DRAINAGE TABLE

1

FULL NOTES:

1. Existing utilities to be protected and remain in service.

WATER CONSTRUCTION SEQUENCE:

1. Existing system shall be protected and remain in use until new system is installed and approved.

2. *Island* new water flow but do not connect and design engineer and fabric approve installation.

3. INVERTED SIPHON CONSTRUCTION SEQUENCE:

2. Existing system shall be protected and removed at user's new system is installed, 103100 and Design Engineer and PQOH approve beforehand.

3. Provide temporary bracing and restraints as required for pressure testing. Provide proposed plan for pressure testing for review per plan notes.

- a. Coordinate temporary shutdown with owner, construction manager, and Design Engineer.
- b. Provide pump and pump out sump does not flood trench to level of new sewer service.

There are no effects of *Simulium* larvae on growth rates of

[illegible]
