor will review and return the shop drawing submittals promptly (2-4 weeks) and that partial submittals will be acceptable.

3.k.2 PLC Programming and HMI Screens

Functional descriptions, control narratives and operations sequence charts will be provided with the 100% Design and Shop Drawing Submittal. SUEZ will complete PLC programming for the supplied system after review and approval of this submission. Ideally, PLC programming and development of HMI screens will be completed in coordination with either MHE, or the Town's SCADA integrator during construction. If required, SUEZ can provide PLC Programming and HMI Screens for the Caesars Lane MBR within 30 weeks after NTP.

3.k.3 Equipment Shipment

Seller has assumed the following minimum durations associated with the shipment schedule.

- Shipment of Equipment – 30-55 weeks from NTP with Manufacture of Equipment (partial shipments allowed) being provided by the Installation Contractor.
- Shipment of Membranes – Membranes will ship immediately prior to their installation on-site and commissioning. This will be coordinated in advance with the Installation Contractor in accordance with the project schedule.

SUEZ has assumed that NTP to Manufacture Equipment will be provided to SUEZ by the Installation Contractor within 90 days of award by the Town of New Windsor to proceed with construction of the project.

SUEZ would like to note that under the current exceptional circumstances under the COVID 19 Pandemic situation, SUEZ may not be in a position to guarantee and comply with the planned schedule for project delivery or performance and that should there be any new measures taken by any governmental authority which may impede or delay the said schedule or performance, SUEZ reserves the right to modify the schedule / contract accordingly. SUEZ will promptly inform you of any changes which may impact the contract or the project.

4 Training Service

SUEZ has developed numerous operator training courses, each catered to the individual needs of its client. The training included by SUEZ will empower the staff to operate the membrane system proficiently and confidently.

Client training packages are developed, maintained, and delivered by the commissioning group. SUEZ has full-time training experts responsible for training methodologies and curriculum development.

Shadowing: During the commissioning and start-up of the system and for membrane installation, SUEZ recommends that an operator representative shadows the field service representative. Shadowing provides superior operator understanding and confidence in all aspects of membrane system operation. Our partner-focused field service representatives will instruct a "shadow" operator over the course of start-up and commissioning.

Classroom: SUEZ will conduct classroom training at the facility. It is recommended that this section of training is conducted prior to the completion of commissioning, but after the installation of membranes, so that the information learned is quickly put into practice and reinforced through actual application on the system.

operator training

One of our training specialists will deliver the classroom training, covering the theory and practice required to operate a SUEZ system. Group sizes of five to ten are optimal for classroom training, but up to twenty people can be accommodated in one session. Material to be covered includes:

- ❑ membrane application theory
- ❑ performance monitoring
- ❑ membrane cleaning theory
- ❑ system controls theory
- ❑ the reasoning method of troubleshooting

SUEZ requires that there be a suitable classroom with associated teaching materials such as blackboards, overhead projectors, pens, pencils, writing pads etc. be available for the duration of the course. It is preferred that, where possible, training be carried out at the plant where the equipment supplied is located.

Hands-on: Immediately following the classroom training, the training specialist will further train the owner's personnel through hands-on operation of the membrane system. The material to be covered includes:

hands-on training

- ❑ use of the computer operator interface
- ❑ plant maintenance
- ❑ instrumentation and equipment maintenance
- ❑ membrane cleaning
- ❑ troubleshooting
- ❑ SUEZ's experience in training shows that groups for hands-on training should be kept to five (5) or less.

Learning Outcomes

Upon successful completion of this learning program the learner will be able to:

- ❑ membrane application and systems control theory;
- ❑ primary flows and equipment functions;
- ❑ navigate the P&IDs to locate components;
- ❑ performance monitoring and membrane cleaning;
- ❑ navigate the Operating Manual and controls documentation;
- ❑ the reasoning method of troubleshooting;
- ❑ use of the computer operator interface (HMI);
- ❑ plant maintenance and preventive steps, and;
- ❑ instrumentation and equipment maintenance.

5 Technical Service and Support

SUEZ is a proven leader in delivering tangible value to our clients over the life of the plant. Our measure of success is how well we deliver solutions that help our clients meet their critical objectives in each and every year of operation.

Through long-acquired membrane experience, SUEZ has clearly distinguished itself from other membrane manufacturers. Mature service culture and deep technical expertise are at the ready to serve and support the **Town of New Windsor** through the entire membrane lifecycle.

5.a Design Service

The proposed SUEZ MBR system has been configured to comply with the specifications. The table below summarizes the allocations for design meetings/workshops and site visits.

Deliverable	Due Date	Suez Personnel	On-Site Days	Location
Design submittals update	To be completed within 15 days after NTP	n/a	n/a	n/a
Design kick-off meeting	To be completed within 20 days after NTP.	Sales manager Project manager Mechanical engineer Process engineer Electrical design engineer Controls engineer Programmer	n/a	Skype/Teams
Bi-weekly status conference calls	For duration of design scope	Sales manager Project manager Mechanical engineer Process engineer	n/a	Skype/Teams
Submittal of 50% design and shop submittals and review meeting	12 weeks after NTP	Sales manager Project manager Mechanical engineer Process engineer Electrical design engineer Controls engineer Programmer	n/a	Skype/Teams
Submittal of 100% design documents	16 weeks after NTP	n/a	n/a	Skype/Teams

5.b Construction, Commissioning, and Training Service

With more than 700 full scale membrane-based water and wastewater plants commissioned and in operation in North America, the commissioning group has developed a powerful infrastructure that provides timely support and management of all commissioning activities.

Throughout commissioning, testing and start-up, we will assign an internal field service supervisor that will support our field service representative (FSR) to ensure rapid response to any on-site issues that may arise.

During the commissioning phase of the project, regular updates will be provided to document site progress. Potential delays, site issues and planning of future activities will be communicated within these reports.

The following is a summary of the on-site technical support services provided by trained SUEZ field service representatives.

SUEZ will provide the owner and contractor with:

- ❑ construction and installation assistance related to SUEZ supplied equipment;
  - recommendations for SUEZ equipment off-loading and installation
  - materials inspection
  - supervision of SUEZ membrane installation
- ❑ assistance with commissioning and start-up of the membrane system;
  - mechanical inspection (prior to commissioning)
  - loop checking, instrumentation and control system verification
  - pipe loss testing
  - clean water permeability testing
  - sludge seeding
- ❑ operator training
- ❑ assistance with the acceptance/performance testing of the system.

The following table outlines the construction, commissioning, and training services to be performed by SUEZ, and the number of days and visits involved.

Deliverable	Due Date	On-Site Days	Location
Fabrication and delivery	Per contractor's schedule, construction contract anticipated to bid in March 2024 with Notice to Proceed in June 2024	n/a	n/a
Mechanical inspection	Per contractor's schedule	5 (1 trip)	Project site
Start-up, testing and commissioning	To be scheduled upon successful completion of mechanical Inspection	45 (4 trips)	Project site
Performance testing	To be scheduled after successful startup and testing.	10 (1 trip)	Project site
Operations and maintenance manuals	A minimum of 14 Days prior to start of training	n/a	n/a
Training	Training to be provided at the conclusion of the system startup	5 (1 trip)	Project site
Total days on site		65	
Total number of trips		7	

Below are brief descriptions of the services during each main stage of execution.

Construction Assistance

A SUEZ representative will meet with the owner and contractor to assist in the following ways:

- ❑ development of a commissioning and start-up schedule and plan;
- ❑ provide guidance with onsite questions related to SUEZ supplied equipment;
- ❑ review resources required during commissioning and start-up;
- ❑ discuss and review control system integration;
- ❑ identification of all SUEZ supplied equipment;
- ❑ ensuring all SUEZ supplied equipment has been delivered in good order and that no damage has occurred during delivery;
- ❑ identification of any discrepancies between the shipping lists and the equipment received;
- ❑ inspection of all SUEZ supplied equipment,
- ❑ inspection of equipment supplied by others (provided it is necessary for the correct operation of the SUEZ system).

Pre-operational Checkout and Testing

After the contractor has completed the installation of the membrane filtration system equipment and provided a completed installation checklist to SUEZ, a commissioning representative will return to site. This visit is to ensure the installation work has been carried out correctly and has reached a degree of completion adequate to allow plant start-up to proceed smoothly and without delays. It will include:

- ❑ Inspection of all wiring to SUEZ supplied equipment (I/O checks);
- ❑ Rotation checks on all SUEZ supplied equipment;
- ❑ Witness flushing of all influent, permeate and backpulse piping using potable/clean;
- ❑ Witness correct operation of prescreening equipment;
- ❑ Setup of SUEZ supplied instrumentation;
- ❑ Stroking SUEZ supplied valves;
- ❑ Verifying operation of SUEZ supplied pumps, blowers and air compressors;
- ❑ Verifying ranges and calibration of SUEZ supplied instrumentation, and;
- ❑ Establishing communication between SUEZ supplied control equipment and control equipment supplied by others.

Following the above, the SUEZ commissioning representative will be present to advise and provide direction to the installation contractor on the preparation and installation of the ZeeWeed membrane cassettes into the membrane tanks.

Once the membranes are installed, the SUEZ commissioning representative will perform testing to validate membrane integrity. Once completed, the membrane system is ready for wet commissioning.

Operator Training

Please see **Section 4** – training service for details.

Start-up Testing

This period will be used to demonstrate that the SUEZ system can meet the discharge requirements during all flow conditions. A SUEZ representative will remain on site to oversee and provide direction to the operations team. The first period will be spent prepping the system, including seeding the bioreactors. The subsequent days will be spent operating the membrane system at ADF, MMF and PDF within 5 percent of their respective design flux. A report on the start-up testing will be provided in the 7 days following completion.

Performance Testing and Follow-up Service

Pending approval of the start-up testing report by the Owner, the operations team will begin operating the plant for the 30-day performance testing. SUEZ will provide one dedicated personnel for onsite support, 24/7 telephone support and remote online monitoring of the system during this performance test period. A performance/acceptance test report will be provided within 30 days after completion of the performance testing with supporting data that indicates that the plant has met all the requirements of the RFP.

After completion of the performance testing, the MBR plant goes into a performance warranty period. In this period, SUEZ will provide 24/7 telephone support and remote online monitoring service to achieve stable MBR operation.

5.c Aftermarket Service

We are ready to put our team to work for the **Caesars Lane MBR** project. When it comes to meeting your post-commissioning service requirements, SUEZ has the depth needed. SUEZ has included the following aftermarket services as part of our bid:

Service	Included in Proposal
Regional Lifecycle Manager	Indefinite
ZeeWeed Users Group	Attendance for one operator for two years is provided
Telephone & PLC code support	Indefinite
24/7 telephone support	10-year
InSight Pro	2-year
Post commissioning service and technical support	First year: 4 days on-site over 2 visits Year 2 to 5: 2 days on-site over 1 visit per year

Partnership Communication

SUEZ knows the importance and long-term implications involved in selecting a membrane supplier. We are committed to continuing to build our partnership with **Orange County** and their operations team and believe communication is the essential ingredient to achieve this as such, we offer the following communication mechanisms:

- ❑ our representative, Sherwood-Logan and Associates;
- ❑ access to a regional lifecycle manager;
- ❑ participation in the ZeeWeed users group;

- ❑ dedicated warranty coordinator, and;
- ❑ technical support.

Regional Lifecycle Manager

The Regional Lifecycle Manager (RLM) will act as the SUEZ Services "quarterback", engaging in frequent communication with plant staff and ensuring timely access to all the technical resources provided by SUEZ. The RLM will also design a schedule and package of services suited to your needs and budget, including:

- ❑ additional years of 24/7 telephone technical support coverage
- ❑ additional years of InSight
- ❑ greater frequency of site visits and or special provisions for emergency site visits
- ❑ plant optimization and plant upgrades
- ❑ membrane replacement planning/budgeting
- ❑ membrane cleaning studies

ZeeWeed Users Group

As an on-going support to ZeeWeed plants, an annual, two-day ZeeWeed users group meeting is organized by SUEZ consisting of formal meetings and a tour of a hosting ZeeWeed plant. New technologies are introduced, current issues are tabled, and roundtable discussions ensue. The users group has become an excellent forum for experienced operators to keep current, to renew old acquaintances, to exchange the "tricks of the trade" with each other, and to impart their knowledge to newer ZeeWeed operators. Generous hospitality combines with informal experiences and exercises to enhance the camaraderie amongst domestic and international plant operators.

ZeeWeed users group meeting in Bonita springs, FL

All ZeeWeed owners are invited to send operators representing their plant. SUEZ covers the conference, food, and hospitality expenses. SUEZ supports this forum to facilitate interaction between ZeeWeed plant operators and to provide real-world feedback to SUEZ's management, design and operations staff.

Warranty Support

To promptly manage warranty claims, SUEZ lifecycle services has a warranty coordinator dedicated to that function and that function only. Our warranty coordinator has access to all SUEZ resources to ensure timely resolution of problems that may occur.

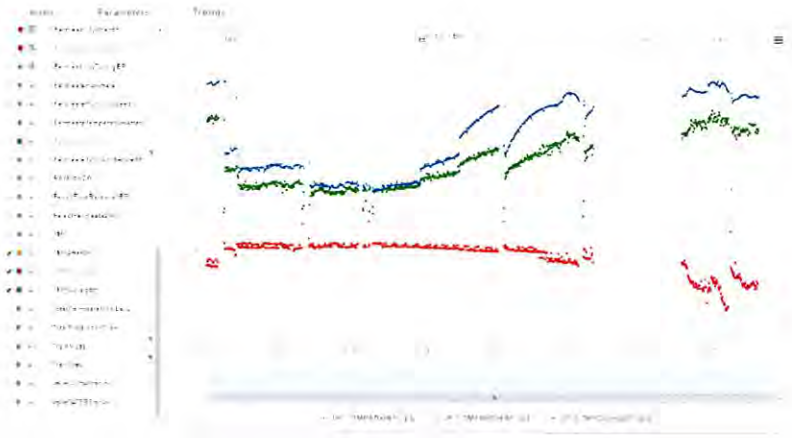
Telephone Technical Support

For the life of the system, plant operators have telephone access to a skilled SUEZ technical support specialist who will assist plant operators in troubleshooting of system problems such as electrical (PLC/HMI), mechanical and process control issues.

Plant operators call the telephone number provided below at any time during business hours and ask for technical support.

Business hours - hours of operation:	8:00 am to 6:00 pm Monday to Friday, EST
Telephone, toll free in North America:	+1-866-271-5425 press 1 for technical support, press 2 for non-warranty parts quotations

Calls After-Hours - 24/7 Emergency Telephone Technical Support



24/7 technical support

Our 15-person technical support team is always on call and is equipped with the system information for effective communication with a plant operator through an emergency, potentially averting loss of plant production and expensive call outs. The telephone technical support group maintains access to all plant drawings for rapid reference during 24/7 support calls and maintains remote connectivity to dial into a plant's control system in order to gain a better understanding of the situation, and to make any necessary adjustments to control set-points or software. Dial-in access requires a LAN modem or hi-speed internet connection at your facility and requires that permissions are setup in advance. If a situation requires more detailed investigation of control code, a SUEZ programmer is on call at all times. Our technical support specialists will manage the resources needed within SUEZ to assist you in resolving your plant issues.

InSight – Knowledge Management Solution

InSight captures and transforms your plant data into meaningful and actionable information, ultimately providing the knowledge you need to maximize performance, avoid operational interruptions, optimize your processes, and reduce the total cost of operation. Insight collects data from the PLC and makes it available for trending or analysis, as shown in the figure below where TMP data is being trended.

InSight data trend example

InSight provides:

- ❑ Analytics: Seeing, at any point in time, historical and current plant performance against success criteria and the trajectory of future performance; where it's on track and the weaknesses that need improvement.
- ❑ Early detection and alarming: Detecting emerging problems, so that action can be taken now, before a failure is experienced in the future.
- ❑ Optimization: Identifying opportunities to optimize and extend the life of membranes and equipment, lowering total cost of operations without sacrificing performance.
- ❑ Productivity: Reducing the tedious work of entering and reporting operator-collected data including data required for membrane warranties. Helping staff get more done with tools that enhance their personal productivity, enabling them to see and do more.
- ❑ Reporting: Reporting on key performance indicators and their impact on business objectives.
- ❑ Membrane replacement strategy: Planning a cost-effective strategy for membrane replacement and upgrades with a deep understanding of factors affecting membrane performance.

Key Benefits:

- ❑ Allowing you to consolidate all your data to pull out valuable information to drive better business results.
- ❑ Driving safety, reliability, accountability and increased throughput.
- ❑ Digitizing data and tools to liberate your operations and service teams to do their jobs more effectively.
- ❑ Providing peace of mind by having another level of surveillance which allows you to redefine operational excellence.

InSight Pro

InSight Pro puts a professional SUEZ process expert onto your team, collaborating to empower your operating team to apply the power of InSight.

The process expert is specifically assigned to your plant and will monitor key parameters on a regular rhythm using the InSight platform. The process expert will be in regular contact with the key members of your operations team to discuss and resolve performance, process and operational issues. While supporting your operations team with day-to-day issues, the process expert will also use InSight to bring attention to long term trends and provide operational recommendations.

As part of InSight pro, the process expert provides bi-weekly process reports with analysis of key trends and recommendations to support plant operation, membrane cleaning and overall performance. In addition, an annual summary performance report is provided.

If the need for troubleshooting does arise, your SUEZ process expert is accessible, familiar with your system and empowered with accurate information to assist.

Site Visits

SUEZ and the **Caesars Lane MBR**'s operating team will cooperatively plan site visit duration and agenda, which can be project specific or selected from the scope of services below. The SUEZ service representative and plant operators can initially define priority tasks and jointly revise these as required.

Plant operators have found it beneficial to schedule the first site visit alongside the first membrane recovery cleaning or prior to the expiry of the mechanical warranty period to identify warrantable issues.

Process Review

- ❑ Inspect the facility with the operator(s);
- ❑ Review results of analytical tests;
- ❑ Evaluate influent, effluent and wasting flow rates;
- ❑ Review chemical dosage rates and overall chemical usage.;
- ❑ Review operating logs with the operator(s). Discuss operator concerns and SUEZ issues emerging from this review;
- ❑ Discuss imminent seasonal shifts, and;
- ❑ Advise the operations manager of technical updates as they become available.

Membrane Cleaning and Integrity

- ❑ Provide direct assistance to the plant operator(s) in the membrane cleaning procedures. Assess the effectiveness of on-going maintenance cleaning and recovery cleaning procedures and provide recommendations to the plant operator;
- ❑ Evaluate the aeration patterns in the tank and blower performance, and;
- ❑ Lift and inspect membrane cassettes to assess membrane, tank, and connection conditions.

Controls Verification

- ❑ Review system alarm history, discuss any related issues with operator(s) and recommend appropriate actions to be taken;
- ❑ Perform limited PLC code modifications as planned, secured by proper documentation, dial-in capabilities and file backup precautions.
- ❑ Verify operation of all safety interlock/controllers, pressure switches and temperature switches.

Mechanical And Electrical

- ❑ evaluate heat, vibration, wear and tear, and other abnormal conditions of mechanical and electrical equipment.
- ❑ Evaluate energy consumption patterns.
- ❑ Recommend required maintenance.

Calibration Verification

- ❑ Review system set points.
- ❑ Assist the plant operator to verify the condition of all control instruments, sensors, probes, and transmitters including switching action and output.
- ❑ The SUEZ service representative will collaborate with the plant operator in maintaining a log of calibration activities.

Spares

- ❑ Review the spares provisions with the plant operator to identify any additional spare parts which should be brought into inventory to provide the desired level of security to the plant including spares related to non-SUEZ equipment.
- ❑ Develop a preventative maintenance plan with the plant operator.

Training

Learning to operate and manage an MBR system is a life-long vocation. On each service visit, we will share our own expanding experience and know-how with operators. They will benefit from the latest developments in operating and maintenance procedures and from technical updates brought by the SUEZ service representative.

The SUEZ service representative will provide operators with on-site, informal training to cover areas of concern in the operation, process, membrane inspection procedures, maintenance, or troubleshooting.

A formal refresher training session of 1½ hours per day on selected curriculum can be arranged. Technical material will be presented using PowerPoint screens on a portable computer and hands-on training will be done throughout the plant.

Reporting

Before leaving site, SUEZ will record observations and discuss with operators concerning the condition of the equipment, tasks accomplished during the visit, and key operating and maintenance issues requiring further attention. SUEZ will provide a service visit report to the plant operator within a reasonable timeframe of the site visit. The Owner will be asked to sign a work order that describes the hours on site and tasks accomplished.

6 Bidding Documents – Bid Form, Bid Worksheets, and Bid Bond

1 Bid Form

2 Bid Worksheets

3 Bid Bond

BID FORM FOR PROCUREMENT CONTRACT

The terms used in this Bid with initial capital letters have the meanings stated in the Instructions to Bidders, the General Conditions, and the Supplementary Conditions.

ARTICLE 1—BUYER AND BIDDER

1.01 This Bid for Caesars Lane WWTP MBR System Pre-Selection is submitted to:

Town of New Windsor

555 Union Avenue

New Windsor, NY 12553

1.02 The undersigned Bidder proposes and agrees, if this Bid is accepted, to enter into a Procurement Contract with Buyer in the form included in the Procurement Bidding Documents, and to furnish the Goods and Special Services as specified or indicated in the Procurement Bidding Documents, for the prices and within the times indicated in this Bid, and in accordance with the other terms and conditions of the Procurement Bidding Documents.

ARTICLE 2—BASIS OF BID

2.01 *Base Bid Price*

A. Bidder shall complete the attached Bid Tables and Worksheets that contain the required formulas and submit with their bid. Bids received without a completed Worksheets shall be deemed unresponsive. Bids received with Worksheets completed incorrectly (i.e., provided formulas not used, miscalculated, or doesn't match submittal information) shall be deemed unresponsive.

B. Bidder acknowledges that the MBR System Capital Cost line item below represents the actual price for the equipment to be paid by the Buyer and will reflect the amount to be used in the Agreement.

C. Bidder acknowledges that any discrepancy between the attached Worksheets and the Bid Summary Table below shall be resolved by using the lower cost/value when comparing bid costs.

D. Bidder acknowledges that the formulas and definitions provided in the attached Worksheets were developed to provide a fair estimate of the 10-year cost value to the Buyer, as a result of selecting the Bidder's equipment.

E. Bidder acknowledges that the other line items in the table below are considered in addition to the MBR System Capital Costs for purposes of bid comparison; providing the highest probability of determining the most cost-effective bid for the buyer over the next 10 years for this project.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

F. Bidder hereby agrees to perform all Work as described in the Specifications and as shown on the Drawings of these Contract Documents, complete for the following Total Bid Cost price indicated in the following Bid Summary Table:

(Note: Total Bid Cost includes Items 1, 2, 4, and 5)

BID SUMMARY TABLE

Item No.	Description	Extended Total Price
1.	Capital MBR System Costs (See Table in Section 2.01.G)	$ 3,826,000
2.	Annual Service Cost (Table A-12, Line A) x 7.4	$ Included in the Capital MBR Cost
3.	Annualized Maintenance Cost (Table B)	$ 451,339
4.	Construction Costs (Table C-4, Line C.12)	$ 5,322,402
5.	Present Worth O&M (Line 3 x 7.4)	$ 3,339,908
	TOTAL BID COST (Sum of all rows)	**$** 12,488,310

TOTAL BID COST TWELVE MILLION AND FOUR HUNDRED EIGHTY EIGHT THOUSAND AND THREE HUNDRED TEN

(in words)

G. The MBR System Capital Cost Schedule summarizes the corresponding Unit Price and Extended Total Price for each Cost Item. Bidder acknowledges that the Extended Total Price shall be full compensation for all Base Bid Work complete, as described for each scheduled Bid Item.

MBR SYSTEM CAPITAL COST SCHEDULE

Item No.	Description	Unit	Estimated Quantity	Unit Price	Extended Total Price
1.	Bonds and Insurance	LS	1	$ 65,821	$ 65,821
2.	Submittals	LS	1	$ 167,437	$ 167,437
3.	Membrane Units and MBR Integral Interconnecting	LS	1	$ 1,996,209	$ 1,996,209
4.	Pumps, Mixers, Blowers, Diffusers, Valves etc.	LS	1	$ 1,043,983	$ 1,043,983
5.	Chemical Cleaning Systems	LS	1	$ 73,127	$ 73,127
6.	Instrumentation and Controls	LS	1	$ 233,167	$ 233,167
7.	Start-up, Commissioning and Training	LS	1	$ 85,365	$ 85,356
8.	Miscellaneous	LS	1	$ 160,900	$ 160,900
				TOTAL MBR SYSTEM CAPITAL COST	**$** 3,826,000

TOTAL MBR SYSTEM CAPITAL COST THREE MILLION AND EIGHT HUNDRED TWENTY SIX THOUSAND

(in words)

H. Estimated annual operation and maintenance costs are based on the Average Daily Flow and wastewater characteristics listed in the Section 455000 Membrane Filtration System. Costs should be stated for continuous steady state operation at ADF. Assumed diurnal curve modeling will not be accepted.

I. Bidder shall attach all tables and worksheets as part of evaluated bid submittal package.

J. Bidder shall attach Bid Submittals required in Section 455000 Membrane Filtration System.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

2.02 *Major Equipment and Systems Suppliers*

A. In connection with major items of equipment to be furnished and installed in this Project, Bidder expressly agrees to the following provisions:

1. That the Total Base Bid Price stated above includes the furnishing of major equipment, products, and systems furnished by the Supplier which Bidder has selected from those suppliers listed in table "Schedule of Proposed Major Equipment and Systems Suppliers" completed as part of this Bid Form; and Bidder has circled the name of the selected Supplier in the "Schedule of Proposed Equipment Suppliers" form in this Section.

B. The "Schedule of Proposed Major Equipment and Systems Suppliers" in this Bid Form shall be binding in terms of the selected equipment, products, systems, and suppliers to be provided by the Bidder under the Total Base Bid Price.

2.03 Substitutions for Major Equipment and Systems

A. Substitutions offered by Bidder shall be governed by the requirements of the General Conditions; and Product Requirements of these Specifications. Bidder expressly agrees to the following provisions:

1. Where proposed substitutions for major equipment and system items listed in the "Schedule of Proposed Major Equipment and Systems Suppliers" form are to be considered, they must be designated by Bidder in the spaces provided on the Schedule Form.

2. Contract Price will be determined on the basis of the lowest Total Base Bid Price or adjusted Total Base Bid Price. Substitutions for Major Equipment and Systems proposed by Bidder and deemed by Buyer to be acceptable shall be considered only after Contract Award.

The remainder of this page was left blank intentionally.

2.04 *Schedule of Proposed Major Equipment and Systems Suppliers*

SCHEDULE OF PROPOSED MAJOR EQUIPMENT AND SYSTEM SUPPLIERS

A	B	C	D	E	F	G
Item	Spec. Section No.	Description	Prequalified "Major Equipment Manufacturers"	Identify "Supplier or Manufacturer" Included in Bidder's Base Bid Price by circling one of the following(1)	Proposed Seller Substitution (optional)(2)	Lump Sum Price Adjustment Add/(Deduct)
a.	455000	Submersible Pumps	a. Flygt b. ABS/Sulzer c. Wilo d. KSB	a. Flygt b. ABS/Sulzer c. Wilo d. KSB		$_____
b.	455000	End suction centrifugal pump	a. Flowserve b. ABS/Sulzer c. Pentair/Fairbanks d. KSB	a. Flowserve b. ABS/Sulzer c. Pentair/Fairbanks d. KSB		$_____
c.	455000	Rotary Lobe Pumps	a. Vogelsang b. Boerger	a. Vogelsang b. Boerger		$_____
d.	455000	Rotary Lobe Blowers	a. Gardner Denver b. Kaeser c. Aerzen	a. Gardner Denver b. Kaeser c. Aerzen		$_____
e.	455000	Submersible Mixers	a. Flygt b. ABS/Sulzer c. Wilo d. KSB	a. Flygt b. ABS/Sulzer c. Wilo d. KSB		$_____
f.	455000	Membrane Diffusers	a. EDI b. Sanitaire c. SSI	a. EDI b. Sanitaire c. SSI		$_____

Notes:

(1) Instructions for listing supplier or manufacturer included in Bidder's Base Bid Price under Column E:

a. Circle name of one supplier or manufacturer for each item listed under Column A to be included in the Bidder's Base Bid Price.

b. Proposal shall be considered irregular and subject to rejection if Bidder:

1) Fails to list (by circling) an approved Supplier or Manufacturer listed under Column E;

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

ARTICLE 3—TIME OF COMPLETION

3.01 Bidder agrees that the furnishing of Goods and Special Services will conform to the schedule of Procurement Contract Times set forth in Article 2 of the Procurement Agreement.

3.02 Bidder accepts the provisions of the Procurement Agreement as to liquidated damages.

ARTICLE 4—ATTACHMENTS TO THIS BID

4.01 The following documents are attached to and made a condition of this Bid:

A. Required Bid security in the form prescribed in the Instructions to Bidders.

B. Evidence of authority to do business in the state of the Project; or a written covenant to obtain such authority within the time for acceptance of Bids.

C. Evaluated bid submittal in accordance with Specification 455000.

D. Required Bidder Qualification Statement with supporting data.

ARTICLE 5—BIDDER'S ACKNOWLEDGMENTS

5.01 Bidder accepts all terms and conditions of the Instructions to Bidders. This Bid will remain subject to acceptance for 45 days after the Bid opening, or for such longer period that Bidder may agree to in writing upon request of Buyer.

5.02 Bidder has examined and carefully studied the Procurement Bidding Documents, the related data identified in the Procurement Bidding Documents, and the following Addenda, receipt of which is hereby acknowledged:

Addendum No.	Addendum Date
1	June 29, 2022
2	July 08, 2022

ARTICLE 6—BIDDER'S REPRESENTATIONS AND CERTIFICATIONS

6.01 *Bidder's Representations*

A. In submitting this Bid, Bidder represents that:

1. Bidder has examined and carefully studied the Procurement Contract Documents.

2. If required by the Instructions to Bidders to visit the Point of Destination and the site where the Goods are to be installed or Special Services will be provided, or if, in Bidder's judgment, any observable local or site conditions may affect the delivery, cost, progress, or furnishing of the Goods and Special Services, then Bidder has visited the Point of Destination and site where the Goods are to be installed or Special Services will be provided (as applicable) and become familiar with and is satisfied as to the observable local and site conditions that may affect delivery, cost, progress, and furnishing of the Goods and Special Services.

Copyright® 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

3. Bidder is familiar with and is satisfied as to all Laws and Regulations that may affect the cost, progress, and performance of Seller's obligations under the Procurement Contract.

4. Bidder has carefully studied, considered, and correlated the information known to Bidder with respect to the effect of such information on the cost, progress, and performance of Seller's obligations under the Procurement Contract.

5. Bidder has given Engineer written notice of all conflicts, errors, ambiguities, or discrepancies that Bidder has discovered in the Procurement Contract Documents, and the written resolution (if any) thereof by Engineer is acceptable to Bidder.

6. The Procurement Contract Documents are generally sufficient to indicate and convey understanding of all terms and conditions for performance of Seller's obligations under the Procurement Contract.

7. The submission of a Bid will constitute an incontrovertible representation by Bidder that Bidder has complied with every requirement of the Bidding Requirements, that without exception the Bid (including all Bid prices) is premised upon furnishing the Goods and Special Services as required by the Procurement Contract Documents.

6.02 *Bidder's Certifications*

A. Bidder certifies that:

1. This Bid is genuine and not made in the interest of or on behalf of any undisclosed individual or entity and is not submitted in conformity with any collusive agreement or rules of any group, association, organization, or corporation;

2. Bidder has not directly or indirectly induced or solicited any other Bidder to submit a false or sham Bid;

3. Bidder has not solicited or induced any individual or entity to refrain from bidding; and

4. Bidder has not engaged in corrupt, fraudulent, collusive, or coercive practices in competing for the Procurement Contract. For the purposes of this Paragraph 6.02.A.4:

a. "corrupt practice" means the offering, giving, receiving, or soliciting of anything of value likely to influence the action of a public official in the bidding process;

b. "fraudulent practice" means an intentional misrepresentation of facts made (a) to influence the bidding process to the detriment of Buyer, (b) to establish bid prices at artificial non-competitive levels, or (c) to deprive Buyer of the benefits of free and open competition;

c. "collusive practice" means a scheme or arrangement between two or more Bidders, with or without the knowledge of Buyer, a purpose of which is to establish bid prices at artificial, non-competitive levels; and

d. "coercive practice" means harming or threatening to harm, directly or indirectly, persons or their property to influence their participation in the bidding process.

Graeme YOUNG

A. the authority to exercise my approval authority with regard to commercial operations under the Annual Actions Board Resolutions and SUEZ Water Technologies & Solutions Global Operating Policy, subject to the prior approvals obtained via the SUEZ Delegation of Authority Policy;

B. the authority to sign on behalf of SUEZ WTS those certain agreements within my authority as Vice President, subject to the prior approvals obtained via the SUEZ Delegation of Authority Policy; and

C. the authority to sell goods and/or services to SUEZ WTS customers on standard terms and conditions.

Such delegation includes but is not limited to the delegated authority to sign all contractual instruments, certificates, documents, acknowledgments, consents, and other agreements as may be necessary or convenient in order to carry out the intent and purpose of the foregoing authority.

EXCEPT THAT THIS DELEGATION DOES NOT INCLUDE THE AUTHORITY TO:

1. Modify corporate insurance policies
2. Transfer intellectual property to a customer
3. Enter into joint ventures or partnerships
4. Provide advance payments to customers
5. Provide commissions to agents other than approved distributors
6. Provide deferred revenue
7. Buy back inventory
8. Engage in a Tiering arrangement

Nothing in this Delegation of Signature Authority alters any applicable Corporation review and approval requirements for the above-listed documents, including but not limited the SUEZ Water Technologies & Solutions Global Operating Policy. The Delegation of Signature Authority conferred hereby shall NOT be further delegable.

This Delegation of Signature Authority is valid until 31 December 2021.

IN WITNESS, WHEREOF, I, as Vice President of SUEZ WTS, have caused my signature to be hereunto placed the day and year first above written.

Name: Kevin Cassidy

BID WORKSHEETS

Bid Analysis
Overview

MBR System proposals shall be evaluated based upon the base bid schedule, present work cost and as noted below:

The evaluation shall consider both financial and non-financial criteria. In addition to the quantitative evaluation of the MBR System Cost and Total Present Worth, the evaluator(s) shall allow careful consideration for non-quantitative evaluation parameters of System Flexibility, Warranty, and Reliability and Technical Support Capabilities. If the Town of New Windsor awards the procurement contract, such award will be to the responsible bidder submitting the bid that best suits the Town's needs.

The following general notes for the basis for the quantitative analyses:

A. Costs and operational requirements are to be based on the Scopes of Supply, process treatment requirements, and hydraulic design requirements as stated in this Specification. If the bidder requires additional information, such as water chemistry, bidder shall request such information a minimum of 30 days prior to bid opening.

B. Membrane replacement shall be set equal to the Warranty Period.

C. Please note that information regarding the Membrane Service Conditions and expected maintenance requirements shall be set equal to the minimum replacement frequency as stated in related O&M materials. For example, if the replacement frequency in the O&M manual that suggests wear items such as seals, retaining rubbers or diffusers shall be replaced every 3-7 years, the System Supplier shall assume a replacement of every 3 years in the Proposal.

D. Annualized operations and maintenance costs are based on Average Daily Flow conditions.

E. Calculation of the present worth of annual costs shall use a Present Worth Factor of 7.4, equal to 10 years at a 6% discount rate.

F. The average electrical Energy costs are assumed to be $0.20/kWh.

G. The calculation of present worth is based on a 10-year plant life cycle for operating and maintenance.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

Note: SUEZ's base design is based on a full siphon. With a siphon design, there will be no permeate pumps, and the overall plant power requirement will be reduced. So this table is not applicable.

Table A-1: Permeate Pumps Power Consumption - Siphon Design

Line ID	Parameter	Unit	Value
A	Total Number of Pumps Provided	#	0
B	Total Number of Duty Pumps	#	0
C	Design Capacity of Pumps	gpm @ TDH	n/a
D	Operating Capacity at ADF (total for all operating pumps)	gpm	n/a
E	Average Operating Transmembrane Pressure (average value of the minimum and maximum values provided by the Supplier.)	ft	n/a

Table A-5: Sodium Hypochlorite Cleaning Consumption

Line ID	Description of Cleaning Event	Frequency (#/yr)	Volume (gal/each)	Total Volume (gal/yr)
A	Sodium Hypochlorite Maintenance Clean	156 (per plant)	12.4	1,940
B	Sodium Hypochlorite Other Clean (Recoery Cleaning)	6 (per plant)	144.8	869
C	Sodium Hypochlorite Other Clean (n/a)	n/a	n/a	n/a
D	Total Usage (12.5% solution)	N/A	N/A	2,809
E	Annual Cost @ $1.80/gallon	$ 3,491 (MCs)	$ 1,564 (RCs)	$ 5,055

Note: Membrane sodium hypochlorite cleaning is based on ADF condition: 1 MC/train per week, and 2 RC per year per train.

Table A-6: Citric Acid Cleaning Consumption

Line ID	Description of Cleaning Event	Frequency (#/yr)	Volume (gal/each)	Total Volume (gal/yr)
A	Citric Acid Maintenance Clean	0	n/a	0
B	Citric Acid Other (Recovery Cleaning)	6 (per plant)	70.1	421
C	Citric Acid Other (n/a)	n/a	n/a	n/a
D	Total Usage (50% solution)	N/A	N/A	421
E	Annual Cost @ $1.90/gallon	$ 0	$ 800	$ 800

Note: Membrane citric acid cleaning is based on ADF condition: 2 RC per year per train and no MC is required.

Tank and Building Cost Calculations

Bidders Notes

A. PROCESS BASIN COSTS

The construction costs of equalization and biological basins are based on the total liquid volume required for the proposed MBR System's hydraulic balancing and biological processes. For the purposes of comparison, a unit cost of $4 per gallon of liquid volume will be used, which includes excavation, backfill, and installed concrete costs.

Process basin square footage shall take the following into account:

1. Minimum Anoxic HRT is 1 hour.

2. For design purposes it is assumed that MBR MLSS inventory shall contribute to biological process requirements. Membrane Tank volume shall not be considered when determining SRT requirements unless otherwise requested by the MBR System Supplier

B. MBR BASIN COSTS

The construction costs of MBR basins are based on the total liquid volume required for the proposed MBR System's membrane units. For the purposes of comparison, a unit cost of $4 per gallon of liquid volume will be used, which includes excavation, backfill, and installed concrete costs.

C. MEMBRANE TREATMENT BUILDING COSTS

The construction cost for the new, 1-story membrane treatment building is based on the required footprint, in square feet, for the proposed system pumps, blowers, bulk chemical storage and feed systems, and instrumentation, MCC, and control panels. The total footprint shall include adequate space for equipment access and maintenance. The MBR System Supplier shall provide a breakdown of the space needed, listing area requirements by subsystem. For purposes of comparison, a unit cost of $500 per square foot will be used for building construction.

The evaluators reserve the right to compare each MBR System Supplier's recommended building footprint and may adjust the proposed value or request additional information if it does not appear reasonable.

Space allowance shall take the following into account:

1. A minimum of 3ft clearance around mechanical equipment & electrical

2. Permeate Collection System

3. Supplemental Aeration System

4. Membrane Zone Aeration System

5. Internal Recycle System

6. Integration and Controls System

7. Chemical Dosing System

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

a. Including storage and containment for a minimum of 1-mo. supply.

b. Incompatible chemicals (as defined by the International Fire Code) must be stored in separate, dedicated containment. Include all necessary containment areas to meet code

c. Chemical containment sized for 150% of the container/tank volume with a 1 foot wall height

8. Adequate height for lifting any equipment for maintenance activities

Table C-1: Construction Costs – Aerobic Volumes

Item	Parameter	Value	Unit	Notes
C.1	Aerobic Volumes	700,000	gal	Provide layout with dimensions.
C.2	Aerobic HRT	2.1	Hr	
C.3	Aerobic Construction Cost	2,800,000	$	C.1 x $4.00/gal

Table C-2: Construction Costs – Anoxic Volumes

Item	Parameter	Value	Unit	Notes
C.4	Anoxic Volumes	330,000	gal	Provide layout with dimensions.
C.5	Anoxic HRT	1.0	Hr	Min. 1.0 hr HRT
C.6	Anoxic Construction Cost	1,320,000	$	C.4 x $4.00/gal

Table C-3: Construction Costs – Membrane Basin

Item	Parameter	Value	Unit	Notes
C.7	Total Membrane Basin Volume	124,476	gal	Total basin volume, not displaced volume. Provide layout with dimensions
C.8	MBR Basin HRT	0.37	hr	
C.9	Membrane Zone Tank Cost	497,902	$	C.7 x $4.00/gal

Table C-4: Construction Costs – Treatment Building

Item	Parameter	Value	Unit	Notes
C.10	Treatment Building Plan Area	1,409	ft2	Provide layout with dimensions.
C.11	Building Cost	704,500	$	= C.10 x $500/ft2

Table C-5 Construction Costs – Tank

Item	Parameter	Value	Unit	Notes
C.12	Tank Cost	4,617,902	$	= C.3 + C.6 + C.9

Table C-6 – TOTAL CONSTRUCTION COSTS

Item	Parameter	Value	Unit	Notes
C.13	Total Construction Costs	5,322,402	$	= C.11 + C.12

Experience and Qualifications

The intent of this section is to establish the qualifications of the Supplier to provide adequate support before, during and after commissioning at the System level. To establish stability, each bidder shall provide an organization chart for each of the last five years including the names of the MBR (or Membrane) Manager, General Manager and President of the company and parent company if applicable. The bidder shall also provide the resumes of applicable lead operations staff.

The prospective Supplier shall submit the following information:

A. Identify the year that the MBR Equipment Manufacturer first began manufacturing MBR equipment for the treatment of municipal wastewater

B. Furnish a list of North American MBR Equipment installations for the treatment of municipal wastewater. The list shall be organized into three sections, including installations of less than 1 MGD, installations ranging in capacity from 1 to 5 MGD, and installations of 5 MGD or greater. The following information shall be provided with each listing:

   1. Owner and Location
   2. Peak Hydraulic Rated Capacity in MGD
   3. Annual Average Rated Capacity in MGD
   4. Biological Nitrogen Removal (yes or no)
   5. Type of WAS Thickening Equipment, if any
   6. Type of Dewatering Equipment, if any
   7. Identify System by Model or Type
   8. First Year of Operation (or identify as under construction)
   9. Reference Contact Name, Title, and Phone Number
   10. Installation Contractor Contact Name, Title, and Phone Number

C. Complete the MBR questionnaire, below, for a minimum of three operating plants in North America of larger than 1 MGD average capacity and with at least 12 consecutive months of operation. If the manufacturer has fewer than three MBR installations of this capacity or larger in North America, installations outside North America may be included.

D. Furnish a list of worldwide MBR Equipment installations, 1.0 MGD or greater, for the treatment of municipal wastewater separate from the North American installations. The list shall be organized in two sections: installations ranging from 1 to 5 MGD in capacity and installations of 5 MGD and greater. Provide the same information as requested for North American installations with each listing.

E. The supplier shall have at least three (3) operational installations in New York State, or if not, at least three (3) operational installations within states participating in Ten States Standards.

F. Identify which of the North American utilize the manufacturer's same model/type anticipated for the Caesars Lane WWTP.

Copyright© 2018 National Society of Professional Engineer, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

1. Bidder and Surety, jointly and severally, bind themselves, their heirs, executors, administrators, successors, and assigns to pay to Owner upon default of Bidder any difference between the total amount of Bidder's Bid and the total amount of the Bid of the next lowest, responsible Bidder that submitted a responsive Bid, as determined by Owner, for the work required by the Contract Documents, provided that:

    1.1. If there is no such next Bidder, and Owner does not abandon the Project, then Bidder and Surety shall pay to Owner the bond amount set forth on the face of this Bond, and

    1.2. In no event will Bidder's and Surety's obligation hereunder exceed the bond amount set forth on the face of this Bond.

    1.3. Recovery under the terms of this Bond will be Owner's sole and exclusive remedy upon default of Bidder.

2. Default of Bidder occurs upon the failure of Bidder to deliver within the time required by the Bidding Documents (or any extension thereof agreed to in writing by Owner) the executed Agreement required by the Bidding Documents and any performance and payment bonds required by the Bidding Documents.

3. This obligation will be null and void if:

    3.1. Owner accepts Bidder's Bid and Bidder delivers within the time required by the Bidding Documents (or any extension thereof agreed to in writing by Owner) the executed Agreement required by the Bidding Documents and any performance and payment bonds required by the Bidding Documents, or

    3.2. All Bids are rejected by Owner, or

    3.3. Owner fails to issue a Notice of Award to Bidder within the time specified in the Bidding Documents (or any extension thereof agreed to in writing by Bidder and, if applicable, consented to by Surety when required by Paragraph 5 hereof).

4. Payment under this Bond will be due and payable upon default of Bidder and within 30 calendar days after receipt by Bidder and Surety of written notice of default from Owner, which notice will be given with reasonable promptness, identifying this Bond and the Project and including a statement of the amount due.

5. Surety waives notice of any and all defenses based on or arising out of any time extension to issue Notice of Award agreed to in writing by Owner and Bidder, provided that the total time for issuing Notice of Award including extensions will not in the aggregate exceed 120 days from Bid due date without Surety's written consent.

6. No suit or action will be commenced under this Bond prior to 30 calendar days after the notice of default required in Paragraph 4 above is received by Bidder and Surety, and in no case later than one year after the Bid due date.

7. Any suit or action under this Bond must be commenced only in a court of competent jurisdiction located in the state in which the Project is located.

8. Notices required hereunder must be in writing and sent to Bidder and Surety at their respective addresses shown on the face of this Bond. Such notices may be sent by personal delivery, commercial courier, or by United States Postal Service registered or certified mail, return receipt requested, postage pre-paid, and will be deemed to be effective upon receipt by the party concerned.

9. Surety shall cause to be attached to this Bond a current and effective Power of Attorney evidencing the authority of the officer, agent, or representative who executed this Bond on behalf of Surety to execute, seal, and deliver such Bond and bind the Surety thereby.

10. This Bond is intended to conform to all applicable statutory requirements. Any applicable requirement of any applicable statute that has been omitted from this Bond will be deemed to be included herein as if set forth at length. If any provision of this Bond conflicts with any applicable statute, then the provision of said statute governs and the remainder of this Bond that is not in conflict therewith continues in full force and effect.

11. The term "Bid" as used herein includes a Bid, offer, or proposal as applicable.

CORPORATE ACKNOWLEDGMENT

PROVINCE
STATE OF ONTARIO

COUNTY OF HALTON

On this 27TH day of JUNE, 2022 before me

personally came

MICHAEL BENSON to me known,

who, being by me duly sworn, did depose and say that he/she resides in

OAKVILLE that he/she is the

COMM. CONTRACTS MGR. of SUEZ WTS Systems USA, Inc.

that corporation described in and which executed the above instrument; that he/she knows the seal of said corporation; that the seal affixed to said instrument is such corporate seal; that it was so affixed by order of the Board of Directors of said corporation, and he/she signed his/her name thereto by like order.

(SEAL)

David Blair Bingham, Notary Public,
Regional Municipality of Halton, limited to the attestation of instruments and the taking of affidavits, for SUEZ Water Technologies & Solutions Canada and its affiliates.
Expires December 18, 2023.

State of New Jersey
County of Morris } ss:

On June 22, 2022, before me, a Notary Public in and for said County and State, residing therein, duly commissioned and sworn, personally appeared

Jessica Iannotta

known to me to be Attorney-in-Fact of Euler Hermes North America Insurance Company the corporation described in and that executed the within and foregoing instrument, and known to me to be the person who executed the said instrument in behalf of the said corporation, and he duly acknowledged to me that such corporation executed the same.

IN WITNESS WHEREOF, I have hereunto set my hand and affixed my official seal, the day and year stated in this certificate above.

My Commission Expires April 16, 2024

The number of persons authorized by this Power of Attorney is not more than: 6

POWER OF ATTORNEY

KNOW ALL MEN BY THESE PRESENTS: That EULER HERMES NORTH AMERICA INSURANCE COMPANY (EULER HERMES), a corporation organized and existing under the laws of the state of Maryland, does hereby nominate, constitute, and appoint the person or persons named below, each individually if more than one is named, its true and lawful attorney-in-fact, for and in its name, place, and stead to execute on behalf of EULER HERMES, as surety, any and all bonds, undertakings, and contracts of suretyship, or other written obligations in the nature thereof; provided that the liability of EULER HERMES on any such bond, undertaking, or contract of suretyship executed under this authority shall not exceed the limit stated below.

NAME		ADDRESS	LIMIT OF POWER
Megan J. Schlueter	Kristin S. Bender	445 South Street	Unlimited
Jessica Iannotta	Kelly O'Malley	Suite 210	
April D. Perez	Joanne Czlapinski	Morristown, NJ 07960	

This Power of Attorney revokes all previous powers issued on behalf of the attorney(s)-in-fact named above.

IN WITNESS WHEREOF, EULER HERMES has caused these presents to be signed and attested by its appropriate officers and its corporate seal hereunder affixed this 1st day of January, 20 21.

James Daly, President and CEO-The Americas

Keith Sherman, Senior Vice President and Chief Operating Officer-Surety

State of Maryland, County of Baltimore

On this 1st day of January, 20 21, before me personally appeared Keith Sherman, to me known, being duly sworn, deposes and says that he resides in Phoenix, MD; that he is the Senior Vice President and Operating Officer-Surety of EULER HERMES, the Company described herein and which executed the above instrument; that he know the seal of EULER HERMES; that the seal affixed to said instrument is such corporate seal; that it was so affixed by authority of the Board of Directors of EULER HERMES; and that he signed his name thereto by like authority.

Notary Public

Notarial Seal

This Commission Expires April 4, 2023

This Power of Attorney is granted by authority of the following resolutions adopted by the Board of Directors of EULER HERMES NORTH AMERICA INSURANCE COMPANY (Company) by unanimous consent on October 1, 2015.

RESOLVED: That the President, Executive Vice President, Senior Vice President, Vice President, Secretary, Assistant Vice Secretary, and Senior Vice President and Chief Operating Officer-Surety, be and hereby are authorized from time to time to appoint one or more Attorneys-in-Fact to execute on behalf of the Company, as surety, any and all bonds, undertakings and contracts of suretyship, or other written obligation in the nature thereof; to proscribe their respective duties and all respective limits of their authority; and to revoke any such appointment at any time.

RESOLVED FURTHER: That the Company seal and signature of the aforesaid officers and may be affixed by facsimile to any Power of Attorney given for the execution of any bond, undertaking, contract of suretyship, or other written obligations in the nature thereof, such signature and seal when so used being hereby adopted by the Company as the original signature of such officer and the original seal of the Company, to be valid and binding upon the Company with the same force and effect as thought manually affixed.

CERTIFICATION

I, Keith Sherman, Senior Vice President and Chief Operating Officer-Surety of EULER HERMES NORTH AMERICA INSURANCE COMPANY, do hereby certify that the foregoing Power of Attorney and the Resolutions of the Board of Directors of October 1, 2015, have not been revoked and are now in full force and effect.

Signed and sealed this 22nd day of June, 20 22.

Keith Sherman, Senior Vice President and Chief Operating Officer-Surety

ZeeWeed membrane care, handling, and storage

1.0 PURPOSE

The purpose of this document is to outline the requirements associated with receiving, unloading and storing ZeeWeed* membranes and associated assemblies. Information is also included on storing wetted membranes. If, after reading this document, questions exist on proper membrane handling, contact SUEZ Water Technologies & Solutions (SUEZ) for additional guidance.

Although the ZeeWeed membranes are designed for maximum durability in water filtering applications, membranes are susceptible to irreversible damage if mishandled. Any concerns regarding membrane handling and potential damage should be addressed with SUEZ directly before any activities are undertaken at site that may cause an increased potential for membrane damage to occur. It should also be confirmed in advance that suitable Builders All Risk Insurance coverage is in place or other insurance coverage as deemed necessary by the project contract. Contact SUEZ for clarification as necessary.

⚠ WARNING

Follow All LOTO Procedures

Follow proper safety procedures to prevent injury when carrying out this procedure. Adhere to all Lock Out Tag Out (LOTO) and safe lifting procedures in accordance with company, site and local health and safety policies and procedures.

Read Entire Procedure

Read this procedure completely before proceeding.

⚠ CAUTION

Wear Appropriate PPE

This procedure requires that the operator wear Kevlar gloves, safety glasses, and protective clothing. Maintain baseline and task-specific PPE until task is completed.

Fall Protection Required

Fall protection is required if working around open tanks during membrane installation.

* Trademark of SUEZ; may be registered in one or more countries. If document printed in black and white, safety images may represent modified versions of ISO images.

NOTICES	
	Every effort has been made by SUEZ to provide current information while preparing this procedure. SUEZ maintains that depictions of methods and/or techniques and use of specific tools and/or apparatus shown within the situations portrayed are accurate at the time of printing. SUEZ accepts no liability for any reliance placed on the information contained herein.
	The installer in charge of the site is responsible for taking all reasonable precautions to prevent damage during installation and to prevent debris and foreign objects from falling into the membrane tanks after the cassettes are installed.

2.0 APPLICABILITY AND REVISIONS

This document applies to the ZeeWeed product line, including all ZeeWeed 500, 700, 1000 and 1500 series modules/elements and cassettes/racks. Three important documents to accompany this procedure include:

- **Equipment Acceptance Certificate and Checklist** – a document used to confirm the receipt of the goods to the satisfaction of the receiver (for membrane shipments, typically the Installer).
- **Document Membrane Pre-Installation Checklist** – a checklist to be completed by the Installer prior to membrane uncrating and installation.
- **ZeeWeed Uncrating and Installation Procedure** – a procedure specific to each membrane type that details the steps involved in uncrating and installing new membranes.

3.0 DEFINITIONS

- **Installer** – Organization that is contractually responsible for the project site.
- **ZeeWeed** – A hollow fiber outside-in and inside-out ultrafiltration membrane.
- **Module** – An assembly to house and contain the membrane fiber. One ZeeWeed membrane, containing numerous individual fibers grouped together, is called a module. The figures below show the different product modules.
- **Cassette/Rack** – An assembly to house and connect the modules. Cassettes/Racks can contain multiple module units.

* Trademark of SUEZ; may be registered in one or more countries. If document printed in black and white, safety images may represent modified versions of ISO images.

Figure 3 - ZW1000

Figure 4 - ZW1000

Figure 5 - ZW1500

Figure 6 - 700B

Figure 7 - ZeeBlok

4.0 MEMBRANE SHIPMENT

During shipping of the ZeeWeed membranes from the SUEZ manufacturing facility to the intended site, the following conditions must be met:

- Control shipment temperatures in the range of 2 - 35°C (35° - 95°F) (Setpoint 20° C or 68°F).
- Never expose the shipping crates housing the membrane cassettes or modules to excessive vibration or large bumps. When shipping membrane cassettes or modules by rail or truck, take care to ensure that air suspension cars or trailers are utilized.
- In most cases, membranes will be shipped in populated cassette form (modules are already installed) in cassettes. The ZW1500 and the ZW700B are exceptions, with the modules shipped separately from the racks.
- After shipping, installation, and glycerin flush, an integrity check will be performed on the membranes to ensure no fibers were compromised during the handling process. To optimize performance, routine and pre-commissioning maintenance may be necessary to ensure the highest quality product prior to commissioning.

* Trademark of SUEZ; may be registered in one or more countries. If document printed in black and white, safety images may represent modified versions of ISO images.

5.0 HANDLING FACTORY SHIPPED SUEZ WATER MEMBRANES

5.1 General information

5.1.1 ZW500, ZW1000 Series, ZeeBlok cassettes

- Membrane cassettes are shipped in either a plywood or cartonplast packing crate.
- The cassette itself is sealed in a plastic bag to retain moisture and prevent damage tothe membranes due to drying.

Modules/Elements

- Individual membrane modules/elements are shipped in a cardboard box within a crate.
- The module itself is sealed in a plastic bag to retain moisture.
- Modules or elements in cardboard boxes should not be stacked more than six high.

5.1.2 ZW1500 and ZW700B series

Racks/Modules

- Individual membranes modules/elements are shipped in a cardboard box with a crate.
- The module is sealed in a plastic bag and/or has temporary port caps installed to retain moisture. The rack is shipped in a plywood packing crate.

5.2 Unloading membranes

The Installer is responsible for the prompt and proper unloading of all membrane equipment and materials received into his custody.

- Dock level, off-loading facilities are recommended.
- The wooden shipping crates are designed to be lifted from the bottom using a forklift.

Note that extended forks and an appropriately sized lift are required for the cassette crates.

* Trademark of SUEZ; may be registered in one or more countries. If document printed in black and white, safety images may represent modified versions of ISO images.

⚠ WARNING	
	**Forklift Hazard** It is recommended that an experienced/qualified forklift truck driver unloads the membranes from the carrier.
	**General Hazard** ZW500 and ZW1000 cassettes are shipped on their sides and will require up righting - follow all procedures carefully to prevent injury.
	**General Hazard** Do not stack shipping crates!

⚠ CAUTION	
	**Obstruction Hazard** Clear area of all obstacles and bystanders to avoid being struck by, struck against, or caught on the cassette.
	**Overhead Load Hazard** Only lift the cassette as needed to clear obstacles.
	**Overexertion Hazard** Use correct position and posture when lifting sides.

NOTICE	
	Damage incurred or observed during equipment off-loading needs to be immediately reported to your SUEZ representative.

5.3 Confirming equipment and materials

- Perform a cross-check on the shipment using the packing slip to confirm the delivery of membrane equipment.

  NOTE: Do not open membrane crates! Limit verification to external examination of crates.

- Check the equipment delivery for content and any damage that may have occurred during shipping or unloading.

* Trademark of SUEZ; may be registered in one or more countries. If document printed in black and white, safety images may represent modified versions of ISO images.

- Report any non-conformance immediately to your SUEZ representative (in writing). Provide digital pictures of damage.
- Refer to section 5.4 for *Confirmation of handling indicators*.
- Once the equipment shipment has been checked, the document provided by SUEZ (ref. *Equipment Acceptance Certificate and Checklist*) is completed and signed by the site organization's representatives.
- The Installer shall expeditiously replace all materials and equipment that are lost or damaged while in the custody of the Installer.
- Replacement materials and equipment of a type and quality equal to the original materials and equipment shall be acceptable to SUEZ and to the Owner.

5.4 Confirming handling indicators

SUEZ includes a series of shipping indicators to protect the integrity of the membrane cassettes while they are being shipped (Figure 8), in addition to the external indicators inside the crate (affixed to one of the cassette legs).

- The Installer's representative should record the indicator condition of the external indicators.
- At the time of discovery, the Installer must inform the SUEZ representative of any triggered indicators. (A triggered indicator indicates ideal shipping conditions were not maintained. Both inside and outside indicators should be cross checked. The SUEZ representative will evaluate membranes prior to installation).

	Freeze Indicator	Heat Indicator
Indicator location	External	External
When to check	At time of receipt	At time of receipt
Indicator location	Internal	Internal
When to check	During installation	During installation

- During membrane installation, the SUEZ representative onsite will also inspect and record the status of all indicators.
- On a cassette or shipping frame, the internal indicators will be in a plastic bag affixed to the cassette or shipping frame. For a crate of bagged and boxed modules, one of the top boxes will have the indicators inside and that box will have an "X" on it.

  NOTE: There are duplicate indicators inside the crate affixed to the cassette. These indicators are for SUEZ FSR use.

Figure 8 - Outside Indicators

* Trademark of SUEZ; may be registered in one or more countries. If document printed in black and white, safety images may represent modified versions of ISO images.

6.0 STORING MEMBRANES

The Installer shall provide all facilities and services required for the storage, maintenance, protection and security of the equipment and materials delivered by SUEZ.

Follow these conditions:

- Equipment and materials shall be stored in assigned lay-down areas.
- Stored equipment and materials shall be adequately supported and protected to prevent damage.
- Equipment shall be moved into the permanent building or onto its permanent foundation as soon as construction will permit.
- Stored materials and equipment shall not be allowed to contact the ground. In warehouses that do not have dry concrete or suspended floors, materials and equipment shall be stored on platforms or shoring.
- Indoor storage furnished by the Installer shall consist of suitable construction trailers or portable enclosures and shall be weather-tight, well ventilated, and secure against theft and vandalism.
- Access doors shall be adequate to accommodate the movement and handling of materials and equipment to be stored and shall be equipped with secure locks.
- Membrane cassettes/racks will be stored upright on a level surface.
- The membrane cassette crates must remain closed until the Installer begins membrane installation to prevent permanent membrane damage due to drying out.
- If upon removal from storage, mold is discovered on the membrane fibers, carefully repackage and contact SUEZ for direction.

6.1 Storage conditions – crated cassettes or membranes

⚠ CAUTION

Equipment Hazard

Membranes must be stored in a dark, dry area with a storage temperature between 5° - 35° C (40° - 95° F).

Ensure the following conditions when storing crated cassettes/membranes:

- Stored in a sheltered area protected from freezing, direct sunlight or extreme heat.
- Vacuum sealed bag should remain sealed until membrane installation is being performed.

It is recommended that the product be stored no longer than necessary prior to installation. Coordinate with SUEZ for appropriate shipment times. Maximum storage duration of a membrane is 12 months from the date of shipment.

* Trademark of SUEZ; may be registered in one or more countries. If document printed in black and white, safety images may represent modified versions of ISO images.

6.2 Storage conditions – bagged modules / elements

New modules preserved with glycerin solution, bagged and factory sealed, may be stored for up to 12 months. When storing bagged modules/elements, store in a sheltered area protected from freezing, direct sunlight, extreme heat and winds that could accelerate drying. The module/element should always be kept bagged and sealed.

Disassembly of cassettes/racks to replace modules requires attention and care. Contact SUEZ for re-assembly procedures, which include step-by-step instructions, bolt torques, and identification of non-reusable hardware.

⚠ CAUTION	
	**Pinch Hazard** To avoid being caught on or between cassette parts, use care during inspection and be alert to pinch points.
	**Fall Hazard** Ensure any glycerin spills/leaks are cleaned immediately.
	**Environmental Hazard** If there is the possibility of an environmental concern with a damaged membrane, don a facemask, repackage, and contact SUEZ.

6.3 Storage conditions – wetted membranes

It is important to note that ZeeWeed membranes should not be allowed to dry out as membrane properties will be adversely affected. **Drying may result in irreversible damage to the membranes.**

⚠ CAUTION	
	**Chemical Hazard** Use respirator or ensure sufficient ventilation. Wear protective equipment including a chemical resistant apron, neoprene gloves, and goggles c/w face shield, at a minimum.

* Trademark of SUEZ; may be registered in one or more countries. If document printed in black and white, safety images may represent modified versions of ISO images.

6.3.1 ZW500, ZW1000 series, ZeeBlok

If the preservative is flushed out or if the module has been in contact with water, the membrane must not be allowed to dry out under any circumstances.

The membranes may be left in air for a maximum of forty-five minutes out of direct sunlight and wind. After forty-five minutes, immerse the membranes in water. Spraying the membranes after this period is not sufficient to prevent drying-out and will not allow a longer period of contact with air. If membranes are **frequently lightly misted** (not sprayed with fire hoses or pressure washers) from the time they have been taken out of the water, they may be left in air for a maximum of 6 hours (5° - 35°C (40° - 95°F)).

Since the membranes are maintained wet, there is no need for specific re-wetting procedures. However, if necessary for other reasons (e.g., drinking water compliance, residual of preservatives) the standard procedures for rinsing and disinfection may be used before starting the operation. If it is impractical to immerse or repeatedly spray the membrane, clean the membrane, preserve it in glycerin solution and re-bag it according to membrane preservation procedures.

Refer to the *Operations & Maintenance Documentation Package* supplied with the system for further information. Longer storage durations are to be discussed with SUEZ on a case-by-case basis.

6.3.2 ZW700B

Ensure the following conditions when storing crated or bagged membranes:

- Store in a sheltered area protected from freezing, direct sunlight, extreme heat and winds that could accelerate drying.
- Keep vacuum-sealed bags or protective caps in place until membrane installation is performed.

It is recommended that the product be stored no longer than necessary prior to installation. Coordinate with SUEZ for appropriate shipment times.

New modules preserved with glycerin solution, bagged and factory sealed, may be stored for up to 12 months. After this time, wet the modules with non-hazardous solutions of water (RO-water quality)/glycerin/sodium bisulphite solution (75:25:0.25:wt%) and sealed them in plastic again. These solutions will control bacterial growth and dehydration. After this treatment, the modules can be stored for a further two months before the above process needs to be repeated.

6.3.3 ZW1500 and ZW700B series

Membrane fibers must always remain wet and must not be exposed to freezing conditions.

Short-term storage (< 1 week): Ensure that membrane modules are filled with potable water containing 1-2 mg/L Cl_2 residual.

* Trademark of SUEZ; may be registered in one or more countries. If document printed in black and white, safety images may represent modified versions of ISO images.

Long-term storage (> 1 week): Ensure that membrane modules are filled with potable water containing 5-10 mg/L Cl_2 residual. Check the preservative solution periodically and replace once per month.

Perform chemical cleaning before storage. Prior to startup, ensure that the membrane modules and equipment are sanitized.

6.4 Storage durations – wetted cassettes (ZW500, ZW1000 series, Zeeblok)

Once membranes have been installed in a tank, they need to be kept wet at all times. When the protective glycerin solution is removed, the membranes become susceptible to drying.

For storage periods of up to approximately 15 days, simple immersion of the cassettes in water containing sodium hypochlorite (NaOCl) with a maximum residual concentration of 3 mg/L is suitable. Monitor the residual every week and re-dose if the residual drops to less than 0.2 mg/L. Recovery cleaning of the membrane prior to storage is strongly recommended. If the membranes have been in service in an MBR application, it will be necessary to inspect them and remove debris (if necessary) prior to storage.

Periodic aeration may also be necessary to prevent anoxic or anaerobic conditions from developing in the tank. Test the water daily to ensure that the residual chlorine concentration is within acceptable limits; a simple swimming pool chlorine test kit is acceptable. Maintain a log recording daily NaOCl concentration and water temperature. Longer storage durations are to be discussed with SUEZ on a case-by-case basis.

6.5 ZW500, ZW1000 series, Zeeblok wetted membranes – long term removal from water

NOTICE

Contact SUEZ Customer Service for proper preservation instructions.

If the membranes have spent time in storage, carefully check for any signs of mold on the fibers. If any mold is present, immediately re-bag and follow the steps outlined in *SERV-0056 Disinfection of Moldy Cassettes/Modules*.

Contact SUEZ for advice on returning a sample for analysis.

* Trademark of SUEZ; may be registered in one or more countries. If document printed in black and white, safety images may represent modified versions of ISO images.

ZeeWeed 500 cassette removal

1.0 PURPOSE

The purpose of this document is to outline the steps required to remove a ZeeWeed* 500 cassette from a tank onsite. This procedure deals with lifting the existing cassette out of the tank. Contact SUEZ Water Technologies & Solutions (SUEZ) for clarification as necessary.

⚠ WARNING

Follow All LOTO Procedures

Follow proper safety procedures to prevent injury when carrying out this procedure. Adhere to all Lock Out Tag Out (LOTO) and safe lifting procedures in accordance with company, site and local health and safety policies and procedures.

Trained and Certified Personnel Only

Proper crane training is required. The crane must be inspected and certified, and the crane operators must be qualified and certified.

Read Entire Procedure

Read this procedure completely before proceeding.

⚠ CAUTION

Wear Appropriate PPE

This procedure requires that the operator wear Kevlar gloves, safety glasses, and protective clothing. Keep area around the system clear to minimize risk of slip/trip/fall. Maintain baseline and task specific PPE until completion of task. Fall protection equipment is required.

NOTICE

Every effort has been made by SUEZ to provide current information while preparing this procedure. SUEZ maintains that depictions of methods and/or techniques and use of specific tools and/or apparatus shown within the situations portrayed are accurate at the time of printing. SUEZ accepts no liability for any reliance placed on the information contained herein.

* Trademark of SUEZ; may be registered in one or more countries. If document printed in black and white, safety images may represent modified versions of ISO images.

2.0 APPLICABILITY AND REVISIONS

This document covers the ZeeWeed 500 product.

Figure 1 - ZW 500 cassette

3.0 MANPOWER REQUIREMENTS

The typical removal of a single cassette requires two people and can be done within 45 minutes, including pre-work and cassette drain time.

4.0 PREPARATION WORK

1. If membrane cleaning or fiber repairs will be performed, aerate the cassette (Figure 2) for 10-15 minutes without permeation prior to removal. This assists in removing any accumulated solids from the fiber bundles.

   Do not perform aeration if the cassette is to be inspected or weighed to assess sludge accumulation.

2. Prior to removal, plan where the cassette will be placed with available water supply and water run-off.

   Note any environmental conditions that could potential impact the membrane fibers.

Figure 2 - Cassette permeate and aeration pipes

3. To prepare the membrane train grating/covering, remove any lockdown components (i.e., bolts).

4. Prior to removal, close the air and permeate isolations valves on the cassette.

5. Loosen the bolts on the YN/Straub connector on the permeate line to allow sliding of the connector onto the portion of the permeate spool attached to the cassette.

6. Loosen the bolts on the YN/Straub connector on the airline to the cassette. This will allow the pressurized air to be released slowly. Do not open both sides of the connector or pull on the air line until the air has stopped hissing out of the connection. Slide the connector onto the portion of the air header spool attached to the cassette.

NOTICE	
⚠	If the train is turned off prior to removing the cassette, do not drain the tank.

* Trademark of SUEZ; may be registered in one or more countries. If document printed in black and white, safety images may represent modified versions of ISO images.

5.0 SAFETY

Before any work begins, make sure that the necessary planning and precautions are done in order to ensure that the membrane removal can be safely carried out. It is the responsibility of those removing the cassette to properly prepare.

- Before cassettes can be moved, ensure that the lifting crane is in good operating condition and is rated for the load.
- While maneuvering the cassette, ensure that no one is in its path or out of sight of the crane operator.
- Do not stand under the cassette.

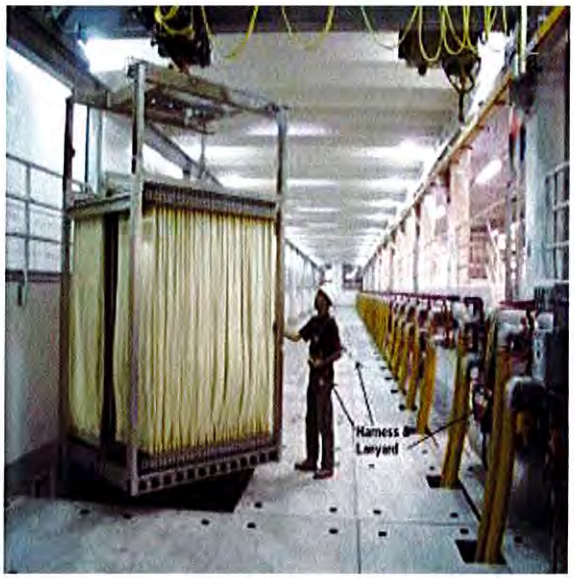

Figure 3 - Using harness/lanyard

NOTICE

It is crucial that fall arrest equipment be worn when working overtop the membrane tank. A fall arrest harness must be worn and appropriate tie-off lanyards must be used while installing and/or working on a cassette (Figure 3).

6.0 TOOLS REQUIRED

- Certified overhead crane or boom truck (5 tons or 10,000 lbs.).
- SUEZ-supplied 500 cassette lifting bracket (Figure 4). The bracket must be inspected for damage or corrosion that may undermine its structural integrity. It is the crane operator's responsibility to accept the condition of the hook and under the hook devices. The lifting bracket should have a label indicating its capacity, serial number, and manufacturer name and design criteria.
- Tools, as recommended by the supplier, required to remove the tank grating/cover.
- Gloves and other PPE as required.

Figure 4 - Lifting device

* Trademark of SUEZ; may be registered in one or more countries. If document printed in black and white, safety images may represent modified versions of ISO images.

7.0 LIFTING PROCEDURE

1. Connect the lifting bracket to the overhead crane using appropriate and certified equipment (Figure 5).

   Remove the tank cover/grating (if any) and place it in an area that will not interfere with cassette removal or create a trip hazard.

2. Disconnect the cassette from the beam brackets and remove the hitch pins. Use the hitch pins to attach the lifting bracket to the cassette arms.

   Move the permeate and air connections out of the way as necessary so that they will not catch on the train headers as the cassette is lifted.

Figure 5 - Connecting lifting bracket to overhead crane

3. Begin to lift the cassette upwards (Figure 6). If the crane has two speeds, the slower speed should be used for lifting cassettes. If necessary, gently (using low pressure) hose down the cassette while it is being lifted out of the tank.

   When the cassette has cleared the water surface in the tank, stop lifting and allow the cassette to drain for 10 minutes or until the water draining from the cassettes slows to a trickle.

4. Continue lifting until the bottom of the cassette is clear of the top of the tank. The cassette can now be moved to the work area.

   It is recommended that a guide rope be tied to one bottom corner of the frame to assist in controlling movement. For safety reasons, the tank cover/grating should be reinstalled while the cassette is out of the tank.

Figure 6 - Lifting the cassette upwards

5. Reverse through the above steps to return the cassette to the tank. Ensure that only a slow crane speed is used.

* Trademark of SUEZ; may be registered in one or more countries. If document printed in black and white, safety images may represent modified versions of ISO images.

ZeeWeed 500 64M module installation

1.0 PURPOSE

The purpose of this document is to outline the steps required to properly install modules into a ZeeWeed* 500 64M cassette. Contact SUEZ Water Technologies & Solutions (SUEZ) for clarification as necessary.

⚠ WARNING	
	**Follow All LOTO Procedures** Follow proper safety procedures to prevent injury when carrying out this procedure. Adhere to all Lock Out Tag Out (LOTO) and safe lifting procedures in accordance with company, site and local health and safety policies and procedures.
	**Read Entire Procedure** Read this procedure completely before proceeding.

⚠ CAUTION	
	**Wear Appropriate PPE** This procedure requires that the operator wear Kevlar gloves, safety glasses, and protective clothing. Maintain baseline and task-specific PPE until task is completed.
	**Fall Protection Required** Fall protection is required if working around open tanks during module installation.
	**Pinch Hazard** Be aware of possible pinch points and use care during installation.

* Trademark of SUEZ; may be registered in one or more countries. If document printed in black and white, safety images may represent modified versions of ISO images.

⚠ CAUTION	
	**Slip/Fall Hazard** Keep area around the system clear to minimize the risk of slip/trip/fall. Ensure any glycerin spills/leaks are cleaned immediately.
	**Overexertion Hazard** Use two people to uncrate the cassette and be alert to pinch points. Use correct position and posture when lifting sides and during installation.
	**Sharp Edges** Be aware of sharp edges. Take care when opening cassette bag per SUEZ instructions. There is a risk of being struck by, struck against, or caught on the cassette. Use care during inspection and be alert to pinch points.

NOTICE	
	Every effort has been made by SUEZ to provide current information while preparing this procedure. SUEZ maintains that depictions of methods and/or techniques and use of specific tools and/or apparatus shown within the situations portrayed are accurate at the time of printing. SUEZ accepts no liability for any reliance placed on the information contained herein.

2.0 APPLICABILITY AND REVISIONS

This document covers the ZW500 64M product line. Related procedures:

- *Glycerin Flush and Sanitization Procedure (SERV-0021)*
- *Module Removal Installation Tool (SERV-0030)*

Figure 1 - ZW500 cassette

3.0 MANPOWER REQUIREMENTS

The typical installation of a 500 module requires two (2) people at all times to prevent damage to the module. Refer to *SERV-0030 ZeeWeed 500 Module Removal Installation Tool* for instructions on removing a 500 module from a cassette.

* Trademark of SUEZ; may be registered in one or more countries. If document printed in black and white, safety images may represent modified versions of ISO images.

4.0 EQUIPMENT AND TOOLS

- Flashlight (optional)
- 500 module removal tool
- O-Ring NSF lubricant (e.g., Dow Corning 111)
- Stepladder

5.0 INSTALLING THE MODULES INTO THE CASSETTE FRAME

5.1 Unpacking the module

1. Each module is packaged in a sealed bag in a box. Using two people, remove the module from the box and lay it out flat on a clean table or work surface larger than the fully extended module.

2. Through the clear bag, inspect the module to ensure that no damage was incurred during shipping. Check that all O-rings are present. If an O-ring is missing, do not open the bag until a spare O-ring is located.

3. Carefully cut completely across one end of the bag; **do not** cut towards yourself or the fibers. With one person holding the header, the second person should pull on the bottom of the bag, sliding the bag off the module.

NOTICE	
	Be mindful of the module and membrane at all times when working around the cassettes. Do not allow clothing, body parts, tools, materials, jewelry etc. to scrape or touch the membrane – do not allow the module headers to bump up against the cassette frame or other modules.
	Quality testing has shown that the majority of module failures can be attributed to incorrect module installation. It is very important that the following instructions are followed to prevent damage. Under no circumstances should excessive force be used on the module to aid in insertion or removal from the cassette.
	Ensure the module is not allowed to dry out.

* Trademark of SUEZ; may be registered in one or more countries. If document printed in black and white, safety images may represent modified versions of ISO images.

5.2 Installing the module

Once the module is unpacked, the permeate spigots will be exposed.

1. Inspect the spigot for any cracks or damage. Confirm the black EPDM #118 O-rings are present, intact, and in proper placement on the permeate spigot.

2. O-rings must not be twisted, cracked, or worn. Apply a water-soluble lubricant (such as Lubrigel or KY Jelly) to the O-rings (Figure 2).

Figure 2 - Lubricating O-ring

3. If reinstalling a used module removed for inspection, hose down the module, removing any obvious solids and debris.

NOTICE	
⚠	Support the headers at all times! Do not allow the module headers to bump up against the cassette frame or other modules.
⚠	The installation of a 500D module must be completed with two people. It is very important that the bottom module header is not allowed to swing freely when the top header is slid into place. If the bottom header is not controlled during installation, it can swing into the center of the cassette and impact the bottom permeate collectors. Damage from this impact will require module replacement.

4. Use two people to lift up the module, being extremely careful not to let the fibers or the bottom header contact the ground (Figure 3). While one person climbs the ladder to install the top header, the second person must support the bottom header at all times.

   In all instances, try to install the modules by hand, and use the module installation tool only for assistance if required (refer to *SERV-0030 Module Removal Tool*).

Figure 3 - Carrying a module

* Trademark of SUEZ; may be registered in one or more countries. If document printed in black and white, safety images may represent modified versions of ISO images.

5. Insert modules slowly along the guide extrusion and into the permeate collectors (Figure 4). Only once the bottom header is successfully connected, should the top header be connected.
   Installing quickly and forcefully may roll the spigot O-rings or fail to seat the module into the permeate adaptor inserts correctly, and/ or pre-stress the plastic components of the header.

Figure 4 - Inserting module

6. Turn all the locking keys a quarter turn so that an audible click is heard. Locking keys will be perpendicular to the ground in the locked position.
   Avoid hammering or using a blunt force object. As a last resort only, the area under the claws can be lightly tapped with a mallet (Figure 5).

Figure 5 - Tapping lightly with a mallet

If a module does not easily slide into the cassette, visually check for the following:

- Check that the permeate adaptor inserts are seated properly. If they are not, reseat the inserts.
- Check that there is no extra plastic on the module header or urethane potting material overflowing the header. If necessary, use a coarse and then fine file to carefully file off any extra material that may be interfering with the insertion of the module into the saddle.

5.3 Final checks

Perform a final check on the cassette and confirm:

- all spigots are seated properly
- all modules keys are in the locked positions
- all hardware is secure and torqued to the proper specifications (see General Arrangement Drawings).

Once the module(s) have been installed and final check has been completed, it may be necessary to carry out a glycerin flush and sanitization procedure (refer to *SERV-0021* for detailed instructions), followed by a Membrane Integrity Test.

* Trademark of SUEZ; may be registered in one or more countries. If document printed in black and white, safety images may represent modified versions of ISO images.

1.0 Purpose

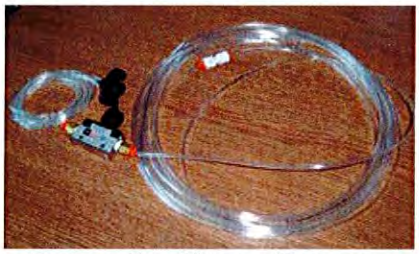
The purpose of this document is to outline the steps required to carry out fiber repairs on ZW500 modules.

Always follow proper safety procedures to prevent injury.

Safety Risk Assessment Recommendations

Required – Kevlar Gloves, Safety Glasses, Protective Clothing

Keep area around the repair area clear to minimize risk of slip/trip/fall. Maintain baseline and task specific PPE until completion of task.



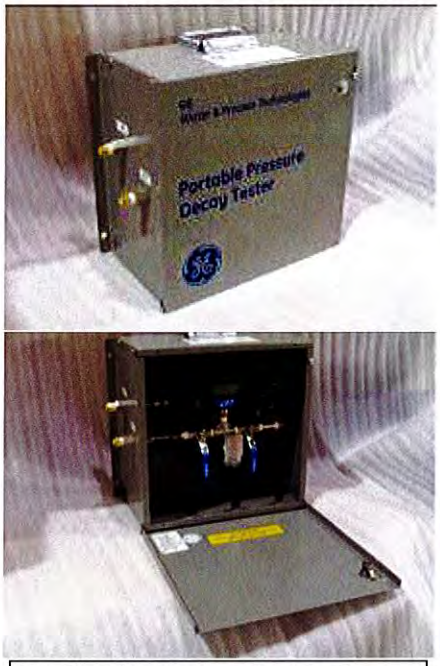
2.0 Applicability and Revisions

This document covers the ZeeWeed® 500 product line. Related procedures: SERV-0013 Pneumatic Fiber Repair; SERV-0017 Membrane Test Procedure – Pressure Decay (DW); SERV-0018 Membrane Test Procedure – Wastewater; SERV-0024 Lower Upper Permeate Header to Increase Slack.

3.0 Tools Required

Tools/Equipment
Fiber Repair Kit **AND/OR** Pneumatic Fiber Repair Kit
Portable Pressure Test Device (PPDT)
Clean cloth rag

Pneumatic silicone dispenser



Fiber Repair Kit

Step 3.0 – Pressurizing Module

Referencing SERV-0017 Membrane Test Procedure – Pressure Decay (DW) or SERV-0018 Membrane Test Procedure – Wastewater, pressurize the module to the specified pressure for the membrane using a clean, oil free, dry source of compressed air. It will take approximately one minute to fully pressurize the module and evacuate the water from the fibers.

NOTE: The incoming airline should be equipped with a vent valve to safely release pressure.

Sharp objects and edges or improper handling can cause membrane damage. Remove all jewelry and watches before handling modules.

This Portable Pressure Test Device (PPTD) is designed for the evaluation of ZeeWeed® membrane integrity. Unit includes an air filter, fine and coarse air regulators, adjustable pressure relief protection and high sensitivity digital pressure gauge.

Safety Risk Assessment Recommendations

Risks	Risk Mitigation
-over pressurization hazard	- pressurize only to the specified pressure

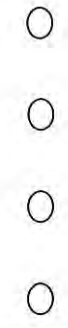
Step 4.0 – Identifying the Leaks

Leaks can appear in a variety of bubble sizes. A broken fibre will produce a steady stream of 3 mm (1/8") bubbles. A damaged fibre will also produce a steady stream of bubbles but of smaller size. Bubbles can gather under the top header of the membrane and when enough volume as collected, comes to the surface in one large bubble. This may represent a number of smaller leaks and is to be taken into account during the diagnosis.

Once a leak has been found as per the following criteria; the module can be repaired using the fiber repair methods detailed below. Where possible, all repairs should be made on site. If a module requires difficult or numerous repairs, please contact the SUEZ WTS Lifecycle Technical Support for information on returning the module to SUEZ for analysis, repair or replacement.

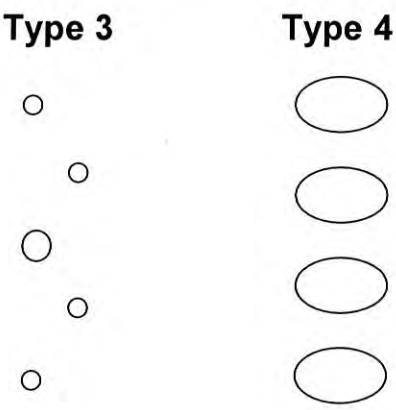
Severe Leaks (Type 1)

Severe leaks at the top header of the 500a product can be due to urethane bonding two adjacent fibers firmly together - called "twinned" fibres. Handling and debris can cause the fibers to be pushed apart causing the removal of the urethane from the fibre surfaces and can begin to leak at this point. Debris can also remove sections of the membrane from the support fibre resulting in delamination and severe leaking. All of these problems are easily dealt with by cutting and sealing fiber ends. Severe leaks also cover more serious issues, such as fibres pulled completely out of the urethane, compromised urethane, cracked headers and manifolds, damaged glue joints, and pinched o-rings. All of the severe leaks produce large voluminous streams of bubbles even at low pressures.



Type 1

Moderate Leaks (Type 2)



Moderate leaks are evident by steady streams of small bubbles. This category covers problems including impact damage from debris, "pin holes" in the membrane, large dried-out pores, twinned fibers and other easily repaired items. These problems are easily resolved by cutting and sealing the fibers.

Type 2

Minor Leaks (Type 3 and 4)

Minor leaks are often misinterpreted from simple air permeation of the membrane. Just as water permeates through the membrane, so can air if the water in the pores has been displaced by air. It is for this reason that the modules must be permeated before any bubble testing occurs. If the problem persists following permeation of the modules(s), the stream of small bubbles is likely due to a minor fiber defect.

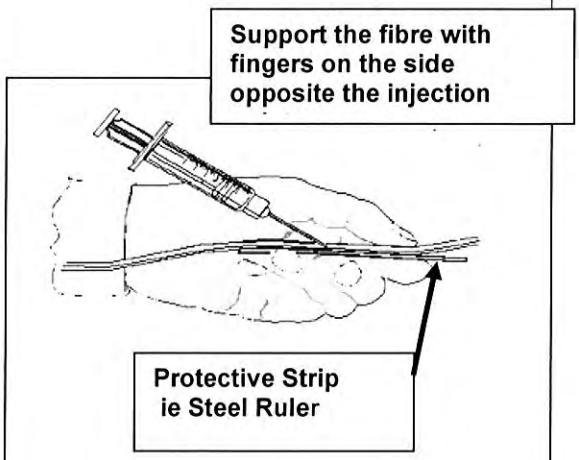
Note:

It is quite common to see Type 2, 3 and 4 bubbles when bubble testing a WW Flow Membrane at 3 psi. Note these types of bubbles are normal and will not impact your water quality and there is no need for repair.

Air diffusing from membranes

Every effort has been made by SUEZ Water Technologies and Solutions to provide current information while preparing this procedure. SUEZ maintains that depictions of methods and/or techniques and use of specific tools and/or apparatus shown within the situations portrayed are accurate at the time of printing. SUEZ accepts no liability for any reliance placed on the information contained herein.

Fibre Repair Method # 1
Axial Silicone Injection Method



If the leak is found in the middle of the lumen follow the following steps:

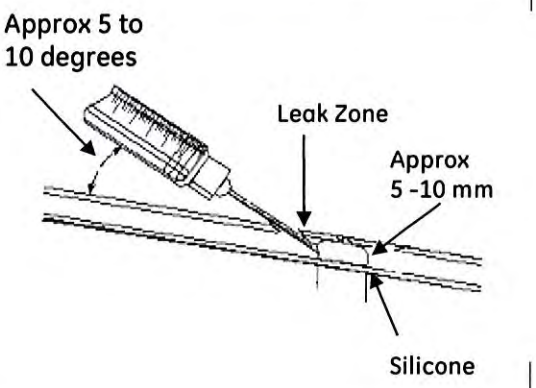
Step 1

Remove the membrane module from the tank and prepare for the fiber repair by filling one 10 cc syringe with Shin-Etsu silicon.

Push the tip of the needle through the fibre taking care to ensure that it does not go through the fibre completely, but only into the hollow centre (lumen). The correct positioning of the needle is 5 to 10 mm away from the leak zone, at an angle of 5 to 10 degrees.

A METAL SHIELD SHOULD BE USED TO PROTECT THE HAND HOLDING THE FIBER.

Safety Risk Assessment Recommendations for Injection Method



Risks	Risk Mitigation
- puncture hazard	- use metal shield to protect hand holding fibre
- slip hazard	- take care to wipe up any glycerin or water from the work area

Step 2

Apply light pressure to fill the lumen so that it is filled 5 to 10 mm past the leak zone on either end. Continue applying pressure while withdrawing the needle from the lumen ensuring puncture is sealed.

Step 3

Once the repair is complete, the cassette should be placed back into the process tank. Allow for a ten-minute curing time before carrying out further membrane testing.

Fiber Repair Method #2
Cutting and Sealing Method

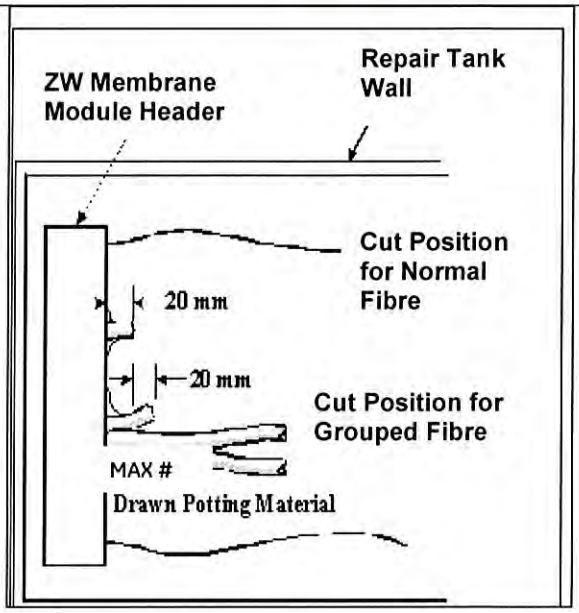
When a fiber is damaged and an axial repair will not work, it needs to be cut and sealed. This section describes the procedure for the necessary repair using the cutting and sealing method.

CAUTION:

Do not separate strands that are glued together at the header, the membrane will be damaged!

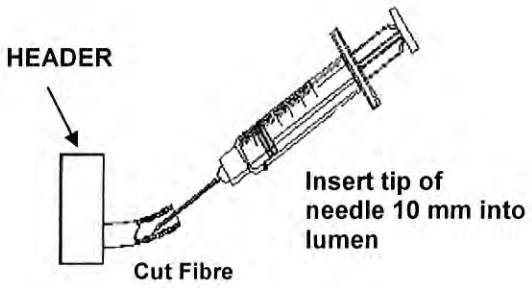
Safety Risk Assessment Recommendations for Injection Method

Risks	Risk Mitigation
- puncture hazard	- use metal shield to protect hand holding fibre
- slip hazard	- take care to wipe up any glycerin or water from the work area
- cut hazard	- take care when cutting the fibres



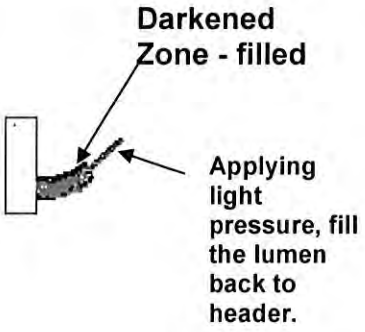
Step 1

Remove the membrane module from the process tank. Locate the damaged fiber and carefully cut the fiber approximately 20 mm from the potting material at the Zee Weed top module header then proceed to carefully cut the fiber approximately 20 mm from the potting material at the Zee Weed bottom module header. See Figure 1.0 for correct cutting positions.



Note:
This procedure must be carried out for all modules, including the 500C.

Step 2



Remove the membrane module from the tank and prepare for the fiber repair by filling one 10 cc syringe with Shin-Etsu silicon.

Insert the tip of the needle 10 mm into the center of the membrane lumen.

Step 3

Apply light pressure to inject the silicone. Fill the lumen back to the headers (as indicated by the darkened zone - see picture - this typically takes about 15 - 45 seconds). Begin to slowly withdraw the needle while still injecting the silicone to assure the lumen is completely filled. While still applying pressure to the syringe, use the tip of the needle to spread silicone over the cut end of the hole left in the fibre.

Step 4

Once the repair has been made on each end of the fiber at both the top and bottom headers, the cassette should be placed back into the process tank. Allow for a **ten-minute** curing time before carrying out further membrane testing.

Fiber Repair Method #3
Header Pin Method

The Pinning Method can be used to seal header holes left by pulled fibres. This method is not 100% reliable in sealing the holes and, as its use can produce leaks in neighbouring fibres, all leaking fibres should continue to be sealed with silicone. Pinning is approved only for non-drinking water applications using the 500 product.

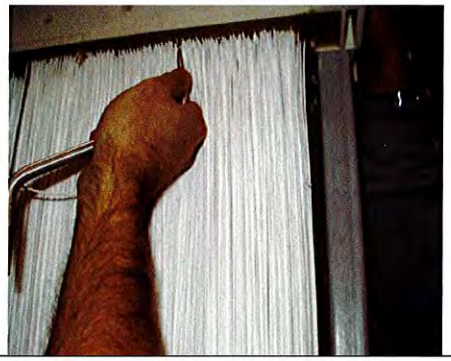
This method is currently approved for non-drinking water 500 modules only.

Step 1

Locate the fibre hole in the module header from the pulled fibre. Note: Dropping the header (and inverting the module if the fibre is pulled from the top header) makes locating the leak much easier and you will be less likely to damage neighbouring fibres during the pinning process. Refer to SERV-0024 re dropping headers on 500a/b cassettes.

Step 2

Note the tool has two ends - a hollow end and concave end. Insert the thick end of the pin into the hollow tool end.



Step 3

Using the pin repair tool, push the pin into the hole until the tool tip touches the urethane surface.

Step 4

Using the concave end of the tool, carefully push the pin further into the urethane so that the top of the pin is just below the urethane surface. Do not add silicone - only place the dry pin in the hole. Push carefully to prevent the tool from slipping off the pin. Cut and seal the loose fibre at the other header using the cut and seal repair method.

Safety Risk Assessment Recommendations for Injection Method

Risks	Risk Mitigation
- caught on hazard	- take care – modules and cassettes have sharp edges

Implied warranties, including but not limited to warranties of fitness for particular purpose, use or application, and all other obligations or liabilities on the part of the seller, unless such warranties, obligations or liabilities are expressly agreed to in writing by seller, are null and void.

8.b Membrane Warranty

A 15-year prorated warranty is offered on the membrane modules with the first 5-year offered as a full replacement warranty and the remaining 10-year as a prorated warranty. Refer to "Seller's Warranty – ZeeWeed Membrane Modules" in Section 8.d for a detailed description of the membrane warranty offered.

8.b.1 Warranty Provisions

In addition to the membrane warranty limitations as defined in the "seller's warranty – ZeeWeed membrane modules", the membrane warranty is subject to the following provisions:

- ❑ the equipment is operated and maintained at all times in accordance with the seller's operations and maintenance manual,
- ❑ the equipment is operated within the mixed liquor characteristics defined in Table 1 of this section,
- ❑ seller has, until performance of its obligation herein is met, reasonable access to the equipment and the operational data relating thereto,
- ❑ the buyer/owner furnishes adequate and competent operating, supervisory and maintenance staff, and necessary laboratory facilities with test equipment and personnel,
- ❑ the buyer/owner utilizes the services of seller until its performance obligations are met
- ❑ the buyer/owner supplies all necessary raw materials and services of a quantity and of a quality specified by the Seller,
- ❑ an adequate and continuous power supply is available that will enable operation of all required equipment,
- ❑ the following pre-treatment guidelines are followed:
  - ***fats, oil and grease (FOG)*** – FOG concentration shall not exceed 150 mg/L of emulsified FOG in the feed with no free oil and less than 10 mg/L of mineral or non-biodegradable oil.
  - ***pretreatment*** - A punched hole or woven wire mesh screen with a maximum size opening of no greater than 2 mm and without possibility of bypass of any particle larger than 2 mm in all directions must be included in the headwork's. Seller must be consulted regarding the type, capacity, and size opening of the screens that are to be installed.
  - ***process chemical additives*** - The use of any chemicals added to the wastewater treatment process (e.g.: polymers, flocculants, coagulants, antifoams) that may come in contact with the ZeeWeed membranes must be approved by seller prior to use. This includes chemicals used in

processes outside of the seller's system that may be transferred to the seller's system, such as in solids handling facilities.

Table 1: Mixed Liquor Characteristics for Warranty Purposes

Parameter	Design Value	Accepted Operating Range
Mixed liquor temperature (°C)	10	10 to 30
MLSS concentration in membrane tanks (mg/L) [1]	10,625	≤ 13,000
pH of mixed liquor in membrane tanks (SU)	7.0	6.5 to 7.5
Soluble $cBOD_5$ concentration in mixed liquor entering membrane tanks (mg/L)	5	≤ 5
NH_3-N concentration in mixed liquor entering membrane tanks (mg/L)	1.0	≤ 1.5
Colloidal TOC (cTOC) concentration in mixed liquor entering membrane tanks (mg/L) [2]	7	≤ 10
Soluble alkalinity of mixed liquor entering membrane tanks (mg/L as $caco_3$)	100	50 to 150
Time to filter (TTF) of mixed liquor in membrane tanks [3]	100	≤ 200
Material greater than 2-mm in size in mixed liquor in membrane tanks (mg/L) [4]	0	≤ 1

Notes:

1) Membrane tank MLSS concentration of up to 13,000 mg/L is permissible during MDF and PHF events only. Membrane tank MLSS concentration to be ≤11,000 mg/L during all other flow conditions.
2) Colloidal TOC (cTOC) is the difference between the TOC measured in the filtrate passing through a 1.5 µm filter paper and the TOC measured in the ZeeWeed membrane permeate.
3) Per seller's standard Time to Filter (TTF) procedure (available upon request).
4) Per seller's standard sieve test procedure (available upon request).

8.b.2 Membrane Performance

Seller warrants, subject to the provisions set forth above, that after stable operation of the seller's system has been attained and operators have acquired reasonable skills, the membrane modules supplied for this project will be capable of meeting the hydraulic capacities set forth in Section 3.a.1.1 and achieving the TSS and turbidity requirements in Section 3.a.1.3 of this proposal.

8.c Performance Warranty

This warranty provides protection and assurances to the buyer/owner with respect to the ability of the seller's MBR system to meet the established performance criteria. Based on the influent wastewater and/or mixed liquor characteristics and system operating parameters specified in this document, the equipment offered herein will be capable of meeting the performance defined below.

The MBR system performance will be demonstrated during a performance test (refer to the "performance test" section of this document for details on the performance test procedure). The performance warranty period is limited to the duration of the

performance test. In cases where the performance test is not completed within fourteen (14) days from the date of completion of start-up, testing and commissioning of the facility, or six (6) months from membrane shipment, whichever occurs first, the seller's obligations under the performance warranty will be deemed fulfilled.

Once the performance warranty period has expired, mechanical and membrane warranty provisions shall apply.

8.c.1 Biological Treatment System

Subject to the terms defined above, the influent wastewater characteristics defined in Table 2, and the biological treatment system operating parameters specified in Table 3, the equipment offered herein will be capable of meeting the permeate quality defined in Table 4.

Table 2: Influent Wastewater Characteristics for Biological Treatment System

Parameter	Design Value (Average)	Accepted Operating Range
Wastewater flow (MGD) [1]	8.0	See note 1
Wastewater temperature (°C)	10	10 to 30
Total suspended solids, TSS (mg/L)	74	≤ 74
Biochemical oxygen demand, BOD_5 (mg/L)	98	≤ 98
Total Kjeldahl nitrogen, TKN (mg/L)	27	≤ 27
Ammonia, NH_3-N (mg/L)	18	≤ 18
Total phosphorous, TP (mg/L)	6.0	≤ 6.0
Ph (SU)	7.0	6 to 9
Alkalinity (mg/L as $caco_3$) [2]	225	≥ 100
Phenols (µg/L) [3]	11	≤ 11

Notes:

1) The biological system design considers the maximum monthly flow (MMF) as the design flow condition. Refer to the membrane filtration system design (table 2) for other flow conditions.
2) In order to maintain sufficient permeate alkalinity and/or maintain pH within the bioreactor within acceptable limits, a supplemental NaOH dosing system is included in the system design. The need for alkalinity adjustment will vary according to influent characteristics and bioreactor performance.
3) As measured per Standard Methods for the Examination of Water and Wastewater Method 5530 or industry-approved equivalent standard analytical method

Table 3: Biological System Operating Parameters for Warranty Purposes

Parameter	Design Value	Accepted Operating Range
Mixed liquor temperature in bioreactor (°C)	10	10 to 30
MLSS concentration in bioreactor (mg/L)	8,500	≤ 8,500
MLVSS/MLSS ratio in bioreactor (-)	0.75	0.6 to 0.8
Aerobic solids retention time, ASRT (d) [1]	13	≥ 13
pH of mixed liquor in bioreactor (SU)	6.7	6.5 to 7.5

Dissolved oxygen (DO) concentration in anoxic zones (mg/L)	0.2	≤ 0.2
Dissolved oxygen (DO) concentration in aerobic zones (mg/L)	2.0	≥ 1.5

Note:

1) Aerobic SRT value is based on total aerated process volume in the aerobic bioreactor zone plus membrane tank volume.

Table 4: Guaranteed Biological Treatment System Performance

Parameter	Guaranteed Value [1]
Biochemical oxygen demand, BOD_5 (mg/L)	≤ 5.0
Ammonia, NH_3-N (mg/L)	≤ 1.8 (Oct 1st – May 31st) ≤ 1.2 (Jun 1st – Sep 30th)

Note:

1) Guaranteed concentrations are based on a monthly average value of a minimum of four (4) 24-hour composite samples collected at regular intervals with testing performed to applicable industry-approved standards.

8.c.2 Operations & Maintenance Costs

Subject to the terms defined above, the operation & maintenance costs for the equipment offered herein will not exceed the values defined in the bid forms. Note that the seller only guarantees operation & maintenance costs for the equipment that is included in the seller's scope of supply and limits the guarantee to the aggregate total in the tables. Seller is not responsible for the operation & maintenance costs of equipment that seller has not supplied.

Energy Consumption

Subject to the terms defined above, the equipment offered herein will consume no greater than the electrical energy defined in the bid forms. The energy guarantee value is based on operating at the average daily flow condition. Seller has assumed that this ADF flow will be treated with three (3) biological and three (3) membrane trains in service.

Membrane Cleaning Chemical Consumption

Subject to the terms defined above, the equipment offered herein will consume no greater than the chemical volumes defined in the bid forms. Seller guarantees the consumption of chemicals used for membrane system cleaning (i.e. sodium hypochlorite and citric acid).

8.c.3 Performance Test

A thirty (30) day performance test is to be carried out to demonstrate the ability of the seller's system to meet the performance warranty requirements. Within thirty (30) days of installation of the membrane modules, the buyer/owner shall start-up the Equipment. Thereafter, the buyer/owner shall use its reasonable best efforts to maintain continuous and stable operation of the system until the seller's obligation under this performance guarantee has been discharged. The buyer/owner shall notify the Seller that the system

is ready for the performance test or notify why the system is not ready and the party responsible for the lack of readiness shall promptly take the appropriate remedial action.

The buyer/owner shall afford the seller full access to the system and to all operating data pertaining to system performance until discharge of the latter's obligations hereunder. The performance test shall be conducted by the buyer/owner in accordance with a mutually agreeable test protocol and applicable standard techniques and operating procedures specified by seller in the operations and maintenance manual.

The performance warranty values are based on a monthly average value of a minimum of four (4) 24-hour composite samples collected at regular intervals with testing performed to applicable industry-approved standards. On-line instrumentation provided and grab sample testing performed is included as indications of the performance of the plant and to assist in the proper operation and control of the system. These results may include values beyond the stated warranty values (during process upsets or if instrument poorly/not calibrated, etc.) and additional composite testing as above must be performed to establish that the plant is not meeting performance requirements. All analytical work shall be carried out by the buyer/owner.

During the performance test, the MBR system operation should be according to the seller's operations and maintenance manual and the operating parameters specified in this section.

In the event of an interruption during the performance test due to any of the following events, the test shall be extended by the period of the interruption plus the time required to re-attain operating conditions in effect at the time of the interruption and data recorded during that period shall not be included:

1) power interruption in excess of sixty (60) minutes per day.

2) mechanical failure of the system, including a significant failure of the membrane system that decreases capacity below 75% for more than 24 hours.

3) any influent or operating parameter outside the accepted operating ranges defined in this section.

If during the execution of the performance test the wastewater flow and/or load into the plant are outside the specified acceptable operating ranges in this document, the seller will modify the test protocol within reason to mimic the design condition. The seller is not responsible for any limitations on the performance test protocol or results due to wastewater flow and/or load that is outside of the specified acceptable operating ranges.

When seller is of the opinion (based on the results obtained at the completion of the performance test), that the system has fulfilled the performance guarantees herein contained, it shall give written notice to the buyer/owner to that effect. Within two (2) weeks immediately following receipt of such notice, the buyer/owner shall notify the seller in writing that it accepts the system, or that it does not accept the system, in which latter case the buyer/owner shall state the specific reason for non-acceptance. In the absence of such reply from the buyer/owner within the two (2) week period, the system shall be deemed to have been accepted and the seller's obligation under this performance warranty shall be discharged.

If, after the system has been operated pursuant to the conditions hereinabove set forth, it becomes reasonably apparent, based on the results obtained at the completion of the performance test, that the system performance is short of the guaranteed performance,

then additional performance tests of the system shall be conducted by the buyer/owner whenever seller shall reasonably request. In such event, seller shall be responsible to undertake all necessary reasonable corrective measures in an effort, consistent with commercial and technical reasonableness, to bring the system up to the guaranteed performance levels.

If for any reason outside seller's control, the performance test can not be completed within sixty (60) days after installation of the membrane modules, or eighteen months from shipment or if any changes are made to the system without the seller's written consent that would affect the seller's ability to meet this performance warranty, then all obligations to the buyer/owner under this performance warranty will be deemed fulfilled.

Once the performance test has been satisfactorily completed, mechanical and membrane warranty provisions shall apply.

8.d Seller's Warranty – ZeeWeed Membrane Modules

This schedule sets out the warranty with respect to ZeeWeed membrane modules ("membrane modules"). No other warranties, expressed or implied are made in connection with the sale of these products, including, without limitation, warranties as to fitness for any purpose or use or merchantability of these products. The warranty provided herein will be the exclusive and sole remedy of Buyer. This warranty is not transferable.

1 Definitions

The following terms shall have the meaning set forth below when used in the warranty document:

a. "Buyer" means **Town of New Windsor, Orange County, New York**.

b. "Seller" means a business component of, or legal entity within the SUEZ Water Technologies & Solutions business which is selling the ZeeWeed membranes.

c. "Full replacement" means that in the case of a valid warranty claim for a membrane module failure, Buyer receives a replacement membrane module and does not pay for the value of use of the membrane module prior to failure.

d. "Prorated replacement" means Buyer pays for actual use of a membrane module from which Buyer has derived value over time. Prorated replacement allows the Seller to pay reasonable compensation under warranty for any product use not enjoyed by Buyer due to premature failure.

2 Warranty Product

This warranty applies to only the membrane modules supplied under the contract of sale. Membrane module means the hollow fiber ultrafiltration membranes and the potted plastic headers. This warranty does not cover air piping to the membrane module, permeate piping from the membrane module, piping connection fittings, connecting hardware and cassette frames with their associated components including but not limited to spacers, aerator tubes, aerator assemblies, screen, module dummies or module blanks.

3 Scope of Warranty

The Seller warrants that its membrane module(s) will be free of defects due to faulty materials or errors in manufacturing workmanship.

Regular membrane module inspection and normal fiber repair shall be the responsibility of Buyer.

All replacement membrane modules will be shipped on the basis of INCOTERMS 2020 FCA SUEZ manufacturing facility.

All ancillary costs including but not limited to bagging, boxing, crating, freight, freight insurance, applicable taxes, import duties, certifications, brokerage, receiving, forklift services, storage at site, reattachment hardware, hose/clamp/camlock replacement, crane services, installation, fiber repair materials, glycerin flushing, commissioning and waste disposal are the responsibility of Buyer.

4 Warranty Start Date

Membrane warranty will start on the earlier of:

a. The date that installation of the original membrane module(s) has been substantially completed, or

b. Three (3) months from the date of delivery of the original membrane module(s) to Buyer.

5 Warranty Duration

Total Warranty Duration: a total of **15 years** composed of a full replacement period and an extended prorated replacement period.

Full Replacement Warranty Duration: 5 years of full replacement warranty coverage.

Extended Prorated Replacement Warranty Duration: 10 years following the full replacement warranty period.

Membrane modules replaced under warranty shall assume the remainder of the warranty for the original membrane modules being replaced, with such warranty to be not less than a **24**-month full replacement warranty from the date of replacement with a new membrane module.

Replacement membrane modules are covered by warranty only to the extent of the warranty of the original membrane module which has been replaced. At all events, this warranty shall expire and be of no force or effect **24** months following the warranty start date.

6 Membrane Module Replacement Price – Prorated Replacement

The base Membrane Module Replacement Price (MMRP) used to calculate the prorated amount to be paid by the Buyer to replace defective membrane modules under warranty shall be shown in Table A-9 in the Bid Worksheets in Section 6. Membrane module prorated replacement price does not include bagging, boxing, crating, taxes and will be shipped on the basis of INCOTERMS 2020 FCA SUEZ Manufacturing facility.

For membrane modules supplied under valid warranty claims, the prorated share that the Buyer will pay is calculated as follows:

$$\text{Prorated Share of Price} = \frac{\text{Number of Whole Months Elapsed Between the Membrane Modules Claim Date and the Warranty Start Date} \times \text{MMRP} \times \text{Inflation Adjustment as Shown in Table A-9 in Bid Worksheets}}{\text{Total Warranty Duration in Months}}$$

Note that this Membrane Module Replacement Price (MMRP) is not applicable for membrane modules requested for purchase by Buyer for any non-warranty or other purposes, including but not limited to flux reduction, or plant hydraulic capacity increases. Modules purchased under these or other scenario's will be sold to Buyer by Seller at the list price in effect at the time of order.

7 Notification of Claim

All claims filed under this warranty shall be made in writing by Buyer within 30 days of identifying a defect.

Buyer shall provide the following information:

a. A description of the defect giving rise to the claim;

b. Photographs showing the manufacturing defect;

c. The serial number(s) of the membrane module(s) which is (are) the subject of the warranty claim; and

d. Operating data and repair history for the life of membrane modules which are the subject of a warranty claim.

8 Verification of Claim

After receipt of written notification of a defect, the Seller will promptly undertake such investigations as, in the Seller's opinion, are necessary to verify whether a defect exists. The Seller reserves the right to require additional data as necessary to validate claims. Buyer may, in the course of these investigations, be requested to return membrane module(s) to the Seller for examination (see section 12). The Seller may also conduct reasonable tests and inspections at Buyer's plant or premises. If the results of the investigation do not validate the defect claimed, Buyer will reimburse the Seller for all reasonable expenses associated with said investigation, including expenses for all tests, inspections, and associated travel.

9 Satisfaction of Claims

The Seller will have the right to satisfy claims under this warranty in a flexible manner. Such flexibility may include the repair of existing membrane modules or changes in operating protocols or membrane module replacement or by upgrading failed membrane modules with newer membrane module(s) that may embody design and efficiency improvements. Buyer consents to the supply of replacement membrane modules which may be of a different design than original membrane modules.

10 Operating Information

To maintain the membrane module warranty, membrane system operation records from initial start-up date until claim must be maintained by Buyer and made available to the Seller upon request. Records must be provided in sufficient detail as applicable to verify the subject of a warranty claim and can include but is not limited to, operation data including information on feed water quality, temperatures, flows, trans-membrane pressures, aeration rates, permeate quality, cleaning intervals, cleaning chemical concentrations, elapsed time since start-up, relevant analytical data and reporting of any screen bypass events.

Buyer shall maintain and share access to a single reference copy in electronic form of a membrane module map containing the history of activity by membrane module and the serial number for each module. Buyer shall log its procedures performed related to a membrane module including relocation of membrane modules, repairs, replacements and any other noteworthy events.

Buyer authorizes the Seller to conduct any reasonable review of operation and maintenance records or to inspect facilities where membrane modules are installed, upon reasonable notice to Buyer. Such reviews and/or inspections are intended to also assist the Seller and Buyer in detection of membrane system faults and to optimize the care and operation of the membrane modules.

11 Limitation of Warranties

Occurrence of any of the following as reasonably determined by the Seller will void this warranty:

a. A material failure to operate the membrane system in accordance with Seller's operations and maintenance manual supplied to Buyer as part of the contract, including material failure to adhere to the Seller's specified membrane module cleaning procedures and the use of anything other than Seller-approved membrane module cleaning agents.

b. Failure to adhere to the preventive maintenance program as presented in the Seller's operations and maintenance manual, in published product manuals and in specifications.

c. Failure to adhere to all transportation and storage requirements. ZeeWeed membrane modules may be stored up to 12 months from date of receipt and must be transported and stored in original intact packaging out of direct sunlight in ambient temperatures between 5-35 Degrees Celsius. Storage beyond 12 months from date of receipt requires a written request to SUEZ to maintain membrane module warranties.

d. Introduction of destructive foreign materials and chemical agents into the membrane module.

e. Failure to maintain and provide system operating data and repair history for the life of membrane modules which are the subject of a warranty claim.

f. Physical abuse or misuse, incorrect removal or installation of membrane modules by non-Seller personnel including fiber damage caused by operator error in handling of membrane modules or cassettes.

g. Unauthorized alteration of any components or parts originally supplied by the Seller.

h. Intentional damage.

12 Return Procedure

In the event that the return of a membrane module is required pursuant to this warranty, Buyer will first obtain a Return Goods Authorization (RGA) number from the Seller. Membrane module(s) shipped to the Seller for warranty examination must be shipped freight prepaid in environmentally controlled freight and storage with ambient air temperature between 5-35 Degree Celsius. If Buyer desires temporary replacement membrane module(s) to replace those alleged to be defective and returned to the Seller for warranty examination, Buyer shall be responsible for the cost associated with any such replacements until examination of the returned membrane modules pursuant to this warranty is complete. Any membrane module examined by Seller as part of a warranty claim where the membrane module is subsequently found to be performing as warranted or where a membrane module failure is not covered

under the warranty will be returned to Buyer, freight collect or disposed of by Seller and the cost associated with any membrane analysis and diagnostic work will be levied against the Buyer based on SUEZ standard labor rates.

13 Disclaimer and Limitation on Liability

To the maximum extent permitted by law, in no event shall Seller be liable for any loss of profit or revenues, loss of production, loss of use of equipment or services or any associated equipment, interruption of business, cost of capital, cost of replacement water or power, downtime costs, increased operating costs, claims of Buyer's customers for such damages, or for any special, consequential, incidental, indirect, punitive or exemplary damages arising out of or relating to the performance or actual or alleged breach of the agreement, regardless of whether a claim is based in contract (including warranty or indemnity), extra-contractual liability, tort (including negligence or strict liability), statute, equity or any other legal theory.

9 Commercial Notes

9.a System Price

Pricing shall be as outlined on the bid form included in **Section 6** of this proposal.

9.b Price Validity and Price Escalation

The quoted system price will be valid until **October 18, 2022**. If a formal Purchase Order or Procurement Agreement is not received and accepted within this Validity Period, both the pricing and delivery schedules are subject to review and adjustment.

The proposed system pricing is based upon receipt of a Notice to Proceed (NTP) for Manufacturing/Equipment Procurement being provided by **July 15, 2024**.

Of the Total Bid Price, SUEZ proposes that escalation be calculated on the following material costs: equipment, instruments, controls, membranes and cassettes.

Portion of Total Bid Price Subject to Escalation: **$2,520,225.00 USD**

Price escalation would be calculated on the bid available date for the General Construction Contract and be the greater of, $0 USD, or the Seller's actual realized cost increases for materials as specified in Addendum No. 1, Agreement Article 2.05.

SUEZ agrees to provide a detailed cost breakdown within 7 days of notice of intent to award the membrane supply pre-selection agreement to SUEZ.

9.c Taxes

Per the Instructions to Bidders, the Owner is exempt from payment of sales and compensating use taxes of the State of New York, and cities and counties, on all materials supplied to the Owner pursuant to this contract.

Pricing provided herein does not include any taxes or duties.

9.d Order Confirmation Center

In order to facilitate efficient order handling, Seller has instituted an Order Confirmation Centre (OCC). All Purchase Orders or Contracts being issued to Seller are to be directed to OCC following the methods indicated below:

❑	Via email:	WTS.equipmentpo@suez.com
❑	Via facsimile:	905-469-2236
❑	Via courier:	**SUEZ WTS Systems USA, Inc.** 3239 Dundas Street West Oakville, Ontario L6M 4B2 Attn: OCC

9.e Delivery

All pricing is FOB project site. Delivery to the project site is conditional upon the provision of access roads of a nature that will permit access by tractor-trailers. Off-loading and positioning of equipment at the job site are not included.

9.f Terms and Conditions

Seller has prepared this proposal based on the Terms and Conditions included with the Request for Proposals and the clarifications to those Terms and Conditions as provided in Section 2.g – Compliance Statement of this proposal.

10 Value Engineering

SUEZ has made every effort to abide by the engineer's design and specifications as detailed in the Caesars Lane WTF MBR System Pre-Selection RFP. Our proposal and capital price are reflective of this effort, which we hope will facilitate the assessment of various membrane vendor offers.

In this section, we have provided a few alternative design concepts for consideration. SUEZ would be pleased to discuss these, or any other design alternative, in more detail upon request.

Anoxic Tank HRT

The minimum anoxic zone HRT for the project is specified as ≥1 hour at MMAF in Section 455000, Item 2.1.B.5.c. SUEZ has reviewed the biological design and believes the HRT and associated anoxic volume can be reduced as follows:

Anoxic HRT	US Gal.	Bioreactor Cost ($USD)
Specified	330,000	$1,320,000
Design Alt.	200,000	$800,000
	Estimated Savings	$520,000

The proposed design alternative will provide ≥1 hour HRT at ADF and have minimal impact on bioreactor pH under the ADF, MMAF, and MDF flow/load conditions (from a pH of ~6.7 to ~6.65 S.U.). For the specified influent alkalinity of 225 mg/L and assumed influent pH of 7 S.U., NaOH addition for alkalinity and pH control will not be required.

Permeate Pump Alternative

SUEZ has proposed a siphon design at this facility as our base offer. While we believe this will provide exceptional value, we recognize that there may be unidentified site constraints that we are unaware of, or potentially some unreconcilable reluctance to implement a full siphon design.

SUEZ has provided a permeate pump design alternative should the Town wish to use permeate pumps. The offered permeate pump equipment supply scope includes permeate pumps, motors, VFDs, pump suction and discharge isolation valves, flow meters, and instrumentation.

The equipment capital cost for equipment provided by SUEZ will be the same for both the full siphon and pumped alternative, i.e., the Price Add/Price Deduct for the pumped alternative is $0.00 USD.

Estimated permeate pump power consumption is provided for reference in Table A1 in Section 6 of this proposal. Permeate pump cut sheets are provided in Appendix A.

Partial Siphon

SUEZ determined that 7.2 psi of transmembrane pressure (TMP) was available within the system accounting for all losses including the piping system and losses across the flow control valve. This limit is suitable for full siphon operation. The SUEZ siphon design under these conditions is detailed in Section 3.a.1

While permeate pumps are not required to assist the filtration process in the current configuration, inclusion of permeate pumps, or inclusion of future space for permeate pumps would allow the facility to operate as a partial siphon plant if desired, either now, or in the future.

A partial siphon design would allow the permeate pump and flow control valve to function independently. Each would be plumbed in parallel such that either can operate based on the driving head available within the system. This approach has been used previously at numerous facilities where insufficient siphon head was available for full siphon operation.

SUEZ has not developed the equipment supply price impact of this configuration, but can upon request.

Axial Flow RAS Pumps

The proposed SUEZ design comprises end-suction RAS pumps and installation of the RAS header above the RAS pumps. However, axial flow pumps with horizontal suction and discharge piping connections may be considered for this low-head application. An example of this proposed arrangement is shown in the adjacent graphic. The proposed pump geometry would direct the RAS pump discharge to a common RAS collector located underneath the equipment building. This would allow the RAS collector to be routed underground; thereby eliminating the need to support the RAS collector.

SUEZ has not developed pricing for this alternative, but can upon request.

Appendix A – Major Equipment Cut Sheets/Brochures

1. Aerzen membrane blower
2. Aerzen process blower
3. Sulzer submersible mixer
4. SSI fine bubble diffuser
5. DeZurik V-Port regulating valve
6. Sulzer Submersible backpulse pump
7. Sulzer end-suction RAS pump
8. Prominent NaOH dosing skid
9. Prominent Sodium hypochlorite/citric acid dosing skid
10. IBC chemical day tank
11. Atlas Copco compressor
12. IFC strainer
13. Bray Butterfly Valve
14. Hach turbidimeter
15. Borger PD Pump for Alternative Permeate Pump Design

SCOPE OF SUPPLY

Membrane blowers with VFDs

2 Aerzen Generation 5 Blower Package - GM 50L DN 200 - Pressure - including:

Aerzen GM 50L Blower
Drive Motor - Teco: 60hp, 1800rpm, TEFC, 460V/60Hz

Base with integrated reactive type discharge silencer
Intake filter silencer
Hinged motor support as automatic belt tensioning device
Set of vibration isolation mounts
Narrow v-belt drive with guard - 1 set
Spring loaded relief valve
Discharge manifold with externally accessible integrated check valve
Flexible connector with clamps for schedule 40 pipe, discharge
Acoustic Enclosure - Indoor/Outdoor

Instruments
Pressure gauge c/w isolation ball valve (2x)
Dirty filter indicator (2x)

Optional Accessories
Inlet flexible sleeve - DN 200 (8")
Motor Protection - 1 Thermistor/Ph

Optional Instruments
Hood Space Heater (2x)

Optional Spare Parts
1 Year Maintenance Kit (1 x V-Belt Set, 1 x Intake Filter)
2 Year Maintenance Kit (1 x V-Belt Set, 1 x Oil Change (Delta Lube), 2 x Air Filter)

Connection Points:
Intake Connection: Local
Discharge Connection: DN 200 - 8"

Exclusions: See page 2

Tolerances as per EN 10204, in accordance with standard ISO 1217:
Flow at inlet conditions / Power required at shaft +/- 5%

Blower package noise level:
Free field measurement at 1m from the complete blower package (tolerance +/- 2 dB(A))

Tests and measurements:
Blower stage: 1.5 hour flow test at the factory (Germany) on a calibrated test bed, at maximum operating conditions and according to DIN 1945. acceptance tolerance: +/- 5%.
A complete test report is available upon request.

On Site Commissioning
Available upon request, charges to be advised.
- Any commissioning activity is subject to two weeks prior notice and completion of commissioning checklist.
- Any on-site activity outside the time indicated will be billed according to the Aerzen Standard Rate Sheet

Exclusions
Control Panels, Motor Starters, Piping and Electrical Connections
* Unloading valves are required for reduced voltage starters

Warranty
Blowers including accessories are warranted for a period of 12mo / max 18mo after delivery and after provisional acceptance of the work against defects in workmanship and design. This warranty does not cover wearing parts unless such parts are defective during shipping / commissioning.
As per Aerzen standard warranty terms.

** Power at shaft excludes drive motor and belt drive

Aerzen Canada

SCOPE OF SUPPLY

Membrane blowers without VFDs

3 Aerzen Generation 5 Blower Package - GM 50L DN 200 - Pressure - including:

Aerzen GM 50L Blower
Drive Motor - Teco: 60hp, 1800rpm, TEFC, 460V/60Hz

Base with integrated reactive type discharge silencer
Intake filter silencer
Hinged motor support as automatic belt tensioning device
Set of vibration isolation mounts
Narrow v-belt drive with guard - 1 set
Spring loaded relief valve
Discharge manifold with externally accessible integrated check valve
Flexible connector with clamps for schedule 40 pipe, discharge
Acoustic Enclosure - Indoor/Outdoor

Instruments
Pressure gauge c/w isolation ball valve (3x)
Dirty filter indicator (3x)

Optional Accessories
Inlet flexible sleeve - DN 200 (8")
Unloading Valve - G5
Motor Protection - 1 Thermistor/Ph

Optional Instruments
Hood Space Heater (2x)

Optional Spare Parts
1 Year Maintenance Kit (1 x V-Belt Set, 1 x Intake Filter)
2 Year Maintenance Kit (1 x V-Belt Set, 1 x Oil Change (Delta Lube), 2 x Air Filter)

Connection Points:
Intake Connection: Local
Discharge Connection: DN 200 - 8"

Exclusions: See page 2

Submersible Mixer Type ABS RW

RW 650 | 25.6" Propeller, Direct Drive, 12 Pole, 3-Phase, 60 Hz

Submersible Motor Specifications		
Motor Design		NEMA design B, squirrel cage induction
Motor Type		Fully enclosed submersible, IP68 protection rating
Motor Efficiency Standard and Rating		IEC 60034-30
Motor Efficiency Test Protocol		IEC 60034-2-1
Insulation Material	**STD**	Class F, 155°C (311°F), copper windings
	OPT	Class H, 180°C (356°F), copper windings [3,4]
Motor Filling Medium		Air
Temperature Rise		Class B
Maximum Fluid Temperature		40°C (104°F) continuous
Motor Protection	**Thermal**	Normally closed bimetallic switch in each phase, connected in series, 140°C (284°F) +/- 5°C (41°F) opening temperature [4]
	Leakage	Moisture detection probe in seal sensing chamber, motor housing, and junction chamber (for use with appropriate relay)
Seal Sensing Chamber Filling Medium		Non-toxic, white mineral oil
Bearings	**Inner**	1 x Single row deep groove ball bearing, permanently lubricated, preloaded
	Outer	1 x Single row deep groove ball bearing, permanently lubricated
	L_{10} Life	>100,000 hours
Motor Starter Types		Suitable for use with direct-on-line (DOL), electronic soft starters, and PWM type Variable Frequency Drives [1]
Maximum Starts per Hour		10 evenly spaced w/ DOL and soft starters; N/A with PWM type VFDs
Inverter Duty Rating		Motors meet NEMA MG1, part 31 requirements
Maximum Submergence		20 meters (65 feet)
Available Voltages		208, 230, 460, 575
Voltage Tolerance from Rated		+/-10%
Agency Approvals	**STD**	CSA
	OPT	Factory Mutual (FM)
Explosion Proof Rating	**OPT**	NEC 500 Class 1, Division 1, Group C & D, Class T3C max surface temp

The picture above may differ from the actual product.
For illustrative purposes only.

[1] Output filters may be required on VFDs. See document **DS-E00-001** for details.
[3] Not applicable with optional FM version.
[4] Thermals are set to 160°C (320°C) when configured with the optional Class H insulation (for standard, non-explosion-proof version only).

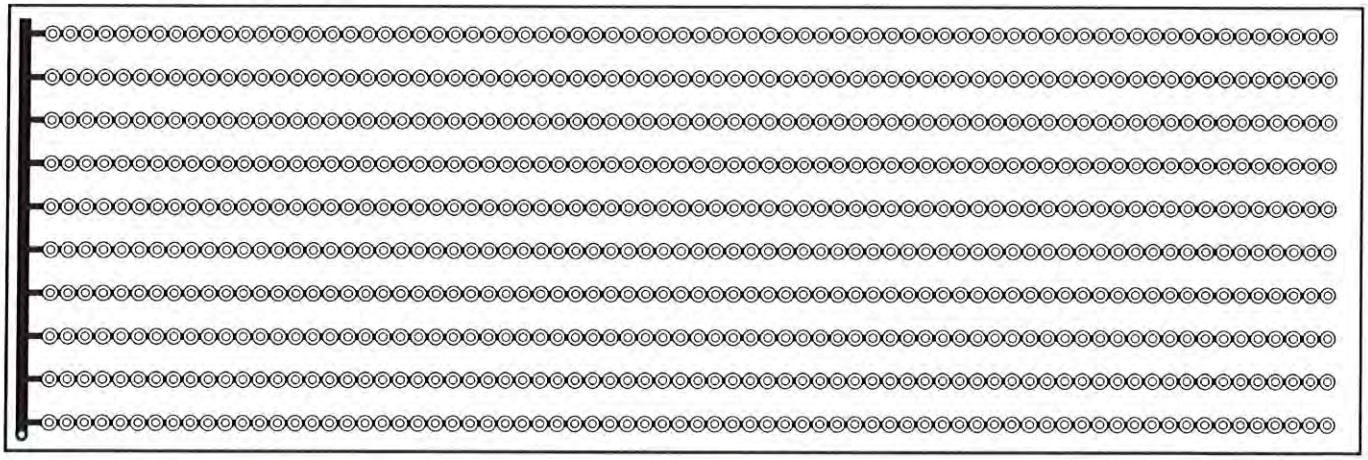
Ref: RFP052822, NY- **Proposal**
Revision 'A' with Tank Dimensions in lieu of email 07-06-2022

Sir/Madam,

In response to your email and based on the information, SSI as an ISO-9001 certified corporation is pleased to submit this proposal for the design, manufacture & supply of Aeration Equipment for **Three (3) Aerobic Tanks** with AFD270-E Fine Bubble Disc Diffusers with EPDM Membranes.

Unless otherwise noted equipment supplied will meet or exceed any engineer specified performance requirements and/or called in the RFP/Email.



Design calculations & Preliminary Drawings showing the general arrangement of diffuser/Piping layouts are included (Refer item I & II).

A. **Scope of supply** is complete with all components from the downstream of air supply line connection (±6" above water level) starting with SS Vanstone and loose follower flange including drop pipe *(Isolation valve and associated accessories are not included in SSI supply limit)*

B. **Each Tank** is 74.1' (L) X 24' (W) X 17.5' (SWD) and Aeration Equipment Supply *per Tank* is listed below:

Ø8" 304SS Drop pipe ±15'		Ø8" PVC Lower Drop + Manifold ±25'		Ø4" PVC Headers ±720' c/w factory drilled holes for mounting saddles and diffusers at site		**AFD270-E diffusers** c/w 4" QTS
304SS Supports	304SS Couplings	304SS Supports	PVC Couplings	304SS Supports	PVC Couplings	
2	1	4	1	150	40	**740**

C. Preliminary Drawings:

Note: This schematic layout is for conceptual purpose not for construction.

Aerobic Tank - 74' (L) X 24' (W) X 17'-6" (SWD)

SSI – SSI Aeration, Inc.
Standard Terms and Conditions of Sale

1. **General:** All products and services offered for sale by Stamford Scientific International, Inc. (hereinafter "Seller") or its subsidiaries or through its distributors or sales representatives are sold subject to the terms and conditions stated herein. This offer expressly limits acceptance to the terms hereof and any additional, different or inconsistent terms proposed by Buyer, whether in writing or otherwise, are hereby objected to and rejected and Seller shall not be bound thereby unless expressly agreed in a writing signed by an officer of the Seller that such terms and conditions shall supersede those contained herein.

2. **Estimates and Quotations**: All prices are subject to adjustment on account of specifications, quantities, shipment arrangements or other terms and conditions, which are not part of the original price quotation. Written estimates issued by the Seller will be valid for 30 days only. Products are sold at prices in effect at the time the order is taken. The company reserves the right to change prices without notice when necessary.

3. **Terms and Method of Payment**: For Buyers with established credit, payment of accounts due must be made within 30 days of shipment FOB Seller facility or 30 days after the goods are ready to ship and Buyer is notified of same. Seller may make partial billings of the contract price or invoice as various components of the equipment are shipped. Partial payments are expected to be made according to partial goods shipped. Custom built and special large orders shall require deposits in advance of production together with progress payments. For Buyers without credit, payment will be by company check, bank draft, Visa or Mastercard, telegraphic transfer or irrevocable letter of credit at time of order or progress payments according to quote offer. The Buyer shall not be entitled to withhold payment of any sums due to the Seller by reason of any disputed claim by the customer relating to any goods or deliveries. If Buyer fails to make payment by the due dates then without prejudice to any other rights of the Seller: The Seller shall be entitled to suspend all or any other deliveries to be made under that or any other contract with the Buyer and in such event the Buyer shall not in any respect be released from its obligations to the Seller under that or any such other contract. The Seller shall also be entitled to treat the relevant contract or any other contract with the Buyer as having been terminated by the Buyer and to claim damages for breach of contract accordingly.

4. **Taxes**: Product prices do not include taxes. The amount of any present or future sales, use, excise, value-added or similar tax if applicable to the sale shall be paid by the Buyer unless a tax exemption certificate acceptable to the tax authorities is approved. If Seller is required to pay any such tax, fee or charge, Buyer shall reimburse Seller therefore.

5. **Delays in Delivery and Force Majeure**: All quoted delivery dates are approximate. The Seller will make commercially reasonable efforts to meet any delivery date(s) quoted in the agreement. However, under no circumstances shall the Seller be liable to Buyer for any delay in shipment or failure to meet any quoted delivery date(s) due to unforeseen circumstances or due to a cause beyond its control. Examples of such causes are acts of God, wars, riots, embargoes, acts of civil or military authorities, fires, floods, accidents, strikes, transportation delays, inability to obtain materials or supplies, interruption for any reason in the manufacture of products by Seller's supplies or other causes not within Seller's control.

6. **Warranty/Repairs**: Products manufactured by Seller are warranted to be free from defects in materials or workmanship for 18 months from date of shipment or 12 months from the date of start up, whichever comes first. Parts found to be defective in materials or workmanship will be repaired or replaced without charge, F.O.B. original point of shipment. The forgoing warranty is in lieu of and excludes all other warranties expressed or implied (including any warranty of merchantability or fitness or purpose). The responsibility of the Seller is limited to the cost of the defective part. Wear caused by faulty maintenance or operation shall not constitute defects. Elastomeric components damaged as a result of maintenance activities, excessive airflow, foreign debris in the process solution, or excessive exposure to direct ultraviolet and thermal radiation shall be excluded. Decomposition by chemical action and chemical precipitate shall not constitute defects. Claims for defective, damaged or improper material or for shortages will not be allowed unless written notice specifying the nature and extent of the defect, damage or shortage is received in the Seller's office within fourteen (14) days from delivery. Seller assumes no responsibility of expense for repairs made on equipment sold by it to Buyer when such repairs are done outside Seller's factory facilities without its written consent. In all cases, a Start-Up certificate issued by SSI is for general conformance to the Manufacturer's installation instructions only after audit for work performed. However, in no cases, SSI can audit 100% of all work performed by others and cannot guarantee their work to fully meet our installation instructions. Warranty for installation labor and services provided by others shall be covered by the warranty of the entity performing those services. Failure by the Installer to fully meet our installation instructions and requirements may result in installation errors which may lead to equipment failure, for which Seller shall not be liable.

7. **Cancellation and Returns Policy**: (A) Cancellations: Any request for order cancellation, rescheduling or modification by Buyer must be made in writing and such action must be approved in writing by an officer of Seller. Such request should be made to Seller at least four (4) weeks from scheduled shipment date in order to be considered. Such cancellation, rescheduling or modification shall be subject to the payment of reasonable cancellation charges, which shall include but not be limited to expenses already incurred for labor and material costs, commitments made by Seller and a reasonable profit. (B) Returns: Any request for product return by Buyer must be made in writing. Returns of products will not be accepted for any reason without prior written consent of Seller and issuance of a Return Material Authorization (RMA) number. Return of products must be shipped freight prepaid by Buyer. Seller will not accept freight charges. Returns may be subject to a 15% restocking fee and any other reasonable charges. Returns made without obtaining prior authorization shall be returned to sender at Buyer's expense. Custom made goods may not be returned under any circumstance.

8. **Limitation of Liability: Notwithstanding anything else to the contrary, Seller shall have no liability for consequential, incidental, punitive, indirect and/or special damages regarding the sale or use of a product even if the potential for such damages has been disclosed to Seller. Seller's total liability for product defect claims shall not exceed the purchase price paid for the product.**

9. **Complete Agreement**: These Terms and Conditions of Sale when combined with Seller's invoice represent the entire agreement between the parties with respect to the subject matter hereof. Language contained in any digital or written instrument from Buyer to Seller serving to modify the terms of any of the foregoing shall be of no effect.

10. **Severability**: If any provision of these Terms and Conditions of Sale shall be deemed illegal or unenforceable, such illegality or unenforceability shall not affect the validity and enforceability of any other provisions hereof, which together shall be construed as if such illegal and unenforceable provision or provisions had not been included herein.

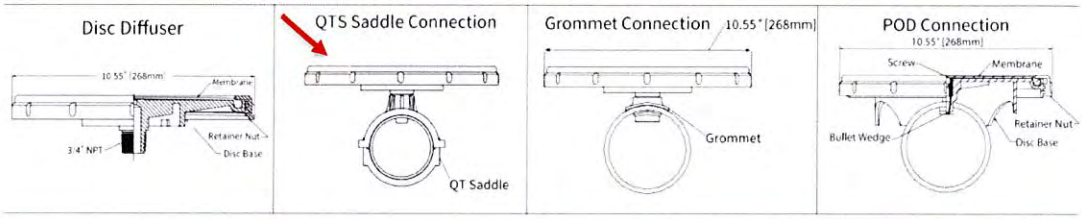
11. **No Waiver**: The failure by Seller to enforce at any time any of the provisions of this agreement, or to exercise any election or option provided herein, shall not be a waiver and shall in no way be construed as a waiver of such provisions or options, nor in any way be construed to affect the validity of this agreement or any part thereof, or the right of Seller thereafter to enforce each and every such provision.

12. **No Indemnification**: Unless otherwise expressly provided in writing by both parties, Seller does not indemnify, nor does it hold Buyer harmless, against any liability, losses, damages and expenses (including attorney's fees) relating to any claim whatsoever, including without limitation, claims for personal injuries, death or property damage related to the products sold hereunder.

13. **Governing Law**; Limitations: The relationship between Buyer and Seller in relation to the products shall be governed by and construed in accordance with the laws of the State of New York, U.S.A. Any legal action with respect to any transaction must be commenced within one year after the cause of action has arisen.

14. **Dispute Resolution**: Actions by Seller for nonpayment by Buyer of the purchase price of products sold by Seller, or for redress of other breaches by Buyer of these Terms and Conditions of Sale, may be brought by Seller, at its option, before any court of competent jurisdiction in the State of New York. At Seller's option, disputes between Buyer and Seller, including all claims for non-performance by Seller, shall be finally settled by arbitration in Poughkeepsie, New York USA.

15. **Foreign Corrupt Practices Act**: Buyer represents and warrants to Seller that it shall comply with all laws in relation to its sale and/or use of the Products and will not pay anything of value to any government employee in connection with the sale of the Products.



16. **Precedence**: In the event of any inconsistency among the referenced documents, attachments, drawings, specifications or other provisions hereof, the following order of precedence shall apply: (1) special terms and conditions agreed to in writing by an Officer of the Seller, (2) these standard terms and conditions of sale, (3) specifications, (4) all other attachments or documents incorporated herein by reference.

SSI Aeration
SMART IDEAS FOR WATER

AFD270 Disc Diffuser

What Makes the a
SSI 9" AFD270 Disc Diffuser Systems
Worldwide Choice?

The SSI 9" Disc Diffuser System combines engineering excellence, superior component quality, and a technically advanced product design. Proven highly durable and efficient in thousands of municipal and industrial installations around the world, this advanced system has reliability built into every stage of performance. SSI's AFD270 comes in several membrane materials including our patented PTFE membrane, designed to use less energy and require minimal maintenance. Industry standand size and shape are interchangable with other manufacturers. The diffuser base is molded with virgin polypropeline for extended performance, and is highly efficient with airflow performance of 1.5-2.5 SCFM.

AFD270 Disc Diffuser

Unique System Strengths

Complete product line – creating the system that fits your needs

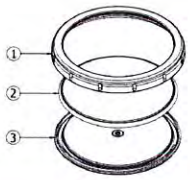
SSI manufactures disc diffusers and coarse bubble diffusers, and we mount these products on a wide range of piping materials including PVC, CPVC, PP and Stainless Steel. We have the ability to attach diffusers to pipe using saddles, grommets, or pre-assembled PODS. We can provide retrievable systems or fixed grids, and systems in kit form or mostly factory assembled. We try to understand and anticipate your needs, and fit our recommendations to your situation.

Piping system integrity – thicker wall pipe and double anchors for fewer breakages

Our piping is 38% thicker and has double rod support stands as standard – two anchors for each support location means twice the resistance to hydraulic and thermal loads. Most often supports fail due to temperature and water velocity. SSI locates two anchors where support is needed most, helping to increase product longevity.

Comprehensive design service and after sales support

SSI provides full design services, including biological and mixing calculations, process simulations and hydraulic studies. We maintain a full drafting department with 3D and animation capabilities and we can assist with specifications and CAD drawings. Our service and installation crew can hold your hand during the early stages of the project and our worldwide multilingual staff is dedicated to your complete satisfaction.



Intelligent Upgrade Options

Patented PTFE membranes prolong efficiency and reduce whole-life costs

SSI's patented PTFE membrane barrier properties not only reduce plasticizer extraction, shrinking, and membrane hardening but also limit dynamic changes that can result from swell, such as creep. Compared with uncoated products that are more susceptible to increases in DWP due to more aggressive fouling and changes in physical properties and weight, the PTFE coated membrane improves consistency of DWP (Headloss) values over the product life. This directly impacts long-term power costs and the ability of the system to distribute air uniformly across the tank floor.

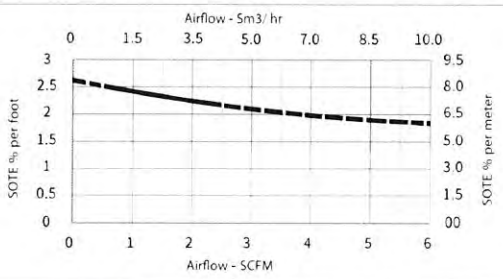
Diffuser Parts	Material
1. Retainer nut	PP
2. Membrane	EPDM / PTFE / PEEK / Silicone
3. Diffuser Base	PP

Max. Temperature resistance - 212°F / 100°C

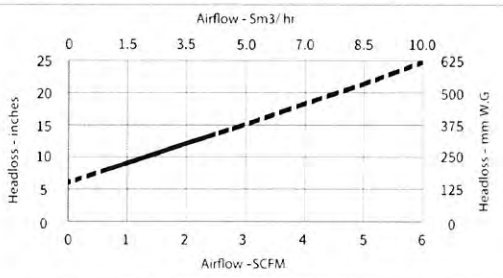
Pods Connection

Factory assembled diffusers mounted on laterals save contractors up to 30% on assembly time. PODS are a viable solution if you want to tank down for a minimum period, if your labor costs are high, or if you have a field labor shortage. For engineers unsure about the skill set of a contractor's field labor, SSI PODS are worry free with fewer field connections, and most connections created in controlled factory settings by trained personnel and automatic machines.

Grommet Connection



Simple to install on site, compact to ship and move. Affordably priced and time tested over 15 years worldwide.



Quick Threaded Saddle

QTS saddles quickly and easily bolt onto the pipe and allow installation of the diffuser with a few simple turns.

Avg Operating Condition per Diffuser	Peak Air Flow per Diffuser	Orifice Size	Slit Qty	Active Surface Area per Diffuser	Weight per Diffuser AFD270
0.45 - 2.5 SCFM 0.8 - 4.5 Sm^3/hr	4.0 SCFM 7.0 Sm^3/hr	1/4" 6mm	6600	0.41ft^2 0.0375 m^2	1.5 lbs 0.68kg

Operating diffusers distant to average operating conditions range might leads to poor uniform distribution and subjected to rapid fouling.

Above curves are generated based on ideal condition. Actual curves for specified project/condition to be provided upon request.

TECHNICAL DATA SHEET

SSI™ ACCESSORIES

NPT SADDLES

Quick Connect NPT Saddles mount on nominal US 4" or metric 114.3mm OD pipe. They allow retrofit of 12" to 9" discs without changing the piping system. Quick Connect NPT Saddles are made of polypropylene, and install into a 5/8" (16mm) hole.

GROMMETS

Grommets are available for round plastic or square stainless steel pipes in US or Metric dimensions. Installation is simple. Multiple sizes are available based on pipe wall thickness. Grommets install into a 1-1/4" (32mm) chamfered hole.

EXPANSION JOINT OPTIONS

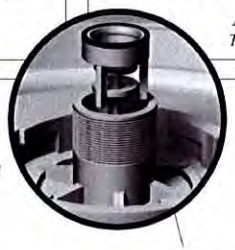
Rigid Bolted SS

Expansion Joints are available in three types: Flexible PVC with SS Shell, Rigid Bolted SS, and Anti-rotation, Telescoping PVC. The flexible expansion joints are recommended for disc installations and the positive locking type for tube diffuser projects.

Flexible PVC w/SS shell

Slotted band joints with stainless steel shear rings are suitable for disc-type fine bubble and cap-type coarse bubble lateral plastic piping systems, in conjunction with SSI's fixed and guide support stand system to manage thermal expansion and contraction.

Positive locking bolted stainless steel couplings are suitable for drop pipes, stainless joints, and for all tube diffuser piping systems to restrict header pipe rotation.



Anti-rotation, Telescoping PVC

SSI's Sliding Expansion Joint is an anti-rotational telescopic union which absorbs pipe expansion and contraction to up to 1.5" (38mm).

CHECK VALVES

SSI fine and coarse bubble diffusers are available with optional check valves. These are not required for proper operation since most diffusers are self-checking, but they may give peace of mind to the designer or operator.

Coarse Band (WBCB) check valves

Snappy Saddle check valves

Tube Diffuser check valves

Disc showing check valve installation

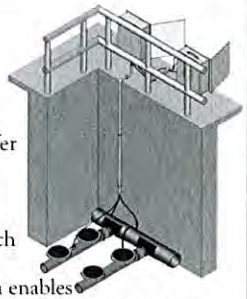
TECHNICAL DATA SHEET



SSI™ ACCESSORIES *continued*

MOISTURE PURGE SYSTEM

An airlift type purge system is used in all SSI fine bubble aeration systems to remove condensate from the piping system. Purging entrained water helps ensure even air distribution to all diffusers in a grid. A ball valve is supplied with the system and is opened manually. Continuous purge systems are available for retrievable-type aeration systems, or where it is not possible to fasten a purge line to a tank wall.

PRESSURE MONITORING SYSTEM

Throughout the life of an aeration system, oxygen transfer efficiency may decline somewhat when diffusers become fouled, but headloss can increase dramatically which in turn increases energy costs. A pressure monitoring system enables the operator to better determine the optimal cleaning frequency of the membranes. The fouling rate can vary by aeration zone, hence it is recommended to install at least one system in each zone.

SUPPORT STANDS

Support Stands are available in 304SS, 316SS or in ABS plastic. SSI's standard is 304SS with drop-in anchor bolts. In our aeration piping systems, support stands fulfill the dual role of anchoring pipes to the floor and controlling thermal expansion and contraction. Special support stands for uneven tank floors, for installing into concrete ballast forms, and for tanks with significant channel velocity (with lateral supports) are also available. ABS support stands are primarily used with disc diffusers and plastic pipe, where a low capital cost is the primary objective.

ABS plastic support stand

TELEMETRY SYSTEM

Adding a Telemetry System to your aeration system will allow you to remotely monitor factors inside your tank from any PC, tablet or mobile device. Telemetry can be installed in new systems or retrofitted through an end cap into existing systems. Telemetry sensors are available to monitor variables in your system such as temperature, vibration, humidity, water detection, DO, and other environmental factors.

ACID DOSING SYSTEM

In-situ Acid Dosing Systems are available to control calcareous deposits in the perforations which will reduce membrane backpressure.

Fact. ITEM	Cust. ITEM	QTY	DESCRIPTION
1		4	

Style	V-Port Ball Valve
Size	14 Inch (350mm)
End Connection	Class 150; Flanged Drilling; ISA 75.08.02 and IEC 534-3-2F-F
Body Material	317 Stainless Steel
Packing	PTFE Chevron; Temperature to 500 Degree F. (260 Degree C.)
Ball Material	317 SST; Heat Treated; Electroless Nickel Overlay to 700 Degree F.
Shaft	2205 Duplex Stainless Steel
Seat Type	Rigid 317 Stainless Steel; Heat Treated; Electroless Nickel Overlay; Temperature to 450 Degree F.
Bushing	317 SST Wire Mesh Encapsulated in PTFE Liner to 500 Degree F.
Coating or Paint	4 mils minimum (non-stainless steel parts) of Blue DeZURIK Epoxy (NSF Std. 61) on Exterior with Standard (SP10) surface prep
Actuator Type	PowerRac Cylinder; 8 In Dia

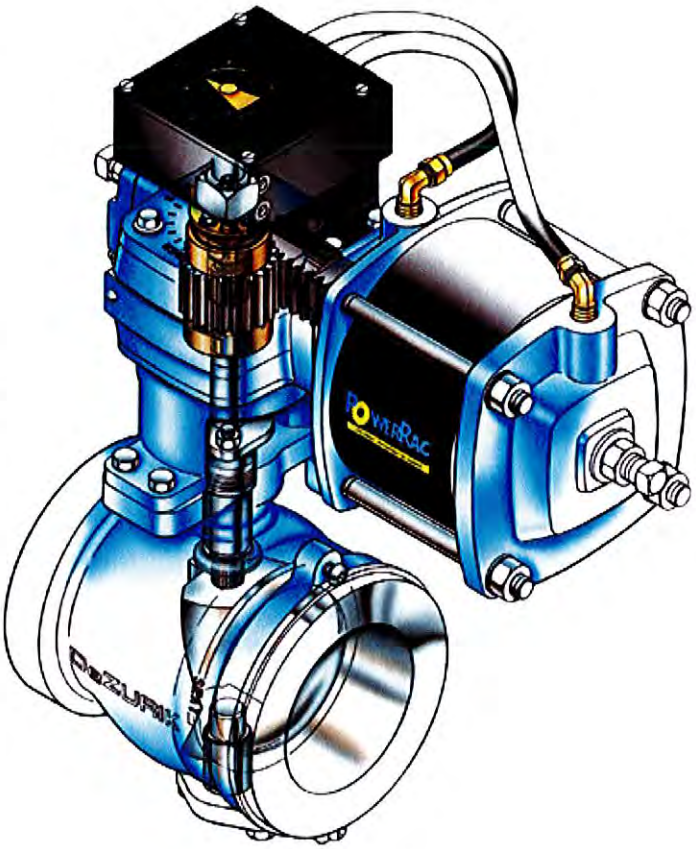
VPB V-Port Ball Valves



Design and Construction

DeZURIK V-Port Ball valves deliver superior performance and reliability required to optimize process performance. This versatile valve is designed for control of fibrous suspension applications, plus clean, dirty, viscous and corrosive liquids and gases.

The VPB has an ASME 150 class valve in size range 1-20" and an ASME 300 class valve in size range 1-12". DeZURIK V-Port Ball valves feature one-piece body construction and are available in flanged or flangeless end connections. They conform to or exceed North American and International Standards for control valves. Superior control performance is designed into the geometry of the ball for critical management of flow. A locked ball-to-shaft connection ensures no lost motion for critical control. Bearings, covers and fasteners are designed for maximum valve reliability.

When operated by a high quality DeZURIK actuator and controlled by one of many high performing positioners, the DeZURIK V-Port Ball control valve can deliver control accuracy exceeding 0.5% as measured by the Benchmark Control Valve Diagnostics™ System. Control accuracy will increase process plant efficiency, improve overall profitability and reduce control valve life-cycle costs.

In the event maintenance is needed, DeZURIK's unique design facilitates fast, easy breakdown and assembly of valve components with no special tools required. The result is reduced maintenance time and the lowest overall cost of ownership.

Drop-in-place, self-aligning and interchangeable seat options offer ease in maintenance. Available seat options include reinforced PTFE, flexible metal, rigid metal and clearance.

© 2020 DeZURIK, Inc.

Streamlined Flow Passages

DeZURIK V-Port Ball valves feature a streamlined flow passage, providing maximum efficiency (Cv/Kv per valve size) and minimizing erosion inside the valve body.

Rugged, Easy-to-Maintain Construction

The heavy-duty cast body is a one-piece design for increased installed-pipe integrity and minimal potential leak paths. Stainless steel construction combined with drop-in seats and a splined shaft and ball connection makes the DeZURIK V-Port Ball valve easy to maintain.

Carbon Steel and High Alloy Valves Available

VPB valve bodies are available in 316 and 317 stainless steel, carbon steel and Hastelloy C.

Laying Length Flexibility

DeZURIK VPB valves offer the ultimate in face-to-face flexibility. The solid one-piece body is available in either ASME B16.10 or ANSI/ISA take-out dimensions. V-Port Ball valves are available in flanged or flangeless construction to meet individual requirements and common piping standards. For added versatility, these valves meet IEC, ISO and EN face-to-face dimensions. In plants that have an installed base of both ASME B16.10 and ANSI/ISA control valves, VPB users have been able to minimize storeroom inventory by stocking valve bodies, ANSI/ISA retainers and ASME B16.10 retainers. A replacement valve with either face-to-face dimension can be quickly installed. DeZURIK also offers an integrally flanged one-piece ASME B16.10 body. Laying length flexibility is just another example of how the VPB can save money.

International Flange Drilling

DIN 10, 16, 25 and 40, and JIS 10, 16 and 20 flange drilling bolt circle options are available in addition to ASME B16.5.

Uninterrupted Gasket Surface

V-Port Ball valves feature a full, uninterrupted, raised-face gasket surface that provides maximum gasket integrity. The gasket surface provides full seal contact area with ASME B16.20 gaskets.

Self-Aligning Ball and Seat

The self-aligning ball and seat on the VPB valve reduces lengthy setup time during repair and reassembly. Valves can easily be returned to like-new performance without time-consuming special procedures. And, because of the spring-loaded metal seat design, the ball and seat self-compensate for wear on either surface.

Common Valve Components

DeZURIK's V-Port Ball valve was designed to share a majority of valve components with the DeZURIK RCV Rotary Control valve. The two valves use the same bodies, packing components, bearings, brackets and fasteners. The common components reduce spare parts in inventory requirements and associated costs for plants utilizing both styles of DeZURIK control valves.

Stainless Steel Fasteners

As standard, all DeZURIK V-Port Ball valve fasteners are stainless steel, providing easy disassembly. An additional maintenance feature is a bottom access cover for valve disassembly and reassembly.

Streamlined Maintenance

DeZURIK V-Port Ball valves feature the simplest maintenance procedures among control valves available. There are no threaded trim parts. The seat retainer and trim components drop in place ensuring precise alignment of plug and seat. Disassembly and reassembly are easily completed with no special wrenches or other tools required. On viscous and suspended fibrous services where routine maintenance is expected, the VPB's drop-in trim, optional sealed bearings and self-aligning ball/seat reduce maintenance costs and minimize lost production.

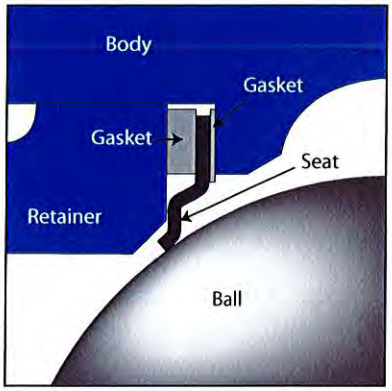
V-Ball Design

Utilizing computer-aided design and extensive flow-loop testing, the v-orifice was designed to provide the high rangeability and precision throttling required on fibrous suspension applications, as well as clean or dirty liquids and gases.

The straight through flow passage provides maximum efficiency and excellent erosion resistance. The ball can be furnished with a range of high-alloy materials, all provided with a heat-treated nickel overlay. This overlay provides a non-porous and lubricous surface, resulting in greater corrosion resistance and less sliding friction. For abrasive and high temperature applications, a 317 stainless steel ball can be furnished with a tungsten carbide overlay or a Hastelloy C ball with nickel overlay can be provided.

Sealed Bearings

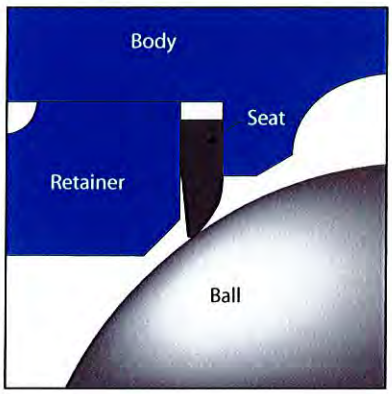
The sealed-bearing option prevents media from entering the bearing areas, which can hinder valve operation. PFA Fluoropolymer or FFKM Perfluoroelastomer seals are available for bearings that need exceptional protection from scaling, plating, abrasive or polymerizing media.



Corrosion-Resistant Bearings

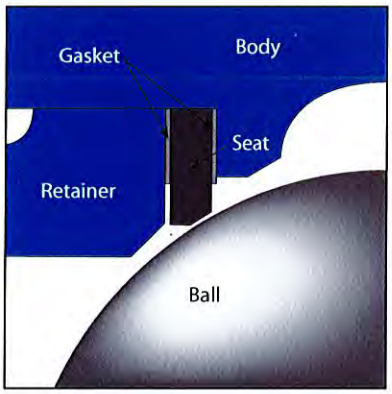
The one-piece bearing provides a large area of radial support to the shaft. The shaft is fully supported, greatly reducing shaft fatigue. The 317 stainless steel wire mesh reinforced PTFE bearing has a low coefficient of friction that minimizes operating torques and reduces actuator sizing requirements. For severe-service applications, a cobalt-chromium alloy bearing is available. A sealed-bearing option is also available.

Splined Shaft with Solid Ball-to-Shaft Connection



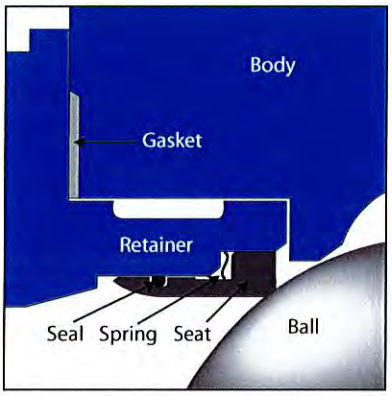
The splined shaft and ball with locking torque screw on DeZURIK V-Port Ball valves provide a high-strength, positive connection that effectively eliminates mechanical backlash and hysteresis. The splined connection with locking torque screw ensures accurate, precise positioning of the ball. The machined diameter of the shaft provides blow-out proof protection.

Seat Options



Flexible Metal Seat

The flexible metal seat is designed to shear fibrous fluids and provides shutoff up to ANSI/FCI 70.2 Class IV standard. Flexible metal seats are rated to the full valve pressure rating with the valve installed in the flow-to-open direction and rated to 150 psi (1030 kPa) pressure differential when installed in the flow-to-close direction.



Reinforced PTFE Seat

Reinforced PTFE seats are typically used on clean fluid applications where ANSI/FCI 70.2 Class VI shutoff is required. DeZURIK V-Port Ball valves feature a reinforced PTFE seat, designed for flow-to-open operation, rated to 285 psi (1895 kPa) pressure differential. For added versatility, all V-Port Ball valve seat options are field-interchangeable.

Clearance Seat

The clearance seat provides maximum controllability and minimum hysteresis in applications that do not require tight shutoff. This bi-directional seat eliminates seat friction. Shutoff is 5% of valve's maximum flow when closed.

Rigid Seat

Rigid seats are available for abrasive application including reclaimed fiber systems and applications with suspended chemical solids. The rigid seat provides shutoff performance to ANSI/FCI 70.2 Class IV. Materials include 317 stainless steel and Hastelloy C, all with heat treated nickel overlay. For enhanced abrasion resistance, a 317 stainless steel seat with tungsten carbide seating surface and solid Cobalt-Chromium alloy bearing is available.

An optional nickel-chromium spring can be substituted for the 17-7 PH stainless steel seat spring when added corrosion resistance is required.

The rigid seat is designed for flow-to-open operations and is field-interchangeable with the reinforced PTFE, flexible metal and clearance seats.

Intelligent Positioners

Digital positioners can be used in a conventional 4-20 mA, analog control environment. They can also be used with HART, Foundation Fieldbus, or Profibus communication protocols bringing you access to diagnostic capabilities that will allow you to ensure your process is operating at its peak effectiveness.

DeZURIK P30A

DeZURIK P85

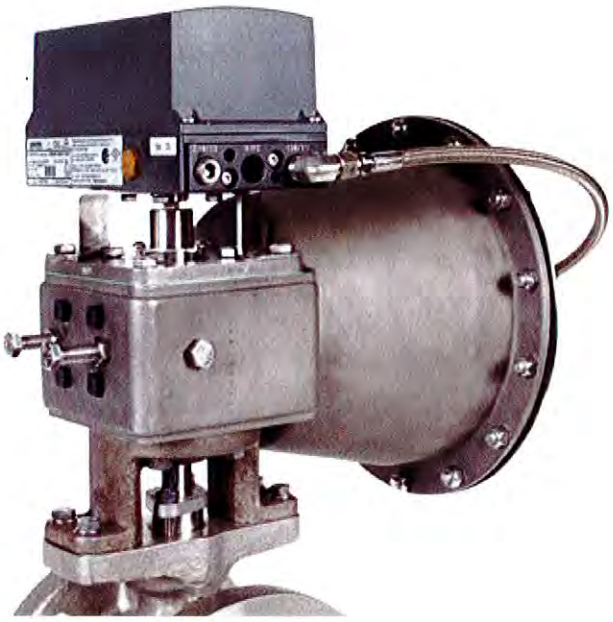
Throttling Control

The V-Port Ball valve design ensures unsurpassed accuracy over the 90° range of operation. Splined and locked ball-to-shaft connection, computer-designed ball, characterized v-port, low-friction bearings and low-friction packing combine to give superior control, including fast, accurate response to signal changes. These rigid connections effectively eliminate mechanical backlash and hysteresis.

The V-Port Ball valve with a high quality DeZURIK actuator and one of many high performing positioners will exceed 0.5% control accuracy, delivering over 200 discrete positions. This exceeds industry valve dynamic performance standards as well as the accuracy levels of most alternative pneumatically actuated control valves.

To enhance accuracy of the VPB in real world process systems, the control valve assembly can be fitted with a smart digital positioner that not only provides near zero air bleed but also can be used in control systems using HART, Foundation Fieldbus, or Profibus protocols. This allows precise control and feedback of valve performance to the Distributed Control System (DCS).

Performance Testing



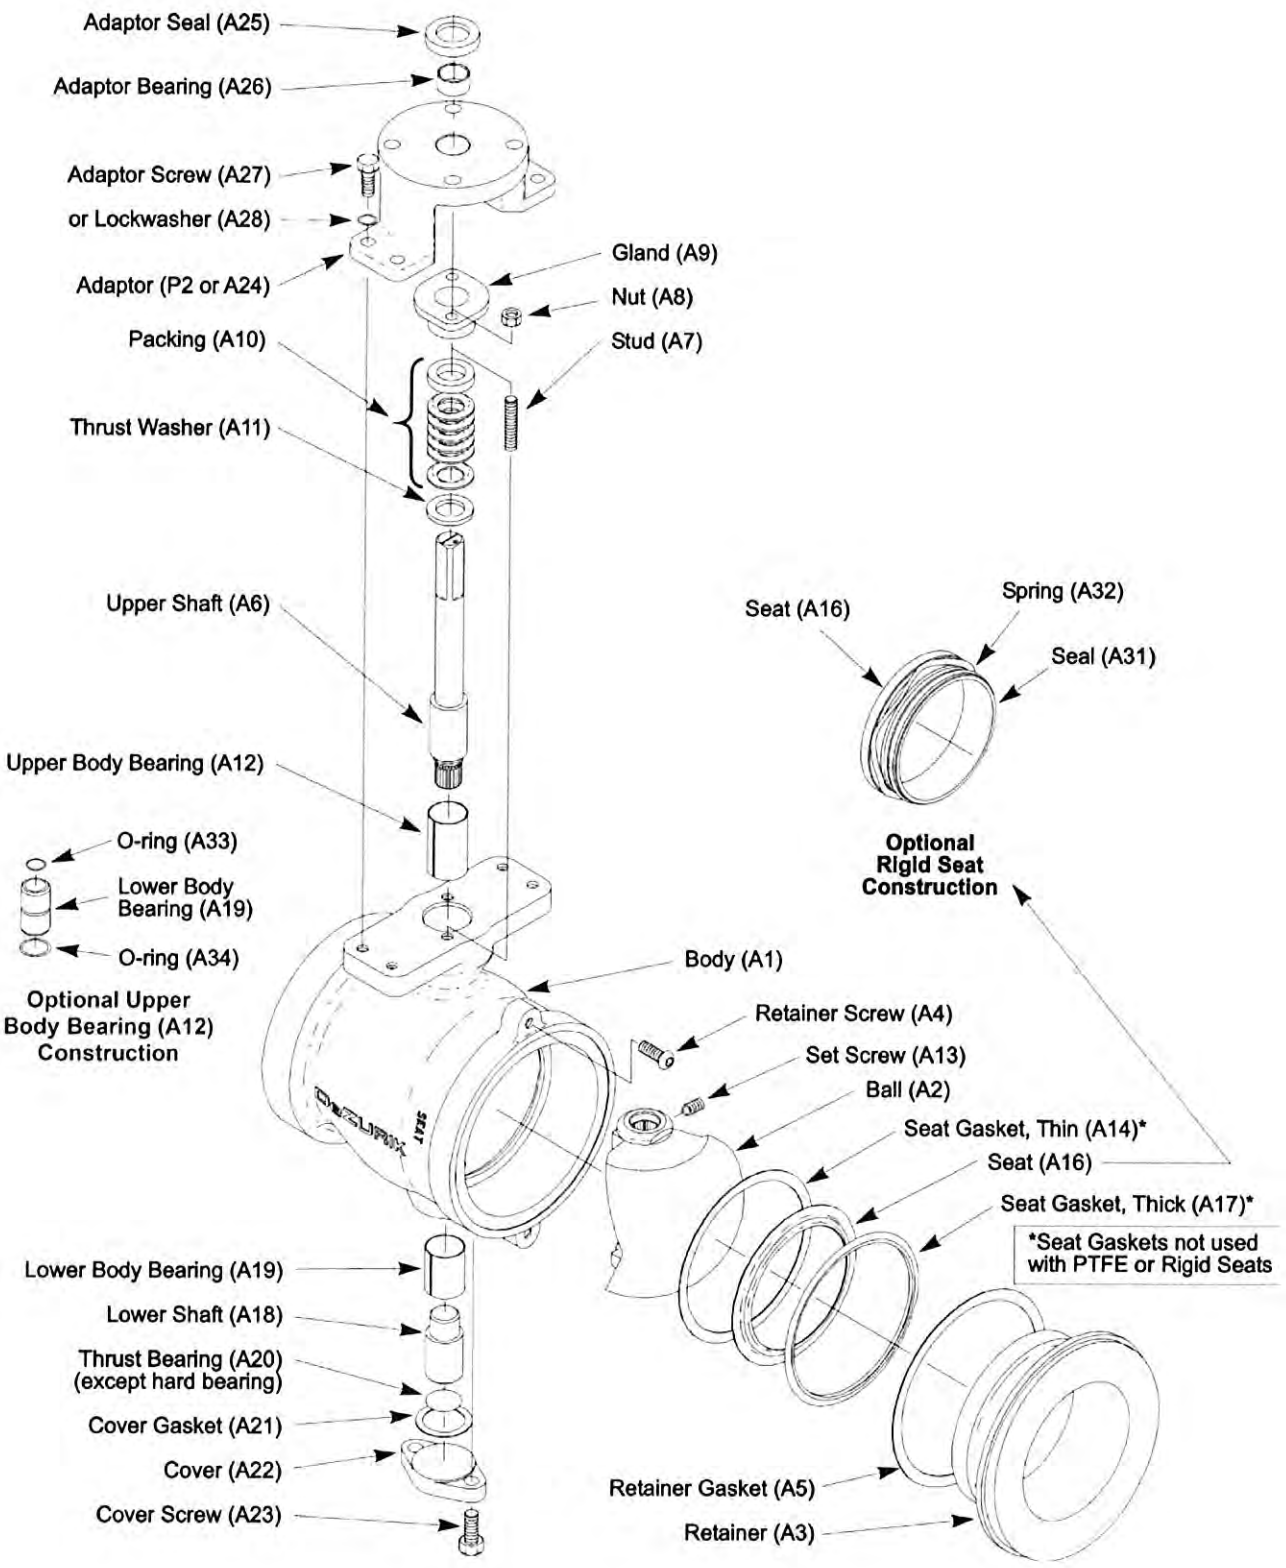
Control valve performance is tested with a BenchMark Control Valve Diagnostic™ system. Each valve has a discrete test result that can be referenced through the valve's serial number. V-Port Ball valve performance accuracy provides in excess of 200 repeatable positions. With routine maintenance, field monitoring or monitoring through a digital positioner, this performance level can be maintained throughout the life of the valve.

Control Valve Test Report

All VPB valve/actuator/positioner assemblies are tested for accuracy. The optional CVT Control Valve Test Report can be ordered which documents the response measurement from step inputs per ISA-75.25.01-2000 (R2010).

Actuator Flexibility Options

V-Port Ball valves are available with DeZURIK PowerRac® or Diaphragm actuators. The actuator top mounting pads or adapter brackets of currently manufactured DeZURIK rotary control and isolation valves (RCV, VPB, BHP) are compatible with the ISO 5211 standard. This common actuator platform increases flexibility and helps reduce spare parts inventory.



Close Coupling of Actuator to Valve

DeZURIK Diaphragm and PowerRac® actuators rigidly connect to the valve and the positioner on the actuator housing. This accurately feeds exact valve position directly to the positioner. In addition, the close coupling of the actuator to the valve makes the total package as compact as possible.

Accessories

A full line of accessories integrated to the actuator system is available to meet your individual mill/plant requirements.

Valve Selection

Flow Characteristic

Applicable Standards

DeZURIK VPB V-Port Ball Valves are designed and/or tested to meet the following standards:	
ASME B16.10	Face-to-Face dimensions, short pattern requirements
ASME B16.34	Body Wall Thickness and Pressure/temperature ratings for Class 150 and 300 Valves
ASME B16.5	Flange dimensions conform to Pipe flanges and Flanged Fittings for Class 150 and 300
ANSI/FCI 70.2	Control valve seat leakage
EN 558-1 PN 10/16	Basic Series 3, Face-to-Face dimensions
IEC 534-3-2 F-F	Face-to-Face dimensions, Industrial Process Control Valves
ANSI/ISA-75.02	Control Valve Capacity Test Procedures
ANSI/ISA-75.08.02	Face-to-Face dimensions for Flanged and Flangeless Rotary Control Valves
ISO 5211/1 & 2	Part-turn valve actuator attachment, Part 1: Flange dimensions and Part 2: Flange and Coupling performance characteristics
ISO 5752 PN 10/16	Basic Series 3, Face-to-Face dimensions
MSS-SP-25	Data Plate and body identification conform to marking requirements

Flow Parameters

Valve Size	Cv*/Kv* 100% Open

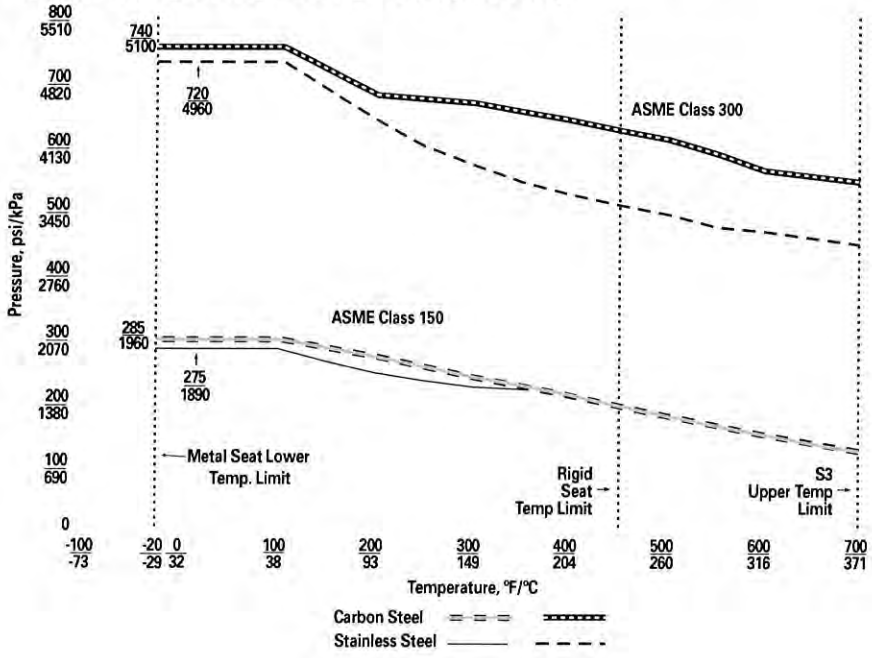
Valve Selection

Shut-Off Capabilities

Seat type	Flow	Shut-Off Class (ANSI /FCI 70-2)
Flexible Metal*	Bi-Directional	IV
Rigid Metal	Uni-Directional	IV
Reinforced PTFE**	Uni-Directional	VI
Clearance Seat	Bi-Directional	5% of max flow when closed



NOTE: Uni-directional valves must be installed with flow-to-open (forward flow; flow into the convex side of ball). Flow-to-open is the preferred direction for bi-directional valves. Seats are rated to the full valve pressure rating unless noted below.

* Flexible metal seats are rated to 150 psi (1030kPa) pressure differential when installed in the flow-to-close direction.

** Reinforced PTFE seats are rated to 285 psi (1895 kPa) maximum shutoff pressure differential.

Pressure Ratings

Flex Metal*, Rigid Metal and Clearance Seats (S3, S3R, S35, S3RI, S3SI, HCRI)

Ordering

To order, simply complete the valve order code from information shown. An ordering example is shown for your reference.

Valve Style
Give valve style code as follows:

VPB	=	V-Port Ball Valve

Valve Size
Give valve size code as follows:

1	=	1"	(25mm)	8	=	8"	(200mm)
1.5	=	1.5"	(40mm)	10	=	10"	(250mm)
2	=	2"	(50mm)	12	=	12"	(300mm)
2.5	=	2.5"	(65mm)	14	=	14"	(350mm)
3	=	3"	(80mm)	16	=	16"	(400mm)
4	=	4"	(100mm)	18	=	18"	(450mm)
6	=	6"	(150mm)	20	=	20"	(500mm)

End Connection
Give end connection code as follows:

Flangeless		
W1S	=	Class 150, ANSI/ISA-75.08.02 and IEC 534-3-2-F 1-12" valves
Flanged		
F1S	=	Class 150, ANSI/ISA-75.08.02 and IEC 534-3-2F-F 1-20" valves
F2S	=	Class 300, ANSI/ISA-75.08.02 and IEC 534-3-2F-F 1-12" valves
F1L	=	Class 150, ASME B16.10, ISO 5752 and EN 558-1 PN 10/16, 1-12" valves
F1A	=	Class 150, ASME B16.10, ISO 5752 and EN 558-1 PN 10/16 (Long body) 1-12" excluding 2.5" valve size.

Body Material
Give body material code as follows:

S3	=	317 stainless steel (Class 150 only) S3 bodies must be ordered with S3NH or S3S ball , S10 shaft and S3, S3S, S3R or RT seat.
CS	=	Carbon Steel. CS bodies must be ordered with S3NH or S3S ball, S10 shaft, and S3, S3S, S3R or RT seat.
S2	=	316 stainless steel (Class 300 only). S2 bodies must be ordered with S3NH or S3S ball, S5 or S10 shaft, and either S3, S3S, S3R or RT seat.
HC	=	Hastelloy C. HC body must be ordered with HCNH ball, HCC or TNC shaft, HCRI or RT seat, and HC, HCVS or HCKS bearings.

Packing Material
Give packing material code as follows:

TC	=	PTFE Chevron, to 500°F (260°C)
G2	=	Braided carbon graphite, to 1000°F (540°C) (Available with S3 seat and S9 or SL bearings)

Trim Combination
Give ball, shaft, seat and bearing codes as follows:

S3NH	=	317 stainless steel heat treated nickel overlay, to 700°F (370°C)
S3S	=	317 stainless steel with tungsten carbide overlay, to 1000°F (540°C) (Available with S3S, S3SI or S3 seats only)
HCNH	=	Hastelloy C with heat treated electroless nickel overlay, to 700°F (370°C)

Shaft Material

S10	=	2205 Duplex stainless steel
S5	=	17-4 PH stainless steel
HCC	=	Hastelloy C Ceramic Coated (HC Bearings only)
TNC	=	Titanium Ceramic Coated

Seat Material

RT	=	Reinforced PTFE, to 500°F (260°C)
S3	=	Flexible 317 stainless steel with heat treated electroless nickel overlay, to 700°F (370°C)
S5C	=	Clearance Seat, 17-4PH Stainless Steel to 1000°F (540°C)
S3R	=	Rigid 317 stainless steel with heat treated nickel overlay, to 450°F (230°C)
S3S	=	Rigid 317 stainless steel with tungsten carbide overlay, to 450°F (230°C) (Available with S3S Ball only)
S3RI	=	Rigid 317 stainless steel with heat treated electroless nickel overlay and nickel-chromium spring, to 450°F (230°C)
S3SI	=	Rigid 317 stainless steel with tungsten carbide overlay and nickel-chromium alloy spring, to 450°F (230°C)
HCRI	=	Rigid Hastelloy C with heat treated electroless nickel overlay and nickel-chromium alloy spring, to 450°F (230°C)

Bearing Material

FT	=	317 stainless steel wire mesh reinforced PTFE, to 500°F (260°C)
S9	=	440C stainless steel bearings, to 1000°F (540°C)
S9VS	=	440C stainless steel bearings with PFA Fluoropolymer seal to 450°F (230°C)
SL	=	Solid Cobalt-Chromium Alloy, to 1000°F (540°C)
SLVS	=	Solid Cobalt-Chromium Alloy with PFA Fluoropolymer seal, to 450°F (230°C)
SLKS	=	Solid Cobalt-Chromium Alloy with FFKM Perfluoroelastomer seal, to 550°F (288°C)

On Application

HC	=	Hastelloy C 1000°F (540°C)
HCVS	=	Hastelloy C with PFA Fluoropolymer seal, to 450°F (230°C)
HCKS	=	Hastelloy C with FFKM Perfluoroelastomer seal, to 550°F (288°C)

On Application
Give options code as follows:

BAA	=	Buy American Act
CMC	=	Certificate of Material Conformance
CRT	=	Certified Material Physical & Chemical Test Report
DTR	=	DeZURIK Standard Certified Production Hydrostatic Shell & Seat Test Report
ST3	=	Pennsylvania Steel Procurement Act
G1	=	DIN 10 or BS4504/10 Drilling (W1S, F1L & F1S only)
G2	=	DIN 16 or BS4504/16 Drilling (W1S, F1L & F1S only)
G3	=	DIN 25 or BS4504/25 Drilling (F2S only)
G4	=	DIN 40 or BS4504/40 Drilling (F2S only)
J1	=	J1S 10 Flange Drilling (F1L or F1S only)
J6	=	J1S 16 Flange Drilling (F1L or F1S only)
J2	=	J1S 20 Flange Drilling (F2S only)

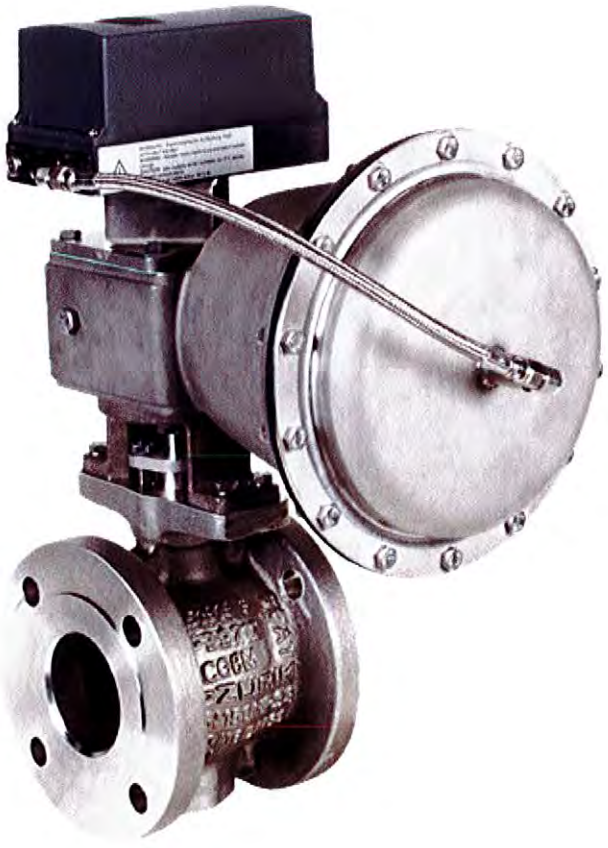
On Application
Pressure Equipment Directive (CE Mark)

Ordering Example
VPB,4,F1L,S3,TC,S3NH-S10-RT-FT,G1*PR-R1A-PC4

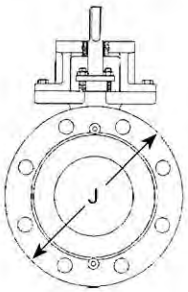
Actuators

Manual Gear Actuators

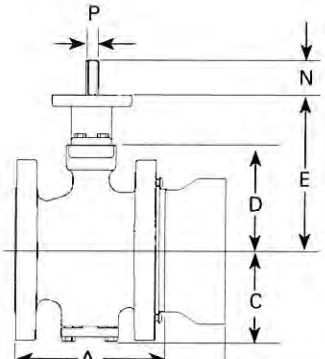
Manual gear actuators with handwheel or chainwheel input are available in cast iron construction. They feature sintered bronze bearings on each end of the input shaft for durability and performance.



Cylinder Actuators



PowerRac® Cylinder actuators are available as double-acting or spring return. They feature a high opening torque for on-off applications and also maintain a high operating torque throughout the full stroke for modulating service.



Diaphragm Actuators

Diaphragm actuators may be specified also. They're available with 40, 55, 85, 125, 145 and 250 square inch (0.026m², 0.036m², 0.055m², 0.094m², 0.161m²) sizes and with 20, 35 or 60 psi (140, 240 or 410 kPa) spring options.

Submersible Sewage Pump Type ABS XFP

XFP 255J-CB2 | 10", 6 Pole, 3-Phase, 60 Hz, PE4

Submersible Motor Specifications, PE4 Frame

Motor Design			NEMA design B, squirrel cage induction
Motor Type			Fully enclosed Premium Efficiency submersible, IP68 protection rating
Motor Efficiency Standard and Rating			IEC 60034-30, IE3 rating
Motor Efficiency Test Protocol			IEC 60034-2-1
Insulation Material			Class H, 180°C (356°F), copper windings
Motor Filling Medium			Air
Temperature Rise			Class A
Maximum Fluid Temperature			40°C (104°F) continuous, 50°C (122°F) intermittent
Cooling System		OPT	Closed-loop, non-toxic glycol/water mixture (⅓ / ⅔)
Motor Protection	Thermal	STD	Normally closed bimetallic switch in each phase, connected in series, 140°C (284°F) +/- 5°C (41°F) opening temperature
		OPT	STD plus: upper and lower bearing bimetallic switches **or** 100Ω RTD (PT100) in winding (option of one RTD or three RTDs in stator) and RTDs in lieu of upper and lower bearing bimetallic switches
	Leakage	STD	Moisture detection probe in seal sensing chamber (for use with appropriate relay)
		OPT	STD plus: probes in motor housing and junction chamber
Sensing Chamber Filling Medium			Oil
Bearing Type	Upper		Cylindrical roller, permanently lubricated
	Lower		Dual angular contact ball bearings plus single cylindrical roller bearing, permanently lubricated
Motor Starter Types			Suitable for use with electronic soft starters, and PWM type Variable Frequency Drives [1]
Maximum Starts per Hour			10 evenly spaced w/ soft starters; N/A with PWM type VFDs
Inverter Duty Rating			Motors meet NEMA MG1, part 31 requirements
Maximum Submergence			20 meters (65 feet)
Available Voltages			230, 460, 600 (consult factory for other voltages)
Voltage Tolerance from Rated			+/-10%
Agency Approvals			Factory Mutual, CSA
Explosion Proof Rating			NEC 500 Class 1, Division 1, Group C & D, Class T3C max surface temp

The picture above may differ from the actual product. For illustrative purposes only.

[1] Output filters may be required on VFDs. See document **DS-E00-001** for details.

Cable Length	Standard: 15m (49 feet)	Optional: 20m (65 feet), 30m (98 feet); Consult Factory for longer lengths		

[3] See motor protection on page 1. Optional full monitoring systems with RTD options do not include bearing bi-metallic switches.

Pump Data

Discharge Size	10" flanged, compatible with 10" class 125 ANSI flanges									
Suction Size (Wet-Pit / Dry-Pit) [5]	10" undrilled / 10" flanged, compatible with 10" class 125 ANSI flanges, threaded for 12x7/8-9 UNC screws, 30mm (1.2") deep									
Volute Pressure Rating	10 bar (145 psi)									
Impeller Type	Semi-open, 2-vane, Contrablock Plus, w/ Seal Protection System									
Impeller Code	-	-	-	-	-	-				
Impeller Diameter, mm (in.)	340 (13.4)	350 (13.8)	360 (14.2)	370 (14.6)	380 (15.0)	390 (15.4)				
Solids Passage Size, mm (in.)	90x120 (3.5x4.7)	90x120 (3.5x4.7)	90x120 (3.5x4.7)	90x120 (3.5x4.7)	90x120 (3.5x4.7)	90x120 (3.5x4.7)				
Min. Recommended Flow, GPM [6]	1400	1500	1500	1600	1700	1900				

[5] Wet-pit version can be drilled to dry-pit specifications upon request. Consult factory for details. [6] Recommend minimum continuous flow. Consult factory for applications below this flow rate.

Materials of Construction

		Standard	Optional
Power/Control Cable Jacket		Chlorinated Polyethylene (CPE)	
Lifting Hoop		Ductile Iron EN-GJS-400-18 (ASTM A-536; 60-40-18)	Duplex Stainless Steel 1.4470 (ASTM A890, CD3MN Grade 4A)
Cable Connection Chamber		Cast Iron EN-GJL-250 (ASTM A-48, Class 35B)	
Motor Housing		Cast Iron EN-GJL-250 (ASTM A-48, Class 35B)	
Cooling Jacket		Steel 1.0036 (ASTM A-570, Grade D)	
Intermediate Housing		Cast Iron EN-GJL-250 (ASTM A-48, Class 35B)	
Seal Plate/Cooling Chamber		Cast Iron EN-GJL-250 (ASTM A-48, Class 35B)	
Pump and Motor Shaft		Stainless Steel 1.4021 (AISI 420)	Duplex Stainless Steel 1.4462 (UNS S31803)
Impeller		Cast Iron EN-GJL-250 (ASTM A-48, Class 35B) [7]	Duplex Stainless Steel 1.4470 (ASTM A890, CD3MN Grade 4A)
Wear Parts	Impeller Wear Ring	N/A	
	Volute Wear Ring	N/A	
	Bottom/Wear Plate	Cast Iron EN-GJL-250 (ASTM A-48, Class 35B) [7]	Duplex Stainless Steel 1.4470 (ASTM A890, CD3MN Grade 4A)
Volute		Cast Iron EN-GJL-250 (ASTM A-48, Class 35B)	Duplex Stainless Steel 1.4470 (ASTM A890, CD3MN Grade 4A)
External Hardware		Stainless Steel 1.4401 (AISI 316)	
O-Rings and Cable Glands		Nitrile (Buna-N)	Viton®
Mechanical Seals	Lower	Silicon Carbide / Silicon Carbide, Nitrile, 316 SS	Silicon Carbide / Silicon Carbide, Viton®, 316 SS
	Upper	Silicon Carbide / Silicon Carbide, Nitrile, 316 SS	
Lower Bearing Lip Seal		Nitrile (Buna-N)	
Coating/Protection		Two-part epoxy, blue, 120µm (4.7 mil) DFT	Two-part epoxy, blue, 400µm (15.7 mil); Wet-end liquid ceramic coating, 500µm (19.7 mil); Zinc Anodes

[7] Hardening of bottom edge of impeller vane and wear plate surface available. Consult factory for details.

Item number	001	Date Last Saved	30 May 2022 1:52 PM
Application	Municipal Wastewater Treatment - 14112	Type / Size / Stages	APT52-16 (O) / 1
Pump speed	590 rpm		

Pump and Accessories

Qty	Description
1	*APT52-16 (O)*
	End suction single stage centrifugal pump
	Quality Requirement
	CE 2006/42/EC
	EN ISO 5199:2002 Class II
	Pump and accessories
	Hydraulic performance acceptance grade
	ISO 9906:2012 / HI 14.6-2011 Grade 2B
	Guaranteed efficiency
	Impeller
	Impeller type: Open
	Impeller holes: Balance holes
	Materials of construction
1	Volute case : Grey cast iron (ASTM A48 CL35B)
	Impeller : Duplex steel (ASTM A890 3A)
	Wetted non casted alloys: 316 SS or better grade
	Shaft: Duplex steel (EN1.4460 / AISI 329 / SS2324)
	Bearing housing : Grey cast iron (ASTM A48 CL30B)
	Surface treatment
	Inside surface treatment: Standard
	Painting method: Standard, atmospheric-corrosivity C4, ISO 12944-2
	Color shade: Light grey (NCS1700)
	Volute case
	Flange drilling : ASME B16.1 CLASS 125
	Casing Connections
	Casing Drain
	Recirculation Pipe (Discharge)
	Shaft seal
	Sealing unit type: Cartridge single, open seal chamber, sleeve installation (MS33)
	Shaft seal fluid: Without fluid (N)
1	Mechanical seal type: John Crane, 5610 (FC16)
	Mechanical seal body: 316/329 SS
	Shaft seal material: SiC/ SiC
	Mechanical seal elastomer material: EPDM, Ethylene propylene
	Bearing unit
	Bearing lubrication type: Oil bath
	Bearing isolation: Standard labyrinth seal
	Other parts
	O-ring material: EPDM, Ethylene propylene
	Shaft seal guards material: Stainless steel
	Coupling
1	Coupling size : Rex Omega ES
1	Coupling guard : Painted galvanized steel
	Coupling guard colour shade: Yellow (RAL1023)

Item number	: 001	Stages	: 1
Service	: RAS PUMP	Based on curve number	: APP52-400_720_O Rev 2
Quantity	: 1	Date of Last Update	: 30 May 2022 1:52 PM

Operating Conditions

Flow, rated	: 5,729.0 USgpm
Differential head / pressure, rated (requested)	: 15.00 ft
Suction pressure, rated / max	: 0.00 / 0.00 bar.g
NPSH available, rated	: Ample
Site Supply Frequency	: 60 Hz

Performance

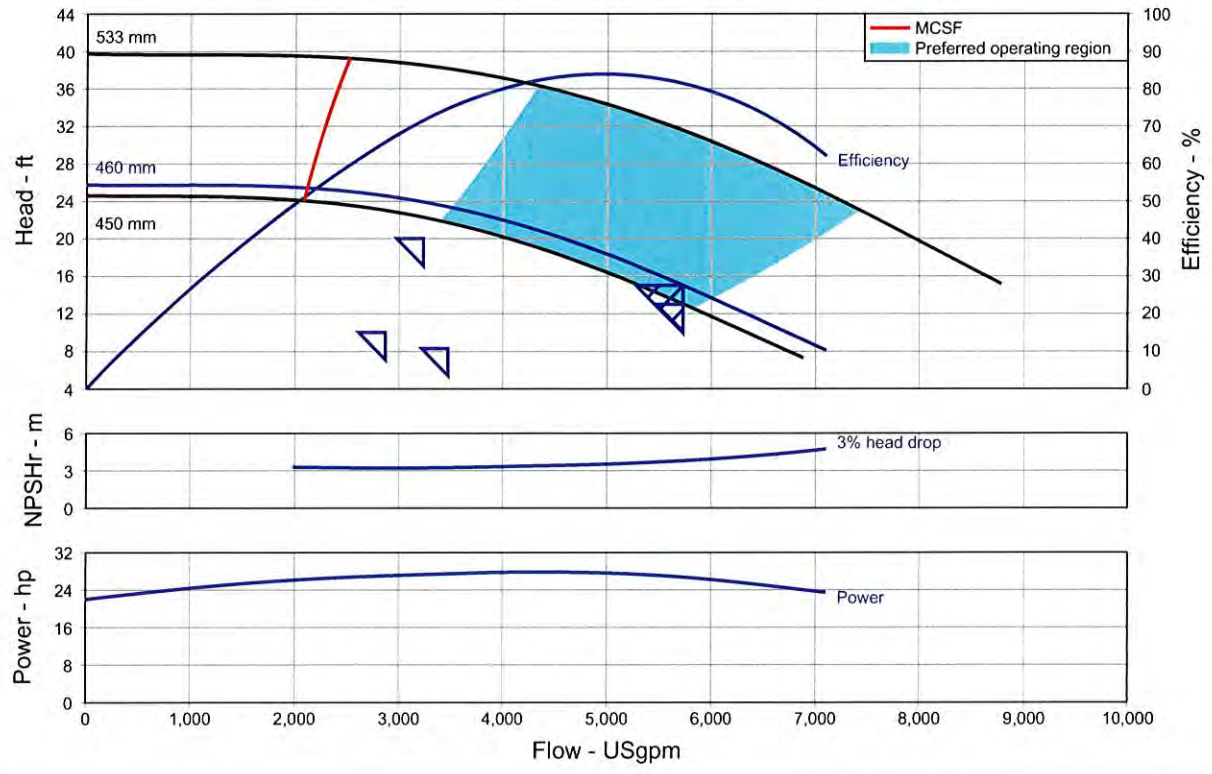
Speed criteria	: Synchronous
Speed, rated	: 590 rpm
Impeller diameter, rated	: 460 mm
Impeller diameter, maximum	: 533 mm
Impeller diameter, minimum	: 450 mm
Efficiency	: 81.34 %
NPSH (3% head drop) / margin required	: 3.78 / 0.00 m
Ns (imp. eye flow) / Nss (imp. eye flow)	: 3,670 / 8,199 US Units
MCSF	: 2,112.3 USgpm
Head, maximum, rated diameter	: 25.74 ft
Head rise to shutoff	: 71.52 %
Flow, best eff. point	: 4,951.9 USgpm
Flow ratio, rated / BEP	: 115.69 %
Diameter ratio (rated / max)	: 86.30 %
Head ratio (rated dia / max dia)	: 47.56 %
Cq/Ch/Ce/Cn [ANSI/HI 9.6.7-2010]	: 1.00 / 1.00 / 1.00 / 1.00
Selection status	: Acceptable

Liquid

Liquid type	: Water
Additional liquid description	:
Solids diameter, max	: 0.00 mm
Solids concentration, by volume	: 0.00 %
Temperature, rated / max	: 20.00 / 20.00 deg C
Fluid density, rated / max	: 0.998 / 0.998 kg/dm3
Viscosity, rated	: 1.00 cSt
Vapor pressure, rated	: 0.02 bar.a

Material

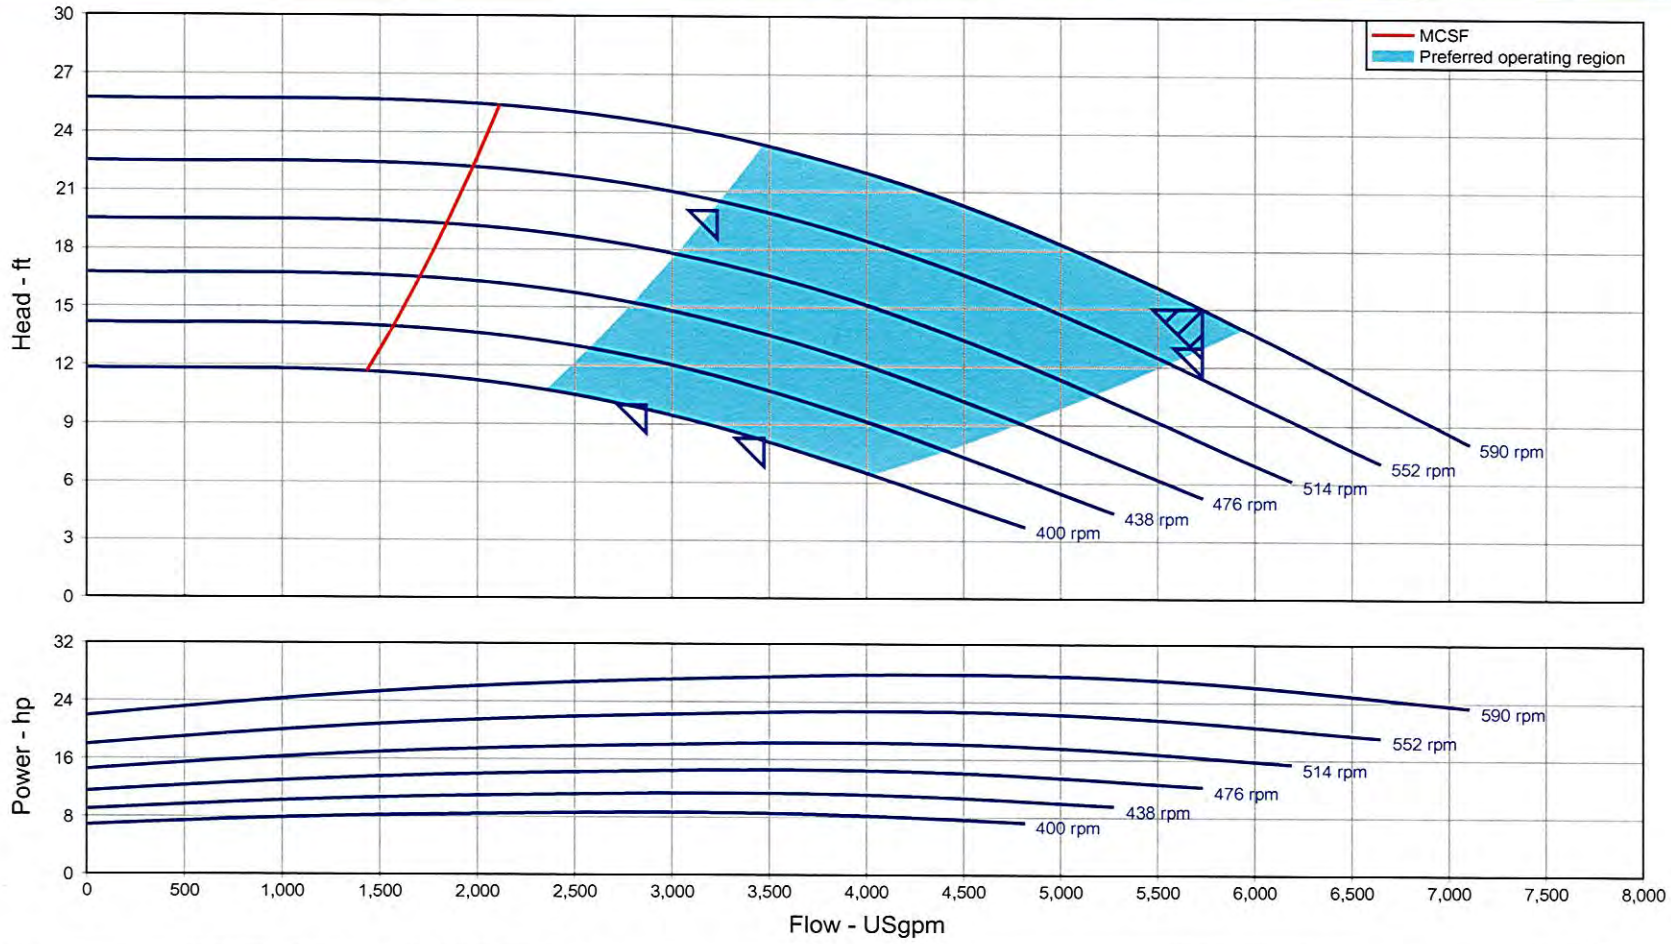
Material selected	: Cast Iron - ASTM A48 CL35B (53 / F0067)



Pressure Data

Maximum casing/bowl working pressure	: 0.77 bar.g
Maximum allowable working pressure	: 10.00 bar.g
Maximum allowable suction pressure	: N/A
Hydrostatic test pressure	: 15.00 bar.g

Driver & Power Data (@Max density)



Driver sizing specification	: Rated power
Margin over specification	: 0.00 %
Service factor	: 1.00
Power, hydraulic	: 21.70 hp
Power, rated	: 26.68 hp
Power, maximum, rated diameter	: 27.78 hp
Minimum recommended motor rating	: 40.00 hp / 29.83 kW

Hydraulic Performance Acceptance Test: ISO 9906:2012 / HI 14.6-2011 Grade 2B

NOTES:

1. ALL PIPING CONNECTIONS ARE 1/2" SCHEDULE 80 PVC SOCKET/WELD UNLESS OTHERWISE REQUIRED BY PIPELINE DEVICES.

2. SEAL MATERIAL IS PTFE AND EPDM UNLESS OTHERWISE SPECIFIED.

3. SYSTEM DESIGNED TO ACCOMMODATE SIGMA MOTOR DRIVEN PUMPS ONLY.

4. PIPE SUPPORT FRAME IS MADE FROM 1/2" THICK HDPE SHEET & PVC STRUT. FRAME SUPPORT IS MADE BY BOLTED CONSTRUCTION.

5. ALL MOUNTING HARDWARE IS 304SS. ALL PIPE CLIPS AND STANDOFFS ARE PLASTIC.

6. CHARGING PRESSURE OF THE PULSATION DAMPENERS TO BE AT 80% OF THE DISCHARGE LINE OPERATING PRESSURE.

7. ALL INTERCONNECTING PIPE & FITTINGS, HARDWARE, GASKETS, SEALS AND WIRING ARE DONE ON SITE BY OTHERS. SHIPPED LOOSE MATERIALS ARE LISTED ON B.O.M. - INSTALLATION IS BY OTHERS.

8. ALL INTERCONNECTING PIPING SHALL BE FULLY & INDEPENDENTLY SUPPORTED BY OTHERS.

9. TOLERANCE ON ALL TERMINATION POINTS IS +/- 3/8" (10mm) UNLESS SPECIFIED BY CUSTOMER.

10. APPROX. SHIPPING WEIGHT: 135 Lb (61 Kg)
APPROX. OPERATING WEIGHT: 145 Lb (66 Kg)

11. SYSTEM IS FOR INDOOR INSTALLATION ONLY

12. SHIP LOOSE SYSTEM DISCHARGE P.R.V. HEADER, INSTALLED ON SITE BY OTHERS.

13. DESIGN NOTES:

- DESIGN TEMPERATURE: MAX: 86ºF (30ºC), MIN: 32ºF (0ºC)

IBC TANKS

Hold as much liquid as six 55-gallon drums. Use up to 33% less floor space.

- Store and dispense water, pesticides or other liquids and powders.
- Chemical-resistant HDPE tank surrounded by a galvanized steel cage.
- Mounted to steel frame pallet for easy transport.
- Stack up to 3 high.
- 4-way fork access.
- 6" diameter fill cap, 2" diameter drain.
- Meets FDA Requirements.

Cast Iron Piston Air Compressors

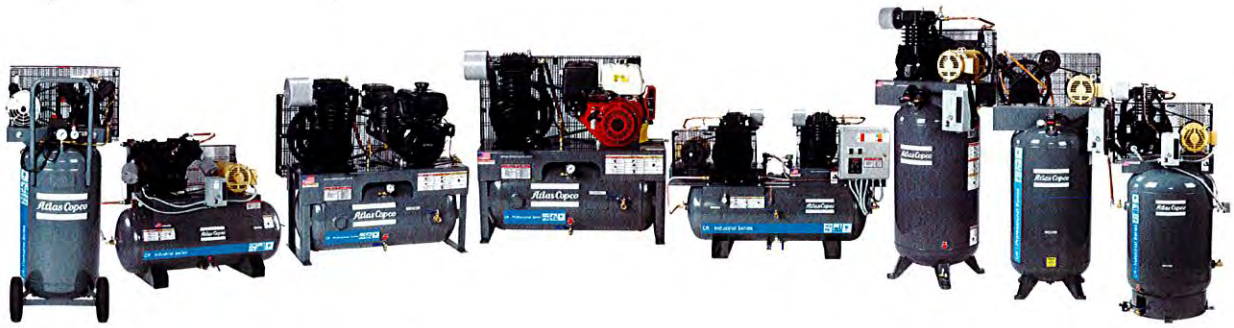
Contractor/Professional/Industrial Series
2-20 HP (1.5-15kW)

7290- Cast Iron Piston Air Compressors_brochure_FD.indd 1 08-01-2020 14:39:19

The CR Cast Iron Piston Compressor Series

Newly designed, lasting reliability

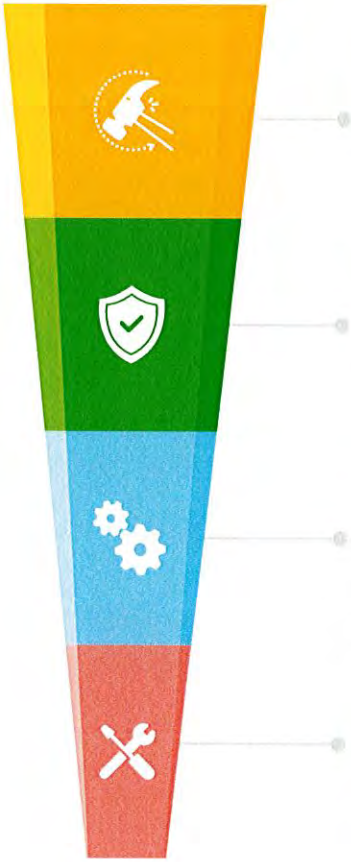
More dependable than ever with tailored options for all contractor, professional and industrial applications, Atlas Copco is pleased to introduce the newly designed CR cast iron piston compressor series. The CR range delivers a champion combination of outstanding reliability matched with robust performance, even in the most demanding conditions for a dependable piston you can count on.



Capitalizing on heavy-duty cast iron construction and a combination of computer-aided design with controlled machining processes, the new CR single stage and two-stage compressors deliver up to 175 psig with 24/7 reliability. We back this up with our bumper to bumper warranty packages, and have options for a 5 year extended warranty, depending on the model chosen.

A complete and tailored range of premium compressors at affordable prices

Count on Atlas Copco's cast iron piston technology to drive your production reliably and support your application demand. We can meet your exact requirements with a broad piston compressor line, whether you work in a small workshop or on a large onsite project.



A range of series with available options:

7290- Cast Iron Piston Air Compressors_brochure_FD.indd 2 08-01-2020 14:39:20

CR Cast Iron Piston Air Compressor

A 60 second guide to the piston that sets the bar high

Heavy-Duty Cast Iron construction

Ensures durability and reliability for the most demanding applications

Reliability

Engineered using the most state-of-the-art manufacturing techniques for a product of design excellence. The compressed air you need to keep your operations running efficiently with maximum uptime.

Tailored

Customize your piston to fit your needs.
Options available include:

- Auto drain
- After cooler
- Low oil level switch
- TEFC motor
- NEMA4 control panel
- Pressure lubricated pump
- Simplex and duplex configurations

Easy maintenance

Every component is easily accessible allowing minimum downtime and requires only limited maintenance.

TEFC Motor

NEMA4 control panel

7290- Cast Iron Piston Air Compressors_brochure_FD.indd 3 08-01-2020 14:39:20

The CR Contractor Series

A premium compressor at the lowest capital cost for point of use applications.

2-5.5HP/135 psi

The Contractor Series provides affordable compressed air in a small, lightweight package. The low-profile cast iron design, semi-pneumatic wheel, heavy gauge wire belt guard and rugged pump design provide the ideal solution for small, portable applications.

Features and Benefits:

- Standard 2-year bumper to bumper warranty
  - No start-up kit required
- Single stage units
  - Electric or gas powered
- Fully enclosed belt guard and ASME safety valves
- Pilot valve control on gas drive units to reduce engine speed on low demand

Technical Specifications

The CR Professional Series

A reliable electric compressor for rugged, stationary use.

5-20HP/135-175 psi

The Professional Series provides high pressure at the lowest cost in a small, lightweight package. The balanced counter weighed crankshaft and cast iron design provide smooth, easy operation with a range of unit options supplying an ideal solution for demanding applications.

Features and Benefits:

- 1 year bumper to bumper with 5 year extended warranty on the pump*
  - *With purchase of minor and major maintenance kits
- Duplex, Simplex or Base Mounted

7290- Cast Iron Piston Air Compressors_brochure_FD.indd 4 08-01-2020 14:39:21

- Two-stage
  - Two stage best for high demands needing up to 175 psi.
- Oversized oil reservoir for low oil temperatures, industrial class bearings and one-piece aluminum head for heat dissipation providing longevity.
- Low maintenance with 2-piece connecting rods and oil pressure gauge.
- High efficiency intercooler with stainless steel valve design for highest volumetric efficiency.

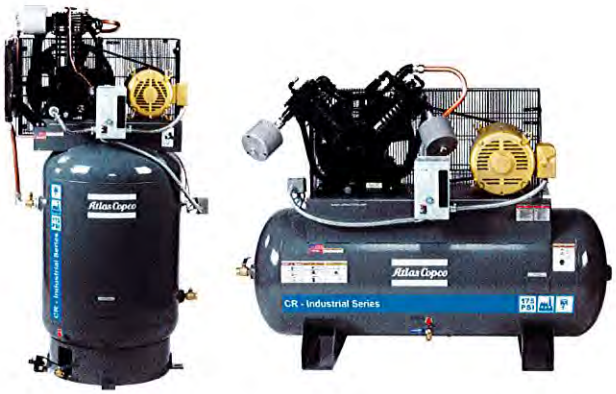
The CR Industrial Series



The most reliable piston air compressor customizable to you.

5-20HP/135-175 psi

The Industrial Series provides high pressure at low cost in a newly designed, cast iron package. The balanced counter weighed crankshaft provide a smooth, easy operation with a range of unit options supplying an ideal solution for the most robust applications.

Features and Benefits:

- 1 year bumper to bumper with 5 year extended warranty on the pump*

- Low maintenance with 2-piece connecting rods and oil pressure gauge
- High efficiency intercooler with stainless steel valve design for highest volumetric efficiency

Technical Specifications

CR Industrial Series

The CR Series piston compressor is a cast-iron, splash lubricated, 2 stage, 175psi product. All models are equipped with magnetic starter as standard. The industrial series comes equipped with an electric drain, belt guard aftercooler, and low oil level switch on all models. The 10 and 15HP models also come equipped with head unloaders.

CR Industrial Series - Standard and TEFC motor and NEMA4 controller upgrade

IFC Series B125F and B150F Style 1 Iron and Bronze Flanged Basket Strainers

Design Features:

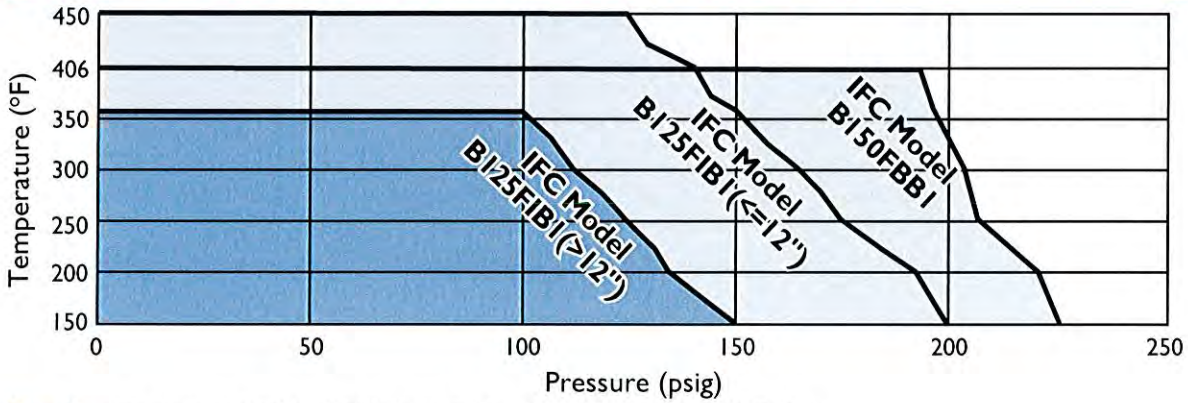
- Iron strainers are equipped with FF flanges (Series B125F) in accordance with ASME B16.1.
- Bronze strainers are equipped with FF flanges (Series B150F) in accordance with ASME B16.24.
- Strainer body meets applicable ASME/ANSI standard.
- All strainers equipped with bolted cover flanges that utilize a flat gasket seal.
- Strainer cover flanges are designed in accordance with ASME Section VIII, Div.1 Appendix II.
- Straight thru flow is accomplished by an angular basket design.
- Standard basket construction is 304 SS perforated plate.
- Recommended minimum straining level is 250 microns.
- N.P.T. drain connection furnished with plug.
- Recommended for installation in horizontal pipelines.

Notes: 1. See page 11 for details of available quick opening covers.
2. See page 19 for basket strainer effective areas.

Parts List and Standard Materials

Part IFC Model	Cast Iron B125FIB1	Bronze B150FBB1
Body	A126-B	B62
Cover	A126-B	B62
Screen [1]	304 SS	304 SS
Plug [2]	A126-B	B62
Gasket [1]	Bolted Cover: Graphite Quick Opening: See pg. 11	Bolted Cover: Teflon Quick Opening: See pg. 11
Bolt/Stud [2]	A307-B	Nonferrous
Nut [2]	A563	Nonferrous

Notes: 1. Recommended spares.
2. Materials of equivalent strength may be substituted at manufacturer's option.



Upper Pressure Limits (Non-Shock)

IFC Model	Body Material	M.A.W.P. psig (Bars)

Notes: 1. Vents are optional.
2. Dimension "B" is +/- 0.13".
3. Dimension "D" will change when Quick Opening covers are used.
4. Sizes 8" and larger come complete with a side drain as standard. A bottom drain is optional.

General

1. Quick opening cover features are shown on pages 11-12.
2. See pg. 14 for available perforations and screen materials.
3. Pressure drop information is shown on pg. 15.
4. See pg. 22 for ordering information.
5. Dimensions shown are subject to change. Consult factory for certified prints when required.

Products for the Water Industry

Water & Wastewater Treatment

Filtration • Purification • Desalination

NSF / ANSI 61CERTIFIED

The High Performance Company

Bray Out Performs AWWA Verification Criteria

Bray Resilient Seated Butterfly Valves

are designed, manufactured and tested to meet or exceed AWWA C504, Section 5.0 performance criteria. Also, Bray valves have exceeded a million cycles in actual AWWA type services, far in excess of the AWWA C504, Section 5.1.4.3 cycling performance standard. Pressure testing to ensure shell, seat and stem seal's integrity is performed on every valve manufactured by Bray Controls.

Bray Controls has been successfully providing resilient seated valves for over 20 years for many applications in Water, Wastewater, Filtration and Desalination applications. Bray peroxide cured EPDM seats exhibit outstanding performance in water services. Third party testing of Bray EPDM per ASTM D6284 shows excellent compatibility with chlorine/ chloramine additives. Consult your local Bray Representative for your specific application.

Automation – Single Source Responsibility

As a manufacturer of electric and pneumatic actuators and accessories, Bray takes full responsibility for the operation of the valve/actuator package. All Bray actuators direct-mount to the valves without the need for costly brackets, linkages and couplers. With this breadth of product and experience, Bray Controls is the fastest growing automated valve producer in the water and wastewater industry.

As the leading supplier of automated butterfly valves to the water filter and air blower OEMs, Bray products are standard at many water, wastewater treatment and desalination plants. Using state-of-the-art materials and design, Bray butterfly valves and actuators have been successfully applied in the following applications:

- Raw water
- Fresh water
- Wastewater
- Digester Gas
- Aeration
- Chemical Treatment
- Reverse Osmosis Filtration
- Backwash Filters
- Seawater Intake
- Power

Bray resilient seated butterfly valves are approved and certified worldwide for potable water applications

Service Conditions	AWWA C504 Specification	BRAY Resilient seated Valves
Media	Fresh Water	Fresh Water, Wastewater, Seawater & Chemicals
PH Limits	6 to 12	3 to 13
Temperature Limits	125°F (52°C) Maximum	250°F (121°C) Maximum
Velocity Limits-Liquid	16 ft/sec. (4.9 m/sec.)	30 ft/sec. (9.1 m/sec.)

Cycle Test Requirements *Valve Size - In. (mm)*	AWWA Minimum Cycles	BRAY Resilient seated Valve Cycles
3" (75) - 72" (1800)	1,000 - 10,000	5 - 10 TIMES GREATER THAN AWWA

Valve Components	AWWA C504 Specification	BRAY Resilient seated Valves
Valve body	EXPOSED TO Media	ISOLATED FROM Media
Valve disc	EXPOSED TO Media (Ductile Iron with Stainless Steel Edge)	EXPOSED TO Media (NSF/FDA Approved Nylon 11 Coated Ductile Iron)
Valve stem	EXPOSED TO Media	ISOLATED FROM Media

Resilient Seated Butterfly Valves Sizes 2"– 96" (50mm - 2400mm)

INTERNAL DISC/STEM CONNECTIONS

Bray offers three disc-to-stem connections, Double 'D' Splined and Double Key. These internal non-wetted connections eliminate typically exposed external disc-to-stem connections such as screws or taper pins which can:

- **Result in leak paths, erosion, corrosion and vibration failures.**
- **Require difficult machining for disassembly.**
- **Require replacement of disc and stem upon failure, since both are matched for the life of the valve.**

Disassembly of Bray's internal connection is performed by simply pulling the stem out of the disc. Bray's precision machining of the disc and the stem connection minimizes hysteresis and produces maximum strength engagements. All stem designs incorporate a blow-out proof feature.

The DOUBLE 'D' disc-to-stem connection features matched precision machined flats on the stem and in the disc.
Size 2"– 20" (50mm–500mm)

The SPLINED disc-to-stem connection features matched precision machined male splines in the stem and female in the disc.
Size 22"– 48" (550mm–1200mm) .

The DOUBLE KEYED disc-to-stem connection features matched double keyways machined into the disc and stem. Keys engage the connection.
Size 52"– 96" (1300mm–2400mm).

- Body Styles:
  Wafer, Lug
  Size 2" - 20" (50mm - 500mm)
  Double Flanged
  Size 3" - 96" (80mm - 2400mm)
- NSF /ANSI 61 Certified valves
- Body and stem are isolated from line media.
- FDA approved Nylon 11 coating on disc resists corrosion, abrasion and adherence of contaminants. Nylon 11 coating is also available on Bodies for salt air and corrosive envirionments.
- Smaller, lighter and a more cost effective solution compared to traditional AWWA butterfly valves
- Flow capacity is 30% higher on average than traditional AWWA butterfly valves
- EPDM seat compliant with FDA 21 CFR 177.2600

High Performance Butterfly Valves

Sizes 2½ "– 60" (65mm - 1500mm)

High Performance Butterfly Valves have been successfully applied to many applications in power plants, desalination plants and offshore oil/gas drilling and production platforms.

- **Wafer, Lug and Double Flanged Styles**
- **ANSI, DIN, BS and JIS flange patterns available**
- **ISO 5211 global standard**
- **Approvals/Compliance**
  - **NSF/ANSI 61- Potable water**
  - **CE**
  - **ABS**
  - **DNV**

Bray Controls is proud to offer the Bray/McCannalok line of high performance butterfly valves. This product line is recognized as a proven leader with over 35 years of successful service in process industries worldwide. The Bray/McCannalok's unique, patented design received Chemical Processing's Vaaler Award for Best Product shortly after it was introduced. The simple, innovative design offers rugged reliability and extremely easy maintenance in the field. Independent and internal tests have proven Bray/McCannalok's superior service life capability, with bubble-tight shut-off through hundreds of thousands of cycles.

The Bray/McCannalok valves can be automated with direct mount (no couplers) Bray pneumatic and electric actuators. When compared to gate, globe, ball, diaphragm and plug valves, the Bray/McCannalok butterfly valve is significantly smaller and lighter weight, therefore installation space, time, and maintenance costs are greatly reduced.

The Bray/McCannalok High Performance Valve delivers the highest quality and highest value available for your requirements.

DEAD-END SERVICE

Bray/McCannalok ANSI Class 150, 300 and 600 valves with lug bodies are rated for bidirectional dead-end service at the full differential pressure rating.

TESTED:

Bray/McCannalok valves are tested to API 598 standards, including both low pressure and high pressure bi-directional leakage tests.

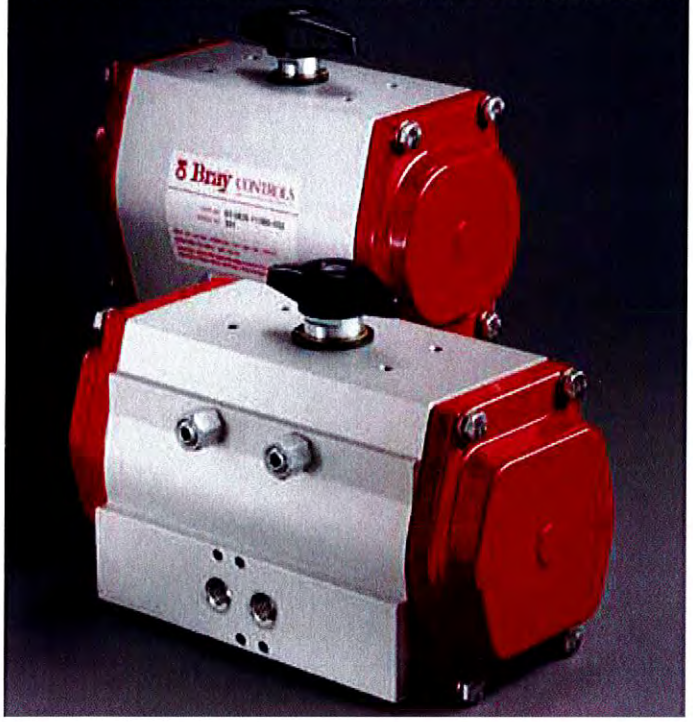
- **ANSI Class 150, 300 and 600 designs**
- **Carbon Steel, Stainless Steel, Duplex Stainless Steel or other Alloy Materials**
- **RTFE seats withstand temperatures up to 500 °F (260° C)**
- **Self-energized seat is pressure assisted, not pressure dependent**
- **Backwash filter valve with significant advantages versus plug valves (less weight, lower cost, excellent torque and control valve characteristics)**
- **Ideally suited to aeration and boiler room applications**

Sanitary and PTFE Lined Butterfly Valves

Sizes 2"– 24" (50mm - 600mm)

The Bray *HPV* PTFE High Performance Valve

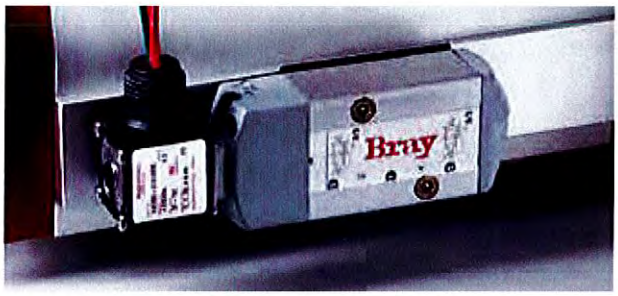
- Wafer and Lug Styles
- PTFE, Conductive PTFE or UHMWPE Trim
- Rated for 150 psi (10.3 bar) differential pressure
- Excellent for the following applications:
  - Corrosive
  - High temperature
  - Abrasive
  - Digester gas



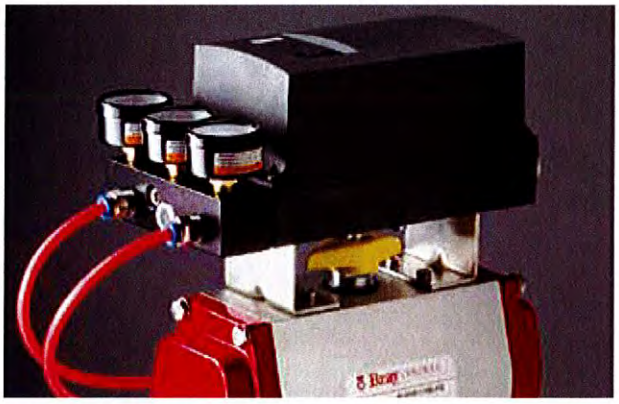
The Series 22/23 *HPV* line of butterfly valves sets the new standard of reliability and innovation. Extensive field research and engineering have developed this state-of-the-art design which provides excellent shut off protection (bubble-tight shut off) and high C_V values.

- Fully lined body and disc isolates all other valve parts from the media
- Thin disc profile dramatically reduces pressure drop/pump costs
- External polyester coating provides excellent corrosion and wear resistance
- Available with UHMWPE Trim
- Available for Sanitary and Ultra-Pure Water Requirements

Actuators and Accessories



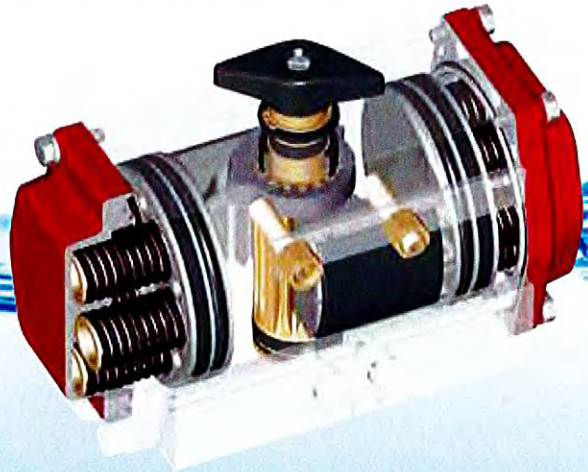
Series 92/93 Pneumatic Actuators



Bray's Series 92/93 line of high performance and high quality pneumatic actuators combines styling, strength, compactness and simplicity of design to produce the best rotary actuator in the market today.

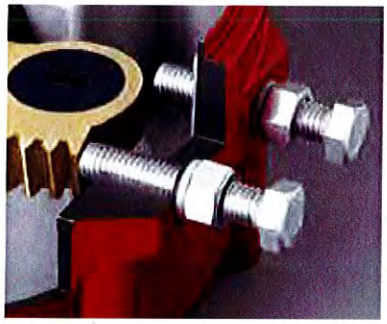
Engineering excellence and precision manufacturing have produced a modular product line with reduced overall size requirements and economic savings. In addition, all Bray Accessories are fully modular and directly mount to the actuator – providing flexibility and efficiency at reduced cost.

SPRING RETURN Bray's Series 93 spring return models employ a unique cartridge system for easy conversion from direct acting to spring return actuation.

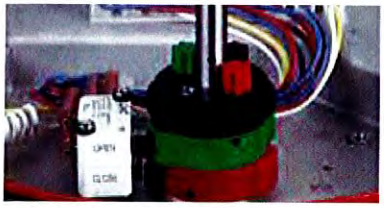


SERIES 63 3-WAY AND 4-WAY SOLENOID VALVES

SERIES 6A ELECTRO-PNEUMATIC POSITIONERS



SERIES 52 VALVE STATUS MONITORS



SERIES 50 VALVE STATUS MONITORS

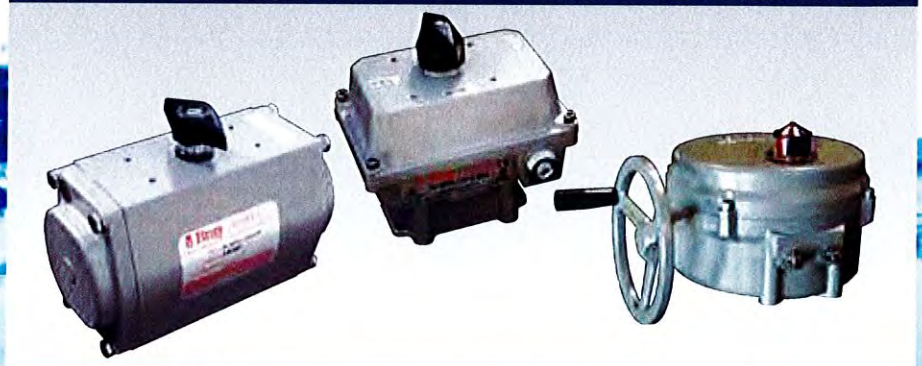
STAINLESS STEEL MECHANICAL TRAVEL STOPS

INFINITELY ADJUSTABLE TRAVEL LIMIT CAMS

OPTIONAL TORQUE LIMITING SWITCH SYSTEM

RUGGED ELECTRIC ACTUATOR FOR ROTARY VALVES
300 LB-IN [34 Nm] TO 18,000 LB-IN [2030 Nm] OUTPUT TORQUE

Bray Controls' years of proven success in electric actuation, combined with innovative engineering, has produced the Series 70. The Series 70 features on-off or modulating control. This electric actuator for rotary valves delivers highly reliable service.



Bray's unique Control Center has many advantages over present industry standards including:

- **UL, CSA and CE certification available**
- **Ease of customer field wiring directly to the terminal strip without interference from other components**
- **Simple and unique manual override handwheel system**
- **Lowest profile and lightest weight actuator on the market**
- **Simple finger or screw driver infinite adjustment of travel limit cams without interference from other components**
- **Highly visible valve status indicator**
- **Externally adjustable travel stops**
- **Captive cover bolts**
- **Components not requiring customer access are protected underneath the Power Center cover plate.**

TU5 SERIES TURBIDIMETERS

Applications
- Drinking Water
- Power
- Beverage
- Pharmaceutical

The next standard in the evolution of turbidity

Only the new TU5 Series Lab & Process Turbidimeters with 360° x 90° Detection™ deliver unprecedented confidence that a change in your reading is a change in your water.

Groundbreaking 360° x 90° Detection™ Technology

The TU5 Series employs a patented optical design that sees more of your sample than any other turbidimeter, delivering the best low level precision and sensitivity while minimizing variability from test to test.

Matching lab and online results

For the first time you will be able to remove the uncertainty of which measurement to trust, thanks to identical 360° x 90° Detection™ Technology in both instruments.

Everything about turbidity – faster

The TU5 Series dramatically reduces the time needed to get a turbidity measurement you can rely on, with 98% less online sample surface area to clean, sealed vials for calibration, and the elimination of the need for indexing and silicone oil in the lab. Not to mention, a smaller online sample volume means you will detect events almost immediately.

No surprises

Prognosys™ monitors your TU5 Series online instrument, proactively alerting you to maintenance needs before your measurement becomes questionable. And a Hach Service Agreement protects your investment and helps ensure that you stay in compliance and on budget.

HACH®
Be Right™

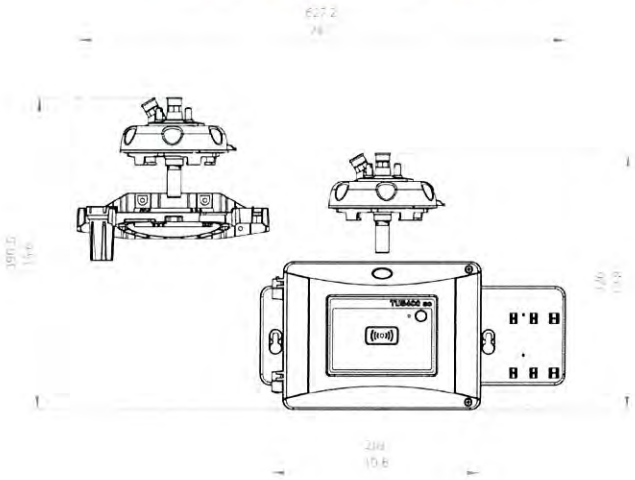
Weight	5.95 lbs. (2.7 kg) (11 lbs. (5.0 kg) with all accessories)
Warranty	1 year

**Subject to change without notice.*

Principle of Operation



The TU5 Series turbidimeters measure turbidity by directing a laser into a sample to scatter off suspended particles. The light that is scattered at a 90° angle from the incident beam is reflected through a conical mirror in a 360° ring around the sample before it is captured by a detector.

The amount of light scattered is proportional to the turbidity of the sample. If the turbidity of the sample is negligible, little light will be scattered and detected by the photocell and the turbidity reading will be low. High turbidity, on the other hand, will cause a high level of light scattering and result in a high reading.

Integrated Management System Manual - Version 2.0 May 2019

quality, environment, health and safety vision

SUEZ's Water Technologies & Solutions is committed to the achievement of quality, environment, occupational health and safety excellence.

We are driven by a passion for delivering on our commitments. We are dedicated to providing our customers with the highest quality offerings, customer service and responsiveness to their needs. We are committed to working through any problem in an open and honest manner with unyielding integrity.

The management and control of risks associated with Water Technologies & Solutions facilities is our top priority in our establishment of a preventive culture. We take appropriate measures to prevent workplace injuries and illnesses, to provide workers with a safe and healthy working environment. We accurately assess environmental risks and ensure that our quality systems are effective and well managed.

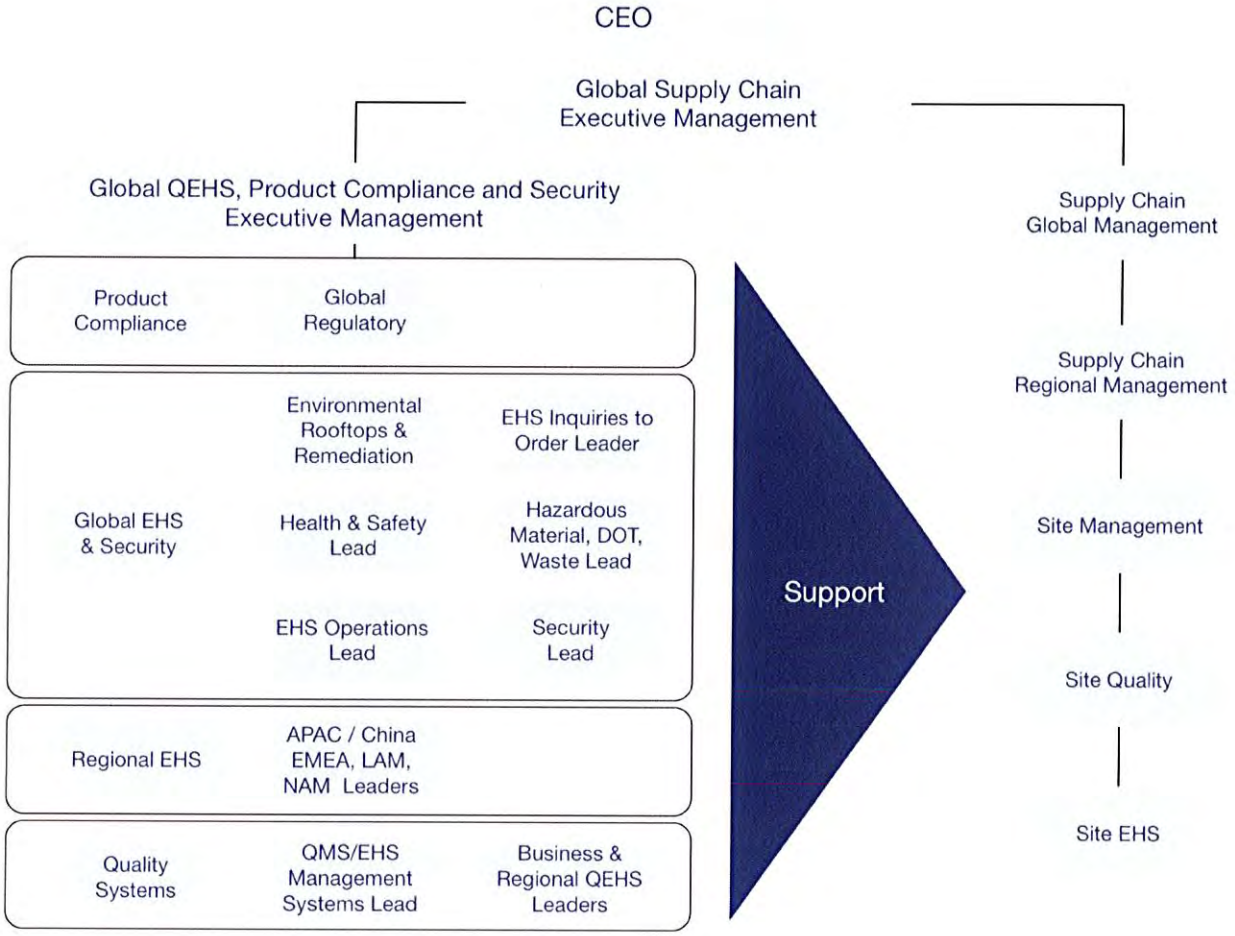
We have a positive Quality, Environment, Occupational Health and Safety culture. The improvement of our integrated management system is a shared endeavor between workers and the management team, to the benefit of our employees, our customers and our planet.

our customer commitments

Customer Experience Program

- SUEZ's Water Technologies & Solutions is committed to driving customer satisfaction with all products and services we offer and building long-term loyalty by working with our customers to help them be successful.
- We recognize that understanding our customers' experiences is essential for us to optimize those experiences and earn our customers' loyalty. To help us achieve this understanding, we use two types of customer surveys.
- Relationship surveys are conducted periodically on a sample basis to determine overall satisfaction. Transactional surveys are conducted after specific events to determine satisfaction of the interactions related to the specific transaction.

Customer Requirements



- Water Technologies & Solutions understands customer requirements associated with its products and services, their delivery and ongoing support.
- This comes from a deep understanding of the customers' business goals and regulatory commitments, and the intended use of the products and services.
- WTS has established channels for effective communication of customer requirements as well as changes throughout its organization.

Regulations and Standards

- Ensuring compliance with the applicable Regulations and Standards for every region where its products and services are manufactured or operated is of paramount importance to Water Technologies & Solutions.
- Management teams at all levels in the business are engaged in a continually improving process of reviewing the regulatory landscape and understanding technical applicability, training, auditing, and rigorous adherence to policies and procedures. We have the ultimate goal of ensuring that products and services are compliant with the applicable laws and regulations of the region and locally where they are being sold.
- Water Technologies & Solutions understands that its customers count on them to provide products that are compliant and is committed to meeting that expectation.
- All Environmental Health and Safety leaders, in all areas of the business, are engaged in a process of continual improvement in relation to both environment and occupational health and safety. Using guidance, best practice examples and keeping up to date with any changes in the regulatory landscape, we ensure that we are compliant in terms or what we do and how we do it.

the quality, environmental health and safety organization

quality, environmental health and safety policies

quality policy

At SUEZ- Water Technologies & Solutions, we are committed to:

- Meeting and exceeding customer expectations
- Improving customer satisfaction and trust
- Delivering our quality products and services on time, in compliance with regulatory and contractual requirements
- Continuously improving the quality of our products, services and processes
- Responding quickly and effectively to resolve issues

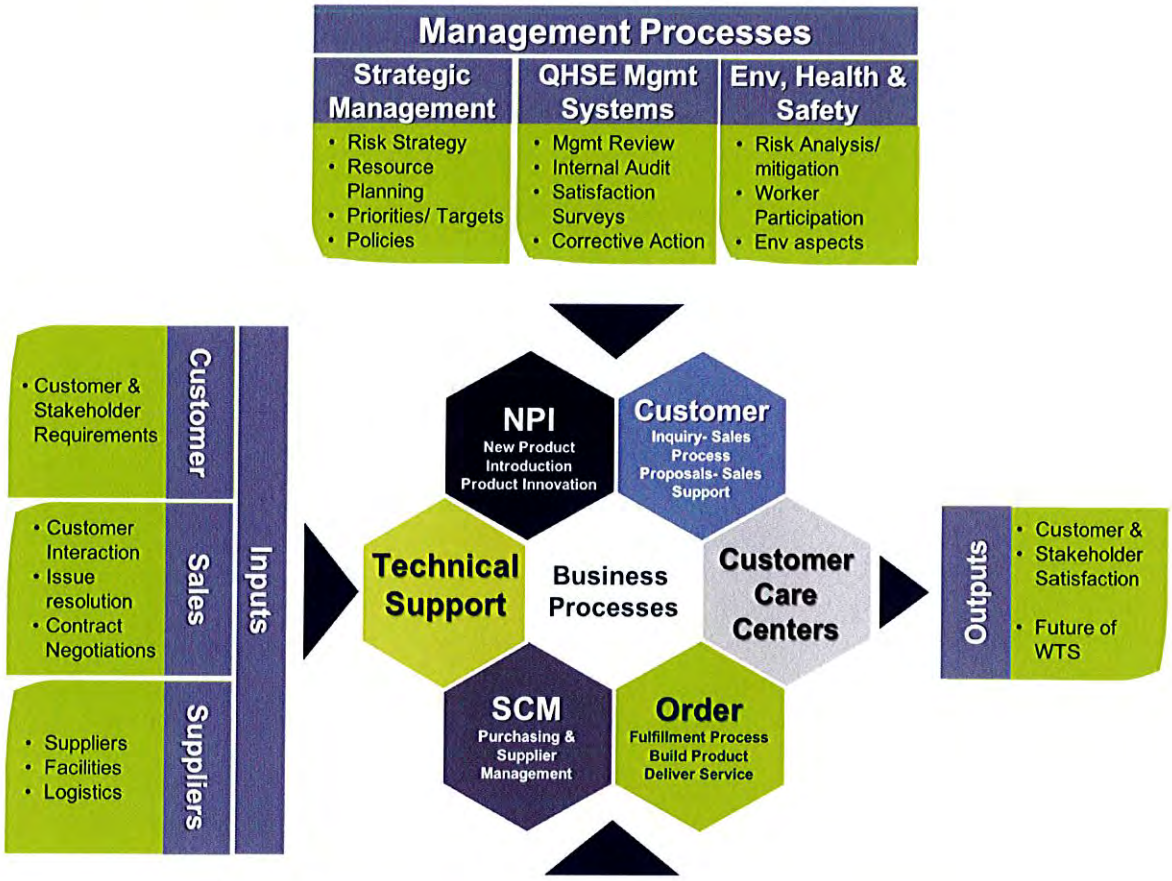
CEO, SUEZ - Water Technologies & Solutions
May 2019

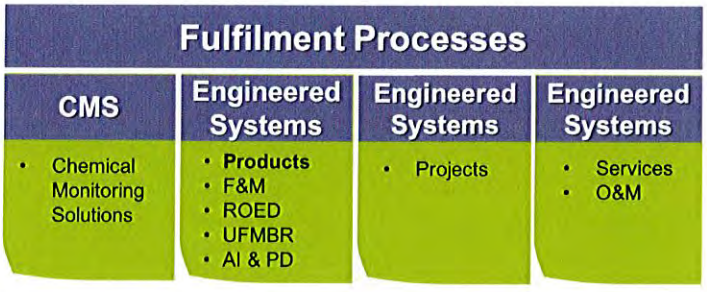
SUEZ

ehs policy

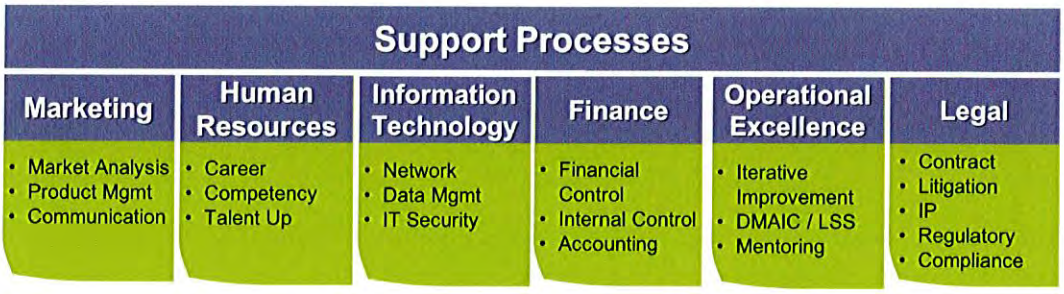
At SUEZ- Water Technologies & Solutions, we are committed to:



- Achieving EHS excellence
- Meeting and exceeding customer expectations
- Complying with applicable EHS laws, regulations & standards
- Providing employees with a safe and healthy working environment
- Considering EHS impacts in all SUEZ's WTS business strategies and initiatives.
- Managing and controlling risks from SUEZ's WTS facilities, products, services and activities
- Protecting the environment by reducing use of toxic and hazardous materials, preventing pollution, and conserving, recovering & recycling materials
- Continuing to improve our EHS systems and performance as an integral part of operational strategy & rhythm
- Eliminate hazards and reduce H&S risks faced by our employees
- Communicate and consult with our employees on the issues that concern them.
- Reporting and auditing our environmental performance to improve accountability
- Implement our 10 Life Saving Rules to avoid severe accidents



SUEZ's Water Technologies and Solutions will strive prevent adverse impact and injury to the environment and the communities in which we do business. Our programs combine clear leadership by management, the participation of all employees, functions, contractors and the use of appropriate technology in developing and distributing SUEZ's WTS products and services.



Yuvbir Singh

SUEZ

key business processes

Customer Inquiry-Sales Process

The Customer Inquiry-Sales Process at Water Technologies & Solutions provides a standard and consistent method for developing commercial opportunities. The included risk review process ensures a balance of customer requirements with SUEZ capabilities and the ability to manage any identified risk.

- The Customer Inquiry-Sales Process includes:
  - Opportunity identification and screening
  - Assessment of customer request for quotation and SUEZ's response
  - Risk assessment and approval of initial bid
  - Negotiated scope, price and terms approval
  - Hand-off to the Order-Fulfillment Process

Order Fulfillment Process

The Order Fulfillment process covers the execution of a sales contract form the time that the order is initiated to the time that the final payment is received.

- The Order Fulfillment Process includes:
  - Resource allocation including detailed technical definition as well as planning, and scheduling of equipment, material and human resources
  - Procurement of material resources to complete the order
  - Product realization to transform acquired resources into final product
  - Fulfillment including delivering the product to the customer-specified location and satisfying the terms of the contract
  - Receipt of payment
- Throughout the process, our integrated management system uses control points to verify and validate whether customer, worker and regulatory requirements are met.

New Product Introduction

- The New Product Introduction (NPI) Operating System is an iterative and collaborative business-level approach to creating new products, services and solutions for our customers. It spans the entire product development cycle, from the identification of a new business opportunity to the post commercial introduction. The NPI Operating System is flexible to the unique needs of each project and is applied throughout the businesses, products and services within Water Technology & Solutions.

- Execution teams exist for every defined program. Teams are responsible for achievement of all commercial, environmental, occupational health and safety and technical product objectives, including:
  - Meeting the product development and marketplace introduction schedules
  - Product performance, program cost, product cost, and financial objectives
  - Validation and verification performed throughout the process to confirm product meets requirements
  - Ensuring that our product development process takes adequate consideration of environmental impacts and aspects of the production process and the final product
  - Ensuring our products can be made safely without unnecessary risk to our workers

- Appropriate reviews are utilized to continually assess if the program is fulfilling requirements.

Control of External Providers

Water Technologies & Solutions expects the same high-quality standards from our external suppliers as we do internally. The Sourcing function has established rigorous processes around supplier quality and oversight to enable and verify this quality level for all sourced components, processes and services that may impact our customers' performance including environmental health and safety.

Supplier Approval

Approved to do business with Water Technologies & Solutions:

- Technical Capabilities
- Quality System
- Environmental Health & Safety / Labor
- Know Your Supplier
- Social Responsibility Guidelines

Mutual Non-Disclosure Agreement

- Protects proprietary information for both parties

Integrity Acknowledgement

- Supplier's commitment to comply with SUEZ's requirements

QEHS (Quality, Environmental, Health, Safety) Questionnaire

- Provides basic QEHS data for evaluation of Quality and Environmental Health and Safety practices
- Further local QEHS assessments performed as required

General Supplier Profile

- Basic data to support quality, financial viability and overall risk

Qualification Process

Released for Production:

- Product Compliance
- Process Capability

Critical hardware requires

- Characteristic accountability
- Product quality plan, manufacturing process plan
- Process risk

Team approvals required

- Supplier quality engineer, design engineer, materials engineer (as appropriate)

Surveillance Process

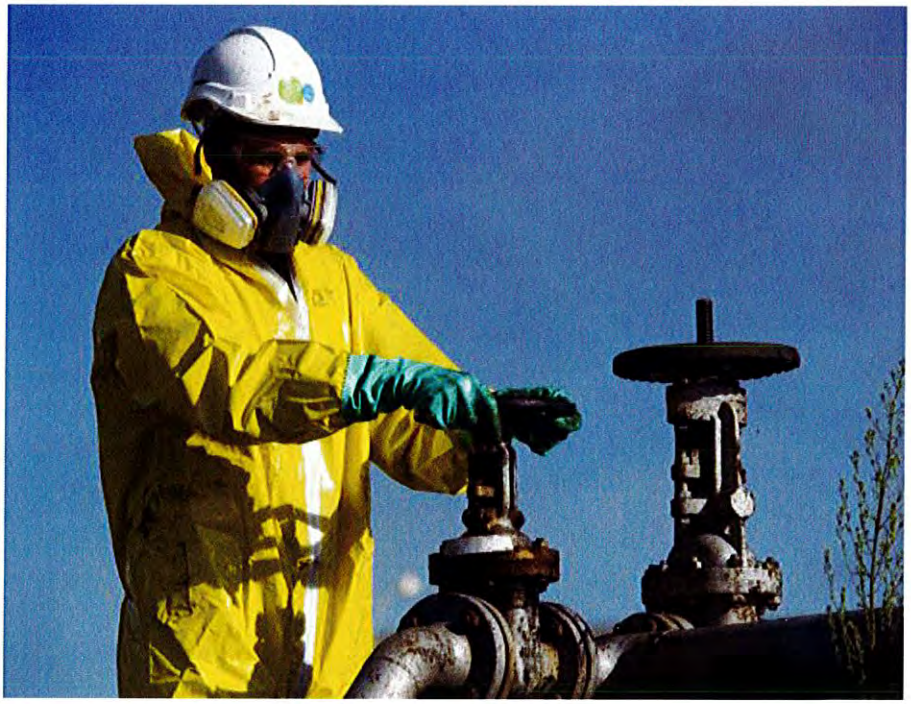
Sustaining Quality, Environmental, Health and Safety:

- Monitoring
- Auditing

Periodic Surveillance Required

- Quality system assessment (if not ISO certified)
- Environmental, Health and Safety systems assessment
- Product / Service audit - compliance to technical requirements
- Process audit - compliance to special processes

Additional audit/inspection requirements defined by:



- Customer requirements, risk, supplier performance, defects

risk management

- Water Technologies & Solutions understands the needs for its risks to be well managed and for its control measures to be proactive rather than reactive. This is important for our workers and for our customers who rely on a healthy, safe workforce and effective, quality processes to deliver their requirements.

- Risk management is achieved through various risk analysis and mitigation strategies incorporated into business processes. Applicable activities include the development of our products and services along with the regulatory compliance strategy, management system process planning, and various transactional business activities.

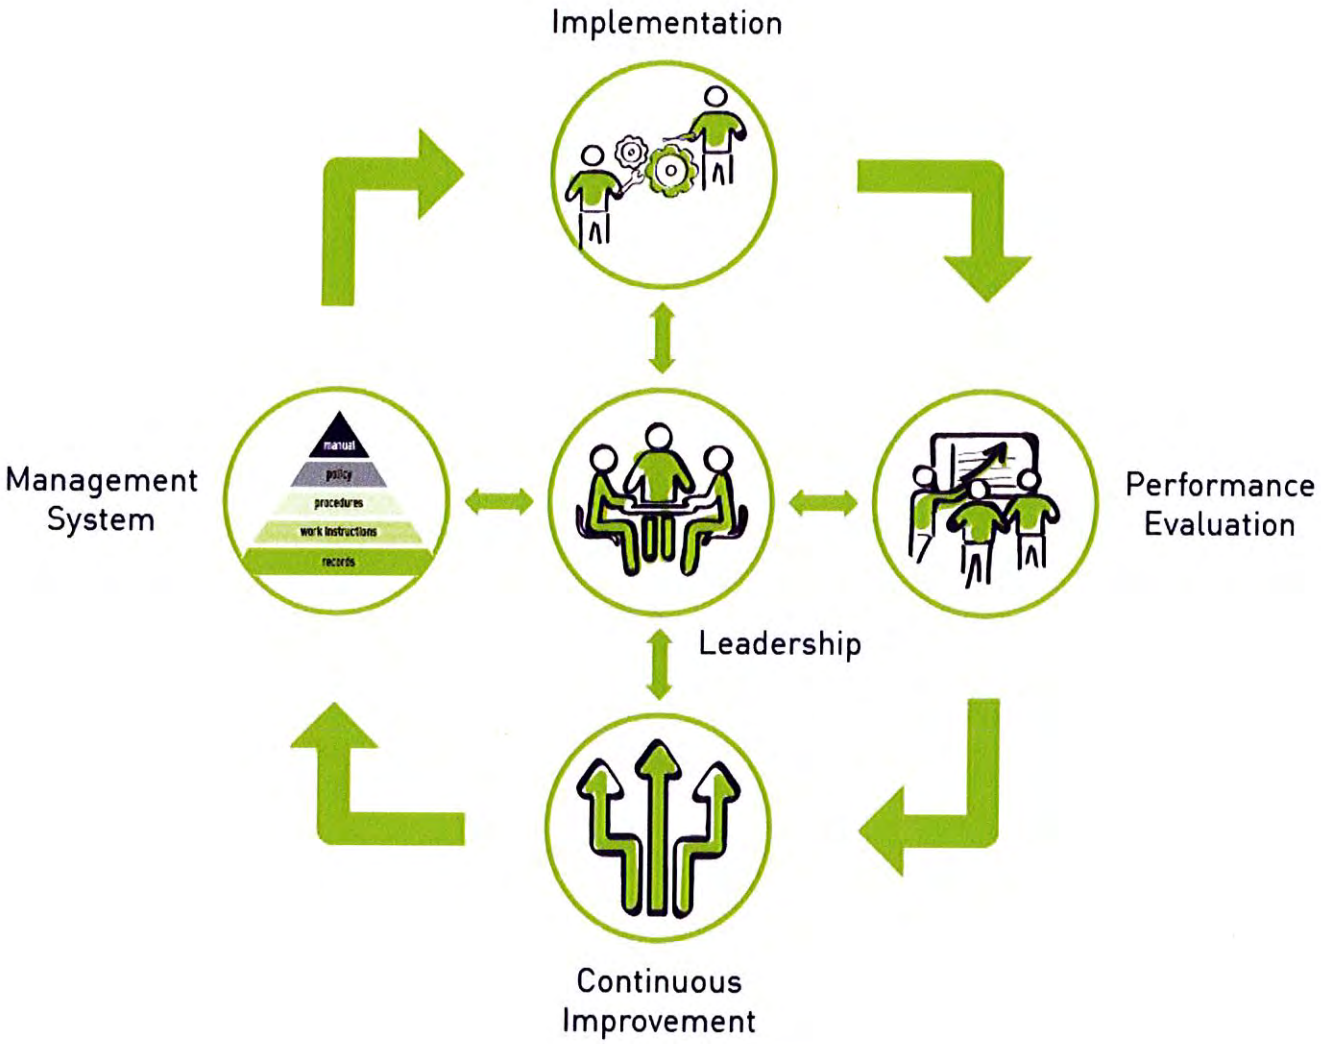
- The risk management control strategy will be generated by the implementation of the Water Technologies & Solutions Environmental Health and Safety Framework and the implementation of the pertinent statutory provisions relevant to the country where the work is carried out.

communication and employee participation

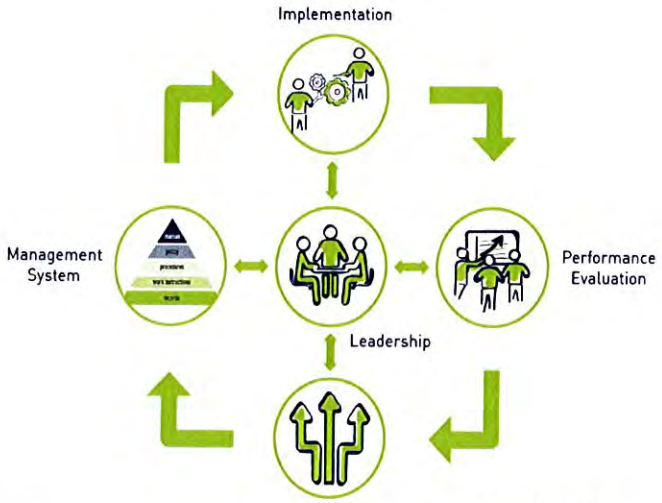
- Water Technologies & Solutions have established channels for effective communication with its employees, contractors and other workers to ensure that all parties can be heard on issues relating to Quality, Environment and Occupational Health and Safety.

- Key personnel including product management leaders, technology leaders, quality leaders, environmental health and safety leaders, manufacturing leaders are engaged in a process of continual improvement to:

  - Improve our products and services to meet our customers' changing needs
  - Improve process effectiveness and efficiencies
  - Improve performance related to environmental protections
  - Improve worker safety performance
  - Ensure continued compliance to changes in the product, environmental, health and safety regulations



- The Operation Excellence Team supports improvement activity by training, mentoring and sponsoring leaders for various improvement projects using various improvement techniques including lean six sigma.



- Employee experiential knowledge is vital to the improvement process so workers at all levels of the organization are encouraged to contribute and participate in the continual improvement change process.

- Employee experiential knowledge is vital to the improvement process so workers at levels of the organization are encouraged to participate in improvement projects and are consulted.

the integrated management system (IMS)

Plan – Do – Check - Act

Management System

- Context of the organization
- Interested parties
- Determination of scope
- Planning
- Documented processes
- Documented information
- Record control

Leadership

- Leadership and commitment
- Customer focus
- Policies
- Risk and opportunity
- Objectives
- Strategy
- Roles, responsibilities and authorities
- Consultation and participation of workers

Implementation (Support)

- Resources
- Training, competence, awareness
- Control of monitoring and measuring resources
- Environmental requirements
- Legal and compliance obligations
- Hazard identification
- Emergency preparedness and support

Performance Evaluation

- Monitoring, measurement, analysis and evaluation
- Internal audits
- Management review
- Evaluation of compliance

Implementation (Operation)

- Determination and review of requirements
- Design and development
- Control of externally provided processes, products and services
- Control of -production and service
- Identification and traceability
- Control of nonconforming outputs
- Actions to address risk and opportunities
- Eliminating hazards and reducing health and safety risks

Improvement

- Nonconformity and corrective action
- Continual improvement

Management's Commitment to Quality

Executive leadership at all levels of Water Technologies & Solutions delivers on the commitment to successfully develop and implement the IMS and continually improve its effectiveness by:

- Deploying the quality and environmental health and safety policies
- Establishing measurable objectives that enable improvement in environmental protection, worker safety and enhanced customer satisfaction
- Communicating to the business the importance of meeting customer and regulatory requirements
- Conducting management reviews at appropriate levels within the organization
- Performing risk and opportunity reviews to establish and deploy business strategies
- Participating in case reviews where we have failed to meet our high standards in occupational health and safety
- Ensuring the business has the resources it needs to achieve the goals of the integrated management system

Management Review

Review topics include:

- Customer satisfaction and feedback from relevant interested parties
- Changes in internal and external issues relevant to the management system
- Process performance and product conformity
- Information on management system performance including monitoring and measuring results and evaluation of compliance with legal requirements
- Audit results
- Performance of external providers
- Adequacy of resources
- Effectiveness of actions taken to address risk and opportunities
- Opportunities for improvement

Business segments, functional groups hold routine operational and strategic reviews to ensure alignment to customer requirements and priorities.

Documented Information

Water Technologies & Solutions utilizes a tiered approach to Documented Information. Global quality system documents provide the structural requirements for an effective quality management system. Sub-business and local documents supplement the global requirements when required to ensure business specific requirements are effectively addressed.

Global document control requirements include:

- Identification
- Review and approval
- Revision control
- Internal and external documents
- Communication, accessibility, confidentiality

Global quality record control requirements include:

- Identification
- Traceability
- Legibility
- Retrieval
- Protection
- Retention and disposition requirements

Training and People

- Water Technologies & Solutions assigns resources to plan and develop our integrated management system and its processes to ensure we satisfy our customers with our delivered product and services.
- Our stringent hiring process ensures that successful applicants are qualified with identified required competencies.
- The SUEZ internal educational programs provide online employee development courses to help employees develop their skills and realize their career aspirations.
- The SUEZ employee and talent review process formalizes ongoing manager-employee interaction to identify and monitor annual objectives, performance and competency.
- The SUEZ employee and talent review process enable effective management of Environmental, Health and Safety competencies through the automatic assignment and tracking of mandatory training requirements based on job category.

Auditing

Focus for Internal Audits

- Compliance with Water Technologies & Solutions' Integrated Management System requirements.
- Test effectiveness of processes to ensure intended results are achieved.
- Planning based on the maturity and importance of the process, as well as results of previous audits.
- Audit results, including timeliness and effectiveness of corrective actions, are reviewed by relevant management.

Control of Nonconforming Outputs

- An output is considered to be nonconforming when it does not meet specified requirements. Nonconforming outputs are controlled to prevent their unintended use or delivery and the situation is resolved so that requirements are met.

- When the nonconforming output involves tangible material, a formal nonconforming material process is followed to ensure the following controls are in place when they are applicable:

    - Identification and segregation (if possible)
    - Containment
    - Communication to interested parties
    - Authorization for acceptance under concession
    - Documentation of the nonconformity including its resolution and identification of deciding authorities

- Field issues related to our products and services are tracked using issue tracking applications that facilitate collaboration with relevant team members to achieve resolution. Impact screening and trending analysis is used to escalate specific issues, or issue types, to the continuous improvement system where formal root cause analysis and corrective action protocols are followed.

- When an incident or nonconformity is related to an environmental or health and safety circumstance, immediate, necessary action is taken to deal with the situation. This is followed by thorough investigations to identify risks and opportunities. Corrective actions are verified for effectiveness and significant learnings are shared across the business.

Control of Monitoring and Measuring Resources

- Water Technologies & Solutions' monitoring and measuring resource control program includes measuring instruments, software measurement standards and reference material. The control program supports the measuring and monitoring activity for equipment, processes, products and services. This helps ensure the quality of product and service delivery, and compliance to environmental, health and safety commitments.
- The measuring resources are suitable for their assigned purpose and they are protected and maintained to ensure their continuing fitness for use.
- Water Technologies & Solutions maintains a comprehensive calibration program for when measurement traceability is a requirement or is considered essential to provide confidence in the validity of results.
- Each measuring and monitoring resource in the calibration program is uniquely identified to provide traceability to its calibration schedule and records.
- As appropriate, calibrations performed are traceable to International or National Standards, as defined in the calibration program.

Monitoring and Measurement

- Groups within Water Technologies & Solutions define and implement monitoring and measurement needed to demonstrate conformity of product and the integrated management system, and to identify opportunities for improvement by:
  - Setting specific and measurable quality, environmental, health and safety objectives and establishing review rhythms to verify performance
  - Verifying that product requirements are met at the appropriate stages of production and/or service provision through in-process inspection and testing
  - Verifying that throughout all production stages and during operation and maintenance of equipment environmental, health and safety requirements are met

Corrective Action

- To drive effective corrective action, Water Technologies & Solutions has implemented several business process specific systems to track and monitor progress on resolution of issues.

- Issue resolution is strongly linked to our organization's commitment to continually improve its products, services, processes and performance. The established Continuous Improvement process defines requirements for:
  - Screening nonconformities and non-compliances, including environmental health and safety concerns, customer complaints, warranty issues to ensure the resolution rigour is appropriate for the nature and scale of the issue
  - Analyzing and determining the causes of nonconformities and non-compliances
  - Evaluating the need for corrective action to prevent occurrence in related areas
  - Determining and implementing the actions needed
  - Verifying the effectiveness of the actions taken

Continuous Improvement

- Water Technologies & Solutions continually improves the effectiveness of its IMS through:
  - Its quality, environmental and occupational health and safety policies
  - Creation and monitoring of objectives and targets linked to quality, environment and occupational health and safety
  - Soliciting customer feedback and engaging in consultation processes with our workers
  - Ensuring we are meeting our legal obligations
  - Engaging in hazard identification, risk analysis and strategic planning activities
  - Developing significant aspects and impacts with periodic review
  - Risk Analysis and Strategic Planning
  - Implementation and verification of corrective actions
  - Completion of internal audits
  - Execution of management review
- Water Technologies & Solutions utilizes various process improvement methodologies along with traditional quality management activities to drive improvements.

Appendix C – Bonding Capacity Letter for SUEZ WTS Systems USA

EULER HERMES

June 27, 2022

Re: Suez WTS Systems USA, Inc.-Caesars Lane WWTP MBR System Pre-Selection

To Whom It May Concern:

This letter will serve to confirm that Suez WTS Systems USA Inc. is a highly regarded and valued client of Euler Hermes North America Insurance Company. We will favorably consider issuing surety bonds for Suez WTS Systems USA, Inc. for individual projects with contract values up to $75mm with an aggregate surety program up to $200mm, although greater limits would be considered.

As is customary within the surety industry, the execution of any bonds would be subject to, but not necessarily limited to, receipt and favorable review of all contract terms and conditions, bond forms, confirmation of project financing and all current underwriting information needed at the time of the request for bonds. Please understand that any arrangement for surety bonds is a matter strictly between (contractor) and Euler Hermes North America Insurance Company. As such, we assume no liability to you or any third party by the issuance of this letter. It is issued only as a bonding reference requested by our client.

Euler Hermes North America Insurance Company is listed in the US Department of Treasury's listing of Approved Sureties (Department Circular 570). Euler Hermes North America Insurance Company has a Company Policyholder rating of 'A+' (Superior) by A.M. Best Company, with a Financial Size Category of 'XV' ($2 Billion or greater).

Sincerely,

Mariya Leonidov, Attorney-In-Fact

Appendix E - Supplementary Conditions of the Procurement Contract

These Supplementary Conditions amend or supplement EJCDC® P-700, Standard General Conditions of the Procurement Contract (2019). The General Conditions remain in full force and effect except as amended.

The terms used in these Supplementary Conditions have the meanings stated in the General Conditions. Additional terms used in these Supplementary Conditions have the meanings stated below, which are applicable to both the singular and plural thereof.

The address system used in these Supplementary Conditions is the same as the address system used in the General Conditions, with the prefix "SC" added—for example, "Paragraph SC-4.05."

ARTICLE 1—DEFINITIONS AND TERMINOLOGY

No suggested Supplementary Conditions in this Article.

ARTICLE 2—PRELIMINARY MATTERS

2.01 *Copies of Documents*

SC-2.02 Amend the first sentence of Paragraph 2.02.A. to read as follows:

Buyer shall furnish to Seller **two (2)** printed copies of the Procurement Contract Documents (including one fully signed counterpart of the Procurement Agreement), and **one (1) copy** in electronic portable document format (PDF).

ARTICLE 3—PROCUREMENT CONTRACT DOCUMENTS

No suggested Supplementary Conditions in this Article.

ARTICLE 4—COMMENCEMENT AND PROGRESS OF WORK

No suggested Supplementary Conditions in this Article.

ARTICLE 5—BONDS AND INSURANCE

5.01 *Performance, Payment, and Other Bonds*

SC-5.01 Add the following paragraphs immediately after Paragraph 5.01.A:

1. *Required Performance Bond Form*: The performance bond that Seller furnishes will be in the form of EJCDC® P-610, Performance Bond (2010 or 2019 edition).
2. *Required Payment Bond Form*: The payment bond that Contractor furnishes will be in the form of EJCDC® P-615, Payment Bond (2010 or 2019 edition).

5.02 *Insurance*

SC-5.02 Add the following new paragraphs immediately after Paragraph 5.02.E:

F. Seller shall purchase and maintain such liability and other insurance as is appropriate for the furnishing of Goods and Special Services and as will provide protection from claims set forth

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

below which may arise out of or result from Seller's furnishing of the Goods or Special Services and Seller's other obligations under the Procurement Contract Documents, whether the furnishing of Goods and Special Services or other obligations are to be performed by Seller, any subcontractor or supplier, or by anyone directly or indirectly employed by any of them to furnish the Goods and Special Services, or by anyone for whose acts any of them may be liable:

1. claims under workers' compensation, disability benefits, and other similar employee benefit acts;
2. claims for damages because of bodily injury, occupational sickness or disease, or death of Seller's employees;
3. claims for damages because of bodily injury, sickness or disease, or death of any person other than Seller's employees;
4. claims for damages insured by reasonably available personal injury liability coverage which are sustained: (a) by any person as a result of an offense directly or indirectly related to the employment of such person by Seller, or (b) by any other person for any other reason;
5. claims for damages, other than to the Goods, because of injury to or destruction of tangible property wherever located,; and
6. claims for damages because of bodily injury or death of any person or property damage arising out of the ownership, maintenance or use of any motor vehicle.

G. The policies of insurance so required by this Paragraph 5.02 to be purchased and maintained must:

1. with respect to insurance required by Paragraphs SC-5.02.F.3 through SC-5.02.F.6 inclusive, include as additional insureds (subject to any customary exclusion in respect of professional liability) Buyer, Engineer, their consultants, and all of whom must be listed as additional insureds, but only in respect of work performed by or on behalf of the named insured, Seller, and only to the extent that the additional insured is held liable for the negligence or other culpability of Seller. Coverage under Seller's policy does not extend to liability arising out of the additional insured's own negligence. Also include coverage for the respective officers, directors, partners, employees, agents, and other consultants and subcontractors of each and any of all such additional insureds, and the insurance afforded to these additional insureds must provide primary coverage for all claims covered thereby;
2. include the specific coverages and be written for the limits of liability provided below or required by Laws or Regulations, whichever is greater;
3. include completed operations insurance;
4. include contractual liability insurance covering Seller's indemnity obligations under Paragraph 7.07;
5. contain a provision or endorsement that the coverage afforded will not be canceled, or renewal refused, until at least 30 days prior written notice has been given to the purchasing policyholder. Within three days of receipt of any such written notice, the purchasing policyholder will provide a copy of the notice to the other party, each other insured, and Engineer;

Copyright® 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

6. remain in effect at least until final payment and at all times thereafter when Seller may be correcting, removing, or replacing non-conforming Goods in accordance with Paragraph 9.03 and 9.04; and7. with respect to completed operations insurance, and any insurance coverage written on a claims-made basis, remain in effect for at least two years after final payment (and Seller shall furnish Buyer and each other additional insured identified in these Supplementary Conditions, to whom a certificate of insurance has been issued, evidence satisfactory to Buyer and any such additional insured of continuation of such insurance at final payment and one year thereafter).

H. The limits of liability for the insurance required by Paragraph SC-5.02.F must provide coverage for the following amounts or greater where required by Laws and Regulations:

1. Workers' Compensation, and related coverages under Paragraphs SC-5.02.F.1 and F.2:

   a. The Seller shall procure and maintain, at their own expense, during the contract period, in accordance with the provisions of the laws of the state in which the work is performed, Workmen's Compensation Insurance, including occupational disease provisions, for all of his employees at the site of the project and in case any work is sublet, the Seller shall require such subcontractor similarly to provide Workmen's Compensation Insurance, including occupational disease provisions for all of the latter's employees unless such employees are covered by the protection afforded by the Seller. In case any class of employees engaged in hazardous work under this contract at the site of the project is not protected under Workmen's Compensation statute, the Seller shall provide, and shall cause each subcontractor to provide, adequate and suitable insurance for the protection of his employees not otherwise protected.

2. Seller's General Liability and Property Damage Insurance, including vehicle coverage issued to the Contractor and protecting him from all claims for personal injury, including death, and all claims for destruction of or damage to property, arising out of or in connection with any operations under the Contract Documents, whether such operations be by himself or by any subcontractor under him, or anyone directly or indirectly employed by the Contractor or by a subcontractor under him. The insurance shall be written with a limit of liability of $2,000,000 for all damages arising out of bodily injury, including death, at any time resulting there from, sustained by any one person in any one accident; and a limit of liability $2,000,000 aggregate for any such damages sustained by two or more persons in any one accident. Insurance shall be written with a limit of liability of $2,000,000 for all property damage sustained by any one person in any one accident; and a limit of liability of $2,000,000 aggregate for any such damage sustained by two or more persons in any one accident.

3. Professional Liability (if the Special Services include professional services):

Seller's Professional Liability	**Policy limits**
Each Claim	$2,000,000
Annual Aggregate	$2,000,000

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

I. Seller shall deliver to Buyer, with copies to each additional insured identified in these Supplementary Conditions, certificates of insurance which Seller is required to purchase and maintain.

ARTICLE 6—LICENSES AND FEES

6.01 Intellectual Property and License Fees

SC 6.01 Replace paragraph 6.01 in its entirety with the following:

A. Unless specifically stated elsewhere in the Contract Documents, Seller is not transferring any intellectual property rights, patent rights, or licenses for the Goods delivered. However, in the event the Seller is manufacturing to Buyer's design, Buyer retains all intellectual property rights in such design excluding Seller's proprietary intellectual property and any improvements to Seller's proprietary intellectual property which shall be and remain the sole and exclusive property of Seller.

B. Seller shall pay all license fees and royalties and assume all costs incident to the use or the furnishing of the Goods, unless specified otherwise by the Contract Documents. Seller grants to Buyer a non-exclusive, non-terminable, royalty free license to use the intellectual property embedded in Equipment delivered to and paid for by the Buyer, as well as any drawings, design or data delivered to and paid for by the Buyer, for the purposes of owning, financing, using, operating and maintaining the relevant Equipment at the Project site. Such license may only be assigned to a future owner of the Equipment or to an operations and maintenance subcontractor. Such license does not extend to the re-creation of the Equipment or the manufacture of spares or consumables by Buyer or third parties.

C. Any software Seller owns and provides pursuant to this Contract shall remain Seller's property. Seller provides to Buyer a limited, non-exclusive and terminable royalty free project-specific license to such software for the term of this Contract. Buyer agrees not to copy, sub-license, translate, transfer, reverse engineer, or decode the software. Unless otherwise expressly agreed by Seller, this license shall terminate and the software shall be returned to Seller upon termination of this Contract, or the material breach of the terms in this section.

D. Both parties agree to keep confidential the other party's proprietary non-public information, if any, which may be acquired in connection with this Contract. Buyer will not, without Seller's advance written consent, subject Equipment to testing, analysis, or any type of reverse engineering. Seller retains all intellectual property rights including copyright which it has in all drawings and data or other deliverables supplied or developed under this Contract. Buyer acknowledges that Seller is in the business of selling the Equipment subject to this Contract and agrees that it will not file patent applications on the Equipment, or processes and methods of using the Equipment, without Seller's express written permission. Buyer further agrees that in any event any such patents will not be asserted against Seller or its other Buyers based upon purchase and use of such Equipment.

Copyright® 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

ARTICLE 7—SELLER'S RESPONSIBILITIES

7.03 *Laws and Regulations*

7.04 *"Or Equals"*

7.05 *Taxes*

SC-7.05 Add a new paragraph immediately after Paragraph 7.05.A:

B. Buyer is exempt from payment of sales and compensating use taxes of the State of **New York** and of cities and counties thereof on all materials and equipment to be incorporated into the Project facilities.

1. Buyer will furnish the required certificates of tax exemption to Seller with respect to materials and equipment to be incorporated into the Project facilities.

2. Buyer's exemption does not apply to construction tools, machinery, equipment, or other property purchased by or leased by Seller, or to supplies or materials not incorporated into the Project facilities.

3. The Procurement Contract Price does not include the cost of sales or compensating use taxes to the extent such are exempted by this paragraph.

7.07 *Indemnification*

SC-7.07 Replace paragraph 7.07.A in its entirety with the following:

To the fullest extent permitted by Laws and Regulations, Seller shall indemnify and hold harmless Buyer, Engineer, Project Owner, and any assignee of Buyer, including Contractor/Assignee, and their officers, directors, members, partners, employees, agents, consultants, contractors, and subcontractors, from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) to the extent arising out of or relating to the performance of Seller's obligations under the Procurement Contract, provided that any such claim, cost, loss, or damage is attributable to bodily injury, sickness, disease, or death, or to injury to or destruction of tangible third-party property (other than the Goods themselves), but only to the extent caused by any negligent act or omission of Seller, or any individual or entity directly or indirectly employed by Seller or anyone for whose acts Seller may be liable.

ARTICLE 8—SHIPPING AND DELIVERY

No suggested Supplementary Conditions in this Article.

ARTICLE 9—BUYER'S RIGHTS

9.01

SC 9.01 Add the following paragraph after 9.01.C.4:

A. Improper handling, storage, installation, or commissioning of the Equipment by Buyer or third parties, repairs or alterations made by Buyer without Seller's written consent, or influent water which does not comply with agreed parameters.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

9.04 *Correction Period*

SC-9.04.B Replace paragraph 9.04.B in its entirety with the following:

Warranty repair, replacement or re-performance by Seller shall not extend or renew the applicable warranty period of the Work, except for repetitive malfunction of material or equipment under the Work that shall be cause for replacement by Seller of the affected equipment with a redesigned component and extension of the Warranty Period for that equipment of the Work for a period of twelve (12) months from completion of the required warranty work.

SC-9.04.C Replace paragraph 9.04.C in its entirety with the following:

The warranties and remedies set forth in this article are in lieu of and exclude all other warranties and remedies, statutory, express or implied, including any warranty of merchantability or of fitness for a particular purpose.

SC-9.05 Add the following new paragraph after Paragraph 9.04:

9.05 *Limitation of Seller's Liability*

A. Notwithstanding anything else contained in this Agreement, to the maximum extent permitted by law, and regardless of whether a claim is based in contract (including warranty or indemnity), extra-contractual liability, tort (including negligence or strict liability), statute, equity or any other legal theory; Buyer and Seller agree that the total liability of Seller to Buyer for claims, costs, losses, and damages arising from this Procurement Contract will be limited to the amount established in the Procurement Agreement as the Procurement Contract Price.

B. Upon assignment the terms of this Paragraph 9.05 will be binding upon both the assignor and assignee with respect to Seller's liability, The terms of this limitation do not apply to or limit any claim by Buyer against Seller based on any of the following: (a) contribution or indemnification with respect to third-party claims, losses, and damages; (b) costs, losses, or damages attributable to personal or bodily injury, sickness, disease, or death, or to injury to or destruction of the tangible property of others, (c) intentional or reckless wrongful conduct, or (d) rights conferred by any bond provided by Seller under this Contract.

C. In no event shall either party be liable for any loss of profit or revenues, loss of production, loss of use of equipment or services or any associated equipment, interruption of business, cost of capital, cost of replacement water or power, downtime costs, increased operating costs, claims of company's customers for such damages, or for any special, consequential, incidental, indirect, punitive or exemplary damages.

Copyright© 2019 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

9.06 Buyer's Responsibilities

SC 9.06 Add the following new paragraph after Paragraph 9.05:

A. Unless otherwise stipulated in the Contract, the unloading, handling, storage and installation of the Equipment shall be the responsibility of the Buyer. Seller will not control the actual operation of either Buyer's systems or the Equipment at the Site. Buyer shall also:

1. provide Seller with complete and accurate data concerning all relevant conditions at the Site, including but not limited to any existing Buyer facility, equipment or processes, influent water or other substances to be treated or measured with the Equipment;

2. operate and maintain its facility and all related systems in good operating condition and within the agreed parameters or, if no parameters have been agreed, within generally accepted industry practice;

3. operate and maintain the Equipment in accordance with Seller's operations and maintenance manuals or where such manuals are silent, in accordance with generally accepted industry practice.

If Buyer's fails to fulfill the foregoing obligations, Seller shall be relieved of any obligations with respect to warranties or any other commitments under the Contract, and Seller shall have no liability for any loss, damage or injury which Buyer may sustain as a result.

Subject: Caesar Lane WWTF
Change Order Proposal

Dear Mr. Zajac,

Below please find the pricing for the various changes to Veolia's Scope that have been requested.

ITEM	QTY	Change	Price
1	lot	Removal of the Process Blower VFDs (x3) and Membrane Blower VFDs (x2) from Veolia's Scope	**($75,970.00)**
2	lot	Modifications to the Aeration equipment to accommodate second Aerobic zone. Includes: • Modification to diffusor grids • Additional Dissolved Oxygen sensor and controller (x3) • Blower motor size increase due to deeper tanks	**$35,175.00**
3	lot	Chemical System Scope changes: • Removal of Chemical storage tanks from Veolia's Scope (x2) • Removal of chemical tank LITs from Veolia's Scope (x3) • Addition of chemical tank level switch to Veolia's Scope (x1)	**($4,300.00)**
4	Lot	Remove 20-FV-601 from Veolia's Scope. (This valve was removed in Veolia's previous submittal) (x1) Add 16-HV-400-A/B/C to Veolia's Scope (Blower intake isolation valves, including limit switches) (x3)	**($403.00)**
5	lot	Add 20-FV-502-X to Veolia's Scope (x4)	**$61,890.00**
6	lot	Add 16-FV-510 to Veolia's Scope (x1)	**$42,480.00**
7	8	Remove Space Heaters from Membrane and Process Blower enclosures	**($6,160.00)**
8	lot	Add to Veolia's scope: • 20-HV-204-A/B/C/D/E/F-X (x24) • 20-HV-310-A/B/C/D/E/F-X (x24) • 20-FV-205-X (x4)	**$9,472.00**

Jamison Zajac

New Windsor NY 12553

Darren Preete
Project Manager
Veolia Water Technologies & Solutions
3239 Dundas St W
Oakville ON L6M 4B2

9	lot	Add open & close limit switches to: • 20-FV-502-X (x4) • 20-FV-621-X (x4) • 20-FV-622-X (x4) • 16-FV-700 (x1) • 16-FV-510 (x1) Change Includes all required to be added to Veolia's MCP for additional IO points, and associated controls/programming updates	**$12,820.00**
10	2	Add NEMA 12 panels for air compressor control to Veolia's Scope	**$8,454.00**
12	Lot	Add to Veolia's Scope: 1. 316SS 16" Permeate Headers (x4). 480" Length 2. 316SS 10" Air Headers (x4). 480" Length 3. 316SS 8" Permeate Downcomers (x24) for connection of membrane cassette to Permeate header (including associated Victaulic couplings for assembly) 4. CPVC 3" Air Downcomers (x24) for connection of membrane cassette to Air header (including associated Victaulic couplings for assembly) • Pipe supports, hardware, and gaskets are not included	1. $18,202.70ea 2. $10,048.13ea 3. $2,015.74ea 4. $779.42ea Total **$180,087.00**

TOTAL $263,545.00

All prices exclude any applicable taxes, duties, or tariffs
All prices quoted subject to escalation, until NTP is received

Schedule Impact:
There is no equipment delivery or schedule delay resulting from this change order

Except as changed herein, all terms and conditions of the contract remain in full force and effect.

This proposal is intended to be binding only upon confirmation of a document signed by all parties.

Accepted by:

_____ _____

Title: Project Manager Title: _____

Veolia WTS

Date _____ Date _____

Notice:

1. This document shall become a supplement to the current agreement/proposal and the terms and conditions outlined in the proposal shall apply to this change order.
2. Impact to delivery dates are estimated and will be finalized upon acceptance of this change order.
3. No action can be taken without an authorized signature.
4. By accepting the change order the Customer authorizes Veolia WTS to proceed with said change order.

Price Escalation

Dear Mr. Zajac,

As stayed in Veolia's proposal, Veolia's selling price is subject to escalation until the date that NTP is provide to Veolia by the General Contractor. The basis on this escalation is defined in the letter included in Appendix C dated Nov 7 2022.

With this letter, Veolia is providing a calculation of the price escalation of Veolia supplied material between the date of Veolia's price proposal (July 2022) and today date (March 2025). Please note that the calculations provided with the letter will be revised at the future date that NTP is provided.

Veolia's material price escalation is summarized below:

Category	**Escalation Amount (As of March 2025)**
Veolia Membranes	$ 13,454.07
Quoted third party equipment	$ 160,784.25
Veolia cost databases / negotiated pricing agreements	$ 38,938.78
Total ($USD)	**$ 213,177.10**

Let us know if you have any questions or concerns regarding this information

Quoted third party Equipment – Scope Details

For clarity, the items included in the "Unit Costs" as the basis of costing are detailed below:

Membrane Blower

- 1x Pressure Package - GM 50L DN 200
- 1x Inlet flexible sleeve
- 1x Motor Protection - 1 Thermistor/Ph
- 1x Hood Space Heater

Process Blower

- 1x Pressure Package - GM 90S DN 250
- 1x Inlet flexible sleeve
- 1x Motor Protection - 1 Thermistor/Ph
- 1x Temperature Switches
- 1x Pressure Switches
- 1x Hood Space Heater

Sulzer submersible mixers; RAS pumps, BP pumps, and associated spare parts

- 3x Sulzer Submersible Mixer
- 1x Spare Parts: Repair Kit /w Bearings and Mechanical Seals
- 1x Portable 24"-36" Adjustable Reach 60"H,1000LB Capacity /w Manual Handwinch
- 3x Socket,Platform,316SS
- 4x RAS Pump - Sulzer End Suction Centrifugal Pump Model #APT52-16
- 1x Spare Parts: Mechanical Seal,Cartridge SiC/SiC
- 2x Backpulse Pump - Sulzer Submersible Pump (Wet Pit),Model #XFP255J-CB2-PE430/6
- 1x Spare Parts: Repair Kit /w Bearings and Mechanical Seals

Atlas Copco Compressor system

- 2x CR7.5-TS-80Gal Vertical 460/3/60-IS,TN4
- 2x FX15 refrigerant air dryer
- 2x UD+ filters
- 1x Standard Documentation

SCOPE OF SUPPLY

Membrane blowers with VFDs

2 Aerzen Generation 5 Blower Package - GM 50L DN 200 - Pressure - including:

Aerzen GM 50L Blower
Drive Motor: 60hp, 1800rpm, TEFC, 460V/60Hz
Motor Protection - 1 Thermistor/Ph
Base with integrated reactive type discharge silencer
Intake filter silencer
Hinged motor support as automatic belt tensioning device
Set of vibration isolation mounts
Narrow v-belt drive with guard - 1 set
Spring loaded relief valve
Discharge manifold with externally accessible integrated check valve
Flexible connector with clamps for schedule 40 pipe, discharge
Acoustic Enclosure - Indoor/Outdoor
Inlet flexible sleeve - DN 200 (8")

Instruments

Pressure gauge c/w isolation ball valve (2x)
Dirty filter indicator (2x)

Optional Spare Parts

1 Year Maintenance Kit (1 x V-Belt Set, 1 x Intake Filter)
2 Year Maintenance Kit (1 x V-Belt Set, 1 x Oil Change (Delta Lube), 2 x Air Filter)

Intake Connection: DN 200 - 8"
Discharge Connection: DN 200 - 8"

Tolerances as per EN 10204, in accordance with standard ISO 1217:
Flow at inlet conditions / Power require +/- 5%

Blower package noise level:
Free field measurement at 1m from the complete blower package (tolerance +/- 2 dB(A))

Tests and measurements:
Blower stage: 1.5 hour flow test at the factory (Germany) on a calibrated test bed, at maximum operating conditions and according to DIN 1945. acceptance tolerance: +/- 5%.
A complete test report is available upon request.

On Site Commissioning
Available upon request, charges to be advised.
- Any commissioning activity is subject to two weeks prior notice and completion of commissioning checklist.
- Any on-site activity outside the time indicated will be billed according to the Aerzen Standard Rate Sheet

Exclusions
Control Panels, Motor Starters, Piping and Electrical Connections
* Unloading valves are required for reduced voltage starters

Warranty
Blowers including accessories are warranted for a period of 30mo / max 36mo after delivery and after provisional acceptance of the work against defects in workmanship and design. This warranty does not cover wearing parts unless such parts are defective during shipping / commissioning.
As per Aerzen standard warranty terms.

** Power at shaft excludes drive motor and belt drive

SCOPE OF SUPPLY

Membrane blowers without VFDs

3 Aerzen Generation 5 Blower Package - GM 50L DN 200 - Pressure - including:

Aerzen GM 50L Blower
Drive Motor: 60hp, 1800rpm, TEFC, 460V/60Hz
Motor Protection - 1 Thermistor/Ph
Base with integrated reactive type discharge silencer
Intake filter silencer
Hinged motor support as automatic belt tensioning device
Set of vibration isolation mounts
Narrow v-belt drive with guard - 1 set
Spring loaded relief valve
Discharge manifold with externally accessible integrated check valve
Flexible connector with clamps for schedule 40 pipe, discharge
Acoustic Enclosure - Indoor/Outdoor
Inlet flexible sleeve - DN 200 (8")

Instruments

Pressure gauge c/w isolation ball valve (3x)
Dirty filter indicator (3x)

Optional Accessories

Unloading Valve - G5

Optional Spare Parts

1 Year Maintenance Kit (1 x V-Belt Set, 1 x Intake Filter)
2 Year Maintenance Kit (1 x V-Belt Set, 1 x Oil Change (Delta Lube), 2 x Air Filter)

Intake Connection: DN 200 - 8"
Discharge Connection: DN 200 - 8"

Aerzen Canada

Noise level with acoustic hood	dB(A)	70

Tolerances as per EN 10204, in accordance with standard ISO 1217:
Flow at inlet conditions / Power required at +/- 5%

Blower package noise level:
Free field measurement at 1m from the complete blower package (tolerance +/- 2 dB(A))

Tests and measurements:
Blower stage: 1.5 hour flow test at the factory (Germany) on a calibrated test bed, at maximum operating conditions and according to DIN 1945. acceptance tolerance: +/- 5%.
A complete test report is available upon request.

On Site Commissioning
Available upon request, charges to be advised.
- Any commissioning activity is subject to two weeks prior notice and completion of commissioning checklist.
- Any on-site activity outside the time indicated will be billed according to the Aerzen Standard Rate Sheet

Exclusions
Control Panels, Motor Starters, Piping and Electrical Connections
* Unloading valves are required for reduced voltage starters

Warranty
Blowers including accessories are warranted for a period of 30mo / max 36mo after delivery and after provisional acceptance of the work against defects in workmanship and design. This warranty does not cover wearing parts unless such parts are defective during shipping / commissioning.
As per Aerzen standard warranty terms.

** Power at shaft excludes drive motor and belt drive

Phone: +1 804-756-7724

Ref: Caesar MBR, NY - **Proposal**

Sir/Madam,

In response to your email and based on the information, SSI as an ISO-9001 certified corporation is pleased to submit this proposal for the design, manufacture & supply of Aeration Equipment for **Three (3) Aerobic Tanks** with POD270-E Fine Bubble Disc Diffusers with EPDM Membranes.

Unless otherwise noted equipment supplied will meet or exceed any engineer specified performance requirements and/or called in the RFP/Email.

Design calculations & Preliminary Drawings showing the general arrangement of diffuser/Piping layouts are included (Refer item I& II).

A. **Scope of supply** is complete with all components from the downstream of air supply line connection (±6" above water level) starting with SS Vanstone and loose follower flange including drop pipe *(Isolation valve and associated accessories are not included in SSI supply limit)*

B. **Each Tank** is 106′ (L) X 24′ (W) X 17.5′ (SWD) and Aeration Equipment Supply *per Tank* is listed below:

Ø10" 304SS Drop pipe ±15′		Ø10" PVC Lower Drop +Manifold ±25′		Ø4" PVC Headers ±940′		**POD270-E diffusers**
304SS Supports	304SS Couplings	304SS Supports	PVC Couplings	304SS Supports	PVC Couplings	
2	1	5	1	180	54	**864**

COMMON FOR ALL TANKS

Total number of POD270-E Diffuser for Three (3) Aerobic Tanks=(864/Tank) * 3 = **2,592 Pcs**

C. Spares:

- POD270-E Diffuser Membranes-**18**
- Ø4" 304SS Supports - **5**
- Ø4" Repair Couplings–**2**
- Special Tools Set – **1**

D. F.O.B: Orange Town of NY, USA, 10962 (subject to change at actuals)

E. Manufacturer's Site Services: Two (2) days / One (1) trip

(For installation inspection, startup assistance and O& M Training)

F. TOTAL LUMP SUM PRICE (for all listed above) **$105,800.00**

G. GENERAL:

- SS pipe work is cleaned, degreased and acid washed for following the fabrication.
- Piping sections are supplied in 20' lengths maximum and connected at site with SS flanges (Factory welded) shipped along with piping.
- All SS welding/PVC Gluing is done in the factory and **NO** site welding/gluing involved in the installation of equipment.
- Each Grid is supplied with Moisture Purge System.
- All Supports are supplied with anchors and accessories.
- **Spares:** Included as above.
- **Site Services:** Included as above.
- SSI diffusers are manufactured under ISO9001.
- **Warranty:** Unless otherwise noted SSI's standard warranty/guarantee on the equipment supplied is for 18 months from the date of shipment or 12 months after the start up whichever occurs first. Warranty covers the workmanship and material of the listed items only. Any costs direct or indirect for transportation, site work, site repair/adjustments etc., are not covered under warranty. Further warranty is valid only when SSI or Its Representative/Associates approve/certify the installation. However, as the inspection is done randomly certification on installation does not make SSI liable or responsible for any direct or indirect installation failure(s).

H. PRICE IS:

1. In **USD**.
2. Valid for **15** days.
3. Above price does not consider Buy America products and if it is needed, price might change accordingly.
4. **Approval Submittal**: in electronic/digital files of all drawing and relevant technical information/data sheets and product cut sheets along with calculation if applicable **2-3 weeks** after receipt of P.O and all the information necessary to prepare submittals and O & Manual included in submittals.
5. Completion and ready to ship**: 14-18 Weeks** after receipt of approved submittal.
6. **F.O.B:** Orange Town of NY, USA, 10962 (subject to change at actuals)
7. Manufacturer's Service days included as above.

8. Unless noted otherwise specified all components/ items are shipped lose for field assembly if any. Field assembly, installation, site work and field testing by others.
9. Exclusions: *(unless noted otherwise)*
    - Offloading upon delivery to site.
    - Any items and services not itemized within the above scope of supply.
    - Blowers, Mixers, wall sleeves, isolated valves, air main piping.
    - Applicable taxes, custom duties, brokerage etc.,
10. Payment Terms:
    - For Municipal and Government Projects in USA: 30% with PO,30% with approved submittals and balance 40% prior to shipment.
    - Private projects in US and all overseas jobs: 30% with PO,30% with approved submittals and balance 40% prior to shipment (Subject to credit approval).
11. Cost Escalation Clause: SSI Aeration, Inc. has priced the job according to existing market conditions and costs at the time of quote. Due to wide fluctuations and increases in the price of stainless steel, carbon steel, PVC components we are experiencing in very short time frames, the sales price of the equipment might be subject to escalation in price in the event there are delays approving submittal, delays in delivery schedule and/or release to manufacture beyond what was quoted and beyond Seller's control. If there is a significant increase of material or freight occurring during the performance of the contract, the contract sums and/or time of completion shall be equitably adjusted by Change order. A change in price will be considered significant when the overall cost of the system increases by 10% or higher.
12. Escalation shall be based upon the increase in the Producer Price Index, U.S Department of Labour, Bureau of Labour Statistics-Group: Machinery and Equipment: Special Industry Machinery and Equipment, Series Id-WPU116 9the "Index"). The escalation shall be calculated based upon the percentage increase of the monthly index between the date of quotation and the date of receipt of order and submittal approval/release to manufacture (i.e.: the index of the month of when the order is received and released to manufacture minus the index for the month of quotation divided by the index for the month of quotation, multiplied by the quoted price). Note there is approximately 2–4-month delay in the publishing and finalizing of these indexes by the U.S Federal Government. Therefore, the escalation will be calculated at the time the index for both months has been published and finalized.

If you have any questions or if we can be of further assistance, please contact us.

Yours truly,
Stamford Scientific International Inc.

POD270 9" Disc Diffuser

SSI Aeration
SMART IDEAS FOR WATER

What Makes the **SSI POD 9" Disc Diffuser Accessory** an Expert Choice?

The POD™ is an excellent option for municipal and industrial wastewater treatment plants interested in saving time and expense in labor involving installations, routine operational maintenance and the need to investigate the source of recurring problematic leaks.

Factory assembled diffusers mounted on laterals save contractors up to 30% on assembly time. PODS are a viable solution if you want to tank down for a minimum period, if your labor costs are high, or if you have a field labor shortage. For engineers unsure about the skill set of a contractor's field labor, SSI PODS are worry free with fewer field connections, and most connections created in controlled factory settings by trained personnel and automatic machines.

SSI Aeration

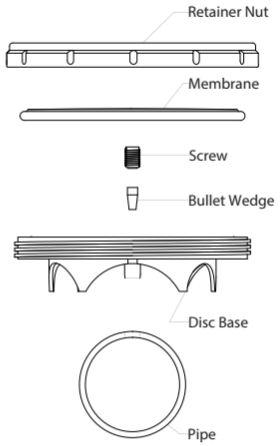
POD270 9" Disc Diffuser

Unique System Strengths

Complete product line – creating the system that fits your needs
SSI manufactures disc diffusers and coarse bubble diffusers, and we mount these products on a wide range of piping materials including PVC, CPVC, PP and Stainless Steel. We have the ability to attach diffusers to pipe using saddles, grommets, or pre-assembled PODS. We can provide retrievable systems or fixed grids, and systems in kit form or mostly factory assembled. We try to understand and anticipate your needs, and fit our recommendations to your situation.

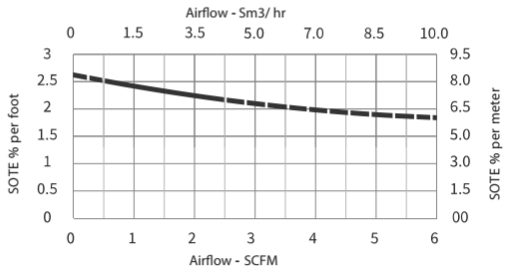


Piping system integrity – thicker wall pipe and double anchors for fewer breakages
Our piping is 38% thicker and has double rod support stands as standard – two anchors for each support location means twice the resistance to hydraulic and thermal loads. Most often supports fail due to temperature and water velocity. SSI locates two anchors where support is needed most, helping to increase product longevity.

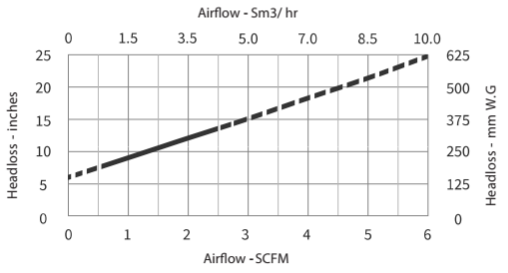
Comprehensive design service and after sales support
SSI provides full design services, including biological and mixing calculations, process simulations and hydraulic studies. We maintain a full drafting department with 3D and animation capabilities and we can assist with specifications and CAD drawings. Our service and installation crew can hold your hand during the early stages of the project and our worldwide multilingual staff is dedicated to your complete satisfaction.

Intelligent Upgrade Options

Patented PTFE membranes prolong efficiency and reduce whole-life costs
SSI's patented PTFE membrane barrier properties not only reduce plasticizer extraction, shrinking, and membrane hardening but also limit dynamic changes that can result from swell, such as creep. Compared with uncoated products that are more susceptible to increases in DWP due to more aggressive fouling and changes in physical properties and weight, the PTFE coated membrane improves consistency of DWP (Headloss) values over the product life. This directly impacts long-term power costs and the ability of the system to distribute air uniformly across the tank floor.



SSI Telemetry – the inside story solves maintenance problems
At the click of a mouse, you will know the DWP of your diffuser membranes, airflow rate to those monitored diffusers, and air temperature in the submerged piping system. You can sense vibration, pipe roll over, and water in the grid. Automatic moisture purging and automatic acid dosing systems are available. Through multiple cameras, you can see both inside the grids, and surface bubble patterns. Wet probes are also available for DO and WW temperature. Tracking all this data on a user-friendly online dashboard facilitates communication between consultant and client, manufacturer and rep. This smart technology lets you locate problem areas and allocate resources more efficiently. SSI Telemetry is your preventive maintenance hub in the heart of the plant.



EXPLODED DRAWING

Pods Installation Procedure

Insert POD diffuser into the pipe hole (17mm). Then insert wedge bullet in to the base. Insert wedge screw and rotate set screw after that place membrane over the base plate. Then hand tighten retainer nut on to the base until unable to be turned further.Then use Spanner Wrench tighten the retaining nut further 1/4 turn to complete installation.

TECHNICAL DATA SHEET

SSI™ ACCESSORIES

QCTS SADDLES

Quick Connect NPT Saddles mount on nominal US 3" or metric 88.9mm, 90mm OD, US 4" or 114.3mm and 110mm OD pipe. They allow retrofit of 12" to 9"discs without changing the piping system.

QCTS Saddle

Quick Connect NPT Saddles are made of polypropylene, and install into a 5/8" (16mm) hole. changing the piping system.

GROMMETS

Grommets are available for round plastic or square stainless steel pipes in US or Metric dimensions. Installation is simple. Multiple sizes are available based on pipe wall thickness. Grommets install into a 1-1/4" (32mm) chamfered hole.

EXPANSION JOIN OPTIONS

Rigid Bolted SS

Expansion Joints are available in three types: Flexible PVC with SS Shell, Rigid Bolted SS, and Anti-rotation, Telescoping PVC. The flexible expansion joints are recommended for disc installations and the positive locking type for tube diffuser projects.

Flexible PVC w/SS shell

Slotted band joints with stainless steel shear rings are suitable for disc-type fine bubble and cap-type coarse bubble lateral plastic piping systems, in conjunction with SSI's fixed and guide support stand system to manage thermal expansion and contraction.

Positive locking bolted stainless steel couplings are suitable for drop pipes, stainless joints, and for all tube diffuser piping systems to restrict header pipe rotation.

Anti-rotatio Telescoping PVC

SI's Sliding Expansion Joint is an anti-rotational telescopic union which absorbs pipe expansion and contraction to up to 1.5" (38mm).

CLAMP SADDLES

Clamp Saddles are avialable to suit different pipe sizes and its installed on 1" to 4" pipes with 5/8" (16mm) hole.Clamp Saddles are also easy to install using bolt, nuts and washers. Clamp saddles are typically made from metal or plastic. Metal clamps are more durable

BOLTED SADDLE

SSI manufactures nominal 2",3" and 4" Quick Bolted Saddles QTS269 for both 2.375"/60.3mm O.D pipes, QTS390 for both 3.5"/ 90mm O.D pipes and QTS4110 for 4.5"/110mm O.D pipes . Quick Threaded Bolted Saddles are made of talc-filled polypropylene, and installation into a 5/8" (16mm) hole with an O-ring (ORQTS). Easily install Quick threaded saddle on pipe using SSI's special channel-lock pliers.

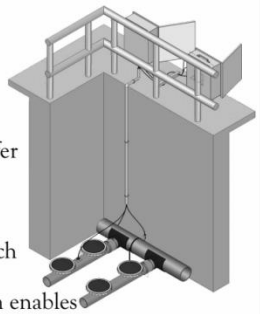
TECHNICAL DATA SHEET

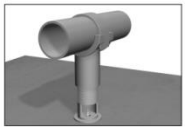


SSI™ ACCESSORIES *continued*

MOISTURE PURGE SYSTEM

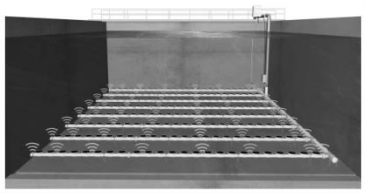
An airlift type purge system is used in all SSI fine bubble aeration systems to remove condensate from the piping system. Purging entrained water helps ensure even air distribution to all diffusers in a grid. A ball valve is supplied with the system and is opened manually. Continuous purge systems are available for retrievable-type aeration systems, or where it is not possible to fasten a purge line to a tank wall.

PRESSURE MONITORING SYSTEM



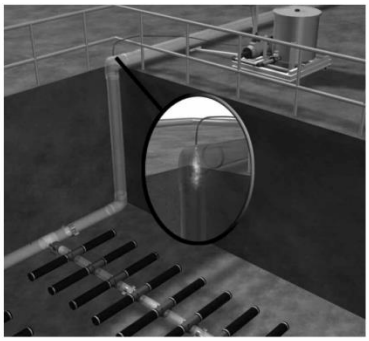
Throughout the life of an aeration system, oxygen transfer efficiency may decline somewhat when diffusers become fouled, but headloss can increase dramatically which in turn increases energy costs. A pressure monitoring system enables the operator to better determine the optimal cleaning frequency of the membranes. The fouling rate can vary by aeration zone, hence it is recommended to install at least one system in each zone.

SUPPORT STANDS



Support Stands are available in 304SS, 316SS or in ABS plastic. SSI's standard is 304SS with drop-in anchor bolts. In our aeration piping systems, support stands fulfill the dual role of anchoring pipes to the floor and controlling thermal expansion and contraction. Special support stands for uneven tank floors, for installing into concrete ballast forms, and for tanks with significant channel velocity (with lateral supports) are also available. ABS support stands are primarily used with disc diffusers and plastic pipe, where a low capital cost is the primary objective.

ABS plastic support stand



TELEMETRY SYSTEM

Adding a Telemetry System to your aeration system will allow you to remotely monitor factors inside your tank from any PC, tablet or mobile device. Telemetry can be installed in new systems or retrofitted through an end cap into existing systems. Telemetry sensors are available to monitor variables in your system such as temperature, vibration, humidity, water detection, DO, and other environmental factors.

ACID DOSING SYSTEM

In-situ Acid Dosing Systems are available to control calcareous deposits in the perforations which will reduce membrane backpressure.

SSI – SSI Aeration, Inc.

Standard Terms and Conditions of Sale

1. **General:** All products and services offered for sale by Stamford Scientific International, Inc. (hereinafter "Seller") or its subsidiaries or through its distributors or sales representatives are sold subject to the terms and conditions stated herein. This offer expressly limits acceptance to the terms hereof and any additional, different or inconsistent terms proposed by Buyer, whether in writing or otherwise, are hereby objected to and rejected and Seller shall not be bound thereby unless expressly agreed in a writing signed by an officer of the Seller that such terms and conditions shall supersede those contained herein.

2. **Estimates and Quotations**: All prices are subject to adjustment on account of specifications, quantities, shipment arrangements or other terms and conditions, which are not part of the original price quotation. Written estimates issued by the Seller will be valid for 30 days only. Products are sold at prices in effect at the time the order is taken. The company reserves the right to change prices without notice when necessary.

3. **Terms and Method of Payment**: For Buyers with established credit, payment of accounts due must be made within 30 days of shipment FOB Seller facility or 30 days after the goods are ready to ship and Buyer is notified of same. Seller may make partial billings of the contract price or invoice as various components of the equipment are shipped. Partial payments are expected to be made according to partial goods shipped. Custom built and special large orders shall require deposits in advance of production together with progress payments. For Buyers without credit, payment will be by company check, bank draft, Visa or Mastercard, telegraphic transfer or irrevocable letter of credit at time of order or progress payments according to quote offer. The Buyer shall not be entitled to withhold payment of any sums due to the Seller by reason of any disputed claim by the customer relating to any goods or deliveries. If Buyer fails to make payment by the due dates then without prejudice to any other rights of the Seller: The Seller shall be entitled to suspend all or any other deliveries to be made under that or any other contract with the Buyer and in such event the Buyer shall not in any respect be released from its obligations to the Seller under that or any such other contract. The Seller shall also be entitled to treat the relevant contract or any other contract with the Buyer as having been terminated by the Buyer and to claim damages for breach of contract accordingly.

4. **Taxes**: Product prices do not include taxes. The amount of any present or future sales, use, excise, value-added or similar tax if applicable to the sale shall be paid by the Buyer unless a tax exemption certificate acceptable to the tax authorities is approved. If Seller is required to pay any such tax, fee or charge, Buyer shall reimburse Seller therefore.

5. **Delays in Delivery and Force Majeure**: All quoted delivery dates are approximate. The Seller will make commercially reasonable efforts to meet any delivery date(s) quoted in the agreement. However, under no circumstances shall the Seller be liable to Buyer for any delay in shipment or failure to meet any quoted delivery date(s) due to unforeseen circumstances or due to a cause beyond its control. Examples of such causes are acts of God, wars, riots, embargoes, acts of civil or military authorities, fires, floods, accidents, strikes, transportation delays, inability to obtain materials or supplies, interruption for any reason in the manufacture of products by Seller's supplies or other causes not within Seller's control.

6. **Warranty/Repairs**: Products manufactured by Seller are warranted to be free from defects in materials or workmanship for 18 months from date of shipment or 12 months from the date of start up, whichever comes first. Parts found to be defective in materials or workmanship will be repaired or replaced without charge, F.O.B. original point of shipment. The forgoing warranty is in lieu of and excludes all other warranties expressed or implied (including any warranty of merchantability or fitness or purpose). The responsibility of the Seller is limited to the cost of the defective part. Wear caused by faulty maintenance or operation shall not constitute defects. Elastomeric components damaged as a result of maintenance activities, excessive airflow, foreign debris in the process solution, or excessive exposure to direct ultraviolet and thermal radiation shall be excluded. Decomposition by chemical action and chemical precipitate shall not constitute defects. Claims for defective, damaged or improper material or for shortages will not be allowed unless written notice specifying the nature and extent of the defect, damage or shortage is received in the Seller's office within fourteen (14) days from delivery. Seller assumes no responsibility of expense for repairs made on equipment sold by it to Buyer when such repairs are done outside Seller's factory facilities without its written consent. In all cases, a Start-Up certificate issued by SSI is for general conformance to the Manufacturer's installation instructions only after audit for work performed. However, in no cases, SSI can audit 100% of all work performed by others and cannot guarantee their work to fully meet our installation instructions. Warranty for installation labor and services provided by others shall be covered by the warranty of the entity performing those services. Failure by the Installer to fully meet our installation instructions and requirements may result in installation errors which may lead to equipment failure, for which Seller shall not be liable.

7. **Cancellation and Returns Policy**: (A) Cancellations: Any request for order cancellation, rescheduling or modification by Buyer must be made in writing and such action must be approved in writing by an officer of Seller. Such request should be made to Seller at least four (4) weeks from scheduled shipment date in order to be considered. Such cancellation, rescheduling or modification shall be subject to the payment of reasonable cancellation charges, which shall include but not be limited to expenses already incurred for labor and material costs, commitments made by Seller and a reasonable profit. (B) Returns: Any request for product return by Buyer must be made in writing. Returns of products will not be accepted for any reason without prior written consent of Seller and issuance of a Return Material Authorization (RMA) number. Return of products must be shipped freight prepaid by Buyer. Seller will not accept freight charges. Returns may be subject to a 15% restocking fee and any other reasonable charges. Returns made without obtaining prior authorization shall be returned to sender at Buyer's expense. Custom made goods may not be returned under any circumstance.

8. **Limitation of Liability: Notwithstanding anything else to the contrary, Seller shall have no liability for consequential, incidental, punitive, indirect and/or special damages regarding the sale or use of a product even if the potential for such damages has been disclosed to Seller. Seller's total liability for product defect claims shall not exceed the purchase price paid for the product.**

9. **Complete Agreement**: These Terms and Conditions of Sale when combined with Seller's invoice represent the entire agreement between the parties with respect to the subject matter hereof. Language contained in any digital or written instrument from Buyer to Seller serving to modify the terms of any of the foregoing shall be of no effect.

10. **Severability**: If any provision of these Terms and Conditions of Sale shall be deemed illegal or unenforceable, such illegality or unenforceability shall not affect the validity and enforceability of any other provisions hereof, which together shall be construed as if such illegal and unenforceable provision or provisions had not been included herein.

11. **No Waiver**: The failure by Seller to enforce at any time any of the provisions of this agreement, or to exercise any election or option provided herein, shall not be a waiver and shall in no way be construed as a waiver of such provisions or options, nor in any way be construed to affect the validity of this agreement or any part thereof, or the right of Seller thereafter to enforce each and every such provision.

12. **No Indemnification**: Unless otherwise expressly provided in writing by both parties, Seller does not indemnify, nor does it hold Buyer harmless, against any liability, losses, damages and expenses (including attorney's fees) relating to any claim whatsoever, including without limitation, claims for personal injuries, death or property damage related to the products sold hereunder.

13. **Governing Law**; Limitations: The relationship between Buyer and Seller in relation to the products shall be governed by and construed in accordance with the laws of the State of New York, U.S.A. Any legal action with respect to any transaction must be commenced within one year after the cause of action has arisen.

14. **Dispute Resolution**: Actions by Seller for nonpayment by Buyer of the purchase price of products sold by Seller, or for redress of other breaches by Buyer of these Terms and Conditions of Sale, may be brought by Seller, at its option, before any court of competent jurisdiction in the State of New York. At Seller's option, disputes between Buyer and Seller, including all claims for non-performance by Seller, shall be finally settled by arbitration in Poughkeepsie, New York USA.

15. **Foreign Corrupt Practices Act**: Buyer represents and warrants to Seller that it shall comply with all laws in relation to its sale and/or use of the Products and will not pay anything of value to any government employee in connection with the sale of the Products.

16. **Precedence**: In the event of any inconsistency among the referenced documents, attachments, drawings, specifications or other provisions hereof, the following order of precedence shall apply: (1) special terms and conditions agreed to in writing by an Officer of the Seller, (2) these standard terms and conditions of sale, (3) specifications, (4) all other attachments or documents incorporated herein by reference.

*Estimated manufacturing lead times included in this quotation are defined as "after release of order to production" (ARO) and are subject to change based upon availability of parts and manufacturing capacity at the time the goods are released to production. Production orders are considered released to production upon receipt. Manufacturing lead times do not include transit lead times. Estimated lead times are based upon the items and quantities listed on the quotation. Any changes to order codes and/or quantities may result in changes to manufacturing lead times.

MANUFACTURER'S CONDITIONS

These conditions apply to all quotations, orders and contracts for DeZURIK Canada, Inc. ("we," "us" or "our")

1. CONSTRUCTION AND LEGAL EFFECT: Our sale to you (defined as the purchaser of goods from us) is limited to and expressly made conditional on your assent to these typed and printed terms and conditions of sale, the face and reverse side hereof ('These Terms"), all of which form a part of the agreement to sell and which supersede and reject all prior writings (including your order), representations, negotiations with respect hereto and any conflicting terms and conditions of yours, any statement therein to the contrary notwithstanding. No waiver, alteration or modification of These Terms shall be binding on DeZURIK unless agreed to in writing by an authorized officer of DeZURIK. The sending of the purchase order for the goods referred to herein, whether or not signed by you, or your acceptance of the goods or payment operates as acceptance by you of These Terms and shall be deemed an agreement by you that you have read These Terms and that you understand and agree to be bound by same. In case of conflict between These Terms and the terms of your purchase order or acceptance, These Terms govern; any different or conflicting terms submitted by you in any purchase order or acceptance shall be deemed objected to by us and shall be of no effect unless specifically agreed to by us in writing. We will furnish only the quantities and goods specifically listed on the face hereof or the pages attached hereto, or any updates or modifications to the same purchase order. We assume no responsibility for other terms or conditions or for furnishing other equipment or material shown in any plans and/or specifications for a project to which the goods quoted or ordered herein pertain or refer. Our published or quoted terms and conditions are subject to change without notice prior to acceptance of order.

2. PRICES: Unless otherwise noted on the face hereof, quotations are valid for 30 days, prices are net, FCA Incoterms 2020, our factory. Stenographic, clerical and mathematical errors are subject to correction. Until acceptance of order on These Terms, quoted prices and delivery are subject to change. Thereafter, unless otherwise noted, prices are firm for shipment of goods within 12 months from the relevant quotation date. Our prices are based on current prices for material. We will endeavor to obtain the lowest pricing on materials from our suppliers, but if a significant material price increase occurs between order acceptance and shipment date, goods scheduled to ship beyond 12 months of the quotation date are subject to a price adjustment by an amount necessary to cover such increase.

3. DELIVERY: Dates for the furnishing of services and/or delivery or shipment of goods are approximate only and are subject to change. Quoted lead times are figured from the later of date of acceptance of order on These Terms or from the date of receipt of complete technical data and approved drawings as such may be necessary. We shall not be liable, directly or indirectly, for any delay in or failure to perform caused by an act or omission by you, carriers or suppliers or delays from labor difficulties, shortages of suitable parts, materials or labor, strikes or stoppages of any sort, failure or delay in obtaining materials, customer requested order changes, fires, floods, storms, accidents, government restrictions, epidemics, pandemics, causes designated acts of God or force majeure by any statute or court of law or other causes beyond our reasonable control.

4. SHORTAGE, DAMAGE,ERRORS IN SHIPMENT: Our responsibility ceases upon delivery to carrier. Risk of loss, injury or destruction of property, shall be borne by you from and after our delivery to carrier, and such loss, injury or destruction shall not release you from the obligation to pay the purchase price. You shall note receipt for goods that are not in accordance with bill of lading or express receipt and you shall make claim against such carrier for any shortage, damage or discrepancy in the shipment per the ICC Code for Freight Claims promptly. You shall inspect and examine all items and goods covered by the order when unpacking crated or boxed goods, and if damage is discovered, leave as is until the carrier's agent makes examination and notation on freight or express bill of concealed damage. We will render reasonable assistance to help trace and recover lost goods and collect just claims as a business courtesy, but without obligation. We do not guarantee safe delivery.

5. TAXES: Our prices do not include sales, use, excise, occupation, processing, transportation or other similar taxes which we may be required to pay or collect with respect to any of the materials covered hereby under existing or future law. Consequently, in addition to the price specified herein, such taxes, including, without limitation, GST/HST, shall be paid by you, or you shall provide us with a tax exemption certificate acceptable to the appropriate taxing authorities. You shall also assume and pay any import or export duties and taxes, with respect to the materials covered by the order, and shall hold harmless and reimburse us therefrom.

6. CREDIT AND PAYMENT: Unless otherwise noted on the face hereof, payment of goods shall be 100% thirty (30) days net in Canadian dollars. Payment shall be made: (a) in full without setoff, counterclaim, or deduction, from date of invoice or goods are delivered, whichever is earliest and (b) not contingent on payment from or approval of any third party. Prorated payments shall become due with partial shipments. We reserve the right at any time to suspend credit or to change credit terms provided herein or elsewhere, when, in our sole opinion, your willingness or ability to pay your obligations to us in doubt. Failure to pay invoices at maturity date, at our election, makes all subsequent invoices immediately due and payable irrespective of terms, and we may withhold all subsequent deliveries until the full account is settled and we shall not, in such event, be liable for non-performance of contract in whole or in part. You agree to pay, without formal notice, 1.5% per month of the amount not paid when due, provided that, if such rate is in excess of applicable governing law, you agree to pay the maximum permitted rate. For the purposes of the *Interest Act* (Canada) and disclosure under such statute, whenever interest to be paid under These Terms is to be calculated on the basis of any period of time that is less than a calendar year, the yearly rate of interest to which the rate determined pursuant to such calculation is equivalent is the rate so determined multiplied by the actual number of days in the calendar year in which the same is to be ascertained and divided by such other period of time. DeZURIK may further hold the goods if there are any amounts outstanding.

7. CANCELLATIONS AND CHANGES: Orders which have been accepted by us are not subject to your cancellation or changes in specifications, except upon our written consent, and we may require, as a condition of such consent, appropriate modification charges and adjustments in price, delivery schedule and other relevant terms, and in the case of cancellation, cancellation charges. In the event we accept your cancellation, you shall be liable for a cancellation charge equal to the higher of (i) 25% of the purchase price of the items or (ii) any loss or cost incurred by us, including, but not limited to, cost of materials, labor, engineering, reconditioning and reasonable overhead.

8. DEFERRED SHIPMENT: If shipment is deferred at your request, payment of the contract price shall become due when you are notified that the equipment is ready for shipment. If you fail to make payment and furnish shipping instructions, we may either extend time for so doing or cancel the contract. In case of deferred shipment at your request, storage and other reasonable expenses attributable to such delay shall be payable by you.

9. LIMITED WARRANTY: Products, auxiliaries and parts thereof that we manufacture for a period of twenty-four (24) months from the date of shipment from our factory, are warranted to the original purchaser only against defective workmanship and material, but only if properly stored, installed, operated and serviced in accordance with our recommendations and instructions. For items proven to be defective within the warranty period, hour exclusive remedy under this limited warranty is repair or replacement of the defective item, at our option, FCA Incoterms 2020 our facility with removal, transportation and installation at your cost. Products or parts manufactured by others but furnished by us are not covered under this limited warranty. We may provide repair or replacement for other's products or parts only to the extent provided in and honored by our original manufacturer's warranty to us, in each case subject to the limitations contained in the original manufacturer's warranty. No claim for transportation, labor or indirect, incidental, special or consequential damages or any other loss, cost or damage is being provided in this limited warranty. You shall be solely responsible for determining suitability for use and in no event shall we be liable in this respect. This limited warranty does not warrant that any product or part we manufacture is resistant to corrosion, erosion, abrasion or other sources of failure, nor do we warrant a minimum length of service. Your failure to give written notice to us of any alleged defect under this warranty within twenty (20) days of its discovery, or attempts by someone other than us or our authorized representatives to remedy the alleged defects therein, or failure to return product or parts for repair or replacement as herein provided, or failure to store, install, or operate said products and parts according to the recommendations and instructions furnished by us shall be a waiver by you of all rights under this limited warranty to the fullest extent permissible under applicable law. This limited warranty is voided by any misuse, modification, abuse or alteration of our product or part, accident, fire, flood or other Act of God, or failure to pay entire contract price when due. The foregoing limited warranty shall be null and void if, after shipment from our factory, the item is modified in any way or a component of another manufacturer, such as but not limited to, an actuator is attached to the item by anyone other than our factory authorized service personnel. All orders accepted shall be deemed accepted subject to this limited warranty, which shall be exclusive of any other or previous warranty, and this shall be the only effective guarantee or warranty binding on us, despite anything to the contrary contained in the purchase order or represented by any agent or employee of ours, in writing or otherwise, notwithstanding, including but not limited to implied warranties.

TO THE FULLEST EXTENT PERMISSIBLE UNDER APPLICABLE LAW, THE FOREGOING REPAIR AND REPLACEMENT LIMITED WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES, OBLIGATIONS AND LIABILITIES, INCLUDING, BUT NOT LIMITED TO, ALL WARRANTIES OF FITNESS FOR A PARTICULAR PURPOSE OR OF MERCHANTABILITY OR OTHERWISE, EXPRESSED OR IMPLIED IN FACT OR BY LAW, AND STATE OUR ENTIRE AND EXCLUSIVE LIABILITY AND YOUR EXCLUSIVE REMEDY FOR ANY CLAIM IN CONNECTION WITH THE SALE AND FURNISHING OF SERVICES, GOODS OR PARTS, THEIR DESIGN, SUITABILITY FOR USE, INSTALLATION OR OPERATIONS WHETHER BASED ON CONTRACT, WARRANTY, TORT (INCLUDING NEGLIGENCE) OR ANY OTHER THEORY OF LEGAL LIABILITY. . NEITHER ANY PERFORMANCE OR OTHER CONDUCT, NOR ANY ORAL OR WRITTEN INFORMATION, STATEMENT OR ADVICE PROVIDED BY US OR ANY OF OUR EMPLOYEES OR AGENTS WILL CREATE A WARRANTY, OR IN ANY WAY INCREASE THE SCOPE OR DURATION OF THIS LIMITED WARRANTY.

10. INTELLECTUAL PROPERTY. We shall indemnify and hold you harmless from any amount that you are required to pay to a third-party pursuant to final, non-appealable court order as a result of such third-party's claim that a product sold hereunder infringes any United States or Canadian patent, copyright or industrial design of such third party; provided that our obligation of indemnification is contingent upon (a) your notifying us in writing of any such claim within 20 days of receipt thereof, (b) your providing us with exclusive control of the defense and/or settlement thereof, and (c) your cooperating with us in such defense and/or settlement. In the event of such a successful infringement claim by the third party, at our option, we shall either (i) modify the product sold hereunder so that it performs comparable functions without infringement, (ii) obtain a royalty-free license for you to continue using the infringing product or (iii) refund to you the then-depreciated fair market value of the infringing component. We shall have no obligation under this Section to the extent a claim is based upon (a) the combination, operation or use of the product with equipment, products, hardware, software, systems or data that was not provided by us, if such infringement would have been avoided in the absence of such combination, operation or use, or (b) your use of the product in any manner inconsistent with our written materials regarding the use of such product. This Section states our entire liability and your exclusive remedy with respect to any alleged infringement arising from the use of the products sold hereunder or any part thereof and is subject to the other limitations contained in These Terms.

11. LIMITATION OF LIABILITY: IN NO EVENT SHALL WE BE LIABLE FOR ANY DIRECT, INDIRECT, SPECIAL, INCIDENTAL OR CONSEQUENTIAL, EXEMPLARY OR PUNITIVE DAMAGES OR OTHER SIMILAR DAMAGES, OR PROSPECTIVE PROFITS, INCLUDING BUT NOT LIMITED TO, LOSS OF PROFITS OR REVENUE, LOSS OF USE OF THE GOODS OR ANY ASSOCIATED PRODUCT, BUSINESS INTERRUPTION, COST OF CAPITAL, COST OF SUBSTITUTE PRODUCTS, FACILITIES OR SERVICES, DOWNTIME COSTS, DIMINUTION IN VALUE, OR CLAIMS OF YOUR CUSTOMERS FOR SUCH DAMAGE AND TO THE FULLEST EXTENT PERMISSIBLE UNDER APPLICABLE LAW, OUR LIABILITY, UNDER NO CIRCUMSTANCES, WILL EXCEED THE CONTRACT PRICE FOR THE GOODS AND/OR SERVICES FOR WHICH LIABILITY IS CLAIMED, ANY ACTION FOR BREACH OF CONTRACT BY YOU, OTHER THAN RIGHTS RESPECTING OUR LIMITED WARRANTY DESCRIBED IN SECTION 9 ABOVE, MUST BE COMMENCED WITHIN 12 MONTHS AFTER THE DATE OF SALE. IN NO EVENT SHALL WE BE LIABLE FOR ANY DESIGN ERRORS RELATING TO DRAWINGS PROVIDED BY YOU WITH RESPECT TO THE MANUFACTURE OF THE GOODS.

12. EXPORT CONTROL COMPLIANCE: You agree and acknowledge that the products are sold in accordance with Canadian or U.S. export control and sanctions laws, regulations and orders, as they may be amended from time to time. You agree to ascertain and comply with all applicable export and re-export obligations and restrictions, including without limitation, Canadian and U.S. export and re-export controls under the Export Administration Regulations ("EAR") and Export and Import Permit Act (EIPA), International Traffic in Arms Regulations ("ITAR"), and all regulations and orders administered by the U.S. Department of Treasury, Office of Foreign Assets Control (collectively, "U.S. Export Control Laws") and International Trade Canada (Global Affairs Canada). If you are conducting the export from the United States or the re-export from a country outside the United States, you shall comply with such U.S. Export Control Laws and obtain any license or other authorization required to export or re-export the products and related technology. We shall reasonably cooperate and exercise reasonable efforts, at your expense, to support you in obtaining any necessary licenses or authorizations. You shall not export or re-export the products and/or related technology to any country or entity to which such export or re-export is prohibited, including, but not limited to, any country or entity under sanction or embargoes administered by the United States and /or Canada. Any diversion contrary to the law of the United States or Canada is prohibited. You will not take, and will not solicit us to take, any action that would violate any anti-boycott or any export or import statutes or regulations of the United States or other governmental authorities, and shall defend and indemnify us for any loss or damage arising out of or related to such actions.

13. GENERAL COMPLIANCE WITH LAWS. In addition to your obligations under Section 12 above, you represent and warrant that, in performing your duties under this Agreement, you will comply with, at your sole expense, all applicable laws and regulations of any governmental authority, including, but not limited to, your duties involving any required registrations, requirements as to product contents, packaging and labeling, restraint of trade, consumer laws, data privacy, export regulations, and environmental laws. You agree and acknowledge you have had an opportunity to obtain legal advice regarding, and currently comply with, all applicable legal requirements that prohibit unfair, fraudulent or corrupt business practices, including, but not limited to, the Corruption of Foreign Public Officials Act (Canada), the Proceeds of Crime (Money Laundering) and Terrorist Financing Act (Canada) as well as Canadian and all other applicable laws and requirements that are designed to combat terrorism and terrorist activities.

14. INDEMNIFICATION BY YOU. You will indemnify, defend and hold us and our corporate parents and other affiliates and their respective officers, directors, stockholders, members, insurers, attorneys, employees, agents, successors, predecessors, assigns, heirs and personal representatives harmless against any and all liability, claims, suits, actions, losses, liabilities, damages, costs and legal fees arising out of or related to: (i) any conduct by you or any related party as described in Sections 12 or 13 above; or (ii) your breach of any other provision herein.

15. PROPRIETARY INFORMATION. All specifications, drawings, data, manuals, designs, information, ideas, methods, patterns and inventions made, conceived, developed or generated by us incident to the procurement or performance of this order ("Work Product") will vest in, inure to and be the sole property of us. You will not copy, publish or otherwise disclose, in whole or in part, to others such Work Product without the express prior written permission of us. You will not use information furnished hereunder for any purpose other than for operation and maintenance of the goods and services or for any purpose other than as explicitly intended by us. The rights and obligations in this Section 15 will survive termination or expiration of this order. .

16. ARBITRATION: Any controversy or claim arising out of or relating to this Agreement or the breach thereof shall be settled by binding arbitration in accordance with the provisions of the *Arbitration Act* (Ontario) and judgment on the award rendered by the arbitrator may be entered in any court having jurisdiction thereof. The arbitration shall be conducted by a single arbitrator. The arbitration shall take place in Toronto, Ontario.

17. APPLICABLE LAW: The rights and duties of the parties shall be governed by the laws of the Province of Ontario and the federal laws of Canada applicable therein, without regard to its conflict of law provisions. You agree that the *United Nations Convention on Contracts for the International Sale of Goods* shall not apply to These Terms.

18. NO OTHER CONTRACT PROVISIONS; OTHER: These Terms reflect the entire agreement with respect to the products. Terms and conditions of your order shall be without force and effect, except to the extent identical herewith. No dealer, broker, branch manager, agent, employee or representative of ours has any power of authority except to take orders for our products and to submit the same to us, at our factory, for our approval and acceptance on the terms herein or rejection. There are no representations, agreements, obligations, or conditions, expressed or implied, statutory or otherwise, relating to the subject matter hereof, other than herein contained. DeZURIK Canada, Inc. and related terms (we, us and our) shall refer to DeZURIK Canada, Inc. and its affiliates. If any provision hereof is invalid or not enforceable under applicable law, the remaining provisions shall remain in full force and effect. Any assignment of your rights hereunder without our consent (which shall not be unreasonably withheld) shall be void. These Terms shall be binding on your successors and assigns. Our failure to require your performance of any of These Terms shall not serve as a waiver of or diminish our rights to require strict performance of such provision or These Terms. You acknowledge and are satisfied that These Terms be drawn up in the English language. *L'acheteur reconnaît avoir exigé que les présentes soient rédigées en anglais et s'en declare satisfait.*

MANUFACTURERS OF ENVIRONMENTAL CONTROLS AND SYSTEMS

March 21, 2025

Quote Number: Q220609-Rev2

Re: Basket Strainers

Project: SUEZ - Tap Water Intake Filtration

We are pleased to quote you on the following:

IFC Model: 16-B125FIB1

Strainer type: Cast Iron Basket Strainer

Inlet/Outlet Connection: 16", 125#. FF Flanges per ASME B16.1

Body, Cover & Manifold Material: A126-B CAST IRON

Basket filtration: 1mm perforated screen. Option for 2mm at no extra cost.

Basket Material: 304 Stainless Steel

Cover Type: Bolted Flange

Cover Gasket: Graphite

Drain Connection: 2" NPT c/w Plug

Design Pressure: 150 PSI @ 150°F

Unit Price: $ 16,388.00 CAD each.

Note(s): 1 psid pressure drop at 3700 GPM with 0.4 mm clean screen.

Delivery: 2-3 Weeks ARO

ExWorks: ACME Warehouse, Montreal, Canada

Terms: Net 30 days.

Validity: 30 days.

Best regards,
Kiana Vahdani

Project Coordinator
Acme Engineering Prod.

Email: sun.ben@prominent.com
cc: Michael Buckley, Account Manager (PFC)

DELIVERY:
Estimated Shipping: 4-5 Weeks after acknowledgment of an order (ARO)

FREIGHT: Ex-works ProMinent plant in Guelph, Ontario

Terms & Conditions:
Payment: 100% with order or Net 120 days, upon approved credit
Price: Canadian dollars, ExWorks, Guelph, ON
Taxes: Not Included, Extra Where applicable
Offer Validity: 120 Days

NOTES:
1. Delivery times are based on stock at time of quoting and it is subject to change depending on when order is issued.
2. Any drawings included with this quote are conceptual only.
3. Cancellation fees will apply to all orders over $10,000.00 (Contact ProMinent for details).
4. All equipment/systems quoted are meant for INDOOR use only, unless otherwise specified.
5. The equipment/system is for general purpose only; quote does not include ASME, MTR, CRN, and TSSA, ABSA or equal. registration.
6. Quote MUST be referenced at time of order.
7. Custom ordered items are NON-RETURNABLE

Products: Air compressor Package

Project: 510464 – Caesar Lanes

Good day Robert,

We thank you for providing us with an opportunity to quote for this project.

In response to your request for quote, we are pleased to offer our proposal # 4839671 Rev.02 which includes the following items:

- Two (2) x Atlas Copco Piston Compressor Model **CR7.5-TS-80Gal Vertical 460/3/60-IS, TN4** (Simplex, Two-Stage, Splash Lubricated, Full Cast Iron Piston Compressor) mounted on an **80 Gallon** vertical air receiver. Options 120 Gallon Vertical vessel is provided,
- Two (2) x Atlas Copco standalone refrigerant dryers model **FXHT15**,
- Two (2) x Atlas Copco standalone refrigerant dryers model **FX15 (as option)**.

Note 1: All the equipment will be shipped loose, to be installed by the customer at site.

Also, note that all our equipment in scope of supply will come with CSA approval and CRN registration for all provinces in Canada.

We have included full technical and commercial details for your evaluation. Should additional information be required, please do not hesitate to contact our office.

We trust the enclosed is to your satisfaction and we look forward to your response and further discussions.

Looking forward to your valuable business,

Best Regards,

Mehdi Raeesian – MSc., C.Eng, P.Eng

(All Equipment are Vendor Standard)

Item	Product No.	Product Description	Qty	Unit Value (CAD)	Total Price (CAD)
1.0	**2020 0418 25**	**CR7.5-TS-80Gal Vertical 460/3/60-IS,TN4**	**2**	**6,850.00**	**13,700.00**

Atlas Copco 7.5 HP two-stage splash lubricated piston air compressor mounted on **80 gallon** Vertical air vessel Model **CR7.5-TS-80Gal Vertical 460/3/60-IS,TN4**

➢ Key Features

- Cast iron design to ensure durability and reliability for all demanding applications
- Fully enclosed belt guard for additional equipment safety
- ASME safety valves
- Stainless steel valves
- Aftercooler included for lower compressed air outlet temperature
- Low oil level switch is included
- Start/Stop pressure switch control
- Magnetic starter is included
- Electric Drain for tank is Included
- TEFC motor and NEMA 4 control panel are included
- 1-year bumper-to-bumper warranty

➢ Characteristics

- Maximum air pressure: 175 psig
- Free air delivery: 23.6 cfm @ 175 psig
- Connection: 3/4" NPT
- Voltage: 460V / 3Ph / 60Hz
- Dimensions: 32" x 26" x 75" (L x W x H)
- Weight: 599 lbs

➢ High-Efficiency Electric Motor

- 7.5 HP
- 460 Vac / 3 Ph / 60

Atlas Copco **FXHT15** high temperature refrigerant air dryer. Removes any condensate from the compressed air and provides a steady pressure dew point as low as +4°C.

➢ Required compressed air quality at lowest cost

- Increased reliability and lifetime of tools and equipment.
- Constant operation with inlet air temperature of up to 82°C.
- Digital display for precise visual monitoring of pressure dew point and dryer performance.
- Plug-and-play installation.
- Sustainable refrigerant to ensure lowest possible carbon footprint and energy consumption.

➢ Five operational units in one:

- Air Cooled After Cooler
- Refrigerant Air Dryer
- Moisture Separator
- Electronic Adjustable Dain Valve
- Oil / Dirt Removing

➢ Characteristics:

- Maximum working pressure: 232 psig
- Inlet capacity: 25 cfm
- Pressure drop at full flow: 0.52 psig
- Connections: 3/4" NPT
- Voltage: 115V / 1Ph / 60Hz
- Dimensions: 14" x 15" x 19" (L x W x H)
- Weight: 161 lbs

Please refer attached documents for the working principle and specifications.

Terms and Conditions

Prices Valid For:	60 Days
Delivery:	15-16 Weeks (to be finalized at the time of PO)
Payment:	100% upon shipment
Terms:	(Net 30 Days)
Currency:	Canadian Dollars
Taxes/GST:	Extra
Delivery:	FCA-Our Warehouse in Montreal

Warranty

- Stationary oil-injected rotary screw compressors:
  - Extended Warranty*: 5 years from start-up for Screw Element
  - Extended Warranty*: 2 years from start-up for Electric Main Drive (motor) and Variable speed Drive (VSD)
  - 12 months from start-up or 18 months from shipment, whichever comes first for entire unit (bumper to bumper)
- All warranties are Ex-Works Atlas Copco Compressors Canada nearest branch

Standard documentation

- Standard drawings (general arrangement, PID, electrical, installation) can be supplied if requested
- O&M manuals are supplied in pdf format

* - All units eligible for Extended Warranty (Screw Element, Motor and VSD) coverage must be (i) registered with Atlas Copco Canada within the first 3 months after the start-up, (ii) maintained and inspected from the start-up according to Atlas Copco preventive maintenance guidelines listed in the instruction manual (delivered together with the compressor) using genuine Atlas Copco parts and lubricants.

Attention: Kelly Allegra, Town Clerk

Subject: Caesars Lane Wastewater Treatment Facility
MBR Pre-selection
Town of New Windsor
SUEZ Proposal 360077 – July 20, 2022
Price Escalation

Dear Kelly,

As stated in our price proposal, the applicable portion of SUEZ price subject to escalation is $2,520,225.00 USD. The breakdown of this amount is provided below:

Item	Amount $USD
SUEZ membranes	$1,345,407.36
Quoted third party equipment	$ 663,545.46
SUEZ cost databases / negotiated pricing agreements	$ 392,798.18
Freight	$ 118,474.00
Total	**$2,520,225.00**

As shown, most of the cost of the MBR system (>53%) comes from the membranes (modules and cassettes), which we fabricate at our own facility. For the remaining equipment costs, we received third party quotes during the bid for approximately 60% of the equipment and derived the other 40% of the equipment costs from standard SUEZ cost databases and negotiated sub-vendor pricing agreements. The remainder of price that is subject to escalation is associated with freight.

Escalation – SUEZ Membranes and Cassettes

As specified in the RFP, we would like to propose an alternative method of price escalation for consideration by the Town for the membrane and cassette portion of the price breakdown. This will simplify the escalation calculation and may be preferred since a significant portion of the cost is internal to SUEZ WTS. The proposed escalation is as follows:

The applicable portion of the equipment supply contract price will be adjusted based on the greater of $0 USD, or Weighted Price Index + 1% calculated monthly from the bid opening date (July 2022) to the most recent monthly Price Index value available on the NTP date provided to

SUEZ by the General Contractor to order equipment.

The proposed price indices and their relative weighting for the membranes and cassettes cost escalation calculation are as follows:

1. 40%:PPI Metal and Metal Products WPU10
2: 60% PPI Plastic Products WPU072

The referenced indices are as published by US Department of Labor, Bureau of Labor and Statistics.

Quoted Third Party Equipment

Quoted Third Party Equipment costs are attached in Appendix 1. The total value is $643,545.46 USD.

Cost Databases & Negotiated Pricing Agreements

A cost breakdown of items costed from SUEZ cost databases / negotiated pricing agreements is provided below and attached. This information is “Confidential and Proprietary Information and is for the exclusive use of the Town of New Windsor and MHE in determining price escalation for the Caesars Lane WTP project.

Item	Amount $USD
Manual Valves	$39,636.69
Automatic Valves	$15,375.89
Membrane Tank Cassette & Instrumentation Brackets, Hangers & Braces	$92,012.56
Instrumentation & Controls	$211,778.00
Miscellaneous Ancillary Equipment	$17,711.37
Spares	$16,283.66
Total	**$392,798.18**

These costs are documented by an electronic Excel spreadsheet to be provided as an attachment to this letter.

Freight

Freight costs are a combination of internal and external freight costs. Internal freight costs to ship equipment to SUEZ in Oakville, ON, Canada are estimated as $94,584.00 USD. External costs to ship equipment from Oakville, ON, Canada to the project site are estimated as $ 23,890.00 USD. Total freight costs are $ 118,474.00 USD.

Let us know if you have any questions or concerns related to this issue.

Regards,

Graham Best
Regional Sales Manager

SUEZ WTS SYSTEMS USA, INC.

Caesars Lane – Quotes Summary

1. Aerzen membrane and process blower
2. Sulzer submersible mixer, RAS pump, and BP pump,
3. SSI fine bubble diffuser
4. DeZurik V-Port control valve – CS body
5. Prominent sampling pump
6. ACME bucket strainer
7. Prominent chemical dosing skid - sodium hypochlorite and citric acid
8. IBC tank
9. Atlas Copco compressor

SCOPE OF SUPPLY

Membrane blowers with VFDs

2 Aerzen Generation 5 Blower Package - GM 50L DN 200 - Pressure - including:

Aerzen GM 50L Blower
Drive Motor - Teco: 60hp, 1800rpm, TEFC, 460V/60Hz

Base with integrated reactive type discharge silencer
Intake filter silencer
Hinged motor support as automatic belt tensioning device
Set of vibration isolation mounts
Narrow v-belt drive with guard - 1 set
Spring loaded relief valve
Discharge manifold with externally accessible integrated check valve
Flexible connector with clamps for schedule 40 pipe, discharge
Acoustic Enclosure - Indoor/Outdoor

Instruments
Pressure gauge c/w isolation ball valve (2x)
Dirty filter indicator (2x)

Optional Accessories
Inlet flexible sleeve - DN 200 (8")
Motor Protection - 1 Thermistor/Ph

Optional Instruments
Hood Space Heater (2x)

Optional Spare Parts
1 Year Maintenance Kit (1 x V-Belt Set, 1 x Intake Filter)
2 Year Maintenance Kit (1 x V-Belt Set, 1 x Oil Change (Delta Lube), 2 x Air Filter)

Connection Points:
Intake Connection: Local
Discharge Connection: DN 200 - 8"

Exclusions: See page 2

Payment terms:	120 days net Subject to credit approval and final destination of goods
Taxes:	G.S.T. extra, P.S.T. charged in Quebec only
Prices firm until:	7/10/2022
Packing:	Heavy duty wooden skid with polyethylene wrapping included * Skeleton Frame * Special packing can be quoted upon request.
Warranty:	30mo / max 36mo after delivery
Estimated Delivery:	20-24 Weeks

- to avoid warranty conflicts, we recommend that our start-up services be ordered and the inspection and operation procedures in our manual be respected.
- The goods remain the property of Aerzen Canada until full payment. Extended payment delays may void the warranty.
- Past due invoice amounts carry an interest charge calculated at 24% apr.
- Aerzen Canada reserves the right to change product specifications without prior notice.
- Aerzen can hold ready units free of charge for up to 3 weeks past agreed due date, after which storage fees will apply.

Ref: RFP052822, NY- **Proposal**
Revision 'A' with Tank Dimensionsin lieu of email 07-06-2022
Revision 'B' updated with Tank Dimensions and AOR Loadings per email of email 08/19/2022

Sir/Madam,

In response to your email and based on the information, SSI as an ISO-9001 certified corporation is pleased to submit this proposal for the design, manufacture & supply of Aeration Equipment for **Three (3) Aerobic Tanks** with AFD270-E Fine Bubble Disc Diffusers with EPDM Membranes.

Unless otherwise noted equipment supplied will meet or exceed any engineer specified performance requirements and/or called in the RFP/Email.

Design calculations & Preliminary Drawings showing the general arrangement of diffuser/Piping layouts are included (Refer item I& II).

A. Scope of supply is complete with all components from the downstream of air supply line connection (±6" above water level)starting with SS Vanstone and loose follower flange including drop pipe*(Isolation valve and associated accessories are not included in SSI supply limit)*

B. Each Tank is 106' (L) X 24' (W) X 17.5' (SWD) and Aeration Equipment Supply *per Tank* is listed below:

Ø10" 304SS Drop pipe ±15'		Ø10" PVC Lower Drop +Manifold ±25'		Ø4" PVC Headers ±940' c/w factory drilled holes for mounting saddles and diffusers at site		**AFD270-E diffusers** c/w 4" QTS
304SS Supports	304SS Couplings	304SS Supports	PVC Couplings	304SS Supports	PVC Couplings	
2	1	5	1	180	54	**864**

COMMON FOR ALL TANKS

Total number of AFD270-E Diffuser for Three (3) Aerobic Tanks=(864/Tank)* 3 = **2,592Pcs**

C. Spares:

- AFD270-E Diffuser Assemblies–**8**
- AFD270-E Diffuser Membranes-**20**
- Ø4" 304SS Supports - **5**
- Ø4" Repair Couplings–**2**
- Special Tools Set – **1**

D. F.O.B: Orange Town of NY, USA, 10962(subject to change at actuals)

E. Manufacturer's Site Services: Two (2) days / One (1) trip

(For installation inspection, startup assistance and O& M Training)

F. TOTAL LUMP SUM PRICE (for all listed above) ……**$88,000.00**

G. GENERAL:

- SS pipe work is cleaned, degreased and acid washedfor following the fabrication.
- Piping sections are supplied in 20' lengths maximum and connected at site with SS flanges (Factory welded) shipped along with piping.
- AIS is exempt for the above Aeration equipment.
- All SS welding/PVC Gluing is done in the factory and **NO** site welding/gluing involved in the installation of equipment.
- Each Grid is supplied with Moisture Purge System.
- All Supports are supplied with anchors and accessories.
- **Spares:** Included as above.
- **Site Services:** Included as above.
- SSI diffusers are manufactured under ISO9001.
- **Warranty:** Unless otherwise noted SSI's standard warranty/guarantee on the equipment supplied is for 18 months from the date of shipment or 12 months after the start up whichever occurs first. Warranty covers the workmanship and material of the listed items only. Any costs direct or indirect for transportation, site work, site repair/adjustments etc., are not covered under warranty. Further warranty is valid only when SSI or Its Representative/Associates approve/certify the installation. However, as the inspection is done randomly certification on installation does not make SSI liable or responsible for any direct or indirect installation failure(s).

H. PRICE IS:

1. In **USD**.
2. Valid for **15** days.
3. Above price does not consider Buy America products and if it is needed, price might change accordingly.

4. **Approval Submittal**: in electronic/digital files of all drawing and relevant technical information/data sheets and product cut sheets along with calculation if applicable **2-3 weeks** after receipt of P.O and all the information necessary to prepare submittals and O & Manual included in submittals.
5. Completion and ready to ship**: 14-18 Weeks** after receipt of approved submittal.
6. **F.O.B:** Orange Town of NY, USA, 10962 (subject to change at actuals)
7. Manufacturer's Service days included as above.
8. Unless noted otherwise specified all components/ items are shipped lose for field assembly if any. Field assembly, installation, site work and field testing by others.
9. Exclusions: *(unless noted otherwise)*
    - Offloading upon delivery to site.
    - Any items and services not itemized within the above scope of supply.
    - Blowers, Mixers, wall sleeves, isolated valves, air main piping.
    - Applicable taxes, custom duties, brokerage etc.,
10. Payment Terms:
    - For Municipal and Government Projects in USA: 30% with PO,30% with approved submittals and balance 40% prior to shipment.
    - Private projects in US and all overseas jobs: 30% with PO,30% with approved submittals and balance 40% prior to shipment (Subject to credit approval).
11. Cost Escalation Clause: SSI Aeration, Inc. has priced the job according to existing market conditions and costs at the time of quote. Due to wide fluctuations and increases in the price of stainless steel, carbon steel, PVC components we are experiencing in very short time frames, the sales price of the equipment might be subject to escalation in price in the event there are delays approving submittal, delays in delivery schedule and/or release to manufacture beyond what was quoted and beyond Seller's control. If there is a significant increase of material or freight occurring during the performance of the contract, the contract sums and/or time of completion shall be equitably adjusted by Change order. A change in price will be considered significant when the overall cost of the system increases by 10% or higher.
12. Escalation shall be based upon the increase in the Producer Price Index, U.S Department of Labour, Bureau of Labour Statistics-Group: Machinery and Equipment: Special Industry Machinery and Equipment, Series Id-WPU116 9the "Index"). The escalation shall be calculated based upon the percentage increase of the monthly index between the date of quotation and the date of receipt of order and submittal approval/release to manufacture (i.e.: the index of the month of when the order is received and released to manufacture minus the index for the month of quotation divided by the index for the month of quotation, multiplied by the quoted price). Note there is approximately 2–4-month delay in the publishing and finalizing of these indexes by the U.S Federal Government. Therefore, the escalation will be calculated at the time the index for both months has been published and finalized.

If you have any questions or if we can be of further assistance, please contact us.

Yours truly,
Stamford Scientific International Inc.

SSI – SSI Aeration, Inc.
Standard Terms and Conditions of Sale

1. **General:** All products and services offered for sale by Stamford Scientific International, Inc. (hereinafter "Seller") or its subsidiaries or through its distributors or sales representatives are sold subject to the terms and conditions stated herein. This offer expressly limits acceptance to the terms hereof and any additional, different or inconsistent terms proposed by Buyer, whether in writing or otherwise, are hereby objected to and rejected and Seller shall not be bound thereby unless expressly agreed in a writing signed by an officer of the Seller that such terms and conditions shall supersede those contained herein.

2. **Estimates and Quotations**: All prices are subject to adjustment on account of specifications, quantities, shipment arrangements or other terms and conditions, which are not part of the original price quotation. Written estimates issued by the Seller will be valid for 30 days only. Products are sold at prices in effect at the time the order is taken. The company reserves the right to change prices without notice when necessary.

3. **Terms and Method of Payment**: For Buyers with established credit, payment of accounts due must be made within 30 days of shipment FOB Seller facility or 30 days after the goods are ready to ship and Buyer is notified of same. Seller may make partial billings of the contract price or invoice as various components of the equipment are shipped. Partial payments are expected to be made according to partial goods shipped. Custom built and special large orders shall require deposits in advance of production together with progress payments. For Buyers without credit, payment will be by company check, bank draft, Visa or Mastercard, telegraphic transfer or irrevocable letter of credit at time of order or progress payments according to quote offer. The Buyer shall not be entitled to withhold payment of any sums due to the Seller by reason of any disputed claim by the customer relating to any goods or deliveries. If Buyer fails to make payment by the due dates then without prejudice to any other rights of the Seller: The Seller shall be entitled to suspend all or any other deliveries to be made under that or any other contract with the Buyer and in such event the Buyer shall not in any respect be released from its obligations to the Seller under that or any such other contract. The Seller shall also be entitled to treat the relevant contract or any other contract with the Buyer as having been terminated by the Buyer and to claim damages for breach of contract accordingly.

4. **Taxes**: Product prices do not include taxes. The amount of any present or future sales, use, excise, value-added or similar tax if applicable to the sale shall be paid by the Buyer unless a tax exemption certificate acceptable to the tax authorities is approved. If Seller is required to pay any such tax, fee or charge, Buyer shall reimburse Seller therefore.

5. **Delays in Delivery and Force Majeure**: All quoted delivery dates are approximate. The Seller will make commercially reasonable efforts to meet any delivery date(s) quoted in the agreement. However, under no circumstances shall the Seller be liable to Buyer for any delay in shipment or failure to meet any quoted delivery date(s) due to unforeseen circumstances or due to a cause beyond its control. Examples of such causes are acts of God, wars, riots, embargoes, acts of civil or military authorities, fires, floods, accidents, strikes, transportation delays, inability to obtain materials or supplies, interruption for any reason in the manufacture of products by Seller's supplies or other causes not within Seller's control.

6. **Warranty/Repairs**: Products manufactured by Seller are warranted to be free from defects in materials or workmanship for 18 months from date of shipment or 12 months from the date of start up, whichever comes first. Parts found to be defective in materials or workmanship will be repaired or replaced without charge, F.O.B. original point of shipment. The forgoing warranty is in lieu of and excludes all other warranties expressed or implied (including any warranty of merchantability or fitness or purpose). The responsibility of the Seller is limited to the cost of the defective part. Wear caused by faulty maintenance or operation shall not constitute defects. Elastomeric components damaged as a result of maintenance activities, excessive airflow, foreign debris in the process solution, or excessive exposure to direct ultraviolet and thermal radiation shall be excluded. Decomposition by chemical action and chemical precipitate shall not constitute defects. Claims for defective, damaged or improper material or for shortages will not be allowed unless written notice specifying the nature and extent of the defect, damage or shortage is received in the Seller's office within fourteen (14) days from delivery. Seller assumes no responsibility of expense for repairs made on equipment sold by it to Buyer when such repairs are done outside Seller's factory facilities without its written consent. In all cases, a Start-Up certificate issued by SSI is for general conformance to the Manufacturer's installation instructions only after audit for work performed. However, in no cases, SSI can audit 100% of all work performed by others and cannot guarantee their work to fully meet our installation instructions. Warranty for installation labor and services provided by others shall be covered by the warranty of the entity performing those services. Failure by the Installer to fully meet our installation instructions and requirements may result in installation errors which may lead to equipment failure, for which Seller shall not be liable.

7. **Cancellation and Returns Policy**: (A) Cancellations: Any request for order cancellation, rescheduling or modification by Buyer must be made in writing and such action must be approved in writing by an officer of Seller. Such request should be made to Seller at least four (4) weeks from scheduled shipment date in order to be considered. Such cancellation, rescheduling or modification shall be subject to the payment of reasonable cancellation charges, which shall include but not be limited to expenses already incurred for labor and material costs, commitments made by Seller and a reasonable profit. (B) Returns: Any request for product return by Buyer must be made in writing. Returns of products will not be accepted for any reason without prior written consent of Seller and issuance of a Return Material Authorization (RMA) number. Return of products must be shipped freight prepaid by Buyer. Seller will not accept freight charges. Returns may be subject to a 15% restocking fee and any other reasonable charges. Returns made without obtaining prior authorization shall be returned to sender at Buyer's expense. Custom made goods may not be returned under any circumstance.

8. **Limitation of Liability: Notwithstanding anything else to the contrary, Seller shall have no liability for consequential, incidental, punitive, indirect and/or special damages regarding the sale or use of a product even if the potential for such damages has been disclosed to Seller. Seller's total liability for product defect claims shall not exceed the purchase price paid for the product.**

9. **Complete Agreement**: These Terms and Conditions of Sale when combined with Seller's invoice represent the entire agreement between the parties with respect to the subject matter hereof. Language contained in any digital or written instrument from Buyer to Seller serving to modify the terms of any of the foregoing shall be of no effect.

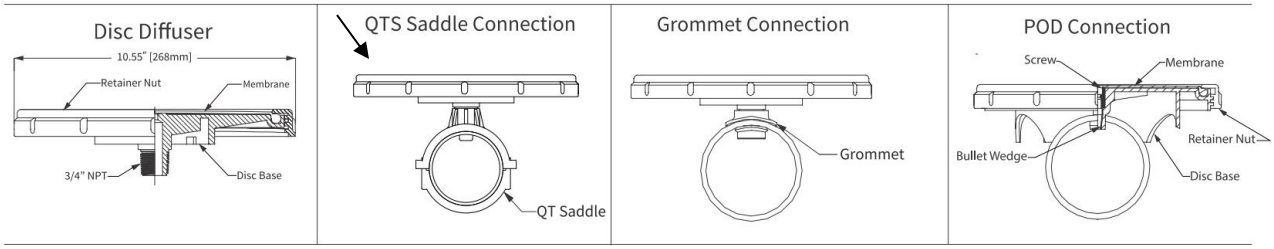
10. **Severability**: If any provision of these Terms and Conditions of Sale shall be deemed illegal or unenforceable, such illegality or unenforceability shall not affect the validity and enforceability of any other provisions hereof, which together shall be construed as if such illegal and unenforceable provision or provisions had not been included herein.

11. **No Waiver**: The failure by Seller to enforce at any time any of the provisions of this agreement, or to exercise any election or option provided herein, shall not be a waiver and shall in no way be construed as a waiver of such provisions or options, nor in any way be construed to affect the validity of this agreement or any part thereof, or the right of Seller thereafter to enforce each and every such provision.

12. **No Indemnification**: Unless otherwise expressly provided in writing by both parties, Seller does not indemnify, nor does it hold Buyer harmless, against any liability, losses, damages and expenses (including attorney's fees) relating to any claim whatsoever, including without limitation, claims for personal injuries, death or property damage related to the products sold hereunder.

13. **Governing Law**; Limitations: The relationship between Buyer and Seller in relation to the products shall be governed by and construed in accordance with the laws of the State of New York, U.S.A. Any legal action with respect to any transaction must be commenced within one year after the cause of action has arisen.

14. **Dispute Resolution**: Actions by Seller for nonpayment by Buyer of the purchase price of products sold by Seller, or for redress of other breaches by Buyer of these Terms and Conditions of Sale, may be brought by Seller, at its option, before any court of competent jurisdiction in the State of New York. At Seller's option, disputes between Buyer and Seller, including all claims for non-performance by Seller, shall be finally settled by arbitration in Poughkeepsie, New York USA.



15. **Foreign Corrupt Practices Act**: Buyer represents and warrants to Seller that it shall comply with all laws in relation to its sale and/or use of the Products and will not pay anything of value to any government employee in connection with the sale of the Products.

16. **Precedence**: In the event of any inconsistency among the referenced documents, attachments, drawings, specifications or other provisions hereof, the following order of precedence shall apply: (1) special terms and conditions agreed to in writing by an Officer of the Seller, (2) these standard terms and conditions of sale, (3) specifications, (4) all other attachments or documents incorporated herein by reference.

SSI Aeration
SMART IDEAS FOR WATER

What Makes the a
SSI 9” AFD270 Disc Diffuser Systems
Worldwide Choice?

The SSI 9” Disc Diffuser System combines engineering excellence, superior component quality, and a technically advanced product design. Proven highly durable and efficient in thousands of municipal and industrial installations around the world, this advanced system has reliability built into every stage of performance. SSI’s AFD270 comes in several membrane materials including our patented PTFE membrane, designed to use less energy and require minimal maintenance. Industry standand size and shape are interchangable with other manufacturers. The diffuser base is molded with virgin polypropeline for extended performance, and is highly efficient with airflow performance of 1.5-2.5 SCFM.

AFD270 Disc Diffuser

Unique System Strengths

Complete product line – creating the system that fits your needs

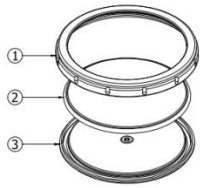
SSI manufactures disc diffusers and coarse bubble diffusers, and we mount these products on a wide range of piping materials including PVC, CPVC, PP and Stainless Steel. We have the ability to attach diffusers to pipe using saddles, grommets, or pre-assembled PODS. We can provide retrievable systems or fixed grids, and systems in kit form or mostly factory assembled. We try to understand and anticipate your needs, and fit our recommendations to your situation.

Piping system integrity – thicker wall pipe and double anchors for fewer breakages

Our piping is 38% thicker and has double rod support stands as standard – two anchors for each support location means twice the resistance to hydraulic and thermal loads. Most often supports fail due to temperature and water velocity. SSI locates two anchors where support is needed most, helping to increase product longevity.

Comprehensive design service and after sales support

SSI provides full design services, including biological and mixing calculations, process simulations and hydraulic studies. We maintain a full drafting department with 3D and animation capabilities and we can assist with specifications and CAD drawings. Our service and installation crew can hold your hand during the early stages of the project and our worldwide multilingual staff is dedicated to your complete satisfaction.



Intelligent Upgrade Options

Patented PTFE membranes prolong efficiency and reduce whole-life costs

SSI's patented PTFE membrane barrier properties not only reduce plasticizer extraction, shrinking, and membrane hardening but also limit dynamic changes that can result from swell, such as creep. Compared with uncoated products that are more susceptible to increases in DWP due to more aggressive fouling and changes in physical properties and weight, the PTFE coated membrane improves consistency of DWP (Headloss) values over the product life. This directly impacts long-term power costs and the ability of the system to distribute air uniformly across the tank floor.

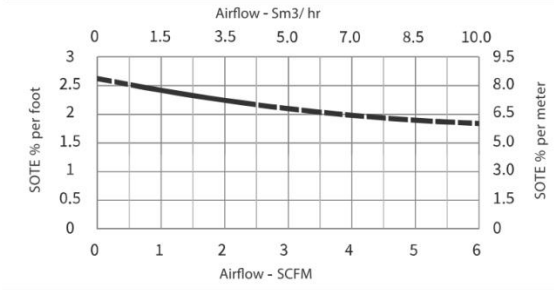
Diffuser Parts	Material
1. Retainer nut	PP
2. Membrane	EPDM / PTFE / PEEK / Silicone
3. Diffuser Base	PP

Max. Temperature resistance - 212° F / 100° C

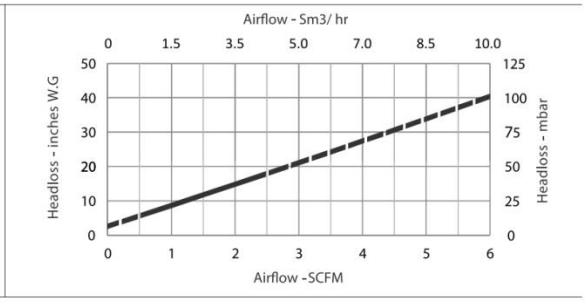
Pods Connection

Factory assembled diffusers mounted on laterals save contractors up to 30% on assembly time. PODS are a viable solution if you want to tank down for a minimum period, if your labor costs are high, or if you have a field labor shortage. For engineers unsure about the skill set of a contractor's field labor, SSI PODS are worry free with fewer field connections, and most connections created in controlled factory settings by trained personnel and automatic machines.

Grommet Connection



Simple to install on site, compact to ship and move. Affordably priced and time tested over 15 years worldwide.



Quick Threaded Saddle

QTS saddles quickly and easily bolt onto the pipe and allow installation of the diffuser with a few simple turns.

Avg Operating Condition per Diffuser	Peak Air Flow per Diffuser	Orifice Size	Slit Qty	Active Surface Area per Diffuser	Weight per Diffuser AFD270
0.45 - 2.5 SCFM 0.8 - 4.5 Sm^3/hr	4.0 SCFM 7.0 Sm^3/hr	1/4" 6mm	+/- 6600	0.41 ft^2 0.038 m^2	1.5 lbs 0.68 kg

Operating diffusers distant to average operating conditions range might leads to poor uniform distribution and subjected to rapid fouling.

Above curves are generated based on ideal condition. Actual curves for specified project/condition to be provided upon request.

TECHNICAL DATA SHEET

SSI™ ACCESSORIES

NPT SADDLES

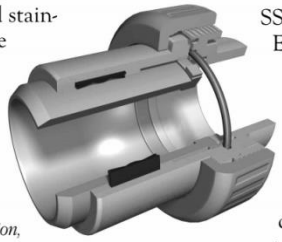
Quick Connect NPT Saddles mount on nominal US 4" or metric 114.3mm OD pipe. They allow retrofit of 12" to 9" discs without changing the piping system. Quick Connect NPT Saddles are made of polypropylene, and install into a 5/8" (16mm) hole.

GROMMETS

Grommets are available for round plastic or square stainless steel pipes in US or Metric dimensions. Installation is simple. Multiple sizes are available based on pipe wall thickness. Grommets install into a 1-1/4" (32mm) chamfered hole.

EXPANSION JOIN OPTIONS

Rigid Bolted SS

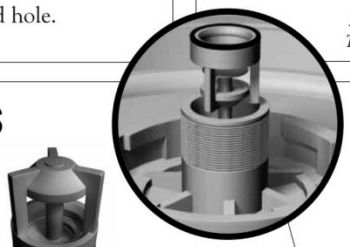


Expansion Joints are available in three types: Flexible PVC with SS Shell, Rigid Bolted SS, and Anti-rotation, Telescoping PVC. The flexible expansion joints are recommended for disc installations and the positive locking type for tube diffuser projects.

Flexible PVC w/SS shell

Slotted band joints with stainless steel shear rings are suitable for disc-type fine bubble and cap-type coarse bubble lateral plastic piping systems, in conjunction with SSI's fixed and guide support stand system to manage thermal expansion and contraction.

Positive locking bolted stainless steel couplings are suitable for drop pipes, stainless joints, and for all tube diffuser piping systems to restrict header pipe rotation.

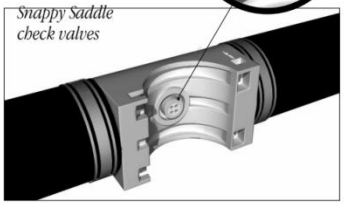


Anti-rotation, Telescoping PVC

SSI's Sliding Expansion Joint is an anti-rotational telescopic union which absorbs pipe expansion and contraction to up to 1.5" (38mm).

CHECK VALVES

SSI fine and coarse bubble diffusers are available with optional check valves. These are not required for proper operation since most diffusers are self-checking, but they may give peace of mind to the designer or operator.



Disc showing check valve installation

Coarse Band (WBCB) check valves

Snappy Saddle check valves

Tube Diffuser check valves

Please see reverse for additional technical data

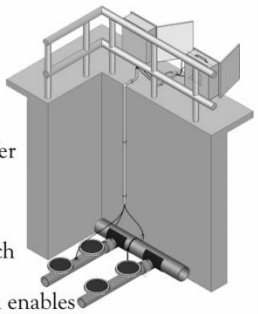
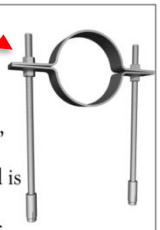
TECHNICAL DATA SHEET



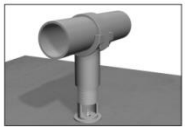
SSI™ ACCESSORIES *continued*

MOISTURE PURGE SYSTEM



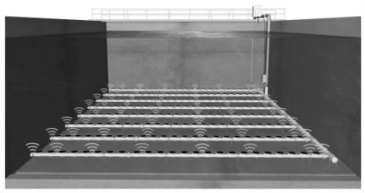
An airlift type purge system is used in all SSI fine bubble aeration systems to remove condensate from the piping system. Purging entrained water helps ensure even air distribution to all diffusers in a grid. A ball valve is supplied with the system and is opened manually. Continuous purge systems are available for retrievable-type aeration systems, or where it is not possible to fasten a purge line to a tank wall.

PRESSURE MONITORING SYSTEM



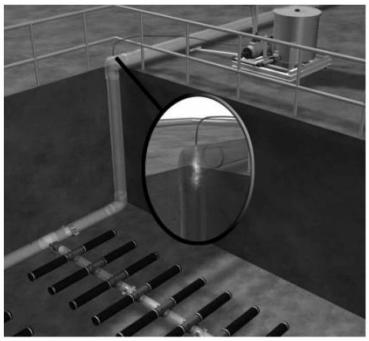
Throughout the life of an aeration system, oxygen transfer efficiency may decline somewhat when diffusers become fouled, but headloss can increase dramatically which in turn increases energy costs. A pressure monitoring system enables the operator to better determine the optimal cleaning frequency of the membranes. The fouling rate can vary by aeration zone, hence it is recommended to install at least one system in each zone.

SUPPORT STANDS



Support Stands are available in 304SS, 316SS or in ABS plastic. SSI's standard is 304SS with drop-in anchor bolts. In our aeration piping systems, support stands fulfill the dual role of anchoring pipes to the floor and controlling thermal expansion and contraction. Special support stands for uneven tank floors, for installing into concrete ballast forms, and for tanks with significant channel velocity (with lateral supports) are also available. ABS support stands are primarily used with disc diffusers and plastic pipe, where a low capital cost is the primary objective.

ABS plastic support stand



TELEMETRY SYSTEM

Adding a Telemetry System to your aeration system will allow you to remotely monitor factors inside your tank from any PC, tablet or mobile device. Telemetry can be installed in new systems or retrofitted through an end cap into existing systems. Telemetry sensors are available to monitor variables in your system such as temperature, vibration, humidity, water detection, DO, and other environmental factors.

ACID DOSING SYSTEM

In-situ Acid Dosing Systems are available to control calcareous deposits in the perforations which will reduce membrane backpressure.

Subject: RE: SUEZ - Metering Pump - Quick Cost Estimate

Below is good:
For 22.7 l/h we can use a GammaX pump. It is 120VAC 1 phase, but it is NOT motor driven, It's solenoid.

This is used for turbidity measurement for clean water.

Subject: RE: SUEZ - Metering Pump - Quick Cost Estimate

Hi Fengshen,
Can you let me know what model of pump you prefer?
Do you want what we would typically offer Suez?
We will need at approx. discharge pressure. Assuming this is a typical Suez process, it is less that 30 PSI, so all pump models would work. If it's higher, please let me know.

For 22.7 l/h we can use a GammaX pump. It is 120VAC 1 phase, but it is NOT motor driven, It's solenoid.
Two options based on flow & pressure. Price is about the same.
This is at the limits of the GammaX, so if it is Hypo, we would use the slightly larger GammaXL.

If the client wants motor driven for a particular reason, we can offer a Sigma1 pump

The acquisition of SUEZ by Veolia has closed, as of January 18, 2022. The Water Technologies & Solutions business is now part of Veolia and operating under the conditions put forth by regional regulatory authorities. During this transition period, our business operations will continue as normal, independent from the rest of Veolia, and also independent from the newly created "New Suez".

Re: Basket Strainers

Project: SUEZ - Tap Water Intake Filtration

We are pleased to quote you on the following:

IFC Model: 16-B125FIB1

Strainer type: Cast Iron Basket Strainer

Inlet/Outlet Connection: 16", 125#. FF Flanges per ASME B16.1

Body, Cover & Manifold Material: A126-B CAST IRON

Basket filtration: 1mm perforated screen. Option for 2mm at no extra cost.

Basket Material: 304 Stainless Steel

Cover Type: Bolted Flange

Cover Gasket: Graphite

Drain Connection: 2" NPT c/w Plug

Design Pressure: 150 PSI @ 150°F

Unit Price: $ 12,926.00 CAD each.

Note(s): 1 psid pressure drop at 3355 GPM with 1mm clean screen.

Delivery: 2-3 Weeks ARO
ExWorks: ACME Warehouse, Montreal, Canada
Terms: Net 30 days.
Validity: 30 days.

Best regards,

Philippe Ellison

Cc: Buckley, Mike
Subject: RE: SUEZ - Standard Dual Mag-Drive Skid Costing
Attachments: 1.Drawing# 3120800500-210 R2 with markups-EPDM-PVC.pdf; 2.Drawing# 3120800500-210 R2-Viton-PVC-Vented.pdf

HI Fengshen,
Good evening,

Do you have a specific Suez project/bid number that I can refer to my quote?
Regarding the pricing for the dual-pump mag drive systems, Suez Engineering team asked for some changes that we are including to the standard system.
Some of the changes are:

1. Changed the suction line from 1" to 1-1/2"
2. Changed the inlet pressure gauge from 0-60 psig to 0-15 psig
3. Enlarged PE frame
4. 1-1/2" strainer and mounting bolts added to be shipped loose
5. Mounting tabs added to frame

Pricing:
The new pricing for the system with these changes are:

Dual Pump EPDM/PVC Dosing Skid: CAD 16,120.94
Dual Pump Viton/PVC/Vented Dosing Skid: CAD 16,619.46

Quote Validity: 30 days (March 27, 2022)
Lead Time: 8 weeks after approved drawings (ARAD). Considering 2 weeks for drawings + 2 weeks for approval, It would be 12 weeks ARO.
Drawing: attached (only to have an idea about the new skid)

Description of the skids are below:

Dual Pump EPDM/PVC Dosing Skid (with 575V motor)

SCOPE OF SUPPLY
Dual-pump (duty/back-up) floor-mounted skid. The system is designed as per attached drawing# 3120800500-210 R2 with markups-EPDM-PVC.

List of main components:
Pump (Qty:2)
-Pump type: MAG Drive Pump
-Model: DB9V-R-E-FF-M272
-Body: PVDF
-Impeller Bushing: Ceramic
-O-Ring: EPDM
-Connection: FRP ANSI 150#
-Impeller Size: 4.18"

-Magnet Set: 8-Pole
-Motor: 1.0 HP, 3 ph/60 Hz/575V, 3450 rpm, TEFC
-Motor Adapter: 56C
-VFD: Not included

Skid components
-Piping and fittings:
-Suction line: 1-1/2" PVC, Sch 80, socket weld, flanged and threaded
-Discharge line: 1" PVC, Sch 80, socket weld, flanged and threaded
-Suction termination point: 1-1/2" FF flange 150#, PVC
-Discharge termination point: 1" FF flange 150#, PVC
-Y-strainer: 1-1/2" PVC/EPDM, Chemline, socket weld
-Pressure Gauge:
For suction line: 2.5" Dial 0-15 PSI stainless steel pressure gauge, liquid filled, with PVC/Teflon isolator, SW, Wika
For discharge line: 2.5" Dial 0-60 PSI stainless steel pressure gauge, liquid filled, with PVC/Teflon isolator, SW, Wika
-Ball valve: 1/2", 1" and 1-1/2" PVC/EPDM, true union with socket weld ends, Chemline
-Ball Check valve: 1" PVC/EPDM, true union with socket ends, Chemline
-Diaphragm valve: 1" PVC/EPDM, true union with socket ends, type 514, Georg Fischer
-Actuated ball valve: 1" PVC/EPDM ball valve, true union and socket ends with spring return pneumatic actuator with Epoxy and Rilsan coated die cast aluminum body and end caps, stainless steel shaft. Complete with Pad Mounted Pilot Valve, 24VDC, anodized aluminum NEMA 4X body, 1/4" NPT pressure port, 1/2" NPT DIN electrical connector, w/ manual override, Chemline
-Pressure Relief Valve: 1/2" PVC/PTFE, 2-port, 0-150 psig adjustable, socket weld, non-ASME, ProMinent
-Magnetic flowmeter: 10P25-ER1A1RA0B5BA with grounding disc DK5GD-25BEL, 24 VDC power supply, range 0.264-79.252 USGPM, flanged, Endress+Hauser
-Seal material: EPDM/ Teflon
-Frame: PE floor-mounted frame without containment or drip tray
-Junction Box: NEMA 4X FRP only for flowmeter and actuated valve

Dual Pump Viton/PVC/Vented Dosing Skid

SCOPE OF SUPPLY
Dual-pump (duty/back-up) floor-mounted skid. The system is designed as per attached drawing# 3120800500-210 R2-Viton-PVC-Vented..

List of main components:
Pump (Qty:2)
-Pump type: MAG Drive Pump
-Model: DB9V-R-FF-M272
-Body: PVDF
-Impeller Bushing: Ceramic
-O-Ring: FKM
-Connection: FRP ANSI 150#
-Impeller Size: 4.18"
-Magnet Set: 8-Pole
-Motor: 1.0 HP, 3 ph/60 Hz/575V, 3450 rpm, TEFC
-Motor Adapter: 56C
-VFD: Not included

Skid components
-Piping and fittings:
-Suction line: 1-1/2" PVC, Sch 80, socket weld, flanged and threaded
-Discharge line: 1" PVC, Sch 80, socket weld, flanged and threaded
-Suction termination point: 1-1/2" FF flange 150#, PVC
-Discharge termination point: 1" FF flange 150#, PVC
-Y-strainer: 1-1/2" PVC/Viton, Chemline, socket weld
-Pressure Gauge:
For suction line: 2.5" Dial 0-15 PSI stainless steel pressure gauge, liquid filled, with PVC/Teflon isolator, SW, Wika
For discharge line: 2.5" Dial 0-60 PSI stainless steel pressure gauge, liquid filled, with PVC/Teflon isolator, SW, Wika
-Ball valve: 1/2", 1" and 1-1/2" PVC/Viton, true union with socket weld ends, Chemline

-Ball Check valve: 1" PVC/Viton, true union with socket ends, Chemline
-Diaphragm valve: 1" PVC/Viton, true union with socket ends, type 514, Georg Fischer
-Actuated ball valve: 1" PVC/Viton ball valve, true union and socket ends with spring return pneumatic actuator with Epoxy and Rilsan coated die cast aluminum body and end caps, stainless steel shaft. Complete with Pad Mounted Pilot Valve, 24VDC, anodized aluminum NEMA 4X body, 1/4" NPT pressure port, 1/2" NPT DIN electrical connector, w/ manual override, Chemline
-Pressure Relief Valve: 1/2" PVC/PTFE, 2-port, 0-150 psig adjustable, socket weld, non-ASME, ProMinent
-Magnetic flowmeter: 10P25-ER1A1RA0B5BA with grounding disc DK5GD-25BEL, 24 VDC power supply, range 0.264-79.252 USGPM, flanged, Endress+Hauser
-Seal material: Viton/ Teflon
-Frame: PE floor-mounted frame without containment or drip tray
-Junction Box: NEMA 4X FRP only for flowmeter and actuated valve

Hi Fengshen,
Current pricing as it stands now is

Dual-Pump EPDM/PVC Dosing Skid: $ 13,196.00

Dual-Pump Viton/PVC/Vented Dosing Skid: $ 13,700.00

Best regards,
Mike

Subject: [EXT] SUEZ - Standard Dual Mag-Drive Skid Costing

Hi Mike,
The price in my hand for the Standard Dual Mag-Drive Skid Costing (hypo) = $13,240 CAD. Please let me know if the cost is still good.

Thanks.

Fengshen

Good day Fengshen,

We thank you for providing us with an opportunity to quote for this project.

In response to your request for quote, we are pleased to offer our proposal # 3308112 Rev.0 which is including below items:

- Two (2) x Atlas Copco Compressor Model **CR7.5-TS-80Gal Vertical 460/3/60-IS** (Two-Stage Splash Lubricated - Full Cast Iron Piston Compressor),
- Two (2) x Atlas Copco standalone refrigerant dryer model **FX15**,
- Two (2) x Atlas Copco Coalescing Filter Model **UD15+.**

We trust the enclosed is to your satisfaction and we look forward to your response and further discussions.

Looking forward to your valuable business,

Best regards,

Mehdi Raeesian – MSc., C.Eng, P.Eng

Technical / Commercial Summary ***3***

Terms and Conditions ***6***

List of Attachments ***7***

Technical / Commercial Summary

(All Equipment are Vendor Standard)

Item	Product No.	Product Description	Qty	Unit Value (CAD)	Total Price (CAD)
1.0	**PISTON AIR COMPRESSOR**		2	$ 3,750.00 Ea.	$ 7,500.00 Ttl.

Atlas Copco Industrial Series 7.5HP two-stage splash lubricated piston air compressor mounted on 80 gallon vertical air vessel model **CR7.5-TS-80Gal Vertical -IS (2020 0400 18)**

➢ Key Features

- Cast iron design to ensure durability and reliability for all demanding applications
- Fully enclosed belt guard for additional equipment safety
- ASME safety valves
- Stainless steel valves
- Aftercooler included for lower compressed air outlet temperature
- Low oil level switch included
- Start/Stop pressure switch control
- Magnetic starter included
- Electronic tank drain
- 10-15 HP models come equipped with head unloaders
- TEFC motor and NEMA 4 control panel (Option)
- 1-year bumper-to-bumper warranty

➢ Characteristics

- Free air delivery: 22.6* cfm @ 175 Psig / 23.8* cfm @ 100 Psig
  * Flow at reference conditions (14.5 PSI, 68°F, 0% RH)
- Noise level: 84 dB(A)
- Connection: 3/4" NPT
- Dimensions: 32" x 26" x 75" (L x W x H)
- Weight: 599 lbs

High Efficiency Electric Motor

- 7.5HP
- 460-575 Vac / 3 Ph / 60

See attached Scope of Supply for complete equipment description.

Item	Product No.	Product Description	Qty	Unit Value (CAD)	Total Price (CAD)
2.0	**AIR DRYER**		2	$ 1,500.00 Ea.	$ 3,000.00 Ttl.

Atlas Copco **FX15** refrigerant air dryer. Removes any condensate from the compressed air and provides a steady pressure dew point as low as +3 to +4°C.

➢ Required compressed air quality at lowest cost

- Increased reliability and lifetime of tools
- and equipment.
- Digital display for precise visual monitoring of pressure dew point and dryer performance.
- Plug-and-play installation.
- Sustainable refrigerant to ensure lowest possible carbon footprint and energy consumption.

➢ Characteristics:

- Maximum working pressure:s 232 psig
- Inlet capacity: 30 cfm
- Pressure drop at full flow: 3.63 psig
- Connections: 3/4 " NPT
- Voltage: 115V / 1Ph / 60Hz
- Dimensions: 20" x 14" x 18" (L x W x H)
- Weight: 44 lbs

See attached Scope of Supply for complete equipment description.

Item	Product No.	Product Description	Qty	Unit Value (CAD)	Total Price (CAD)
3.0	**FILTERS**		2	$ 355.00 Ea.	$ 355.00 Ttl.

Atlas Copco's innovative **UD+** filters combine **two filtration steps in one**, removes contaminants such as liquid water, oil aerosol & wet dust.

➢ Simple solution to reduce environmental impact

- Lowest pressure drop with Atlas Copco's patented Nautilus multi-wrap technology.
- Two-in-one filter for optimum space saving, reduced installation and service costs compared to traditional two filter set-up (DD+ & PD+).
- The differential pressure gauge allows simple monitoring of pressure drop.

➢ Filter Characteristics:

- Atlas Copco model **UD15+**
- Capacity: 32CFM at 100 Psig
- Wet pressure drop: 3.19 Psi
- Liquid water and oil aerosol 0.001 ppm
- Particles 0.01 micron
- Weight: 2.7 lbs
- Connections: 1/2" NPT
- Including Pressure Differential Gauge (PDG) as standard

Item	Product No.	Product Description	Qty	Unit Value (CAD)	Total Price (CAD)

Warranty

- Stationary oil-injected rotary screw compressors:
  - Extended Warranty*: 5 years from start-up for Screw Element
  - Extended Warranty*: 2 years from start-up for Electric Main Drive (motor) and Variable speed Drive (VSD)
  - 12 months from start-up or 18 months from shipment, whichever comes first for entire unit (bumper to bumper)
- All warranties are Ex-Works Atlas Copco Compressors Canada nearest branch

Standard documentation

- Standard drawings (general arrangement, PID, electrical, installation) can be supplied if requested
- O&M manuals are supplied in pdf format

* - All units eligible for Extended Warranty (Screw Element, Motor and VSD) coverage must be (i) registered with Atlas Copco Canada within the first 3 months after the start-up, (ii) maintained and inspected from the start-up according to Atlas Copco preventive maintenance guidelines listed in the instruction manual (delivered together with the compressor) using genuine Atlas Copco parts and lubricants.

NYSDEC Existing Outfall Abandonment Permit

PERMIT
Under the Environmental Conservation Law (ECL)

Permittee and Facility Information

Permit Issued To:
TOWN OF NEW WINDSOR
555 UNION AVE
NEW WINDSOR, NY 12553-6140
(845) 567-4600

Facility:
Caesars Lane Wastewater Treatment Plant
CAESARS LN
NEW WINDSOR, NY 12550

Facility Location: in NEW WINDSOR in ORANGE COUNTY
Facility Principal Reference Point: NYTM-E: 581.291 NYTM-N: 4590.355
Latitude: 41°27'38.4" Longitude: 74°01'35.8"
Project Location: Existing outfall at the mouth of Moodna Creek
Authorized Activity: This permit authorizes disturbance to Freshwater Wetland CO-10, Class 1 and excavation/fill within the Moodna Creek (NYS WIN H-89, Class C) below mean high associated with the removal of the above grade features of the existing sanitary sewer outfall associated with State Pollutant Discharge Elimination System (SPDES) permit NY0022446, which is being relocated to the treatment plant.

Permit Components

NATURAL RESOURCE PERMIT CONDITIONS

GENERAL CONDITIONS, APPLY TO ALL AUTHORIZED PERMITS

NOTIFICATION OF OTHER PERMITTEE OBLIGATIONS

NATURAL RESOURCE PERMIT CONDITIONS - Apply to the Following Permits: FRESHWATER WETLANDS; EXCAVATION & FILL IN NAVIGABLE WATERS

1. **Conformance With Plans** All activities authorized by this permit must be in strict conformance with the approved plans submitted by the applicant or applicant's agent as part of the permit application. Such approved plans were prepared by McGoey, Hauser & Edsall. consisting of Sheet C-103, “Site Plan And Typical Details & Notes”. Any work described in the approved plans that was completed prior to the effective date of this permit is not authorized by this permit..

2. **Post Permit Sign** The permit sign enclosed with this permit shall be posted in a conspicuous location on the worksite and adequately protected from the weather.

3. **Notice of Intent to Commence Work** The Permittee shall notify the Department 48 hours prior to the commencement of work on the project by emailing Angela Schimizzi, angela.schimizzi@dec.ny.gov. The email needs to include the permit number, permittee name, and the project start date.

4. **Manhole Abandonment** As specified in approved plan, all manholes to be abandoned will have any frames, grates, and concrete risers removed to at least 1 ft below existing grade. Any remaining structure will be filled with rip-rap and topped with clean soil to match existing grade.

5. **Remnant Access Road Structures to Be Removed and Area Restored** The existing 48” pipe stream crossing and exposed geotextile in vicinity to be removed completely. Area to be restored to

match existing conditions and the stream grade restored to the level prior to installation. All removal must be to the satisfaction of the Department.

All existing geotextile will be cut back to a minimum of 30 feet from the stream embankments.

6. Prohibition Period for Nesting Birds To protect nesting marsh birds, including threatened and/or endangered species, no outfall removal activities may occur between April 15th and August 31st of any calendar year.

7. Removal of Trees on State Lands Minimal cutting of woody vegetation will be allowed. The permittee must meet with Department forester before any trees are cut.

One (1) week prior to commencing any tree or vegetation clearing pursuant to this permit, the limits of route shall be flagged and any live trees 6" diameter or larger to be removed outside of the flagged route must be marked. A DEC State Lands Forester shall inspect the route and trees to be removed prior to the start of clearing.

All tree limbs shall be cut/pruned perpendicular to the branch outside the branch collar. All pruning shall conform to ANSI 300 (Part 1) Tree Pruning Standards.

The stumps of the trees to be removed must be a height of 6" or less.

8. Use of Motorized Equipment on State Lands The permittee must call the Forester, Evan Masten, at (845) 256-3074 before any motorized equipment moves on to DEC State Lands and before machinery moves off of DEC State Lands.

9. In-Water Work During Low Tide Only Work below Mean High Water shall occur only during the period 2 hours before and after the scheduled low tide.

10. Clean Fill Only All fill shall consist of clean soil, sand and/or gravel that is free of the following substances: asphalt, slag, flyash, broken concrete, demolition debris, garbage, household refuse, tires, woody materials including tree or landscape debris, and metal objects. The introduction of materials toxic to aquatic life is expressly prohibited.

11. No Construction Debris in Wetland or Adjacent Area Any debris or excess materials from construction of this project (including earth, construction materials, trees and stumps) shall be immediately and completely removed from the wetland and adjacent area to an appropriate upland area for disposal.

12. No Equipment in the Water Heavy equipment operation in the water is prohibited. With backhoes and similar heavy equipment, the bucket may enter the water.

13. Seed, Mulch Disturbed Soils All areas of soil disturbance resulting from this project (above the mean high water line) shall be seeded with an appropriate seed mix and mulched with straw within one week of final grading.

14. Precautions Against Contamination of Waters All necessary precautions shall be taken to preclude contamination of any wetland or waterway by suspended solids, sediments, fuels, solvents, lubricants, epoxy coatings, paints, concrete, leachate or any other environmentally deleterious materials associated with the project.

15. **No Interference With Navigation** There shall be no unreasonable interference with navigation by the work herein authorized.

16. **State Not Liable for Damage** The State of New York shall in no case be liable for any damage or injury to the structure or work herein authorized which may be caused by or result from future operations undertaken by the State for the conservation or improvement of navigation, or for other purposes, and no claim or right to compensation shall accrue from any such damage.

17. **State May Require Site Restoration** If upon the expiration or revocation of this permit, the project hereby authorized has not been completed, the applicant shall, without expense to the State, and to such extent and in such time and manner as the Department of Environmental Conservation may lawfully require, remove all or any portion of the uncompleted structure or fill and restore the site to its former condition. No claim shall be made against the State of New York on account of any such removal or alteration.

18. **State May Order Removal or Alteration of Work** If future operations by the State of New York require an alteration in the position of the structure or work herein authorized, or if, in the opinion of the Department of Environmental Conservation it shall cause unreasonable obstruction to the free navigation of said waters or flood flows or endanger the health, safety or welfare of the people of the State, or cause loss or destruction of the natural resources of the State, the owner may be ordered by the Department to remove or alter the structural work, obstructions, or hazards caused thereby without expense to the State, and if, upon the expiration or revocation of this permit, the structure, fill, excavation, or other modification of the watercourse hereby authorized shall not be completed, the owners, shall, without expense to the State, and to such extent and in such time and manner as the Department of Environmental Conservation may require, remove all or any portion of the uncompleted structure or fill and restore to its former condition the navigable and flood capacity of the watercourse. No claim shall be made against the State of New York on account of any such removal or alteration.

GENERAL CONDITIONS - Apply to ALL Authorized Permits:

1. **Facility Inspection by The Department** The permitted site or facility, including relevant records, is subject to inspection at reasonable hours and intervals by an authorized representative of the Department of Environmental Conservation (the Department) to determine whether the permittee is complying with this permit and the ECL. Such representative may order the work suspended pursuant to ECL 71- 0301 and SAPA 401(3).

The permittee shall provide a person to accompany the Department's representative during an inspection to the permit area when requested by the Department.

A copy of this permit, including all referenced maps, drawings and special conditions, must be available for inspection by the Department at all times at the project site or facility. Failure to produce a copy of the permit upon request by a Department representative is a violation of this permit.

2. **Relationship of this Permit to Other Department Orders and Determinations** Unless expressly provided for by the Department, issuance of this permit does not modify, supersede or rescind any order

or determination previously issued by the Department or any of the terms, conditions or requirements contained in such order or determination.

3. **Applications For Permit Renewals, Modifications or Transfers** The permittee must submit a separate written application to the Department for permit renewal, modification or transfer of this permit. Such application must include any forms or supplemental information the Department requires. Any renewal, modification or transfer granted by the Department must be in writing. Submission of applications for permit renewal, modification or transfer are to be submitted to:

Regional Permit Administrator
NYSDEC Region 3 Headquarters
21 S Putt Corners Rd
New Paltz, NY12561

4. **Submission of Renewal Application** The permittee must submit a renewal application at least 30 days before permit expiration for the following permit authorizations: Excavation & Fill in Navigable Waters, Freshwater Wetlands.

5. **Permit Modifications, Suspensions and Revocations by the Department** The Department reserves the right to exercise all available authority to modify, suspend or revoke this permit. The grounds for modification, suspension or revocation include:

a. materially false or inaccurate statements in the permit application or supporting papers;

b. failure by the permittee to comply with any terms or conditions of the permit;

c. exceeding the scope of the project as described in the permit application;

d. newly discovered material information or a material change in environmental conditions, relevant technology or applicable law or regulations since the issuance of the existing permit;

e. noncompliance with previously issued permit conditions, orders of the commissioner, any provisions of the Environmental Conservation Law or regulations of the Department related to the permitted activity.

6. **Permit Transfer** Permits are transferrable unless specifically prohibited by statute, regulation or another permit condition. Applications for permit transfer should be submitted prior to actual transfer of ownership.

NOTIFICATION OF OTHER PERMITTEE OBLIGATIONS

Item A: Permittee Accepts Legal Responsibility and Agrees to Indemnification
The permittee, excepting state or federal agencies, expressly agrees to indemnify and hold harmless the Department of Environmental Conservation of the State of New York, its representatives, employees, and agents ("DEC") for all claims, suits, actions, and damages, to the extent attributable to the permittee's acts or omissions in connection with the permittee's undertaking of activities in connection with, or operation and maintenance of, the facility or facilities authorized by the permit whether in

compliance or not in compliance with the terms and conditions of the permit. This indemnification does not extend to any claims, suits, actions, or damages to the extent attributable to DEC's own negligent or intentional acts or omissions, or to any claims, suits, or actions naming the DEC and arising under Article 78 of the New York Civil Practice Laws and Rules or any citizen suit or civil rights provision under federal or state laws.

Item B: Permittee's Contractors to Comply with Permit
The permittee is responsible for informing its independent contractors, employees, agents and assigns of their responsibility to comply with this permit, including all special conditions while acting as the permittee's agent with respect to the permitted activities, and such persons shall be subject to the same sanctions for violations of the Environmental Conservation Law as those prescribed for the permittee.

Item C: Permittee Responsible for Obtaining Other Required Permits
The permittee is responsible for obtaining any other permits, approvals, lands, easements and rights-of-way that may be required to carry out the activities that are authorized by this permit.

Item D: No Right to Trespass or Interfere with Riparian Rights
This permit does not convey to the permittee any right to trespass upon the lands or interfere with the riparian rights of others in order to perform the permitted work nor does it authorize the impairment of any rights, title, or interest in real or personal property held or vested in a person not a party to the permit.

Item E: SEQR Unlisted Action, No Significant Impact Under the State Environmental Quality Review Act (SEQR), the project associated with this permit is classified as an Unlisted Action with New Windsor Town Board designated as the lead agency. It has been determined that the project will not have a significant effect on the environment.

New York State

Department of Environmental Conservation

NOTICE

The Department of Environmental Conservation (DEC) has issued permit(s) pursuant to the Environmental Conservation Law for work being conducted at this site. For further information regarding the nature and extent of work approved and any Department condition on it, contact the DEC at 845-256-3054 or dep.r3@dec.ny.gov. Please refer to the permit number shown when contacting the DEC.

Permittee: Town of New Windsor

Permit No. 3-3348-00055/00016&17

Effective Date: 12/18/2023

Expiration Date: 12/31/2023

For Work at the Existing Outfall at the Mouth of the Moodna Creek

NATURAL RESOURCE PERMIT CONDITIONS

GENERAL CONDITIONS, APPLY TO ALL AUTHORIZED PERMITS

NOTIFICATION OF OTHER PERMITTEE OBLIGATIONS

NATURAL RESOURCE PERMIT CONDITIONS - Apply to the Following Permits: EXCAVATION & FILL IN NAVIGABLE WATERS

1. **Conformance With Plans** All activities authorized by this permit must be in strict conformance with the approved plans submitted by the applicant or applicant's agent as part of the permit application. Such approved plans were prepared by McGoey, Hauser & Edsall. titled "Caesars Lane WWTP Expansion Phase" dated 12/01/2022, and consisting of Sheet C-100, “Overall Site Development Plan” and Sheet C-101 “Enlarged Outfall Plan”.

2. **Post Permit Sign** The permit sign enclosed with this permit shall be posted in a conspicuous location on the worksite and adequately protected from the weather.

3. **Notice of Intent to Commence Work** The Permittee shall notify the Department 48 hours prior to the commencement of work on the project by emailing Angela Schimizzi, angela.schimizzi@dec.ny.gov. The email needs to include the permit number, permittee name, and the project start date.

4. **Install Erosion Controls** Before any soil is disturbed on the subject site, the permittee shall install erosion and sedimentation controls which are adequate to prevent erosion and sedimentation off-site. Such controls shall be maintained until the unpaved portions of subject site, if any, are stabilized by a self-sustaining cover of vegetation that is adequate to prevent erosion and sedimentation on and off such site. Before such controls are removed, the permittee shall remove all sediment that has accumulated at such controls.

5. **Clean Fill Only** All fill shall consist of clean soil, sand and/or gravel that is free of the following substances: asphalt, slag, flyash, broken concrete, demolition debris, garbage, household refuse, tires, woody materials including tree or landscape debris, and metal objects. The introduction of materials

toxic to aquatic life is expressly prohibited.

6. **No Equipment in the Water** Heavy equipment operation in the water is prohibited. With backhoes and similar heavy equipment, the bucket may enter the water.

7. **Seed, Mulch Disturbed Soils** All areas of soil disturbance resulting from this project (above the mean high water line) shall be seeded with an appropriate perennial grass seed and mulched with straw within one week of final grading.

8. **Precautions Against Contamination of Waters** All necessary precautions shall be taken to preclude contamination of any wetland or waterway by suspended solids, sediments, fuels, solvents, lubricants, epoxy coatings, paints, concrete, leachate or any other environmentally deleterious materials associated with the project.

9. **No Interference With Navigation** There shall be no unreasonable interference with navigation by the work herein authorized.

10. **State Not Liable for Damage** The State of New York shall in no case be liable for any damage or injury to the structure or work herein authorized which may be caused by or result from future operations undertaken by the State for the conservation or improvement of navigation, or for other purposes, and no claim or right to compensation shall accrue from any such damage.

11. **State May Require Site Restoration** If upon the expiration or revocation of this permit, the project hereby authorized has not been completed, the applicant shall, without expense to the State, and to such extent and in such time and manner as the Department of Environmental Conservation may lawfully require, remove all or any portion of the uncompleted structure or fill and restore the site to its former condition. No claim shall be made against the State of New York on account of any such removal or alteration.

12. **State May Order Removal or Alteration of Work** If future operations by the State of New York require an alteration in the position of the structure or work herein authorized, or if, in the opinion of the Department of Environmental Conservation it shall cause unreasonable obstruction to the free navigation of said waters or flood flows or endanger the health, safety or welfare of the people of the State, or cause loss or destruction of the natural resources of the State, the owner may be ordered by the Department to remove or alter the structural work, obstructions, or hazards caused thereby without expense to the State, and if, upon the expiration or revocation of this permit, the structure, fill, excavation, or other modification of the watercourse hereby authorized shall not be completed, the owners, shall, without expense to the State, and to such extent and in such time and manner as the Department of Environmental Conservation may require, remove all or any portion of the uncompleted structure or fill and restore to its former condition the navigable and flood capacity of the watercourse. No claim shall be made against the State of New York on account of any such removal or alteration.

GENERAL CONDITIONS - Apply to ALL Authorized Permits:

1. **Facility Inspection by The Department** The permitted site or facility, including relevant records, is subject to inspection at reasonable hours and intervals by an authorized representative of the

Department of Environmental Conservation (the Department) to determine whether the permittee is complying with this permit and the ECL. Such representative may order the work suspended pursuant to ECL 71- 0301 and SAPA 401(3).

The permittee shall provide a person to accompany the Department's representative during an inspection to the permit area when requested by the Department.

A copy of this permit, including all referenced maps, drawings and special conditions, must be available for inspection by the Department at all times at the project site or facility. Failure to produce a copy of the permit upon request by a Department representative is a violation of this permit.

2. Relationship of this Permit to Other Department Orders and Determinations Unless expressly provided for by the Department, issuance of this permit does not modify, supersede or rescind any order or determination previously issued by the Department or any of the terms, conditions or requirements contained in such order or determination.

3. Applications For Permit Renewals, Modifications or Transfers The permittee must submit a separate written application to the Department for permit renewal, modification or transfer of this permit. Such application must include any forms or supplemental information the Department requires. Any renewal, modification or transfer granted by the Department must be in writing. Submission of applications for permit renewal, modification or transfer are to be submitted to:

Regional Permit Administrator
NYSDEC Region 3 Headquarters
21 S Putt Corners Rd
New Paltz, NY12561

4. Submission of Renewal Application The permittee must submit a renewal application at least 30 days before permit expiration for the following permit authorizations: Excavation & Fill in Navigable Waters.

5. Permit Modifications, Suspensions and Revocations by the Department The Department reserves the right to exercise all available authority to modify, suspend or revoke this permit. The grounds for modification, suspension or revocation include:

a. materially false or inaccurate statements in the permit application or supporting papers;

b. failure by the permittee to comply with any terms or conditions of the permit;

c. exceeding the scope of the project as described in the permit application;

d. newly discovered material information or a material change in environmental conditions, relevant technology or applicable law or regulations since the issuance of the existing permit;

e. noncompliance with previously issued permit conditions, orders of the commissioner, any provisions of the Environmental Conservation Law or regulations of the Department related to the permitted activity.

6. Permit Transfer Permits are transferrable unless specifically prohibited by statute, regulation or

another permit condition. Applications for permit transfer should be submitted prior to actual transfer of ownership.

NOTIFICATION OF OTHER PERMITTEE OBLIGATIONS

Item A: Permittee Accepts Legal Responsibility and Agrees to Indemnification
The permittee, excepting state or federal agencies, expressly agrees to indemnify and hold harmless the Department of Environmental Conservation of the State of New York, its representatives, employees, and agents ("DEC") for all claims, suits, actions, and damages, to the extent attributable to the permittee's acts or omissions in connection with the permittee's undertaking of activities in connection with, or operation and maintenance of, the facility or facilities authorized by the permit whether in compliance or not in compliance with the terms and conditions of the permit. This indemnification does not extend to any claims, suits, actions, or damages to the extent attributable to DEC's own negligent or intentional acts or omissions, or to any claims, suits, or actions naming the DEC and arising under Article 78 of the New York Civil Practice Laws and Rules or any citizen suit or civil rights provision under federal or state laws.

Item B: Permittee's Contractors to Comply with Permit
The permittee is responsible for informing its independent contractors, employees, agents and assigns of their responsibility to comply with this permit, including all special conditions while acting as the permittee's agent with respect to the permitted activities, and such persons shall be subject to the same sanctions for violations of the Environmental Conservation Law as those prescribed for the permittee.

Item C: Permittee Responsible for Obtaining Other Required Permits
The permittee is responsible for obtaining any other permits, approvals, lands, easements and rights-of-way that may be required to carry out the activities that are authorized by this permit.

Item D: No Right to Trespass or Interfere with Riparian Rights
This permit does not convey to the permittee any right to trespass upon the lands or interfere with the riparian rights of others in order to perform the permitted work nor does it authorize the impairment of any rights, title, or interest in real or personal property held or vested in a person not a party to the permit.

Item E: SEQR Unlisted Action, No Significant Impact Under the State Environmental Quality Review Act (SEQR), the project associated with this permit is classified as an Unlisted Action with New Windsor Town Board designated as the lead agency. It has been determined that the project will not have a significant effect on the environment.

New York State

Department of Environmental Conservation

NOTICE

The Department of Environmental Conservation (DEC) has issued permit(s) pursuant to the Environmental Conservation Law for work being conducted at this site. For further information regarding the nature and extent of work approved and any Department condition on it, contact the DEC at 845-256-3054 or dep.r3@dec.ny.gov. Please refer to the permit number shown when contacting the DEC.

Permittee: Town of New Windsor

Permit No. 3-3348-00055/00019

Effective Date: 12/18/2023

Expiration Date: 12/31/2023

For Construction of a New Outfall in the Bed of the Moodna Creek at the WWTP

NOTE: This notice is **NOT** a permit.

EXHIBIT O

NYSDEC SPDES Discharge Permit

State Pollutant Discharge Elimination System (SPDES) DISCHARGE PERMIT

SIC Code:	**4952**	NAICS Code:	**221320**	SPDES Number:	**NY 002 2446**
Discharge Class (CL):	**05**			DEC Number:	**3-3348-00055**
Toxic Class (TX):	**T**			Effective Date (EDP):	**01/01/2024**
Major-Sub Drainage Basin:	**13 - 03**			Expiration Date (ExDP):	**12/31/2028**
Water Index Number:	**H-89**	Item No.:	**862 - 77**	Modification Dates (EDPM):	
Compact Area:	**-**				

This SPDES permit is issued in compliance with Title 8 of Article 17 of the Environmental Conservation Law of New York State and in compliance with the Clean Water Act, as amended, (33 U.S.C. '1251 et.seq.)

PERMITTEE NAME AND ADDRESS					
Name:	**Town of New Windsor**	Attention:	**Supervisor and Town Board**		
Street:	**555 Union Avenue**				
City:	**New Windsor**	State:	**NY**	Zip Code:	**12553**
Email:		Phone:			

is authorized to discharge from the facility described below:

FACILITY NAME, ADDRESS, AND PRIMARY OUTFALL															
Name:	**Caesars Lane Wastewater Treatment Facility**														
Address / Location:	**145 Caesars Lane**											County:	**Orange**		
City:	**New Windsor**						State:	**NY**				Zip Code:	**12553**		
Facility Location:		Latitude:	**41**	°	**27**	’	**39**	” N	& Longitude:	**74**	°	**01**	’	**35**	” W
Primary Outfall No.:	**001**	Latitude:	**41**	°	**27**	’	**36**	” N	& Longitude:	**74**	°	**01**	’	**35**	” W
Outfall Description:	**Treated Sanitary**	Receiving Water:	**Moodna Creek**						Class:	**C**		Standard:	**-**		

in accordance with: effluent limitations; monitoring and reporting requirements; other provisions and conditions set forth in this permit; and 6 NYCRR Part 750-1 and 750-2.

This permit and the authorization to discharge shall expire on midnight of the expiration date shown above and the permittee shall not discharge after the expiration date unless this permit has been renewed or extended pursuant to law. To be authorized to discharge beyond the expiration date, the permittee shall apply for permit renewal not less than 180 days prior to the expiration date shown above.

DEFINITIONS

TERM	DEFINITION
7-Day Geo Mean	The highest allowable geometric mean of daily discharges over a calendar week.
7-Day Average	The average of all daily discharges for each 7-days in the monitoring period. The sample measurement is the highest of the 7-day averages calculated for the monitoring period.
12-Month Rolling Average (12 MRA)	The current monthly value of a parameter, plus the sum of the monthly values over the previous 11 months for that parameter, divided by the number of months for which samples were collected in the 12-month period.
30-Day Geometric Mean	The highest allowable geometric mean of daily discharges over a calendar month, calculated as the antilog of: the sum of the log of each of the daily discharges measured during a calendar month divided by the number of daily discharges measured during that month.
Action Level	Action level means a monitoring requirement characterized by a numerical value that, when exceeded, triggers additional permittee actions and department review to determine if numerical effluent limitations should be imposed.
Compliance Level / Minimum Level	A compliance level is an effluent limitation. A compliance level is given when the water quality evaluation specifies a Water Quality Based Effluent Limit (WQBEL) below the Minimum Level. The compliance level shall be set at the Minimum Level (ML) for the most sensitive analytical method as given in 40 CFR Part 136, or otherwise accepted by the Department.
Daily Discharge	The discharge of a pollutant measured during a calendar day or any 24-hour period that reasonably represents the calendar day for the purposes of sampling. For pollutants expressed in units of mass, the 'daily discharge' is calculated as the total mass of the pollutant discharged over the day. For pollutants with limitations expressed in other units of measurement, the 'daily discharge' is calculated as the average measurement of the pollutant over the day.
Daily Maximum	The highest allowable Daily Discharge.
Daily Minimum	The lowest allowable Daily Discharge.
Effective Date of Permit (EDP or EDPM)	The date this permit is in effect.
Effluent Limitations	Effluent limitation means any restriction on quantities, quality, rates and concentrations of chemical, physical, biological, and other constituents of effluents that are discharged into waters of the state.
Expiration Date of Permit (ExDP)	The date this permit is no longer in effect.
Instantaneous Maximum	The maximum level that may not be exceeded at any instant in time.
Instantaneous Minimum	The minimum level that must be maintained at all instants in time.
Monthly Average	The highest allowable average of daily discharges over a calendar month, calculated as the sum of each of the daily discharges measured during a calendar month divided by the number of daily discharges measured during that month.
Outfall	The terminus of a sewer system, or the point of emergence of any waterborne sewage, industrial waste or other wastes or the effluent therefrom, into the waters of the State.
Range	The minimum and maximum instantaneous measurements for the reporting period must remain between the two values shown.
Receiving Water	The classified waters of the state to which the listed outfall discharges.
Sample Frequency / Sample Type / Units	See NYSDEC's "DMR Manual for Completing the Discharge Monitoring Report for the SPDES" for information on sample frequency, type and units.

PERMIT LIMITS, LEVELS AND MONITORING (During Construction)

OUTFALL	LIMITATIONS APPLY	RECEIVING WATER	EFFECTIVE	EXPIRING

WHOLE EFFLUENT TOXICITY (WET) TESTING		Limit	Units	Action Level	Units	Sample Frequency	Sample Type	Inf.	Eff.	FN
WET - Acute Invertebrate	See footnote			1.8	TUa	Quarterly	See footnote		X	4
WET - Acute Vertebrate	See footnote			1.8	TUa	Quarterly	See footnote		X	4
WET - Chronic Invertebrate	See footnote			11	TUc	Quarterly	See footnote		X	4
WET - Chronic Vertebrate	See footnote			11	TUc	Quarterly	See footnote		X	4

FOOTNOTES:

1. Effluent shall not exceed 30% and 20% of influent concentration values for BOD_5 & TSS respectively.
2. Composite samples shall be collected in accordance with 6 NYCRR 750-2.5(a)(2)(iii).
3. Sampling and reporting for total residual chlorine are only necessary if chlorine is used for disinfection, elsewhere in the treatment process, or the facility otherwise has reasonable potential to discharge chlorine. Otherwise, the permittee shall report NODI-9 on the DMR.
4. **Whole Effluent Toxicity (WET) Testing:**

   Testing Requirements – Chronic WET testing is required, but report both the acute and chronic results. Testing shall be performed in accordance with 40 CFR Part 136 and TOGS 1.3.2 unless prior written approval has been obtained from the Department. The test species shall be Ceriodaphnia dubia (water flea - invertebrate) and Pimephales promelas (fathead minnow - vertebrate). Receiving water collected upstream from the discharge should be used for dilution. All tests conducted should be static-renewal (two 24-hr composite samples with one renewal for Acute tests and three 24-hr composite samples with two renewals for Chronic tests). The appropriate dilution series should be used to generate a definitive test endpoint, otherwise an immediate rerun of the test may be required. WET testing shall be coordinated with the monitoring of chemical and physical parameters limited by this permit so that the resulting analyses are also representative of the sample used for WET testing. The ratio of critical receiving water flow to discharge flow (i.e. dilution ratio) is 6:1 for acute, and 11:1 for chronic. Discharges which are disinfected using chlorine should be dechlorinated prior to WET testing or samples shall be taken immediately prior to the chlorination system.

   Monitoring Period - WET testing shall be performed quarterly (calendar quarters) during calendar years ending in **4** and **9**.

   Reporting - Toxicity Units shall be calculated and reported on the DMR as follows: TUa = (100)/(48-hr LC50) [note that Acute data is generated by both Acute and Chronic testing] and TUc = (100)/(7-day NOEC) or (100)/(7-day IC25) when Chronic testing has been performed or TUc = (TUa) x (10) when only Acute testing has been performed and is used to predict Chronic test results, where the 48-hr LC50, 7-day NOEC and/or IC25 are all expressed in % effluent. This must be done, including the Chronic prediction from the Acute data, for both species unless otherwise directed. For Chronic results, report the most sensitive endpoint (i.e. survival, growth and/or reproduction) corresponding to the lowest 7-day NOEC or IC25 and resulting highest TUc. For Acute results, report a TUa of 0.3 if there is no statistically significant mortality in 100% effluent as compared to the control. Report a TUa of 1.0 if there is statistically significant mortality in 100% effluent as compared to the control, but insufficient mortality to generate a 48-hr LC50. Also, in the absence of a 48-hr LC50, use 1.0 TUa for the Chronic prediction from the Acute data, and report a TUc of 10.0.

   The complete test report including all bench sheets, statistical analyses, reference toxicity data, daily average flow at the time of sampling and other appropriate supporting documentation, shall be submitted within 60 days following the end of each test period with your WET DMR and to the WET@dec.ny.gov email address. A summary page of the test results for the invertebrate and vertebrate species indicating TUa, 48-hr LC50 for Acute tests and/or TUc, NOEC, IC25, and most sensitive endpoints for Chronic tests, should also be included at the beginning of the test report.

   WET Testing Action Level Exceedances - If an action level is exceeded then the Department may require the permittee to conduct additional WET testing including Acute and/or Chronic tests. Additionally, the permittee may be required to perform a Toxicity Identification/Reduction Evaluation (TI/RE) in accordance with Department guidance. Enforceable WET limits may also apply. The permittee shall be notified in writing by their Regional DEC office of additional requirements. The written notification shall include the reason(s) why such testing, TI/RE and/or limits are required.

PERMIT LIMITS, LEVELS AND MONITORING (Post Construction)

OUTFALL	LIMITATIONS APPLY	RECEIVING WATER	EFFECTIVE	EXPIRING
001	All Year (except where noted)	Moodna Creek	Upon Construction Completion + 60 Days	ExDP

WET - Acute Invertebrate	See footnote			0.3	TUa	Quarterly	See footnote		X	9,11
WET - Acute Vertebrate	See footnote			0.3	TUa	Quarterly	See footnote		X	9,11
WET - Chronic Invertebrate	See footnote			1.0	TUc	Quarterly	See footnote		X	9,11
WET - Chronic Vertebrate	See footnote			1.0	TUc	Quarterly	See footnote		X	9,11

FOOTNOTES:

1. Effluent shall not exceed 15% of influent concentration values for BOD_5 & TSS.

2. Biennial Pollutant Scan: The permittee shall perform effluent sampling every two (2) years for all applicable pollutants identified in the NY-2A Application, Tables A - D. Sampling data shall be collected according to the guidance in the NY-2A application and maintained by the permittee. Monitoring results shall not be submitted on the DMR. Data shall be submitted with the next submission of the NY-2A form.

3. Sampling and reporting for total residual chlorine are only necessary if chlorine is used for disinfection, elsewhere in the treatment process, or the facility otherwise has reasonable potential to discharge chlorine. Otherwise, the permittee shall report NODI-9 on the DMR.

4. This is a Compliance Level. The calculated WQBEL is 0.005 mg/L.

5. This is a Compliance Level. The calculated WQBEL is 0.6 µg/L.

6. The 12-month rolling average for total mercury is defined as the sum of the current month's monthly average concentration added to the quarterly averages from the eleven previous months, divided by the number of months for which samples were collected in the 12-month period.

7. At least 4 individual manual grab samples must be collected over the course of 24 hours analyzed separately, and the concentrations averaged. Alternatively, grab samples may be collected in the field and composited in the laboratory and analyzed as a single sample if the results are equivalent to the arithmetic averaging of individual grab samples. Where effluent flows do not vary more than 10 percent over the course of composite sample collection, composite samples may be composed of equal size grab samples taken at equal time intervals. Where effluent flows do vary more than 10 percent over the course of sample collection, composite samples must be flow proportioned.

8. Total phenols shall be determined by colorimetric or spectrophotometric analysis using the most sufficiently sensitive method approved under 40 CFR Part 136 for total recoverable phenols.

9. Quarterly samples shall be collected in calendar quarters (Q1 – January 1st to March 31st; Q2 – April 1st to June 30th; Q3 – July 1st to September 30th; Q4 – October 1st to December 31st).

10. The permittee may develop and submit a sampling plan for approval for bis(2-ethylhexyl) phthalate sampling to determine if detections of bis(2-ethylhexyl) phthalate are from a source within the collection system, or from laboratory contamination. If the bis(2-ethylhexyl) phthalate is detected in the effluent in excess of the permit effluent limitation, the permittee shall initiate a track down of potential sources through an inventory of industrial users and associated sampling of the industrial users. The permittee shall ensure that proper sampling and analytical protocols for bis(2-ethylhexyl) phthalate are used, and that the data is validated in order to reduce the possibility of equipment contaminating samples. If it can be determined that the source of the bis(2-ethylhexyl) phthalate is from laboratory contamination, the permittee may apply for a permit modification to remove the bis(2-ethylhexyl) phthalate limit.

11. **Whole Effluent Toxicity (WET) Testing:**
Testing Requirements – Chronic WET testing is required, but report both the acute and chronic results. Testing shall be performed in accordance with 40 CFR Part 136 and TOGS 1.3.2 unless prior written approval has been obtained from the Department. The test species shall be Ceriodaphnia dubia (water flea - invertebrate) and Pimephales promelas (fathead minnow - vertebrate). Receiving water collected upstream from the discharge should be used for dilution. All tests conducted should be static-renewal (two 24-hr composite samples with one renewal

for Acute tests and three 24-hr composite samples with two renewals for Chronic tests). The appropriate dilution series should be used to generate a definitive test endpoint, otherwise an immediate rerun of the test may be required. WET testing shall be coordinated with the monitoring of chemical and physical parameters limited by this permit so that the resulting analyses are also representative of the sample used for WET testing. The ratio of critical receiving water flow to discharge flow (i.e. dilution ratio) is 1:1 for acute, and 1:1 for chronic. Discharges which are disinfected using chlorine should be dechlorinated prior to WET testing or samples shall be taken immediately prior to the chlorination system.

Monitoring Period - WET testing shall be performed quarterly (calendar quarters) during calendar years ending in **4** and **9**.

Reporting - Toxicity Units shall be calculated and reported on the DMR as follows: TUa = (100)/(48-hr LC50) [note that Acute data is generated by both Acute and Chronic testing] and TUc = (100)/(7-day NOEC) or (100)/(7-day IC25) when Chronic testing has been performed or TUc = (TUa) x (10) when only Acute testing has been performed and is used to predict Chronic test results, where the 48-hr LC50, 7-day NOEC and/or IC25 are all expressed in % effluent. This must be done, including the Chronic prediction from the Acute data, for both species unless otherwise directed. For Chronic results, report the most sensitive endpoint (i.e. survival, growth and/or reproduction) corresponding to the lowest 7-day NOEC or IC25 and resulting highest TUc. For Acute results, report a TUa of 0.3 if there is no statistically significant mortality in 100% effluent as compared to the control. Report a TUa of 1.0 if there is statistically significant mortality in 100% effluent as compared to the control, but insufficient mortality to generate a 48-hr LC50. Also, in the absence of a 48-hr LC50, use 1.0 TUa for the Chronic prediction from the Acute data, and report a TUc of 10.0.

The complete test report including all bench sheets, statistical analyses, reference toxicity data, daily average flow at the time of sampling and other appropriate supporting documentation, shall be submitted within 60 days following the end of each test period with your WET DMR and to the WET@dec.ny.gov email address. A summary page of the test results for the invertebrate and vertebrate species indicating TUa, 48-hr LC50 for Acute tests and/or TUc, NOEC, IC25, and most sensitive endpoints for Chronic tests, should also be included at the beginning of the test report.

WET Testing Action Level Exceedances - If an action level is exceeded then the Department may require the permittee to conduct additional WET testing including Acute and/or Chronic tests. Additionally, the permittee may be required to perform a Toxicity Identification/Reduction Evaluation (TI/RE) in accordance with Department guidance. Enforceable WET limits may also apply. The permittee shall be notified in writing by their Regional DEC office of additional requirements. The written notification shall include the reason(s) why such testing, TI/RE and/or limits are required.

STORMWATER POLLUTION PREVENTION REQUIREMENTS

NO EXPOSURE CERTIFICATION

The permittee submitted a Conditional Exclusion for No Exposure Form on June 30, 2023, certifying that all industrial activities and materials are completely sheltered from exposure to rain, snow, snowmelt, and/or stormwater runoff. The permittee must maintain a condition of no exposure for the exclusion to remain applicable. If conditions change resulting in the exposure of materials and activities to stormwater, the permittee must notify the Regional Water Engineer. The permittee must recertify a condition of no exposure every five years by completing the “No Exposure Certification Form” found on the NYSDEC website.

MERCURY MINIMIZATION PROGRAM (MMP) - Type I

1. General - The permittee must develop, implement, and maintain a mercury minimization program (MMP), containing the elements set forth below, to reduce mercury effluent levels with the goal of achieving the WQBEL of 0.7 ng/L.

2. MMP Elements - The MMP must be a written document and must include any necessary drawings or maps of the facility and/or collection system. Other related documents already prepared for the facility may be used as part of the MMP and may be incorporated by reference. At a minimum, the MMP must include the following elements as described in detail below:

   a. Monitoring - Monitoring at Outfall 001, influent and other locations tributary to compliance points shall be performed using either USEPA Method 1631 or another sufficiently sensitive method, as approved under 40 CFR Part 136[1]. Monitoring of raw materials, equipment, treatment residuals, and other non-wastewater/non-stormwater substances may be performed using other methods as appropriate. Monitoring must be coordinated so that the results can be effectively compared between locations.

      Minimum required monitoring is as follows:

      i. Sewage Treatment Plant Influent and/or Effluent – The permittee must collect samples at the location(s) and frequency as specified in the SPDES permit limitations table.

      ii. *Key Locations* and *Potential Mercury Sources* – The permittee must sample *key locations*, chosen to identify *potential mercury sources*, at least semi-annually. Sampling of discharges from dental facilities in compliance with 6 NYCRR 374.4 is not required.

      iii. Hauled Wastes – The permittee must establish procedures for the acceptance of hauled waste to ensure the hauled waste is not a potential mercury source. Loads which may exceed 500 ng/L,[2] must receive approval from the Department prior to acceptance.

      iv. Decreased Monitoring Requirements - Facilities with EEQ at or below 12 ng/L are eligible for the following:
         1) Reduced requirements, through a permittee-initiated permit modification
            a) Conduct influent monitoring, sampling quarterly, in lieu of monitoring within the collection system, such as at *key locations*; and
            b) Conduct effluent compliance sampling quarterly.
         2) If a facility with reduced requirements reports discharges above 12 ng/L for two of four consecutive effluent samples, the Department may undertake a Department-initiated modification to remove the allowance of reduced requirements.
         3) Under the decreased permit requirements, the facility must continue to conduct a status report, as applicable in accordance with 2.c of this MMP, to determine if any waste streams have changed.

      v. Additional monitoring must be completed as required elsewhere in this permit (e.g., locations tributary to compliance points).

   b. Control Strategy - The control strategy must contain the following minimum elements:

      i. Pretreatment/Sewer Use Law - The permittee must review pretreatment program requirements and the Sewer Use Law (SUL) to ensure it is up-to-date and enforceable with applicable permit requirements and will support efforts to achieve a dissolved mercury concentration of 0.70 ng/L in the effluent.

      ii. Monitoring and Inventory/Inspections for Outfall 001 -
         1) Monitoring shall be performed as described in 2.a above. As mercury sources are found, the permittee must enforce its sewer use law to track down and minimize these sources.
         2) The permittee must inventory and/or inspect users of its system as necessary to support the MMP.
            a) Dental Facilities
               1. The permittee must maintain an inventory of each dental facility.

[1] Outfall monitoring must be conducted using the methods specified in Table 8 of *DOW 1.3.10.*
[2] A level of 0.2 mg/L (200,000 ng/L) or more is considered hazardous per 40 CFR Part 261.11. 500 ng/L is used here to alert the permittee that there is an unusual concentration of mercury and that it will need to be managed appropriately.

MERCURY MINIMIZATION PROGRAM (MMP) - Type I (Continued)

2. The permittee must inspect each dental facility at least once every five years to verify compliance with the wastewater treatment operation, maintenance, and notification elements of 6 NYCRR 374.4. Alternatively, the permittee may develop and implement an outreach program,[3] which informs users of their responsibilities, and collect the "Amalgam Waste Compliance Report for Dental Dischargers"[4] form, as needed, to satisfy the inspection requirements. The permittee must conduct the outreach program at least once every five years and ensure the "Amalgam Waste Compliance Report for Dental Dischargers" are submitted by new users, as necessary. The outreach program could be supported by a subset of site inspections.
3. A file shall be maintained containing documentation demonstrating compliance with 2.b.ii.2)a) above. This file shall be available for review by the Department representatives and copies shall be provided upon request.

b) Other *potential mercury sources*
1. The permittee must maintain an inventory of other *potential mercury sources.*
2. The permittee must inspect other *potential mercury sources* once every five years. Alternatively, the permittee may develop and implement an outreach program which informs users of their responsibilities as *potential mercury sources.* The permittee must conduct the outreach program at least once every five years. The outreach program should be supported by a subset of site inspections.
3. A file shall be maintained containing documentation demonstrating compliance with 2.b.ii.2)b) above. This file shall be available for review by the Department representatives and copies shall be provided upon request.

iii. Systems with CSO & Type II SSO Outfalls – Permittees must prioritize *potential mercury sources* upstream of CSOs and Type II SSOs for mercury reduction activities and/or controlled-release discharge.

iv. Equipment and Materials – Equipment and materials (e.g., thermometers, thermostats) used by the permittee, which may contain mercury, must be evaluated by the permittee. As equipment and materials containing mercury are updated/replaced, the permittee must use mercury-free alternatives, if possible.

v. Bulk Chemical Evaluation – For chemicals, used at a rate which exceeds 1,000 gallons/year or 10,000 pounds/year, the permittee must obtain a manufacturer's certificate of analysis, a chemical analysis performed by a certified laboratory, and/or a notarized affidavit which describes the substances' mercury concentration and the detection limit achieved. If possible, the permittee must only use bulk chemicals utilized in the wastewater treatment process which contain <10 ppb mercury.

c. **Status Report - An annual** status report must be developed and maintained on site, in accordance with the Schedule of Additional Submittals, summarizing:

i. All MMP monitoring results for Outfall 001 for the previous reporting period;

ii. A list of known and *potential mercury sources* for Outfall 001
1) If the permittee meets the criteria for MMP Type IV, the permittee must notify the Department for a permittee-initiated modification;

iii. All actions undertaken, pursuant to the control strategy, during the previous reporting period;

iv. Actions planned, pursuant to the control strategy, for the upcoming reporting period; and

v. Progress towards achieving a dissolved mercury concentration of 0.70 ng/L in the effluent (e.g., summarizing reductions in effluent concentrations as a result of the control strategy implementation and/or installation/modification of a treatment system).

The permittee must maintain a file with all MMP documentation. The file must be available for review by Department representatives and copies must be provided upon request in accordance with 6 NYCRR 750-2.1(i) and 750-2.5(c)(4).

[3] For example, the outreach program could include education about sources of mercury and what to do if a mercury source is found.
[4] The form, "Amalgam Waste Compliance Report for Dental Dischargers," can be found here: https://www.dec.ny.gov/docs/water_pdf/dentalform.pdf

MERCURY MINIMIZATION PROGRAM (MMP) - Type I (Continued)

3. MMP Modification - The MMP must be modified whenever:
   a. Changes at the facility, or within the collection system, increase the potential for mercury discharges;
   b. Effluent discharges exceed the current permit limitation(s); or
   c. A letter from the Department identifies inadequacies in the MMP.

   The Department may use information in the status reports, as applicable in accordance with 2.c of this MMP, to determine if the permit limitations and MMP Type is appropriate for the facility.

DEFINITIONS:

Key location – a location within the collection/wastewater system (e.g. including but not limited to a specific manhole/access point, tributary sewer/wastewater connection, or user discharge point) identified by the permittee as a potential mercury source. The permittee may adjust key locations based upon sampling and/or best professional judgement.

Potential mercury source – a source identified by the permittee that may reasonably be expected to have total mercury contained in the discharge. Some potential mercury sources include switches, fluorescent lightbulbs, cleaners, degreasers, thermometers, batteries, hauled wastes, universities, hospitals, laboratories, landfills, Brownfield sites, or raw material storage.

DISCHARGE NOTIFICATION REQUIREMENTS

(a) The permittee shall install and maintain identification signs at all outfalls to surface waters listed in this permit, unless the Permittee has obtained a waiver in accordance with the Discharge Notification Act (DNA). Such signs shall be installed before initiation of any new discharge location.

(b) Subsequent modifications to or renewal of this permit does not reset or revise the deadline set forth in (a) above, unless a new deadline is set explicitly by such permit modification or renewal.

(c) The Discharge Notification Requirements described herein do not apply to outfalls from which the discharge is composed exclusively of storm water, or discharges to ground water.

(d) The sign(s) shall be conspicuous, legible and in as close proximity to the point of discharge as is reasonably possible while ensuring the maximum visibility from the surface water and shore. The signs shall be installed in such a manner to pose minimal hazard to navigation, bathing or other water related activities. If the public has access to the water from the land in the vicinity of the outfall, an identical sign shall be posted to be visible from the direction approaching the surface water.

The signs shall have **minimum** dimensions of eighteen inches by twenty-four inches (18" x 24") and shall have white letters on a green background and contain the following information:

N.Y.S. PERMITTED DISCHARGE POINT

SPDES PERMIT No.: NY_____

OUTFALL No. :____

For information about this permitted discharge contact:

Permittee Name: _____

Permittee Contact: _____

Permittee Phone: ( ) - ### - ####

OR:

NYSDEC Division of Water Regional Office Address:

NYSDEC Division of Water Regional Phone: ( ) - ### - ####

(e) Upon request, the permittee shall make available electronic or hard copies of the sampling data to the public. In accordance with the RECORDING, REPORTING AND ADDITIONAL MONITORING REQUIREMENTS page of your permit, each DMR shall be maintained (either electronically or as a hard copy) on record for a period of five years.

(f) The permittee shall periodically inspect the outfall identification sign(s) in order to ensure they are maintained, are still visible, and contain information that is current and factually correct. Signs that are damaged or incorrect shall be replaced within 3 months of inspection.

INDUSTRIAL PRETREATMENT PROGRAM IMPLEMENTATION REQUIREMENTS

A. DEFINITIONS: Generally, terms used in this Section shall be defined as in the General Pretreatment Regulations (40 CFR Part 403). Specifically, the following definitions apply to terms used in this Section:

1. Categorical Industrial User (CIU): an industrial user of the POTW that is subject to Categorical Pretreatment Standards under 40 CFR 403.6 and 40 CFR Chapter I, Subchapter N;

2. Local Limits: General Prohibitions, specific prohibitions and specific limits as set forth in 40 CFR 403.5.

3. The Publicly Owned Treatment Works (POTW): as defined by 40 CFR 403.3(q) and that discharges in accordance with this permit.

4. Program Submission(s): requests for approval or modification of the POTW Pretreatment Program submitted in accordance with 40 CFR 403.11 or 403.18 and approved by USEPA on **September 4, 1995**.

5. Significant Industrial User (SIU):
   a) CIUs;
   b) Except as provided in 40 CFR 403.3(v)(3), any other industrial user that discharges an average of 25,000 gallons per day or more of process wastewater (excluding sanitary, non-contact cooling and boiler blowdown wastewater) to the POTW;
   c) Except as provided in 40 CFR 403.3(v)(3), any other industrial user that contributes a process waste stream which makes up 5 percent or more of the average dry weather hydraulic or organic capacity of the POTW treatment plant;
   d) Any other industrial user that the permittee designates as having a reasonable potential for adversely affecting the POTW's operation or for violating a pretreatment standard or requirement.

6. Substances of Concern: Substances identified by the New York State Department of Environmental Conservation Industrial Chemical Survey as substances of concern.

B. IMPLEMENTATION: The permittee shall implement a POTW Pretreatment Program in accordance 40 CFR Part 403 and as set forth in the permittee's approved Program Submission(s). Modifications to this program shall be made in accordance with 40 CFR 403.18. Specific program requirements are as follows:

1. Industrial Survey: To maintain an updated inventory of industrial dischargers to the POTW the permittee shall:
   a) Identify, locate and list all industrial users who might be subject to the industrial pretreatment program from the pretreatment program submission and any other necessary, appropriate and available sources. This identification and location list will be updated, at a minimum, every five years. As part of this update the permittee shall collect a current and complete New York State Industrial Chemical Survey form (or equivalent) from each SIU.
   b) Identify the character and volume of pollutants contributed to the POTW by each industrial user identified in B.1.a above that is classified as a SIU.
   c) Identify, locate and list, from the pretreatment program submission and any other necessary, appropriate and available sources, all SIUs of the POTW.

2. Control Mechanisms: To provide adequate notice to and control of industrial users of the POTW the permittee shall:
   a) Inform by certified letter, hand delivery courier, overnight mail, or other means which will provide written acknowledgment of delivery, all industrial users identified in B.1.a. above of applicable pretreatment standards and requirements including the requirement to comply with the local sewer use law, regulation or ordinance and any applicable requirements under section 204(b) and 405 of the Federal Clean Water Act and Subtitles C and D of the Resource Conservation and Recovery Act.

INDUSTRIAL PRETREATMENT PROGRAM IMPLEMENTATION REQUIREMENTS (continued)

b) Control through permit or similar means the contribution to the POTW by each SIU to ensure compliance with applicable pretreatment standards and requirements. Permits shall contain limitations, sampling frequency and type, reporting and self-monitoring requirements as described below, requirements that limitations and conditions be complied with by established deadlines, an expiration date not later than five years from the date of permit issuance, a statement of applicable civil and criminal penalties and the requirement to comply with Local Limits and any other requirements in accordance with 40 CFR 403.8(f)(1).

3. Monitoring and Inspection: To provide adequate, ongoing characterization of non-domestic users of the POTW, the permittee shall:
   a) Receive and analyze self-monitoring reports and other notices. The permittee shall require all SIUs to submit self-monitoring reports at least every six months unless the permittee collects all such information required for the report, including flow data.
   b) The permittee shall adequately inspect each SIU at a minimum frequency of once per year.
   c) The permittee shall collect and analyze samples from each SIU for all priority pollutants that can reasonably be expected to be detectable at levels greater than the levels found in domestic sewage at a minimum frequency of once per year.
   d) Require, through permits, each SIU to collect at least one 24 hour, flow proportioned composite (where feasible) effluent sample every six months and analyze each of those samples for all priority pollutants that can reasonably be expected to be detectable in that discharge at levels greater than the levels found in domestic sewage. The permittee may perform the aforementioned monitoring in lieu of the SIU except that the permittee must also perform the compliance monitoring described in 3.c.

4. Enforcement: To assure adequate, equitable enforcement of the industrial pretreatment program the permittee shall:
   a) Investigate instances of noncompliance with pretreatment standards and requirements, as indicated in self-monitoring reports and notices or indicated by analysis, inspection and surveillance activities. Sample taking and analysis and the collection of other information shall be performed with sufficient care to produce evidence admissible in enforcement proceedings or in judicial actions. Enforcement activities shall be conducted in accordance with the permittee's Enforcement Response Plan developed and approved in accordance with 40 CFR Part 403.
   b) Enforce compliance with all national pretreatment standards and requirements in 40 CFR Parts 406 - 471.
   c) Provide public notification of significant non-compliance as required by 40 CFR 403.8(f)(2)(viii).
   d) Pursuant to 40 CFR 403.5(e), when either the Department or the USEPA determines any source contributes pollutants to the POTW in violation of Pretreatment Standards or Requirements the Department or the USEPA shall notify the permittee. Failure by the permittee to commence an appropriate investigation and subsequent enforcement action within 30 days of this notification may result in appropriate enforcement action against the source and permittee.

5. Recordkeeping: The permittee shall maintain and update, as necessary, records identifying the nature, character, and volume of pollutants contributed by SIUs. Records shall be maintained in accordance with 6 NYCRR 750-2.5(c).

6. Staffing: The permittee shall maintain minimum staffing positions committed to implementation of the Industrial Pretreatment Program in accordance with the approved pretreatment program.

C. SLUDGE DISPOSAL PLAN. The permittee shall notify NYSDEC, and USEPA as long as USEPA remains the approval authority, 60 days prior to any major proposed change in the sludge disposal plan. NYSDEC may require additional pretreatment measures or controls to prevent or abate an interference incident relating to sludge use or disposal.

INDUSTRIAL PRETREATMENT PROGRAM IMPLEMENTATION REQUIREMENTS (continued)

D. REPORTING: The permittee shall provide to the offices listed on the Monitoring, Reporting and Recording page of this permit and to the Chief-Water Compliance Branch, USEPA Region II, 290 Broadway, New York, NY 10007, a periodic report that briefly describes the permittee's program activities over the previous year. This report shall be submitted in accordance with the Schedule of Submittals to the above noted offices within 60 days of the end of the reporting period. The periodic report shall include:

1. Industrial Survey: Updated industrial survey information in accordance with 40 CFR 403.12(i)(1) (including any NYS Industrial Chemical Survey forms updated during the reporting period).

2. Implementation Status: Status of Program Implementation, to include:
   a) Any interference, upset or permit violations experienced at the POTW directly attributable to industrial users.
   b) Listing of SIUs issued permits.
   c) Listing of SIUs inspected and/or monitored during the previous reporting period and summary of results.
   d) Listing of SIUs notified of promulgated pretreatment standards or applicable local standards who are on compliance schedules. The listing should include for each facility the final date of compliance.
   e) Summary of POTW monitoring results not already submitted on Discharge Monitoring Reports and toxic loadings from SIU's organized by parameter.
   f) A summary of additions or deletions to the list of SIUs, with a brief explanation for each deletion.

3. Enforcement Status: Status of enforcement activities to include:
   a) Listing of SIUs in significant non-compliance (as defined by 40 CFR 403.8(f)(2)(viii) with federal or local pretreatment standards at end of the reporting period.
   b) Summary of enforcement activities taken against non-complying SIUs. The permittee shall provide a copy of the public notice of significant violators as specified in 40 CFR 403.8(f)(2)(viii).

E. ADDITIONAL PRETREATMENT CONDITIONS:
1. Notification of Material Change: Facility shall notify the NYSDEC prior to the addition of any SIUs or CIUs which may materially change the nature of the discharge from the POTW or increase the discharge of one or more substances authorized in this permit or discharge a substance not currently authorized in this permit (6 NYCRR Part 750-2.9(a)(1)). The noticed act is prohibited until the Department determines whether a permit modification is necessary pursuant to 750-2.9(a)(2).

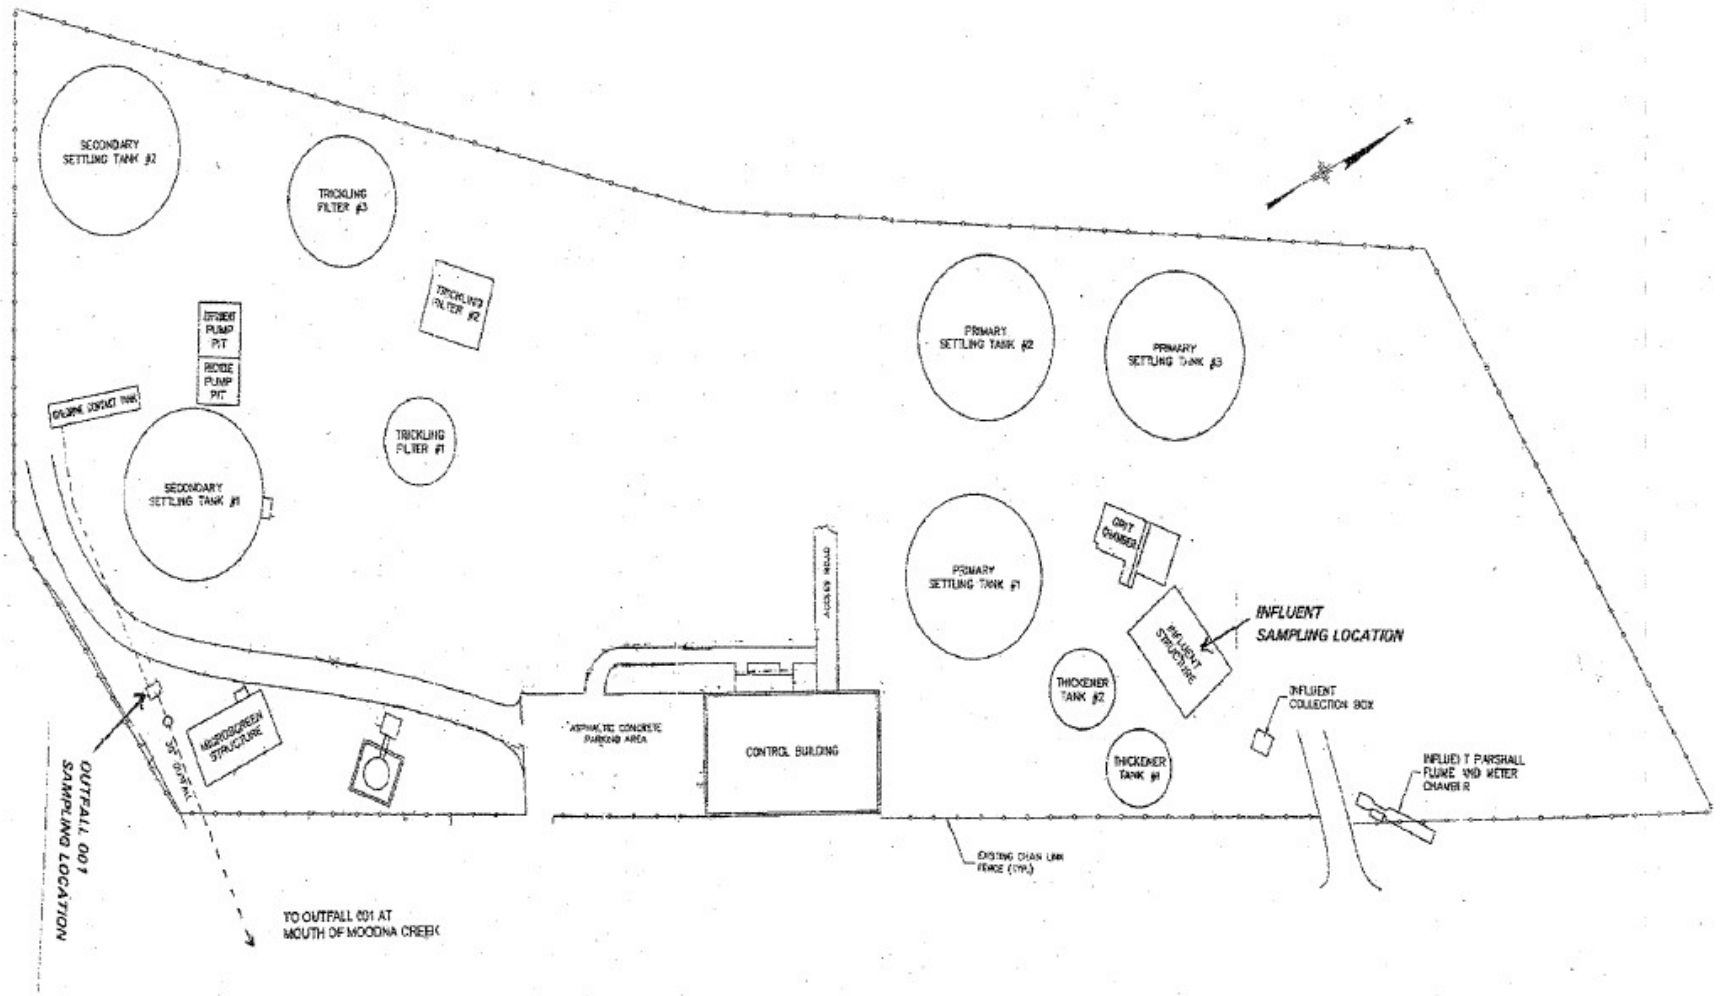
SCHEDULE OF COMPLIANCE

a) The permittee shall comply with the following schedule:

Outfall(s)	Compliance Action	Compliance Date[5]
	SCHEDULE OF COMPLIANCE STATUS REPORTS[6] Submit interim status reports on the progress related to meeting the specified Schedule of Compliance items.	EDP + 9 Months, and every 9 months thereafter
	DESIGN DOCUMENTS The permittee shall submit approvable[7] Design Documents, and Plans and Specifications for the selected alternative that will ensure compliance with final effluent limitations.	EDP + 6 Months
	COMPLETE CONSTRUCTION The permittee shall provide a Certificate of Completion[8] to the Department that the disposal system has been fully completed in accordance with the approved Design Documents.	10/1/2027
	COMMENCE OPERATION Following receipt of Department acceptance of Certificate of Completion, the permittee shall comply with the final effluent limitation(s) described in this permit.	Upon Department Acceptance
Unless noted otherwise, the above actions are one-time requirements.		

b) The permittee shall submit a written notice of compliance or non-compliance with each of the above schedule dates no later than 14 days following each elapsed date, unless conditions require more immediate notice as prescribed in 6 NYCRR Part 750-1.2(a) and 750-2. All such compliance or non-compliance notification shall be sent to the locations listed under the section of this permit entitled RECORDING, REPORTING AND ADDITIONAL MONITORING REQUIREMENTS. Each notice of non-compliance shall include the following information:
   1. A short description of the non-compliance;
   2. A description of any actions taken or proposed by the permittee to comply with the elapsed schedule requirements without further delay and to limit environmental impact associated with the non-compliance;
   3. Any details which tend to explain or mitigate an instance of non-compliance; and
   4. An estimate of the date the permittee will comply with the elapsed schedule requirement and an assessment of the probability that the permittee will meet the next scheduled requirement on time.

c) The permittee shall submit copies of any document required by the above schedule of compliance to the NYSDEC Regional Water Engineer and to the Bureau of Water Permits.



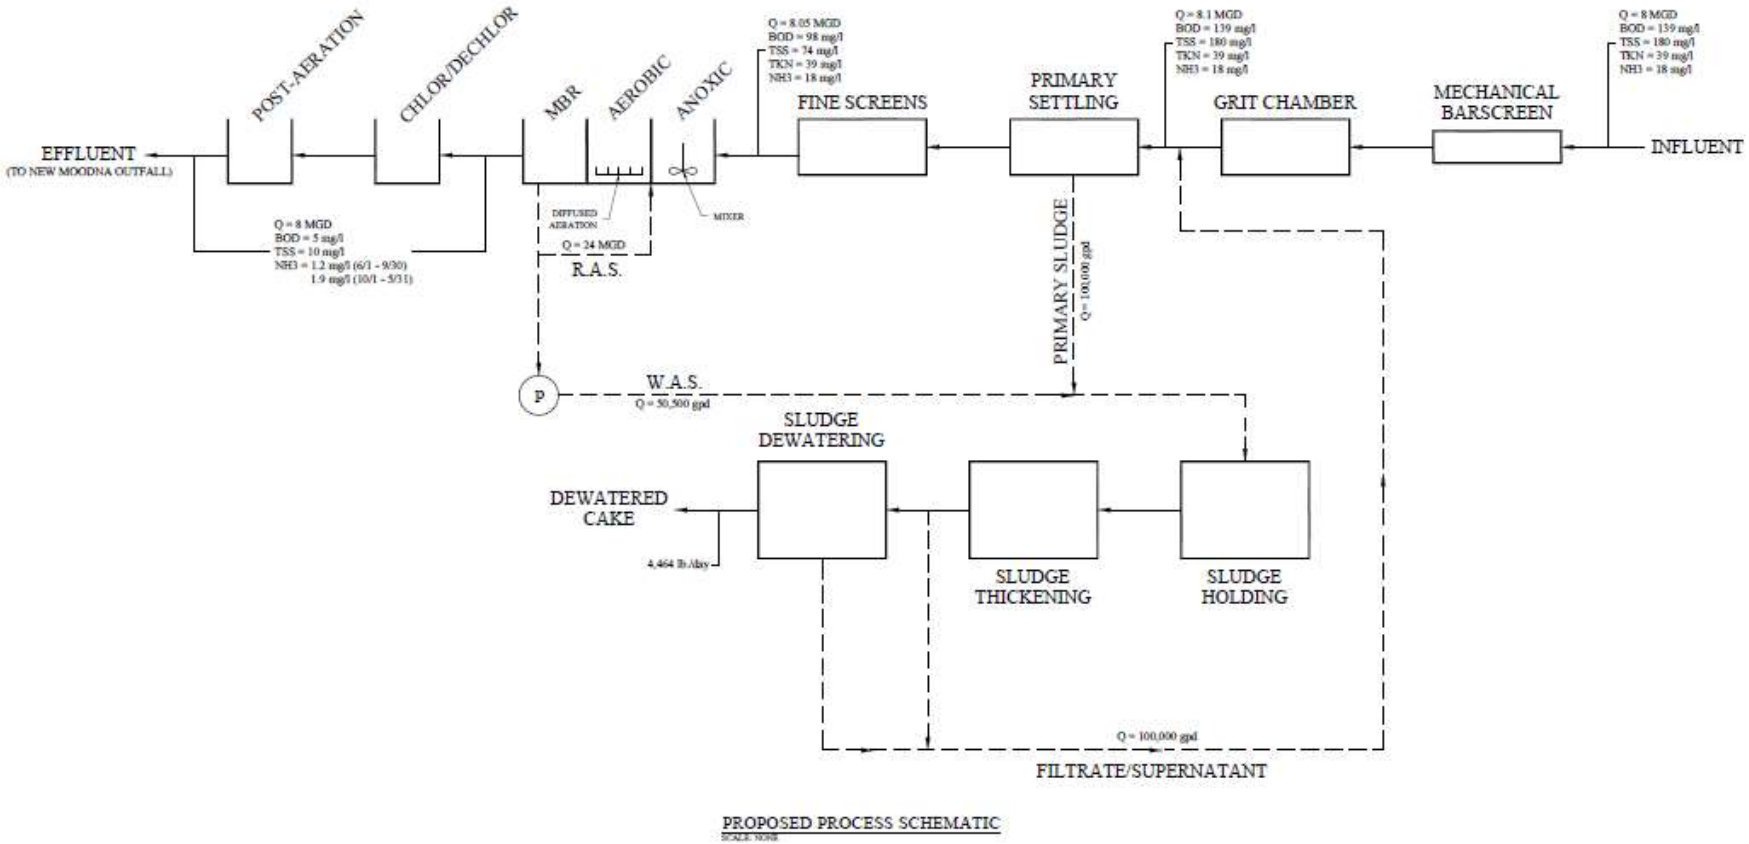
[5] 6 NYCRR 750-1.14 (a)
[6] 6 NYCRR 750-1.14 (b)
[7] 6 NYCRR 750 1.2 (a)(8)
[8] 6 NYCRR 750-2.10 (c)

MONITORING LOCATIONS – During Construction

The permittee shall take samples and measurements, to comply with the monitoring requirements specified in the permit for the timeframe during construction, at the location(s) specified below:

Influent: Before the grit chamber

Effluent: After the chlorine contact tank



MONITORING LOCATIONS – Post Construction

The permittee shall take samples and measurements, to comply with the monitoring requirements specified in this permit for the timeframe after construction, at the locations(s) specified below:

Influent: Before the mechanical bar screen

Effluent: After the post-aeration tank

PROPOSED PROCESS SCHEMATIC

GENERAL REQUIREMENTS

A. The regulations in 6 NYCRR Part 750 are hereby incorporated by reference and the conditions are enforceable requirements under this permit. The permittee shall comply with all requirements set forth in this permit and with all the applicable requirements of 6 NYCRR Part 750 incorporated into this permit by reference, including but not limited to the regulations in paragraphs B through I as follows:

B. General Conditions

1.	Duty to comply	6 NYCRR 750-2.1(e) & 2.4
2.	Duty to reapply	6 NYCRR 750-1.16(a)
3.	Need to halt or reduce activity not a defense	6 NYCRR 750-2.1(g)
4.	Duty to mitigate	6 NYCRR 750-2.7(f)
5.	Permit actions	6 NYCRR 750-1.1(c), 1.18, 1.20 & 2.1(h)
6.	Property rights	6 NYCRR 750-2.2(b)
7.	Duty to provide information	6 NYCRR 750-2.1(i)
8.	Inspection and entry	6 NYCRR 750-2.1(a) & 2.3

C. Operation and Maintenance

1.	Proper Operation & Maintenance	6 NYCRR 750-2.8
2.	Bypass	6 NYCRR 750-1.2(a)(17), 2.8(b) & 2.7
3.	Upset	6 NYCRR 750-1.2(a)(94) & 2.8(c)

D. Monitoring and Records

1.	Monitoring and records	6 NYCRR 750-2.5(a)(2), 2.5(a)(6), 2.5(c)(1), 2.5(c)(2), & 2.5(d)
2.	Signatory requirements	6 NYCRR 750-1.8 & 2.5(b)

E. Reporting Requirements

1.	Reporting requirements	6 NYCRR 750-2.5, 2.7 & 1.17
2.	Anticipated noncompliance	6 NYCRR 750-2.7(a)
3.	Transfers	6 NYCRR 750-1.17
4.	Monitoring reports	6 NYCRR 750-2.5(e)
5.	Compliance schedules	6 NYCRR 750-1.14(d)
6.	24-hour reporting	6 NYCRR 750-2.7(c) & (d)
7.	Other noncompliance	6 NYCRR 750-2.7(e)
8.	Other information	6 NYCRR 750-2.1(f)
9.	Additional conditions applicable to a POTW	6 NYCRR 750-2.9

F. Planned Changes

1. The permittee shall give notice to the Department as soon as possible of planned physical alterations or additions to the permitted facility when:

   a. The alteration or addition to the permitted facility may meet any of the criteria for determining whether facility is a new source in 40 CFR §122.29(b); or
   b. The alteration or addition could significantly change the nature or increase the quantity of pollutants discharged. This notification applies to pollutants which are subject either to effluent limitations in the permit, or to notification requirements under 40 CFR §122.42(a)(1); or
   c. The alteration or addition results in a significant change in the permittee's sludge use or disposal practices, and such alteration, addition, or change may justify the application of permit conditions that are different from or absent in the existing permit, including notification of additional use or disposal sites not reported during the permit application process or not reported pursuant to an approved land application plan.

In addition to the Department, the permittee shall submit a copy of this notice to the United States Environmental Protection Agency at the following address: U.S. EPA Region 2, Clean Water Regulatory Branch, 290 Broadway, 24th Floor, New York, NY 10007-1866.

GENERAL REQUIREMENTS (continued)

2. Notification Requirement for POTWs
   All POTWs shall provide adequate notice to the Department and the USEPA of the following:

   a. Any new introduction of pollutants into the POTW from an indirect discharger which would be subject to section 301 or 306 of CWA if it were directly discharging those pollutants; or
   b. Any substantial change in the volume or character of pollutants being introduced into that POTW by a source introducing pollutants into the POTW at the time of issuance of the permit.
   c. For the purposes of this paragraph, adequate notice shall include information on:
      i. the quality and quantity of effluent introduced into the POTW, and
      ii. any anticipated impact of the change on the quantity or quality of effluent to be discharged from the POTW.

   POTWs shall submit a copy of this notice to the United States Environmental Protection Agency, at the following address:
   U.S. EPA Region 2, Clean Water Regulatory Branch, 290 Broadway, 24th Floor, New York, NY 10007-1866

G. Sludge Management
   The permittee shall comply with all applicable requirements of 6 NYCRR Part 360.

H. SPDES Permit Program Fee
   The permittee shall pay to the Department an annual SPDES permit program fee within 30 days of the date of the first invoice, unless otherwise directed by the Department, and shall comply with all applicable requirements of ECL 72-0602 and 6 NYCRR Parts 480, 481 and 485. Note that if there is inconsistency between the fees specified in ECL 72-0602 and 6 NYCRR Part 485, the ECL 72-0602 fees govern.

I. Water Treatment Chemicals (WTCs)
   New or increased use and discharge of a WTC requires prior Department review and authorization. At a minimum, the permittee must notify the Department in writing of its intent to change WTC use by submitting a completed *WTC Notification Form* for each proposed WTC. The Department will review that submittal and determine if a SPDES permit modification is necessary or whether WTC review and authorization may proceed outside of the formal permit administrative process. The majority of WTC authorizations do not require SPDES permit modification. In any event, use and discharge of a WTC shall not proceed without prior authorization from the Department. Examples of WTCs include biocides, coagulants, conditioners, corrosion inhibitors, defoamers, deposit control agents, flocculants, scale inhibitors, sequestrants, and settling aids.
   1. WTC use shall not exceed the rate explicitly authorized by this permit or otherwise authorized in writing by the Department.
   2. The permittee shall maintain a logbook of all WTC use, noting for each WTC the date, time, exact location, and amount of each dosage, and, the name of the individual applying or measuring the chemical. The logbook must also document that adequate process controls are in place to ensure that excessive levels of WTCs are not used.
   3. The permittee shall submit a completed WTC Annual Report Form each year that they use and discharge WTCs. This form shall be submitted in electronic format and attached to either the December DMR or the annual monitoring report required below. The *WTC Notification Form and WTC Annual Report Form* are available from the Department's website at: http://www.dec.ny.gov/permits/93245.html

RECORDING, REPORTING AND ADDITIONAL MONITORING REQUIREMENTS

A. The monitoring information required by this permit shall be retained for a period of at least five years from the date of the sampling for subsequent inspection by the Department or its designated agent.

B. Discharge Monitoring Reports (DMRs): Completed DMR forms shall be submitted for each **one (1)** month reporting period in accordance with the DMR Manual available on Department's website.

DMRs must be submitted electronically using the electronic reporting tool (NetDMR) specified by NYSDEC. Instructions on the use of NetDMR can be found at https://www.dec.ny.gov/chemical/103774.html. **Hardcopy paper DMRs will only be accepted if a waiver from the electronic submittal requirements has been granted by DEC to the facility.**

Attach the monthly "Wastewater Facility Operation Report" (form 92-15-7) and any required DMR attachments electronically to the DMR or with the hardcopy submittal.

The first monitoring period begins on the effective date of this permit, and, unless otherwise required, the reports are due no later than the 28th day of the month following the end of each monitoring period.

C. Additional information required to be submitted by this permit shall be summarized and reported to the Regional Water Engineer and Bureau of Water Permits at the following addresses:

Department of Environmental Conservation
Division of Water, Bureau of Water Permits
625 Broadway, Albany, New York 12233-3505 Phone: (518) 402-8111

Department of Environmental Conservation
Regional Water Engineer, Region 3
220 White Plains Road, Suite 110, Tarrytown, NY 10591 Phone: (914) 803-8157

D. Bypass and Sewage Pollutant Right to Know Reporting: In accordance with the Sewage Pollutant Right to Know Act (ECL § 17-0826-a), Publicly Owned Treatment Works (POTWs) are required to notify DEC and Department of Health within two hours of discovery of an untreated or partially treated sewage discharge and to notify the public and adjoining municipalities within four hours of discovery. Information regarding reporting and other requirements of this program may be found on the Department's website. In addition, POTWs are required to provide a five-day incident report and supplemental information to the DEC in accordance with Part 750-2.7(d) by utilizing the Division of Water Report of Noncompliance Event form unless waived by DEC on a case-by-case basis.

E. Schedule of Additional Submittals:

The permittee shall submit the following information to the Regional Water Engineer and to the Bureau of Water Permits, unless otherwise instructed:

SCHEDULE OF ADDITIONAL SUBMITTALS

Outfall(s)	Required Action	Due Date
001	WATER TREATMENT CHEMICAL (WTC) ANNUAL REPORT FORM The permittee shall submit a completed WTC Annual Report Form each year that Water Treatment Chemicals are used. The form shall be attached to the December DMR.	December DMR (January 28th)
001	ANNUAL FLOW CERTIFICATION The permittee shall submit an Annual Flow Certification form each year in accordance with 750-2.9(C)(4). The form shall be attached to the February DMR or submitted through nForm.	February DMR (March 28th)

SCHEDULE OF ADDITIONAL SUBMITTALS		
Outfall(s)	**Required Action**	**Due Date**
001	BIENNIAL POLLUTANT SCAN The permittee shall implement an ongoing monitoring program and perform effluent sampling every two years as specified in footnote of the permit limits table.	Retain and submit with next NY-2A Application
001	SHORT-TERM HIGH-INTENSITY MONITORING PROGRAM The permittee shall collect 12 samples representative of normal discharge conditions and treatment operations over 12 months for Total Dissolved Solids, Nitrite (as N), Heptachlor Epoxide, and Methoxychlor. The permittee shall use approved EPA analytical method with the lowest possible detection limit as promulgated under 40CFR Part 136 for the determination of the concentrations of parameters listed. The permittee shall submit a summary of the results.	Upon Construction Completion + 18 months
001	WHOLE EFFLUENT TOXICITY (WET) TESTING WET testing shall be performed as required in the footnote of the permit limits table. The toxicity test report including all information requested of this permit shall be attached to your WET DMRs and sent to the WET@dec.ny.gov email address.	Within 60 days following the end of each monitoring period
001	STORMWATER NO EXPOSURE CERTIFICATION Permittee must recertify every five years a condition of no exposure to stormwater in order to continue to qualify for the no exposure exclusion. The No Exposure Certification Form can be found on the NYSDEC website.	6/30/2028 and every 5 years thereafter
001	MERCURY MINIMIZATION PLAN The permittee must complete and maintain onsite an annual mercury minimization status report in accordance with the requirements of this permit.	***Maintained Onsite*** EDP + 12 months, annually thereafter
001	EMERGING CONTAMINANT SHORT-TERM MONITORING PROGRAM The permittee shall collect grab samples of both the influent and effluent from the facility's treatment system(s) associated with the identified outfall for Per-and Polyfluoroalkyl Substances (PFAS) and 1,4-Dioxane (1,4-D), unless permittee receives written notification from the Department during this time that sampling can be discontinued. Samples must be analyzed utilizing EPA draft analytical method 1633 and EPA Method 8270D SIM or 8270E SIM, respectively. The samples must represent normal discharge conditions and treatment operations and shall be obtained on a quarterly basis for at least 4 consecutive quarters, unless written notification from the Department indicates otherwise. The results shall be reported through the "Emerging Contaminants Survey for POTWs" found at: https://www.dec.ny.gov/chemical/127939.html. The permittee shall initiate track down of potential sources by completing the "Emerging Contaminants Investigation Checklist for POTWs" available at the above link. The Department may periodically request updates and/or additional monitoring to check progress on track down investigations. Elements of the checklist may be used as permit conditions in future permit modifications.	Upon Construction Completion + 18 months Within 90 days of DEC written notification

SCHEDULE OF ADDITIONAL SUBMITTALS		
Outfall(s)	**Required Action**	**Due Date**
001	PRETREATMENT PROGRAM Submit a report that briefly describes the permittee's program activities over the previous year. The report shall follow the guidelines contained in this permit and be submitted to the Regional Water Engineer and the Bureau of Water permits as well as the USEPA Region II office.	Within 60 days following the end of each reporting period

Unless noted otherwise, the above actions are one-time requirements.

F. Monitoring and analysis shall be conducted using sufficiently sensitive test procedures approved under 40 CFR Part 136, unless other test procedures have been specified in this permit.

G. More frequent monitoring of the discharge(s), monitoring point(s), or waters of the State than required by the permit, where analysis is performed by a certified laboratory or where such analysis is not required to be performed by a certified laboratory, shall be included in the calculations and recording of the data on the corresponding DMRs.

H. Calculations which require averaging of measurements shall utilize an arithmetic mean unless otherwise specified in this permit.

I. Unless otherwise specified, all information recorded on the DMRs shall be based upon measurements and sampling carried out during the most recently completed reporting period.

J. Any laboratory test or sample analysis required by this permit for which the State Commissioner of Health issues certificates of approval pursuant to section 502 of the Public Health Law shall be conducted by a laboratory which has been issued a certificate of approval. Inquiries regarding laboratory certification should be directed to the New York State Department of Health, Environmental Laboratory Accreditation Program.

DRAFT

1 Introduction

The Caesars Lane Wastewater Treatment Facility (WTF) is a Wastewater UltraFiltration facility. Four UF Trains operate together to treat mixed liquor. The 2 mm fine screened wastewater flows into the bioreactor splitter box. The mixed liquor from the three biological reactors flows by gravity to the membrane tank distribution channel and then into the membrane tanks. The clean water "permeate" is drawn through the membranes by a siphon through the Permeate Flow Control Valve (20-FCV-301-X) to the backpulse tank, which overflows to de-chlorination tank.

The train dedicated RAS/WAS/Drain pump draws mixed liquor from the membrane tank and pumps it to the bioreactor splitter box. Once per day solids are wasted from the mixed liquor line.

The reader should refer to the Piping and Instrumentation Diagrams (P&ID's), and the Control Logic & Sequence Chart (CLSC) for a complete understanding of the plant control scheme as described below. The CLSC contains the following tabs: Legend, Device Controls, Train Sequence Chart (SC), Control Logic Chart (CLC), Control Loop, and Communication.

Details of the control logic, setpoints, etc. that are required to operate the plant are given in the CLSC.

In the documentation, the Programmable Logic Controller is referred to as the PLC. The PLC provides automated control of the UF equipment. All the programming for the control of the UF plant is stored in the PLC.

Modes and States are shown in capital letters, such as AUTO mode and PRODUCTION state. States are a series of steps the train follows to perform various operations, such as cleaning.

Setpoints, alarms, calculated parameters, etc., have assigned tags in the PLC code. When tags are used in the Control Philosophy, they are identified by an alpha-numeric label, for example, 20-P501-1, for a RAS/WAS/drain pump for UF train 1.

1.1 Process Areas

This document covers a general description of the controls by Veolia for the following unit processes:

- Feed & Pre-treatment (by Others),
- Biological Reactor Trains
- Ultra-Filtration (UF) Trains,
- Backpulse Equipment,
- Aeration Equipment,
- Clean-In-Place (CIP) Equipment,
- Waste Activated Sludge (WAS) Equipment
- Compressed air system.

DRAFT

1.2 Definitions and Acronyms

Table 1 Definitions and Acronyms

Word/Acronym	Definition
ACF	Activated Carbon Filters
Alarm	An alert sounded on the OIT when there is a system disruption or condition failed. There are different alarms for different severity of faults (Ex: Critical Alarm when tank is overflowing)
CIP	Clean-In-Place
Command	Every action made on the PLC that produces a change in equipment status
CP	Control Philosophy
CLSC	Control Logic & Sequence Charts
CV	Control Variable, sometimes called the manipulated variable
DO	Dissolved Oxygen
Faceplate	Used in the OIT to display dynamic process variables. Oftentimes, the faceplate is a pop-up and controls/modes can be selected on it.
FCE	Final Control Element, Equipment that physically controls a desired output variable
Floc	Colloids and fine particles come out of suspension and floc together to form floc
Flocculation	Process where coagulated clumps join to form a cloud and then precipitate out
HMI	Human Machine Interface, screen used by plant personnel to view/display/control real-time/dynamic process data
I/O	Inputs and Outputs of the PLC
Interlock	In place to prevent undesired actions/situations from occurring
Local Controls	These controls are set via the HOA (Hand Off Auto) switch in the plant, usually on a piece of equipment. Local means in the field, at the physical location of the equipment. Local control means at the equipment or control from the MCC starter panel.
Loop	A management system to regulate a process
MBR	Membrane Bioreactor
MCC	Motor Control Center
OIT	Operator Interface Terminal
P&ID	Piping and Instrumentation Diagram
Permissive	Conditions or pre-requisite steps that must be met in order to continue / progress further in process scheme

DRAFT

Word/Acronym	Definition
PFD	Process Flow Diagram, Chart to show the flow of the system/plant
PID	Proportional Integral Derivative control. This type of control is used to handle changes in process such as varying flow, etc.
PLC	Programmable Logic Controller
Proportional	This control is used to adapt to process changes (not predictive, but reactive) (Ex: injecting a quantity of chemical based on current flow values)
PV	Process Variable, Variable being measured in a control loop (compared to the set point)
RAS	Recirculated Activated Sludge
Ready	Equipment is ready for service and waiting for service command from plant control system / PLC or similar device. No active safety interlock or fault condition exists.
Remote/Local	These controls are set via the Hand-Off-Auto (HOA) switch in the plant, usually on a piece of equipment
Remote/Soft Controls	These controls are operated via the OIT
RO	Reverse Osmosis
Sequence	Order of specific tasks or steps of process
SC	Sequence Chart
Signal	The communication between the user and the control system
SP	Set Point, The target value for a variable in the process
SS, TSS	Suspended Solids, Total Suspended Solid
State	Sequence of automated steps (XXX)
System Mode	Placement of complete system (AUTO, SEMI-AUTO, and OFF).
TMP	TransMembrane Pressure
Unit Operations	A basic step in a process, functional box (Ex: train)
UPS	Uninterruptible Power Supply
VFD	Variable-Frequency Drive
WAS	Waste Activated Sludge

DRAFT

2 OIT Graphics

An PLC is provided to control and monitor the system operation remotely. The system is designed to communicate with the customer's PLC. See the network architecture drawing for the specifics of the PLC, OIT (HMI), and software.

The state, step and duration remaining in the step is displayed on the train screen at the OIT.

The OIT screen captures in the following sections are example screen, to provide directions to the operators on how to use the OIT.

2.1 System Overview Screen

Reference the Overview screen to show process flow through the system. Navigation to other screens may be done by selecting the respective process area or arrows.

2.2 Security & Passwords Access & Privileges

The ability to de-energize the "general alarm" output (for a horn or callout) and acknowledge alarms does not require a password, but alarms cannot be reset without a password.

2.2.1 Security Login

To be able to access control functions of the OIT, the user must first login. The login screen is accessed by pressing the Security Status button at the bottom of the screen.

2.2.2 Security Passwords

There are three levels of password protection; Operator, Supervisor, & Administrator, which is the Veolia standard. To gain access to make changes on the OIT, the operator is required to enter the correct password. There is no limit to the number of times another password can be attempted.

The system is designed with the following initial Usernames and Passwords.

Table 2 Security Levels

Security Level	Username	Password
Guest	Default	N/A
Operator	oper	Provide during commissioning
Supervisor	super	Provide during commissioning
Administrator	admin	Provide during commissioning

Access by unauthorized users may be a potential risk to correct equipment operation. The end user is encouraged to modify these initial usernames and passwords after commissioning and acceptance of the system.

DRAFT

The Guest access, no username or password required, is permitted the following actions:

1. Access to major screens (all screens listed in the graphics index popup).
2. Silence horn and acknowledge alarms.
3. No access to Alarm Reset button.

A screensaver blanks the screen after a set amount of time of inactivity, typically 60 minutes. The screen is reactivated by a single touch. Reactivation cannot select a device or operating sequence. The password must be re-entered for Operator/Supervisor/Administrator access.

The Operator access permitting the following actions:

1. Access to view all screens.
2. Access only to view setpoints.
3. Access to view and adjust of all train operational modes.
4. Access to view and selection of train state button views.
5. Resetting of all alarms.
6. Access to operate pumps and valves.
7. Access to operate and configure PID controllers, except for PID tuning constants.

The Supervisor access is permitting the following actions:

8. All operator permissions.
9. Access to adjust setpoints.
10. Access to operate and configure PID controllers, including PID tuning constants.

OIT Administrator access is permitting the following actions:

11. All Supervisor permissions.
12. Access to view and adjust for equipment operation such as turning parameters for PID loops.
13. Access to installation options for the design.
14. Permission to exit the runtime application.

2.2.3 Security Access

To prevent unauthorized access, users should logout after control actions are complete. To logout, the user opens the Security Access screen and presses the Security Lock button. This action will reset security to the default guest level. The system will also automatically reset the security after 60 minutes of screen inactivity.

The end user when logged in as administrator is able to add and delete individual users if so desired. The end user is encouraged to customize the default user names and default passwords shown above. The default is three separate accounts at each level of access.

DRAFT

2.3 OIT Navigation

When OIT is powered up, the main screen is shown. Screen access buttons are located on the bottom of the Main, Overview and Unit screens. These include the Overview, Graphics Index and Setpoints.

The unit screens can be accessed by the following:

- Selecting the graphic of the unit on the overview screen.
- Pressing the Graphics Index button, which displays the Graphics Index Faceplate. On this index selected the area button for example UF Train 1.

The following HMI color scheme is standard but selection of red in place of green is also standard. The specification does not define the OIT colors.

2.3.1 Status and Color Schemes

Table 3 Status and Color

Color	Valve	Pump	Analog Equipment Speed/Position	Alarm Status
Grey	Closed	Off	Grey (when commanded percent open/speed is < 1%	N/A
Green	Open	On	Grey (when commanded percent open/speed is < 1%	N/A
Red	N/A	N/A	N/A	Alarm – Critical & Alarm - Warning

2.3.2 Date and Time Synchronization

The OIT date and time is displayed in the top right corner of every screen. The OIT date/time is synchronized to the PLC Date/Time. The Clock Synchronization screen can be accessed by pressing this display. The OIT clock will be continually updated from the PLC clock and will be displayed on the OIT screen. The user can update the OIT and PLC clocks from the OIT if necessary.

2.4 Triggers & Alarms

Alarms are displayed on the OIT using the text shown in the CLC Tag/Mnemonic and Description cells. Alarms are tracked on the alarm summary screen.

Alarms, Triggers, and Setpoints that have a value for Range Minimum and Range Maximum are adjustable by the operator at the OIT. When there are no values provided for Range Minimum or Range Maximum, then the setpoint value is not adjustable at the OIT.

Setpoints for transmitters are dedicated to the transmitter.

DRAFT

Setpoints that are process setpoints, such as the backpulse duration, are plant setpoints, common to all the trains.

2.4.1 Triggers

A trigger is a normal event that can clear an alarm or be one of several points in a sequence of events. These triggers are listed in the CLC as “Trigger” under the Type column.

2.4.2 Alarms

Alarms are used to identify a problem with the system.

Critical alarm: The critical alarms are used to protect equipment from damage. If a critical alarm occurs requiring the unit to shutdown, the unit will proceed immediately to the Fault step. The operator can reset a critical alarm by pressing the System or Unit Alarm Reset button on the OIT. This button resets the alarm, and the unit will resume operation as defined in the Sequence Chart (SC). If it is a latched alarm at the VFD it will need to be reset at the VFD and then at the OIT.

Warning alarm: Warning alarms are used to notify the operator of an abnormal condition. The operator is expected to acknowledge a warning alarm by pressing the Acknowledge All button and correct the abnormal situation. If the problem is not corrected, production quality/quantity may be affected in the future.

Alarms are listed in the CLC as either “Alarm – Warning” or “Alarm – Critical” under the Type column.

If a loss power alarm is active, then the train proceeds directly to fault step 31. In Step 31, the valves are in safe position and there is no demand for pumps/blowers.

When a shutdown alarm except for loss of power is active, then the train proceeds to the first fault step of the current state.

RECOVERY CLEAN and NEUTRALIZATION have fault step 29, which has a duration of 120 minutes. During this step the membrane tank is not refilled with mixed liquor and all pumps/blower are off and the valves are closed. This step allows the operator to resolve the shutdown alarm without diluting the cleaning solution with mixed liquor. The operator can then resume the clean. See the fault step in the Sequence Chart (SC) for how the train recovers after the alarm is resolved.

In STANDBY, PRODUCTION, PRIME, BACKPULSE, RELAX, MAINTENANCE CLEAN, RECOVERY CLEAN, NEUTRALIZATION step 30 refills the membrane tank with mixed liquor. In Step 31, the valves are in safe position and there is no demand for pumps/blowers. After the operator has resolved the alarm and reset the alarm, then the train proceeds according to the Sequence Chart (The CLC lists under the reset column the requirements to reset the alarm. Several of these alarms require the operator to press the Train Alarm Reset Button.)

In MAINTENANCE CLEAN step 31, when the shutdown alarm is reset, the train proceeds to MAINTENANCE CLEAN step 10 to flush the cleaning solution from the permeate header.

In RECOVERY CLEAN step 31, the train proceeds to NEUTRALIZATION, since the membrane tank has been refilled with mixed liquor. In NEUTRALIZATION step 31, the train proceeds to NEUTRALIZATION step 1.

DRAFT

Typical alarms that shutdown a train are listed in the following table.

Table 4 Train Shutdown Alarms

Alarm Description	Possible Causes	Reset
Permeate High flow	Suction disconnecting from the fittings	After condition is resolved the UF train alarm reset button
Permeate Low flow	Loss of prime	Run the ejector to restore prime, then the UF train alarm reset button
Permeate Pressure High-high (Measured by pressure transmitter)	Suction disconnecting from the fittings	After condition is resolved the UF train alarm reset button
TransMembrane Pressure Low-low (Measured by pressure transmitter)	Fouled UF membranes	Clean the UF train. The UF train alarm reset button
Compressed Air low pressure	Insufficient compressed air to operate the pneumatically actuated valves	Automatic restart when there is sufficient compressed air pressure
Membrane Tank Low level	Permeate flow rate is higher than the feed flow rate	Automatic restart when the membrane tank level is above the setpoint
Loss of Power	Tripped breaker inside the panel	Automatic restart when power is restored provided that Auto Restart is enabled

2.4.3 Alarm Banner

When Alarms are triggered, an alarm banner will be shown at the top of OIT screen. Operators can Acknowledge alarm or Clear alarm by pressing pushbutton in alarm banner. The alarm banner is closed by pressing the Exit button.

2.4.4 Alarm Summary

When an alarm occurs, the user should check the current alarms from alarm summary screen, which is accessed by pressing the Alarm Summary pushbutton at the bottom of the screen. This screen will show the Alarm Date/Time and Alarm Description of the current alarms. If an alarm has been acknowledged, this Date/Time will be shown as well.

The alarm acknowledge button cancels the panel horn, flashing indicating display lights, and alarm signals. For diagnostic reasons, the specific alarm indication on the operator interface does not clear until the alarm condition is corrected.

Based on the alarms, the operator should address the situation and fix the issue causing the alarm. If the problem is not corrected, equipment operation and production may be affected.

Once the cause of the alarm has been addressed, the alarm can be reset by either pressing the corresponding Unit Reset button (i.e., MBR train) or Reset All or the Device Reset button.

DRAFT

An alarm that is activated by an instrument, pressure transmitter, flow transmitters, or level instrumentation, typically requires a pump or certain device to be on to generate the required flow or pressure. Otherwise, the alarm will be ignored if the device to be protected is off.

All alarms are indicated with a message on the screen. The operator cannot reset the alarm without the correct password. All alarms and the time they occurred are recorded on the alarm history screen.

Devices in Hand/Local cannot have their status changed by the PLC. Consult the CLC for details on specific alarms, the corresponding actions and reset procedures.

2.4.5 Alarm History

Alarm History screen can be accessed from the Alarm Summary screen. The alarm history shows the alarm date/time, acknowledge date/time and description of all alarms that have occurred with the most recent shown first.

2.4.6 PLC Panel Status

The status of the PLC is displayed on the Faceplate. The alarms for the panels are set at this Faceplate. Select the PLC Panel Status button on the Overview screen to display this Faceplate.

2.5 OIT Trending

PID control variables are trended for 10-minute duration. The OIT screen graphically displays the Setpoint (SP), Process Variable (PV), and Control Variable (CV).

PID control variables are trended for 10-minute duration at 0.5 second intervals. Each PID controller will trend percentage of the Setpoint, Process Variable and Control Variable. The trend screen can be used to assist with tuning of the PID loops.
All transmitters and derived values, such as TMP, are trended for a 10-minute duration.

2.6 Buttons

After a button is pressed at the OIT, it is reset after one scan time.

3 Device Control

Reference the Legend screen for device status indications.

For DOL (Direct On Line) motor starters, the PLC monitors running status. There is a run command from the PLC. Failure to start/run alarm is calculated by PLC when the run feedback status signal is lost after pre-determined delay timer.

For the standard VFD, the PLC monitors running status. There is a run command and speed command.

A failure to start/run alarm is calculated by PLC when the run feedback status signal is lost after pre-determined delay timer.

DRAFT

For Sodium Hypochlorite and Citric Acid Pumps, the PLC monitors Remote (Auto), Fault Signal, Running feedback. There are run command and speed command. A local HOA (Hand-Off-Auto) station is located near the motor to be adjusted by the operator.

For Alkalinity pump, the PLC monitors Fault signal. There are run command and speed command.

3.1 Device Modes from the OIT

For equipment that is controllable from the PLC in either a MANUAL or AUTOMATIC mode, the operator is provided with a software “AUTO/MANUAL” selector switch at the operator OIT workstation. This switch is functional only when LOCAL-OFF-REMOTE switch in the field is in REMOTE position. The following are the AUTO- MANUAL functions.

Select a device to display the pop-up controls. The pop-up will have the following momentary pushbuttons:

3.1.1 Device Status

Device statuses describe conditions that will change how the device responds to commands.

- Interlocked – An Interlock is a condition external to the device that disables it from operating. Specific Interlock states and descriptions are described in the device interface in the OIT.
- Faulted – is a fault alarm from a VFD, motor starter, or device. A fault condition prevents a device from running.
- Remote – A device is considered to be in Remote when it is able to be controlled by the PLC rather than controls local to the device in the MCC. When a device is not in Remote Auto (MCC local) control "L" in an orange square is displayed beside the device.
- Ready – A device is Ready when it is not interlocked and not in manual. Motors must also be in Remote, not Faulted and the Fail to Run alarm is not active. The Ready status indicates that it is able to be commanded by automatic process controls from the PLC.
- Alarm – A device is in alarm when any device alarm is active, for example: Fail to Run, Fault, Fail to Open, Out of Range, etc.

3.1.2 Device Modes

For equipment that is controllable from the PLC in either a MANUAL or AUTOMATIC mode, the operator is provided with a software “AUTO/MANUAL” selector switch at the operator OIT workstation. This switch is functional only when LOCAL-OFF-REMOTE switch in the field is in REMOTE position. The following are the AUTO- MANUAL functions.

Most devices are able to be operated in either Auto or Manual mode, as described below:

- Auto – The operator sets the device for automatic operation. The device will be prevented from operating by any active alarm interlocks unless the interlock’s bypass is selected. The device operates as shown in the Sequence Chart or as defined in the CLC.
- Manual – The operator sets the device for manual operation. In this mode, the Start and Stop buttons are active for a pump/blower, etc. or Open and Close buttons are active for a valve. The device operates with all alarm interlocks enabled unless an interlock’s bypass is selected.

DRAFT

3.1.3 Motor Lead Rotation

Lead is changed when the button is pressed.

OR

If “Auto Rotation” on “Run Time” is enabled, when the duty cycle timer times out (range: 0-100 hrs., default 12 hours, 0 hours disables selection). A lag device must be stopped for one hour before it can rotate in for the run time of another device.

OR/AND

When the “Demand Loss Rotation” is selected and the running devices stops due to a fault or interlock, then the PLC rotates the lead of the devices, where the lag device becomes the lead device.

If the lead device is interlocked or faulted, the lag device starts automatically. The interlocked or faulted device retains the lead position, with the lag device operating in its place.

The SCADA indicates which device is the lead.

4 Power Interruption/Power Up

4.1 Loss of Power/System Stop

On the PLC Panel Status screen, the operator selects Power Restored Start to either Auto, which Automatically reset the operation of the plant on loss of power or Manual, which requires the operator to manually restart the plant after a power loss.

4.1.1 Power Interruption/Power Up

The Veolia PLC monitors the plant control power supply.

On loss of plant control power supply, the Veolia PLC:

- All automatic valves will move to their fail positions,
- All motors will stop,
- All trains proceed immediately to the Faulted step of the current state and wait for power to resume.

When power is restored, the control system will power-up. The system can be configured for automatic or manual restart after power-up. In manual mode, a PLC Power Restored alarm will occur. This alarm will need to be reset by the operator for equipment to operate. In Automatic mode, the Power Restored alarm will be reset by the PLC and power-up process will start automatically. After the alarm is reset, there is an Equipment Power up delay. During power-up, the unit processes are in the fault step of the current state and locked out from operation. After the equipment power-up delay is complete, the unit fault is cleared, and the equipment will restart normally. The power up status is displayed at the bottom of the screen.

DRAFT

The power-up settings are accessed by pressing the PLC Panel Status button on the Main screen. This screen also shows the status of the Power Health, Operational Stop Button, PLC Flash Load, PLC Battery and PLC Forces Enabled alarms.

On disruption of power to individual Veolia control panels:

- the affected trains immediately proceed to the Faulted step of the current state.

When a train is Faulted due to loss of power, the system blocks all fail safe inputs that are normally closed (to avoid nuisance alarms).

When power is restored, and the system is in Auto Restart after a Power loss:

- the valves are function according to the sequence chart and the CLC. The mixers are started
- the process blowers start one at a time with a time delay between starts.
- all trains are restarted one at a time with time delay between starts, following the Start-Up sequence detailed in the Control Logic Chart.

4.1.2 System Stop

A mechanical System Stop pushbutton is also provided at the panel to allow for the operator to immediately stop all equipment through the PLC.

When the button is pressed, an alarm occurs:

- all common equipment is stopped immediately.
- all trains transition to the Faulted step of their current state.

When the system stop button is physically pulled out, the alarm is reset:

if the Power Restored Restart is in Auto:

- the valves are function according to the sequence chart and the CLC. The mixers are started
- the process blowers start one at a time with a time delay between starts.
- all trains are restarted one at a time with time delay between starts, following the Start-Up sequence detailed in the Control Logic Chart.

if the Power Restored Restart is in Manual, then the operator manages system restart.

When the System Stop button is pulled out and the Reset button pressed, power is restored to the outputs. When the System Stop Alarm is reset at the OIT. After the alarm is reset, there is an Equipment Power up delay. During power-up, the unit processes are in the fault step of the current state and locked out from operation. After the equipment power-up delay is complete, the unit fault is cleared, and the equipment will restart normally.

4.1.3 Start-Up Sequence

The start-up sequence is the order in which the devices in the plant are re-enabled after a power interruption or after a system stop is reset.

When re-enabled, each train proceeds according to the Sequence Chart (SC).

DRAFT

A delay is provided in each step to allow for devices to start before advancing to the next step. Steps are skipped for those devices which are not ready.

5 Communication

For the Veolia membrane system to maintain optimal performance, information must be communicated between the plant PLC and the Veolia PLC. The signals required are both analog and digital.

Operating parameters of the Veolia system such as flow rates, pressures, train sequences, etc. are available for communication, if necessary, when the plant SCADA is required to only monitor these parameters. A list showing this information, however, is not provided in this document due to the large number of parameters available.

The Veolia PLC and plant PLC both generate a heartbeat signal. Each “heartbeat” signal increments at a regular rate, (e.g., each second), and is monitored by the other PLC. When communication with a PLC is lost, the PLC that is monitoring the “heartbeat” signal detects that the state of the signal has not changed for a pre-set time, for example after 5 seconds, and alarms.

When the counter reaches 10,000 it restarts counting from zero.

Discussions of the alarms and the changes that occur to the control systems are given in the following sections.

5.1 Plant PLC to the Veolia PLC Signals

The list given below shows the signals that are communicated from the plant PLC over the network to the Veolia PLC to operate the membrane system.

1. Heartbeat
2. Feed Flowrate

Is there reduced capacity when operating with Generator power?

5.2 Veolia PLC to the Plant PLC Signals

The list given below shows the signals that are communicated from the Veolia PLC over the network to the plant PLC to assist in the operation of the membrane system.

1. Heartbeat

5.3 Loss of Communication Alarm with Plant PLC

When there is a loss of communication with the plant PLC, the plant permeate flow demand is based on the trim factor (average membrane tank level).

DRAFT

6 Analog Control

The following Proportional and PID controls are provided. Refer to the Control Loop tab in the CLSC for details about which controllers are used for specific devices.

6.1 PID Control Loop

Some of the pumps/valves in the system are controlled using PID loops to vary the speed/position based on process conditions.
The PID is controlled by accessing the appropriate PID screen. The PID screen displays the PID setpoint (SP), process value (PV), control variable (CV), tuning setpoints and AUTO/MANUAL control. PID control of the device is enabled whenever the run signal to that device is enabled. In Auto mode, the PID output is calculated based on the Setpoint, Process value and tuning parameters. When a fixed output is desired for control, the operator has the option of placing the PID in the Manual mode, which fixes the output to the Manual PID Output setpoint in the range of 0-100%. The PID is configured for “bumpless” transfer between Auto and Manual control. The PID control also trends the Setpoint, Process variable and control variable for tuning purposes.

In addition to the standard PID control loop, some controllers have the following options. Refer to the Control Loop Chart and Unit Sequence Chart in the CLSC for details.

- CV Restart. During initial device operation, the CV can either start at a set CV or Last CV during previous operation.

- Preset CV. During certain sequence steps, the CV output is set to a Preset CV.

- Auto/manual setpoint. In Manual Mode, the setpoint is user adjustable. In Auto Mode, the setpoint is based on a calculated value.

Refer to the Control Loop chart in the CLSC for details about which devices are controlled using PID controllers.

6.2 Totalizers

The PLC sums the flows and displays a current running total, current day total and a 7-day total history. At midnight, the current day total is moved to the previous day total and the today total is reset to 0. Where appropriate, the current running total can be reset by pressing the reset button, which captures the current running total as previous running total and resets the current running total. The reset is time stamped and the reset date and time are displayed.

6.3 Step Control

A step controller is used when the change in the process parameter is very slow. At a regular frequency, (typically every 5 minutes), the process parameter is compared to an operator entered setpoint for the step controller.

- When the process parameter value is near the setpoint value as defined by a deadband 1 the output of the controller is not changed. The range for the deadband 1 is not adjustable.

DRAFT

- When the process parameter value is outside of the deadband 1 but within deadband 2, the setpoint is changed by a fixed percentage/value. The range for the deadband 2 is not adjustable.
- When the process parameter value is outside of the deadband 2, the setpoint is changed by a fixed percentage/value.

The sizes of the step changes are hardcoded. The delay timer for the step controller is adjustable at the OIT. When the controller restarts from off, the previous value is used.

On the blower screen select the DO Control button to display the Step Controller Faceplate.

7 Biological Trains

There are 3 biological trains, and each contains an anoxic zone followed by an aerobic zone. The mixed liquor overflows to the membrane distribution channel.

There are several components of the biological trains which are controlled directly by Veolia PLC. These components include mixers, instrumentation, valves, and the Alkalinity system.

7.1 Bio-Reactor Splitter Box

The fine screened wastewater, the RAS from the membrane tanks and the alkalinity is dosed to the bio-reactor splitter box, which overflows to the anoxic zones.

7.2 Anoxic Zones

To promote denitrification, a low dissolved oxygen level is maintained in the anoxic zone. Submersible mixers provide blending of the influent with RAS and keep mixed liquor solids in suspension. The mixers run continuously in Auto.

7.3 Aerobic Zones

The aerobic zones of the Biological Reactors require air which is supplied through the fine-bubble diffuser. The air is provided by the process blowers.

The dissolved oxygen concentration, pH, and aerobic zone level are monitored. When the high-high level switch is active, the OIT displays an alarm, and the plant flow demand is set at the maximum value to prevent an overflow.

7.4 Dissolved Oxygen Meters

The aerobic zones each have one dissolved oxygen (DO) meter. The average dissolved oxygen is used to control the number of process blowers operating and the process blowers speed when Dissolved Oxygen Control mode is selected.

DRAFT

To ensure the D.O. meters are reading correctly, once per day the difference between the meter and average is calculated. If this difference is equal to or greater than the setpoint then the OIT displays a differential alarm.

When a meter is not healthy, it is not used to calculate the average dissolved oxygen.

7.5 Process Blowers

The 3 Process Blowers are configured to operate as two duty and one standby. The operator can select at the OIT either Cycle Process Blower Control or Dissolved Oxygen Control mode. See section 7.7.1 DO Step Control for Process Aeration for the control of the blower speed.

7.5.1 Process Blower Low Airflow

A low air flow switch is located on the discharge of each blower, for blower protection. If the switch is active, an alarm occurs, and the PLC changes the lead to the next available blower. If there are no blowers available, a different alarm occurs, and the PLC shuts down all trains.

7.5.2 Process Blower High Temperature

A high temperature switch is located on the blower motor for motor protection. This switch is not wired to PLC. When the switch trips, the PLC will see a loss of running alarm.

7.6 Alkalinity Pump for pH Control

Sodium hydroxide (caustic) is added for pH control to Bio-Reactor Splitter Box. A pH sensor is installed in each aerobic zone. The flow rate of the alkalinity-dosing pumps is controlled paced to the plant flow and trimmed to a pH PID loop. The setpoint for the PID loop is adjustable. Please see the Controls Loop spreadsheet for further details.

The Alkalinity (sodium hydroxide) dosing pump starts and stops based on pH triggers. The setpoints for these triggers are adjustable.

7.7 Biological Process Analog Control

7.7.1 DO Step Control for Process Aeration

When Cycle Process Blower Control mode is selected, the Dissolved Oxygen Controller stops. The operator can select the number of blowers to operate and the speed of the blowers. The operator can select either continuous or intermittent operation of the blowers. When intermittent operation is selected, the process blowers operate based on an aeration timer setpoint, and an aeration frequency timer setpoint.

When Dissolved Oxygen Control is selected, the Cycle Process Blower Controller stops. The speed of the process blowers and the number of blowers operating is controlled by the average dissolved oxygen concentration, (DO). In Auto, the operating blowers runs continuously.

The dissolved oxygen is monitored in three bioreactors and averaged. At a regular frequency, (typically every 5 minutes), the average DO is compared to an operator entered DO setpoint to control the output

DRAFT

from the blowers. When the dissolved oxygen is near the setpoint and within a specific deadband, (e.g., ± 0.2 mg/L), the speed of the blowers/aeration flow setpoint is not changed. When the dissolved oxygen is outside of the deadband, the blower speed/aeration flow setpoint is changed by a fixed percentage/value, to change the air flow to the aerobic zones.

The size step changes of the blower speed, (e.g., 2%, 5%, etc, is hardcoded. The delay timer for the step controller is adjustable at the OIT. When the controller restarts from off, the number of operating blowers and the blowers' speed are the previous values.

8 UF Train

A UF train is functionally described as a group of ZeeWeed modules and cassettes connected by a common permeate collection header. The clean water (permeate) is drawn through the UF membranes by a siphon.

Operating modes define how the transitions occur for a Train from one operating state to another. A specific mode discussed in this document is shown in capital letters, such as AUTO. Modes can only be selected by the operator, using pushbuttons on the OIT. The Semi-Auto mode button is available in all states. The Off-mode button is available in all states except OFF state. The Auto mode button is available in all states except RECOVERY CLEAN & NEUTRALIZATION.

The sequencing of each Train can be described by the mode and state of the Train. Each Train is in only one state and mode at any given time.

Buttons displayed on the OIT screen that the operator can press to initiate a mode or state, or other operation are shown with the first letter capitalized. For example, one button that is used to put a train to the OFF mode is the Off button. The specific sequencing of Modes and States and the steps involved are detailed in the SC.

When Auto mode is selected, the state selections available in Semi Auto are not visible.

8.1.1 AUTO Mode

This is the normal mode of operation for a UF Train to produce clean water.

For the train equipment to operate automatically, the operator needs to have all related devices set to AUTO and the train set to AUTO. The operation of the train is automatic when in AUTO, and there is minimal operator attention required unless an alarm is activated.

In AUTO mode with Demand Override button not enabled, the train changes state between the Production Cycle and STANDBY according to train start & stop triggers, which are based on the plant permeate flow demand. In AUTO mode with the Demand Override button enabled, the UF train proceeds to the Production Cycle without waiting for a start trigger and the stop trigger does not send the train to STANDBY.

A MAINTENANCE CLEAN is automatically triggered as required by a schedule.

DRAFT

8.1.2 OFF Mode

This mode immediately places the train to OFF state and prevents the operator from manually selecting other states until the Train is placed in another mode.

The operator may turn a train OFF at any time. Pressing the Off button places the train into OFF mode and OFF state. It is the responsibility of the operator to ensure that if the Off button is pressed when a train is in a clean, the tank's contents are suitable for a train to proceed to another mode. When the Off button was selected in RECOVERY CLEAN, then NEUTRALIZATION state may be required. When the Off button was selected in MAINTENANCE CLEAN, then BACKPULSE state may be required to remove the cleaning chemical from the permeate header.

8.1.3 SEMI-AUTO Mode

This mode safely places the train to OFF state but permits the operator to manually select other states such as a PRIME, BACKPULSE, MAINTENANCE CLEAN, AND RECOVERY CLEAN/NEUTRALIZATION. Upon completion, the train will return to the OFF state and wait for further operator selection.

8.2 UF Train States

States are a series of steps the train follows to perform various operations, such as producing water. A specific state discussed in this document is shown in capital letters, such as PRODUCTION. The states available to each train are: OFF, PRIME, STANDBY, PRODUCTION, RELAX, BACKPULSE, MAINTENANCE CLEAN, RECOVERY CLEAN & NEUTRALIZATION. Each of these states is discussed further in the following sections and detailed sequencing information is available in the SC.

8.2.1 State Permissive

The train proceeds to the selected state once the resources are available. For certain states, the state permissive prevents more than one train from entering the same state at the same time.

The state permissive must be met:

- A train cannot enter PRIME if another train is in PRIME.
- A train cannot enter MAINTENANCE CLEAN, RECOVERY CLEAN steps 1 to 20, and NEUTRALIZATION if another train is in one of these states or steps.

During MAINTENANCE CLEAN, RECOVERY CLEAN steps 1 to 20, and NEUTRALIZATION, the other trains use RELAX in place of BACKPULSE in the Production Cycle. In BACKPULSE only one of the trains has a demand for the backpulse pump at a time.

There are no state permissive for STANDBY, RELAX and PRODUCTION.

8.2.2 Prime

Each train is provided with an ejector (20-E-801-x), which uses compressed air to operate. The ejector primes the permeate piping in PRIME and at the beginning of BACKPULSE, RELAX, MAINTENANCE CLEAN, & RECOVERY CLEAN.

The train's ejector compressed air valve (20-SV-802-x) opens which also opens the permeate header isolation valve (20-FV-801-x). During this time, air in the permeate header is pulled up and out through

DRAFT

the ejector, which pulls water into the membranes and permeate line until header to pump valve (20-FV-622-x). Any water that is drawn into the ejector drains out of it by gravity.

A train proceeds to PRIME after the Auto button is pressed in the OFF state. The ejector operates for typically 60 seconds, a longer duration than what is used for intermittent operation, and the duration is adjustable at the OIT.

The operator can manually initiate PRIME by pressing the Prime button at the OIT. The Prime button is available in SEMI AUTO mode and OFF state.

When no other trains are in PRODUCTION step 2 or PRIME state step 1, then Train Permeate Ejector Valve (20-FV-802-6 &20-FV-803-6) and Common Permeate Ejector Valve (20-FV-802-6 &20-FV-803-6) open for an adjustable duration. If other trains are in PRODUCTION step 2 then these valves are closed, and the duration of PRODUCTION step 1 is 6 seconds.

The operator can manually initiate the train priming sequence by pressing the Prime button for the train at the OIT. The operator can manually initiate priming only when the train is in OFF state & SEMI AUTO mode.

8.2.3 Standby

The steps for the STANDBY are:

1. The membrane tank inlet gate is open fill the membrane tank to a level is above the membranes.
2. While a train is in Standby intermittently the ejector runs based on priming timers. the membranes are aerated, and RAS is recirculated based on the frequency and duration aeration timers. The train remains in this step until one of the following is active:
    - a start trigger.
    - train rotation trigger.
    - maintenance clean request with schedule.

    Trains are intermittently primed in STANDBY. The frequency of the priming is controlled by the Master Ejector Cycle timer. The Master Ejector Cycle timer operates when there is at least one train in STANDBY. There is a time assigned for each train when the ejector operates. The duration of the priming is controlled by an adjustable setpoint, typically 15 seconds. The duration of the Master Ejector Cycle timer is typically 12 minutes.

8.2.4 Production

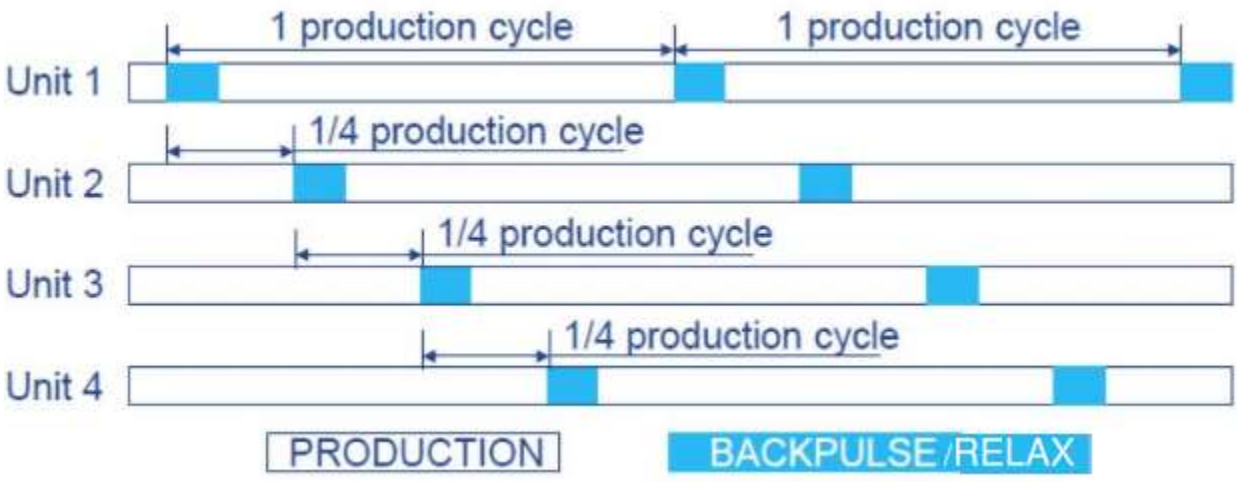
In Production, the train is producing permeate. The steps for the PRODUCTION are:

1. Permeate flow control valve (20-FCV-301-x) and header to pump valve (20-FV-622-x) open. (The train permeate ejector valves and common permeate ejector valves open if no other train is in PRIME or PRODUCTION step 2.) The aeration valve, membrane tank recirculation valve, and the membrane tank inlet valve open if not already open. If the membrane aeration blower and RAS/WAS/drain pump were already running, then they continue to run.
2. The membrane aeration blower and RAS/WAS/drain pump start if not already running. The permeate flow control valve throttles the flow of clean water through the membranes to the backpulse tank. Based on time in the production cycle, the train proceeds to either BACKPULSE or RELAX. MAINTENANCE CLEAN can be triggered by the schedule in place of the either BACKPULSE or RELAX.

DRAFT

8.2.4.1 Production Cycle

The Production Cycle is the alternation of the train's states between PRODUCTION and either BACKPULSE or RELAX. The Production Cycle is controlled by a timer, typically duration is 12 minutes. The selection of either Backpulse or Relax for the Production Cycle does not affect the duration of this timer.



The Master Production Cycle timer starts when there are no trains in Production and one train is requested to start PRODUCTION. The timer restarts every time it times out.

There is a button to select either BACKPULSE or RELAX for the Production Cycle. In SEMI AUTO, there is another button to manually initiate BACKPULSE from OFF state.

With the Demand Override button not selected, the UF trains switch between STANDBY and the Production Cycle based on Start & Stop Train Triggers and train rotation triggers. The Start triggers' values are based on the Plant Permeate Flow Demand and are adjustable at the OIT.

When the supervisory flow setpoint is enabled, the permeate flow control valve (20-FCV-301-x) flow setpoint is an operator entered value. When the auto flow setpoint is enabled, the permeate Flow Control Valve (20-FCV-301-x) flow setpoint is a calculated value based on the plant permeate flow demand.

Figure 1Production Cycle

8.2.5 Backpulse

During BACKPULSE, treated water is periodically reversed back through the membranes to maintain stable transmembrane pressures. The trains' Backpulse/Relax start trigger is based on time slots in this production cycle timer.

The steps for the staggered BACKPULSE are:

1. The aeration valve, membrane tank recirculation valve, and the membrane tank inlet valve open if not already open. If the blower and RAS/WAS/drain pump were already running, then they continue to run. Close the permeate flow control valve (20-FCV-301-x) and header to pump

DRAFT

valve (20-FV-622-x). Opens the ejector valve (20-FV-802-x). The step duration is typically 6 seconds.
2. The membrane aeration blower and RAS/WAS/drain pump start if not already running. Opens the backpulse train isolation valve (20-FV-621-x), typically 6 seconds.
3. Immediately, closes the Ejector Valve (20-FV-802-x). Starts the backpulse pump and it runs for the backpulse duration time, typically 30 seconds. The water is drawn from the backpulse tank and pumped through the membranes into the membrane tank.
4. Stops the backpulse pump and closes the backpulse train isolation valve, typically 6 seconds. After the BACKPULSE is complete and if there is demand for the train to run or the Demand Override button is enabled the train proceeds to PRODUCTION. After the BACKPULSE is complete and if there is no demand for the train to run the train proceeds to STANDBY.

The PLC staggers the backpulses of the trains throughout each cycle to distribute the backpulses evenly when all trains are in the Production cycle. Each train is given a fixed scheduled time in the Production cycle timer to begin a BACKPULSE or RELAX. Train 1 is assigned the first-time slot, train 2 is assigned the second-time slot, and so on for all trains in the system. Regardless of the number of trains in the Production cycle, each train is always backpulsed at the same time slot of the Master Production Cycle timer. For example, when there are four trains in the system and the Production cycle time is 12 minutes, the first-time slot is at time 0 minute and the second-time slot, to backpulse Train 2, is at 3 minutes of the Master Production Cycle timer.

The membranes are backpulsed using Backpulse Pump. If the lead device is interlocked or faulted, the lag device starts automatically. The interlocked or faulted device retains the lead position, with the lag device operating in its place.

The PLC controls the pump speed to backpulse the trains at a set flow rate per train up to a maximum TMP. A pressure transmitter on the membrane header is used to calculate the BACKPULSE TMP. This TMP limit provides membrane protection against over-pressurization. If the TMP is too high, the TMP high trigger is active, and the flow control PID loop output is captured. This value becomes the maximum value for the output of the flow control PID loop.

When the TMP high trigger becomes active, the PLC gradually reduces the maximum for the flow PID loop output until the TMP high trigger is not active, (i.e., TMP is less positive). When the TMP high trigger becomes inactive, the maximum value is then gradually increased until the TMP high trigger is active again or continues to increase until the maximum value for the flow control PID loop output equals 100%. This control strategy allows the PLC to vary the pump speed to maximize flow while avoiding excessive TMP across the membranes.

The backpulse duration, production cycle duration, TMP limiting setpoint and the flow setpoint for all UF trains can be set through the OIT. All UF trains in the plant share the backpulse duration, production cycle duration, TMP setpoint and flow setpoint.

In SEMI AUTO, the operator can initiate a BACKPULSE from the OIT for any UF train by pressing the Backpulse button. This button is disabled if any other train is in BACKPULSE or a step with a demand for backpulse pump in MAINTENANCE CLEAN, RECOVERY CLEAN & NEUTRALIZATION.

8.2.5.1 Backpulse Tank

The backpulse tank is filled with permeate from the UF trains.

DRAFT

8.2.6 Relax

During RELAX, the solids that have concentrated around the membrane fibers are distributed away from the membrane surface by the aeration. The steps for the RELAX are:

1. Closes the permeate flow control valve (20-FCV-301-x) and header to pump valve (20-FV-622-x). Opens the ejector valve (20-FV-802-x). The step duration typically 6 seconds.
2. After six seconds closes the ejector valve. When the backpulse duration timer times out, the train proceeds to the next step, typically 30 seconds.
3. After the RELAX is complete, and if there is demand for the train to run or the train is in Demand Override the train proceeds to PRODUCTION. After the RELAX is complete and if there is no demand for the train to run the train proceeds to STANDBY, typically 6 seconds.

If a backpulse failure occurs and/or no pump is available, the PLC will replace BACKPULSE in the Production Cycle with RELAX state.

8.2.7 Maintenance Clean

The membranes require cleaning to maintain peak performance. There are two types of cleaning methods. MAINTENANCE CLEANS, and RECOVERY CLEANS.

MAINTENANCE CLEAN is scheduled through the OIT and are automatically initiated by the PLC based on a 24-hour clock. The operator may select to perform one scheduled MAINTENANCE CLEAN a train per day on the Maintenance Clean schedule screen.

The operator selectable options:

- Day of week for cleaning.
- Time of day for cleaning.
- Sodium hypochlorite for cleaning solution.
- Citric acid for cleaning solution.

When it is time to carry out a MAINTENANCE CLEAN, the PLC compares the current plant permeate flow demand with the available capacity of the plant if one train is not in service. If the plant permeate flow demand exceeds this capacity, then scheduled MAINTENANCE CLEAN is skipped but the request remains active and is started when this demand is lower. When a MAINTENANCE CLEAN is skipped or aborted, an alarm occurs to inform the operator.

If the plant permeate flow demand does not exceed this capacity, when it is time to carry out a MAINTENANCE CLEAN, the train completes its current production cycle before starting the cleaning procedure. If a train is in STANDBY, it goes directly to MAINTENANCE CLEAN.

The default steps for MAINTENANCE CLEAN are:

1. The aeration valve (20-FV-205-x) and the membrane tank inlet valve (20-Fv-209-x) open if not already open. If the blower was already running, then it continues to run. Open the aeration valve if not already open and the ejector valve (20-FV-802-x), typically for 6 seconds.
2. After six seconds closes the ejector valve. The membrane aeration blower aerates the membranes, typically for 5 minutes.

DRAFT

3. Stop the membrane aeration blower demand and close the aeration valve and align the valves for backpulse with cleaning chemical, typically for 6 seconds.
4. The backpulse pump pulses all cassettes with the selected cleaning solution (sodium hypochlorite (23-FV-130) or citric acid (23-FV-330), typically for 2 minutes. If the level in the Backpulse tank is low, the train proceeds to the next step otherwise the UF train proceed to step 6.
5. Stop the backpulse pump and chemical pump and close the backpulse train isolation valve (20-FV-621-x) and the train chemical valve. Waits for the Backpulse tank to refill. When there is sufficient water in the Backpulse tank return to step 3.
6. The PLC stops the backpulse pump and chemical pump and close the backpulse train isolation valve and the train chemical valve. Relaxation period for all cassettes, typically for 4.5 minutes.
7. The PLC aligns the valves for backpulse with the cleaning chemical, typically for 6 seconds
8. The backpulse pump and the chemical pump pulses the cassettes with the cleaning solution, typically for 30 seconds.
9. The PLC stops the backpulse pump and the chemical pump. Relaxation period for the cassettes, typically for 4.5 minutes. Steps 7 to 9 are repeated for several iterations, typically 8 iterations.
10. The PLC aligns the valves for backpulse, typically for 6 seconds.
11. The backpulse pump pulses the cassettes with permeate to remove the cleaning solution from the permeate header, typically for 2 minutes. If the level in the Backpulse tank is low, the train proceeds to the next step otherwise the UF train proceed to step 13.
12. Waits for the Backpulse tank to refill. When there is sufficient water in the Backpulse tank return to step 10.
13. The PLC stops the backpulse pump and closes the backpulse isolation valve (20-FV-621-x), and opens the aeration valve (20-FV-205-x). The step duration is typically 6 seconds.
14. The membrane blower aerates the membranes, typically for 5 minutes.
15. The train proceeds to STANDBY state in AUTO mode and to OFF state in SEMI-AUTO mode.

8.2.8 Recovery Clean

RECOVERY CLEANS can only be carried out for a train if it is in SEMI-AUTO. The operator is required to turn the train to SEMI AUTO mode and OFF state then select the R. Clean button and then either the Acid or Hypochlorite button, for the cleaning to begin. During a Recovery Clean there are several prompts which the operator must address. Consult the SC and CLC for further details. As a result, it is suggested to have the operator present during the Recovery Clean so that these prompts can be responded to in a timely manner.

RECOVERY CLEANS can be done with citric acid or sodium hypochlorite depending on which cleaning chemical the operator selects.

1. Open the aeration valve (20-FV-205-x). The membrane tank inlet gate (20-FV-209-x) is closed. The step duration is typically 6 seconds.
2. Aerates the membrane tank typically for 5 minutes.

DRAFT

3. Stops the blower demand, close the aeration valve. Open the membrane tank recirculation valve (20-FV-502-x) typically for 6 seconds.
4. Drains the membrane tank with RAS/WAS/drain pump.
5. Stops the RAS/WAS/drain pump demand and close the membrane tank recirculation valve.
6. Manual drain and flush step. The PLC will proceed to the next step after a defined duration.
7. Opens the backpulse train isolation valve (20-FV-621-x). Steps 7 to 14 are repeated for several iterations and then proceed to step 15. The number of iterations is determined on site.
8. Backpulses the membranes with permeate if the level in the backpulse tank is low then proceeds to next step or until the membrane tank is at a defined level then proceeds to step 10.
9. Relaxation period for all cassettes until there is sufficient water in the backpulse tank and then proceed to step 7.
10. Valve alignment, typically for 6 seconds.
11. Aerates the membrane tank for a defined duration, typically for 5 minutes.
12. Opens the membrane tank recirculation valve, typically for 6 seconds.
13. Drains the membrane tank with a RAS/WAS/drain pump.
14. Stop the RAS/WAS/drain pump demand, typically for 6 seconds.
15. Opens the selected clean chemical valve, either sodium hypochlorite (23-FV-130) or citric acid (23-FV-330). Opens backpulse train isolation valve (20-FV-621-x) The step duration is typically 6 seconds.
16. Backpulses the membranes with cleaning solution, if the level in the backpulse tank is low then proceeds to the next step. Or when in this step and the membrane tank level is at or above 90% of the Chemical Fill level trigger then proceeds to RECOVERY CLEAN step 18.
17. Holds this step until there is sufficient water in the backpulse tank then returns to step 15.
18. Opens the backpulse train isolation valve (20-FV-621-x), typically for 6 seconds.
19. Backpulses the membranes with permeate if the level in the backpulse tank is low then proceeds to the next step. OR When in this step and the membrane tank level is at or above the Chemical Fill level trigger setpoint then proceeds to step 21.
20. Holds this step until there is sufficient water in the backpulse tank then returns to step 18.
21. Final, extended relaxation period with intermittent aeration, typically twelve hours.
22. The operator selects the Neutralization button to proceed to NEUTRALIZATION state.

8.2.9 Neutralization

The Neutralization button is available in SEMI AUTO mode and OFF state and in all steps of RECOVERY CLEAN. The neutralization is initiated by the operator after the extended chemical soak step of the RECOVERY CLEAN. The default steps for NEUTRALIZATION are:

1. Opens the membrane tank inlet valve to fill the membrane tank to defined level with mixed liquor.
2. Open the aeration valve and close membrane tank inlet valve, typically for 6 seconds.

DRAFT

3. Aerates the membrane tank, typically for 1 minute.
4. Relaxation period for all cassettes for a defined duration typically 900 seconds and then proceed to next step.
5. Opens the backpulse train isolation valve (20-FV-621-x), typically for 6 seconds
6. Backpulses the membranes to flush the permeate header. Holds this step for step duration then proceeds to step 8. If there is insufficient water in the backpulse tank, then proceeds to the next step.
7. Holds this step until there is sufficient level in the backpulse tank then returns to step 5.
8. The operator checks the chlorine concentration and the pH. If the free chlorine and pH are with permitted limits, then press the Confirm Neutralization button and proceed to step 12. Otherwise press the Resume Neutralization button and proceed to the next step.
9. Valve alignment, typically for 6 seconds.
10. Opens the membrane tank inlet valve to adds additional mixed liquor for a defined duration typically 1 minute, and then proceeds to the next step.
11. The operator checks the chlorine concentration and the pH. If the free chlorine and pH are with permitted limits, then press the Confirm Neutralization button and proceed to step 12. Otherwise press the Resume Neutralization button and proceed to the step 9.
12. Proceeds to OFF state.

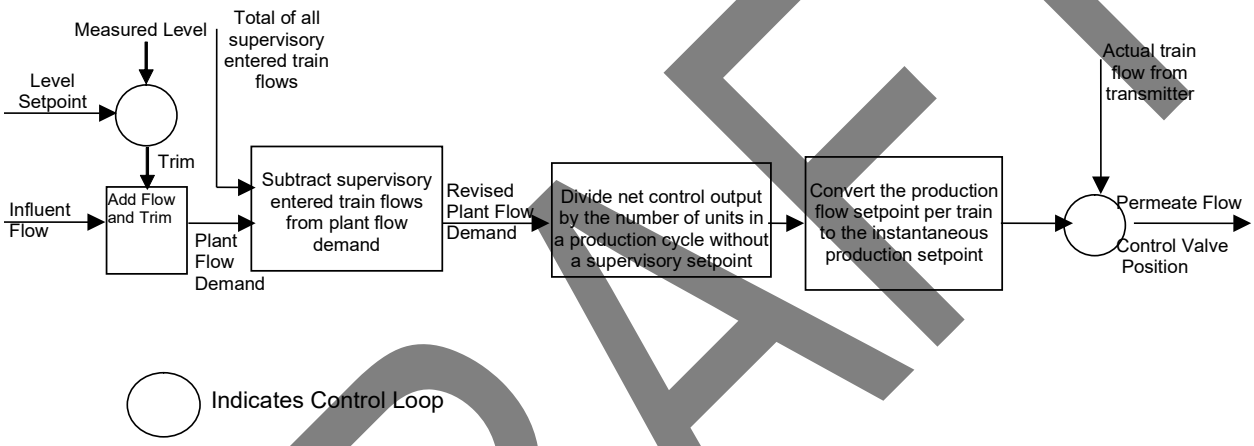
8.3 Calculations

8.3.1 Permeate Flow Control

The influent flow signal is used for the plant permeate flow demand. As the influent flow increases the plant permeate flow demand increases, causing the Permeate Flow Control Valve (20-FCV-301-X) to ramp open. To prevent standby and overflow conditions, the average level in the membrane tanks is used to trim the plant permeate flow demand. Level control is accomplished with Proportional control. The PLC performs these calculations. The plant permeate flow demand is the net permeate flowrate required from the Veolia system and does not include additional permeate the system produces for non-production operations, such as BACKPULSE.

The trim flowrate, which is a calculated flow, is added to or subtracted from the influent flowrate. As the average level increases above the setpoint in the membrane tanks, the trim increases causing the overall plant permeate flow demand to increase. When the plant permeate flow demand increases, the Permeate Flow Control Valves for the trains in PRODUCTION are ramped open to increase the plant permeate production which brings the average membrane tank level down. Conversely, if the average membrane tanks level is below the setpoint, the calculated trim flowrate is a negative flow and the overall plant permeate flow demand decreases. The Permeate Flow Control Valves are ramped closed, decreasing permeate production, and the average membrane tanks level increases because the decreased permeate production.

In Auto Setpoint mode, the flow setpoints for trains with a manual (Supervisory) flow setpoint are added together and subtracted from the plant permeate flow demand which includes the level trim. This adjusted plant permeate flow demand is then divided by the number of trains in operation without a



DRAFT

manually entered flow setpoint. This value becomes the net train permeate flow setpoint. A correction factor is calculated to account for the time when the train is not producing water (i.e., Backpulse) and to produce additional water required for backpulsing the train, when trains are being backpulsed. The net train permeate flow setpoint multiplied by the correction factor is then used to calculate the instantaneous flow setpoint for the train. The Permeate Flow Control Valve (20-FCV-301-x) is controlled by the flow PID loop.

In Supervisory Setpoint mode, a flow setpoint may also be entered for each train manually. The supervisor can do this by setting the permeate flowrate for some or all the trains on the OIT.

The PLC maintains the operator entered permeate flow rate or MBR PLC calculated permeate flow rate up to a maximum TransMembrane Pressure (TMP) or a minimum membrane tank level.

Figure 2: Influent Flow, Level Control & Permeate Flow Control Chart

8.3.1.1 Level Trim

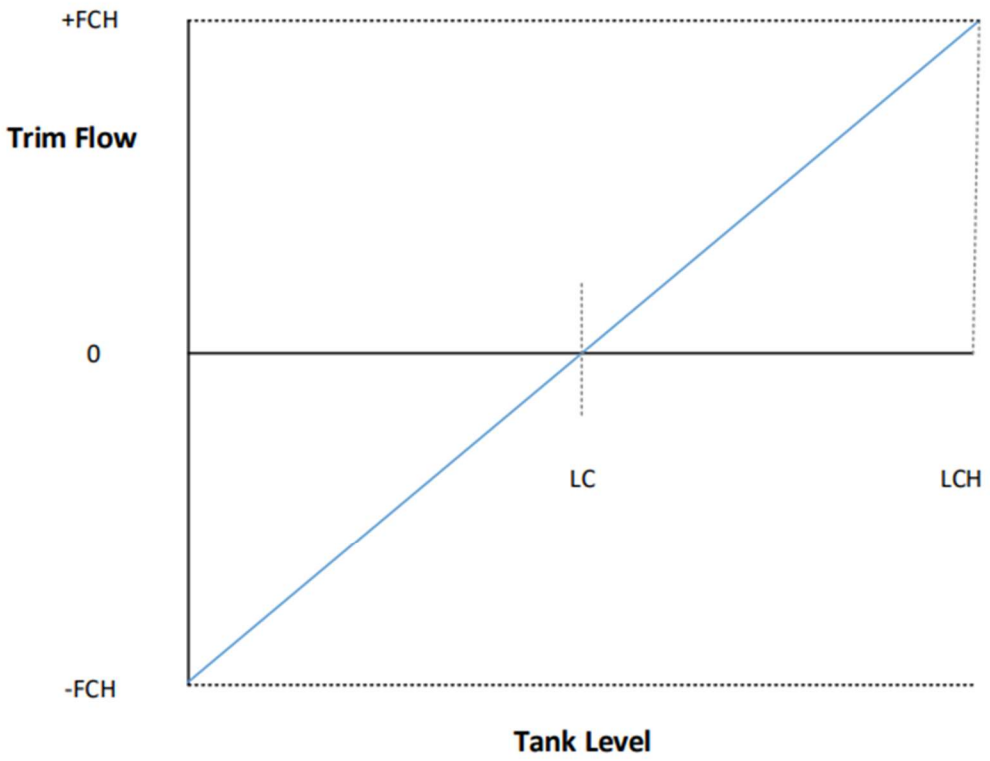
The plant permeate demand is the influent flow trimmed to the average membrane tank level.

When the membrane tank is the trim level then the level used is the average level of the membrane tanks in STANDBY, PRODUCTION, BACKPULSE, RELAX.

Tank Level Trim Calculation

To produce a full-range trim flow (negative flow to positive flow).

Trim Flow = FCH x (Level – LC) / (LCH – LC)



FCH is the maximum flow for the plant.

LCH is the level at top of the operating band.

LC is the level at middle of the operating band.

DRAFT

Figure 3 Level Trim

DRAFT

8.3.2 Production TransMembrane Pressure (TMP)

TransMembrane Pressure is the differential pressure across the membranes as measured by a combination of a level transmitter in the membrane tank and a pressure transmitter on the permeate header. In PRODUCTION, the pressure in the permeate header is lower than on the outside of the membranes resulting in a negative value for TMP. During BACKPULSE and backpulsing steps in CIP the water is flowing in the opposite direction so the pressure in the permeate header is higher than the outside of the membranes resulting in a positive value for TMP.

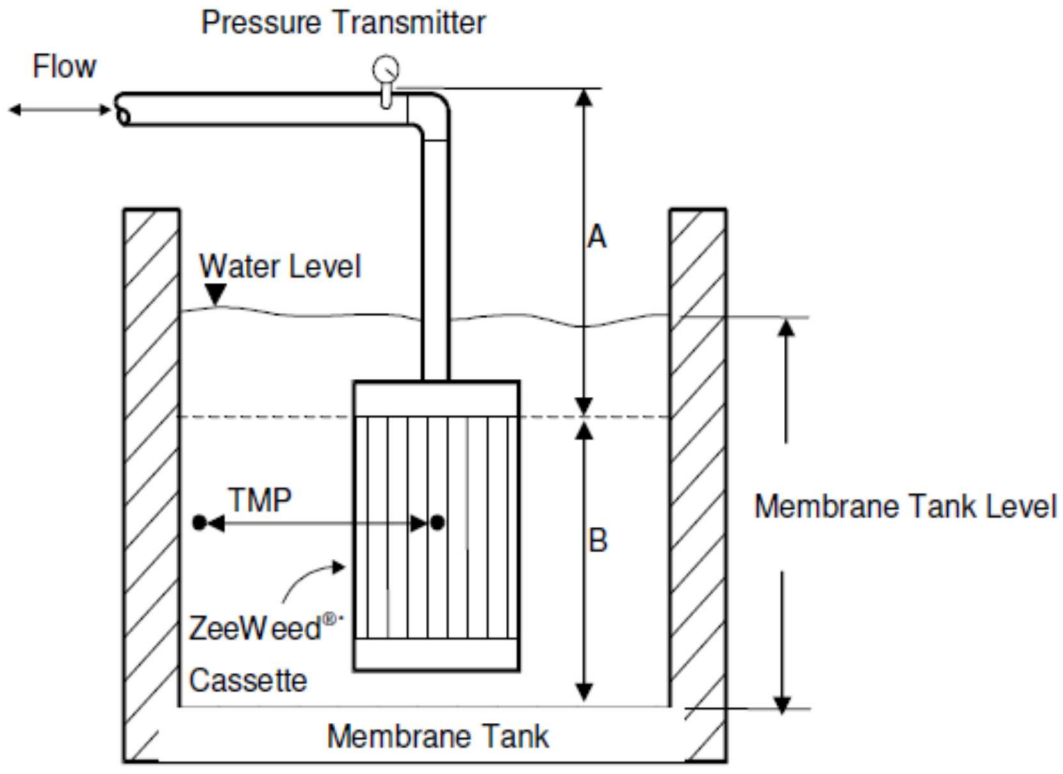
In PRODUCTION, when the TMP low trigger becomes active, the PLC gradually reduces the maximum for the flow PID loop output until the TMP low trigger is not active, (i.e., TMP is less negative). When the TMP low trigger becomes inactive, the maximum value is then gradually increased until the TMP low trigger is active again or continues to increase until the maximum value for the flow control PID loop output equals 100%. This control strategy allows the PLC to vary the permeate flow control valve position to maximize flow while avoiding excessive TMP across the membranes.

8.3.2.1 TransMembrane Pressure (TMP) Calculation

TMP is calculated by using the equation below. During PRODUCTION the value is negative. for backpulses and CIP, it is positive.

$$TMP = \text{Header Pressure} + C \times (A + B - \text{Membrane Tank Level})$$

Where:



A is the height of the pressure transmitter above the top of the membranes.

B is the height to the top of membranes in the membrane tank.

C is a conversion factor (water depth to pressure) = 0.036127 psig/inch.

In PRODUCTION, an increased TMP value means a larger pressure differential because the pressure inside the membranes is lower than outside the membranes. This corresponds to a lower number as expressed in engineering units. Therefore, a high production TMP is expressed as a Pressure Differential Alarm Low.

Figure 4 TMP

8.3.3 Start & Stop Train Triggers

The number of trains in operation at any given time varies depending on the plant permeate flow demand. As this demand increases, the number of trains in PRODUCTION increases. When a Start train trigger is active, a train switches from STANDBY to PRODUCTION. When a Stop train trigger is active, a train switches from PRODUCTION to STANDBY. The setpoint values for these triggers are defined in the CLC.

A train that has been in the Production Cycle for the longest time has the highest priority to proceed to STANDBY from PRODUCTION. A train that has been in STANDBY the longest time has the highest priority to proceed to PRODUCTION from STANDBY.

8.3.4 Normal Train Rotation

Trains are automatically rotated from PRODUCTION to STANDBY when another train is in STANDBY based on an adjustable cycle timer, typically set to 1 hour. As long as there is at least one train in the Production cycle, the cycle timer operates, and when the timer times out, a Standby request is initiated to stop one train, the train that has operated the longest compared to the other operating trains. This lead train is put to STANDBY at the end of its next Backpulse/Relax, and a train that is in STANDBY starts in PRODUCTION. When at least one train is in STANDBY, Train rotation allows each available train to operate as the lead train for no more than the duration of the cycle timer, such as 1 hour, plus the time remaining in the train's Production cycle when the train is triggered to proceed to STANDBY.

When the cycle timer times out and there is no train available in STANDBY to start in PRODUCTION, the lead train continues in the Production cycle and the request to put a train to STANDBY is maintained, waiting for a train to become available.

If the plant permeate flow demand decreases and triggers a train to STANDBY, the normal train rotation timer resets and resumes timing, or when a train is in STANDBY, the timer resets and resumes timing.

8.3.5 Freeze Protection Enabled

Freeze Protection is used when there is a danger of the permeate headers freezing. When Freeze Protection is selected it replaces Train Rotation. Freeze Protection only works as long as there is demand for at least one train to be in the Production cycle.

The PLC is programmed to force a train, which is in STANDBY for more than 30 minutes to go to PRODUCTION (this train stays in the Production cycle for at least 200 seconds) another train in the Production cycle switches to STANDBY.

After 200 seconds, the PLC checks all Standby trains and selects the train, which has more than 30 minutes standby time and the highest standby time to repeat the same process again, one train at the time. The timers are operator adjustable at the OIT. The number of trains in the Production cycle is still controlled by the start/standby triggers. There are buttons on the OIT to select either Enable Freeze Protection or Enable Train Rotation.

During this switching time the request for the number of running blowers is held constant.

For normal train rotation select the Train Rotation button. The train rotation is controlled by Train Rotation Time SP value.

For Freeze Protection select the Freeze Rotation button. If the All-Day button is selected, then freeze rotation occurs continuously. If the Timed button is selected, then it starts at the start hour and finishes at the stop hour. This rotation is controlled by Rotation Standby Duration and Rotation Train Min. Time in Production setpoints.

DRAFT

8.4 UF Analog Control

8.4.1 Membrane Tank Inlet Valve

The Membrane Tank Inlet Gate is open continuously in PRIME, STANDBY, PRODUCTION, RELAX, BACKPULSE and MAINTENANCE CLEAN and in some steps of NEUTRALIZATION.

8.4.2 Membrane Aeration Control

There are 5 membrane aeration blowers, designated as 4 duty blowers and 1 standby blower. Blower duty is alternated according to an operator entered run time. (Blower duty is alternated by the blower master control panel). The blowers supply low pressure air into a common air header for all the UF trains. This common air header then divides into multiple air headers to the membrane tanks.

For further details on blower operation, refer to the SC and CLC for the occurrence and number of blowers to be running at any given time.

The blower's VFD varies the volume of air through the blower. The PLC uses the sum of the trains air flow demand to determine the speed of the blower using a lookup table.

The speed of the blower is controlled by a flow PID loop. The process variable is a flow meter on the common air discharge header.

The PLC starts and stops blowers as necessary to maintain the desired air flow. All the blowers operate at the same speed when running.

8.4.2.1 Aeration

UF membranes are aerated in PRODUCTION, BACKPULSE, RELAX, intermittently in STANDBY and some steps of MAINTENANCE CLEAN & RECOVERY CLEAN & NEUTRALIZATION.

When a train is in a step with an aeration demand, the aeration isolation valve for that train is open.

The PLC automatically determines when the UF trains run in High Flow Aeration or Low Flow. The change from High to Low aeration only occurs when STANDBY aeration timer (30-minute) times out and all the following conditions are true:

1. The plant is enabled to operate in Low Flow Aeration.
2. The net permeate flow setpoints for all trains in the Production Cycle are below the design value for the membranes.
3. All the trains in the production cycle have resistance calculation value which permits Low Flow Aeration.

The change from Low to High aeration occurs when standby aeration timer (30-minute) times out and any of the following conditions are true:

1. The net permeate flow setpoint for any train in the production cycle is above the design value for the membranes. OR
2. Any train in the production cycle has resistance calculation value which does not permit Low Flow Aeration.
3. High Flow Aeration Twice Daily Frequency is active.

Or

DRAFT

- When any train in the production cycle has a flow greater than average day design value for the membranes for five minutes.

Or

- Low Flow Aeration is disabled by the button on the OIT - then immediately.

The resistance calculation runs from the last step of either BACKPULSE OR RELAX state to the first step of either BACKPULSE OR RELAX state for production cycle for each train. The result of each train's resistance calculation is saved for the last complete train's production cycle.

If any of these trains in the production cycle require high flow aeration, then all the trains are aerated in high flow aeration.

When the standby aeration timer (30 minutes) times out, the membrane aeration demand (i.e., # of blowers and /blower speed) is calculated for the standby trains and operating trains, to minimize start stops on the blowers.

If an aeration isolation valve is requested to close and fails to close, aeration continues, and the train does not proceed to Standby due to an active Standby Trigger. An alarm is triggered to alert the operator. If an aeration isolation valve fails to open, the train is shutdown to prevent fouling of the membranes due to inadequate air scouring.

8.4.3 Recirculation Flow Control

The RAS/WAS/drain Pump for the train transfers mixed liquor from the membrane tank to the bioreactor splitter box. The RAS pumps are configured to operate as one duty per train.

The RAS flow setpoint is an operator adjustable ratio based on the net train permeate flow setpoint, which the PLC calculates. The speed of the RAS/WAS/drain pump is controlled by a flow PID loop. As the net train permeate flow setpoint increases the RAS flow demand increases, causing the RAS/WAS/drain pump(s) to speed up.

The RAS/WAS/drain pumps operate continuously during PRODUCTION, BACKPULSE, RELAX. (If there is an anoxic zone one RAS pump must operate continuously in STANDBY in addition to intermittent RAS recirculation)

8.4.3.1 Standby Recirculation

When trains are in STANDBY, intermittently the RAS is recirculated. This RAS recirculation is controlled by the same timers used in Standby Aeration.

Standby trains are intermittently aerated based on a duration timer and a frequency timer. When the frequency timer times out, the Standby trains are aerated, and RAS is circulated through the membrane tank one after another. The aeration and RAS circulation is controlled by the setpoint of the duration timer.

When none of the trains are in PRODUCTION, BACKPULSE, RELAX, then the RAS/WAS/drain pump for the train with the highest starting priority in STANDBY runs continuously. This operation is in addition to the intermittent RAS recirculation.

DRAFT

8.4.4 Sodium Hypochlorite Cleaning Equipment

Sodium hypochlorite is used to remove organic contaminants from the membranes. The Veolia PLC requests one sodium hypochlorite pump, 23-P-101-A or B to run during MAINTENANCE CLEANS or RECOVERY CLEANS. The pump injects chemical to the backpulse water in specific steps during the cleaning procedure. The pumps are configured as one duty and one standby. A flow meter on the discharge of the pumps measures the chemical flow rate. The speed of the pump is controlled using a PID loop to provide a target chemical flow rate, with separate flow setpoints for MAINTENANCE CLEAN and RECOVERY CLEAN. The chemical flow rate provides the required chemical concentration in the chemical dosing steps. A bypass valve on the pump discharge line opens during RECOVERY CLEAN, to enable a higher flow rate from the pump. The chemical flow is totalized during cleans and the volume injected is displayed on the OIT.

The sodium hypochlorite tank level is monitored with a level transmitter.

If low level alarm is active, then the sodium hypochlorite pumps are interlocked. A MAINTENANCE CLEAN continues steps while in a RECOVERY CLEAN the train proceeds to the first fault step.

8.4.5 Citric Acid Cleaning Equipment

Citric acid is periodically used to remove inorganic contaminants from the membranes such as calcium carbonate, manganese, and iron compounds. The Veolia PLC requests one citric acid pump, 23-P-301-A or B to run during MAINTENANCE CLEANS or RECOVERY CLEANS. The pump injects chemical to the backpulse water in specific steps during the cleaning procedure. The pumps are configured as one duty and one standby. A flow meter on the discharge of the pumps measures the chemical flow rate. The speed of the pump is controlled using a PID loop to provide a target chemical flow rate, with separate flow setpoints for MAINTENANCE CLEAN and RECOVERY CLEAN. The chemical flow rate provides the required chemical concentration in the chemical dosing steps. A bypass valve on the pump discharge line opens during RECOVERY CLEAN to enable a higher flow rate from the pump. The chemical flow is totalized during cleans and the volume injected is displayed on the OIT.

The citric acid tank level is monitored with a level transmitter.

If low level alarm is active, then the citric acid pumps are interlocked. A MAINTENANCE CLEAN continues steps while in a RECOVERY CLEAN the train proceeds to the first fault step.

9 Integrity Monitoring & Control

In PRODUCTION, integrity of each train is monitored with on-line turbidity meters. Turbidity is displayed but not monitored for alarms when trains are in STANDBY, BACKPULSE, RELAX, MAINTENANCE CLEAN, RECOVERY CLEAN, NEUTRALIZATION.

There are three turbidity alarms used to assist the operator in running the system. One alarm is used to detect a problem that is not a spike and immediately shuts down the train in PRODUCTION. For example, a train is shutdown when the turbidity is above the setpoint, 0.2 NTU, for 2 minutes.

A second alarm is used to detect a spike in turbidity and sets all trains that are in BACKPULSE to RELAX. For example, the alarm is active when the turbidity is above the setpoint, 5 NTU, for 10 seconds. The alarm also skips all scheduled MAINTENANCE CLEANS until the turbidity alarm

DRAFT

condition no longer exists. After the turbidity alarm condition clears, the Maintenance Cleans are completed as scheduled, but the BACKPULSE must be manually selected by the operators, if required.

The third alarm also detects turbidity spikes but at a lower setpoint and is used to notify the operator of a potential problem which needs to be addressed. For example, the alarm is active when the turbidity is above the setpoint, 0.5 NTU for 60 seconds.

The turbidity alarm setpoints and the time delays, before the alarms become active, are adjustable at the OIT. For further details consult the CLC.

10 Sludge Wasting

The operator is required to waste sludge from the membrane basins in order to maintain good membrane performance. The operator should analyze the sludge to ensure a mixed liquor concentration in the membrane tanks is less than 10,000 mg/L, for example, to maximize membrane performance.

At the OIT, the operator enters

- enables wasting
- start time
- the total volume of sludge to waste for the day, start time.

When the time of day is reached, sludge wasting is started. A sludge isolation valve opens to direct waste to the sludge handling facility and the flow is totalized. When the total volume of sludge wasted reaches the setpoint, the valve is closed, and the flow totalizer is reset to zero at midnight.

11 Air Compressor Control

The system comes with two air compressors and two refrigerated air dryers. The air compressors provide compressed air for all the pneumatic actuated valves and ejectors in the Veolia supplied system.

The PLC enables one air compressor at a time during normal operation. The air compressors alternate on a pre-defined period, which is operator adjustable, or alternate when selected by the operator, selectable at the PLC OIT. When an air compressor is enabled, its local pressure switch will control the start and stop of the compressor based on the system pressure. When the system pressure reaches the low setpoint, the switch will trip starting the compressor and when the system pressure reaches the high setpoint, the contact will open stopping the compressor.

If the system pressure falls to 90 psi, either due to a large demand or the Lead (enabled) compressor fails, a low-pressure switch located upstream of the instrument air regulator, activates, and the lag compressor is enabled to start in an attempt to restore air pressure back to normal pressure. Both compressors could be running in this scenario and will turn off when their local pressure switch reaches the shutoff pressure set point. In the event that the system pressure falls below the low low trigger pressure, another pressure switch downstream of the pressure regulator will activate creating a callout alarm and put all trains to Fault step as the actuated valves cannot reliably be operated. Trains will re-start when the low-low pressure switch pressure condition is cleared.

DRAFT

If the enabled (LEAD) compressor experiences a fault an alarm is triggered, and an enable signal will be provided to the LAG compressor. It will stay enabled without rotation of the compressor until the fault is cleared.

Reciprocating compressors have a duty cycle around 70% which means they should not run longer than 42 minutes in any 60-minute period. The controls include an excessive runtime alarm that will occur if one of the compressors is running more than 45 minutes, to alert the Operations staff to check the system.

The supplied air dryers run independently and are not controlled by the PLC. The function of the air dryer is to remove the moisture in the air supply. Excessive moisture could cause pre-mature failure of the valve solenoids. Refer to the Operation & Maintenance Manual for more details.

12 InSight Remote Monitoring

InSight is a paid service that captures and stores plant data from the PLC in the private Veolia cloud in AWS. Data upload can be automated or manual. This data is then transformed into meaningful information, providing the knowledge needed to optimize the plant process and, in some cases, predict upcoming performance trends. With InSight, operators can assess trends and detect problems quickly, allowing them to act to avoid operational interruptions. Our process experts study customer plant data and provide guidance. We assist operating teams with optimization and troubleshooting. InSight is a powerful tool to preserve operations knowledge.

InSight information is available on the web, mobile data, automated reports, and email, which makes it easier to monitor plant operation. InSight users can review historical and current performance, helping them to ensure maximum membrane life and utilization of other equipment.

Additionally, the automated data collection feature reduces the tedious work of entering and reporting the collected data.

InSight data also sets the foundation for our Veolia advanced analytics tools which use machine learning and artificial intelligence technologies to predict future events.

   • EST. CASSETTE SHIPPING WEIGHT: 5,313 LBS [2,410 KG]
   • EST. CASSETTE MAX. WEIGHT (SLUDGED): 9,537 LBS [4,326 KG] (INCLUDING LIFTING MODULE)
   • RECOMMENDED CRANE LIFTING CAPACITY: 10,000 LBS [4,535 KG]. THE VEOLIA DESIGN GUIDELINE LISTED BELOW.
3. USE CRANE SCALE IF CASSETTE'S WEIGHT IS UNKNOWN. THE VEOLIA CRANE SCALE USE GUIDE LISTED BELOW.
4. CRANE HOIST CHAINFALL SHOULD BE IN LINE WITH CASSETTE CENTERLINE, FOR BOTH ALONG AND ACROSS THE TANK, BEFORE LIFTING CASSETTE.
5. LIFTING MODULE IS NOT TO BE LEFT INSIDE MEMBRANE TANK DURING OPERATION. A STORAGE SPACE WILL BE REQUIRED WHEN LIFTING MODULE IS NOT IS USE.
6. FOR SCOPE OF VEOLIA SUPPLIED EQUIPMENT AND TECHNICAL DATA REFER TO THE P&IDS AND EQUIPMENT BILL OF MATERIAL.
7. DESIGN, SUPPLY AND INSTALLATION OF MEMBRANE TANK DISTRIBUTION CHANNEL, SLUICE AND WEIR GATES, EMERGENCY OVERFLOW, AND HANDRAILS ON TOP OF THE TANKS ARE BY OTHERS. THESE ARE NOT SHOWN FOR CLARITY.
8. DESIGN AND SUPPLY OF MEMBRANE TANK COVERS ARE BY OTHERS (TANK MUST BE VENTED). THE VEOLIA DESIGN GUIDELINE IS LISTED BELOW. WALL BRACKET'S ELEVATION SHOULD BE COORDINATED WITH TANK COVER'S THICKNESS.
9. DO NOT PUT THE CASSETTE ON TOP OF TANK COVER UNLESS THE TANK COVER WAS DESIGNED TO TAKE SLUDGED CASSETTE WEIGHT.
10. DESIGN AND SUPPLY OF PIPE SUPPORTS BY OTHERS.
11. INFLUENT DEFLECTOR PLATE IS REQUIRED TO PREVENT DIRECT IMPACT OF FEED WATER ON CASSETTES. THE VEOLIA DESIGN GUIDELINE IS LISTED BELOW.
12. MEMBRANE TANK COVERS DESIGN TO BE COORDINATED WITH VEOLIA TEAM FROM INITIAL STAGES OF COVER DESIGN. THE VEOLIA DESIGN GUIDELINE IS LISTED BELOW.
13. THE FOLLOWING DESIGN GUIDELINES ARE AVAILABLE FROM VEOLIA UPON REQUEST:
    • E000001-WTS-ME-T02-8522-SG-001 - MEMBRANE TOLERANCES.
    • E000001-WTS-ME-T02-8522-SG-016 - ZEEWEED 500D SERIES MEMBRANE LIFTING EQUIPMENT GUIDELINE
    • E000001-WTS-ME-T02-8522-SG-013 - BAFFLE DESIGN
    • CRANE SCALE INSTALLATION AND USE (IN SERV-0083 ZW500 CASSETTE SOLIDS REMOVAL PROCEDURE).
    • E000001-WTS-ME-SYS-EN22-SG-017 - MEMBRANE TANK COVERS DESIGN GUIDELINE.
14. ANY ANCHOR BOLT TO BE MINIMUM 4" AWAY FROM CONCRET EDGES.
15. FOR INTERIOR TANK WALLS THAT HAVE BRACKETS ON BOTH SIDES, IF THE ANCHOR EMBEDMENT PLUS TWO TIMES THE ANCHOR DIAMETER IS GREATER THAN HALF OF TANK WALL THICKNESS, THEN THRU-WALL THREADED RODS MUST BE USED TO FIT 0.6875" DIA. HOLE (RODS TO BE SUPPLIED BY OTHERS)
16. PIPING MATERIAL:
    • AIR: SCH. 10, 316L SS AND SCH. 80, CPVC
    • PERMEATE: SCH. 10, 316L SS
17. GASKET MATERIAL:
    • SS LINES: EPDM
18. FASTENER MATERIAL:
    • 316SS
19. ALL DIMENSIONS IN INCHES.
20. DIMENSION SHOWN IN PARENTHESIS (XX) ARE FOR REFERENCE ONLY.
21. CONTRACTOR/SHOP SHALL VERIFY ALL DIMENSIONS PRIOR TO INSTALLING PIPING/EQUIPMENT.
22. REFERENCE - PIPING & INSTRUMENTATION DIAGRAM: 510464-WTS- PR-SYS-EN21-DS-104
23. SUMP DESIGN IS BY OTHERS. DIMENSIONS ARE SHOWN FOR REFERENCE ONLY. TO ENSURE FULL TANK DRAIN, VORTEX BREAKER IS RECOMMENDED. FOR SUCTION LOSSES REDUCTION, A BELLMOUTH FITTING CAN BE USED. LONG RADIUS ELBOW IS RECOMMENDED IF FEASIBLE. INTRODUCTION OF ANY OF THESE FEATURES MAY REQUIRE THE SUMP SIZE TO INCREASE.
24. THIS SPOOL IS A PLACEHOLDER FOR RECOMENDED VORTEX BREAKER AND OPTIONAL FLAIR (BELLMOUTH). *SYSTEM INTEGRATOR* TO DETERMINE DESIGN AND DIMENSIONS OF ANY OF THESE COMPONENTS, AS APPLICABLE.
25. FOR THE SCENARIO OF RAS PIPE PASSING BETWEEN CASSETTE FRAME AND TANK WALL, TANK LENGTH WILL INCREASE ACCORDINGLY. LEAVE A MINIMUM OF 4" BETWEEN CASSETTE FRAME AND VERTICAL PIPE SECTION.
26. UNLESS NOTED OTHERWISE, ALL FLANGE BOLT HOLES TO BE STRADDLE MAJOR CENTERLINES.
27. ALL MATING FLANGES SHALL HAVE PARALLEL FACE WITH NO OFFSET BETWEEN PIPE CENTERLINES. COLD SPRINGING OF PIPING DURING INSTALLATION IS NOT ALLOWED.
28. INDICATED LIFTING HEIGHT IS BASED ONLY ON COMPONENTS SHOWN ON THIS DRAWING.
29. EJECTOR TO BE CONNECTED TO A PIPE OVERT AT PIPE'S HEIGHEST POINT BETWEEN PERMEATE HEADER TIE POINT AND PERMEATE PUMP SUCTION.
30. FALL PROTECTION PROVISIONS ARE IN SCOPE OF OTHERS.
31. ENSURE SLUICE GATE VALVE DOES NOT INTERFERE WITH THE CASSETTE TRAVELING IN BOTH DIRECTIONS WHILE BEING REMOVED FROM INSIDE THE TANK.
32. PERMEATE/AIR HEADERS, PERMEATE/AIR DROP LEGS, CASSETTE PERMEATE/AIR ISOLATION VALVES , DEFLECTOR PLATE AND SLUICE GATE VALVES AND RAS/DRAIN INLET ELBOWS ARE BY OTHERS.
33. VOID SPACE (OR A THICKER WALL) IS REQUIRED IN BETWEEN PAIRS OF TANKS TO ACCOMMODATE TWO SETS OF HEADERS ABOVE, DIMENSION (5 FEET) IN PLANE VIEW IS FOR REFERENCE ONLY AND CAN BE REDUCED.

CONTROL VALVE ACTUATORS

ACTUATED VALVE OPERATION IS NORMALLY CLOSED UNLESS MARKED OTHERWISE

- PISTON DOUBLE ACTING
- PISTON SPRING TO OPEN
- PISTON SPRING TO CLOSE
- DIAPHRAGM DOUBLE ACTING
- DIAPHRAGM SPRING TO OPEN
- DIAPHRAGM SPRING TO CLOSE
- DIAPHRAGM DOUBLE BALANCING
- BACK PRESSURE CONTROL (EXTERNAL REGULATING)
- BACK PRESSURE CONTROL (INTERNAL REGULATING)
- PRESSURE REDUCING (EXTERNAL REGULATING)
- PRESSURE REDUCING (INTERNAL REGULATING)
- M — ROTARY MOTOR ANALOG
- M — ROTARY MOTOR DIGITAL
- I/P — I/P CONVERTER
- POSITIONER
- TRAVEL STOP
- GEAR — MANUAL GEAR WHEEL
- CHAIN — MANUAL CHAIN WHEEL
- S, A, B — SOLENOID
- S, A, B, C — SOLENOID 3 WAY
- S, D, A, B, C — SOLENOID 4 WAY

VALVE SYMBOLS

OPEN DURING NORMAL PROCESS OPERATION — CLOSED DURING NORMAL PROCESS OPERATION

- GATE (OR GENERIC)
- BALL
- BUTTERFLY
- NEEDLE
- GLOBE
- DIAPHRAGM
- ANGLE
- PLUG
- PINCH
- V–BALL
- K — KNIFE GATE — K
- UPWARD OPENING SLIDING GATE
- DOWNWARD OPENING SLIDING GATE
- MANUAL BLAST GATE
- BACKFLOW PREVENTER
- CHECK
- INJECTION QUILL
- FOOT
- FLOAT
- MUD
- 3 WAY
- 4 WAY
- 5 WAY
- 6 WAY
- 2 VALVE MANIFOLD
- 3 VALVE MANIFOLD
- 5 VALVE MANIFOLD
- SAMPLE

RELIEF

- PRESSURE SAFETY
- VACUUM SAFETY
- MULTIFUNCTION
- PRESSURE RUPTURE DISK
- VACUUM RUPTURE DISK
- AIR RELEASE
- VACUUM BREAKER
- VENT — VENT
- GROUND
- DRAIN — DRAIN

PUMPS, BLOWERS, & COMPRESSORS

- CENTRIFUGAL PUMP
- CENTRIFUGAL/ REGENERATIVE BLOWER
- PROPELLER PUMP
- ROTARY LOBE COMPRESSOR BLOWER
- METERING PUMP
- AIR OPERATED DOUBLE DIAPHRAGM PUMP
- VACUUM PUMP (DRY)
- POSITIVE DISPLACEMENT PUMP
- VACUUM PUMP LIQUID RING
- VERTICAL TURBINE PUMP
- AIR COMPRESSOR PISTON
- CAN PUMP
- AIR COMPRESSOR ROTARY SCREW
- WELL PUMP
- REFRIGERATED AIR DRYER
- DRUM PUMP
- FAN
- HP / LP — ERI PRESSURE EXCHANGER
- SUBMERSIBLE SUMP PUMP
- M — MOTOR
- HP / LP — HYDRAULIC PRESSURE BOOSTER
- PROGRESSIVE CAVITY PUMP

FLOW ELEMENT

- PADDLE WHEEL
- ANNUBAR
- FLOW NOZZLE
- FLUME
- M — MAGNETIC
- PITOT
- SONIC/ ULTRASONIC
- TURBINE
- VENTURI TUBE
- VORTEX
- MASS FLOW/ CORIOLIS
- ROTAMETER
- FG — IN–LINE FLOW GLASS
- FLOW STRAIGHTENER
- FIXED ORIFICE
- ADJUSTABLE ORIFICE
- RESTRICTED ORIFICE
- RESTRICTED ORIFICE ANGLE
- ORIFICE PLATE QUICK–CHANGE

CONNECTIONS

- FLANGE
- FLANGE BLIND
- MECHANICAL COUPLING OR VICTAULIC
- MECHANICAL COUPLING OR VICTAULIC PLUG
- SANITARY
- SANITARY PLUG
- THREADED
- THREADED PLUG
- SOCKET
- UNION
- CAMLOCK
- CAMLOCK PLUG
- HOSE BARB
- WELDED PIPE CAP
- PLAIN END PIPE COUPLING
- REDUCER
- COMPRESSION FITTING
- COMPRESSION FITTING PLUG
- SPECTACLE BLIND OPEN
- SPECTACLE BLIND CLOSED

HEATING

- TANK HEATER
- HEAT EXCHANGER
- IN–LINE HEATER
- PLATE & FRAME HEAT EXCHANGER
- DESUPERHEATER

FILTERS

- FIXED SCREEN
- TOP HAT STRAINER
- BAR SCREEN
- HEPA FILTER
- Y STRAINER
- CONICAL STRAINER
- F — FILTER
- PUMP SCREEN
- ST — STEAM TRAP
- R/T — RESIN TRAP

RO/UF

- FOUR PORT HOUSING
- TWO PORT HOUSING
- END PORT HOUSING
- MEMBRANE MODULE

VESSELS/TRIM

- CONICAL BOTTOM TANK
- TANK (CLOSED TOP)
- TANK (OPEN TOP)
- DOMED TANK
- PRESSURE VESSEL HORIZONTAL/ VERTICAL OR RECEIVER
- M — PROPELLER AGITATOR
- VB — VORTEX BREAKER
- VESSEL INSULATION
- LEVEL GLASS
- ELLIPTICAL MANWAY
- MANHOLE
- MANHOLE W/ DAVIT ARM
- VESSEL SIGHT GLASS
- WATER LEVEL
- LADDER/ PLATFORM

MISCELLANEOUS

- MUFFLER
- EDUCTOR
- STATIC MIXER
- EXPANSION JOINT
- SILENCER
- VIBRATION ISOLATOR
- HIGH PRESSURE FLEXIBLE CONNECTOR
- INJECTION SPARGER
- DIAPHRAGM SEAL/ GAUGE GUARD
- PULSATION DAMPENER
- SPRAYER NOZZLE
- DESICCANT AIR DRYER
- HYDROMETER POT
- COARSE BUBBLE DIFFUSER ELEVATION VIEW
- FINE BUBBLE DIFFUSER ELEVATION VIEW
- THERMOWELL
- TOP MOUNT LEVEL SWITCH
- ULTRASONIC LEVEL
- CALIBRATION COLUMN
- XXX / XXX — PIG TAIL
- ION EXCHANGE BOTTLE

SCOPE BREAK

- CLIENT/OTHER
- SUEZ

MATERIAL BREAK

- MATERIAL A — MATERIAL B

PIPE INSULATION/ DOUBLE CONTAINMENT

- PP 2" ("PP" INDICATES PERSONNEL PROTECTION –OPTIONAL)

LINE TYPES

VEOLIA WTS
CONTROLLED DOCUMENT

NOTES:

1. ALL DOTTED-LINE EQUIPMENT BY OTHERS. STAINLESS STEEL PIPING OPTIONAL. VERIFICATION OF ANY POSTED VALUES IS THE RESPONSIBILITY OF THE SYSTEM INTEGRATOR.
2. DRAWING TYPICAL FOR EACH MEMBRANE TRAIN WITH EXCEPTION OF THE COMMON CHANNEL. THERE ARE 4 MEMBRANE TRAINS IN TOTAL, X = 1, 2, 3 AND 4.
3. A PORTION OF THE AIR LINE NEEDS TO BE ROUTED A MINIMUM OF 2 FT (610 MM) ABOVE MAXIMUM LIQUID LEVEL IN TANK BEING AERATED TO PREVENT WATER BACK FLOW.
4. ALL EQUIPMENT ON THIS SHEET IS DESIGNED TO BE INSTALLED IN A NON-CLASSIFIED AREA (PER NFPA 820).
5. BOTH EJECTOR AND INSTRUMENT AIR SUPPLY ASSEMBLIES ARE TO BE LOCATED INDOORS OR TO BE TEMPERATURE AND UV PROTECTED.
6. CONNECTION TO BE PROVIDED AT HIGHEST POINT ON PIPING BETWEEN PERMEATE HEADER AND PUMP.
7. AIR GAP IS REQUIRED ON EJECTOR DISCHARGE LINE EXHAUST TO MEMBRANE TANK OR DRAIN.
8. KNIFE GATE VALVES ARE RECOMMENDED FOR ALL WASTE WATER AND SLUDGE APPLICATIONS. UNDER CERTAIN CIRCUMSTANCES, BUTTERFLY VALVES COULD BE ACCEPTABLE; THIS WILL BE A MUTUAL DECISION BETWEEN CUSTOMER AND SUEZ ENGINEERS.
9. TANK RAS/WAS/DRAIN VALVES ARE RECOMMENDED TO BE FULL LUG STYLE.
10. MEMBRANE TANK SPLITTER CHANNEL IS COMMON FOR ALL TRAINS, AND PROVIDES A HYDRAULIC LINK AND EVEN DISTRIBUTION.
11. LEVEL SWITCH IS PLACED 1 FT BELOW THE TOP OF THE TANK.
12. TANK COVERS(BY OTHERS) ARE REQUIRED; NOT SHOWN FOR CLARITY.
13. BASED ON ADDENDUM #1 DATED JUNE 29,2022, ALL VALVES AND PIPING INSIDE MEMBRANE TANKS ARE BY THE CONTRACTOR.

ZeeWeed* 500 for Large Municipal MBR

FACT SHEET

Experience, Expand, Evolve with ZeeWeed

Addressing the everchanging needs of Municipal customers looking to:

- Lower the CAPEX associated with expanding capacity
- Increase treatment capacity in a smaller footprint
- Reduce annual energy and maintenance costs
- Enjoy longer membrane life with simplified maintenance

Performance

- High flux dedicated MBR membrane chemistry since 2007 with permeability > 900 lmh/bar
- True UF membrane for over 25 years with proven 0.035 µm nominal pore size
- Patented LEAPmbr aeration providing exceptional energy consumption savings
- Superior fiber strength, 60x greater than non-reinforced PVDF membranes

Reliability

Exceptional membrane reliability and product life with many municipal customers achieving 12 to 16 years operation; longest proven life 21 years!

Veolia stands by its product offering Peace of mind with warranties up to 15 years in duration.

Proven Experience

Nearly 2500 MBRs globally running with ZeeWeed 500 membranes. More than 1.3 million operating modules treating over 27000 MLD (7200 MGD) daily.

Flexibility & Simplicity

Configurable product to provide plant layout versatility for easy future expansion even for those with footprint constraints.

Demonstrated simple retrofit solutions for conventional upgrades and more than 15 other MBR membrane suppliers.

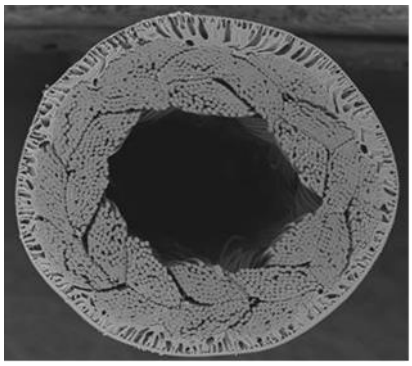
Cassette Properties

Table 1: Cassette Dimensions

Product	Width (A) mm (in)	Length (B) mm (in)	Height (C) mm (in)
500EV-64M	1,744 (68.7)	2,136 (84.1)	2,735 (107.7)
500D-52M			2,562 (100.9)

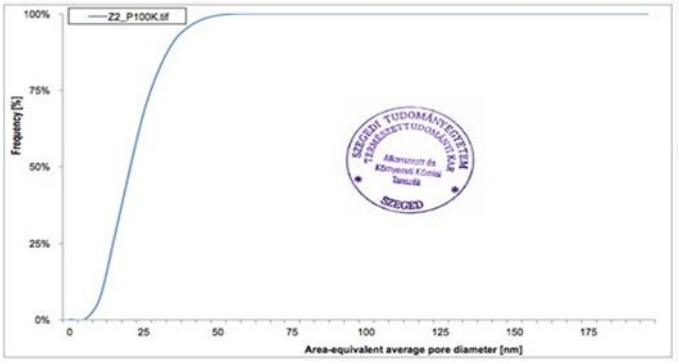
Table 2: Cassette Tie Points and Weights

Application	Product	Max. # of Modules	Min. # of Modules	Permeate Connection	Air Connection	Max. Shipping Weight [1] kg (lb)	Wet Weight [2] kg (lb)	Lifting Design Weight [3] kg (lb)	Cassette Material [4]
LEAPmbr	EV-64M	64	32	1 x 8” vert. pipe	1 x 3” FNPT half coupling	2,091 (4,610)	2,329 (5,135)	4,536 (10,000)	316L SS frame with engineered plastics
	D-52M	52	26	1 x 6” vert. pipe	1 x 3” FNPT half coupling	1,892 (4,172)	2,184 (4,816)	4,536 (10,000)	



1 Crated with maximum number of modules

2 Wet weight of a clean, fully populated cassette. Lower module population will reduce this value. Cassette support method and lifting module can also vary this weight, depending on design. An estimate is used based on several standard designs.



3 Product lifting design weight assumes a fully populated cassette with solids accumulation, standard lifting module and hanging arms. Alternative support and lifting methods could vary this value.

4 Alternative grades of stainless steel offered for cassettes are 304L, 2205 and SMO254 as required.

Membrane Properties

Membrane cross-section

3rd party certified UF pore size

Table 3: module dimensions

Application	Product	Width – A mm (in)	Length - B mm (in) Header-to-Header	Depth – C mm (in)
MBR	500EV	861 (33.9)	2,051 (80.7)	51 (2.0)
	500D	844 (33.2)	1,940 (76.4)	49 (1.9)

Table 4: Module Properties

Application	Membrane Surface Area m^2 (ft^2)	Lifting Weight [1] kg (lb)	Material	Nominal Pore Size [2] (µm)	Fiber Diameter [3] (mm)	Surface Properties	Fiber Tensile Strength [4] (N)	Flow Path

	500D 40.0 (430)	28 (61)						

1 Clean wet weight excluding any solids accumulation

2 Nominal pore size is often rounded to 40nm (0.04 micron) for simplicity.

3 Fiber dimensions have been rounded to the nearest decimal place for simplicity.

4 Tensile strength measured using a modification of ASTM protocol (D 3822)

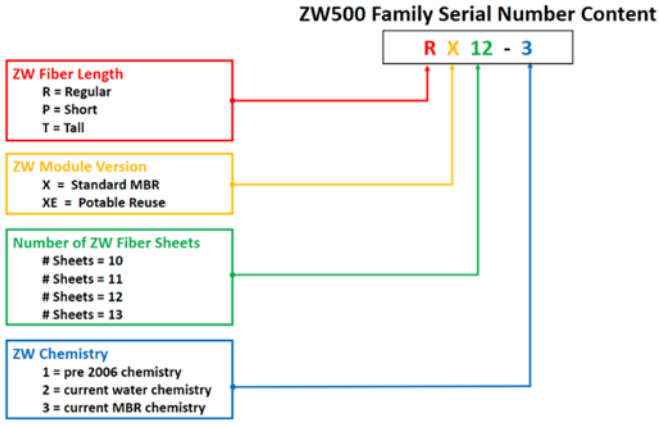

Table 5: Operating & Cleaning Specifications [1]

Application	TMP Range kPa (psig)	Typ. Aeration Nm^3/h/cassette (scfm/cassette)	Max. Operating Temp. °C (°F)	Operating pH Range	Backpulse Type	Max. Cleaning Temp. °C (°F)	Cleaning pH Range	Max. lifetime exposure Cl2 (ppm)
MBR	-55 to 55 (-8 to +8)	500EV 222-445 Nm^3/h (132-264 SCFM) 500D 182-363 Nm^3/h (108-215 SCFM)	40 (104)	5.0-9.5	Relax Aeration (Standard) Backpulse-capable (as-required)	40 (104)	2.0 – 10.5 (<30°C) 2.0 -10.0 (30-40°C)	1,000,000

[1] Cassettes can be populated with 26 to 52 modules (500D), or 32 to 64 modules (500EV). Normalized ADF flow for fully populated cassette at 150m ASL, 20°C wastewater temperature. Delivered value at modules will differ based on site conditions. Lower cassette populations will have a lower aeration rate.

ZeeWeed 500 Series Products

The ZeeWeed 500 series of membranes have been applied to MBR applications since 1997 when the ZW500A was introduced. There are four products within the current 5th generation – the ZW500M (laboratory use), ZW500S, ZW500D and ZW500EV. All ZeeWeed 500 series MBR products use the same PVDF chemistry formulation, designed specifically for membrane bioreactor application.

ZeeWeed 500 Product Identification

All ZeeWeed 500 series products have a product type identification code tied to the product specification. The code provides information on the version of the module, the fiber length, the number of sheets, and the membrane chemistry. It is typically found with the module serial number and takes the format of 1 to 3 letters, a number, and usually, but not always, a dash and third number.

ROTARY LOBE BLOWERS
DELTA BLOWER GENERATION 5

Intake volume streams from 30 m^3/h to 15,000 m^3/h

Membrane Blowers:
Tag:
20-B-201-A/B/C/D/E

AERZEN

THE DELTA BLOWERS. ROBUST, DURABLE MACHINES FOR COUNTLESS COMPRESSOR PROCESSES.

Delta Blower Generation 5

They are the driving force behind countless processes, the heart of a powerful machine assembly: the Delta Generation 5 rotary lobe blowers. They represent the distillation of almost 150 years of AERZEN experience and development work, but are more innovative than ever. AERZEN has packed a number of new features into its latest generation of delta blowers: oil-free conveyance of air and neutral gases; a broad control range for volume streams of from 30 m^3/h to 15,000 m^3/h; reduced life-cycle costs; easy handling; quieter operation. What hasn't changed: the extremely robust, extremely reliable, and extremely durable nature of this global success story. No wonder that their owners are so enthusiastic about putting them into continuous service – year in and year out, decade after decade.

AERZEN
Delta Blower

Applications
- Water and waste water treatment
- Aeration
- Filter backwashing
- Pneumatic conveyance of bulk materials
- Gas conveyance
- Degassing
- Dust removal
- Vacuum production
- Biogas treatment

and many others

Industries
- Sewage treatment
- Chemical and process technology
- Power plants
- Cement and lime
- Foodstuffs
- Paper

and many others

THE UNIVERSAL GENIUS FOR EVERY APPLICATION.

The versatile and compact Delta Blower units can be deployed in any climate zone on Earth. In the most challenging outdoor environments just as safely as in covered indoor spaces. They can be used as both standalone units or in complex assemblies. They are as reliable in earthquake zones as they are aboard ships or in other mobile applications.

Versatility in Detail.
Delta Blowers are powerful all-round geniuses. Miniature units can be mounted on silo vehicles, the largest machines can be used in lifting units. They are used to unload ships – at up to 1,000 tons an hour.

Control range from 25% to 100%

Intake volumes streams from 30 m^3/h to 15,000 m^3/h

Positive pressure up to 1,000 mbar

Nominal widths from DN 50 to DN 400

Indispensable for power plant

Powerful performer for loading and unloading ships

MACHINES AND SERVICES FROM AERZEN. HIGHLY ACCESSIBLE AND AVAILABLE AROUND THE WORLD.

The durability of Delta Blower units is legendary. Just like their proverbial reliability, lifespan, and intelligent operating and maintenance design. Why bring up AERZEN services at all, then? Because service is necessary. And because the service teams we have on call across the globe are an important decision criterion for plant operators: a decision for blowers "made by AERZEN".

The heart of the Delta unit: the triple-lobed AERZEN blower stage

High availability.
The best blower units are the ones you don't notice. Because they do their work reliably, year in and year out. The Delta Blowers from AERZEN are just this kind of unit. There's a reason they have a reputation for robust nature and long service life: AERZEN makes all the components itself. Right down to the control system. From the initial idea through engineering to configuration. Which is how we can guarantee the productivity of our machines. Our contribution to the "made in Germany" quality designation.

A reliable partner – the world over

There for you – the world over.
Typically AERZEN: that our solutions should be so reliably available. That means our machines, of course, but also our services. Our teams will take care of your units throughout their entire operational life, thus helping to protect the value of your investment. And the fact that we have a network of over 40 affiliates and service representatives in more than 100 countries around the world means we're never far away. We can be there for you quickly – when you need us.

AERZEN: always the right choice.
- Commissioning done by qualified personnel
- Individualized training for customer's specialists
- Customer-specific service and maintenance contracts
- Delta-real time monitoring for your unit
- On-site machine modifications (if needed)

Intelligently made.
What do they mean, the terms "compact, easy handling, maintenance-friendly"? These are our promises to you for the day-to-day operation of our products, and they're worth their weight in gold. Some concrete examples:

- Small footprint
- Flexible machine mounts
- Easy to move with a fork lift or pallet truck
- Space-saving side-by-side setup
- Plug and play installation and commissioning
- Easy access to all parts subject to wear
- Oil levels can be checked while machine is in operation
- Maintenance work such as changing oil and filters done from the front of the machine
- Low noise levels
- Belt-driven for optimal volume streams; retrofitting is fast and easy

100% clean.
How can we offer machines that can be used for handling foodstuffs, without the need for extensive cleaning that would interrupt production? By eliminating absorption material in the muffler. AERZEN designed the base support to function as a discharge muffler, reducing noise by air deflection alone. 100% free of absorption material that would otherwise cause wear and contaminate downstream systems. The base supports, by the way, are AERZEN patents and are also certified as spark arresters for use in ATEX applications.

Intelligent noise reduction: the AERZEN discharge muffler with no absorption material

BLOWERS ARE BLOWERS, RIGHT? AN END TO PRECONCEPTIONS.

AERZEN is one of the world's most innovative providers of compressor technology. For over 150 years. And it was almost 150 years ago – 1868, to be exact – that we produced Europe's first rotary lobe blower. Since then we have raised the bar for each generation of this technology. Let yourself be surprised. Discover the extraordinary blowers: the Delta Blower Generation 5.

Extremely robust
- for a broad range of applications in control ranges from 25 to 100%
- many types of possible modifications

Compact design
- space-saving side-by-side setup
- smaller engine rooms

Operation-friendly, low-maintenance design
- high availability in continuous operation under difficult environmental conditions
- control and maintenance from the front of the machine

Plug&play
- pre-configured, parameterized, ready to run
- integrated service package with funnel and initial oil fill

Oil-free per Class 0
- per ISO 8573-1, TÜV certified

No absorption material
- for use in the pneumatic conveyance of bulk food items (no contamination).
- secure, energy-efficient water treatment (no deposits of absorption material on aeration plates, no clogging of filter media, no pressure losses)

Integrated power component (optional)
- frequency inverter, delta-star, direct/soft start
- intelligent AERtronic control

Smart oil system
- oil levels can be checked with the machine running
- readable from outside the machine
- oil instead of grease: bearings lubricated with oil last longer

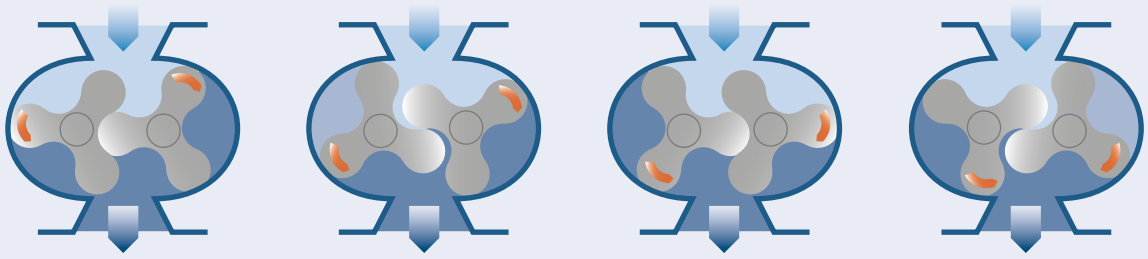
A plus for the environment
- energy-efficient Class IE3 motors as standard equipment
- intake on the cold side of the unit
- basic unit integrated into a highly efficient machine network with rotary lobe compressors and turbo blowers from AERZEN
- retrofitting is fast and easy

Belt-tensioning hinged motor mounting plate
- fully automatic and maintenance-free belt tensioning
- no need to monitor V-belt tension
- very easy to mount or replace V-belts

Multifunctional hinged motor mounting plate and lifting jack
- safer transport
- easy, secure V-belt installation
- mobile installation (e.g. aboard ship/ in earthquake zones)
- Hinged motor mounting plate as support for heavy motors

Low noise levels
- for easy compliance with noise level regulations near populated areas and production facilities
- minimal noise levels with optimized acoustic hood
- integrated pulsation reduction process (patented AERZEN blower stage)

Approval per PDE guidelines (pressure valve)

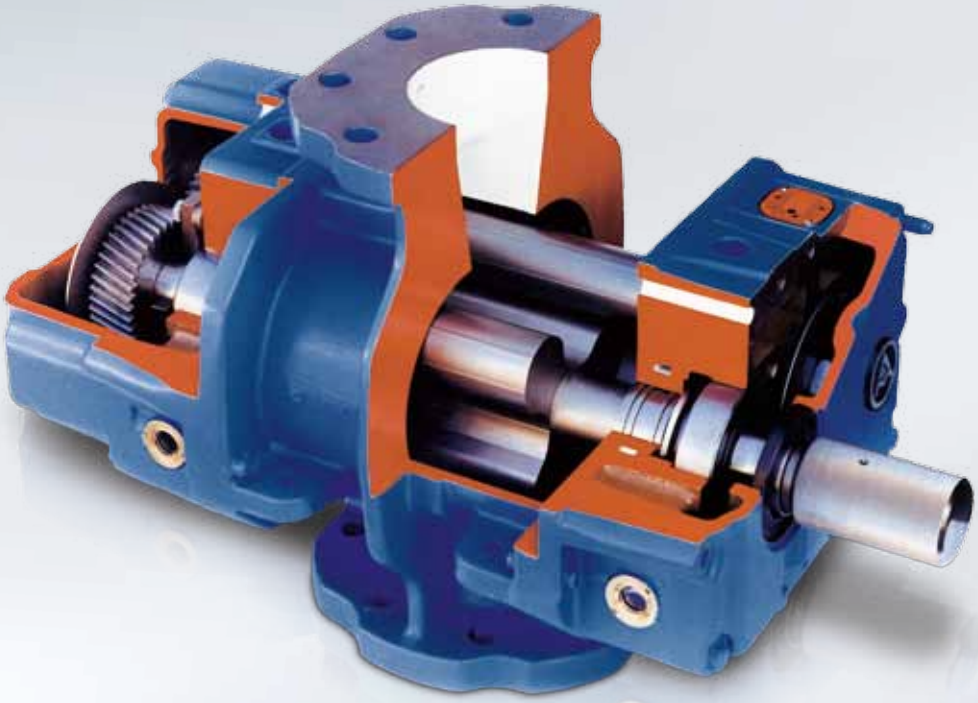


ATEX compliant
- AERZEN base plates certified as spark extinguishers for ATEX applications

TÜV-certified zone separation filter

WANT TO KNOW MORE ABOUT WHAT'S INSIDE? DESIGN AND CONSTRUCTION.

It's good to know what all is inside each and every AERZEN Delta blower unit: The wealth of experience of a global market leader. The quality expected of a family firm with a long history of excellence. The goal of providing the best solutions for our customers. And a principle that underlies thousands and thousands of successful applications: Roots.



Innovative pulsation reduction.
AERZEN has developed a unique process especially for the Delta Blower series and integrated it into all its models: pulsation reduction. This patented AERZEN process prevents disruptions in the machine even before they arise. The triple-lobed rotors in the Delta blowers have two channels cast in the cylinder. These channels control backflow into the conveyance chamber to eliminate the blowback and crimping impulses that were typical of double-lobed blowers. A patented interference process that means an end to pulsation.

Conveyance process in AERZEN blowers

Intelligent technical details are your guarantee for the lasting value of the Delta blowers. One example from among many: the patented pulsation reduction process, an AERZEN innovation that increases the lifespan of the bearings.

The inner values are what count: a view into an AERZEN blower

Blower stage
- Triple-lobed blower with integrated pulsation reduction
- Housing: cylinder (with two integrated, pressure-side pre-inlet channels to reduce noise through pulsation reduction), wheel well, housing lid, and side plates
- Made of EN-GJL-200
- Ribbed surface

Rotors

Models GM 3 S to GM 80 L:
- Rotors and shafts drop forged from C45N

Models GM 90 S and GM 30 L:
- Rotors and shaft drop forged from EN-GJS-500-7

Models GM 150 S to GM 240 S:
- Rotors made of EN-GJS-400-18-LT, shafts of C45N

Drive type
- Overhung via narrow V-belt
- Direct drive

Cooling
- Convection cooling

Lubrication
- Oil bath for bearings and timing gears

Oil-free conveyance
- Oil-free operation per ISO 8573-1 Class 0 is guaranteed by using proven piston ring labyrinth seals combined with neutral chambers (open to the atmosphere)

Timing gears
- Made of case-hardening steel, hardened and ground, with helical gears
- Attached to the shaft via taper interference fit
- Extremely smooth running, very long operational life

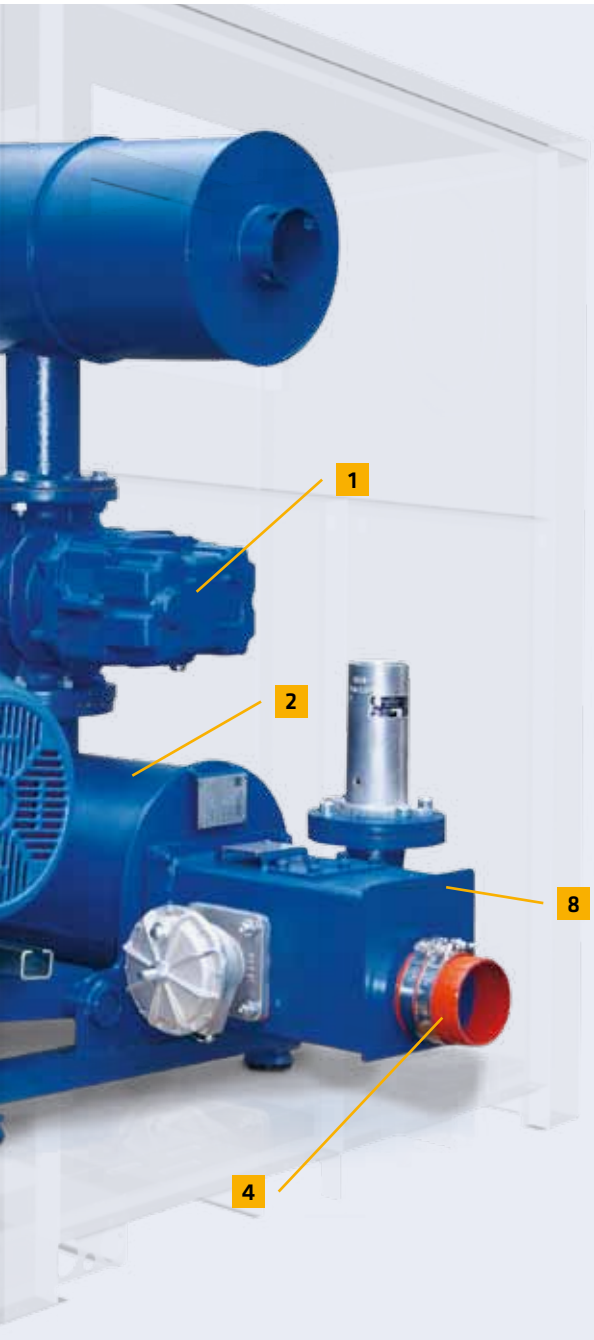
EXCEEDING STANDARDS. AERZEN DELIVERABLES.

Some do comfortable. Others do efficient. We do both. When your Delta Blower unit is delivered, it comes completely configured, parameterized, ready to plug and run. Designed especially for your processes, of course. And including all the standardized accessories and components you'll need for flawless operation at the push of a button.

The AERZEN "All-in" concept: Standard deliverables.

1 **Triple-lobe blower stage**
- with integrated pulsation reduction (see page 10/11)

2 **Base plate with integrated discharge muffler**
- Certified as ATEX spark arrester per EU guideline 1999/92/EC
- Muffler free of absorption material



3 **Intake muffler with integrated air filter**
- Normal intake from the surrounding area
- Conduit intake optional

4 **Flexible rubber bushing**
- With clamps

5 **Flexible machine mounts**
- To decouple machine-borne noise

6 **Motor**

- High-performance narrow V-belt drive with three-phase AC motor
- Energy-efficient Class IE3 motors (up to motor size 315) as standard equipment

7 **Hinged motor mounting plate**

- Automatic V-belt tensioning
- Multifunctional hinged motor mounting plate and lifting jack

8 **Terminal box**

- With pressure valve (8) per PED guideline 97/23/EC
- built-in non-return flap

9 **Instrumentation**

- Pressure gauge for displaying conveying pressure
- Maintenance indicator for monitoring intake filter

Added value: Accessory components.

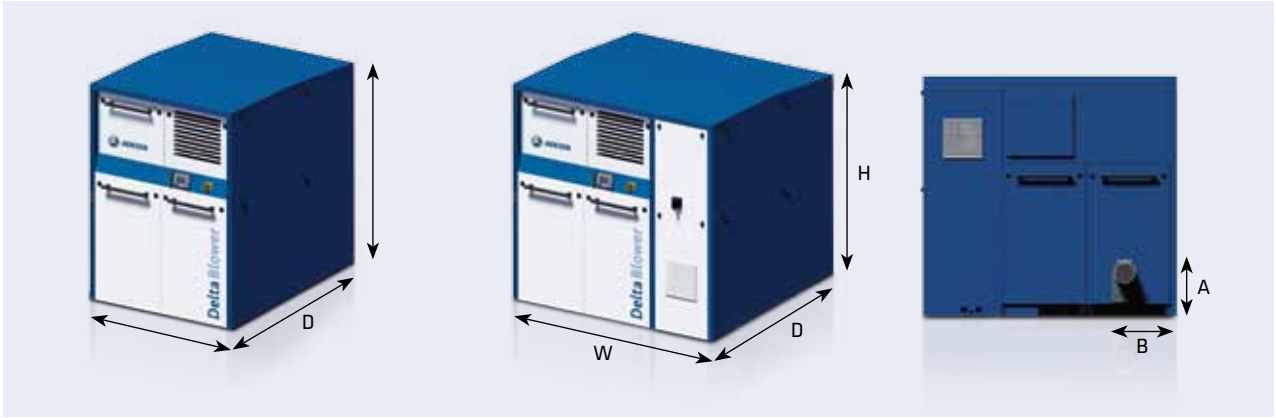
- Acoustic hood for indoor and outdoor installation, force-air ventilated via mechanical filter
- Startup load relief (10), needed with delta-star motor startup
- Pressure-side axial compensator in place of flexible rubber bushing
- Control cabinet: delta-star, frequency inverter, soft-starter
- AERZEN AERtronic blower control
- Additional accessories on demand

AERZEN startup load relief

Modifications.

- Special motors
- Special finishes
- ATEX-compliant design
- Acoustic hood with special sand collector for use in desert locations
- Acoustic hood for low temperatures (to -40° C) with heater and gravity-activated blinds
- Acoustic hood for earthquake safety and increased wind resistance
- For use aboard ships and in motor vehicles
- For conveying specialty gases by using specialized materials
- Customer-specific documentation

Always a safe choice: ATEX-compliant AERZEN design



Efficient control.

AERtonic is easy to use. But above all, AERZEN's control system is an important part of the unit's safety design: it guarantees that your facility will be operating at optimal efficiency levels at all times. The AERtronic offers a broad spectrum of functions. It can visualize operational data, run the operating hours counter, provide early notifications of operational events, and save all this information in memory. AERtronic will also keep you informed about upcoming maintenance and service cycles, meaning that service calls can be planned for more efficiently, helping to increase the lifespan of your machine's components significantly.

WEIGHTY ADVANTAGES. IN A LEAN MACHINE.

BLOWER POWER IN DETAIL. THE PERFORMANCE TABLES.

The Delta rotary lobe blowers are high-performance products. They were designed for use in many different areas of application: 16 models in 9 nominal widths from DN 50 to DN 400, intake volume streams from about 30 to 15,000 m^3/h, positive pressures up to 1,000 mbar, negative pressures down to -500 mbar.

Noise values.
The sound pressure levels from machine noise (Lp(A)) per individual unit are based measurements taken outdoors at a distance of 1 M from the exterior of the machine (tolerance of ± 2 dB). Noise measurement per DIN 45 635, DIN ISO 3744 and DIN EN ISO 2151.

Using the performance tables.
You will find all the important performance data for the Delta series in the performance tables: intake volume stream ($\dot{V}1$), required coupling power (Pk), motor size and noise level (Lp(A)). The intake volumes shown are based on commonly available belt drive ratios in increments of about 12%. Lower drive speeds are also possible, depending on the final temperature.

Parameters.

$\dot{V}1$	[m^3/min]	Intake volume stream
p1	[bar abs]	Intake pressure
Δp	[mbar]	Pressure differential
t_1	[°C]	Intake temperature
t_2	[°C]	Final temperature
nG	[rpm]	Blower rotational speed
nM	[rpm]	Motor rotational speed
Pk	[kW]	Shaft power
P_{mot}	[kW]	Nominal motor power
Lp(A) o. H.	[dB]	Noise pressure level for blower unit without hood
Lp(A) m. H.	[dB]	Noise pressure level for blower unit with hood

Delta Blower is the driving force in countless processes. There is a good reason for the exceptional range of applications: the robust power units from AERZEN can be configured for just about any requirement, even in standard implementations.

Lower differential pressures on request. Higher intake volume flows on request. Performance data are non-binding examples only.

AERZEN. Compression as success factor.

AERZEN was founded in 1864 as Aerzener Maschinenfabrik. In 1868 we built Europe's first rotary lobe blower. The first turbo blowers followed in 1911, the first screw compressors in 1943, and in 2010 the world's first rotary lobe compressor unit. AERZEN innovations are a driving force behind the development of compressor technology. Today AERZEN is one of the world's oldest and most important manufacturers of rotary lobe blowers, rotary lobe compressors, rotary lobe gas meters, screw compressors, and turbo blowers. And in many areas of application, AERZEN is among the undisputed leaders.

There are more than 2,000 experienced AERZEN employees in over 40 affiliates worldwide working hard to advance compressor technology. Their technological expertise, our international network of experts, and the constant feedback from our customers are what make us successful. AERZEN products and services have become standards in the industry for reliability, lasting value, and efficiency. Go ahead: challenge us!

SCOPE OF SUPPLY

Membrane blowers with VFDs

2 Aerzen Generation 5 Blower Package - GM 50L DN 200 - Pressure - including:

Aerzen GM 50L Blower

Drive Motor: 60hp, 1800rpm, TEFC, 460V/60Hz
Motor Protection - 1 Thermistor/Ph
Base with integrated reactive type discharge silencer
Intake filter silencer
Hinged motor support as automatic belt tensioning device
Set of vibration isolation mounts
Narrow v-belt drive with guard - 1 set
Spring loaded relief valve
Discharge manifold with externally accessible integrated check valve
Flexible connector with clamps for schedule 40 pipe, discharge
Acoustic Enclosure - Indoor/Outdoor
Inlet flexible sleeve - DN 200 (8")

Instruments

Pressure gauge c/w isolation ball valve (2x)
Dirty filter indicator (2x)

Optional Spare Parts

1 Year Maintenance Kit (1 x V-Belt Set, 1 x Intake Filter)
2 Year Maintenance Kit (1 x V-Belt Set, 1 x Oil Change (Delta Lube), 2 x Air Filter)

Intake Connection: DN 200 - 8"
Discharge Connection: DN 200 - 8"

Aerzen Canada
980 rue Valois, Vaudreuil-Dorion, Québec J7V 8P2

Customer Reference: 510464 - Caesar Lanes
Aerzen Reference: 259014f

Noise level without acoustic hood	dB(A)	97
Noise level with acoustic hood	dB(A)	70

Tolerances as per EN 10204, in accordance with standard ISO 1217:
Flow at inlet conditions / Power require +/- 5%

Blower package noise level:
Free field measurement at 1m from the complete blower package (tolerance +/- 2 dB(A))

Tests and measurements:
Blower stage: 1.5 hour flow test at the factory (Germany) on a calibrated test bed, at maximum operating conditions and according to DIN 1945. acceptance tolerance: +/- 5%.
A complete test report is available upon request.

On Site Commissioning
Available upon request, charges to be advised.
- Any commissioning activity is subject to two weeks prior notice and completion of commissioning checklist.
- Any on-site activity outside the time indicated will be billed according to the Aerzen Standard Rate Sheet

Exclusions
Control Panels, Motor Starters, Piping and Electrical Connections
* Unloading valves are required for reduced voltage starters

Warranty
Blowers including accessories are warranted for a period of 30mo / max 36mo after delivery and after provisional acceptance of the work against defects in workmanship and design. This warranty does not cover wearing parts unless such parts are defective during shipping / commissioning. As per Aerzen standard warranty terms.

** Power at shaft excludes drive motor and belt drive

ROTARY LOBE BLOWERS

DELTA BLOWER GENERATION 5

Intake volume streams from 30 m^3/h to 15,000 m^3/h

AERZEN

THE DELTA BLOWERS. ROBUST, DURABLE MACHINES FOR COUNTLESS COMPRESSOR PROCESSES.

Delta Blower Generation 5

They are the driving force behind countless processes, the heart of a powerful machine assembly: the Delta Generation 5 rotary lobe blowers. They represent the distillation of almost 150 years of AERZEN experience and development work, but are more innovative than ever. AERZEN has packed a number of new features into its latest generation of delta blowers: oil-free conveyance of air and neutral gases; a broad control range for volume streams of from 30 m^3/h to 15,000 m^3/h; reduced life-cycle costs; easy handling; quieter operation. What hasn't changed: the extremely robust, extremely reliable, and extremely durable nature of this global success story. No wonder that their owners are so enthusiastic about putting them into continuous service – year in and year out, decade after decade.

AERZEN
Delta Blower

Applications
- Water and waste water treatment
- Aeration
- Filter backwashing
- Pneumatic conveyance of bulk materials
- Gas conveyance
- Degassing
- Dust removal
- Vacuum production
- Biogas treatment

and many others

Industries
- Sewage treatment
- Chemical and process technology
- Power plants
- Cement and lime
- Foodstuffs
- Paper

and many others

THE UNIVERSAL GENIUS FOR EVERY APPLICATION.

The versatile and compact Delta Blower units can be deployed in any climate zone on Earth. In the most challenging outdoor environments just as safely as in covered indoor spaces. They can be used as both standalone units or in complex assemblies. They are as reliable in earthquake zones as they are aboard ships or in other mobile applications.

Versatility in Detail.
Delta Blowers are powerful all-round geniuses. Miniature units can be mounted on silo vehicles, the largest machines can be used in lifting units. They are used to unload ships – at up to 1,000 tons an hour.

Control range from 25% to 100%

Intake volumes streams from 30 m^3/h to 15,000 m^3/h

Positive pressure up to 1,000 mbar

Nominal widths from DN 50 to DN 400

Indispensable for power plant

Powerful performer for loading and unloading ships

MACHINES AND SERVICES FROM AERZEN. HIGHLY ACCESSIBLE AND AVAILABLE AROUND THE WORLD.

The durability of Delta Blower units is legendary. Just like their proverbial reliability, lifespan, and intelligent operating and maintenance design. Why bring up AERZEN services at all, then? Because service is necessary. And because the service teams we have on call across the globe are an important decision criterion for plant operators: a decision for blowers "made by AERZEN".

The heart of the Delta unit: the triple-lobed AERZEN blower stage

High availability.
The best blower units are the ones you don't notice. Because they do their work reliably, year in and year out. The Delta Blowers from AERZEN are just this kind of unit. There's a reason they have a reputation for robust nature and long service life: AERZEN makes all the components itself. Right down to the control system. From the initial idea through engineering to configuration. Which is how we can guarantee the productivity of our machines. Our contribution to the "made in Germany" quality designation.

A reliable partner – the world over

There for you – the world over.
Typically AERZEN: that our solutions should be so reliably available. That means our machines, of course, but also our services. Our teams will take care of your units throughout their entire operational life, thus helping to protect the value of your investment. And the fact that we have a network of over 40 affiliates and service representatives in more than 100 countries around the world means we're never far away. We can be there for you quickly – when you need us.

AERZEN: always the right choice.
- Commissioning done by qualified personnel
- Individualized training for customer's specialists
- Customer-specific service and maintenance contracts
- Delta-real time monitoring for your unit
- On-site machine modifications (if needed)

Intelligently made.
What do they mean, the terms "compact, easy handling, maintenance-friendly"? These are our promises to you for the day-to-day operation of our products, and they're worth their weight in gold. Some concrete examples:

- Small footprint
- Flexible machine mounts
- Easy to move with a fork lift or pallet truck
- Space-saving side-by-side setup
- Plug and play installation and commissioning
- Easy access to all parts subject to wear
- Oil levels can be checked while machine is in operation
- Maintenance work such as changing oil and filters done from the front of the machine
- Low noise levels
- Belt-driven for optimal volume streams; retrofitting is fast and easy

100% clean.
How can we offer machines that can be used for handling foodstuffs, without the need for extensive cleaning that would interrupt production? By eliminating absorption material in the muffler. AERZEN designed the base support to function as a discharge muffler, reducing noise by air deflection alone. 100% free of absorption material that would otherwise cause wear and contaminate downstream systems. The base supports, by the way, are AERZEN patents and are also certified as spark arresters for use in ATEX applications.

Intelligent noise reduction: the AERZEN discharge muffler with no absorption material

BLOWERS ARE BLOWERS, RIGHT? AN END TO PRECONCEPTIONS.

AERZEN is one of the world's most innovative providers of compressor technology. For over 150 years. And it was almost 150 years ago – 1868, to be exact – that we produced Europe's first rotary lobe blower. Since then we have raised the bar for each generation of this technology. Let yourself be surprised. Discover the extraordinary blowers: the Delta Blower Generation 5.

Extremely robust
- for a broad range of applications in control ranges from 25 to 100%
- many types of possible modifications

Compact design
- space-saving side-by-side setup
- smaller engine rooms

Operation-friendly, low-maintenance design
- high availability in continuous operation under difficult environmental conditions
- control and maintenance from the front of the machine

Plug&play
- pre-configured, parameterized, ready to run
- integrated service package with funnel and initial oil fill

Oil-free per Class 0
- per ISO 8573-1, TÜV certified

No absorption material
- for use in the pneumatic conveyance of bulk food items (no contamination).
- secure, energy-efficient water treatment (no deposits of absorption material on aeration plates, no clogging of filter media, no pressure losses)

Integrated power component (optional)
- frequency inverter, delta-star, direct/soft start
- intelligent AERtronic control

Smart oil system
- oil levels can be checked with the machine running
- readable from outside the machine
- oil instead of grease: bearings lubricated with oil last longer

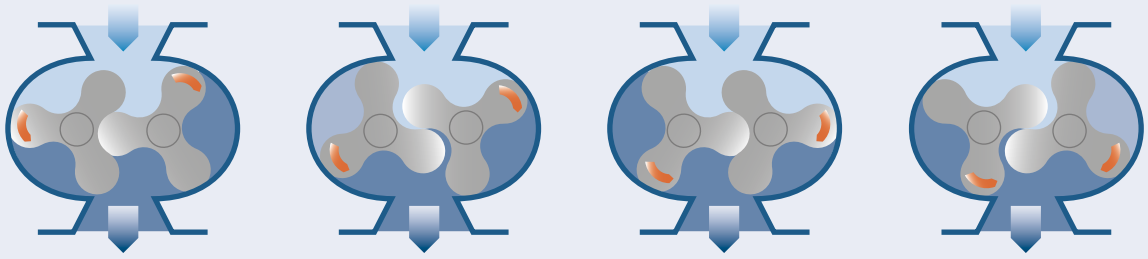
A plus for the environment
- energy-efficient Class IE3 motors as standard equipment
- intake on the cold side of the unit
- basic unit integrated into a highly efficient machine network with rotary lobe compressors and turbo blowers from AERZEN
- retrofitting is fast and easy

Belt-tensioning hinged motor mounting plate
- fully automatic and maintenance-free belt tensioning
- no need to monitor V-belt tension
- very easy to mount or replace V-belts

Multifunctional hinged motor mounting plate and lifting jack
- safer transport
- easy, secure V-belt installation
- mobile installation (e.g. aboard ship/ in earthquake zones)
- Hinged motor mounting plate as support for heavy motors

Low noise levels
- for easy compliance with noise level regulations near populated areas and production facilities
- minimal noise levels with optimized acoustic hood
- integrated pulsation reduction process (patented AERZEN blower stage)

Approval per PDE guidelines (pressure valve)

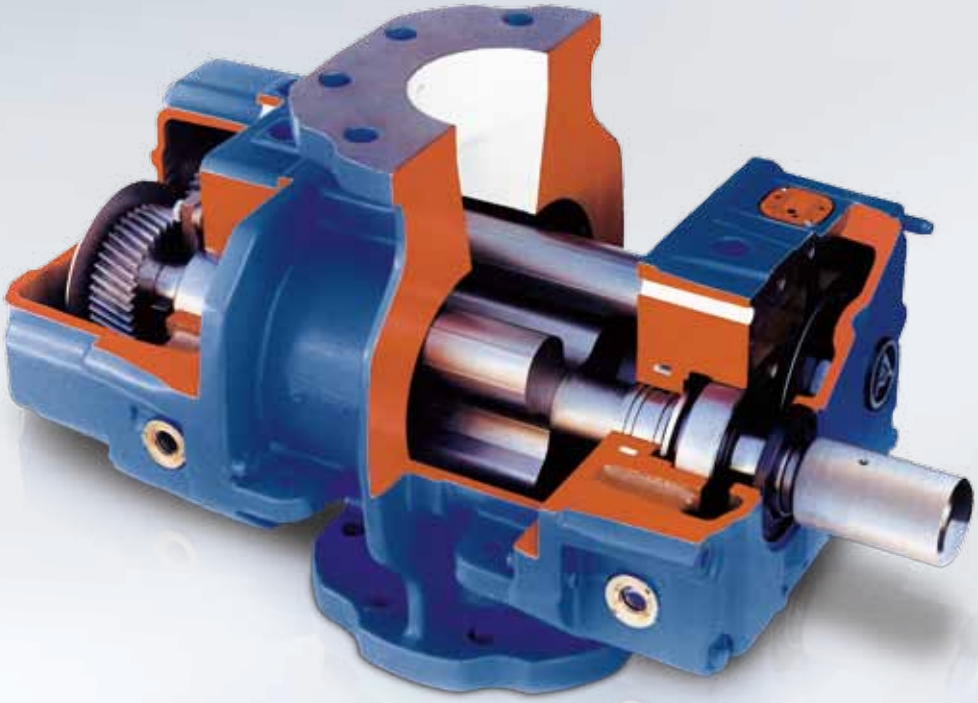


ATEX compliant
- AERZEN base plates certified as spark extinguishers for ATEX applications

TÜV-certified zone separation filter

WANT TO KNOW MORE ABOUT WHAT'S INSIDE? DESIGN AND CONSTRUCTION.

It's good to know what all is inside each and every AERZEN Delta blower unit: The wealth of experience of a global market leader. The quality expected of a family firm with a long history of excellence. The goal of providing the best solutions for our customers. And a principle that underlies thousands and thousands of successful applications: Roots.



Innovative pulsation reduction.
AERZEN has developed a unique process especially for the Delta Blower series and integrated it into all its models: pulsation reduction. This patented AERZEN process prevents disruptions in the machine even before they arise. The triple-lobed rotors in the Delta blowers have two channels cast in the cylinder. These channels control backflow into the conveyance chamber to eliminate the blowback and crimping impulses that were typical of double-lobed blowers. A patented interference process that means an end to pulsation.

Conveyance process in AERZEN blowers

Intelligent technical details are your guarantee for the lasting value of the Delta blowers. One example from among many: the patented pulsation reduction process, an AERZEN innovation that increases the lifespan of the bearings.

The inner values are what count: a view into an AERZEN blower

Blower stage
- Triple-lobed blower with integrated pulsation reduction
- Housing: cylinder (with two integrated, pressure-side pre-inlet channels to reduce noise through pulsation reduction), wheel well, housing lid, and side plates
- Made of EN-GJL-200
- Ribbed surface

Rotors

Models GM 3 S to GM 80 L:
- Rotors and shafts drop forged from C45N

Models GM 90 S and GM 30 L:
- Rotors and shaft drop forged from EN-GJS-500-7

Models GM 150 S to GM 240 S:
- Rotors made of EN-GJS-400-18-LT, shafts of C45N

Drive type
- Overhung via narrow V-belt
- Direct drive

Cooling
- Convection cooling

Lubrication
- Oil bath for bearings and timing gears

Oil-free conveyance
- Oil-free operation per ISO 8573-1 Class 0 is guaranteed by using proven piston ring labyrinth seals combined with neutral chambers (open to the atmosphere)

Timing gears
- Made of case-hardening steel, hardened and ground, with helical gears
- Attached to the shaft via taper interference fit
- Extremely smooth running, very long operational life

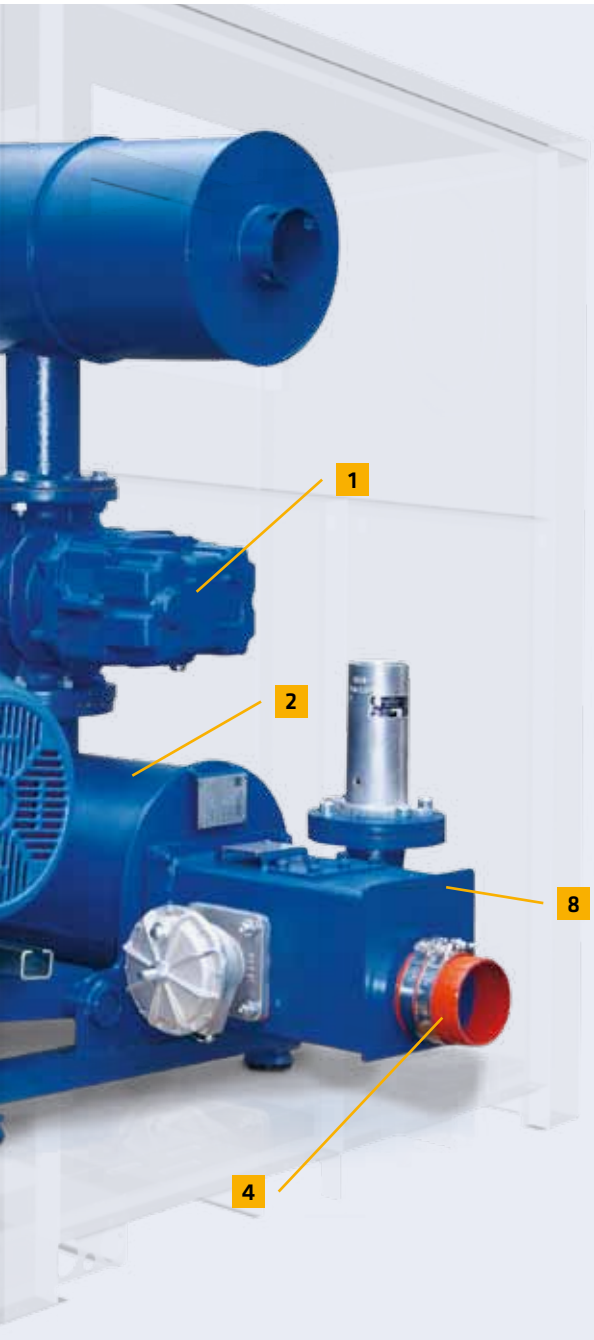
EXCEEDING STANDARDS. AERZEN DELIVERABLES.

Some do comfortable. Others do efficient. We do both. When your Delta Blower unit is delivered, it comes completely configured, parameterized, ready to plug and run. Designed especially for your processes, of course. And including all the standardized accessories and components you'll need for flawless operation at the push of a button.

The AERZEN "All-in" concept: Standard deliverables.

1 **Triple-lobe blower stage**
- with integrated pulsation reduction (see page 10/11)

2 **Base plate with integrated discharge muffler**
- Certified as ATEX spark arrester per EU guideline 1999/92/EC
- Muffler free of absorption material



3 **Intake muffler with integrated air filter**
- Normal intake from the surrounding area
- Conduit intake optional

4 **Flexible rubber bushing**
- With clamps

5 **Flexible machine mounts**
- To decouple machine-borne noise

6 **Motor**

- High-performance narrow V-belt drive with three-phase AC motor
- Energy-efficient Class IE3 motors (up to motor size 315) as standard equipment

7 **Hinged motor mounting plate**

- Automatic V-belt tensioning
- Multifunctional hinged motor mounting plate and lifting jack

8 **Terminal box**

- With pressure valve (8) per PED guideline 97/23/EC
- built-in non-return flap

9 **Instrumentation**

- Pressure gauge for displaying conveying pressure
- Maintenance indicator for monitoring intake filter

Added value: Accessory components.

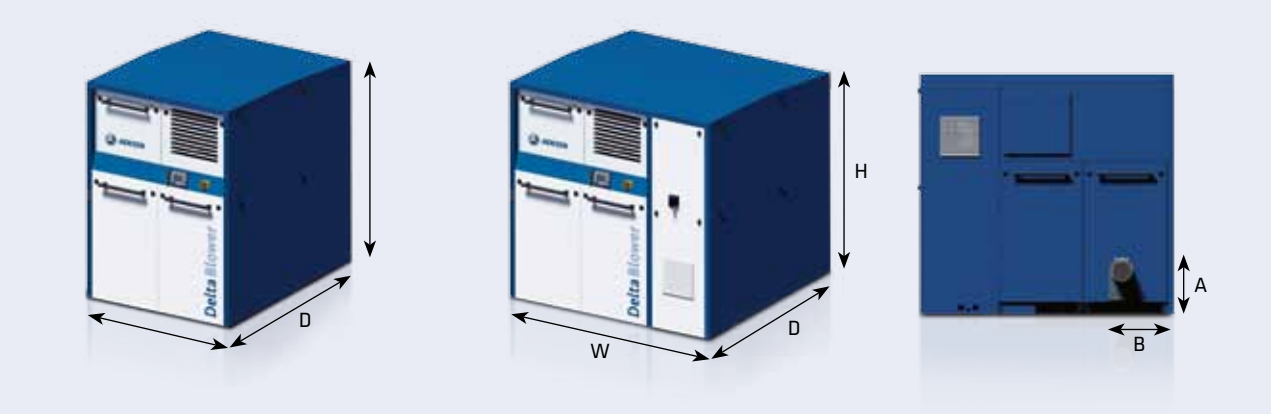
- Acoustic hood for indoor and outdoor installation, force-air ventilated via mechanical filter
- Startup load relief (10), needed with delta-star motor startup
- Pressure-side axial compensator in place of flexible rubber bushing
- Control cabinet: delta-star, frequency inverter, soft-starter
- AERZEN AERtronic blower control
- Additional accessories on demand

AERZEN startup load relief

Modifications.

- Special motors
- Special finishes
- ATEX-compliant design
- Acoustic hood with special sand collector for use in desert locations
- Acoustic hood for low temperatures (to -40° C) with heater and gravity-activated blinds
- Acoustic hood for earthquake safety and increased wind resistance
- For use aboard ships and in motor vehicles
- For conveying specialty gases by using specialized materials
- Customer-specific documentation

Always a safe choice: ATEX-compliant AERZEN design



Efficient control.

AERtonic is easy to use. But above all, AERZEN's control system is an important part of the unit's safety design: it guarantees that your facility will be operating at optimal efficiency levels at all times. The AERtronic offers a broad spectrum of functions. It can visualize operational data, run the operating hours counter, provide early notifications of operational events, and save all this information in memory. AERtronic will also keep you informed about upcoming maintenance and service cycles, meaning that service calls can be planned for more efficiently, helping to increase the lifespan of your machine's components significantly.

BLOWER POWER IN DETAIL. THE PERFORMANCE TABLES.

The Delta rotary lobe blowers are high-performance products. They were designed for use in many different areas of application: 16 models in 9 nominal widths from DN 50 to DN 400, intake volume streams from about 30 to 15,000 m^3/h, positive pressures up to 1,000 mbar, negative pressures down to -500 mbar.

Noise values.
The sound pressure levels from machine noise (Lp(A)) per individual unit are based measurements taken outdoors at a distance of 1 M from the exterior of the machine (tolerance of ± 2 dB). Noise measurement per DIN 45 635, DIN ISO 3744 and DIN EN ISO 2151.

Using the performance tables.
You will find all the important performance data for the Delta series in the performance tables: intake volume stream ($\dot{V}1$), required coupling power (Pk), motor size and noise level (Lp(A)). The intake volumes shown are based on commonly available belt drive ratios in increments of about 12%. Lower drive speeds are also possible, depending on the final temperature.

Parameters.

$\dot{V}1$	[m^3/min]	Intake volume stream
p1	[bar abs]	Intake pressure
Δp	[mbar]	Pressure differential
t_1	[°C]	Intake temperature
t_2	[°C]	Final temperature
nG	[rpm]	Blower rotational speed
nM	[rpm]	Motor rotational speed
Pk	[kW]	Shaft power
P_{mot}	[kW]	Nominal motor power
Lp(A) o. H.	[dB]	Noise pressure level for blower unit without hood
Lp(A) m. H.	[dB]	Noise pressure level for blower unit with hood

Delta Blower is the driving force in countless processes. There is a good reason for the exceptional range of applications: the robust power units from AERZEN can be configured for just about any requirement, even in standard implementations.

Lower differential pressures on request. Higher intake volume flows on request. Performance data are non-binding examples only.

AERZEN. Compression as success factor.

AERZEN was founded in 1864 as Aerzener Maschinenfabrik. In 1868 we built Europe's first rotary lobe blower. The first turbo blowers followed in 1911, the first screw compressors in 1943, and in 2010 the world's first rotary lobe compressor unit. AERZEN innovations are a driving force behind the development of compressor technology. Today AERZEN is one of the world's oldest and most important manufacturers of rotary lobe blowers, rotary lobe compressors, rotary lobe gas meters, screw compressors, and turbo blowers. And in many areas of application, AERZEN is among the undisputed leaders.

There are more than 2,000 experienced AERZEN employees in over 40 affiliates worldwide working hard to advance compressor technology. Their technological expertise, our international network of experts, and the constant feedback from our customers are what make us successful. AERZEN products and services have become standards in the industry for reliability, lasting value, and efficiency. Go ahead: challenge us!

SCOPE OF SUPPLY

Process blowers - NEW OPTION : 2038 SCFM @ 9.74 PSIG

3 Aerzen Generation 5 Blower Package - GM 90S DN 250 - Pressure - including:

Aerzen GM 90S Blower
Drive Motor: 150hp, 1800rpm, TEFC, 460V/60Hz
Motor Protection - 1 Thermistor/Ph
Base with integrated reactive type discharge silencer
Intake filter silencer
Hinged motor support as automatic belt tensioning device
Set of vibration isolation mounts
Narrow v-belt drive with guard - 1 set
Spring loaded relief valve
Discharge manifold with externally accessible integrated check valve
Flexible connector with clamps for schedule 40 pipe, discharge
Acoustic Enclosure - Indoor/Outdoor
Inlet flexible sleeve - DN 250 (10")

Instruments
Pressure gauge c/w isolation ball valve (3x)
Dirty filter indicator (3x)

Optional Accessories
Temperature switch c/w thermowell 120V (3x)
Pressure switch 120V

Optional Spare Parts
1 Year Maintenance Kit (1 x V-Belt Set, 1 x Intake Filter)
2 Year Maintenance Kit (1 x V-Belt Set, 1 x Oil Change (Delta Lube), 2 x Air Filter)

Intake Connection: DN 250 - 10"
Discharge Connection: DN 250 - 10"

Aerzen Canada
980 rue Valois, Vaudreuil-Dorion, Québec J7V 8P2

Customer Reference: 510464 - Caesar Lanes
Aerzen Reference: 259014f

PERFORMANCE DATA

Aerzen Blower Package - GM 90S DN 250 - Pressure

Configuration:	**G5**	**Max flow duty point**	**Min Flow**	**Max blower capacity with 150 hp**
Conditions:	**Scfm**	2038	327	2403
Flow at inlet conditions	m³/min	60.4	9.7	71.2
	lcfm	2132	342	2515
Inlet pressure (abs.)	bar	1.012	1.012	1.012
	Psi	14.68	14.68	14.68
Pressure differential	mbar(g)	672	672	672
	Psig	9.74	9.74	9.74
Inlet temperature	°C	29.44	29.44	29.44
Discharge temperature	°C	97	148	95
Blower speed	RPM	1709	484	1971
Blower maximum speed	RPM	2400	2400	2400
% of maximum blower speed		71%	20%	82%
Power required at shaft	kW	84.3	23.6	99.3
	HP	113.0	31.6	133.2
Total Power (Wire to Air):	HP	125.1	35.0	147.5
Motor rating	**HP**	150.0		
Motor speed	RPM	1780	504	2054
Motor frequency	Hz	60	17	

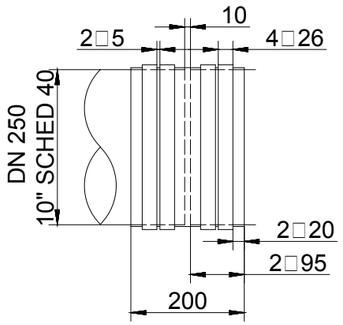
Noise level without acoustic hood	dB(A)	101
Noise level with acoustic hood	dB(A)	79

Tolerances as per EN 10204, in accordance with standard ISO 1217:
Flow at inlet conditions / Power required at shaft +/- 5%

Blower package noise level:
Free field measurement at 1m from the complete blower package (tolerance +/- 2 dB(A))

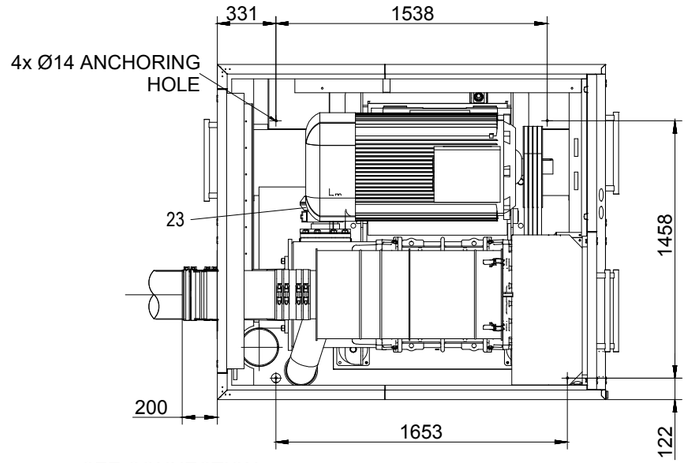
Tests and measurements:
Blower stage: 1.5 hour flow test at the factory (Germany) on a calibrated test bed, at maximum operating conditions and according to DIN 1945. acceptance tolerance: +/- 5%.
A complete test report is available upon request.

On Site Commissioning
Available upon request, charges to be advised.
- Any commissioning activity is subject to two weeks prior notice and completion of commissioning checklist.
- Any on-site activity outside the time indicated will be billed according to the Aerzen Standard Rate Sheet



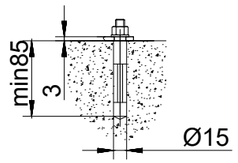
Exclusions
Control Panels, Motor Starters, Piping and Electrical Connections
* Unloading valves are required for reduced voltage starters

Warranty
Blowers including accessories are warranted for a period of 30mo / max 36mo after delivery and after provisional acceptance of the work against defects in workmanship and design. This warranty does not cover wearing parts unless such parts are defective during shipping / commissioning. As per Aerzen standard warranty terms.



** Power at shaft excludes drive motor and belt drive

NOTICE: THIS DRAWING AND ALL INFORMATION HEREIN IS THE PROPERTY OF AERZEN CANADA. AND ITS SUBSIDIARIES AND SHALL NOT BE REPRODUCED BY ANY MEANS IN WHOLE OR IN PART OR USED AS THE BASIS FOR MANUFACTURE WITHOUT WRITTEN PERMISSION.



CAUTION
BLOWER PACKAGES MUST BE CAREFULLY LEVELED. USE OIL LEVEL ON SIGHT GLASSES OF THE BLOWER STAGE. USE PROVIDED SHIMS TO ADJUST LEVEL IF NECESSARY. PLEASE REFER TO THE OPERATING AND INSTALLATION INSTRUCTIONS MANUAL (DOCUMENT # G4-006) FOR MORE DETAILS.

Submersible Sewage Pump Type ABS XFP

XFP 255J-CB2 | 10", 6 Pole, 3-Phase, 60 Hz, PE4

Submersible Motor Specifications, PE4 Frame

Motor Design			NEMA design B, squirrel cage induction
Motor Type			Fully enclosed Premium Efficiency submersible, IP68 protection rating
Motor Efficiency Standard and Rating			IEC 60034-30, IE3 rating
Motor Efficiency Test Protocol			IEC 60034-2-1
Insulation Material			Class H, 180ºC (356ºF), copper windings
Motor Filling Medium			Air
Temperature Rise			Class A
Maximum Fluid Temperature			40ºC (104ºF) continuous, 50ºC (122ºF) intermittent
Cooling System		**OPT**	Closed-loop, non-toxic glycol/water mixture (⅓ / ⅔)
Motor Protection	**Thermal**	**STD**	Normally closed bimetallic switch in each phase, connected in series, 140ºC (284ºF) +/- 5ºC (41ºF) opening temperature
		OPT	STD plus: upper and lower bearing bimetallic switches **or** 100Ω RTD (PT100) in winding (option of one RTD or three RTDs in stator) and RTDs in lieu of upper and lower bearing bimetallic switches
	Leakage	**STD**	Moisture detection probe in seal sensing chamber (for use with appropriate relay)
		OPT	STD plus: probes in motor housing and junction chamber
Sensing Chamber Filling Medium			Oil
Bearing Type	**Upper**		Cylindrical roller, permanently lubricated
	Lower		Dual angular contact ball bearings plus single cylindrical roller bearing, permanently lubricated
Motor Starter Types			Suitable for use with electronic soft starters, and PWM type Variable Frequency Drives [1]
Maximum Starts per Hour			10 evenly spaced w/ soft starters; N/A with PWM type VFDs
Inverter Duty Rating			Motors meet NEMA MG1, part 31 requirements
Maximum Submergence			20 meters (65 feet)
Available Voltages			230, 460, 600 (consult factory for other voltages)
Voltage Tolerance from Rated			+/-10%
Agency Approvals			Factory Mutual, CSA
Explosion Proof Rating			NEC 500 Class 1, Division 1, Group C & D, Class T3C max surface temp

The picture above may differ from the actual product.
For illustrative purposes only.

[1] Output filters may be required on VFDs. See document **DS-E00-001** for details.

Min. Recommended Flow, GPM [6]	1400	1500	1500	1600	1700	1900				

[5] Wet-pit version can be drilled to dry-pit specifications upon request. Consult factory for details. [6] Recommend minimum continuous flow. Consult factory for applications below this flow rate.

Materials of Construction

		Standard	Optional
Power/Control Cable Jacket		Chlorinated Polyethylene (CPE)	
Lifting Hoop		Ductile Iron EN-GJS-400-18 (ASTM A-536; 60-40-18)	Duplex Stainless Steel 1.4470 (ASTM A890, CD3MN Grade 4A)
Cable Connection Chamber		Cast Iron EN-GJL-250 (ASTM A-48, Class 35B)	
Motor Housing		Cast Iron EN-GJL-250 (ASTM A-48, Class 35B)	
Cooling Jacket		Steel 1.0036 (ASTM A-570, Grade D)	
Intermediate Housing		Cast Iron EN-GJL-250 (ASTM A-48, Class 35B)	
Seal Plate/Cooling Chamber		Cast Iron EN-GJL-250 (ASTM A-48, Class 35B)	
Pump and Motor Shaft		Stainless Steel 1.4021 (AISI 420)	Duplex Stainless Steel 1.4462 (UNS S31803)
Impeller		Cast Iron EN-GJL-250 (ASTM A-48, Class 35B) [7]	Duplex Stainless Steel 1.4470 (ASTM A890, CD3MN Grade 4A)
Wear Parts	Impeller Wear Ring	N/A	
	Volute Wear Ring	N/A	
	Bottom/Wear Plate	Cast Iron EN-GJL-250 (ASTM A-48, Class 35B) [7]	Duplex Stainless Steel 1.4470 (ASTM A890, CD3MN Grade 4A)
Volute		Cast Iron EN-GJL-250 (ASTM A-48, Class 35B)	Duplex Stainless Steel 1.4470 (ASTM A890, CD3MN Grade 4A)
External Hardware		Stainless Steel 1.4401 (AISI 316)	
O-Rings and Cable Glands		Nitrile (Buna-N)	Viton®
Mechanical Seals	Lower	Silicon Carbide / Silicon Carbide, Nitrile, 316 SS	Silicon Carbide / Silicon Carbide, Viton®, 316 SS
	Upper	Silicon Carbide / Silicon Carbide, Nitrile, 316 SS	
Lower Bearing Lip Seal		Nitrile (Buna-N)	
Coating/Protection		Two-part epoxy, blue, 120µm (4.7 mil) DFT	Two-part epoxy, blue, 400µm (15.7 mil); Wet-end liquid ceramic coating, 500µm (19.7 mil); Zinc Anodes

[7] Hardening of bottom edge of impeller vane and wear plate surface available. Consult factory for details.

NOZZLE SCHEDULE

NOZZLE	DESCRIPTION	TYPE	SIZE
N01	PLANT INSTRUMENT AIR	ODT	0.50
N02	INSTRUMENT AIR TO EJECTOR SPOOL	ODT	0.38
N03	INSTRUMENT AIR FROM AIR SPOOL	ODT	0.38
N04	PERMEATE/AIR FROM TOP OF PERMEATE PIPE	F-NPT	1.00
N05	TO OPEN DRAIN/MEMBRANE TANK (AIR GAP)	BARB	1.00

NOTES:

1. SHIPPING WEIGHT OF EJECTOR SPOOL - 11.0 LB/[5 KG]
2. SHIPPING WEIGHT OF SOLENOID SPOOL - 4.5 LB/[2 KG]
3. ALL PIPING & EQUIPMENT SHOWN SHALL BE FULLY SUPPORTED BY OTHERS.
4. ALL VALVES & INSTRUMENTS TO BE PROPERLY TAGGED.
5. PIPING MATERIAL:
   - HIGH PRESSURE: SCH. 10, 316 SS / SS TUBING
   - LOW PRESSURE: SCH. 10, 316 SS / SS TUBING
6. ALL DIMENSIONS IN INCHES [MILLIMETERS]
7. CONNECTION TO BE PROVIDED AT HIGHEST POINT ON PIPING BETWEEN PERMEATE HEADER AND PUMP.
8. AIR GAP IS REQUIRED ON EJECTOR DISCHARGE LINE EXHAUST TO MEMBRANE TANK OR DRAIN. 1" BRAIDED HOSE RECOMMENDED (HOSE BY OTHERS).
9. EJECTOR MUST BE INSTALLED VERTICALLY DOWNWARD.
10. THE 3/8" SS TUBING THAT CONNECTS THE TWO SPOOLS TOGETHER IS TO BE PROVIDED AND INSTALLED ONSITE BY OTHERS.
11. VALVE USED AS AIR INLET FOR MEMBRANE PRESSURE DECAY TEST. TO BE CLOSED AT ALL OTHER TIMES WITH HANDLE LOCKED IN PLACE TO PREVENT ACCEDINTAL OPENING.

VACUUM PRODUCTS

COAX® — THE NEXT DIMENSION IN VACUUM TECHNOLOGY

Tag No:
20-E-801-1/2/3/4/5/6/7

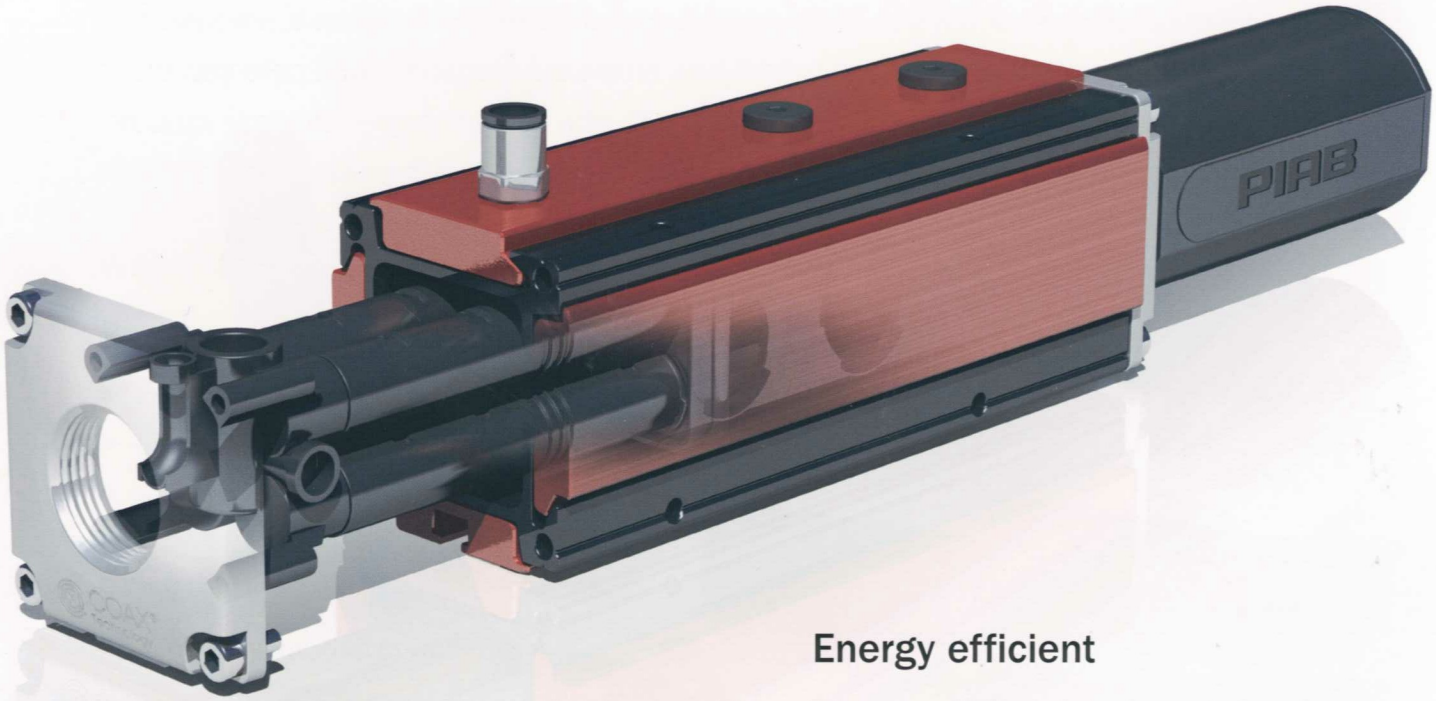
P6010

A COMPACT MODULAR VACUUM PUMP WITH INTEGRATED FUNCTIONALITY

Patented COAX® technology

Energy efficient

Durable



Modular design

Quiet operation

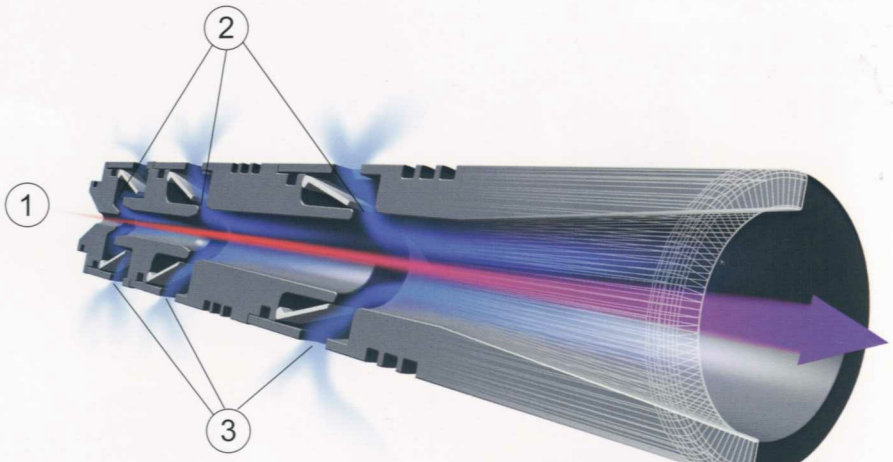
PIAB
Innovators in Vacuum Technology

P6010 —

A smart investment...

Durable

PIAB sets the standard when it comes to reliable operation. The P6010 pump range is designed for the most demanding environments. The pump housing is so strong it can be used as a support. Because there are no moving parts, there is no heat generation and virtually no maintenance. Downtime and work stoppage can be drastically reduced. Exceptional performance in a durable package – the P6010 is built to last.



Energy efficient

Powered by COAX® technology, the P6010 can reduce energy costs up to 25% or more compared to other methods of generating vacuum. Powerful suction at low feed pressures is characteristic for this advanced design. Lower supply pressure results in a measurable decrease in energy consumption. In addition, the P6010 with COAX® maintains performance levels during periods of fluctuating supply pressure when other pumps lose suction capacity and may even drop parts. The P6010's compact size is deceiving. COAX® technology puts powerful suction in a small package and the pump can be easily mounted close to the point of suction. The result... a smaller pump requirement with lower energy needs. For the ultimate in operating efficiency, integrated control options are also available. Refer to pages 6–7 for details.

COAX® — The next dimension in vacuum technology

It's all about simplicity--- You want to save time and money. Your vacuum system should be easy to design, install, start up and maintain. It should offer operational reliability and show flexibility to changes in working conditions. This is why the COAX® technology was developed.

When compressed air (1) flows through the pump nozzles (2), air from outside the pump will be entrained by the jet of air at the nozzle outlet. Suction will be generated at the openings to the various stages (3). Exhaust then exits the pump.

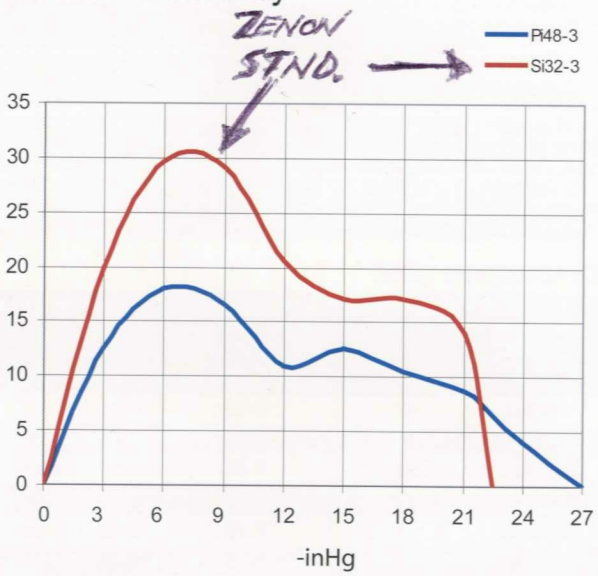
Unique multistage ejector

COAX®, a patented technology, is a new and improved design on PIAB's innovative multistage concept for creating vacuum with compressed air. COAX® integrates the internal components of a multistage vacuum pump into a vacuum cartridge. The result is a smaller, more efficient, more reliable and highly flexible technology that allows you to design a modular system.

Energy is put to maximum use with the COAX® technology. The vacuum pump/cartridge consumes less air than conventional ejectors. COAX® vacuum cartridges are up to twice as fast and provide 3 times more flow than a typical conventional ejector with the same air consumption. COAX® is also designed for low and fluctuating feed pressures (25-87 psi) with sustained vacuum performance for maximum reliability.

Choose the right COAX® *cartridge* for your application

PIAB has developed two main types of COAX® *cartridges*, Pi and Si, for different applications.



Pi

Pi cartridges have been developed to achieve a high vacuum level at low feed pressures. They are ideal when pressures in compressed air lines fluctuate. Pi cartridges are recommended in situations such as handling sheet metal or glass or other non-porous products, where you need good vacuum flow and a high-level vacuum. Pi can deliver high vacuum levels down to 27-inHg.

Si

Si cartridges are designed to provide extra vacuum flow. They are highly recommended for handling porous materials such as corrugated board and for high-volume evacuation in, for example, a fast-cycling system where it is necessary to compensate for leakage in order to maintain the vacuum level. Si cartridges can deliver moderate vacuum levels down to 22-inHg.

Vacuum efficiency

Vacuum Efficiency =
Vacuum flow/air consumption x vacuum level

P6010 SI32-3

- COAX® patented technology
- Substantially lower air-consumption as compared to conventional ejectors
- Modular design
- High flow - suitable for handling of porous objects and in case of leakage
- Short evacuation time
- "Classic" mounting style option available
- Supplied with a vacuum gauge and optional vacuum filter

TECHNICAL DATA

CR Series

Cast Iron Piston Air Compressors

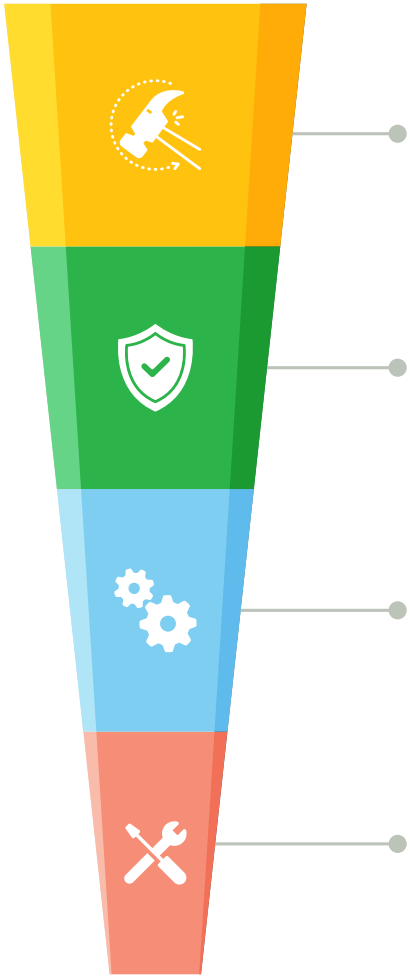
The CR Cast Iron Piston Compressor Series

Newly designed, lasting reliability

More dependable than ever with tailored options for all contractor, professional and industrial applications, Atlas Copco is pleased to introduce the newly designed CR cast iron piston compressor series. The CR range delivers a champion combination of outstanding reliability matched with robust performance, even in the most demanding conditions for a dependable piston you can count on.

Capitalizing on heavy-duty cast iron construction and a combination of computer-aided design with controlled machining processes, the new CR single stage and two-stage compressors deliver up to 175 psig with 24/7 reliability. We back this up with our bumper to bumper warranty packages, and have options for a 5 year extended warranty, depending on the model chosen.

A complete and tailored range of premium compressors at affordable prices



Count on Atlas Copco's cast iron piston technology to drive your production reliably and support your application demand. We can meet your exact requirements with a broad piston compressor line, whether you work in a small workshop or on a large onsite project.

A range of series with available options:

CR Series

A 60 second guide to the piston that sets the bar high

Heavy-Duty Cast Iron Construction

Ensures durability and reliability for the most demanding applications

Reliability

Engineered using the most state-of-the-art manufacturing techniques for a product of design excellence. The compressed air you need to keep your operations running efficiently with maximum uptime.

Tailored

Custom your piston to your needs. Options available include:

- Auto drain
- After cooler
- Low oil level switch
- TEFC motor
- NEMA4 control panel
- Pressure lubricated pump
- Simplex and duplex configurations
- And more...

Easy Maintenance

Every component is easily accessible allowing minimum downtime and requires only limited maintenance.

TEFC Motor

NEMA4 control panel

The CR - Contractor Series

A premium compressor at the lowest capital cost for point of use applications.

2-5.5HP/135 psi

The Contractor Series provides affordable compressed air in a small, lightweight package. The low-profile cast iron design, semi-pneumatic wheel, heavy gauge wire belt guard and rugged pump design provide the ideal solution for small, portable applications.

Features and Benefits:

- Standard 2-year Bumper to Bumper Warranty
  – No start-up kit required
- Single stage units
  – Electric or gas powered
- Fully enclosed belt guard and ASME safety valves
- Pilot valve control on gas drive units to reduce engine peed on low demand

The - CR Professional Series

A reliable electric compressor for rugged, stationary use.

5-20HP/135-175 psi

The Professional Series provides high pressure at the lowest cost in a small, lightweight package. The balanced counter weighed crankshaft and cast iron design provide smooth, easy operation with a range of unit options supplying an ideal solution for demanding applications.

Features and Benefits:

- 1 year bumper to bumper with 5 year extended warranty on the pump*
  – *With purchase of minor and major maintenance kits
- Duplex, Simplex or Base Mounted

- Two-stage
  - Best for high demands needing up to 175 psi
- Oversized oil reservoir for low oil temperatures, industrial class bearings and one-piece aluminum head for heat dissipation providing longevity
- Low Maintenance with 2-piece connecting rods and oil pressure gauge
- High efficiency intercooler with stainless steel valve design for highest volumetric efficiency

- Low maintenance with 2-piece connecting rods and oil pressure gauge
- High efficiency intercooler with stainless steel valve design for highest volumetric efficiency

Technical Specifications

CR Industrial Series

The CR Series piston compressor is a cast-iron, splash lubricated, 2 stage, 175psi product. All models are equipped with magnetic starters as standard. The industrial series comes equipped with an electric drain, belt guard aftercooler, and low oil level switch on all models. The 10 and 15HP models also come equipped with head unloaders.

CR Industrial Series - Standard and TEFC motor and NEMA4 controller upgrade

1 Safety precautions

1.1 Safety icons

Explanation

	Danger for life
	Warning
	Important note

1.2 Safety precautions, general

General precautions

1. The operator must employ safe working practices and observe all related work safety requirements and regulations.
2. If any of the following statements does not comply with the applicable legislation, the stricter of the two shall apply.
3. Installation, operation, maintenance and repair work must only be performed by authorized, trained, specialized personnel.
4. The compressor is not considered capable of producing air of breathing quality. For air of breathing quality, the compressed air must be adequately purified according to the applicable legislation and standards.
5. Before any maintenance, repair work, adjustment or any other non-routine checks, stop the compressor, press the emergency stop button, switch off the voltage and depressurize the compressor. In addition, the power isolating switch must be opened and locked.
6. Never play with compressed air. Do not apply the air to your skin or direct an air stream at people. Never use the air to clean dirt from your clothes. When using the air to clean equipment, do so with extreme caution and wear eye protection.
7. The owner is responsible for maintaining the unit in safe operating condition. Parts and accessories shall be replaced if unsuitable for safe operation.
8. It is not allowed to walk or stand on the roof of the compressor canopy.

1.3 Safety precautions during installation

	All responsibility for any damage or injury resulting from neglecting these precautions, or non-observance of the normal caution and care required for installation, operation, maintenance and repair, even if not expressly stated, will be disclaimed by the manufacturer.

Precautions during installation

1. The machine must only be lifted using suitable equipment in accordance with the applicable safety regulations. Loose or pivoting parts must be securely fastened before lifting. It is strictly forbidden to dwell or stay in the risk zone under a lifted load. Lifting acceleration and deceleration must be kept within safe limits. Wear a safety helmet when working in the area of overhead or lifting equipment.
2. Place the machine where the ambient air is as cool and clean as possible. If necessary, install a suction duct. Never obstruct the air inlet. Care must be taken to minimize the entry of moisture at the inlet air.
3. Any blanking flanges, plugs, caps and desiccant bags must be removed before connecting the pipes.
4. Air hoses must be of correct size and suitable for the working pressure. Never use frayed, damaged or worn hoses. Distribution pipes and connections must be of the correct size and suitable for the working pressure.
5. The aspirated air must be free of flammable fumes, vapors and particles, e.g. paint solvents, that can lead to internal fire or explosion.
6. Arrange the air intake so that loose clothing cannot be sucked in.
7. Ensure that the discharge pipe from the compressor to the aftercooler or air net is free to expand under heat and that it is not in contact with or close to flammable materials.
8. No external force may be exerted on the air outlet valve; the connected pipe must be free of strain.
9. If remote control is installed, the machine must bear a clear sign stating: DANGER: This machine is remotely controlled and may start without warning. The operator has to make sure that the machine is stopped and that the isolating switch is open and locked before any maintenance or repair. As a further safeguard, persons switching on remotely controlled machines shall take adequate precautions to ensure that there is no one checking or working on the machine. To this end, a suitable notice shall be affixed to the start equipment.
10. The machines must be installed in such a way that an adequate flow of cooling air is available and that the air from the exhaust does not recirculate to the compressor air inlet or cooling air inlet.
11. The electrical connections must correspond to the applicable codes. The machines must be earthed and protected against short circuits by fuses in all phases. A lockable power isolating switch must be installed near the compressor.
12. On machines with automatic start-stop system or if the automatic restart function after voltage failure is activated, a sign stating “This machine may start without warning” must be affixed near the instrument panel.
13. In multiple compressor systems, manual valves must be installed to isolate each compressor. Non-return valves (check valves) must not be relied upon for isolating pressure systems.
14. Never remove or tamper with the safety devices, guards or insulation fitted on the machine. Every pressure vessel or auxiliary installed outside the machine to contain air above atmospheric pressure must be protected by a pressure-relieving device or devices as required.
15. Pipework or other parts with a temperature in excess of 176˚F and which may be accidentally touched by personnel in normal operation must be guarded or insulated. Other high-temperature pipework must be clearly marked.
16. If the ground is not level or can be subject to variable inclinations, consult the manufacturer.

	Also consult following safety precautions: Safety precautions during operation and Safety precautions during maintenance. These precautions apply to machinery processing or consuming air or inert gas. Processing of any other gas requires additional safety precautions typical to the application which are not included herein. Some precautions are general and cover several machine types and equipment; hence some statements may not apply to your machine.

1.4 Safety precautions during operation

	All responsibility for any damage or injury resulting from neglecting these precautions, or non-observance of the normal precautions and care required for installation, operation, maintenance and repair, even if not expressly stated, will be disclaimed by the manufacturer.

Precautions during operation

1. Use only the correct type and size of hose end fittings and connections. When blowing through a hose or air line, ensure that the open end is held securely. A free end will whip and may cause injury. Make sure that a hose is fully depressurized before disconnecting it.
2. Persons switching on remotely controlled machines shall take adequate precautions to ensure that there is no one checking or working on the machine. To this end, a suitable notice shall be affixed to the remote start equipment.
3. Never operate the machine when there is a possibility of taking in flammable or toxic fumes, vapors or particles.
4. Never operate the machine below or in excess of its limit ratings.
5. People staying in environments or rooms where the sound pressure level reaches or exceeds 90 dB(A) shall wear ear protectors.
6. Periodically check that:
   - All guards are in place and securely fastened
   - All hoses and/or pipes inside the machine are in good condition, secure and not rubbing
   - There are no leaks
   - All fasteners are tight
   - All electrical leads are secure and in good order
   - Pressure relief valves and other pressure-relief devices are not obstructed by dirt or paint
   - Air outlet valve and air net, i.e. pipes, couplings, manifolds, valves, hoses etc. are in good repair, free of wear or abuse
7. If warm cooling air from compressors is used in air heating systems, e.g. to warm up a workroom, take precautions against air pollution and possible contamination of the breathing air.
8. If available, do not remove any of, or tamper with, the sound-damping material.
9. Never remove or tamper with the safety devices, guards or insulations fitted on the machine. Every pressure vessel or auxiliary installed outside the machine to contain air above atmospheric pressure shall be protected by a pressure-relieving device or devices as required.

	Also consult following safety precautions: Safety precautions during installation and Safety precautions during maintenance. These precautions apply to machinery processing or consuming air or inert gas. Processing of any other gas requires additional safety precautions typical to the application which are not included herein. Some precautions are general and cover several machine types and equipment; hence some statements may not apply to your machine.

1.5 Safety precautions during maintenance or repair

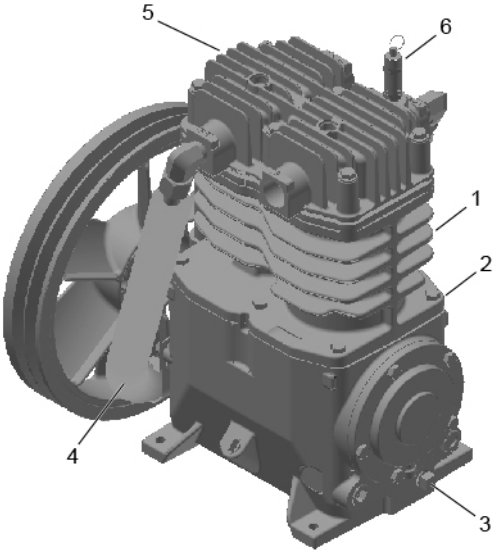
	All responsibility for any damage or injury resulting from neglecting these precautions, or non-observance of the normal precautions and care required for installation, operation, maintenance and repair, even if not expressly stated, will be disclaimed by the manufacturer.

Precautions during maintenance or repair

1. Always wear safety glasses.
2. Use only the correct tools for maintenance and repair work.
3. Use only genuine spare parts.
4. All maintenance work shall only be undertaken when the machine has cooled down.
5. A warning sign stating “work in progress; do not start” shall be attached to the starting equipment.
6. Persons switching on remotely controlled machines shall take adequate precautions to ensure that there is no one checking or working on the machine. To this end, a suitable notice shall be affixed to the remote start equipment.
7. Close the compressor air outlet valve before connecting or disconnecting a pipe.
8. Before removing any pressurized component, effectively isolate the machine from all sources of pressure and relieve the entire system of pressure.
9. Never use flammable solvents or carbon tetrachloride for cleaning parts. Take safety precautions against toxic vapors of cleaning liquids.
10. Scrupulously observe cleanliness during maintenance and repair. Keep dirt away by covering the parts and exposed openings with a clean cloth, paper or tape.
11. Never weld or perform any operation involving heat near the oil system. Oil tanks must be completely purged, e.g. by steam-cleaning, before carrying out such operations. Never weld on, or in any way modify, pressure vessels.
12. Whenever there is an indication or any suspicion that an internal part of a machine is overheated, the machine shall be stopped but no inspection covers shall be opened before sufficient cooling time has elapsed; this to avoid the risk of spontaneous ignition of the oil vapor when air is admitted.
13. Never use a light source with open flame for inspecting the interior of a machine, pressure vessel etc.
14. Make sure that no tools, loose parts or rags are left in or on the machine.
15. All regulating and safety devices shall be maintained with due care to ensure that they function properly. They may not be put out of action.
16. Protect the motor, air filter, electrical and regulating components etc. to prevent moisture from entering them, e.g. when steam-cleaning.
17. Make sure that all sound-damping material and vibration dampers, e.g. damping material on the bodywork and in the air inlet and outlet systems of the compressor, are in good condition. If damaged, replace it by genuine material from the manufacturer to prevent the sound pressure level from increasing.
18. Never use caustic solvents which can damage materials of the air net, e.g. polycarbonate bowls.
19. **The following safety precautions are stressed when handling refrigerant**:
    - Never inhale refrigerant vapors. Check that the working area is adequately ventilated; if required, use breathing protection.
    - Always wear special gloves. In case of refrigerant contact with the skin, rinse the skin with water. If liquid refrigerant contacts the skin through clothing, never tear off or remove the latter; flush abundantly with fresh water over the clothing until all refrigerant is flushed away; then seek medical first aid.
20. Protect hands to avoid injury from hot machine parts, e.g. during draining of oil.

	Also consult the following safety precautions: Safety precautions during installation and Safety precautions during operation. These precautions apply to machinery processing or consuming air or inert gas. Processing of any other gas requires additional safety precautions typical to the application which are not included herein. Some precautions are general and cover several machine types and equipment; hence some statements may not apply to your machine.

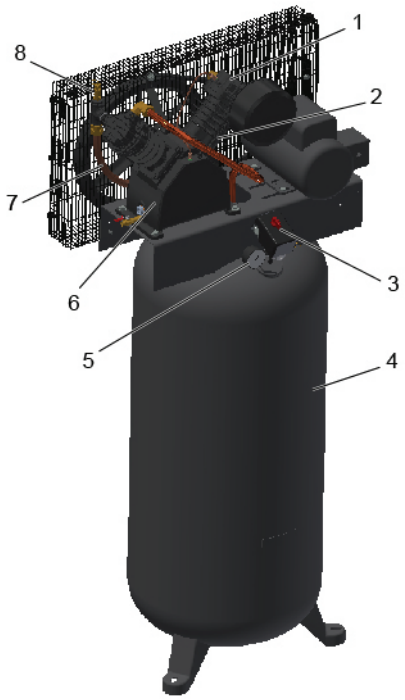
2 General description



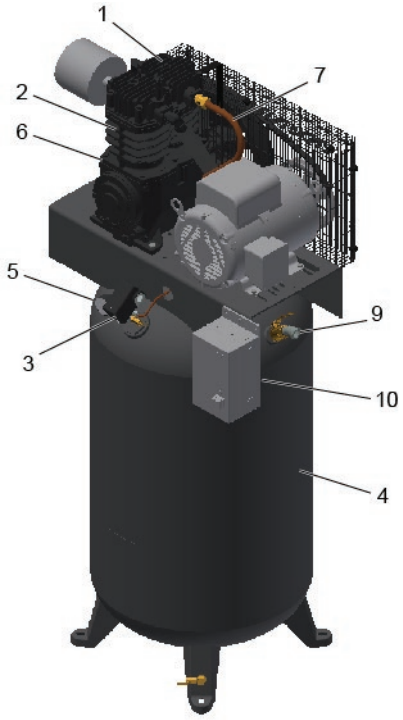
2.1 General description

Introduction

CR Range Compressors are air-cooled, two cylinder, single-stage and double-stage, lubricated piston compressors, built for effective working pressures up to 145-175 psi.

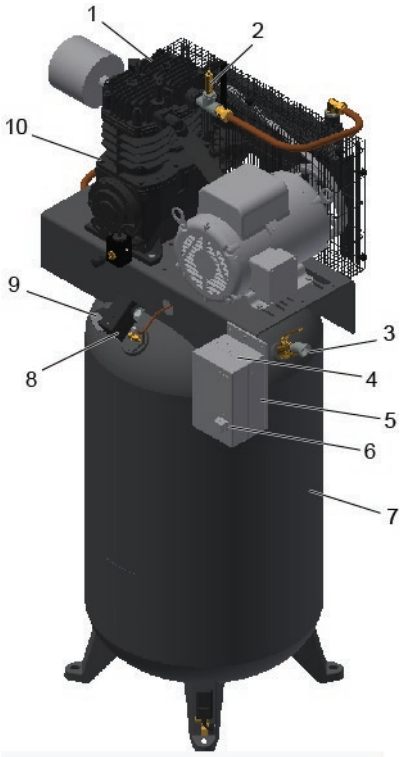


Compressor block

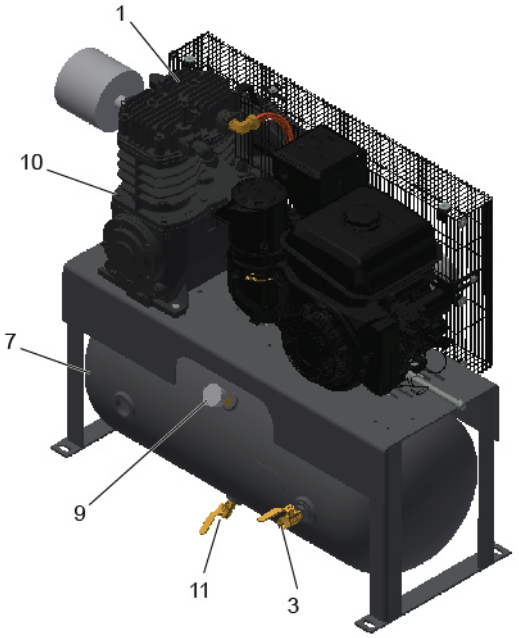


Compressor block

Reference	Description
1	Cylinder
2	Crankcase
3	Oil drain
4	Intercooler
5	Cylinder head
6	Pressure relief valve



Tank-mounted, vertical receiver



Tank-mounted, vertical receiver

2	Pressure relief valve
3	Air outlet valve
4	Hour meter (option)
5	Electric cabinet
6	On/off switch
7	Air receiver
8	Air pressure switch
9	Air pressure gauge
10	Compressor
11	Condensate drain valve

Compressor variants

The **compressor block** includes:

- Crankcase and cylinders
- Air cooler piping
- Check valve
- Pressure relief valve

The unit comprises:

- **Tank-mounted CR with electric motor:** The compressor on a horizontal or vertical air receiver with air outlet valve, pressure gauge, pressure relief valve, air pressure switch with an on/off button (MDR), and condensate drain valve.
- **Tank-mounted CR with gas engine:** The compressor on an air receiver with air outlet valve, pressure gauge, pressure relief valve, and condensate drain valve.
- **CR base-mounted unit** is a fully operational unit with air pressure switch and on/off switches mounted on a frame (no air receiver).
- **CR Contractor units** are mobile compressors. They are equipped with a gas engine. The compressors have two outlet connections:
  - A connection for compressed air at working pressure.
  - A connection for compressed air at reduced pressure via a pressure regulator.

2.2 Hour meter option

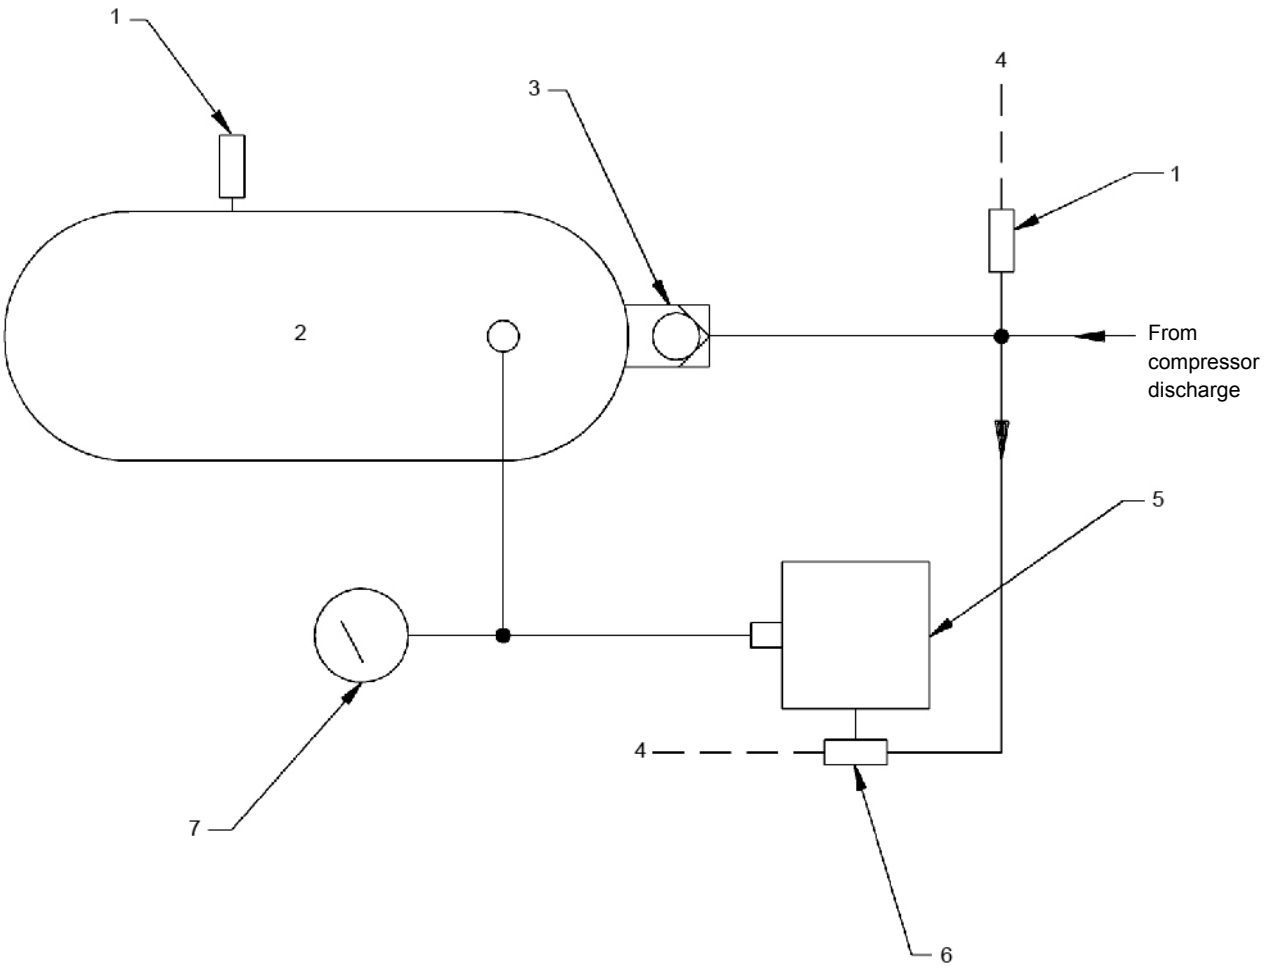
The hour meter is triggered by the motor's magnetic field, so the hours display actual operation. When the motor is on, the hours icon will blink on/off indicating the hour meter is active.

With solid-state technology the hour meter is built with a custom chip and with solid construction for maximum durability for harsh environments and rugged applications.

Hour meter

Features

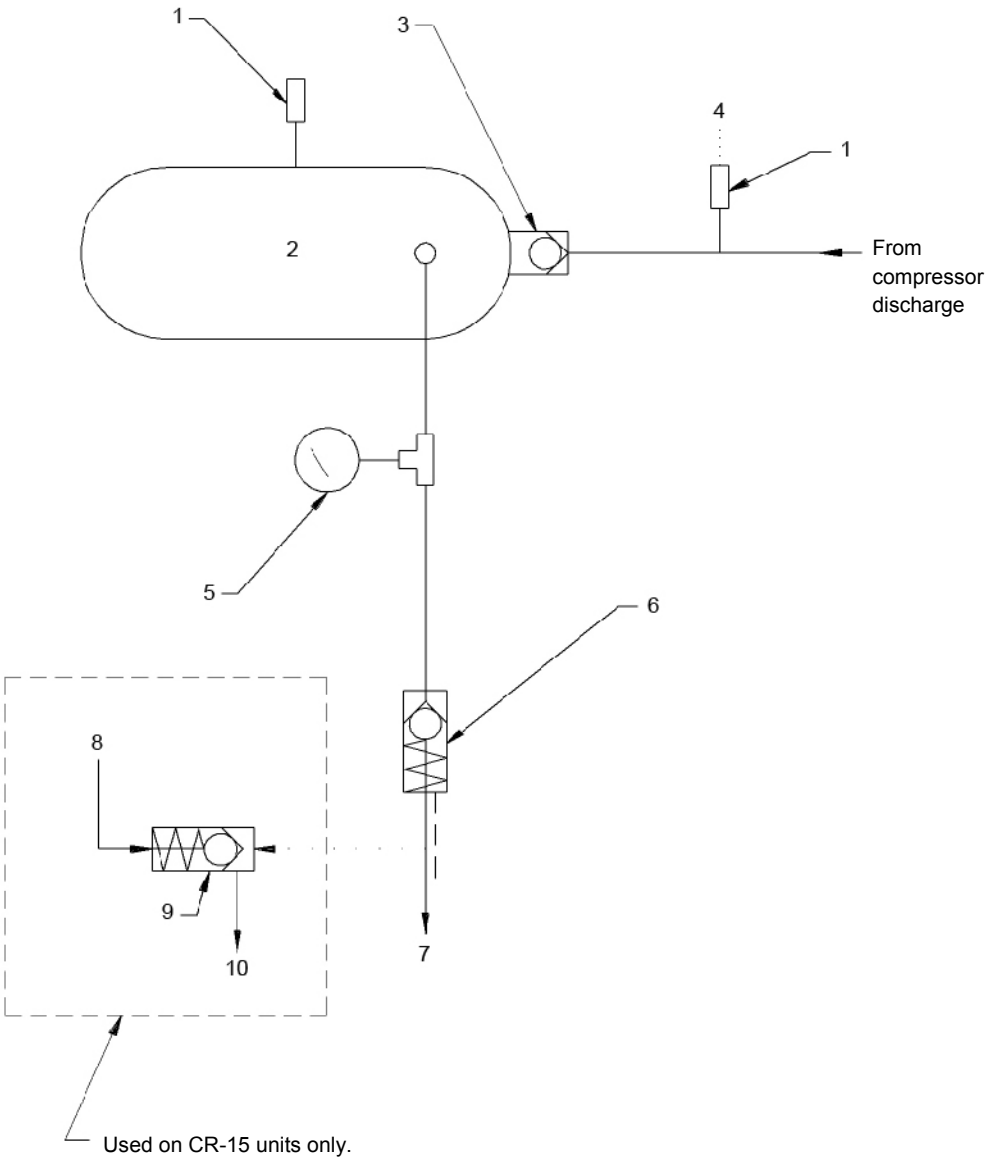
- Large 5 segment LCD display
- Low cost and small size
- No external power required
- No shunt required
- Solid-state electronics
- Quartz crystal
- Wide operating temperature range
- High reliability
- Easy to install
- Made in the U.S.A.



Specifications

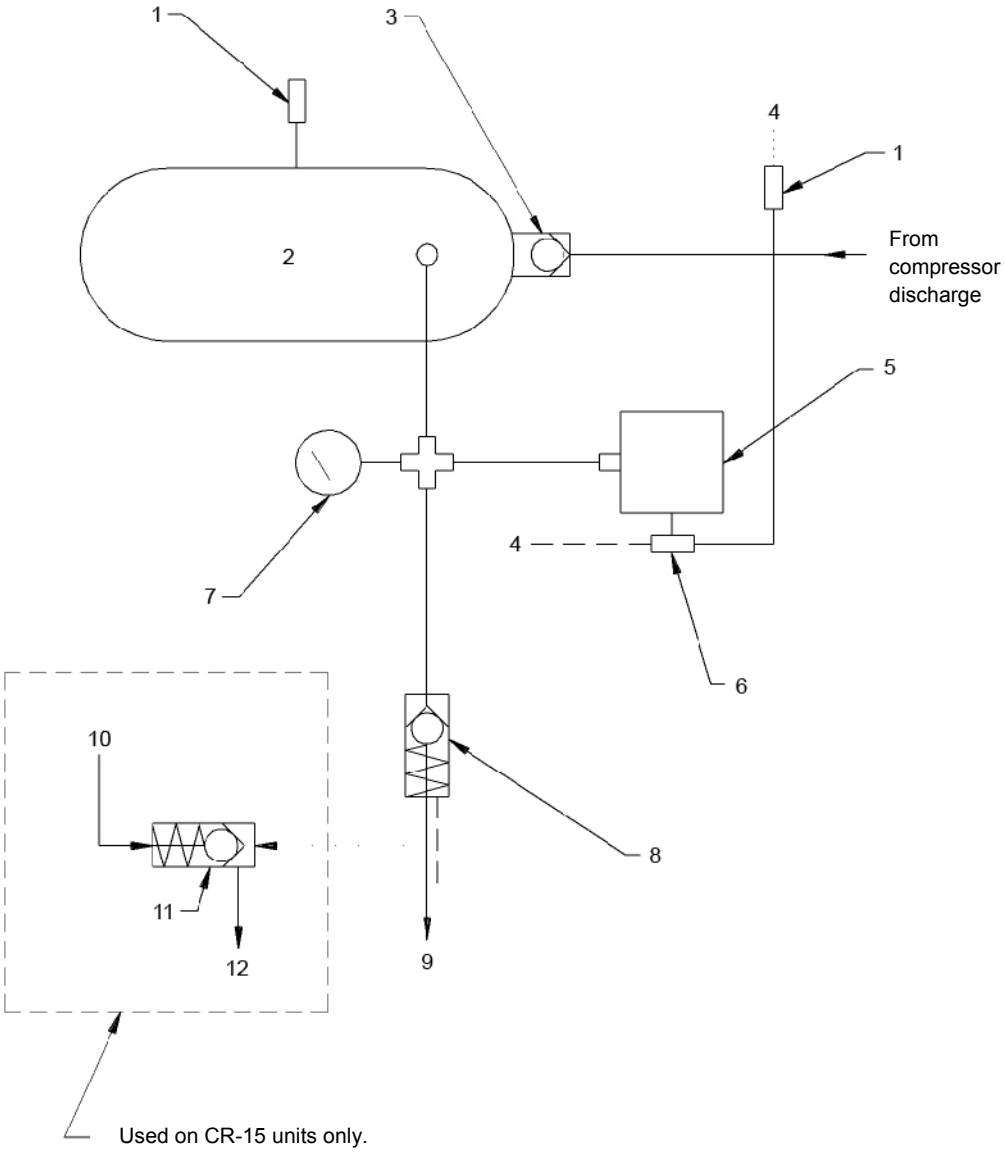
Display Reading:	9999.9 Hour meter
Digit Height:	5-digits [8MM] LCD
Operating Voltage:	Internal lithium battery 15,000 hours continuous running
Temperature:	Standard -40°C to +85°C (-40°F to +185°F)
Vibration Resistance:	Withstands 10 to 75Hz @ 1 to 8 g's
Mounting Configuration:	Two hole base mount

2.3 Control piping



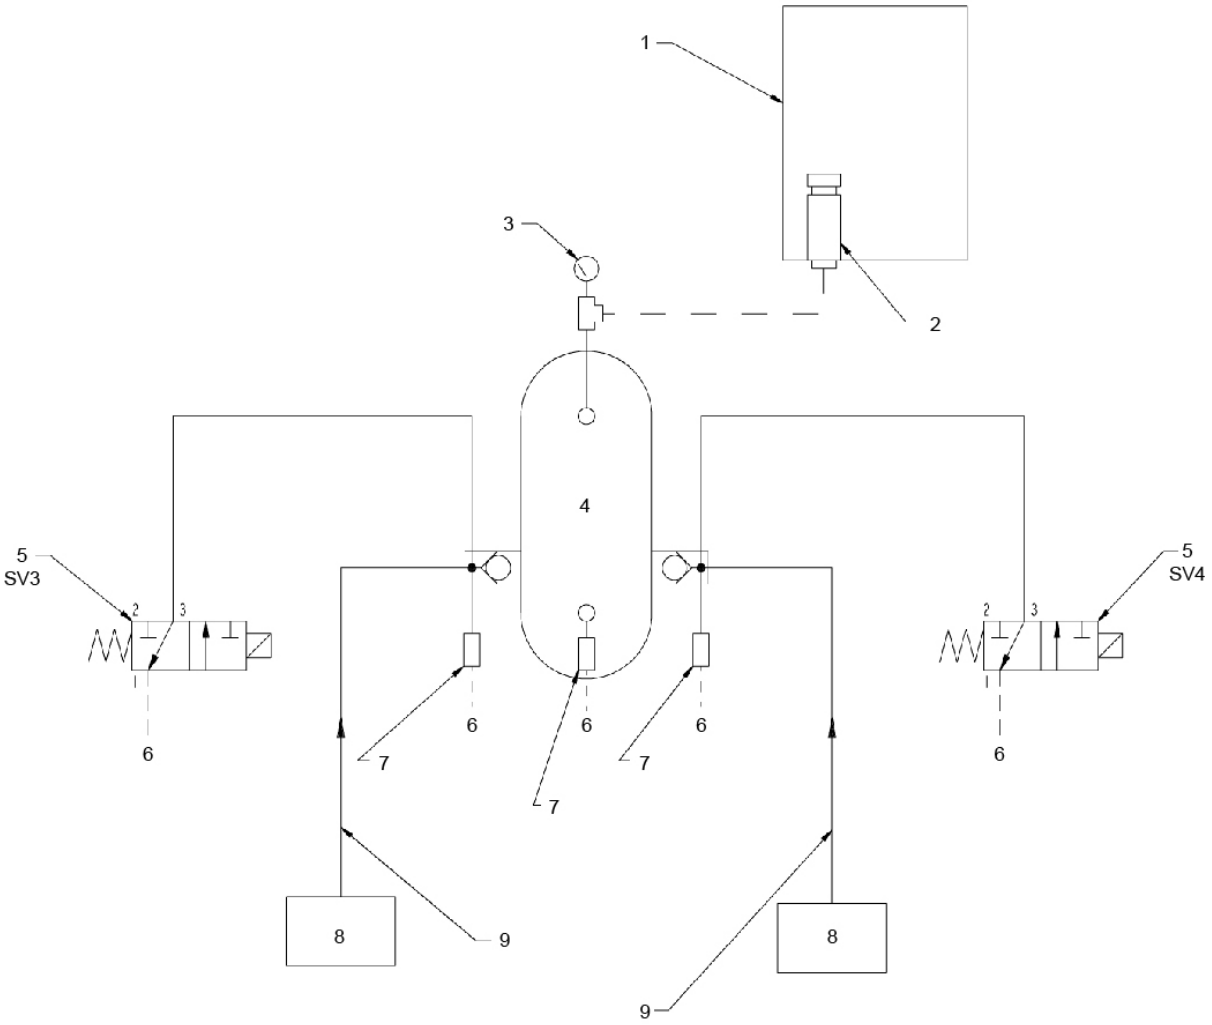
CR 2 to 15 hp

Air drawn through the air filter and inlet silencer into cylinders is compressed, then discharged through the cooler piping and “and check valve / unloader valve” into the air receiver.



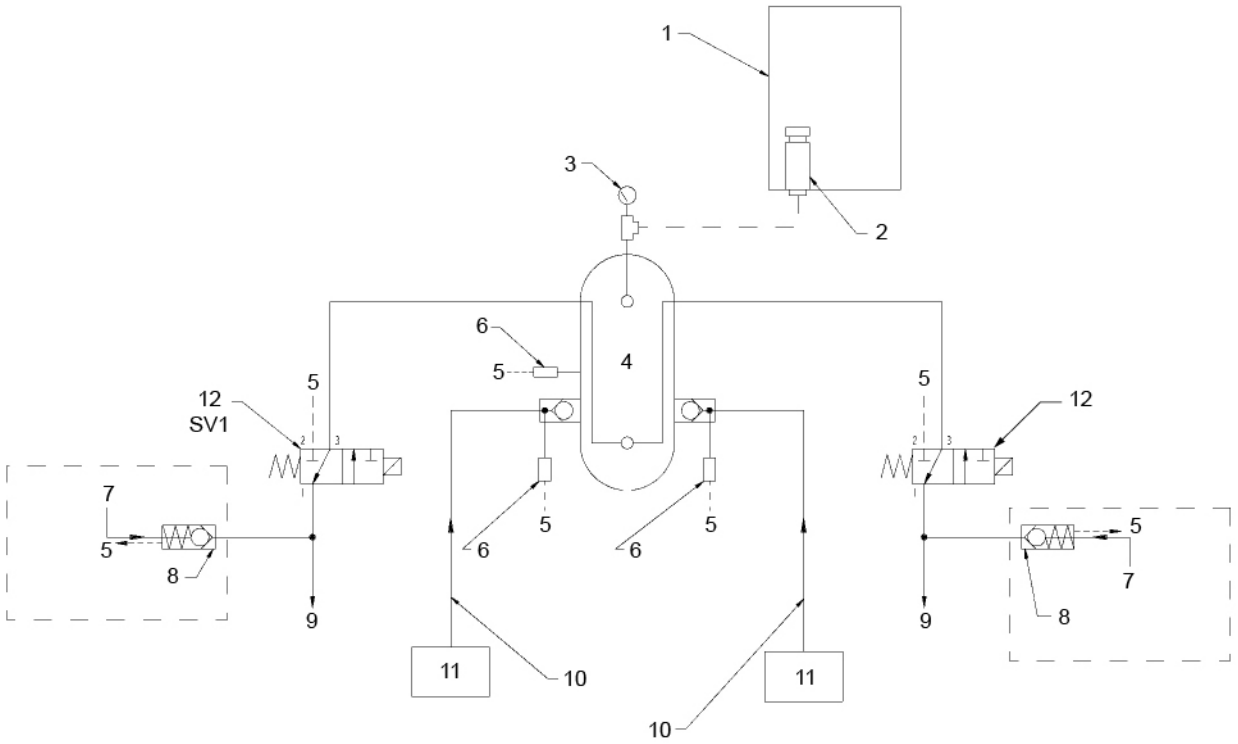
Control piping and regulating system with automatic start/stop

Reference	Description
1	Pressure relief valve
2	Air receiver
3	Discharge line check valve
4	Vent
5	Pressure switch
6	Pressure release valve on pressure switch
7	Pressure gauge



Control piping and regulating system with load/unload

Reference	Description
1	Pressure relief valve
2	Air receiver
3	Discharge line check valve
4	Vent
5	Pressure gauge
6	Pilot valve
7	Flow to head unloaders
8	Flow from compressor interstage
9	Electronic drain
10	Vent to atmosphere



Control piping and regulating system with dual control and pilot

Reference	Description
1	Pressure relief valve
2	Air receiver
3	Discharge line check valve
4	Vent
5	Pressure switch
6	Pressure release valve on pressure switch
7	Pressure gauge
8	Pilot valve
9	Flow to head unloaders
10	Flow from compressor interstage
11	Electronic drain
12	Vent to atmosphere

Control piping and regulating system, duplex tank mount with automatic start/stop

Reference	Description
1	Control panel
2	Pressure transducer
3	Pressure gauge
4	Air receiver
5	3-way normally-open solenoid valve
6	Vent
7	Pressure relief valve
8	Compressor
9	Discharge line

Control piping and regulating system, duplex tank mount with dual control and solenoid valve

Reference	Description
1	Control panel
2	Pressure transducer
3	Pressure gauge
4	Air receiver
5	Vent
6	Pressure relief valve
7	Flow from interstage
8	Interstage dump valve (Used on CR-15 units only.)
9	Flow to compressor head unloaders
10	Discharge line
11	Compressor
12	3-way normally-open solenoid valve

2.4 Regulating system

Automatic Start/Stop

The regulating system includes:

- Check valve
- Air pressure switch (MDR) with pressure release valve and on/off button (S1).

Operation

The air pressure switch opens and closes its contacts at pre-set pressures. During loaded operation, the contacts are closed: the motor is running.

When the pressure in the air receiver reaches the pre-set maximum pressure, the contacts as well as pressure release valve are opened. The motor stops, the air at the delivery side of the compressor is vented to atmosphere and the check valve closes to prevent venting of the receiver.

When the pressure in the air receiver decreases to the pre-set minimum pressure, the contacts of the air pressure switch close and the pressure release valve closes. The motor restarts and compressed air is supplied to the receiver again.

CR Contractor

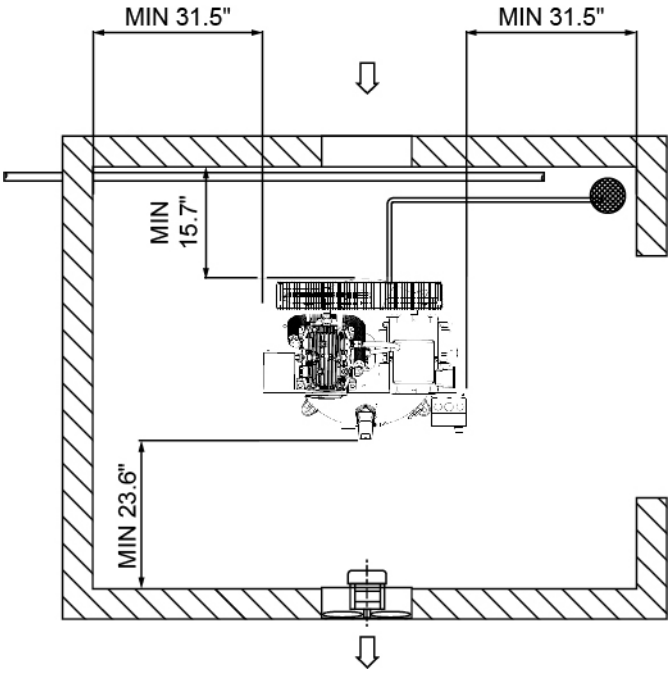
The regulating system includes:

- Pilot valve
- Unloader with integrated check valve

Operation

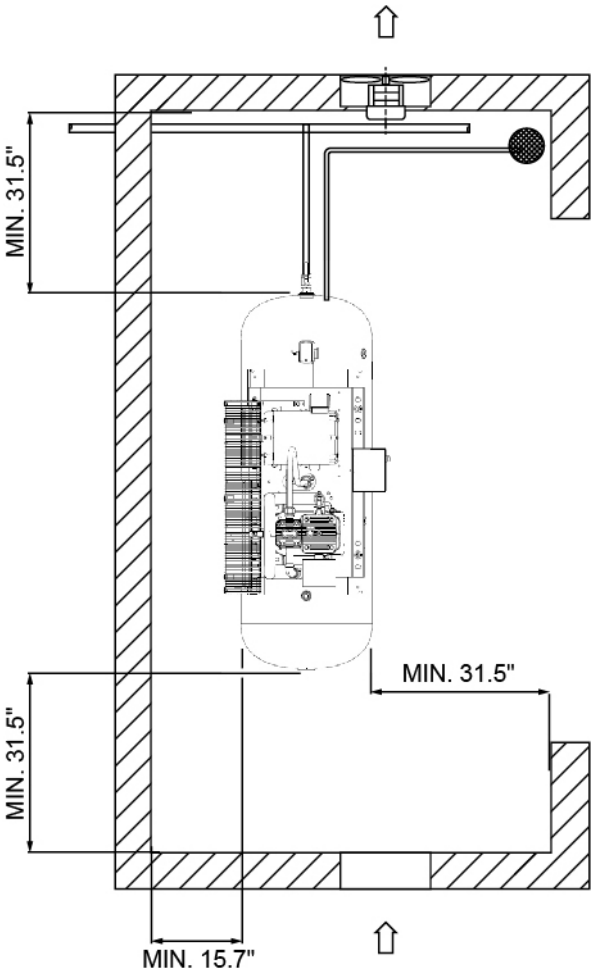
The pilot valve opens and closes at pre-set pressures. During loaded operation, the pilot valve is closed, preventing the compressed air from flowing to the unloader.

When the pressure in the pulsation dampers reaches the pre-set maximum pressure, the pilot valve will open. Compressed air from the pulsation dampers will flow to the plunger which causes the unloading valve to open. The air at the delivery side of the compressor is blown through the silencer to the atmosphere and the check valve closes to prevent venting of the pulsation dampers. The compressor runs unloaded.



When the pressure in the pulsation dampers decreases to the pre-set minimum pressure, the pilot valve closes. Control air from the unloader plunger chamber is vented to the atmosphere. The unloading valve closes and compressed air is supplied to the pulsation dampers again.

3 Installation



3.1 Installation instruction

Install the unit in an area where the noise levels do not cause inconvenience and adequate ventilation is available for cooling purposes.

⚠	Before commencing installation, check that the electrical data on the compressor specification plate/s are compatible with the local power supply. Before connecting the electricity, ensure that the power supply is off and correctly isolated. The electrical power supplied to the compressor unit must be connected by a qualified electrician in accordance with the wiring diagram supplied with the plant. All wiring must be in accordance with UL regulations. Cable sizes given in section. Electric data are recommendations only.

Installation proposal for CR with vertical receiver

Installation proposal for CR with horizontal receiver

CR

Install the compressor horizontally, in a cool but frost-free and well-ventilated room. Place the compressor as level as possible; however, CR can be operated with a maximum inclination of 40% (22.5 degrees) in any direction. The air should be clean.

It is recommended to install an automatic condensate drain (available as an option) on the air receiver to ensure continuous condensate removal.

CR Contractor

The compressors are equipped with a lifting eye or yoke. When running, the compressor must be installed as level as possible; however, it can be operated temporarily in an inclined plane of maximum 25% (or 20 degrees). Keep the compressor in a frost-free and well-ventilated place.

3.2 Electrical connections

Warning

	The electrical connection must be carried out by an electrician and must correspond to the local codes. The indications on the motor data plate must correspond to the power supply voltage and frequency. The installation must include an isolating switch in the power line near the unit and be protected against short-circuits by fuses for each phase. Refer to Fuses and wire sizes. The power supply and grounding lines must be of suitable size. Refer to Fuses and wire sizes in Section 3.3. For Automatic Start/Stop, connect the power supply cables as shown in the electrical diagrams. Check the setting of the overload relay.

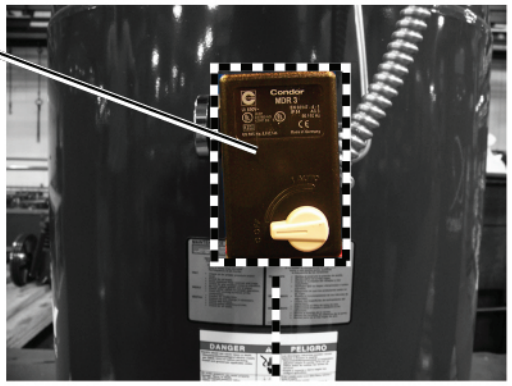
Pressure Switch

To Remove the Cover:

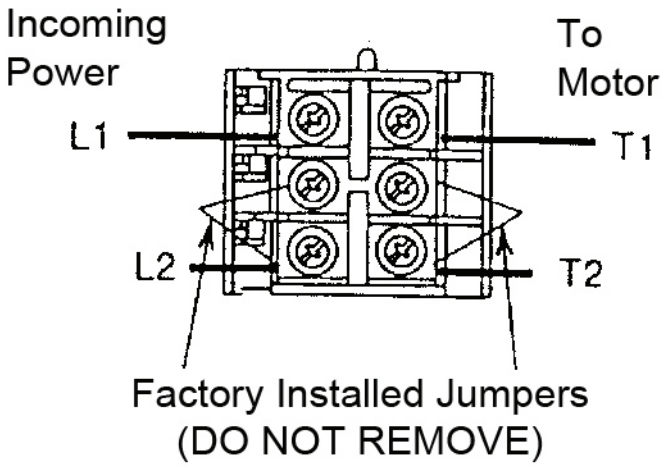


1. Turn the switch handle to "OFF" position.
2. Remove small screws on side of the cover.
3. Pull the cover away from the pressure switch.

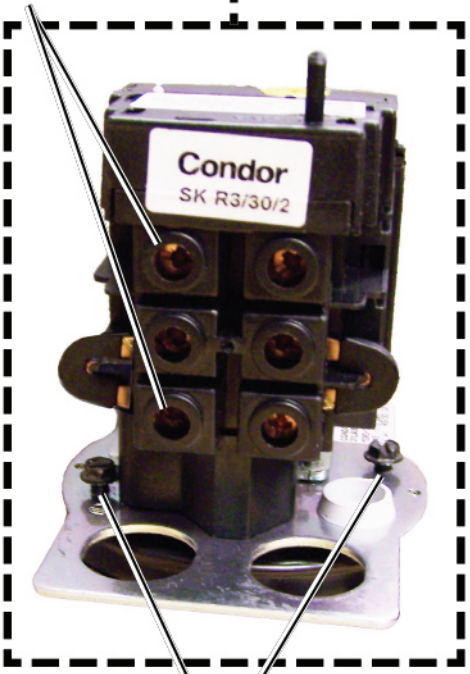
To Re-install the Cover:

1. Make sure the switch handle is in the "OFF" position (as shown).
2. Carefully slide the cover over the pressure switch.

DO NOT FORCE!



3. Re-install the small cover screws and tighten.

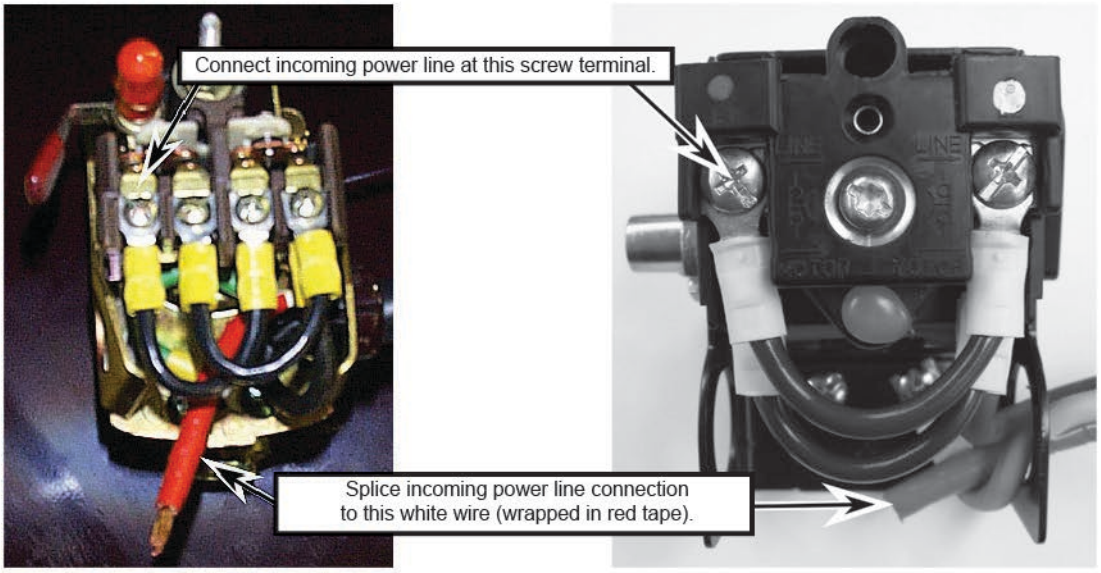


CAUTION !

Verify all wires are secure and fasteners are torqued before connecting power to the unit.

Use wire lugs on incoming power wires. Do not attempt to twist bare wire end under the screw heads.

Connect incoming power lines at screw terminals L1 & L2.



Connect ground wires.

At Installation, the customer is to provide:
Disconnect and branch circuit overcurrent protection and grounding between the power supply and the electrical control enclosure in accordance with the National Electrical Code (NEC), the Canadian Electrical Code (CEC) and / or any local codes having precedence.

Single Phase Full-Load Motor Amps are from NEC Table 430-248

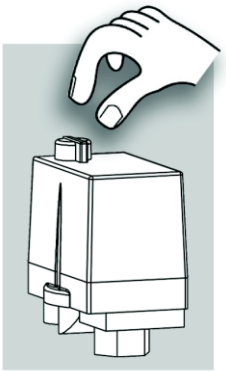
NEC Table 430.52 used for calculating Fuse size.

NEC 240.6 Used to select Standard Fuse Sizes
15, 20, 25, 30, 35, 40, 45, 50, 60, 70, 80, 90, 100, 110, 125, 150, 175, 200, 225, 250, 300, 350, 400, 450, 500, 600, 700, 800, 1000, 1200, 1600, 2000, 2500, 3000, 4000, 5000, and 6000 amperes.

NEC 430.24 used to determine minimum wire size needed.

4 Operating instructions

4.1 Initial start-up



If the compressor has not run for the past 6 months (at initial start-up check the date on the data plate), it is strongly recommended to improve the lubrication of the compressor element: drain the oil, refill the compressor with the same oil while turning the crankshaft.

1. For tank-mounted and base mounted units, remove the RED transport brackets from underneath the compressor.
2. Check the electrical installation, which must be in accordance with the instructions given in Electrical connections.
3. CR units are filled with Piston Fluid compressor oil. Check that the oil level is still at the top of the red circle of sight-glass.
4. Switch on the voltage. Start the motor.
5. Check the operation of the air pressure switch. Refer to Adjustment of pressure switch. Check the operation of the pilot valve when equipped. Refer to Adjustment of pilot valve.
6. On CR 15 compressors, check for correct direction of rotation, as indicated by the arrow on the fan housing.

4.2 Starting

CR

1. Check the oil level, which must be at the top of the red circle of the sight-glass. The minimum level is the lower part of the red circle.
2. Switch on the voltage.
3. Turn the switch to position I (Auto), or turn switch (S1) to position I.

CR Contractor with electrical motor

1. Check the oil level, which must be near the top of the red circle of the sight-glass. The minimum level is the lower part of the red circle.
2. Set the pilot valve in the unload position by turning the red handle 90 degrees. Refer to Adjustment of pilot valve.
3. Attach the air lines to the air outlets.
4. Plug in and switch on the voltage at the main circuit breaker.

	**Warning:** Never move the compressor after plugging it in.

5. Move the switch to position I or turn switch (S1) to position I.
6. Open the outlet valves (AV1 and AV2).
7. Set the pilot valve in the load position by turning the red handle 90 degrees. Refer to Adjustment of pilot valve.
8. Turn the regulating knob of the pressure regulator clockwise or counter-clockwise to increase or decrease the pressure at the outlet of the pressure regulator.

	Regularly drain condensate.

CR Contractor with gas engine

1. On CR check the oil level, which must be near the top of the red circle of the sight-glass. The minimum level is the lower part of the red circle.
2. Check the engine oil level as follows:
   - Remove the oil filler cap and wipe the dipstick clean.
   - Insert the dipstick into the filler neck, but do not screw it in.
   - The oil level must show between the minimum and maximum marks on the dipstick.
3. Fill the fuel tank with unleaded or low-leaded gasoline.
4. Start the engine. Refer to the engine “Owner’s manual”.
5. Attach the air lines to the air outlets.
6. Open the outlet valves (AV1/2).
7. Set the pilot valve in the load position by turning the red handle 90 degrees. Refer to Adjustment of pilot valve.
8. Turn the regulating knob of the pressure regulator clockwise or counter-clockwise to increase or decrease the pressure at the outlet of the pressure regulator.

	Regularly drain condensate.

4.3 Stopping

CR

1. Turn the switch to position 0 (Off), or push switch (S1) to position 0.
2. Close air outlet valve.
3. Switch off the voltage.

If a compressor with pressure switch stops during operation because of a power failure, the pressure from the air outlet pipe must be released by moving the switch on top of the air pressure switch to 0 to prevent the compressor from restarting against back-pressure when the power becomes live again.

CR Contractor with Pilot Valve

1. Set the pilot valve in the unload position by turning the red handle 90 degrees. Refer to Adjustment of pilot valve.
2. On CR Contractor units with electrical motor, move switch to position 0 or push switch (S1) to position 0. If the compressor is not required for immediate further use, switch off the voltage at the main circuit breaker and unplug.
3. On CR Contractor units with gas engine, stop the engine. Refer to the engine “Owner’s manual”.
4. Close the air outlet valves (AV1 and AV2). Depressurize and disconnect the air lines from the outlet valves.

4.4 Taking out of operation

At the end of the service life of the compressor, proceed as follows:

1. Stop the compressor and close the air outlet valve(s).
2. Switch off the voltage and disconnect the compressor from the mains.
3. Depressurize the compressor.
4. Shut off and depressurize the part of the air net which is connected to the outlet valve. Disconnect the compressor from the air net.
5. Drain the oil.

4.5 Storage after installation

Procedure

	If the compressor is going to be stored without running from time to time, protective measures must be taken.

- Protect the machine against dust and moisture, if possible in a clean, cool, dry and well ventilated area.
- Make sure that the machine is not subject to vibration.
- If the machine is stored in packing, put some vapor corrosion inhibitor (VCI) paper into the packing.
- Store the machine in its normal position, not upside down or on its side.
- If the machine is stored for 1 year or more, rotate the bearings once a month to change the position of the roller balls in the bearings. Consult Atlas Copco Service.

5 Maintenance

5.1 Gas engine maintenance

Consult the engine “Owner’s manual”.

5.2 Preventive maintenance schedule

	The schedule contains a summary of the maintenance instructions. Read the respective section before taking maintenance measures. When servicing, replace all disengaged packing components, e.g. gaskets, O-rings, washers. **The “longer interval” checks must also include the “shorter interval” checks.**

Interval	Operation
Daily/8 Hours	Check lubricant levels several minutes after stopping. Drain and replace contaminated lubricant.
	Drain moisture from the receiver tank, drop legs, and air traps. (If subject to freezing, store in heated area first to remove ice.)
	Visually inspect the compressor and safety guards.
	Check for unusual noise or vibration.
	Check for lubricant leaks.
	Check pressurized components for rust, cracks, or leaks.
Weekly/40 Hours	Manually operate the pressure relief valves.
	Clean cooling surfaces of the intercooler, aftercooler, and compressor.
	Check for air leaks in the compressor and air distribution system.
	Clean or replace the air intake filter. (Use a shorter interval in humid/dirty conditions.)
Initial 100 Hours	Completely drain lubricant from the crankcase and replace.
Monthly/160 Hours	Check the belt tension.
3 Months/500 Hours	Change the lubricant. (Use a shorter interval in harsh conditions.)
	Torque the pulley clamp screws or jamnut.
6 Months/1000 Hours	Retorque the cylinder to the head capscrews.
	Inspect the compressor valves for leakage or carbon build-up. If necessary, clean with a safety solvent.
12 Months/2000 Hours	Inspect the pressure switch diaphragm and contacts.
	Inspect the contact points in the motor/starter.

5.3 Lubrication of compressors

It is strongly recommended to use the Piston Fluid compressor oil to keep the compressor in excellent operating condition.

Traditional lubricants cannot cope with the extreme conditions of piston compressors, resulting in fast oil degradation, overheating and potentially irreversible damage and high repair costs. Therefore, high performing lubricants increase the equipment lifetime.

Considering the low oil content in piston compressors, the economy of lesser quality oils simply is not worth the risk.

Piston Fluid oil can be ordered in different quantities.

5.4 Service kits

Kit	CR 5	CR 7.5	CR 10	CR 15
1 Year Maintenance Kit	2022101700	2022101700	2022101800	—
Overhaul Kit	2022100300	2022100500	2022100700	2022155201 (w/head unloaders)
Gasket Set	2022106702	2022106800	2022106900	2022104800
Intercooler Repair Kit	—	—	2023501682	—
Head Kit	—	—	—	2022154601 2022154801 (w/head unloaders)

Notes:

1. Use only authorized parts. Any damage or malfunction caused by the use of unauthorized parts is not covered by Warranty or Product Liability.
2. Whichever interval comes first. The local Sales Company may overrule the maintenance schedule, especially the service intervals, depending upon the environmental and working conditions of the compressor.
3. For the contents of all kits, consult the Parts list.

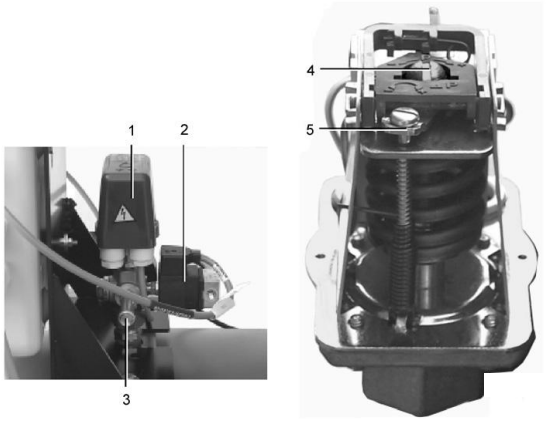
5.5 Disposal of used material

Used filters or any other used material (e.g. desiccant, lubricants, cleaning rags, machine parts, etc.) must be disposed of in an environmentally friendly and safe manner, and in line with the local recommendations and environmental legislation.

6 Servicing and adjustment procedures

Warning

⚠	Release the pressure from the compressor before starting repair or maintenance works. Switch off the voltage and isolate the compressor from the mains.



6.1 Air filter

To replace the air filter, follow these steps:

1. Stop the compressor.
2. Unscrew the cap on top of the cover. Lift off the cover and the filter element. Take care that no dirt drops inside the suction silencer.
3. Using a damp cloth, clean the filter chamber and cover. Discard damaged elements.
4. Install the new element, cover and cap.

6.2 Adjustment of MDR4 pressure switch

Views of air pressure switch MDR4

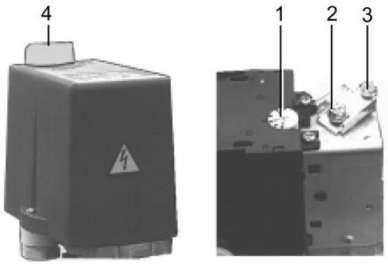
Ref	Name
1	Air pressure switch
2	Solenoid valve
3	Pressure release valve
4	Adjusting screw, stopping pressure
5	Adjusting screw, pressure difference

Function

The adjustment of the maximum or stopping pressure of the compressor is effected by means of the air pressure switch. The switch also controls the pressure difference between the maximum pressure (stopping pressure) and the pressure at which compression is resumed (starting pressure).

Adjustment

	• Adjust the air pressure switch while it is pressurized. • Switch off the voltage before removing the cover of the switch; reinstall it after an adjustment has been made and before the voltage is switched on again.



The **maximum pressure** is controlled by adjusting screw (4). Turn the screw clockwise to raise the maximum or stopping pressure, counter-clockwise to lower it.

The **pressure difference** is adjusted by means of screw (5). To reduce the difference between the stopping and starting pressures, i.e. to increase the starting pressure, turn the screw counter-clockwise. To increase the pressure difference, turn the screw clockwise.

6.3 Adjustment of MDR3 pressure switch

Views of air pressure switch MDR3 with ON/OFF switch

This pressure switch has a cover with rotary knob (4) for manual On/Off (Auto/Off).

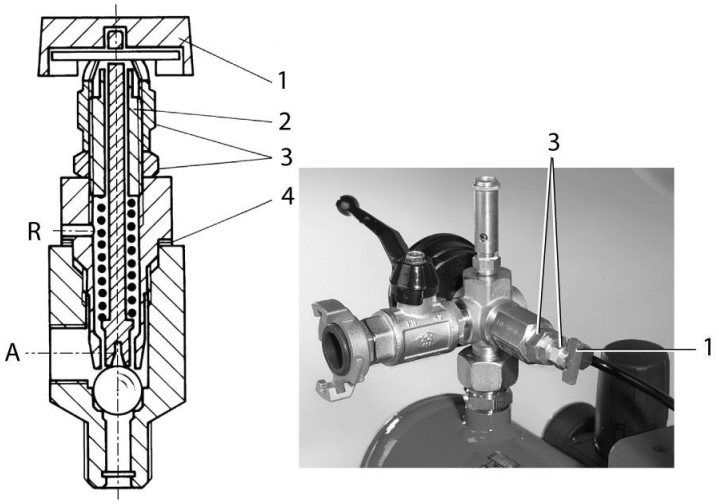
Reference	Description
1	Dial, overload relay
2	Adjusting screw, stopping pressure
3	Adjusting screw, pressure difference
4	On/off switch (Auto/Off)

Function

The switch allows the operator to select the stopping pressure and the pressure difference between stopping and starting pressures. The stopping and starting pressures are the opening and closing pressures of the switch.

Adjustment

	• Adjust the air pressure switch while it is pressurized. • Switch off the voltage before removing the cover of the switch; reinstall it after an adjustment has been made and before the voltage is switched on again.



The stopping pressure is controlled by adjusting screw (2). Turn the screw clockwise to raise the stopping pressure, counter-clockwise to lower it.

The pressure difference between starting and stopping is adjusted by means of adjusting screw (3). The adjustment range is shown in the graph below. Turn the screw counter-clockwise to reduce the pressure difference, clockwise to increase it.

6.4 Adjustment of pilot valve

The adjustment of the maximum or unloading pressure of the compressor is effected by means of pilot valve. The valve also controls the difference between the preset maximum pressure and that at which compression is resumed.

Pilot valve

Reference	Description
A	Control air to unloader
R	Vent hole
1	Unloading handle
2	Pressure adjusting screw
3	Nuts
4	Shims

Unload mechanism

The pilot valve is equipped with a hand-operated unload mechanism: by turning the red handle (1) 90 degrees, the plunger of the valve will be lifted, releasing the spring force. The air pressure from the pulsation dampers will force down unloader plunger (8) and the compressor will run unloaded. By turning handle (1) 90 degrees further, the plunger returns to its original position so that the pilot valve will again unload and load the compressor at the pre-set pressures.

Setting of the pilot valve

The maximum pressure is controlled by adjusting screw (2):
1. Loosen handle (1) and the two nuts (3).
2. Turn the adjusting screw (2) clockwise to increase the maximum pressure.
3. The pressure difference can be increased by removing one or more shims (4).
4. Fit the two nuts (3) and handle (1) in their original position.

6.5 Pressure relief valve

	Replace the valve if it does not open at the correct pressure. No adjustment is allowed. **Testing:** Testing as described below shall only be carried out by competent personnel.
	If pressure relief valve is not used for longer than 6 months, pressurize for 4h to have working pressure.

Testing

1. Close the air outlet valve, depressurize and disconnect the hose or pipe from the valve.
2. Start the compressor and run it until it stops automatically.
3. Switch off the voltage.
   Remove the cover from the air pressure switch and, with the air receiver now under pressure, turn the adjusting screw one turn clockwise to increase the stopping pressure Adjustment of MDR4S pressure switch and Adjustment of MRD3 pressure switch. Reinstall the cover.
4. Switch on the voltage, slightly open the outlet valve and start the compressor.
5. Gradually close the outlet valve while checking the air pressure gauge. If the pressure relief valve has not opened at the pressure specified in Compressor data, it must be replaced by a new one. If the compressor unloads before the specified opening pressure is reached, repeat the procedure as mentioned from step 3.
6. Readjust the unloading pressure as described in sections Adjustment of MDR4S pressure switch and Adjustment of MRD3 pressure switch.
7. Reconnect the hose or pipe to the closed air outlet valve.

Testing on Contractor units

1. Close the air outlet valves, depressurize and disconnect the hoses from the valves.
2. Loosen the red handle of the pilot valve (1) and the two nuts (3).
3. Open outlet valve a fraction. Start the compressor.
4. Gradually turn adjusting screw (2) clockwise while checking pressure gauge. If the pressure relief valve has not opened at the pressure specified in Compressor data, it must be replaced by a new one.
5. Readjust the normal working pressure after testing. Consult section Adjustment of pilot valve.
6. Fit nuts (3) and handle (1) in their original positions.

7 Problem solving

Condition	Fault
Low discharge pressure	Restricted inlet
	Defective compressor valves or valve unloading mechanism
	Leaks in the compressed air distribution system at fittings, connections, etc.
	Unloader pilot valve defective or set wrong
	Pressure switch defective or set wrong
	Drive belt slipping
	Incorrect speed
	Worn piston rings or loose piston
	Leaking head gasket
	Drain valve open
	Defective pressure gauge
	Pressure relief valve leaking
	Clogged intercooler
	Compressor incorrectly sized for the altitude it is operating at
	Piston rings not seated; allow 100 hours at full pressure
Water in the crankcase (lubricant appears milky)	Compressor does not run long enough to get hot and vaporize the liquids squeezed out of the air during compression (compressor may be too large for application)
	Incorrect or inferior grade of lubricant
	System pressure leaking back through discharge valve
Rusty valves and/or cylinders	Compressor operated too infrequently
	Compressor does not run long enough to get hot and vaporize the liquids squeezed out of the air during compression (compressor may be too large for application)
	Compressor not properly prepared for storage
	Discharge line from compressor head is pointed upward allowing condensation to drain back at shutdown
Excessive vibration	Incorrect speed
	Compressor valves not functioning properly
	Loose pulley/sheave
	Compressor, motor or engine not secured tightly, or tightened into a bind
	Foundation or frame inadequate
	Piping inadequately supported or tightened into a bind
	Excessive discharge pressure
	Compressor feet may need to be leveled with shims
Excessive drive belt wear	Pulley/sheave out of alignment
	Belt too loose or too tight
	Belt slipping
	Pulley/sheave wobbling
	Pulley/sheave groove damaged or rough
	Incorrect belts

Condition	Fault
Low oil pressure	Oil sump strainer plugged
	Excessive leakage at crankshaft seals
	Low oil level
	Oil pump incorrectly assembled to the bearing carrier (“o” ring not properly located between oil pump body & bearing carrier)
	Oil pressure adjusting screw not set properly
	Defective oil pressure gauge
Compressor loads and unloads excessively	Air receiver too small
	Compressor valves or unloaders defective
	Excessive system leakage
	Compressor operating at incorrect speed
	Unloader pilot differential set too close
	Pressure switch defective
Defective pressure switch	Moisture and/or oil build-up on the pressure switch diaphragm
	Ruptured diaphragm
	Burned contact points
	Plugged air passage from the receiver to the pressure switch
	Loose electrical connection
Excessive air pressure in air receiver	Air pressure gauge inaccurate
	Leaks in unloader piping system
	Defective compressor head unloader
	Pilot valve or pressure switch set incorrectly or defective
	Pressure switch wired incorrectly
	Tube to compressor head unloader plugged
Excessive intercooler pressure	Intercooler restricted or plugged
	Compressor valves in second stage broken or not functioning properly
	Pilot valve or pressure switch set incorrectly or defective
Intercooler pressure	Compressor valves or head unloaders in first stage not functioning abnormally low properly or defective
	Restricted air inlet filter or suction line
	Pilot valve or pressure switch set incorrectly or defective
	Pressurized air at head unloader not venting properly when demand for air is required
	Compressor valve or head gasket leaking
	Worn piston rings
	Leaking air at intercooler or intercooler connections
Compressor overheats	Clogged intake system
	Defective compressor valves
	Pressure setting too high
	Clogged intercooler, internally or externally
	Inadequate ventilation, or recirculation of hot air
	Pulley/sheave rotation wrong
	Incorrect speed
	Lubrication inadequate
	Compressor incorrectly sized

Condition	Fault
High discharge temperature	Compressor valve assemblies defective
	Discharge pressure too high
	Inadequate ventilation or hot air recirculating
	Cooling surfaces of compressor or intercooler excessively dirty
	Ambient temperature too high
	Scored or excessively worn cylinder walls
Compressor knocks	Head clearance insufficient
	Piston loose in cylinder bore, cylinder bore worn, piston or piston rings worn
	Worn rods or main bearing
	Wrong pressure setting, discharge pressure excessive
	Crankcase lubrication inadequate
	Loose pulley/sheave
Excessive oil consumption	Compressor runs unloaded too long
	Worn piston rings
	Restricted intake system
	Compressor running too hot
	Breather valve not functioning properly
	Oil level in crankcase too high
	Oil viscosity wrong for the application
	Connecting rod out of alignment, bent or twisted
	Leaking oil seal
	Piston rings not seated (allow 100 hours for seating)
	Wrong oil (may be a detergent oil with a tendency to foam)
	Inferior grade of oil
Excessive current draw *(To determine maximum amperage allowed, multiply the FLA on the motor nameplate by the service factor.)* **CAUTION ! Motor surface temperature normally exceeds 170° F.**	Low voltage (must be within 10% of nameplate voltage)
	Loose electrical connection
	Wire size too small
	Incorrect oil
	Discharge pressure too high
	Intercooler plugging
	Bearings tight or seizing
	No crankshaft endplay
	Motor sized incorrectly
	Motor defective
	Drive belts too tight
Failure to start **CAUTION! Overload relays are designed to protect the motor from damage due to motor overload. If the overload relay trips persistently, DO NOT CONTINUE TO PUSH THE RESET BUTTON! Contact your local Quincy distributor for assistance.**	Power not on
	Blown circuit fuse
	Overload relay tripped
	Low voltage
	Faulty start switch
	Power failure
	Pressure switch incorrectly adjusted or faulty
	Loose or broken wire
	Motor defective
	Compressor seized
Motor stalls	Motor overloaded

8 Technical data

8.1 Reference conditions

Inlet pressure (absolute)	psi	14.5

9 Instructions for use

Air receiver (tank-mounted units)

1	**Corrosion must be prevented: depending on the conditions of use, condensate may accumulate inside the tank and must be drained every day.** This may be done manually, by opening the drain valve, or by means of the automatic drain, if fitted to the tank. Nevertheless, a weekly check of correct functioning of the automatic valve is needed. This has to be done by opening the manual drain valve and checking for condensate.
2	Periodical service inspection of the air receiver is needed, as internal corrosion can reduce the steel wall thickness with the consequent risk of bursting. Local rules need to be respected, if applicable. The use of the air receiver is forbidden once the wall thickness reaches the minimum value as indicated in the service manual of the air receiver (part of the documentation delivered with the unit).
3	Lifetime of the air receiver mainly depends on the working environment. Avoid installing the compressor in a dirty and corrosive environment, as this can reduce the vessel lifetime dramatically.
4	Do not anchor the vessel or attached components directly to the ground or fixed structures. Fit the pressure vessel with vibration dampers to avoid possible fatigue failure caused by vibration of the vessel during use.
5	Use the vessel within the pressure and temperature limits stated on the nameplate and the testing report.
6	No alterations must be made to this vessel by welding, drilling or other mechanical methods.

ATLAS COPCO
STANDARD TERMS AND CONDITIONS

LEGAL EFFECT: Except as expressly otherwise agreed to in writing by an authorized representative of Seller, the following terms and conditions shall apply to and form a part of this order and any additional and/or different terms of Buyer's purchase order or other form of acceptance are rejected in advance and shall not become a part of this order.

The rights of Buyer hereunder shall be neither assignable nor transferable except with the written consent of Seller.

This order may not be canceled or altered except with the written consent of Seller and upon terms which will indemnify Seller against all loss occasioned thereby. All additional costs incurred by Seller due to changes in design or specifications, modification of this order or revision of product must be paid for by Buyer.

In addition to the rights and remedies conferred upon Seller by this order, Seller shall have all rights and remedies conferred at law and in equity and shall not be required to proceed with the performance of this order if Buyer is in default in the performance of such order or of any other contract or order with seller.

TERMS OF PAYMENT: Unless otherwise specified in the order acknowledgment, the terms of payment shall be 1% 15, net forty-five (45) days after shipment. These terms shall apply to partial as well as complete shipments. If any proceeding be initiated by or against Buyer under any bankruptcy or insolvency law, or in the judgment of Seller the financial condition of Buyer, at the time the equipment is ready for shipment, does not justify the terms of payment specified, Seller reserves the right to require full payment in cash prior to making shipment. If such payment is not received within fifteen (15) days after notification of readiness for shipment, Seller may cancel the order as to any unshipped item and require payment of its reasonable cancellation charges.

If Buyer delays shipment, payments based on date of shipment shall become due as of the date when ready for shipment. If Buyer delays completion of manufacture, Seller may elect to require payment according to percentage of completion. Equipment held for Buyer shall be at Buyer's risk and storage charges may be applied at the discretion of Seller.

Accounts past due shall bear interest at the highest rate lawful to contract for but if there is no limit set by law, such interest shall be eighteen percent (18%). Buyer shall pay all cost and expenses, including reasonable attorney's fees, incurred in collecting the same, and no claim, except claims within Seller's warranty of material or workmanship, as stated below, will be recognized unless delivered in writing to Seller within thirty (30) days after date of shipment.

TAXES: All prices exclude present and future sales, use, occupation, license, excise, and other taxes in respect of manufacture, sales or delivery, all of which shall be paid by Buyer unless included in the purchase price at the proper rate or a proper exemption certificate is furnished.

ACCEPTANCE: All offers to purchase, quotations and contracts of sales are subject to final acceptance by an authorized representative at Seller's plant.

DELIVERY: Except as otherwise specified in this quotation, delivery will be F. O. B. point of shipment. In the absence of exact shipping instruction, Seller will use its discretion regarding best means of insured shipment. No liability will be accepted by Seller for so doing. All transportation charges are at Buyer's expense. Time of delivery is an estimate only and is based upon the receipt of all information and necessary approvals. The shipping schedule shall not be construed to limit seller in making commitments for materials or in fabricating articles under this order in accordance with Seller's normal and reasonable production schedules.

Seller shall in no event be liable for delays caused by fires, acts of God, strikes, labor difficulties, acts of governmental or military authorities, delays in transportation or procuring materials, or causes of any kind beyond Seller's control. No provision for liquidated damages for any cause shall apply under this order. Buyer shall accept delivery within thirty (30) days after receipt of notification of readiness for shipment. Claims for shortages will be deemed to have been waived if not made in writing with ten (10) days after the receipt of the material in respect of which any such shortage is claimed. Seller is not responsible for loss or damage in transit after having received "In Good Order" receipt from the carrier. All claims for loss or damage in transit should be made to the carrier.

TITLE & LIEN RIGHTS: The equipment shall remain personal property, regardless of how affixed to any realty or structure. Until the price (including any notes given therefore) of the equipment has been fully paid in cash, Seller shall, in the event of Buyer's default, have the right to repossess such equipment.

PATENT INFRINGEMENT: If properly notified and given an opportunity to do so with friendly assistance, Seller will defend Buyer and the ultimate user of the equipment from any actual or alleged infringement of any published United States patent by the equipment or any part thereof furnished pursuant hereto (other than parts of special design, construction, or manufacture specified by and originating with Buyer), and will pay all damages and costs awarded by competent court in any suit thus defended or of which it may have had notice and opportunity to defend as aforesaid.

STANDARD WARRANTY: Seller warrants that products of its own manufacture will be free from defects in workmanship and materials under normal use and service for the period specified in the product instruction manual. Warranty for service parts will be Ninety (90) days from date of factory shipment. Electric Motors, gasoline and diesel engines, electrical apparatus and all other accessories, components and parts not manufactured by Seller are warranted only to the extent of the original manufacturer's warranty.

Notice of the alleged defect must be given to the Seller, in writing with all identifying details including serial number, type of equipment and date of purchase within thirty (30) days of the discovery of the same during the warranty period.

Seller's sole obligation on this warranty shall be, at its option, to repair or replace or refund the purchase price of any product or part thereof which proves to be defective. If requested by Seller, such product or part thereof must be promptly returned to seller, freight prepaid, for inspection.

Seller warrants repaired or replaced parts of its own manufacture against defects in materials and workmanship under normal use and service for ninety (90) days or for the remainder of the warranty on the product being repaired.

This warranty shall not apply and Seller shall not be responsible or liable for:

(a) Consequential, collateral or special losses or damages;

(b) Equipment conditions caused by fair wear and tear, abnormal conditions of use, accident, neglect or misuse of equipment, improper storage or damage resulting during shipping;

(c) Deviation from operating instructions, specifications or other special terms of sale;

(d) Labor charges, loss or damage resulting from improper operation, maintenance or repairs made by person(s) other than Seller or Seller's authorized service station.

In no event shall Seller be liable for any claims whether arising from breach of contract or warranty or claims of negligence or negligent manufacture in excess of the purchase price.

THIS WARRANTY IS THE SOLE WARRANTY OF SELLER AND ANY OTHER WARRANTIES, WHETHER EXPRESS OR IMPLIED IN LAW OR IMPLIED IN FACT, INCLUDING ANY WARRANTIES OF MERCHANTABILITY AND FITNESS FOR PARTICULAR USE ARE HEREBY SPECIFICALLY EXCLUDED.

LIABILITY LIMITATIONS: Under no circumstances shall the Seller have any liability for liquidated damages or for collateral, consequential or special damages or for loss of profits, or for actual losses or for loss of production or progress of construction, whether resulting from delays in delivery or performance, breach of warranty, negligent manufacture or otherwise.

ENVIRONMENTAL AND OSHA REQUIREMENTS: At the time of shipment of the equipment from the factory, Atlas Copco will comply with the various Federal, State and local laws and regulations concerning occupational health and safety and pollution. However, in the installation and operation of the equipment and other matters over which the seller has no control, the Seller assumes no responsibility for compliance with those laws and regulations, whether by the way of indemnity, warranty or otherwise.

June 30, 2003

In order to be First in Mind-First in Choice® for all your quality compressed air needs, Atlas Copco delivers the products and services that help to increase your business' efficiency and profitability.

Atlas Copco's pursuit of innovation never ceases, driven by our need for reliability and efficiency. Always working with you, we are committed to providing you the customized quality air solution that is the driving force behind your business.

Refrigerant air dryers

FD VSD 100-300, FD 5-95 and FX 5-300
(5-300 l/s/11-636 cfm)

Why dry your compressed air?

Compressed air contains oil, solid particles and water vapors. It is the inherent result of the compression process, which concentrates the natural water vapors and particles in the air that surrounds us. This untreated compressed air poses a substantial risk to your air system and end products. Its moisture content alone can cause corrosion in pipe work, premature failure of pneumatic equipment, product spoilage and more. An air dryer is therefore essential to protect your systems and processes.

Refrigerant dryers by Atlas Copco

Atlas Copco's refrigerant dryers provide the clean, dry air you need to expand the life of your equipment and ensure the quality of your products. Our FD and FX dryers are designed in-house and tested using the most stringent methods. They meet or exceed the international standards for compressed air purity and are tested according to ISO 7183:2007.

FX 5-300
Quality Performance

- Available in 16 sizes from 6 to 300 l/s/15 to 636 cfm.
- Pressure dew point as low as +3°C/+37.4°F.
- Electronic no-loss drain with safety function.
- Controller with pressure dew point display.
- Easy installation.
- Minimal maintenance.

FD 5-95
First-Rate Efficiency

- Available in 11 sizes from 6 to 95 l/s/13 to 201 cfm.
- Pressure dew point as low as +3°C/+37.4°F.
- Electronic no loss drain with safety function.
- Controller with pressure dew point display, energy saving option, alarm contacts, …
- Quiet operation.
- Constant purity class -;4 - according ISO 8573-1:2010.

FD VSD 100-300
Unrivalled Energy Savings

- Available in 6 sizes from 100 to 300 l/s/212 to 636 cfm.
- Supreme energy savings: up to 50% on indirect energy costs and up to 70% on direct energy costs.
- Low pressure drop, typically below 0.2 bar/2.9 psi.
- Pressure dew point as low as +3°C/+37.4°F.
- Advanced touchscreen controller: visualization, alarm history, remote control,…
- All-in-one design with very small footprint.
- Delivered ready for use.
- Quiet operation.
- Constant purity class -;4;- according ISO 8573-1:2010.

VSD

Extending your VSD energy savings to your quality air

The introduction of Atlas Copco's VSD (and later VSD+) compressor technology was an industry milestone. By automatically adjusting its motor speed as air demand fluctuates depending on production flow or time, a VSD compressor offers double digit reductions in energy use and in lifecycle costs. With the FD VSD, Atlas Copco is extending this energy-saving principle to your quality air equipment.

FD VSD 100-300:
Unrivalled Energy Savings

1

VSD inverter

Controls the speed of the compressor to match your air demand and ensure the highest possible energy savings.

2

High-efficiency heat exchanger

Counter-flow compact brazed plate or aluminum heat exchanger, with air-to-air side for optimum cooling efficiency and the lowest possible pressure drop.

3

Integrated water separator

Low velocity with high separation efficiency, even in low flow conditions.

4

Electronic no-loss condensate drain

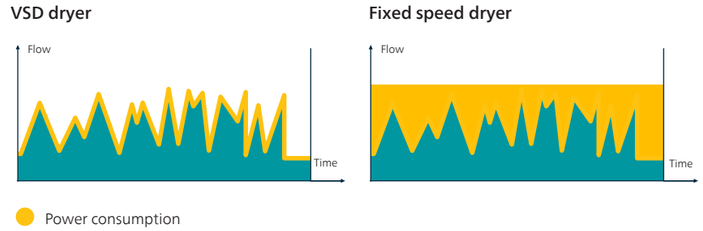
Opens the drain only when needed to eliminate unnecessary loss of compressed air during timed draining.

5

Elektronikon® Touch controller

Provides advanced control and allows for remote monitoring.

6



Single electrical connection

Ensures plug-and-play installation.

VSD for superior energy savings

Atlas Copco's in-house developed VSD technology matches your FD dryer's power consumption to your production's actual air flow. While a traditional refrigerant dryer can only be turned on or off, Atlas Copco's FD VSD mirrors your production's demand for compressed air as it fluctuates during the day, week or year. This ensures supreme energy savings as well as a stable dew point.

Minimal environmental impact

FD VSD dryers use the CFC-free R410A refrigerant, which has an ozone depletion potential (ODP) of zero. The refrigerant meets the strict F-Gas regulations and, due to its low power consumption, has an an outstanding TEWI (Total Equivalent Warming Impact) performance.

Optimum performance and safety in all conditions

- Hot gas bypass valve prevents freezing at lower loads.
- The extremely reliable R410A rotary compressor provides the best performance with minimum environmental impact. Capillary tubes cope with all conditions – no moving parts for extra reliability.
- Condenser with louvered fin technology for improved performance in dusty environments.

Advanced remote monitoring and control

- High-tech Elektronikon® Touch controller with warning indications, dryer shutdown and maintenance scheduling.
- Standard SMARTLINK remote monitoring to maximize air system performance and energy savings.

Robust and compact design

- Forklift opening for smooth transport.
- Easy front and side panel access.
- No bulky thermal mass heat exchanger needed to save on energy.

Filters

If your production requires higher levels of air quality and filtration, UD+ filters can be added on to your FD VSD dryer.

FD 5-95:
First-Rate Efficiency

1

Low-noise compressor with liquid separator

Lasts longer thanks to limited vibrations, minimal moving parts, and reduced risk of leakage.

2

High-efficiency heat exchanger

Counter-flow compact brazed plate or aluminum heat exchanger, with air-to-air side for optimum cooling efficiency and the lowest possible pressure drop.

3

Integrated water separator

Low velocity with high separation efficiency even in low flow conditions.

4

Electronic no-loss condensate drain
