RE: JMC Project 14012
Commercial Campus at Fields Corners
NYS 312 and Pugsley Road
Town of Southeast, NY

OWTS Construction Permit

Dear Mr. Paravati:

On behalf of the applicant, Putnam Seabury Partners, LP, we have enclosed two (2) copies of the following referenced documents for your review and consideration:

1. **JMC Drawings**

Dwg. No.	Title	Rev. No.	/Date
C-010	Overall Existing Conditions Map	7	1/04/2021
C-320	Overall OWTS Map		1/06/2021
C-321	OWTS Plan 'A'		1/06/2021
C-322	OWTS Plan 'A'		1/06/2021
C-323	OWTS 'A' Profile		1/06/2021
C-324	OWTS Plan 'B'		1/06/2021
C-325	OWTS Plan 'C'		1/06/2021
C-326	OWTS Plan 'D'		1/06/2021
C-327	OWTS 'D' Profile		1/06/2021
C-328	OWTS Details		1/06/2021

2. Sanitary Engineering Report dates 01/06/2021

3. Putnam County Department of Health Application for Approval of Plans for a Wastewater Treatment System dated 01/06/2021.

4. Putnam Seabury Partners, LP check number 5368 in the amount of $3,744.00 for the septic system application fee.

5. Putnam County Department of Health Division of Environmental Health Letter of Authorization date 01/06/2021

The applicant is proposing to develop the existing 326.92 acre (Commercial Campus at Fields Corner) vacant site, located in Town of Southeast, Putnam County, New York with two state of the art highly mechanized warehouses totaling 933,100 square feet.

The site is located at the intersection of Route 312 and Pugsley Road. Due to the massive sizes of both the site and the buildings, the site has been broken up into 4 separate treatment areas discussed in the enclosed Engineering Report and depicted on the attached Drawings.

We look forward to your review. If you have any questions or require additional information please contact our office at (914) 273-5225.

Sincerely,

JMC Planning Engineering Landscape Architecture & Land Surveying PLLC

Richard P. Cordone

PUTNAM COUNTY DEPARTMENT OF HEALTH
DIVISION OF ENVIRONMENTAL HEALTH SERVICES

APPLICATION FOR APPROVAL OF PLANS FOR A WASTEWATER TREATMENT SYSTEM

1. Name and address of applicant: Putnam Seabury Partners, LP
   287 King St.
   Chappaqua, NY 10514

2. Name of Project: Commercial Campus at Fields Corners
3. Location: T/V: Town of Southeast
4. Design Professional: JMC Planning Engineering Landscape Architecture & Land Surveying, PLLC
5. Address: 120 Bedford Road, Armonk, NY
6. Drainage Basin: Middle Branch Reservoir
7. Type of Project:

_____ Private/Residential	_____ Food Service	_x_ Commercial
_____ Apartments	_____ Institutional	_____ Mobile Home Park
_____ Office Building	_____ Realty Subdivision	_____ Other (specify) _____

8. Is this project subject to State Environmental Quality Review (SEQR)?..... Yes/No YES
   Type Status (check one)..... Type I _X_ Exempt ____
   Type II ____ Unlisted ____
9. Is a Draft Environmental Impact Statement (DEIS) required?..... Yes/No Yes
10. Has DEIS been completed and found acceptable by Lead Agency?..... Yes/No Yes
11. Name of Lead Agency Planning Board
12. Is this project in an area under the control of local planning, zoning, or other officials, ordinances? ..... Yes/No Yes
13. If so, have plans been submitted to such authorities? ..... Yes/No Yes
14. Has preliminary approval been granted by such authorities? No Date granted: _____
15. Type of sewage treatment system discharge ..... _____ surface water _x_ groundwater
16. If surface water discharge, what is the stream class designation? ..... N/A
17. Waters index number (surface) ..... N/A
18. Is project located near a public water supply system? ..... Yes/No No
19. If yes, name of water supply _____ Distance to water supply _____
20. Is project site near a public sewage collection or treatment system? ..... Yes/No No
21. Name of sewage system _____ Distance to sewage system _____
22. Date test holes observed Winter 2018 23. Name of Health Inspector Eugene Reed, and Mike Budzinski
24. Project design flow (gallons per day) ..... 12,480 GPD
25. Is State Pollutant Discharge Elimination system (SPDES) Permit required? ... Yes/No Yes
26. Has SPDES Application been submitted to local DEC office? ..... Yes/No No

27. Is any portion of this project located within a designated Town or State wetland?... Yes/No Yes

28. Wetlands ID number LC-18

29. Is Wetlands Permit required? .... Yes/No Yes

Has application been made to Town or Local DEC .... Yes/No Yes

30. Does project require a DEC Stream Disturbance Permit? .... Yes/No No

31. Is or was project site used for agricultural activity involving application of pesticides to orchards or other crops, solid or hazardous waste disposal, landfilling, sludge application or industrial activity? .... Yes/No Yes

32. Is project located within 1,000 feet of existing or abandoned landfill, hazardous waste site, salt stockpile, landfill, sludge disposal site or any other potentially known source of contamination? .... Yes/No No

DESCRIBE: ______

33. Is there a local master plan on file with the Town or Village? .... Yes/No Yes

34. Are community water and/or sewer facilities planned to be developed within 15 years in or adjacent to project site? .... Yes/No No

35. Are any sewage treatment areas in excess of 15% slope? .... Yes/No No

36. Tax Map ID Number See attached .... Map ______ Block ______ Lot ______

37. Approved plans are to be returned to .... ______ Applicant X Design Professional

NOTE: All applications for review and approval of a new SSTS to be located within the NYC Watershed shall be sent to the Department, and need not be sent in duplicate to the DEP, although the project may require DEP approval of the SSTS prior to final approval by the Department. Projects within the watershed may also require DEP review and approval of other aspects of a project, such as stormwater plans or the creation of impervious surfaces, and the project applicant should obtain the appropriate forms for such activities from DEP and submit those forms to DEP for review and approval.

If the application is signed by a person other than the applicant shown in Item 1, the application must be accompanied by a Letter of Authorization (Form LA-97). Failure to comply with this provision may be grounds for the rejection of any submission.

I hereby affirm, under penalty of perjury, that information provided on this form is true to the best of my knowledge and belief. False statements made herein are punishable as a Class A misdemeanor pursuant to Section 210.45 of the Penal Law.

I. INTRODUCTION

This Engineering Report has been prepared for the 326.92 acre Commercial Campus at Fields Corner site, located in the Town of Southeast, Putnam County, New York (hereinafter referred to as the "Site"). The site is bordered by woods to the north, farmland to the south, Interstate 84 to the east, and woods and residential developments to the west. The development has been designed in accordance with the following:

- Requirements of the Putnam County Department of Health
- NYS Department of Environmental Conservation Design Standards for Intermediate Sized Wastewater Systems dated March 5, 2014
- New York City Environmental Protection (NYCEP, formerly NYCDEP) Rules and Regulations for the Protection from Contamination, Degradation and Pollution of the New York City Water Supply and its Sources, amended November 29, 2019.

Development of this site will consist of the construction two warehouse buildings with associated parking areas. Under existing conditions, a majority of the site was once used for agriculture but is now brush and some meadow and the remaining area is wooded. Stormwater runoff from this property drains into the Middle Branch Reservoir, which is in the New York City Watershed.

II. WASTEWATER TREATMENT SYSTEMS

The wastewater treatment systems are designed to serve two proposed warehouse buildings that will be broken up into a number of different tenant spaces. The total square footage of both warehouses is 933,100 square feet. The anticipated number of employees is based on the ratio of employees to square feet of floor area on the maximum shift published by Energystar.gov for typical warehouse space. New construction highly mechanized warehouse spaces typically have lower employee densities. Accordingly, the flow rates as ascertained from the "New York State Design Standards for Intermediate Sized Treatment Systems," dated March 5, 2014, are as follows:

Building A: 375 Employees @ 15 GPD = 5,625 GPD with 20% reduction = 4,500 GPD
Building B: 665 Employees @ 15 GPD = 9,975 GPD with 20% reduction = 7,980 GPD

Due to the expansive length of the Building B, the wastewater generated will be broken into two equally sized systems with individual primary and expansion areas. Building B will require two systems sized at 3,990 GPD each for a total of 7,980 GPD and Building A will require a system sized at 4,500 GPD. Each system will have a 100% expansion area designed.

Since the Average Daily Design flow is between the ranges of 1,000 to 10,000 gpd, the facility will require coverage under NYSDEC SPDES General Permit GP-0-05-001. The applicant will file for coverage under this permit once a Construction Permit is issued by the PCDOH for the wastewater treatment systems.

Warehouse A

Warehouse A has an anticipated design flow of 4,500 GPD. Minimum Septic tank sizing calculations for Flows (Q) under 5,000 GPD (based upon NYSDEC Design Standards for Wastewater Treatment Works -2014) is 1.5 (Q). The required septic tank size is 6,750 gallons. We are proposing two 3,500 gallon precast septic tanks in series which will provide a working capacity of 7,000 gallons.

The effluent will flow from the two septic tanks into a precast pump station with accompanying valve pit. The pump station will be provided with duplex effluent pumps which will pump the effluent to a five way "Cue Box" flout system that alternately doses to five 10 outlet distribution boxes with one outlet plugged; essentially a nine outlet box. Each lateral is 100 feet long making each distribution field 900 linear feet long, less than the maximum distribution field of 1,000 linear feet. Based upon field testing conducted by SESI Consulting Engineers and witnessed by the Putnam County Department of Health and New York City Department of Environmental Protection, a percolation rate of 40 min./inch was determined resulting in an application rate of 0.5 gallons per day per square foot. Accordingly, the minimum contact area is calculated as follows:

Minimum Contact Area = Design Flow (GPD) / Application Rate (GPD / SF)
= 4,500 GPD / 0.5 GPD / SF
= 9,000 SF (Required)

Since each linear foot of septic fields provides two square feet of contact area, 4,500 linear feet of 24" wide absorption trench is provided to a primary area and a 100% expansion area.

The length of the proposed absorption trenches total 4,500 linear feet. The system will be separated into five equal sections, and automatic alternating dosing will be used to each section. Each section will have 900 linear feet of absorption fields.

The required dosage is calculated as follows:

900 L.F. at 0.5 gallon per L.F. = 450 gallons dose per section.

Automatic alternating doses will be provided by the proposed five outlet Cue Box flout system by Rissy Plastics, which will provide 450 gallon doses that alternate between each field.

Pump Station Design for Warehouse A

After the septic tanks, to direct the effluent to either the primary or expansion septic field, a pump is required. At an average daily flow of 4,500 gallons per day, with 24 hours of occupancy, the flow entering the pump chamber is 187.5 gallons per hour or 3.125 gallons per minute. To minimize septicity, fill time should not exceed 30 minutes. Accordingly, a dose of 93.75 gallons should be provided.

For the Primary field the head calculations are as follows:
Pump Sizing and design calculations are as follows:

- Elevation of pumping crest (Invert at distribution box) = 642.00
- Pump "Off" elevation in pumping station = 635.90
- Static Head = 6.10 ft.
- Head Loss in 784 linear feet of 2" force main

(Friction loss at C-150 @ 25 GPM [1.2/100]) = 9.41 ft.

- Loss in pump station and valve pit (allow) = 0.50 ft.
- Friction Head = 9.91 ft.

Total Dynamic Head (TDH) = Static Head + Friction Head

TDH = 6.10 ft. + 9.91 ft.

TDH = 16.01 ft.

Total Dynamic Head Loss say 16 feet

Accordingly, at the time of initial construction, Myers Model MEOSP50M1-20 pumps will be installed for use as a pumps for the primary septic area. Since the primary septic area and expansion areas are located in different corners of the property, a new force main and pumps will need to be installed should it ever be required. Myers Model MESPD50MH1-20 pumps will need to be retrofitted should the use of the expansion area septic system ever be required.

For the expansion field, the head calculations are as follows:

Pump Sizing and design calculations are as follows:

- Elevation of pumping crest (Invert at distribution box) = 634.50
- Pump "Off" elevation in pumping station = 635.90
- Static Head = -1.4 ft.
- Head Loss in 3,520 linear feet of 2" Force Main

(Friction loss at C-150 @ 25 GPM [1.2/100]) = 36.4 ft.

- Loss in pump station and valve pit (allow) = 0.50 ft.
- Friction Head = 36.9 ft.

Total Dynamic Head (TDH) = Static Head + Friction Head

TDH = -1.4 ft. + 36.9

TDH = 35.5 ft.

Total Dynamic Head Loss say 36 feet

Each pump will yield a flow of 25 gallons per minute at 16 feet of total dynamic head. The pump will maintain a flow velocity of 2.4 feet per second through a two inch PVC pressure pipe force main which is greater than the minimum 2.00 feet per second self cleaning velocity.

In the event of failure to the duplex pump station, a telemetry system shall transmit an emergency signal to an audible alarm. The alarm will sound for high water power failure and pump failure. The alarm will be mounted to the south side of the building. For the pump and alarm specifications, refer to Appendix B, respectively.

Since a portion of the force main for the expansion area is under the proposed pavement, this portion shall be installed at the time of the initial construction to eliminate disruption in the future.

Warehouse B

Warehouse B has an anticipated design flow of 7,980 GPD. Due to the sheer expanse of the building the flows from each side are split equally, so that half the flow is directed to two equally sized systems, one to the north of the building and one to the south. Each system is looked at individually with its own septic tanks and distribution systems for 3,990 GPD each.

Minimum Septic tank sizing calculations for Flows (Q) under 5,000 GPD (based upon NYSDEC Design Standards for Wastewater Treatment Works -1988) is 1.5 (Q). The required septic tank size is 5,985 gallons, for each system. We are hereby proposing two 6,000 gallon precast septic tanks; one for each system.

For the northern septic system, after the septic tanks the effluent will flow by gravity to a 4 way "Cue Box" flout system that alternatively doses to four 10 outlet distribution boxes. Each lateral is 100' long making each distribution field 1,000 linear feet long, the maximum allowable distribution field of 1,000 linear feet. Based upon field testing conducted by SESI Consulting Engineers and witnessed by the Putnam County Department of Health and New York City Department of Environmental Protection, a percolation rate of 40 min./inch was determined

resulting in an application rate of 0.5 gallons per day per square foot. Accordingly, the minimum contact area can be calculated as follows:

Minimum Contact Area = Design Flow (GPD) / Application Rate (GPD / SF)
= 3,990 GPD / 0.5 GPD / SF
= 7,890 SF (Required)

Since each linear foot of septic fields provides two square feet of contact area, 3,990 linear feet of 24" wide absorption trench is provided to a primary area and a 100% expansion area.

The length of the proposed absorption trenches total 4,000 linear feet. The system will be separated into four equal sections, and automatic alternating dosing will be used to each section. Each section will have 100 linear feet of absorption fields.

The required dosage is calculated as follows:

1,000 L.F. at 0.5 gallon per L.F. = 500 gallons dose per section.

Automatic alternating doses will be provided by the proposed four outlet Cue Box flout system by Rissy Plastics, which will provide a 500 gallon doses that alternates between each field.

For the southern septic system, after the septic tanks the effluent will flow by gravity to a four way "Cue Box" flout system that alternatively doses to four 10-outlet distribution boxes. Each lateral is 100 feet long making each distribution field 1,000 linear feet long; the maximum allowable distribution field of 1,000 linear feet. Based upon field testing conducted by SESI Consulting Engineers and witnessed by the Putnam County Department of Health and New York City Department of Environmental Protection, a percolation rate of 30 min./inch was determined resulting in an application rate of 0.6 gallons per day per square foot. Accordingly, the minimum contact area is calculated as follows:

Minimum Contact Area = Design Flow (GPD) / Application Rate (GPD / SF)
= 3,990 GPD / 0.6 GPD / SF
= 6,650 SF (Required)

Since each linear foot of septic fields provides two square feet of contact area, 3,325 linear feet of 24" wide absorption trench is provided to a primary area and an 100% expansion area.

The length of the proposed absorption trenches total 3,348 linear feet. The system will be separated into four equal sections, and automatic alternating dosing will be used to each section. Each section will have 93 linear feet of absorption fields.

The required dosage is calculated as follows:

837 L.F. at 0.5 gallon per L.F. = 418.5 gallons dose per section.

Though groundwater was generally not encountered in the septic areas, some mottling was encountered. To maximize the separation between ground water and the bottom of the treatment systems seven foot deep curtain drains will be installed.

III. CONCLUSION

This Engineering report has been prepared to describe the project's proposed methods for handling sanitary discharge. This design has considered the requirements and guidelines of the following:

- New York State Department of Environmental Conservation (NYSDEC) Design Standards for Intermediate Sized Wastewater Treatment Systems last revised March 5, 2014.
- New York City Environmental Protection (NYCEP, formerly NYCDEP) Rules and Regulations for the Protection from Contamination, Degradation and Pollution of the New York City Water Supply and its Sources, amended November 29, 2019.
- Recommended Standards for Wastewater Facilities (10 States Standards) 2014 Edition.

Based on the foregoing, it is our professional opinion that the proposed improvements will provide wastewater treatment which exceeds the above-mentioned requirements and are not anticipated to have any adverse impacts to the site or any surrounding areas.

MYERS® MEOSP50
SUBMERSIBLE EFFLUENT PUMP

WWW.FEMYERS.COM

MEOSP50
Submersible Effluent Pump

Applications

- Septic Tank Effluent
- Flood Control Units
- Industrial Circulators
- Elevator Pits
- Basement Sumps

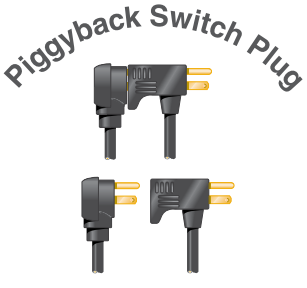
The Myers MEOSP50 submersible pump is specifically designed to meet the demands of residential sump, elevator pit, septic tank effluent, industrial circulator and transfer tank applications.

The 1-1/2 inch NPT discharge pump is available with a powerful 1/2 horsepower motor, in both automatic and manual configurations, and can handle capacities up to 60 gallons per minute and heads to 25 feet.

The MEOSP50 features a heavy-duty cast iron construction that provides durability in rugged applications, as well as assisting in dissipating heat from the motor, for cooler operation. The pump's impeller, which is threaded to a stainless steel shaft, provides long life even in demanding applications, and is capable of handling up to 5/8 inch spherical solids and lint.

The MEOSP50's oil-filled motor provides superior cooling characteristics, allowing the motor to run cool and quiet for years. This oil-filled design also provides permanent lubrication of the shaft bearings, minimizing maintenance and extending the service life of the pump. In addition, to protect against overheating, the motor windings contain an automatic reset thermal overload.

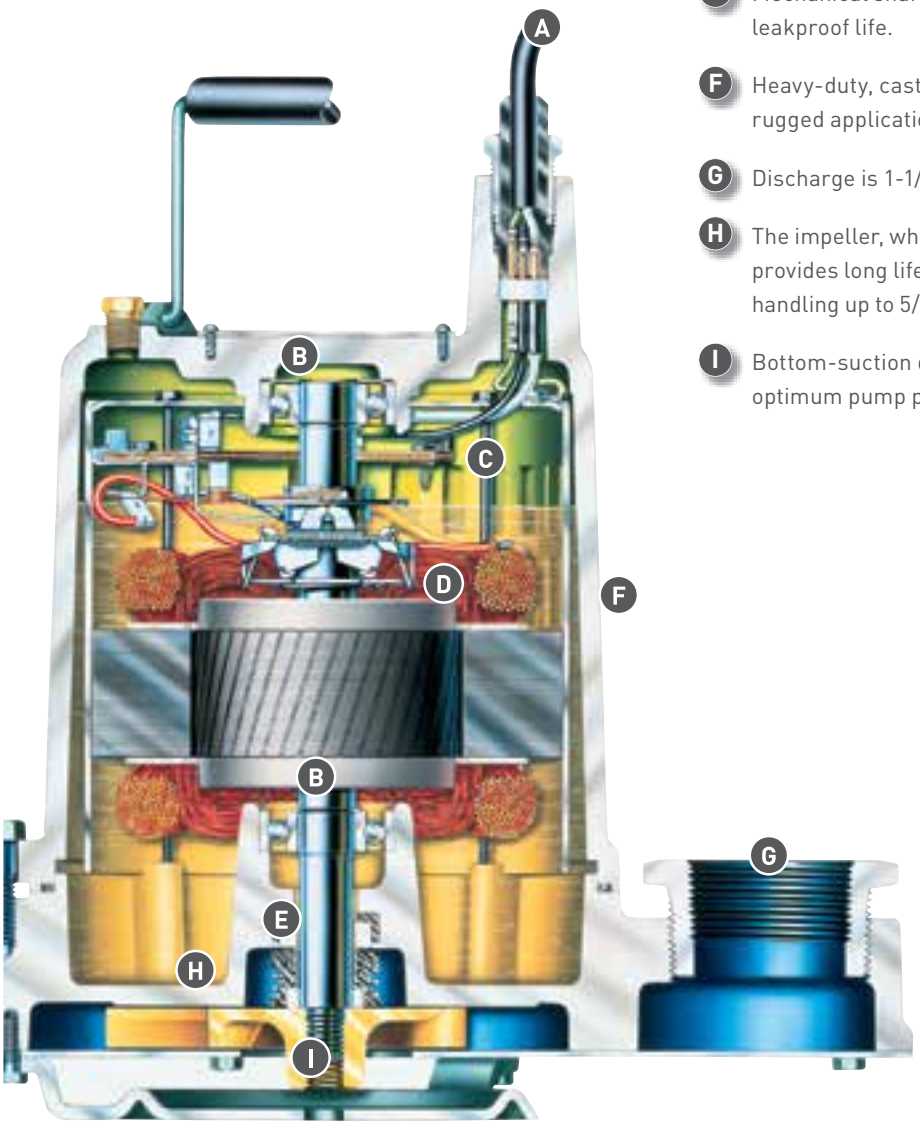
Automatic models feature the exclusive Myers diaphragm pressure switch, which provides proven reliability in installations where a float might hang up. It also incorporates a unique "piggyback" plug arrangement, which allows for simple conversion to manual operation by simply removing the switch plug and inserting the motor plug directly into the electrical outlet. This feature provides an easy way of periodically cycling the pump to ensure it is operating properly.



MEOSP50

The MEOSP50 is a completely submersible pump for use in basement sump, elevator pit, septic tank effluent, industrial circulator, and transfer tank applications.

Automatic models feature the exclusive Myers diaphragm pressure switch with "piggyback" plug-in arrangement, which provides proven reliability in installations where a float might hang up. Switch is easily serviced and may be easily disconnected to operate pump manually.



- **A** Water-resistant power cord with molded plug is available in 10 or 20 foot lengths, and is easily field serviceable.
- **B** Upper and lower ball bearings support motor shaft, minimizing the effects of impeller thrust loads. This design results in minimum friction and perfect alignment of rotor, for longer service from pump.
- **C** Oil-filled motor provides superior cooling and permanent lubrication of bearings, minimizing maintenance and extending service life.
- **D** Powerful 1/2 HP motor runs cool and quiet for long life. Motor windings contain automatic-reset, thermal overload protection.
- **E** Mechanical shaft seal is carbon- and ceramic-faced for long, leakproof life.
- **F** Heavy-duty, cast iron construction provides long life in rugged applications.
- **G** Discharge is 1-1/2 inch NPT.
- **H** The impeller, which is threaded to a stainless steel shaft, provides long life in corrosive applications, and is capable of handling up to 5/8 inch spherical solids and lint.
- **I** Bottom-suction design alleviates buildup of debris, providing optimum pump performance and reduced maintenance.

MESPD100 Shown

MYERS® MESPD50/MESPD100 SUBMERSIBLE EFFLUENT PUMP

Septic Tank Effluent • High-Capacity Sump • High-Head Dewatering

WWW.FEMYERS.COM

MESPD50/100
Submersible Effluent Pump

MESPD100

The Myers MESPD50/100H can handle capacities up to 110 gallons per minute and heads to 50 feet, while the MESPD100 handles capacities up to 140 gallons per minute and heads to 63 feet.

These pumps feature a high-quality cast iron pump volute, motor housing and seal housing construction that help to ensure a long service life. The pump's non-clogging, two-vane, cast iron impeller, which is threaded to a stainless steel shaft, is capable of handling up to 3/4 inch spherical solids – providing long life in demanding applications. A seal-failure sensor probe (for connection to a seal failure alarm) is standard on three-phase units and available as an option on single-phase models. Two carbon- and ceramic-faced mechanical shaft seals are mounted in tandem to provide double protection against water entry for a long, leakproof life.

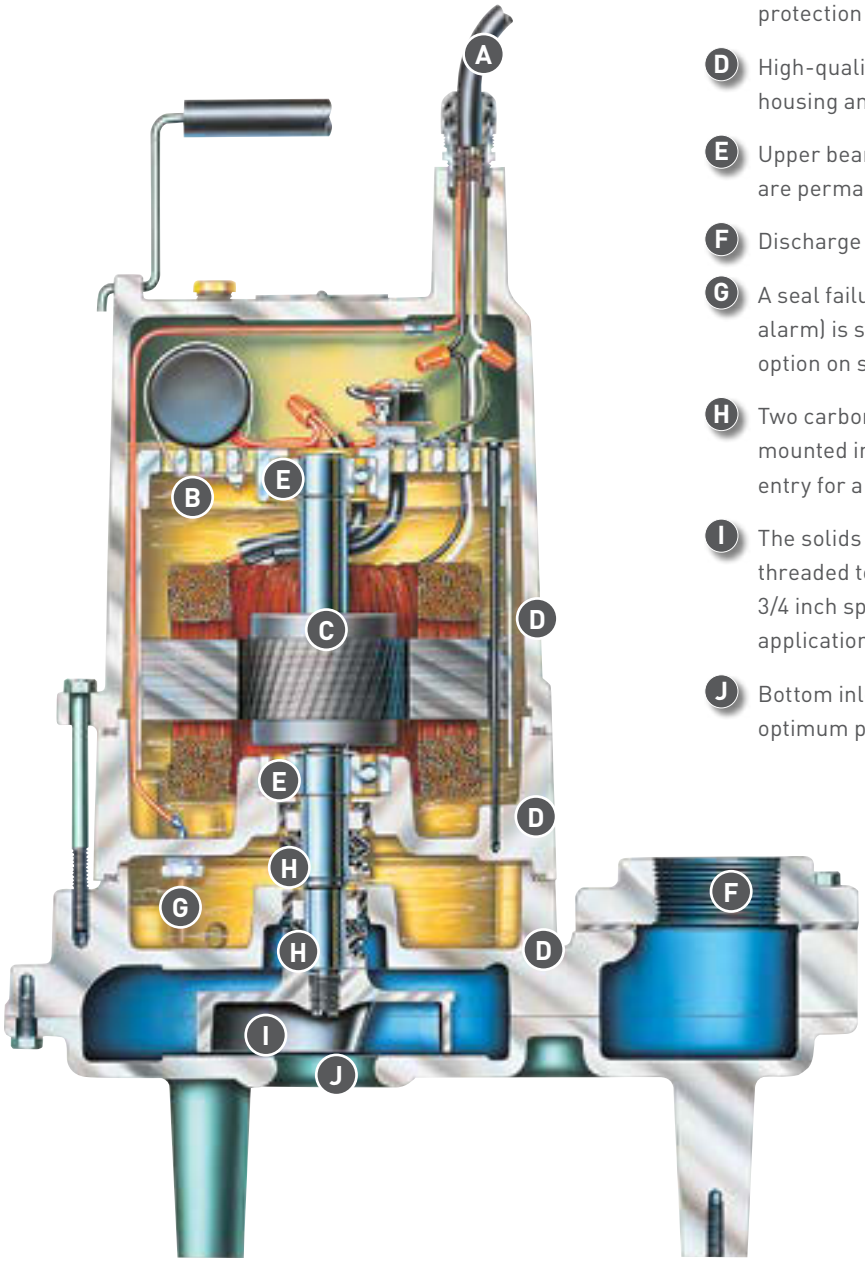
The MESPD50/100H's oil-filled motor provides superior cooling characteristics, allowing the motor to run cool and quiet for years. This oil-filled design also provides permanent lubrication of the shaft bearings, minimizing maintenance and extending the service life of the pump. In addition, to protect against overheating, the motor windings contain an automatic reset thermal overload protection (1ø).

Automatic models (1/2 HP) feature the exclusive Myers diaphragm pressure switch, which provides proven reliability in installations where a float might hang up. It also incorporates a unique piggyback plug arrangement, which allows for simple conversion to manual operation by simply removing the switch plug and inserting the motor plug directly into the electrical outlet.

MESPD50

The MESPD50/100H are completely submersible, "high-head", dual-seal pumps for use in septic tank effluent applications.

MESPD50/100



- **A** Water-resistant power cord has a compression-fit connection and an epoxy potting for double protection against water entry. Lengths of 10 and 20 feet are available with molded plugs, depending on model variations.
- **B** Oil-filled motor provides superior cooling and permanent lubrication of bearings, minimizing maintenance and extending service life.
- **C** 1/2 or 1 HP capacitor-start motors provide maximum starting torque. Motor windings contain automatic thermal overload protection (1ø).
- **D** High-quality cast iron construction of pump volute, motor housing and seal housing provides long life.
- **E** Upper bearings are heavy-duty, single-row ball bearings that are permanently lubricated for service-free life.
- **F** Discharge is standard 2 inch NPT (3 inch is optional).
- **G** A seal failure sensor probe (for connection to a seal failure alarm) is standard on three-phase units and available as an option on single-phase models.
- **H** Two carbon- and ceramic-faced mechanical shaft seals are mounted in tandem to provide double protection against water entry for a long, leakproof life.
- **I** The solids handling, two-vane, cast iron impeller, which is threaded to a stainless steel shaft, efficiently handles up to 3/4 inch spherical solids – providing long life in demanding applications.
- **J** Bottom inlet has no screen to become clogged, providing optimum pump performance and minimal maintenance.

SJE PUMPMASTER® WPS Float Switch

Mechanically-activated, wide-angle switch designed for direct control of pumps up to 1/2 HP at 120 VAC and 1 HP at 230 VAC or control applications as low as 120 VAC, 100 mA.

This mechanically-activated, wide-angle float switch provides automatic control in:

- potable water applications
- water applications

It can be wired to work in either pump down (normally open) or pump up (normally closed) applications.

The SJE PumpMaster® WPS float switch is not sensitive to rotation or turbulence allowing it to be used in both calm and turbulent applications.

FEATURES

- Can be wired to work in either pump down (normally open) or pump up (normally closed) applications (Single Pole, Double Throw).
- Heavy-duty contacts.
- Controls pumps up to 1/2 HP at 120 VAC and 1 HP at 230 VAC or control applications as low as 120 VAC, 100 mA
- For direct wiring applications.
- Adjustable pumping range of 7 to 36 inches (18 to 91 cm).
- Includes external cable weight and boxed packaging.
- CSA Certified to meet NSF/ANSI 61 standard for use in potable water. Approved for use in tanks of 250 US gallons (950L) in volume or greater per float.
- Five-year limited warranty.

C US Drinking Water NSF/ANSI 61 LR54245 SSPMA MEMBER Member of Hydraulic Institute

SPECIFICATIONS

CABLE: flexible 16 gauge, 3 conductor (UL, CSA) SJOW, water-resistant (CPE)

FLOAT: 3.05 inch diameter x 3.56 inch long (7.75 x 9.04 cm) high impact, corrosion resistant, PVC housing for use in potable water and water up to 140°F (60°C)

ELECTRICAL:
120/230 VAC 50/60 Hz
13 FLA, 85 LRA

NOTE: This switch must be used with pumps that provide integral thermal overload protection.

Minimum Electrical Load:
120 VAC, 100 mA

NOTE: This switch is not intended to control non-arcing loads.

PUTNAM COUNTY HEALTH DEPARTMENT NOTES:

1. SSTS AREA TO BE FIELD STAKED AND CORDONED OFF TO PREVENT THE OPERATIONS OF TRUCKS AND/OR MACHINERY OR STORAGE OF HEAVY EQUIPMENT, OR EXCAVATED EARTH IN THIS AREA.
2. SSTS SYSTEM TO BE INSPECTED BY THE DESIGN PROFESSIONAL AND PUTNAM COUNTY HEALTH DEPARTMENT AFTER INSTALLATION AND PRIOR TO BACKFILL.
3. PUTNAM COUNTY HEALTH DEPARTMENT APPROVAL IS BASED ON THE LOCATION OF THE SEWAGE SYSTEM WELL, BUILDINGS, SETBACKS, ROADS AND DRIVEWAYS, AS WELL AS, BUILDING SIZE AND USE AS SHOWN ON THE APPROVED DRAWINGS. ANY MODIFICATIONS OR REVISIONS ARE TO HAVE PRIOR PUTNAM COUNTY HEALTH DEPARTMENT APPROVAL.
4. UNAUTHORIZED MODIFICATIONS MADE TO THE DRAWINGS AFTER THE DATE OF THE PUTNAM COUNTY DEPARTMENT OF HEALTH APPROVAL VOIDS SAID APPROVAL.
5. PUTNAM COUNTY DEPARTMENT OF HEALTH APPROVAL IS BASED ON A MAXIMUM FLOW OF 4,500 GPD FOR BUILDING A AND 7,980 GPD FOR BUILDING B. AN INCREASE IN THE FLOW WILL REQUIRE PRIOR APPROVAL FROM THE DEPARTMENT.
6. WATER METERS SHALL BE INSTALLED AT EACH BUILDING AND DAILY READINGS FURNISHED TO THE PUTNAM COUNTY HEALTH DEPARTMENT EACH MONTH.
7. THE SSTS IS TO RECEIVE SANITARY WASTES ONLY. THE DISCHARGE OF INDUSTRIAL WASTES, CONTAMINATED COOLING WATER, OR OTHER DELIRIOUS SUBSTANCES INTO OR ONTO THE SURFACE OF THE GROUND IS PROHIBITED. THE PUTNAM COUNTY HEALTH DEPARTMENT RESERVES THE RIGHT OF INSPECTION OF THE PREMISED TO INSURE COMPLIANCE WITH THESE REQUIREMENTS.
8. PUTNAM COUNTY HEALTH DEPARTMENT SHALL BE PROMPTLY NOTIFIED IN THE EVENT THAT ANY WASTE OTHER THAN STRICTLY DOMESTIC SANITARY WASTES ARE PRODUCED AT THIS FACILITY.
9. OCCUPANCY OF THE BUILDINGS WILL NOT BE PERMITTED UNTIL THE CONSTRUCTION COMPLIANCE APPLICATION HAS BEEN RECEIVED AND APPROVED BY THE PUTNAM COUNTY HEALTH DEPARTMENT AND FORWARDED TO THE BUILDING INSPECTOR OF THE RESPECTIVE MUNICIPALITY AS PART OF THE CERTIFICATE OF OCCUPANCY APPLICATION.
10. AFTER BACKFILLING THE SYSTEM, THE SSTS AREA SHALL BE COVERED WITH A MINIMUM OF 6 INCHES OF TOP SOIL SEEDED AND MULCHED.
11. REMOVE ALL TREES WITHIN 10 FEET OF THE ABSORPTION SYSTEM.
12. ALL EXISTING AND/OR PROPOSED SUBSURFACE SEWAGE TREATMENT SYSTEMS AND WELLS ON NEIGHBORING PROPERTIES WITHIN 200 FEET OF THE PROPOSED SSTS AND WELL ARE SHOWN ON THE PLANS.
13. CUT OR FILL IS NOT PERMITTED IN THE SEWAGE TREATMENT AREAS, EXCEPT AS SPECIFIED ON THE PLANS.
14. ALL STONE WALLS IN AND WITHIN 10 FEET OF THE SSTS AREA SHALL BE REMOVED TO THEIR ENTIRE DEPTH AND THE RESULTING VOID REPLACED WITH SIMILIAR ON SITE SOIL.
15. IF ANY PRECAST CONCRETE TANK IS DELIVERED TO THE SITE IN SECTION, IT SHALL BE DEMONSTRATED TO THE DEPARTMENT AND/OR CERTIFYING DESIGN PROFESSIONAL THAT THE TANK IS SEALED, WATERTIGHT AND ACCEPTABLE FOR USE. THIS SHALL REQUIRE AS A MINIMUM, THE FILLING OF THE TANK WITH WATER AND OBSERVING THE WATER LEVEL AFTER A 24–HOUR PERIOD TO DEMONSTRATE IF IT IS IN FACT SEALED, WATERTIGHT AND ACCEPTABLE FOR USE.
16. ALL EROSION CONTROL MEASURES FOR THE BUILDINGS, WELLS AND SSTS'S ARE TO BE INSTALLED PRIOR TO ANY CONSTRUCTION.
17. THE CONDITIONS NOTED ON THE PUTNAM COUNTY DEPARTMENT OF HEALTH LETTER OF APPROVAL ARE AN INTEGRAL PART OF THIS APPROVAL AND COMPLIANCE IS REQUIRED.
18. THIS PLAN IS APPROVED FOR SEWAGE TREATMENT AND/OR WATER SUPPLY ONLY, AND ALL OTHER PERMITS AND/OR APPROVALS ARE THE RESPONSIBILITY OF THE PERMITEE.
19. THE PUTNAM COUNTY HEALTH DEPARTMENT APPROVAL EXPIRES TWO (2) YEARS FROM THE DATE OF THE APPROVAL STAMP AND IS REQUIRED TO BE RENEWED ON OR BEFORE THE EXPIRATION DATE. THE APPROVAL IS REVOCABLE FOR CAUSE OR MAY BE AMENDED OR MODIFIED WHEN CONSIDERED NECESSARY BY THE DEPARTMENT.

PUTNAM COUNTY HEALTH DEPARTMENT NOTES:

1. SSTS AREA TO BE FIELD STAKED AND CORDONED OFF TO PREVENT THE OPERATIONS OF TRUCKS AND/OR MACHINERY OR STORAGE OF HEAVY EQUIPMENT, OR EXCAVATED EARTH IN THIS AREA.
2. SSTS SYSTEM TO BE INSPECTED BY THE DESIGN PROFESSIONAL AND PUTNAM COUNTY HEALTH DEPARTMENT AFTER INSTALLATION AND PRIOR TO BACKFILL.
3. PUTNAM COUNTY HEALTH DEPARTMENT APPROVAL IS BASED ON THE LOCATION OF THE SEWAGE SYSTEM WELL, BUILDINGS, SETBACKS, ROADS AND DRIVEWAYS, AS WELL AS, BUILDING SIZE AND USE AS SHOWN ON THE APPROVED DRAWINGS. ANY MODIFICATIONS OR REVISIONS ARE TO HAVE PRIOR PUTNAM COUNTY HEALTH DEPARTMENT APPROVAL.
4. UNAUTHORIZED MODIFICATIONS MADE TO THE DRAWINGS AFTER THE DATE OF THE PUTNAM COUNTY DEPARTMENT OF HEALTH APPROVAL VOIDS SAID APPROVAL.
5. PUTNAM COUNTY DEPARTMENT OF HEALTH APPROVAL IS BASED ON A MAXIMUM FLOW OF 4,500 GPD FOR BUILDING A AND 7,980 GPD FOR BUILDING B. AN INCREASE IN THE FLOW WILL REQUIRE PRIOR APPROVAL FROM THE DEPARTMENT.
6. WATER METERS SHALL BE INSTALLED AT EACH BUILDING AND DAILY READINGS FURNISHED TO THE PUTNAM COUNTY HEALTH DEPARTMENT EACH MONTH.
7. THE SSTS IS TO RECEIVE SANITARY WASTES ONLY. THE DISCHARGE OF INDUSTRIAL WASTES, CONTAMINATED COOLING WATER, OR OTHER DELIRIOUS SUBSTANCES INTO OR ONTO THE SURFACE OF THE GROUND IS PROHIBITED. THE PUTNAM COUNTY HEALTH DEPARTMENT RESERVES THE RIGHT OF INSPECTION OF THE PREMISED TO INSURE COMPLIANCE WITH THESE REQUIREMENTS.
8. PUTNAM COUNTY HEALTH DEPARTMENT SHALL BE PROMPTLY NOTIFIED IN THE EVENT THAT ANY WASTE OTHER THAN STRICTLY DOMESTIC SANITARY WASTES ARE PRODUCED AT THIS FACILITY.
9. OCCUPANCY OF THE BUILDINGS WILL NOT BE PERMITTED UNTIL THE CONSTRUCTION COMPLIANCE APPLICATION HAS BEEN RECEIVED AND APPROVED BY THE PUTNAM COUNTY HEALTH DEPARTMENT AND FORWARDED TO THE BUILDING INSPECTOR OF THE RESPECTIVE MUNICIPALITY AS PART OF THE CERTIFICATE OF OCCUPANCY APPLICATION.
10. AFTER BACKFILLING THE SYSTEM, THE SSTS AREA SHALL BE COVERED WITH A MINIMUM OF 6 INCHES OF TOP SOIL SEEDED AND MULCHED.
11. REMOVE ALL TREES WITHIN 10 FEET OF THE ABSORPTION SYSTEM.
12. ALL EXISTING AND/OR PROPOSED SUBSURFACE SEWAGE TREATMENT SYSTEMS AND WELLS ON NEIGHBORING PROPERTIES WITHIN 200 FEET OF THE PROPOSED SSTS AND WELL ARE SHOWN ON THE PLANS.
13. CUT OR FILL IS NOT PERMITTED IN THE SEWAGE TREATMENT AREAS, EXCEPT AS SPECIFIED ON THE PLANS.
14. ALL STONE WALLS IN AND WITHIN 10 FEET OF THE SSTS AREA SHALL BE REMOVED TO THEIR ENTIRE DEPTH AND THE RESULTING VOID REPLACED WITH SIMILIAR ON SITE SOIL.
15. IF ANY PRECAST CONCRETE TANK IS DELIVERED TO THE SITE IN SECTION, IT SHALL BE DEMONSTRATED TO THE DEPARTMENT AND/OR CERTIFYING DESIGN PROFESSIONAL THAT THE TANK IS SEALED, WATERTIGHT AND ACCEPTABLE FOR USE. THIS SHALL REQUIRE AS A MINIMUM, THE FILLING OF THE TANK WITH WATER AND OBSERVING THE WATER LEVEL AFTER A 24-HOUR PERIOD TO DEMONSTRATE IF IT IS IN FACT SEALED, WATERTIGHT AND ACCEPTABLE FOR USE.
16. ALL EROSION CONTROL MEASURES FOR THE BUILDINGS, WELLS AND SSTS'S ARE TO BE INSTALLED PRIOR TO ANY CONSTRUCTION.
17. THE CONDITIONS NOTED ON THE PUTNAM COUNTY DEPARTMENT OF HEALTH LETTER OF APPROVAL ARE AN INTEGRAL PART OF THIS APPROVAL AND COMPLIANCE IS REQUIRED.
18. THIS PLAN IS APPROVED FOR SEWAGE TREATMENT AND/OR WATER SUPPLY ONLY, AND ALL OTHER PERMITS AND/OR APPROVALS ARE THE RESPONSIBILITY OF THE PERMITEE.
19. THE PUTNAM COUNTY HEALTH DEPARTMENT APPROVAL EXPIRES TWO (2) YEARS FROM THE DATE OF THE APPROVAL STAMP AND IS REQUIRED TO BE RENEWED ON OR BEFORE THE EXPIRATION DATE. THE APPROVAL IS REVOCABLE FOR CAUSE OR MAY BE AMENDED OR MODIFIED WHEN CONSIDERED NECESSARY BY THE DEPARTMENT.

2. SSTS SYSTEM TO BE INSPECTED BY THE DESIGN PROFESSIONAL AND PUTNAM COUNTY HEALTH DEPARTMENT AFTER INSTALLATION AND PRIOR TO BACKFILL.
3. PUTNAM COUNTY HEALTH DEPARTMENT APPROVAL IS BASED ON THE LOCATION OF THE SEWAGE SYSTEM WELL, BUILDINGS, SETBACKS, ROADS AND DRIVEWAYS, AS WELL AS, BUILDING SIZE AND USE AS SHOWN ON THE APPROVED DRAWINGS. ANY MODIFICATIONS OR REVISIONS ARE TO HAVE PRIOR PUTNAM COUNTY HEALTH DEPARTMENT APPROVAL.
4. UNAUTHORIZED MODIFICATIONS MADE TO THE DRAWINGS AFTER THE DATE OF THE PUTNAM COUNTY DEPARTMENT OF HEALTH APPROVAL VOIDS SAID APPROVAL.
5. PUTNAM COUNTY DEPARTMENT OF HEALTH APPROVAL IS BASED ON A MAXIMUM FLOW OF 4,500 GPD FOR BUILDING A AND 7,980 GPD FOR BUILDING B. AN INCREASE IN THE FLOW WILL REQUIRE PRIOR APPROVAL FROM THE DEPARTMENT.
6. WATER METERS SHALL BE INSTALLED AT EACH BUILDING AND DAILY READINGS FURNISHED TO THE PUTNAM COUNTY HEALTH DEPARTMENT EACH MONTH.
7. THE SSTS IS TO RECEIVE SANITARY WASTES ONLY. THE DISCHARGE OF INDUSTRIAL WASTES, CONTAMINATED COOLING WATER, OR OTHER DELIRIOUS SUBSTANCES INTO OR ONTO THE SURFACE OF THE GROUND IS PROHIBITED. THE PUTNAM COUNTY HEALTH DEPARTMENT RESERVES THE RIGHT OF INSPECTION OF THE PREMISED TO INSURE COMPLIANCE WITH THESE REQUIREMENTS.
8. PUTNAM COUNTY HEALTH DEPARTMENT SHALL BE PROMPTLY NOTIFIED IN THE EVENT THAT ANY WASTE OTHER THAN STRICTLY DOMESTIC SANITARY WASTES ARE PRODUCED AT THIS FACILITY.
9. OCCUPANCY OF THE BUILDINGS WILL NOT BE PERMITTED UNTIL THE CONSTRUCTION COMPLIANCE APPLICATION HAS BEEN RECEIVED AND APPROVED BY THE PUTNAM COUNTY HEALTH DEPARTMENT AND FORWARDED TO THE BUILDING INSPECTOR OF THE RESPECTIVE MUNICIPALITY AS PART OF THE CERTIFICATE OF OCCUPANCY APPLICATION.
10. AFTER BACKFILLING THE SYSTEM, THE SSTS AREA SHALL BE COVERED WITH A MINIMUM OF 6 INCHES OF TOP SOIL SEEDED AND MULCHED.
11. REMOVE ALL TREES WITHIN 10 FEET OF THE ABSORPTION SYSTEM.
12. ALL EXISTING AND/OR PROPOSED SUBSURFACE SEWAGE TREATMENT SYSTEMS AND WELLS ON NEIGHBORING PROPERTIES WITHIN 200 FEET OF THE PROPOSED SSTS AND WELL ARE SHOWN ON THE PLANS.
13. CUT OR FILL IS NOT PERMITTED IN THE SEWAGE TREATMENT AREAS, EXCEPT AS SPECIFIED ON THE PLANS.
14. ALL STONE WALLS IN AND WITHIN 10 FEET OF THE SSTS AREA SHALL BE REMOVED TO THEIR ENTIRE DEPTH AND THE RESULTING VOID REPLACED WITH SIMILIAR ON SITE SOIL.
15. IF ANY PRECAST CONCRETE TANK IS DELIVERED TO THE SITE IN SECTION, IT SHALL BE DEMONSTRATED TO THE DEPARTMENT AND/OR CERTIFYING DESIGN PROFESSIONAL THAT THE TANK IS SEALED, WATERTIGHT AND ACCEPTABLE FOR USE. THIS SHALL REQUIRE AS A MINIMUM, THE FILLING OF THE TANK WITH WATER AND OBSERVING THE WATER LEVEL AFTER A 24-HOUR PERIOD TO DEMONSTRATE IF IT IS IN FACT SEALED, WATERTIGHT AND ACCEPTABLE FOR USE.
16. ALL EROSION CONTROL MEASURES FOR THE BUILDINGS, WELLS AND SSTS'S ARE TO BE INSTALLED PRIOR TO ANY CONSTRUCTION.
17. THE CONDITIONS NOTED ON THE PUTNAM COUNTY DEPARTMENT OF HEALTH LETTER OF APPROVAL ARE AN INTEGRAL PART OF THIS APPROVAL AND COMPLIANCE IS REQUIRED.
18. THIS PLAN IS APPROVED FOR SEWAGE TREATMENT AND/OR WATER SUPPLY ONLY, AND ALL OTHER PERMITS AND/OR APPROVALS ARE THE RESPONSIBILITY OF THE PERMITEE.
19. THE PUTNAM COUNTY HEALTH DEPARTMENT APPROVAL EXPIRES TWO (2) YEARS FROM THE DATE OF THE APPROVAL STAMP AND IS REQUIRED TO BE RENEWED ON OR BEFORE THE EXPIRATION DATE. THE APPROVAL IS REVOCABLE FOR CAUSE OR MAY BE AMENDED OR MODIFIED WHEN CONSIDERED NECESSARY BY THE DEPARTMENT.

TOWN OF SOUTHEAST, NEW YORK

ANY ALTERATION OF PLANS, SPECIFICATIONS, PLATS AND REPORTS BEARING THE SEAL OF A LICENSED PROFESSIONAL ENGINEER OR LICENSED LAND SURVEYOR IS A VIOLATION OF SECTION 7209 OF THE NEW YORK STATE EDUCATION LAW, EXCEPT AS PROVIDED FOR BY SECTION 7209, SUBSECTION 2.

Drawn: KRM Approved: DL
Scale: 1" = 30'
Date: 01/06/2020
Project No: 14012
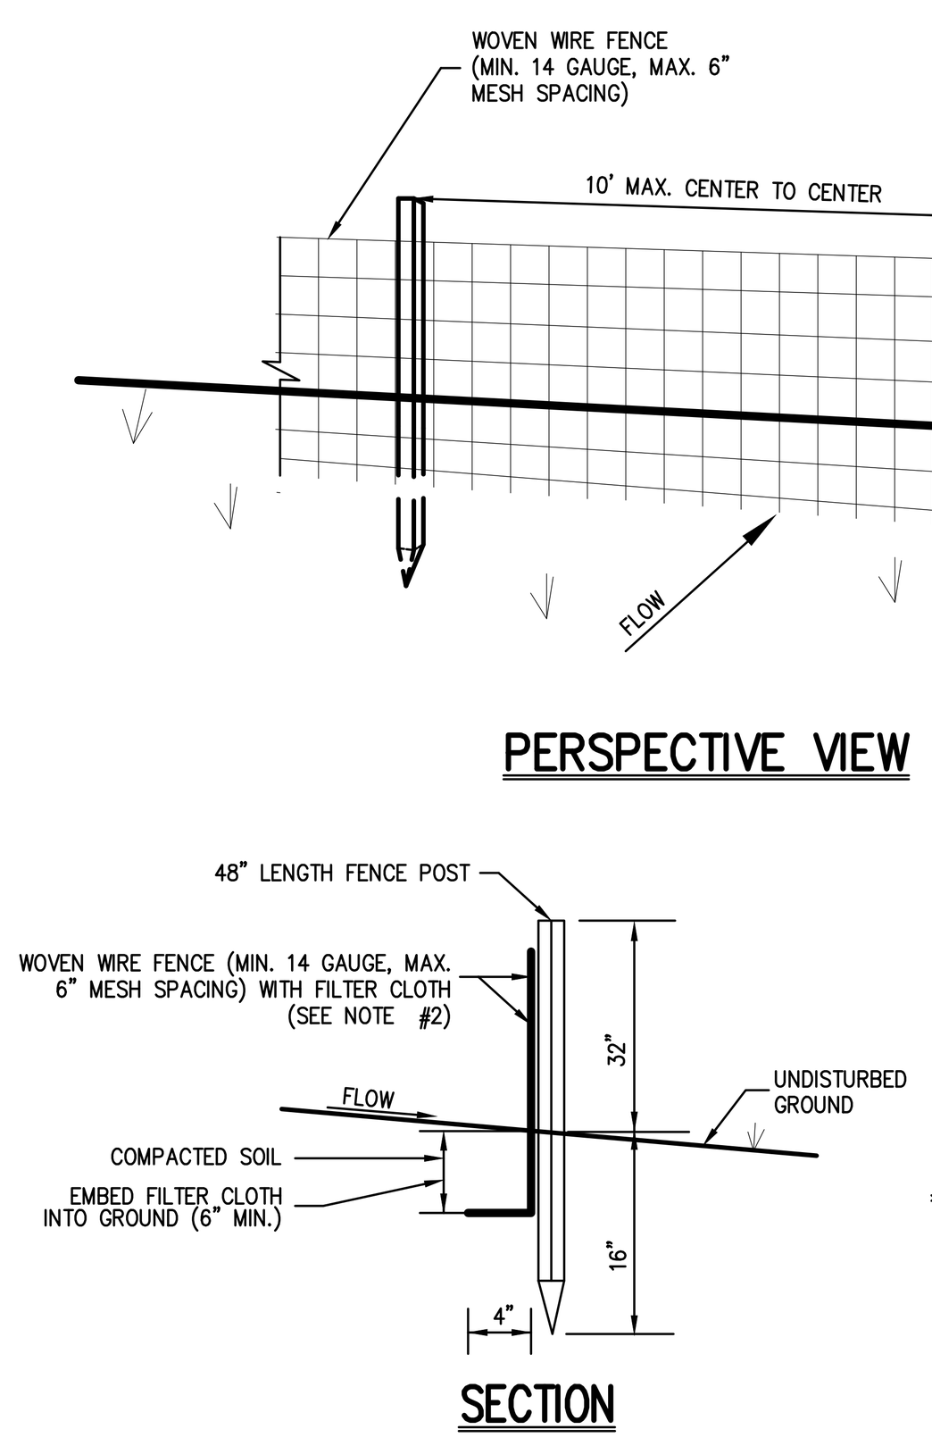
Drawing No: C-327

NOT FOR CONSTRUCTION



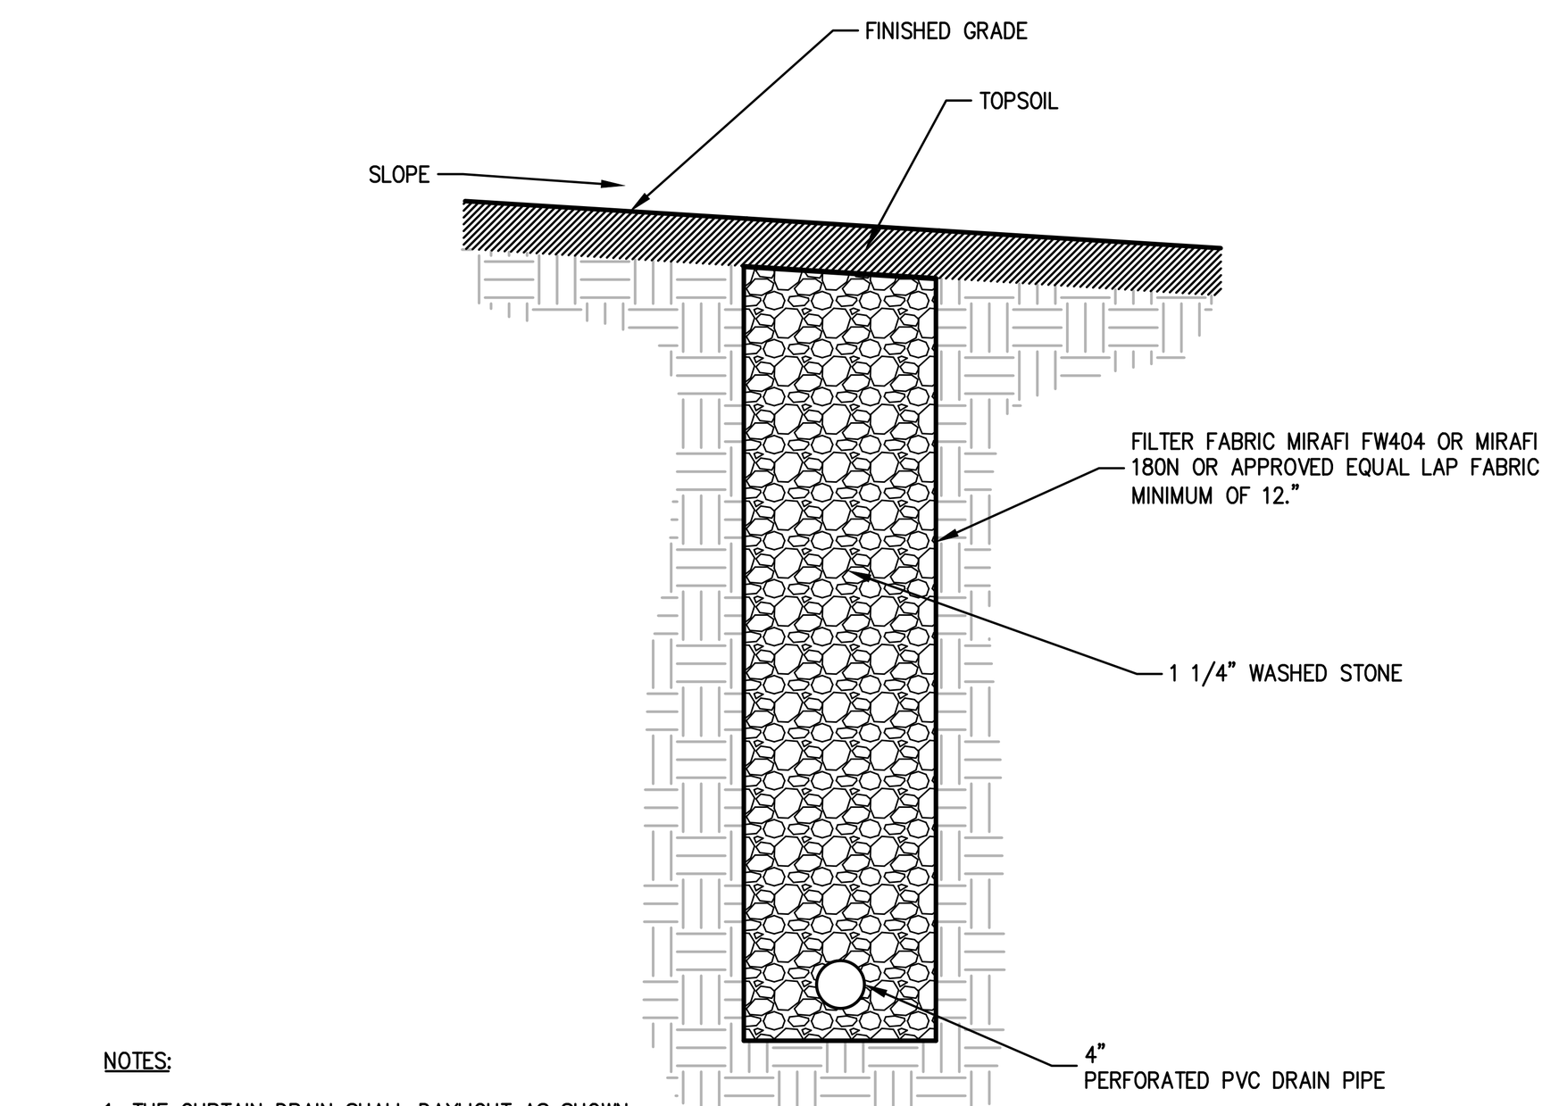
SLOPE	STEEPNESS	SLOPE LENGTH/FENCE LENGTH (FT.)
2–10%	50:1 TO 10:1	250/2000
10–20%	10:1 TO 5:1	150/1000
20–33%	5:1 TO 3:1	60/750
33–50%	3:1 TO 2:1	70/350
>50%	>2:1	30/175

*ALL SILT FENCES SHALL BE PLACED AS CLOSE TO THE DISTURBED AREA AS POSSIBLE, BUT AT LEAST 10 FEET FROM THE TOE OF A SLOPE STEEPER THAN 3H:1V, TO ALLOW FOR MAINTENANCE AND ROLL DOWN. THE AREA BEYOND THE FENCE MUST BE UNDISTURBED OR STABILIZED.

NOTES:

1. WOVEN WIRE FENCE SHALL BE FASTENED SECURELY TO FENCE POSTS WITH WIRE TIES OR STAPLES. POSTS SHALL BE STEEL, EITHER T OR U TYPE OR HARDWOOD.
2. FILTER CLOTH SHALL BE FASTENED SECURELY TO WOVEN WIRE FENCE WITH TIES SPACED EVERY 24" AT TOP AND MID SECTION. FENCE SHALL BE WOVEN WIRE, 6" MAXIMUM MESH OPENING.
3. WHEN TWO SECTIONS OF FILTER CLOTH ADJOIN EACH OTHER, THEY SHALL BE OVERLAPPED BY SIX INCHES AND FOLDED. FILTER CLOTH SHALL BE EITHER FILTER X, MIRAFI 100X, STABLINKA T140N, OR APPROVED EQUAL.
4. PREFABRICATED UNITS SHALL BE GEOFAB, ENVIROFENCE, OR APPROVED EQUAL.
5. MAINTENANCE SHALL BE PERFORMED AS NEEDED AND MATERIAL REMOVED AND REPLACED WHEN "BULGES" DEVELOP IN THE SILT FENCE.

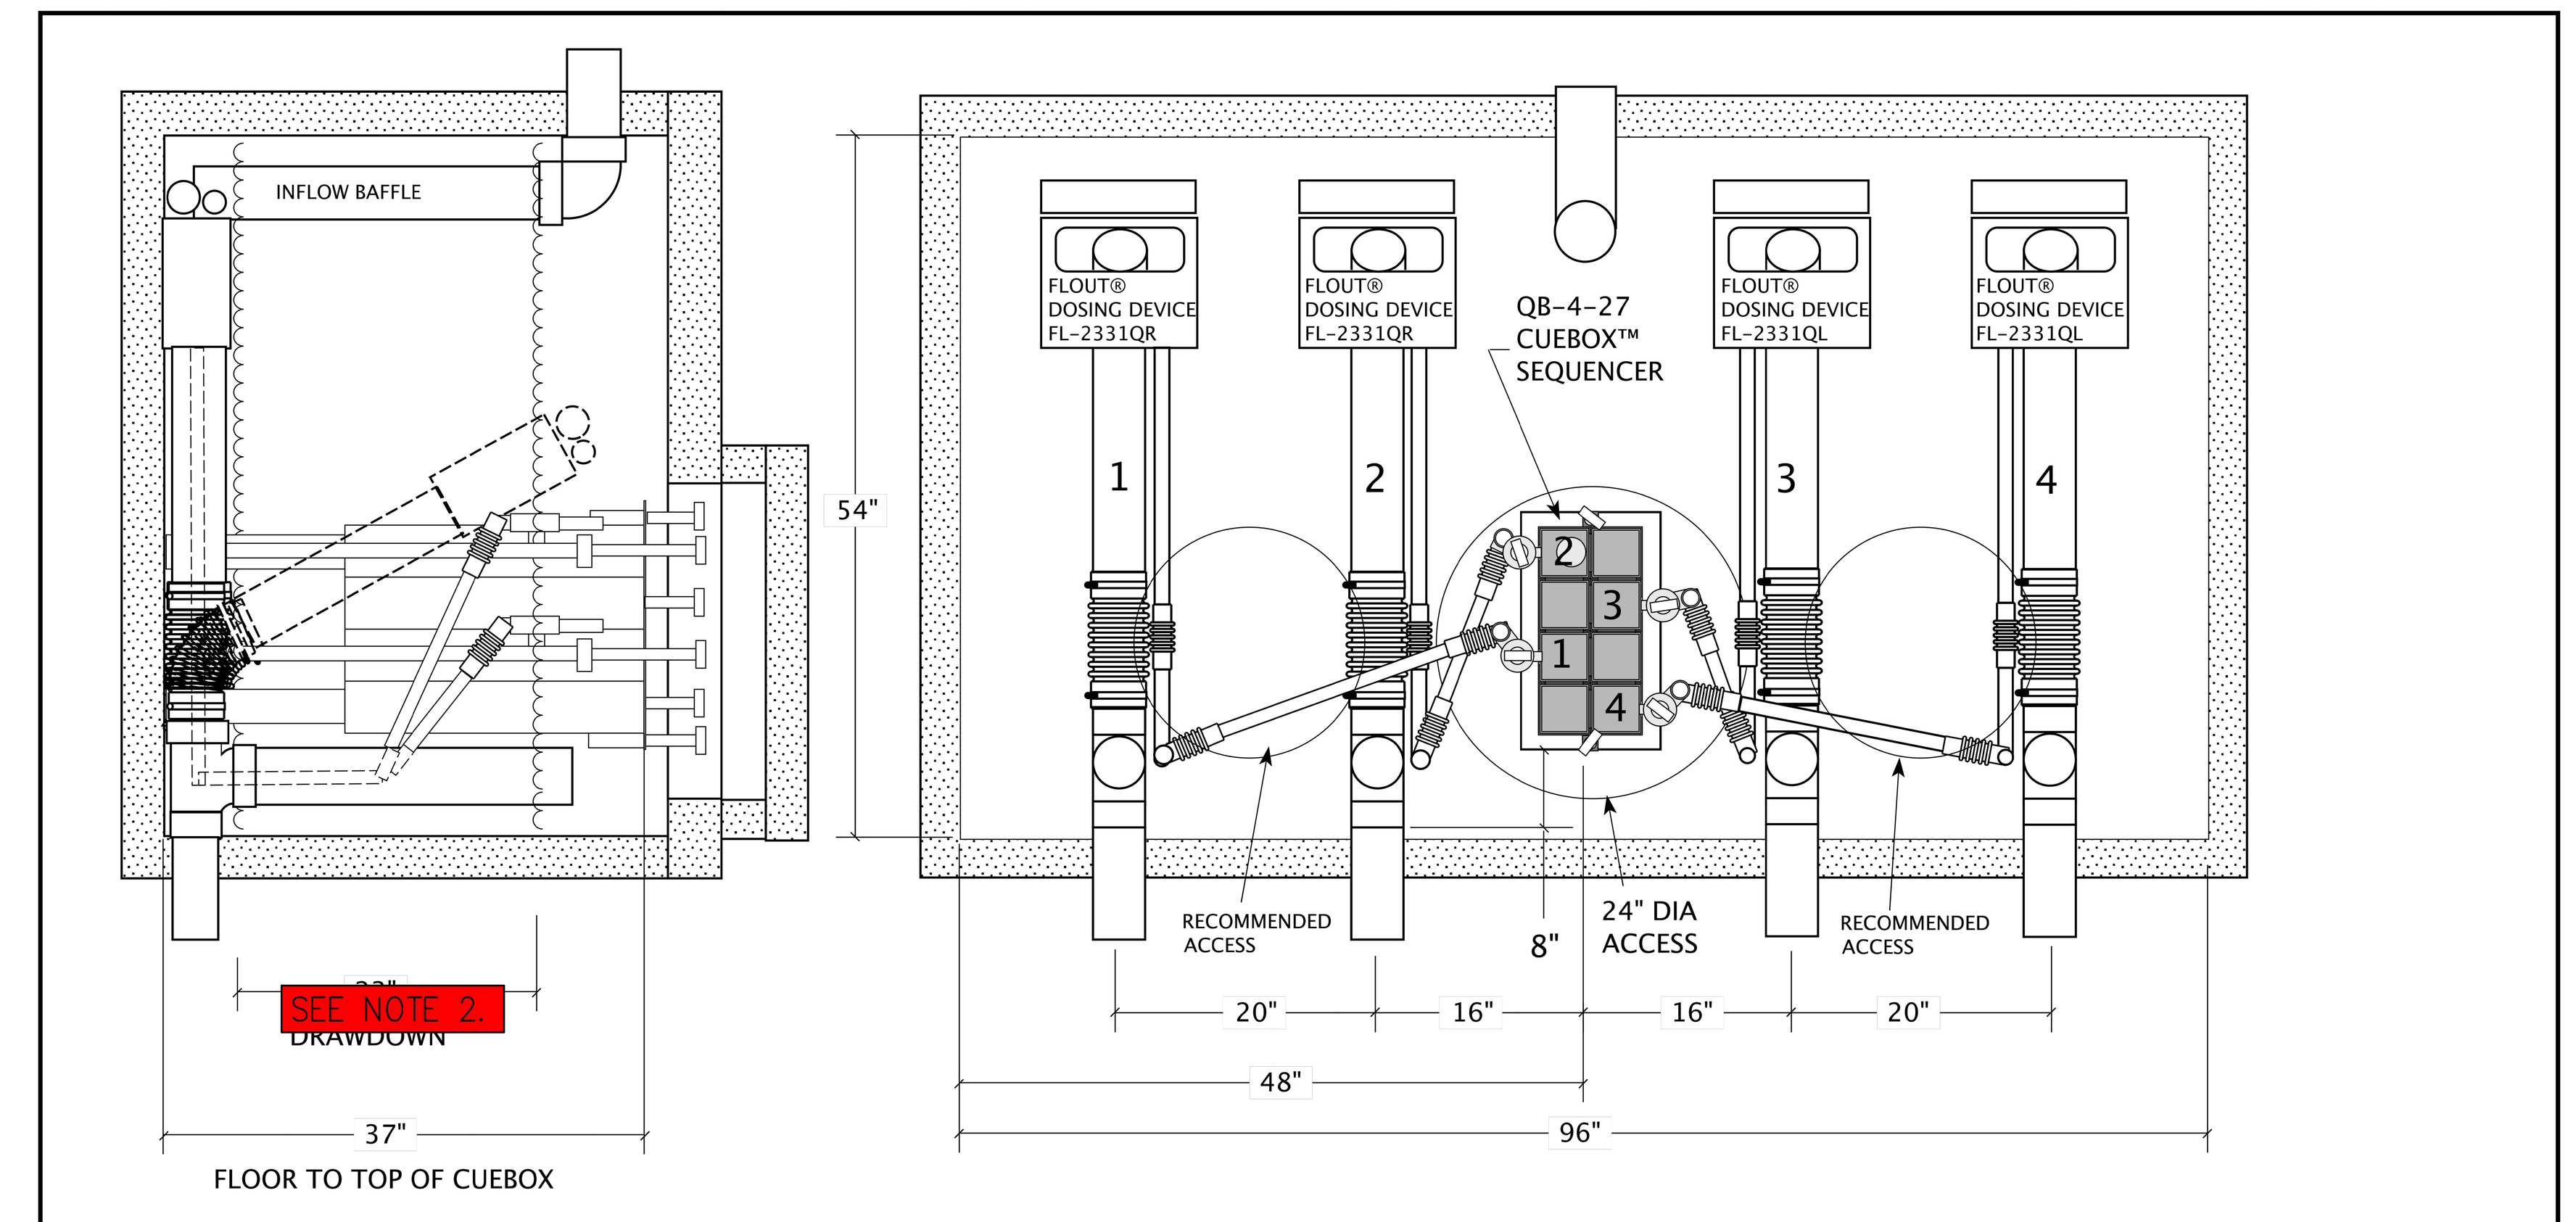
SILT FENCE — 1



NOTES:

1. THE CURTAIN DRAIN SHALL DRAIN DAYLIGHT AS SHOWN ON THE SITE PLAN WITH A RODENT SCREEN.
2. PIPE SHALL BE INSTALLED WITH PERFORATIONS DOWN.

CURTAIN DRAIN — 2



NOTES:

1. CUE BOXES SHALL BE MANUFACTURED BY RISSY PLASTICS THEY SHALL BE SET TO ALTERNATE ON THEIR OWN.
2. THE DOSE FOR SEPTIC SYSTEMS FOR BUILDING A SHALL BOTH BE SET AT 450 GALLONS (20 INCHES) FOR BUILDING B THE DOSE SHALL BE SET AT 500 GALLONS (22.5 INCHES).
3. BOX SHALL BE SET ON A 4" BED OF GRAVEL.
4. PROVIDE MANHOLE CASTING TO GRADE

Notes:
1. Effluent outlet filters are available as well as high level alarms.
2. Gas deflectors are available for 4" outlet pipes.
3. Tank designs based on the 2014 NYSDEC design standards.
4. Grease Traps are Type 2 with longer outlet baffles than Septic Tanks.
5. 1,000, 1,250, and 1,500 tanks are two-piece design with center seam.

SPECIFICATIONS

Concrete Min. Strength: 4,000 psi at 28 days
Reinforcement: #4 & #5 Rebar / ASTM A615
Air Entrainment: 6%
Construction Joint: Butyl Rubber Sealant
Pipe Connection: Polylok Seal or as needed
Load Rating: HS20-44 + 30% / ASTM C857

PRECAST TRAFFIC DUTY TANKS
750 TO 6,000 GALLONS

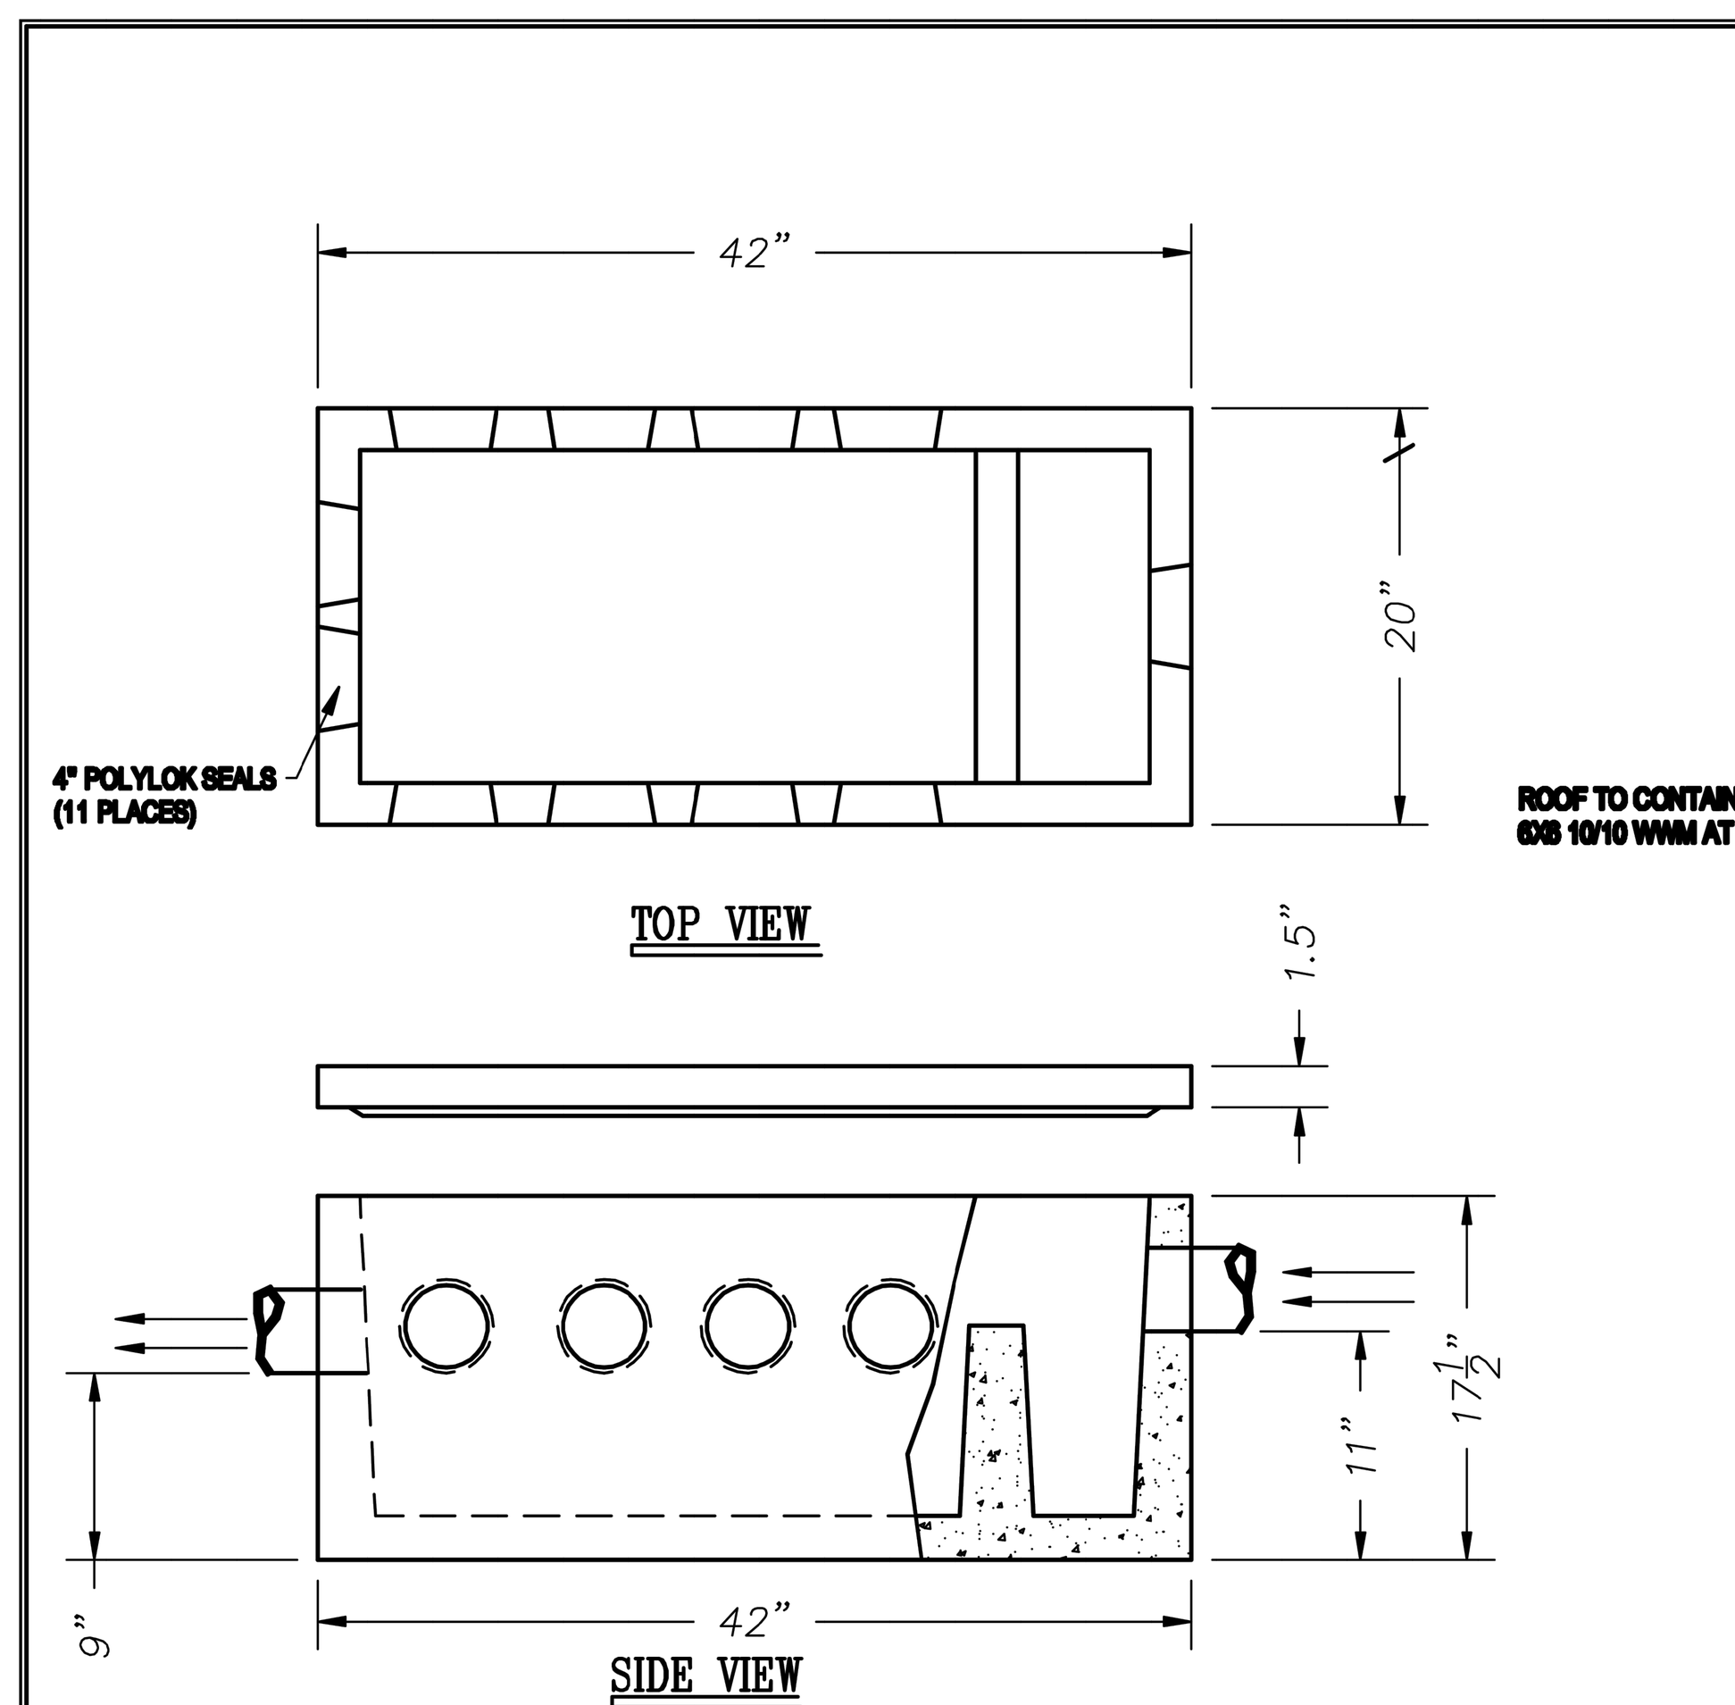
WOODARD CONCRETE HEAVY DUTY SEPTIC TANK — 4



NOTES:
1. Intentionally left blank
2. **Steel reinforcement: A.S.T.M. A496-A615 Grade 60-60 ksi**
3. Intentionally left blank
4. **Concrete: 4000 psi @ 28 days, 5% - 9% air entrainment**
5. **Equipped with polylok seals**
6. Intentionally left blank
7. **Design loading A-0.3/ 300 psf - walkways, floatation forces not accounted for**
8. **Max. cover over tank: 3' of earth fill**
9. Min. 1" concrete cover over reinforcement
10. Tank to conform with ASTM C1227

NOTES:
1. ANY UNUSED OUTLETS SHALL REMAIN PLUGGED.
2. SPEED LEVELLERS SHALL BE USED TO ENSURE EQUAL DISTRIBUTION TO ALL LINES.
3. BOX SHALL HAVE A MARKER TO GRADE
4. MAXIMUM COVER ON BOX SHALL BE 12"
5. BOXES SHALL BE SET ON 6" CRUSHED STONE FOUNDATION
6. PROVIDE MANHOLE CASTING TO GRADE

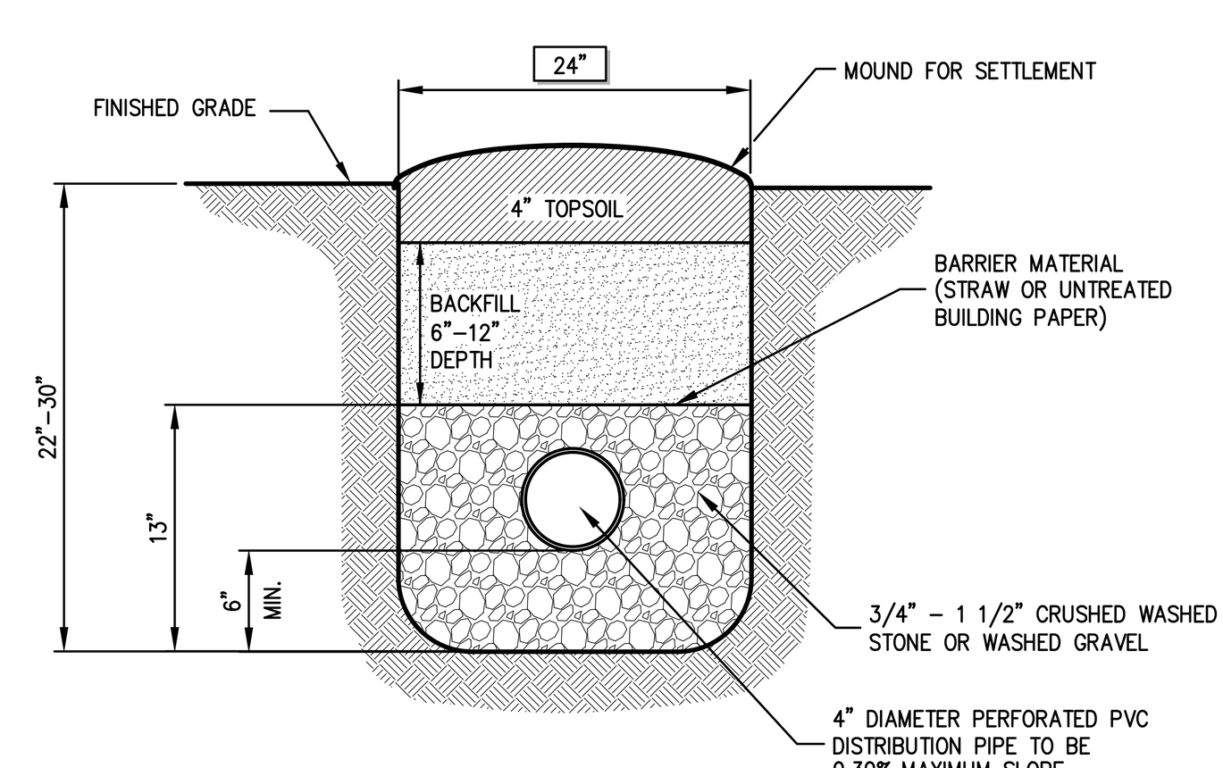
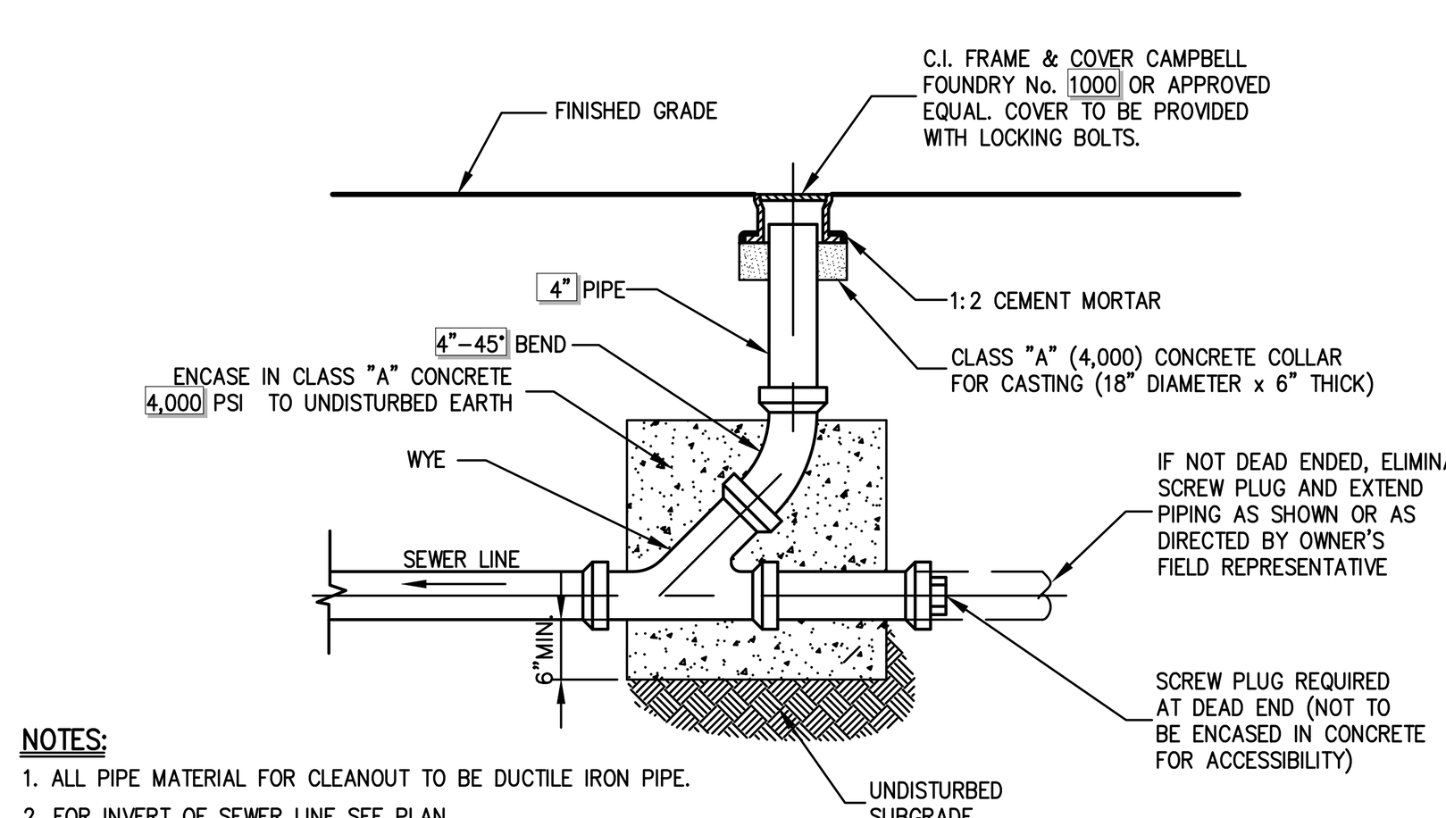
PRODUCT SPECIFICATION
11 HOLE DISTRIBUTION BOX

DRAWING NUMBER: 11-HDB
3/13/2012

MID–HUDSON CONCRETE DISTRIBUTION BOX — 5

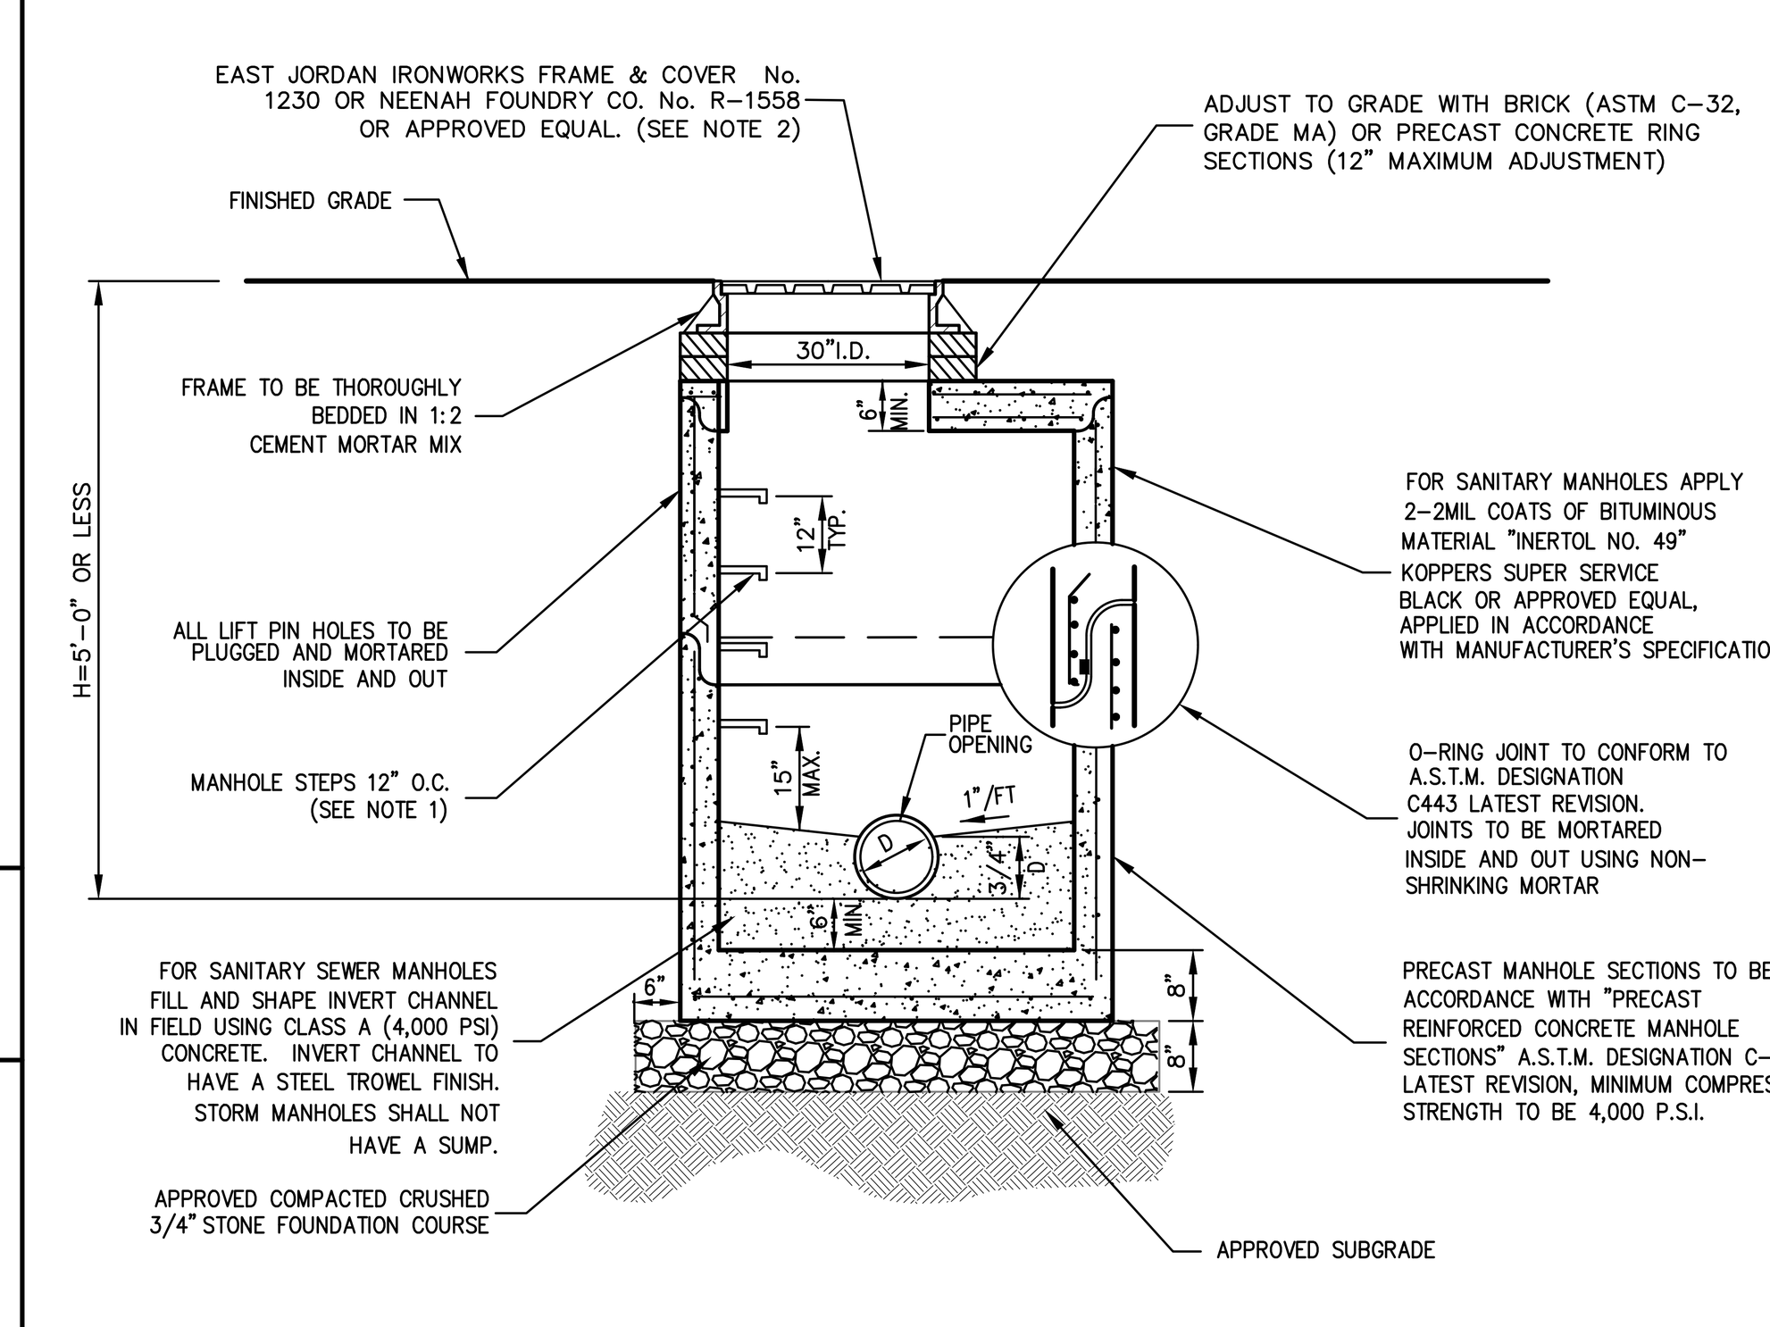


SEPTIC FIELDS — 6

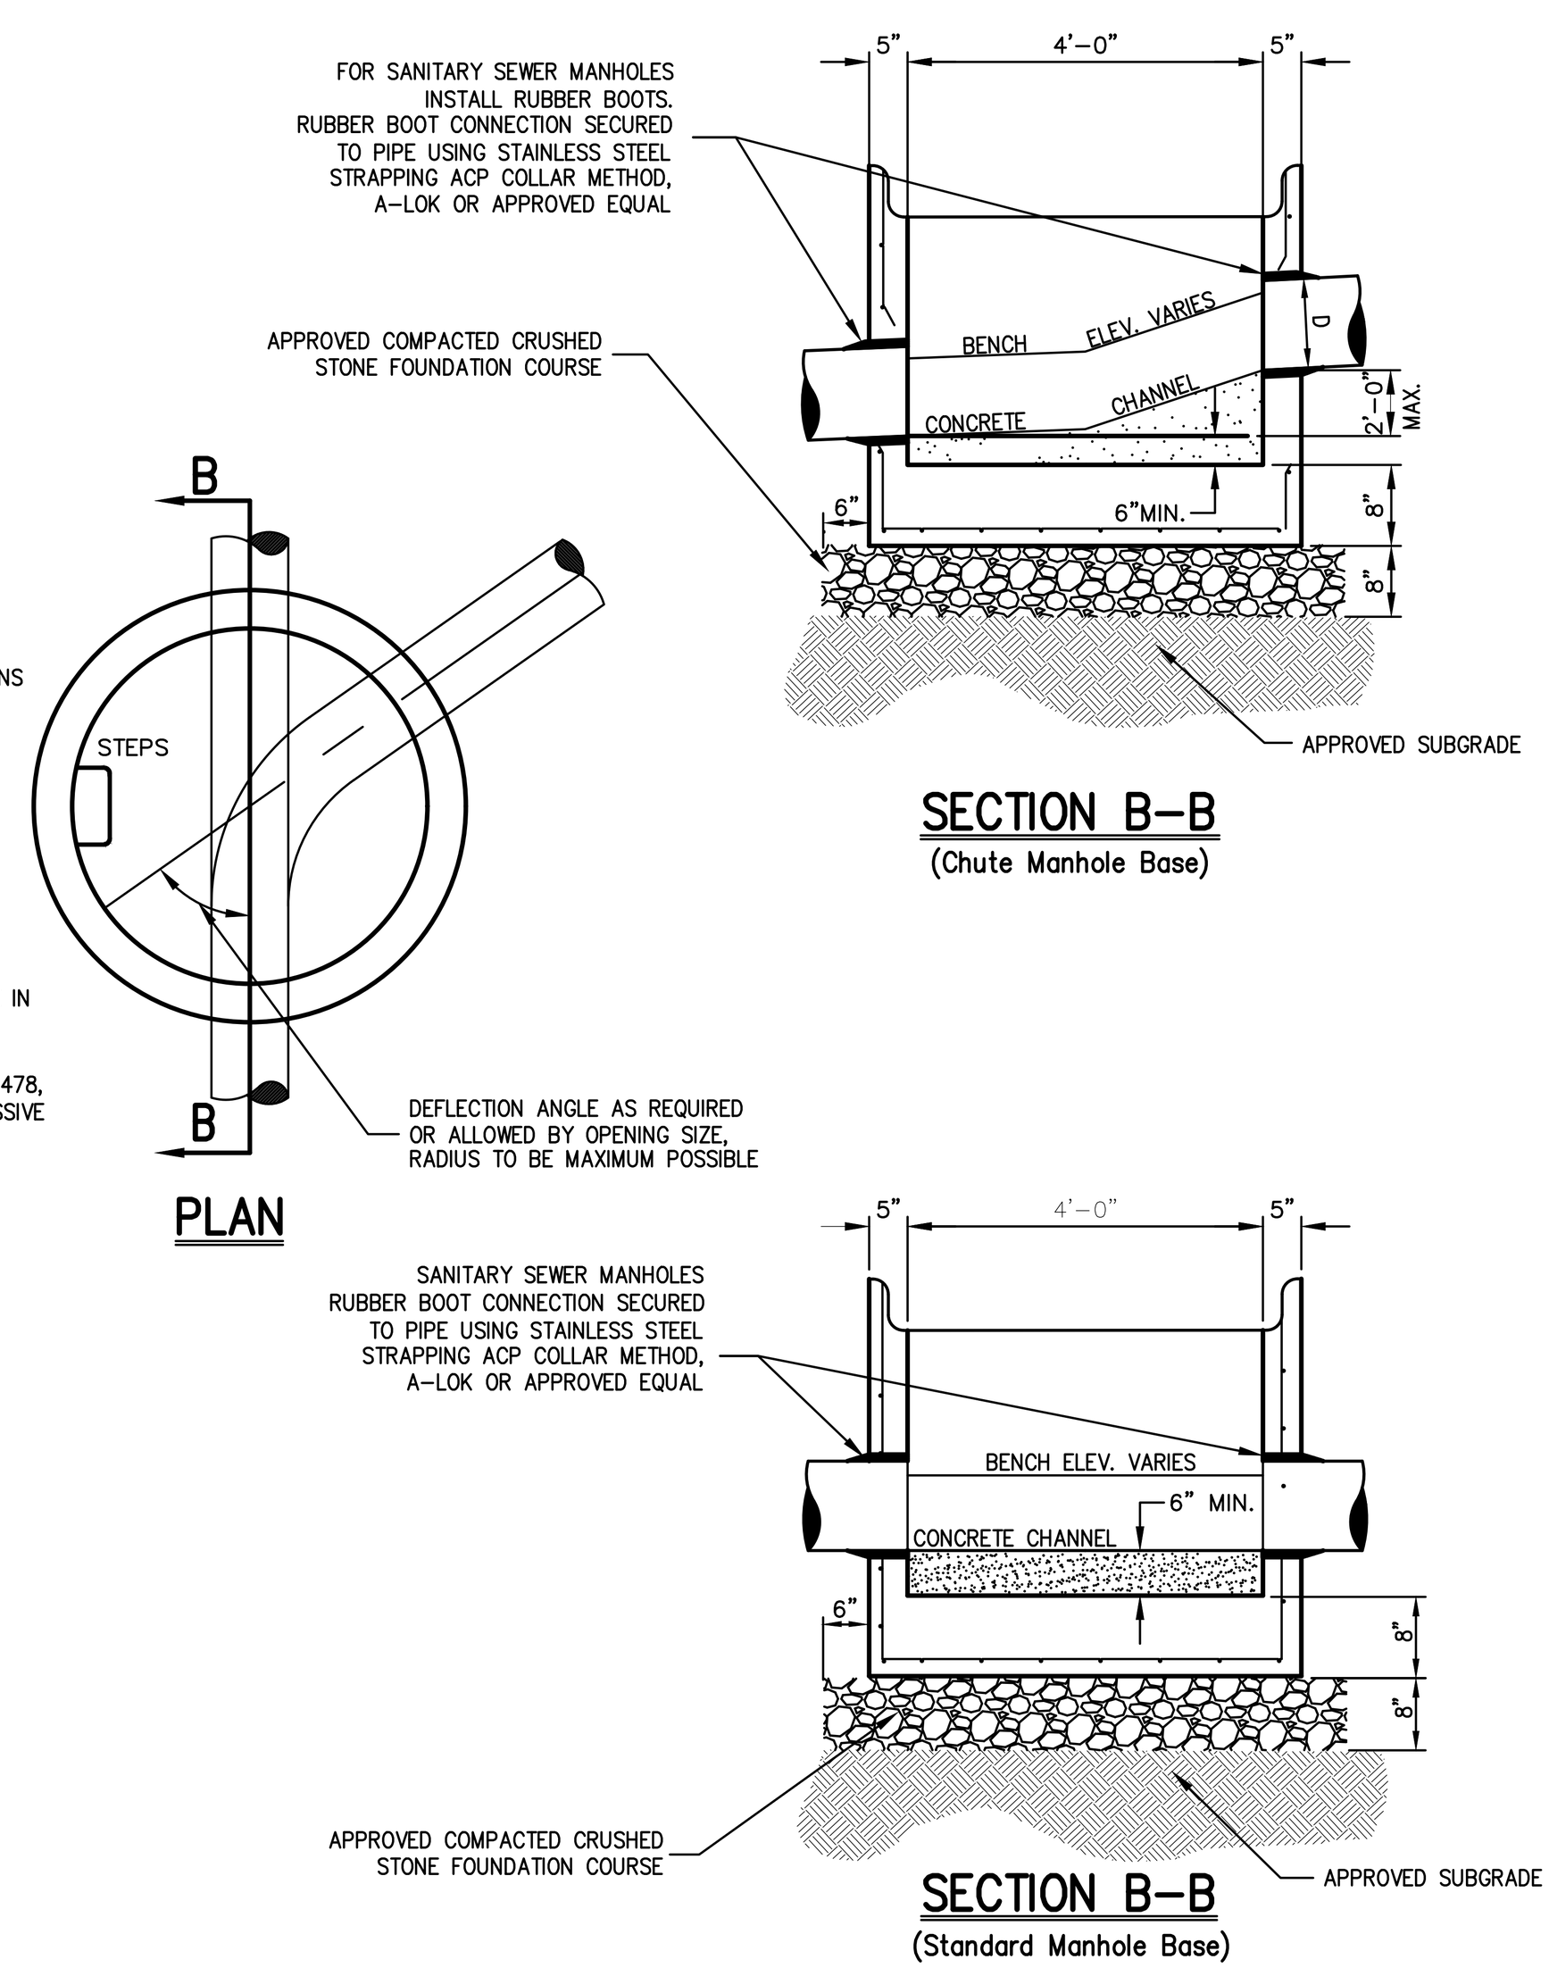


NOTES:
1. ALL PIPE MATERIAL FOR CLEANOUT TO BE DUCTILE IRON PIPE.
2. FOR INVERT OF SEWER LINE SEE PLAN.

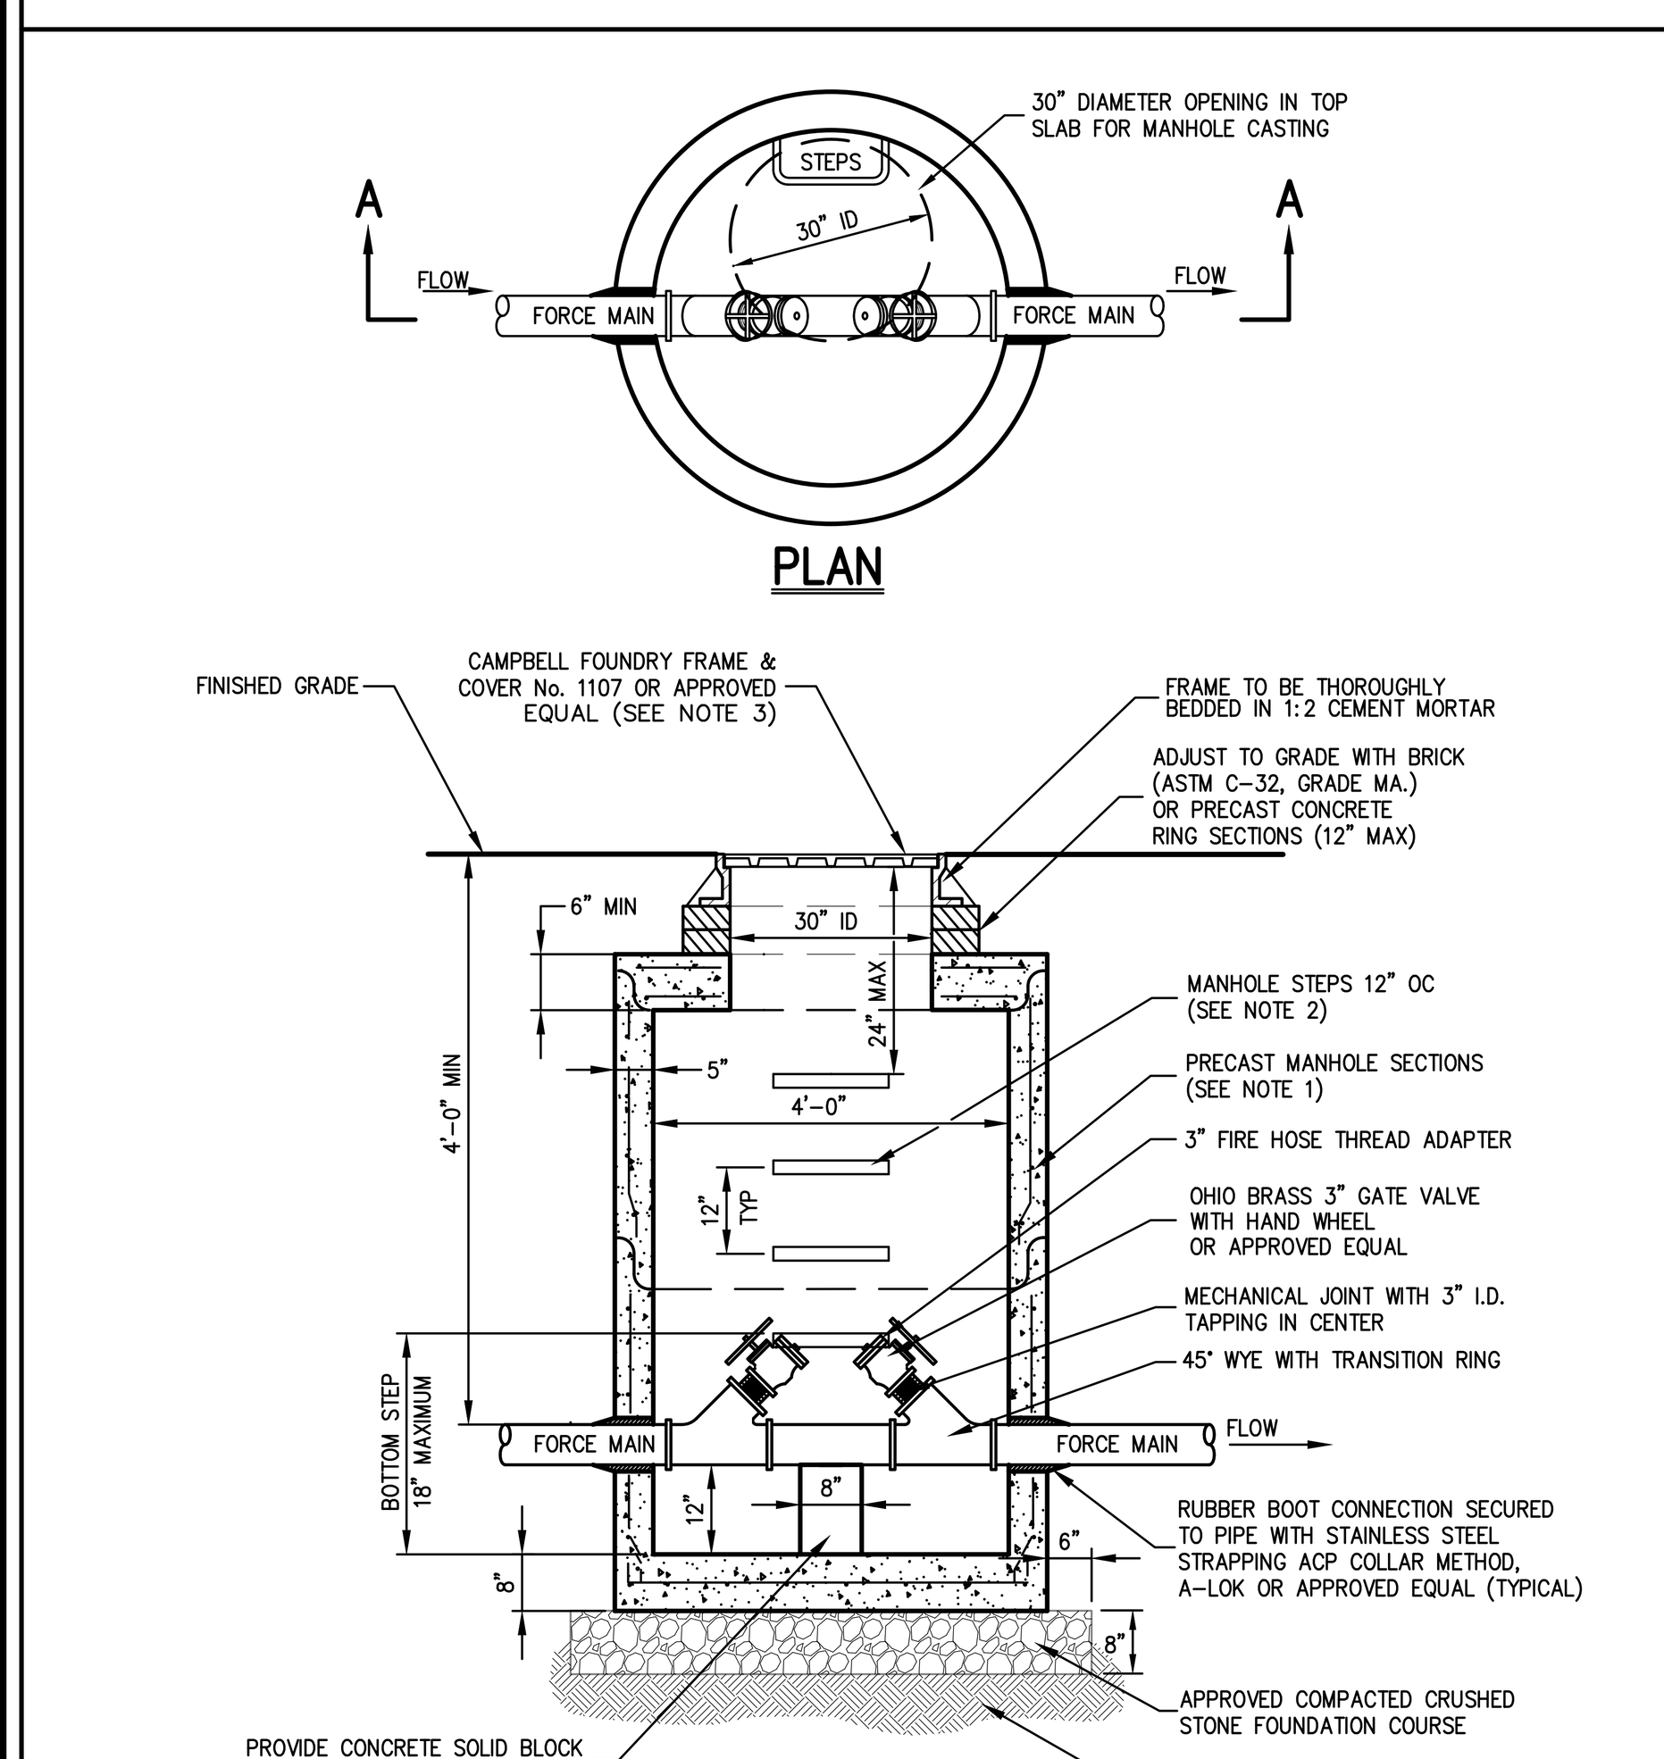
CLEANOUT W/O MANHOLE — 7



NOTES:
1. MANHOLE STEPS SHALL BE CAST IRON NEENAH No. R–1981–0 OR CAMPBELL FOUNDRY No. 2588–1 OR POLYPROPYLENE COATED STEEL (SEE SPECIFICATIONS) OR APPROVED EQUAL.
2. UNLESS OTHERWISE SPECIFIED, SANITARY SEWER MANHOLES SHALL HAVE LETTERS "SEWER" AND STORM DRAIN MANHOLES SHALL HAVE LETTERS "DRAIN" CAST ON COVER. THE COVERS SHALL HAVE VENT HOLES.
3. MANHOLES SHALL MEET OR EXCEED A.S.T.M. AND O.S.H.A. REQUIREMENTS.

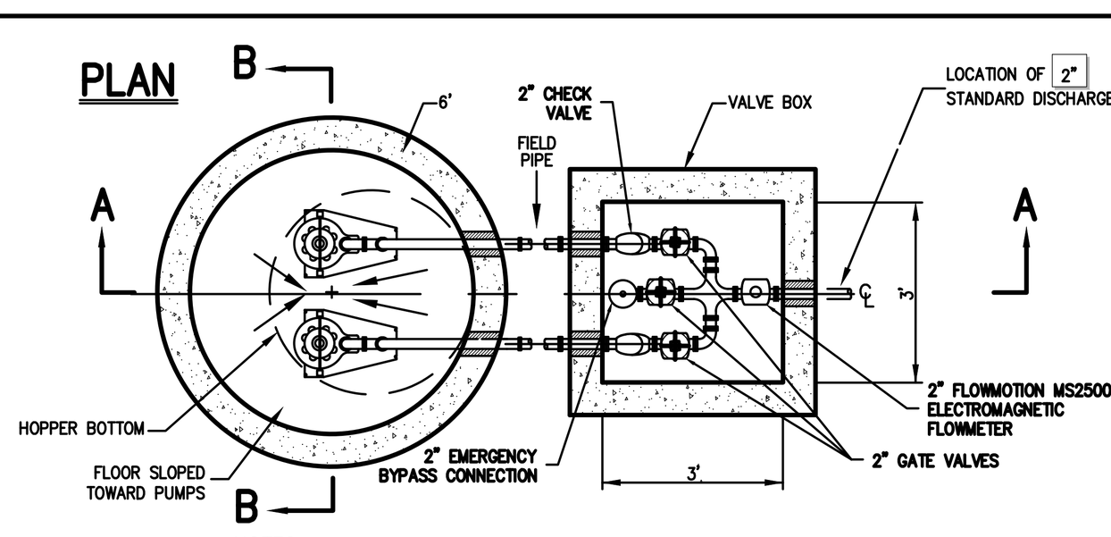


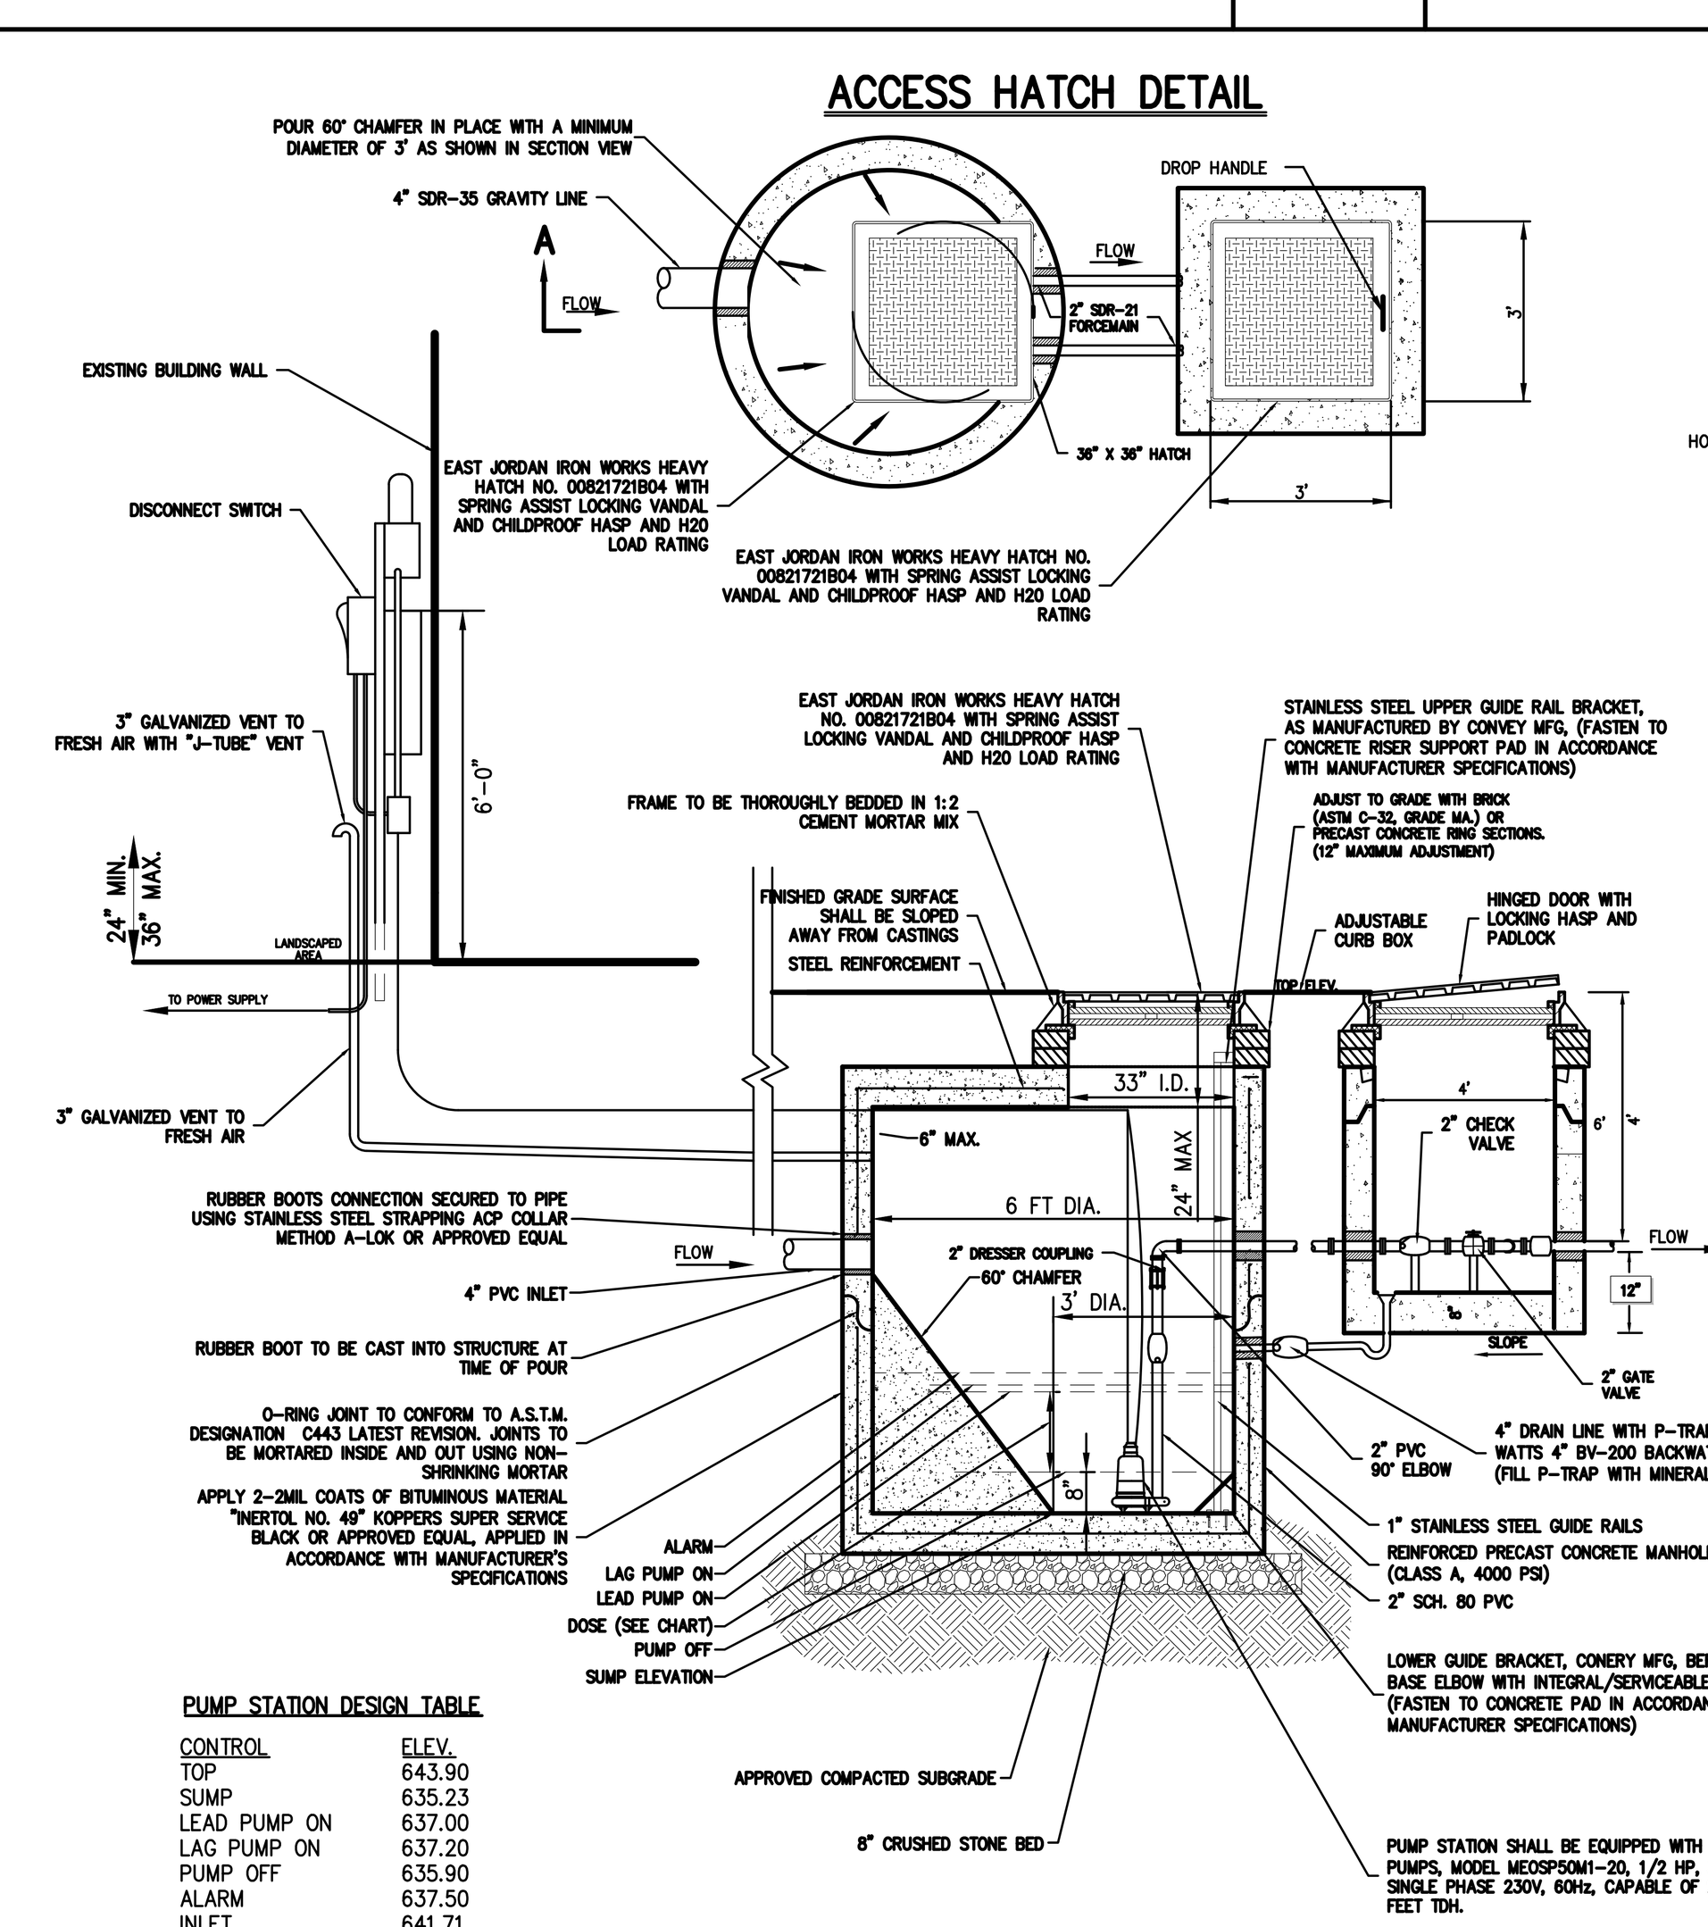
MANHOLE (TYPE A) — 8



NOTES:
1. PRECAST CONCRETE MANHOLE SHALL COMPLY WITH ASTM STANDARD C-478. MANHOLE JOINTS SHALL COMPLY WITH ASTM STANDARD C-443.
2. MANHOLE STEPS SHALL BE CAST IRON NEENAH No. R-1981-0 OR CAMPBELL FOUNDRY No. 2588-1 OR POLYPROPYLENE COATED STEEL (SEE SPECIFICATIONS) OR APPROVED EQUAL.
3. UNLESS OTHERWISE SPECIFIED, MANHOLE COVER SHALL HAVE LETTERS "SEWER" CAST ON COVER. COVER SHALL HAVE VENT HOLES.

SANITARY SEWER FORCE MAIN CLEANOUT IN MANHOLE — 9





PUMP	MAKE	MODEL	RATED CAPACITY	H.P.	TDH

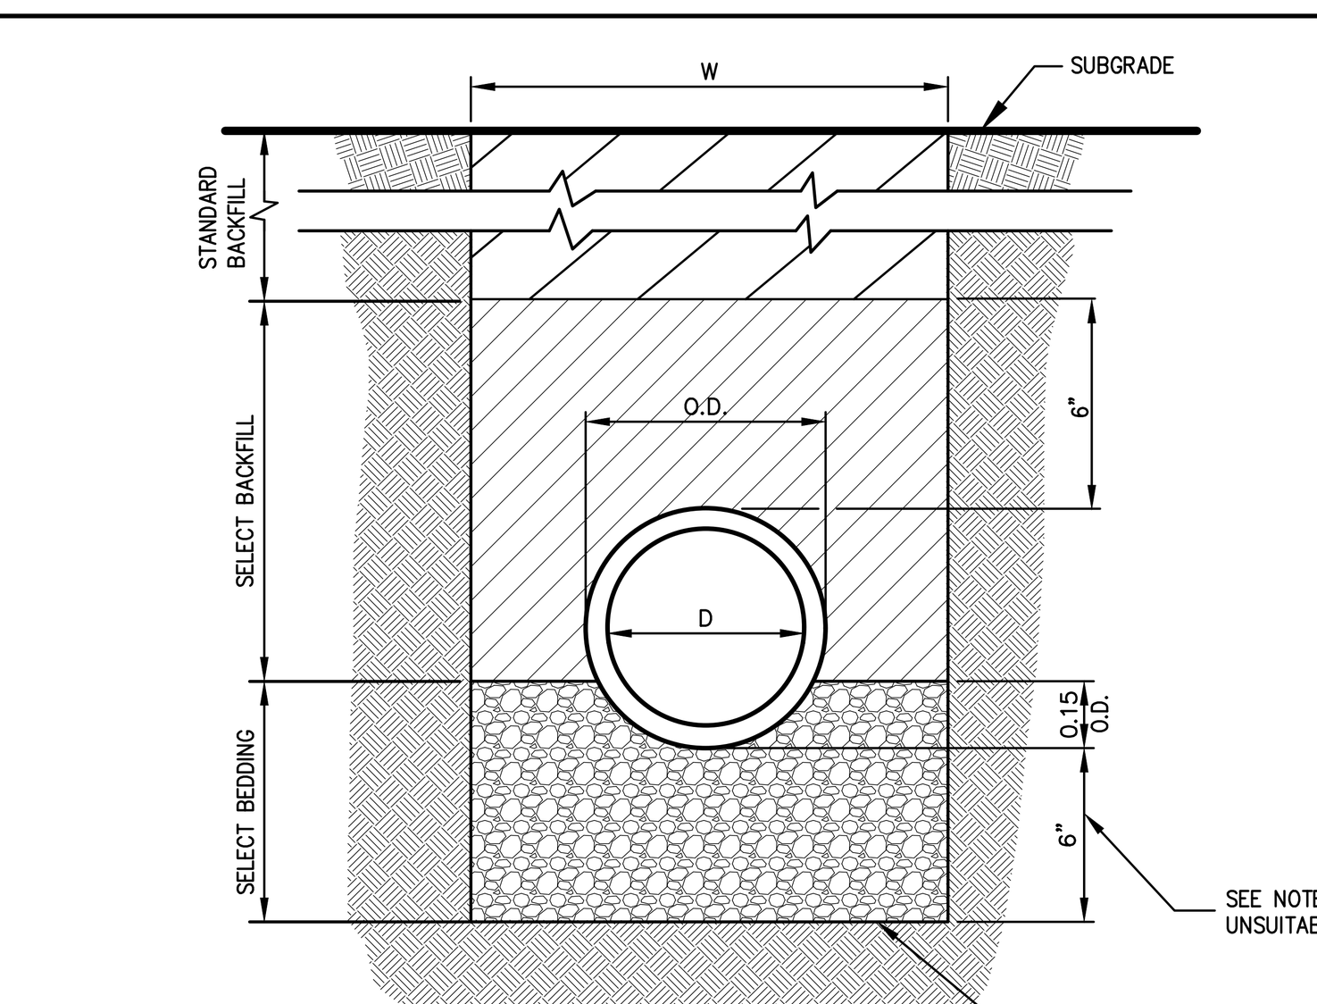
EXPANSION	MYERS	MESP50M1-20	25 GPM	1/2	36'

TABLE OF PUMP SPECIFICATIONS

SANITARY SEWER PUMP STATION — 10



D=INSIDE DIAMETER, SPAN, OR RISE
O.D.=OUTSIDE BARREL DIAMETER, SPAN OR RISE
H.D.=OUTSIDE DIAMETER, SPAN, OR RISE @ BELL OR BAND
W=H.D. + 2.0' – FOR 48" OR SMALLER DIAMETER, SPAN, OR RISE
W=H.D. + 2.5' – FOR GREATER THAN 48" DIAMETER, SPAN, OR RISE

NOTES:
1. FOR TYPE II TRENCH, MATERIAL FOR SELECT BEDDING AND SELECT BACKFILL SHALL BE:
   A. EITHER SAND OR CRUSHED STONE IF NO WATER IS ENCOUNTERED IN TRENCH.
   B. 3/4"CRUSHED STONE IF WATER IS ENCOUNTERED IN TRENCH.
2. TYPE II TRENCH SHALL BE USED IN ALL OF THE FOLLOWING CASES:
   A. FOR ALL CORRUGATED POLYETHYLENE DRAIN PIPE (CPDP) AND PVC PIPE AND CONDUIT INSTALLATION.
   B. WHEN ROCK OR HARDPAN IS ENCOUNTERED IN BOTTOM OF TRENCH.
   C. WHEN UNSUITABLE MATERIAL IS ENCOUNTERED IN BOTTOM OF TRENCH. IN SUCH CASE DEPTH OF UNDERCUTTING SHALL BE AS DIRECTED BY THE ENGINEER WITH 6" MINIMUM.
3. FOR ALL TRENCH EXCAVATION IN FILL AREAS, ALL EMBANKMENTS SHALL BE CONSTRUCTED TO A MINIMUM OF 2 FEET ABOVE THE OUTSIDE TOP (AT THE BELL) OF THE PIPE PRIOR TO BEGINNING ANY TRENCH EXCAVATION.
4. BACKFILL FOR PIPE AND CONDUIT SHALL BE PLACED EVENLY AND CAREFULLY AROUND AND OVER THE PIPE OR CONDUIT IN SIX (6) INCH MAXIMUM LAYERS. EACH LAYER SHALL BE THOROUGHLY AND CAREFULLY COMPACTED UNTIL TWELVE (12) INCHES OF COVER EXISTS OVER THE PIPE OR CONDUIT. THE REMAINDER OF THE BACKFILL MAY THEN BE PLACED AND COMPACTED IN A MAXIMUM OF TWELVE (12) INCH LAYERS. EACH LAYER SHALL BE COMPACTED BY APPROVED MECHANICAL TAMPING MACHINES. UNLESS OTHERWISE SPECIFIED BACKFILL SHALL BE COMPACTED TO NOT LESS THAN 92% MAXIMUM MODIFIED DENSITY IN ACCORDANCE WITH ASTM DESIGNATION D–1557 IN THE MANNER HEREIN DESCRIBED. BACKFILL SHALL PROCEED UP TO THE LINES AND GRADES AS SHOWN ON THE DRAWINGS.

TYPE II TRENCH — 11
