ATC Submittal

Submittal Notes

2/16/2023

1. At the time of submission, Siemens has based our design from Bid Set Issuance drawings dated 06/06/2023, section 23 09 23 Direct-Digital Control System for HVAC dated 06/08/2023 and addendum #1 dated 06/22/2023, addendum #3 dated 06/29/2023 addendum #6 dated 07/12/2023.
2. At the time of submission, Siemens has followed the following reviewed cut sheets.
 - a. Indoor AHU - Unit Vents and Heat Pumps Rev-02.
 - b. RTU, AHU, CCU, BC & MC Rev-02.
 - c. Heat Exchanger.
 - d. Hydronic Pumps.
 - e. Variable Frequency Drivers for Pumps.
 - f. Steam And Cond Specialties Rev-01.
 - g. Power Ventilators Rev-01.
 - h. Centrifugal Fans Rev-02.
3. At the time of submission, following cut sheets were not available. Design may change upon receiving the cut sheets.
 - a. Unit heaters.
 - b. Heating coils cut sheets for existing AHU's.
 - c. Radiation panels.
 - d. Fin tube radiators.
 - e. Heating water radiation.
4. BACnet thermostats are proposed for controlling the existing & new FTR's, Heating Radiation & Convactor Units.

A. Barr Middle School building:

1. At the time of submission, Siemens has designed the Unit Ventilators by providing field mounted Siemens controller, current switch, space thermostats & condensate overflow switch for all UV units as per email received from D&B Building Solutions LLC dated 12/13/2023 and as per RFI response 2 in addendum #3. Siemens will wire the required control points to Siemens controller from UV terminal strip as shown in UV units wiring diagram file - 910413999 REV. 00. Siemens has included only one BACnet IP integration from Daikin Master Controller to BAS. As per new UV scope per above details, the sequence of operations given in specification section 230923 3.11/B/3 are not aligned with the designed system because of changed mechanical design. Siemens will update the new sequences once received.

SIEMENS

D&B Building Solutions LLC will wire Expansion Valve Kit, Z-Control kit, Navigator (required t-stat for the VRV UV system).

2. At the time of submission, sequence of operation for Unit Heaters were not available on the specification section 230923. Siemens has proposed same sequence of operations of Cabinet Unit Heater for Unit Heaters.
3. At the time of submission, damper actuator type (modulating/On/off) was not mentioned for the replacement AHU & Unit Heaters damper actuators as per notes in mechanical drawings. Siemens has requested for the existing controller and termination details to which these devices will relate to. However, the requested information's are still not received. Siemens has proposed modulating type damper actuators for the AHU's and On/Off damper actuator for Face and bypass damper actuator for existing UHs. Siemens will update the BOM once relevant information's are received.
4. At the time of submission, existing controller & terminal details for existing AHU's (S-1 to S-4, S-6 to S-9), Hot Water Systems was not available. Siemens has added a table in Barr School submittal in drawing 500A which shows the equipment and type of sensors/field devices replaced. Siemens has proposed the replacement sensors/field devices for these systems, however wiring details are not provided due to insufficient existing terminal details. Siemens will provide the wiring diagram once the required information's are received.

B. High School building:

1. At the time of submission, Siemens has connected the IO points of Hot Water Coils, for existing AHU-1, 2 & AC-1 shown in detail D18 in drawing HS-M603 to existing panel HIGHSPXM05 & HIGHSPXM03. Siemens will add the new IO points to spare IO points in controller and will replace the existing points as required.
2. At the time of submission, for RTU-HS-4 & RTU-Hs-5, Siemens has included only BACnet IP connection to BAS from Microtech III BACnet communication module as per RTU cutsheets and only includes supply of 5 qty AFMS for these units.
3. At the time of submission, sequence of operations and cutsheets for existing Unit Ventilators were not available. Siemens has requested for existing unit sequences, cutsheets and wiring diagram, however, was not received. Siemens proposes the same sequence of operations which was provided for the Unit Ventilators in specification section 230923 clause 3.11/3 Unit Ventilators. Siemens has designed this unit based on the control schematics provided in detail A9 in drawing HS-M602 and will update the submittal as required once all requested information's are available.
4. At the time of submission, Siemens has connected the new IO points of the Heat Exchanger (HX-HS-2) and pumps (P-HS-4, 5) to the spare point terminals in existing HIGHSPXC22.
5. At the time of submission, Siemens has designed Blower coil unit's controller to be placed inside the Blower control unit control enclosure. Separate panel is not provided.

Job Name: Nanuet Bond Phase 3 High School
JOB #: 44OP-366733
Siemens Industry Inc – Smart Infrastructure
Valve Schedule Submittal

Valve Submittal Notes
2/16/2024

1. At the time of submission Siemens has followed the following reviewed cut sheets.
 - a. Indoor AHU - Unit Vents and Heat Pumps Rev-02.
 - b. RTU, AHU, CCU, BC & MC Rev-02.
 - c. Heat Exchanger.
2. At the time of submission, following cut sheets are not available. Valve for these units are sized based on GPM ratings given in Nanuet Bond Phase 3 HS Mech-Elec Drawings under mechanical schedule BM-M002, HS-M002 dated:06/06/23. Design may change upon receiving the cut sheets.
 - a. Unit heaters.
 - b. Heating coils cut sheets for existing AHU's.
 - c. Radiation panels.
 - d. Fin tube radiators.
 - e. Heating water radiation.
3. At the time of submission, all modulating valves are proposed based on specification details provided in the 230923/(2.10/C) dated: 06/08/23 and sequence of operations mentioned in specification section 23 09 23/(3.11/A) & (3.11/B).

A. Barr Middle School building:

1. At the time of submission, for Barr Middle School, existing pneumatic valves are replaced with new electric valves based on GPM data given in notes in drawings dated 06/06/2023. Coil data and pressure drops were not available at the time of design and to be confirmed on site.
2. Clarification: At the time of submission, 2-way modulating valves are proposed for existing Fin Tube Radiators as per control drawing detail-A10 in dwg BM-M602 dated 06/06/2023 and sequence of operations for Fin Tube Radiators mentioned in specification section 23 09 23/(3.11/B/5). As, tags are not available for existing FTR's, room numbers associated with existing FTR's are added in valve submittal comments for identification purpose.
3. Clarification: At the time of submission, as per note 17 & 18 in dwg BM-M110 the type of valves is not mentioned for Hot Water Storage Tank valve & Hot Water Booster Heater Heat Exchanger valve. Siemens has proposed 2-way modulating valves for these units.
4. Unit Ventilator heating coil control valve have been selected with the following characteristics:
 - a. Globe Valve, Stainless Steel trim
 - b. 2-Way Modulating Valve, Spring return, Normally Open.

SIEMENS

- c. ANSI 250
 - d. Close-off pressure: 120 psi.
- 5. Existing AHU valves have been selected with the following characteristics:
 - a. Globe Valve, Stainless Steel trim
 - b. 3-Way Modulating Valve, Spring return.
 - c. ANSI 250
 - d. Selected minimum Close-off pressure: 73 psi.
- 6. Existing Hot Water System valves for main building heating loop have been selected with the following characteristics:
 - a. Butterfly Valve, Stainless Steel trim
 - b. 3-Way Modulating Valve, Spring return.
 - c. ANSI 250
 - d. Selected minimum Close-off pressure: 175 psi.
- 7. Existing Hot Water System valves for hot water storage tank have been selected with the following characteristics:
 - a. Globe Valve, Stainless Steel trim
 - b. 2-Way Modulating Valve, Spring return, Normally Closed.
 - c. ANSI 250
 - d. Selected minimum Close-off pressure: 200 psi.
- 8. Existing Hot Water System valves for Hot Water Booster Heat Exchanger have been selected with the following characteristics:
 - a. Globe Valve, Stainless Steel trim
 - b. 2-Way Modulating Valve, Spring return, Normally Open.
 - c. ANSI 250
 - d. Selected minimum Close-off pressure: 201 psi.
- 9. Existing Fin Tube Radiator control valves have been selected with the following characteristics:
 - a. Globe Valve, Stainless Steel trim
 - b. 2-Way Modulating Valve, Spring return, Normally Open.
 - c. ANSI 250
 - d. Selected minimum Close-off pressure: 55 psi.
- 10. New Fin Tube Radiator control valves have been selected with the following characteristics:
 - a. Globe Valve, Stainless Steel trim
 - b. 2-Way Modulating Valve, Spring return, Normally Open.
 - c. ANSI 250
 - d. Selected minimum Close-off pressure: 120 psi.
- 11. Heating Water Radiator control valves have been selected with the following characteristics:
 - a. Globe Valve, Stainless Steel trim
 - b. 2-Way Modulating Valve, Spring return, Normally Open.
 - c. ANSI 250

SIEMENS

- d. Selected minimum Close-off pressure: 65 psi.

B. High School building:

1. Clarification: As per unit heater schedule in HS-M002 drawing and layout drawing given in HS-M107, these units are connecting to HW line. However, there is no specification related to valve control in SOO, hence Siemens has followed the specification given for cabinet unit heaters.
2. Existing heat exchanger 1/3 & 2/3 steam valves have been selected with the following characteristics:
 - a. Globe Valve, Stainless Steel trim
 - b. 2-Way Modulating Valve, Spring return, Normally Closed.
 - c. ANSI 125
 - d. Selected minimum Close-off pressure: 34 & 39 psi.
3. Clarification: Building steam pressure has been identified at 7psi. Heat exchanger manufacturer has requested an operating pressure of 15 psi. Siemens has provided 1/3 & 2/3 steam valves with total pressure drop of 1.2 psi as a system. Individual pressure drops for each valve listed in table. Siemens is expecting to deliver 5 psi to the HX, please confirm this is acceptable.
4. Existing hot water valve return bypass valve in crawl space have been selected with the following characteristics:
 - a. 50% of line GPM and 10 psi pressure drop is considered.
 - b. Globe Valve, Stainless Steel trim
 - c. 2-Way Modulating Valve, Spring return, Normally Closed.
 - d. ANSI 125
 - e. Selected minimum Close-off pressure: 200 psi.
4. Blower coil unit hot water valves have been selected with the following characteristics:
 - a. Globe Valve, Stainless Steel trim
 - b. 2-Way Modulating Valve, Spring return, Normally Open.
 - c. ANSI 250
 - d. Selected minimum Close-off pressure: 65 psi.
5. Convactor hot water valves have been selected with the following characteristics:
 - a. Globe Valve, Stainless Steel trim
 - b. 2-Way Modulating Valve, Spring return, Normally Open.
 - c. ANSI 250
 - d. Selected minimum Close-off pressure: 120 psi.
6. Radiator hot water valves have been selected with the following characteristics:
 - a. Globe Valve, Stainless Steel trim
 - b. 2-Way Modulating Valve, Spring return, Normally Open.
 - c. ANSI 250
 - d. Selected minimum Close-off pressure: 120 psi.

SIEMENS

7. Existing AHU hot water coil HC-HS-2 & HC-HS-4 valves for AHU-1 & AHU-2, have been selected with the following characteristics:
 - a. Globe Valve, Stainless Steel trim
 - b. 3-Way Modulating Valve, Spring return.
 - c. ANSI 250
 - d. Selected minimum Close-off pressure: 117 psi.
8. Existing AHU hot water coil HC-HS-3 valve for AC-1, have been selected with the following characteristics:
 - a. Globe Valve, Stainless Steel trim
 - b. 2-Way Modulating Valve, Spring return, Normally Open.
 - c. ANSI 250
 - d. Selected minimum Close-off pressure: 201 psi.
9. AHU-HS-3 hot water valve, have been selected with the following characteristics:
 - a. Globe Valve, Stainless Steel trim
 - b. 2-Way Modulating Valve, Spring return, Normally Closed.
 - c. ANSI 250
 - d. Selected minimum Close-off pressure: 73 psi.
10. Cabinet unit heater & unit heater hot water valve, have been selected with the following characteristics:
 - a. Ball Valve, Stainless Steel trim
 - b. 2-Way 2 Pos Valve, Spring return, Normally Open.
 - c. ANSI 250
 - d. Selected minimum Close-off pressure: 200 psi.
11. Existing control valves for existing unit ventilators shall be reused, siemens need to consider wiring from controller to control valve actuator.

Job Name: Nanuet Bond Phase 3 High School
JOB #: 44OP-366733
Siemens Industry Inc – Smart Infrastructure
Thermostat Location Submittal

Submittal Notes
2/16/2024

1. BACnet thermostats are proposed for controlling the existing & new FTR's, Heating Radiation & Convector Units.
2. At the time of submission, as per DWG BM-M112, note-4 thermostat is connected to EX S-2. However, as per note-28 the same thermostat is mentioned as it will be controlling the 2-way valve for EX FTR. Thereby new BACnet thermostat will be provided for EX FTR and temperature reading will be shared with EX S-2.
3. At the time of submission, as per DWG BM-M111, UV-MS-3 and FT-MS-1 serving classroom 102A are sharing a single thermostat. Siemens proposes a new BACnet thermostat which will be controlling the FTR valve. Space temperature reading from this thermostat will be shared with UV-MS-3. New separate thermostat is not considered for UV units.
4. At the time of submission, as per DWG HS-M109, RTU-HS-5, R-2-3 and R-2-4 serving cafeteria are sharing a single thermostat. Siemens proposes a new BACnet thermostat (1 qty) for heating floor radiation units (R-2-3, R-2-4) which will be controlling radiation units' valves. RTU-HS-5 will be provided with manufacturer supplied thermostat.
5. At the time of submission, as per DWG HS-M109, RTU-HS-4, R-2-1 and R-2-2 serving dining room 2 are sharing a single thermostat. Siemens proposes a new BACnet thermostat (1 qty) for heating floor radiation units (R-2-1, R-2-2) which will be controlling radiation units' valves. RTU-HS-4 will be provided with manufacturer supplied thermostat.
6. At the time of submission, as per DWG HS-M109, thermostats are not shown for Convector units. Siemens is proposing new BACnet thermostat for these units to control the valves and to monitor space temperature. CV-HS-1 & CV-HS-2, CV-HS-4 & CV-HS-5 are serving same areas so single thermostat for each pair is considered.

NOTES:

NEVER RUN NETWORK CABLING CLOSER THAN 5 FEET TO A VARIABLE FREQUENCY DRIVE (VFD) EXCEPT AT THE POINT WHERE THE NETWORK MUST CONNECT TO THE VFD. NETWORK ENTRY INTO A VFD MUST BE THROUGH A SEPERATE CONDUIT AND ALL NETWORK WIRING MUST BE KEPT AS FAR AS POSSIBLE FROM HIGH POWER CABLING IN THE DRIVE.

NEVER RUN NETWORK CABLE CLOSER THAN 5 FEET FROM CONDUITS CARRYING 100KVA OR GREATER. ALWAYS CROSS HIGH POWER CABLES (AT A DISTANCE OF 5 FEET) AT A 90° ANGLE.

NETWORK RUN IN OPEN CABLE TRAYS WITH CIRCUITS CARRYING 20 AMPS SHOULD BE NO CLOSER THAN 26 INCHES TO THE HIGHER POWER CABLES.

NETWORK RUN IN ENCLOSED TRAYS WITH CONDUITS CARRYING OVER 20 AMPS SHOULD BE NO CLOSER THAN 18 INCHES TO THE HIGHER POWER CABLES.

				SIEMENS INDUSTRY, INC. SMART INFRASTRUCTURE							

Important Safety Information

System-specific:

The electrical safety for building automation and control systems by Siemens Building Technologies is essentially based on safely separating low voltage from mains voltage.

Application as per SELV or PELV pursuant to HD 384 "Electrical installation of buildings" depending on the grounding (24V AC) of the low voltage:
Ungrounded = Safety Extra-Low Voltage (SELV).
Grounded = Protection by Extra Low Voltage (PELV).
Device-related safety is guaranteed, among others, by:

- Low-voltage power supply 24V AC per SELV or PELV
- Comply with specific regulations for electrical wiring per the following sections.
- Observe the following points when grounding 24V AC (system neutral):
- Operating voltage of 24V AC is permitted in principle for both grounded as well as non-grounded system neutral. Local regulations and customers apply accordingly.
- Grounding may be required or not allowed for functional reasons.
- 24V AC systems are generally grounded unless disadvised by the manufacturer.
- In order to avoid ground loops, connect systems with PELV to the ground at one location only (especially for transformers), if no other indication exists.

Mains and operating voltage:

Operating voltage 24V AC:

- It must meet requirements for SELV or PELV. Permitted deviation for nominal voltage 24V AC on the device: -10 +/– 20%.

Transformer specification 24V AC:

- Use safety insulating transformers as per EN 61558 with double insulation designed for 100% duty to supply SELV or PELV circuits..
- Power taken from the transformer should be at least 50% of nominal load for efficiency reasons (effectiveness).
- Transformer nominal power should be at least 25VA. For smaller transformers, the ratio of open circuit voltage to full load is unfavorable (> + 20%).

Operational voltage fuse 24V AC:

Transformers on the secondary side correspond to the actual load of all connected devices as per transformer sizing:

- 24V AC line (system potential) must always be fused.
- There required, also line (system neutral).

Mains filter:

Spikes and high-frequency interference may occur in areas with high levels of interference. The disturbances not only impact the transformer on the primary side, but may also influence secondary connected components.

A mains filter should be attached on the primary transformer if such interference is anticipated. Mains filters should be installed as close to the network transformer as possible and grounded.

Device-specific :

Devices using different power circuits:

Devices must have the required insulation of the power circuits from each other to be able to connect them directly without additional insulation.

Interfaces for different voltage circuits :

Connections via interfaces increase the risk of distributing dangerous voltage through the building. Ensure that the required insulation is available at all times and installed per applicable regulations.

DXR2 with 24V AC supply:

- A class 2 transformer or an external T4 A fuse is compulsory.
- Max. 100VA per transformer / per fuse circuit.

Installation:

Mounting position:

Recommended:

- Wall, horizontal from left to right or from right to left.
- Wall, vertical from bottom to top.
- Ambient temperature 23 to 122F (-5 to 50 °C)

AC 24V power lines:

- DXR2 room automation stations with 24V AC supply are limited to a consumption of 4A/100VA.
- Supply: Class 2 transformer OR external 4A fuse OR transformer >100VA for more than one DXR2. (In this case a separate 4A fuse is required for every 100VA).
- DXR2 room automation stations with 24V AC supply can only be wired in star topology.
- An external power supply of field devices should be fused separately for secure operation.

24V AC Transformer :

Operating voltage :

- The operating voltage is 24V AC. It must comply with SELV or PELV to HD 60364-4-41 (2007-01-01) requirements.
- The acceptable deviation of the 24V AC nominal voltage connected to the transformer is +20%/–10%. This means that after taking account of the cable and contact resistances, a tolerance of +/-20% for the field device supply can be guaranteed in the field devices.

Specification for 24V AC transformers:

- Double-insulated safety transformers to EN 61558, designed for continuous operation, to supply SELV or PELV circuits.
- The rated transformer output must be at least 50VA. In smaller transformers the ratio of no-load voltage to full-load voltage is unfavorable (> +20%).
- For reasons of power efficiency the rated transformer output should not exceed 200 % of the maximum load.

Wiring DXR2:

The 24V AC can only be wired in star distribution for the DXR2 room automation stations. 24V AC must be fused with max. 4A (or Class 2 transformer).

Power consumption DXR2 24V AC:

Max. permissible input current 24V AC (through terminals 5 and 6) = Total max. 4A.

Base load (without loading by field devices)

DXR2.M11, DXR2.x12P	9VA
DXR2.M18	11VA
DXR2.E18	13VA

KNX PL-Link supply	5VA/3W
--------------------	--------

29V DC / Max. 50 mA

The bus supply can be switched off manually via tool if not used. Transit power 24V AC

Field supply 24V AC	Max. 6VA
Field supply 24V DC (DXR2.E18 only)	Max. 2.4W
Digital output (triac active)	6VA (250mA)

Note: Certain applications ensure that only one triac at a time is active: No simultaneous heating and cooling. Two heating outputs are alternatively on 50% of the time, the same with two cooling outputs. This can be considered in the transformer sizing.

Unconfigured triac	6VA (250mA)
--------------------	-------------

Cable lengths 24V AC

The permissible voltage drop of 0.6 V on the power wire between the transformer and the most distant power point (room automation station, power module, bus interface module) is the basis for calculations.

Permissible load [VA]

Cable X-section	Cable length for 24V AC (SI)				
	2.5m	5.0m	10m	20m	50m
AWG16	200VA	100VA	50VA	25VA	10VA
AWG14	320VA	160VA	80VA	40VA	16VA
Cable X-section	Cable length for 24V AC (US)				
	8.2ft	16.4ft	32.8ft	65.6ft	164ft
AWG16	200VA	100VA	50VA	25VA	10VA
AWG14	320VA	160VA	80VA	40VA	16VA

Notes :

- The supply wire (24V AC) and return lines can each have the indicated lengths.
- Power is added together for multiple back-to-back looped PXC3 or DXR2 ("daisy chain") which reduces the cable length accordingly.
- Each supply point (room automation stations/power module/bus interface module) is either connected separately to the transformer's terminal block (star wiring) or looped via the room automation station.
- Cables may be wired in parallel to increase the cross section.

Wiring of field devices (without bus)

As a rule, comply with local regulations for electrical installations. These take precedence over any notes in this document.

Wiring for Triac outputs 24V AC.

The following applies for wiring to actuating devices such as valves, damper actuators or protection connected to the Triac outputs:

- Use stranded, 2 or multiple core round cables, screened (standard off-the-shelf installation cable).
- Single wires may not be used.
- Wiring may be laid together with power lines (230V AC). They must be isolated from the power lines per regulations. Isolation must meet PELV requirements.
- Wiring can not be led in the same cable as the power lines.
- See table below for maximum single cable lengths. However, the length must not exceed 984ft (300m) (EM interference). DXR2: 262ft (80m).

DXR2 room automation stations with 24V AC supply:

Use cable cross section suited for 4A according to local regulations (T 4A fuse external / Class 2 transformer). Cable cross section >= AWG18. Triacs are not protected and are destroyed if overloaded.

- Cable length <= 262ft (80m)

Signal wiring

The following applies in common for signal wiring of field devices such as temperature sensors, window switches, presence detectors, dew point sensors or electrical buttons:

- Use stranded, 2 or multiple core round cables, without screen (standard off-the-shelf installation cable).
- Single wires or ribbon cables may not be used.
- Signal wiring may be laid together with power lines (230V AC). They must be isolated from the power lines per regulations. Isolation must meet PELV requirements.
- Signal wiring can not be led in the same cable as the power lines.
- The length must not exceed the following value (measuring errors, EM interference): DXR2: 262ft (80m).
- All system neutral terminals of a device are interconnected. TX–I/O: The connection is not in the terminal base but in the plug-in module. When this unit is unplugged there is no connection.
- The system neutral of a digital input can be connected to any signal neutral terminal of the device.
- It is also permissible to combine the system neutral conductors of several digital inputs in order to save wire. TX–I/O: However, system ground must be connected at least once per module.
- With analog inputs and outputs, the measuring neutral must always be connected to the terminal associated with that specific I/O point to avoid possible measurement errors.
- 0 to 10V DC actuators with 0 to 10V DC feedback: System neutral of output and feedback may be in the same conductor due to the small current of the U10 and Y10 signals. However, output and feedback must be on the same device and there is no 24V DC supply current admissible on the system neutral conductor.

Relay outputs

- External fuse of max. 10A for protection of the PCB tracks.
- Relays have volt-free relay contacts. The mains voltage / switching voltage (230V AC / 24V AC/DC) must be supplied as an external voltage to the terminals.
- The maximum load of the relay contracts must be observed (see data sheets for the corresponding devices)
- The sizing and fusing of the power lines are oriented to overall connected load and local regulations.
- The fused electrical values must therefore be reviewed in the data sheets for the corresponding devices.
- The lines must be secured on the device with strain relief.
- Cable length: as per load and local regulations.
- The maximum current of the relays is limited to 4 (3)A.

Inputs and Outputs

Digital inputs

Cable length

The permissible length of the cables connected to the status contacts, regardless of the thickness of the wire (min. diameter 0.024in / 0.6mm) is restricted to 262ft (80m).

Common conductor with multiple contacts:

When several status or counter contacts are to be connected, a common conductor may be used. This saves wiring. However, system ground must be connected at least once per module. Digital inputs are not electrically isolated from the system electronics. Mechanical contacts must be volt-free. Electronic switches must comply with SELV or PELV standards.

Analog inputs

Cable length:

The maximum permissible cable length for passive resistance sensors and transmitters depends on the permissible measuring error due to the line resistance. The maximum cable length for DXR2 is 262ft (80m).

Active sensors 0 – 10V DC

Cable length:

The maximum cable length for DXR2 is 262ft (80m). The permissible length of 10V DC cables for measured signals, and of the cables to supply the sensors from the TRA device, have to be calculated on the following basis for each active sensor.

- Max. 7% voltage drop (1.68V) on the cables due to the sensor supply current. Reason: to ensure sufficient voltage for the sensor supply.
- Measuring error of max. 0.5% of the measuring range due to line resistance on the measuring conductor (not critical, as the measuring current is only 0.1mA)
- Longer cables are permissible provided larger measuring errors are acceptable.
- If the active sensor is supplied locally from a transformer, the sensor cable can be up to 984ft (300m) long (DXR2: 262ft (80m)) with a wire diameter of greater than or equal to 0.024in (0.6mm). The local transformer MUST NOT be earthed (earth loop)!
- In case of active sensors with 24V AC supply, use cable cross section suited for 10A according to local regulations .
-

Digital outputs (relays, triacs)

Cable length:

The cable between the switching outputs and the equipment to be switched may be up to 262ft (80m) for DXR2.

The permissible lengths of the cables between the relay outputs / triacs and the actuators depend on the type of actuator in use and are calculated as follows:

Relays: Voltage drop of max. 7% (1.68V) on the 24V AC operating voltage for the actuator.

Triacs: Voltage drop of max. 3% (0.72V) on the 24V AC operating voltage for the actuator (the triac itself has already 4% voltage drop).

Analog outputs

Cable length

The permissible cable lengths for 0 – 10V DC control signals and for the 24V AC operating voltage are given in the data sheets of the individual actuators.

Where the actuators are supplied locally with 24V AC, the control signal cable may be up to 984ft (300m) long (DXR2: 262ft (80m)) with a diameter of greater than or equal to 0.024in (0.6mm).

The local transformer MUST NOT be earthed (earth loop)!

0 – 10V DC actuators with 0 – 10V DC feedback: System neutral of output and feedback may be in the same conductor due to the small current. However, output and feedback must be on the same device.

0

DWIR1

Ethernet network:

Network topologies

- Star topology (general).
- Line topology (for room automation).
- DXR2 and PXC3 can be mixed.
- The number of room automation stations is limited to 20 for a line topology (daisy chain).
- The next device has no 24V AC power when a room automation station is removed. The connection exists only on the board, but not on the terminal block.
- The Ethernet switch is inactive when a room automation station has no 24V AC power. The next devices, if in line topology, are disconnected from the network. For secure operation of the system it is recommended to supply each room automation station separately with 24V AC.

Cables – Room automation stations are connected to one another via switches and Ethernet cables with RJ45 connectors. The following conditions must be met:

- Standard Ethernet cable min. category 5
- Shielded or unshielded STP (Shielded Twisted Pair) or UTP (Unshielded Twisted Pair).
- Length between switch and Room automation station max. 328ft (100m).
- Length between Room automation stations Max. 328ft (100m).
- Number of devices under a line topology max. 20.
- Standard IT product at 100MB or 1GB.

Power over Ethernet (PoE) – Power over Ethernet (PoE) is a simple solution to supply power to room operator units consuming only little power. This saves a power cable and associated installation costs. PoE allows for installing Ethernet devices also in hard-to-access locations or areas where too many cables are an issue. In PoE, power sourcing equipment (PSE) supplies power to powered devices (PD, here: end devices). Voltage is supplied via the RJ45 plugs and a twisted-pair cable (TP) to the devices either:

- Via data transmission lines
- Or via unused lines of the RJ45 connection.

PoE requires a star topology. Standard PoE switches have between 4 and 16 outputs. In large plants (e.g. different rooms in a hotel) require use of multiple switches in a line topology.

Specifications:

Standard Ethernet cable min category 5
Screened or unscreened STP / UTP
STP (Shielded Twisted Pair)
or UTP (Unshielded Twisted Pair)
Distance between switch and station = max 328ft (100m).
Distance between switch and end unit = max 328ft (100m).

MS/TP networks:

Network topologies – MS/TP networks for Desigo TRA can only be wired in line topology. The network distance for a fully or partially loaded network is 4000ft (1220m) at a maximum network speed of 76,800 bps. Lower speeds do not mean longer network sections are possible. DXR2 controller support up to 115,200 bps. Network repeaters can be used to extend this distance. To determine how many devices can be on a network section, add up all the loading numbers and do not exceed 32. Many third-party devices have full load interfaces. Check the manufacturer's literature for network loading information. The RS-485 specification allows 32 full load devices on a section of network cable before a repeater is required. Desigo TRA devices are 1/8 load devices, so, in theory, you could place 256 on a network section.

Response times normally limit the maximum number of devices on a network to lower values of around 96 devices.

- Two 1200hm ½W resistors between + and – at BOTH ends of the network section.
- OneSpecial PTC thermistor between Reference) and earth at ONE end of the network section. This prevents the cable from being damaged by high ground currents that may occur if the reference wire is accidentally grounded to earth ground at a second location.

Technical data BACnet MS/TP – Inter-node protocol communications on BACnet MS/TP networks take place over RS-485 physical media. Desigo TRA devices use the 3-wire interface.

- By providing the RS-485 ground signal of the interface to the network termination plug, all node communication ports can be referenced together providing a high degree of noise immunity.
- The RS-485 common reference wire is terminated at one point (and only one point) to earth ground.
- An overall foil shield and drain wire provide additional noise protection.
- The decision to use the orange jacket cable or orange jacket with blue stripe cable is up to the user/customer. The only difference in the cables is the addition of the blue stripe, which can be useful to indicate a different protocol usage (e.g. Automatic level vs. floor level network).

Cable Specifications

Transmission medium 1.5-Pair (1 TP & 1 conductor) (bus cable) with overall Shield and drain wire
Gauge (pair) 24 AWG (0.25 mm2) stranded
Capacitance conductor to conductor 12.5 pF/foot (41 pF/m)
conductor to shield 24 pF/foot (79 pF/m)
Impedance 120 Ohm
Twists min. 4 per foot (13 per m)
Reference wire 24 AWG (0.25 mm2) stranded, 3 inch lay with twisted pair
Shield 100% overall foil with drain wire
NEC class UL listed, CM, CMP (167°F (75°C or higher)
CEC class FT4, FT6 (167°F (75°C) or higher)

KNX PL-Link room bus:

- The KNX PL-Link bus must be conducted inside the building. The cables must never leave the building.
- The KNX PL-Link bus facilities communications from the PXC3 room automation station to a maximum 64 devices on the KNX bus devices for various manufacturers.
- Note: The number of devices is also limited by the number of data points and the available bus power. Data points and bus power are incremented during engineering with the ABT tool.
- The KNX PL-Link bus basic version comprises one cable and two stranded bus wires.
- The PXC3 has one internal bus power supply of 160mA.
- The DXR2 has one internal bus power supply of 50mA.
- The PXC3 also includes an 24V AC / 2A output for devices with increased power consumption that is supplied via 24V AC rather than via the KNX PL-Link bus.
- The KNX PL-Link is physically based on the KNX bus (Konnex).
- In KNX networks area/line couplers and IP routers are not admitted.

- Interconnection of room automation stations via KNX PL-Link is not admissible; the connection is done exclusively via Ethernet switches (Section 9).
- The polarity of the KNX PL-Link bus conductors must be respected (KNX terminals + and –).

Bus power supply – A bus power supply is required for bus communications. Throttled voltage 29V DC is used.

Internal KNX PL-Link Power Supply: The room automation stations have an internal bus power supply, which is switched on by default. If an external supply is used, the internal supply must be switched off manually in the ABT (KNX PL-Link rail properties), as parallel operation is not permitted. Bus power and the KNX bus are electrically isolated from device electronics for devices with bus power. Parallel operation of the internal KNX PL-Link bus supply with an external bus power supply is not permitted. The internal bus power supply must be switched off in the tool when an external bus power supply is used.

External bus supply:

An external bus power supply unit (PSU) is required when the 160mA of the PXC3 / the 50mA of the DXR2 is insufficient to cover the power demand of the connected devices. Power supply units for 160, 320 and 640mA available in specialty stores. The total power supply for the devices must be calculated to determine the appropriate size. Comply with the corresponding details in the datasheet. A 640mA power supply unit suffices for a line featuring 64 devices on the KNX bus with an average power demand of 10mA each.

(Parallel operation)

- In principle, parallel operation of external bus supplies among themselves is possible. However, check if the specific PSU is allowed to be operated in parallel with other PSUs. Refer to the technical specifications. The below mentioned Siemens devices are not submitted to this restriction.
- A minimum cable distance is required between two PSU.

Bus topologies – Up to 64 devices with KNX PL-Link can be installed on one line (main line as well). No restrictions apply to the type mix.

Note:

- There is no need to calculate the bus load number E for up to 64 devices.
- A maximum of 64 devices may be installed even if devices requiring less power are used.

Permissible bus topologies are: Tree, line, and star topologies. These topologies can be mixed as needed. However, ring topologies are not allowed. The tree topology is advantageous if a large network must be created.

Cables

The bus lines (= wired pair) are connected via PL+ (red) and PL- (black).

24V AC can be provided in the same (2 x 2 stands) or in a separate cable.

Bus cable screening : In TRA plants, bus cables without screen are permitted. The screens available for bus cables do not need to be connected. If interference is expected on the KNX bus, use a cable with screen. Connect the screen as per standard installation rules.

Network with internal power supply: Comply with the following distances for a KNX network with the internal power supply from the room automation station:

- Distance between device and internal supply, max 262ft (80m).
- Distance between devices, max 262ft (80m).
- Total length of all lines on one line, max 262ft (80m).

Network with external power supply: Comply with the following distances for a KNX network with external bus power supply (PSU)

- Distance PSU to PXC3 with switched off internal supply, Min. 0ft (0m).
- Distance device to next PSU, Max. 1148ft (350m).
- Distance between two PSU operated in parallel Min. 656ft (200m), (Min. 0ft (0m) for the new Siemens power supply modules.).
- Distance between devices, Max. 2297ft (700m).
- Total length of all lines on one line, Max. 3281ft (1000m).

Polarity: Important – The bus conductors must NOT be inverted. (KNX terminals + and –).

Permissible load [VA] :

Cable length for 24V AC					
AWG	32.8ft	65.6ft	164ft	328ft	656ft
AWG20	48VA	30VA	12VA	6VA	3VA
AWG18	48VA	48VA	20VA	10VA	5VA
AWG16	48VA	48VA	32VA	16VA	8VA
AWG14	48VA	48VA	48VA	24VA	12VA

Permissible load [VA] (SI):

Cable length for AC 24V					
AWG	10m	20m	50m	100m	200m
AWG20	48VA	30VA	12VA	6VA	3VA
AWG18	48VA	48VA	20VA	10VA	5VA
AWG16	48VA	48VA	32VA	16VA	8VA

KNX PL-Link Technical data

KNX bus :

- Transmission medium (bus cable),TP (twisted pair)
- Baud rate, 9.6 kbps (fixed for TP)
- Bus line polarity, PL+, PL- (not interchangeable)
- Bus terminating resistor, Not required.

KNX bus cable:

- Cable type, 18AWG two conductor, solid, communication cable (Belden 6320FE877 or similar).
- Wire diameter, Min. 0.8 mm (AWG20), Max. 1.0 mm (AWG18).
- Line resistance, 20 to 75 Ω/km.
- Specific capacity, 10 to 100 nF/km at 10 kHz.
- Specific inductivity, 450 to 850 µH/km at 10 kHz.
- Screens, Not required.

Bus power supply: DXR2 is 30V DC, 50mA for max. 5 KNX devices with 10mA each .

Max. number of devices: 64 devices in a KNX PL-Link network.

Tree Topology(with stub lines)

Line Topology (with loops)

Device with screw terminals

T branch with bus terminals

Device with spring cage terminals

NOTES (Cont.):

- 6

DI Excitation: Open Circuit Voltage: 24 Vdc . Short Circuit Current: 20 mA . Maximum Load Current: 8 mA .
- 7

Pulse Accumulator Sensing: Same Excitation as DI. Maximum Input Frequency: 20 Hz . Minimum Pulse Duration: 20 ms, 50% DC/50ms pulse width.
- 8

10K Type II NTC Thermistor: Switch selectable. 24Vdc Supplied to Sensor. Temperature range 55°F to 95°F.
- 9

Input Power Range: 19.2 Vac to 28.8 Vac (50 or 60 Hz) 4 VA
- 10

MAXIMUM WIRE RUN LENGTHS ARE BASED ON THE CURRENT DRAW AND WIRE GAGE. SEE DRAWING TWIR.
- 11

SEE CONTROL DRAWINGS FOR NORMAL DE-ENERGIZED CONTACT STATE
- 12

MAXIMUM CONTACT CLOSURE RATE IS 10 PER SECOND
DI EXCITATION = 24VDC, 10mA
UI, U EXCITATION = 24VDC, 6mA, 150ms, 1mA
- 13

MAXIMUM PULSE RATE = 20HZ (25ms PER STATE, 50ms PRE PULSE.
- 14

PPM DO CONTACT RATINGS
AC OPERATION:
4A @ 240VAC (RESISTIVE)
3A @ 240VAC (INDUCTIVE)
SIZE 4 MOTOR STARTER
DC OPERATION:
40W @ < 50VDC
20W @ > 50VDC

- 15

EXTERNAL POWER SUPPLY CAN EITHER BE A 24VDC POWER SUPPLY OR A 24VAC TRANSFORMER DEPENDING ON THE SENSOR SELECTED. IF NOT AN ISOLATED NC CLASS 2 CIRCUIT THEN POWER SOURCE, NEUTRAL AND PPM COMMON MUST BE BOTH CONNECTED TO THE SAME OR BONDED BUILDING APPROVED EARTH GROUND. FOR FURTHER DETAILS SEE EARTH GROUNDING RULES (125-3002) APOGEE WIRING GUIDELINES FOR FIELD PANELS AND EQUIPMENT CONTROLLERS.
- 16

50mA OR LESS – 750ft/230m
50mA TO 100mA – 375ft/115m
- 17

100mA TO 150mA – 250ft/76m
150mA TO 200mA – 187ft/57m
200mA TO 250mA – 150ft/46m
- 18

WHERE H TERMINAL IS NOT A NEC CLASS 2 CIRCUIT, RELAY COMMON TERMINAL BRANCH CURRENT MUST BE EXTERNALLY LIMITED TO 10A MAXIMUM BY A NEC APPROVED MEANS. NOT A FUSE.
- 19

WHERE REQUIRED, NEUTRAL TERMINAL BRANCH CURRENT MUST BE EXTERNALLY LIMITED BY A NEC APPROVED MEANS.

PXCC WIRING TYPE AND GAUGE REQUIREMENTS

TABLE 1

CIRCUIT TYPE	CLASS	WIRE TYPE	MAX. DISTANCE	CONDUIT SHARING ²
AC LINE POWER ¹	POWER	#12–14 THHN	REFER TO NEC	CHECK LOCAL CODES
DIGITAL OUTPUT	1 & 2	TP not required, check job specs & local codes #18 to #24 AWG	SEE TABLE 3	CHECK LOCAL CODES
DIGITAL INPUT	2	TP not required, check job specs & local codes #18 to #24 AWG	750ft (230 m)	CHECK LOCAL CODES
ANALOG INPUT ⁴ 100K/10K Thermistor	2	#18–#24 TP ^{3,6} or TSP ⁵ CM(FT4) or CMP(FT6)	750ft (230 m)	CHECK LOCAL CODES
ANALOG INPUT ⁴ 1K Ni OR RTD	2	#18–#24 TP ^{3,6} or TSP ⁵ CM(FT4) or CMP(FT6)	750ft (230 m)	CHECK LOCAL CODES
ANALOG INPUT 0–10 V	2	#18–#24 TP ^{3,6} or TSP ⁵ CM(FT4) or CMP(FT6)	750ft (230 m)	CHECK LOCAL CODES
ANALOG INPUT 4–20 mA	2	#18–#24 TP ^{3,6} or TSP ⁵ CM(FT4) or CMP(FT6)	750ft (230 m)	CHECK LOCAL CODES
ANALOG OUTPUT 0–10 V	2	#18–#24 TP ^{3,6} or TSP ⁵ CM(FT4) or CMP(FT6)	750ft (230 m)	CHECK LOCAL CODES
ANALOG OUTPUT 4–20 mA	2	#18–#24 TP ^{3,6} or TSP ⁵ CM(FT4) or CMP(FT6)	750ft (230 m)	CHECK LOCAL CODES
ETHERNET ALN	2	#24 (4) TP ⁶ CAT5 OR BETTER	295ft (90 m)	CHECK LOCAL CODES
ALN TRUNK	2	#24 TSP	SEE TABLE 4	CHECK LOCAL CODES

- WHEN DAISY-CHAINING 24VAC POWER TO CONTROLLERS USE #14 WIRE.
- CONDUIT SHARING RULES: ONLY WHERE LOCAL CODES PERMIT. BOTH CLASS1 AND CLASS 2 WIRING CAN BE RUN TO THE PXCC PROVIDED THE CLASS 2 WIRE IS UL LISTED 300V 75°C(167°F) OR HIGHER OR THE CLASS 2 WIRE IS NEC TYPE CM (FT4) (75°C OR HIGHER) OR CMP(FT6) (75°C OR HIGHER). NEC TYPE CL2 AND CL2P IS NOT ACCEPTABLE UNLESS ALSO UL LISTED AND MARKED 300V 75°C (167°F) OR HIGHER
- TWISTED PAIR, NON-JACKETED UL LISTED 75°C(167°F) AND 300V, CABLE CAN BE USED IN PLACE OF CM(FT4) OR CMP(FT6)(BOTH MUST BE RATED 75°C OR HIGHER) CABLE WHEN CONTAINED IN CONDUIT PER LOCAL CODES. SEE THE FIELD PURCHASING GUIDE FOR WIRE.
- WIRE LENGTH AFFECTS POINT INTERCEPT ENTRY. ADJUST INTERCEPT ACCORDINGLY FOR EACH WIRE GAUGE AND SENSOR TYPE.
- SHIELDED TWISETED PAIR (TSP) IS NOT REQUIRED FOR ELECTRICAL NOISE LEVELS UPTO 10 V/M. AT HIGHER LEVELS TSP MAY BE NEEDED.TERMINATE SHIELD ON ENCLOSURE AND TAPE BACK ON POINT END.
- FOR 24AWG INSTALL CATEGORY5 OR BETTER CABLE PER ANSI/TIA/EIA-568-B.1 OR HIGHER. USE SOLID COPPER BETWEEN JACK BOXES. USE STRANDED COPPER PATCH CABLES 13ft (4m) TO CONNECT PXCC AND 20ft (6m) TO CONNECT SWITCH OR HUB.

PXCC WIRE SPECIFICATIONS

TABLE 2

	LOW-VOLTAGE POINT APPLICATIONS	POINT USAGE	ALN TRUNK	EALN
CABLE CONFIGURATION	TWISTED PAIR OR TSP	TWISTED PAIR (UNJACKETED) OR TSP	TWISTED SHIELDED PAIR	(4) TWISTED PAIR
GAUGE	#18 TO #22 AWG (STRANDED)	#18 TO #22 AWG (STRANDED)	24 AWG (STRANDED)	24AWG(STRANDED)
CAPACITANCE	n.a.	n.a.	12.5 pf/ft OR LESS	13 pf/ft OR LESS
TWISTS PER FOOT	6 MINIMUM	6 MINIMUM	6 MINIMUM	CATEGORY 5 Min
SHIELDS	NOT REQUIRED (IN CASE OF TSP, 100% FOIL W/ DRAIN WIRE)	NOT REQUIRED (IN CASE OF TSP, 100% FOIL W/ DRAIN WIRE)	100% FOIL W/ DRAIN WIRE	NOT REQUIRED
NEC CLASS	CM, CMP (75°C OR HIGHER)	NOT SPECIFIED	CM, CMP (75°C OR HIGHER)	MM, MMP
CEC CLASS	FT4, FT6 (75°C OR HIGHER)	NOT SPECIFIED	FT4, FT6 (75°C OR HIGHER)	NOT SPECIFIED
UL VOLTAGE RATING	NOT SPECIFIED	300 VAC ²	NOT SPECIFIED	NOT SPECIFIED
UL TEMP. RATING	NOT SPECIFIED	75°C (167°F)	NOT SPECIFIED	NOT SPECIFIED

- UL RECOGNIZED WIRE (LABELED WITH A BACKWARDS 'RU') IS NOT FIELD INSTALLABLE. USE ONLY UL-LISTED WIRE.
- 300 VAC WIRE CAN BE USED IN FIELD PANELS CONTAINING VOLTAGES BELOW 150 VAC.

MAXIMUM DO WIRE RUN LENGHTS

TABLE 3

NOMINAL INRUSH	STARTER SIZE	WIRE SIZE		
		#18	#16	#14
200 VA	0 1	500ft (152m)	900ft (274m)	1400ft (427m)
550 VA	2	200ft (61m)	300ft (91m)	500ft (152m)
1150 VA	3	100ft (30m)	150ft (46m)	250ft (76m)
1500 VA	4	70ft (21m)	100ft (30m)	200ft (61m)

TABLE 3 NOTES:

- DISTANCES SHOWN ASSURE LESS THAN 10% VOLTAGE DROP ACROSS THE WIRE FOR A TYPICAL STARTER.
- PXCC DO CONTACT RATINGS
4A @ 250VAC & 30VDC
SIZE 4 MOTOR STARTER
- WIRING LENGTHS SHOWN ARE FOR 120VOLTS.

MAXIMUM NUMBER HSTIE IN SERIES ON ALN TRUNK

TABLE 4

6

SPEED	1200 BAUD	4800 BAUD	9600 – 38.4K BAUD	57.6K – 115.2K BAUD
SERIES TIE'S	10	7	6	
ALN TRUNK DISTANCE	4000ft (1.2km)	4000ft (1.2km)	4000ft (1.2km)	3280ft (1km)

- TIE MUST BE USED TO ISOLATE ALN BETWEEN PXCC CONNECTED TO DIFFERENT SERVICE GROUNDS OR ON BOTH SIDES OF THE ALN CABLE THAT EXITS BUILDING.
- THE MAX ALN DISTANCE APPLIES TO EACH SIDE OF THE TIE.

GENERAL NOTES:

- COMPLY WITH LOCAL BUILDING CODES
- SIZE WIRE FOR LOAD, CURRENT, AND VOLTAGE.
- ALL WIRE TO BE APPROVED OR LISTED FOR THE INTENDED APPLICATION BY AGENCIES SUCH AS UL, NEC, CSA.
- ALWAYS REFER TO LOCAL CODES FOR CONDUIT SHARING.
- WIRING MUST HAVE INSULATION RATED FOR HIGHEST VOLTAGE CIRCUIT IN CONDUIT.
- THE ALN TRUNK MUST BE AN UNINTERRUPTED RUN BETWEEN CABINETS. NO SPLICES ALLOWED.
- CM/CMP/MM/MMP WIRE IS NOT USABLE FOR CLASS 1 CIRCUITS.
- FOR EXTENDED TEMPERATURE INSTALLATIONS USE ONLY COPPER WIRE LISTED FOR 90°C OR HIGHER

P1 PXCC CONDUIT PENETRATIONS

PRODUCT	24VAC VA RATING	24VDC mA
PX COMPACT 16	18	100
PX COMPACT 24	20	100
PX COMPACT 36	35	200

NOTES:

- NO MORE THAN SEVEN (7) FULLY LOADED PXCC CABINETS ALLOWED ON A SINGLE 3-WIRE CIRCUIT.
- RECEPTACLE IS PRE-WIRED AND MOUNTED IN FACTORY, FOR 115VAC SERVICE BOX ONLY.

P2 PXCC POWER WIRING

NOTES:

- COMMUNICATION CONNECTORS PLUG INTO PXCC.
- ALN MUST BE DAISEY-CHAINED WHEN RUNNING 19.2 k BAUD OR FASTER AND TRUNK TERMINATORS USED AT BOTH ENDS OF LINE P3C.
- TERMINATE SHIELD AT LEAVING END OF ALN TRUNK ONLY.
- USE ALN SHIELD TERMINATION P3A WHEN 24VAC E TERMINAL IS EARTH GROUNDED.
- USE ALN SHIELD TERMINATION P3B WHEN 24VAC E TERMINAL IS OPEN.

NOTE:
REFER TO "APOGEE WIRING GUIDELINES FOR FIELD PANELS AND EQUIPMENT CONTROLLERS (125–3002)" FOR FLN WIRING CONFIG'S.

P3 PXCC COMMN TERMINATIONS

PXCC ON ETHERNET CONNECTOR

E: EALN ETHERNET CONNECTOR RJ-45 SHIELDED JACK FOR ETHERNET PATCH CABLE

H: PXCC – HMI⁷ RJ45 JACK FOR RS232 SERVICE MODE SERIAL PRINTER OR PXCC

ETHERNET ALN	2	#24 (4) TP ⁶ CAT5 OR BETTER	295ft (90 m)	CHECK LOCAL CODES
ALN TRUNK	2	#24 TSP	SEE TABLE 4	CHECK LOCAL CODES

- WHEN DAISY-CHAINING 24VAC POWER TO CONTROLLERS USE #14 WIRE.
- CONDUIT SHARING RULES: ONLY WHERE LOCAL CODES PERMIT. BOTH CLASS1 AND CLASS 2 WIRING CAN BE RUN TO THE PXCC PROVIDED THE CLASS 2 WIRE IS UL LISTED 300V 75°C(167°F) OR HIGHER OR THE CLASS 2 WIRE IS NEC TYPE CM (FT4) (75°C OR HIGHER) OR CMP(FT6) (75°C OR HIGHER). NEC TYPE CL2 AND CL2P IS NOT ACCEPTABLE UNLESS ALSO UL LISTED AND MARKED 300V 75°C (167°F) OR HIGHER
- TWISTED PAIR, NON-JACKETED UL LISTED 75°C(167°F) AND 300V, CABLE CAN BE USED IN PLACE OF CM(FT4) OR CMP(FT6)(BOTH MUST BE RATED 75°C OR HIGHER) CABLE WHEN CONTAINED IN CONDUIT PER LOCAL CODES. SEE THE FIELD PURCHASING GUIDE FOR WIRE.
- WIRE LENGTH AFFECTS POINT INTERCEPT ENTRY. ADJUST INTERCEPT ACCORDINGLY FOR EACH WIRE GAUGE AND SENSOR TYPE.
- SHIELDED TWISETED PAIR (TSP) IS NOT REQUIRED FOR ELECTRICAL NOISE LEVELS UP TO 10 V/M. AT HIGHER LEVELS TSP MAY BE NEEDED.TERMINATE SHIELD ON ENCLOSURE AND TAPE BACK ON POINT END.
- FOR 24AWG INSTALL CATEGORY5 OR BETTER CABLE PER ANSI/TIA/EIA-568-B.1 OR HIGHER. USE SOLID COPPER BETWEEN JACK BOXES. USE STRANDED COPPER PATCH CABLES 13ft (4m) TO CONNECT PXCC AND 20ft (6m) TO CONNECT SWITCH OR HUB.

PXCM WIRE SPECIFICATIONS

SIZE 4 MOTOR STARTER

MAXIMUM NUMBER HSTIE IN SERIES ON ALN TRUNK

TABLE 4

SPEED	1200 BAUD	4800 BAUD	9600 – 38.4K BAUD	57.6K – 115.2K BAUD
SERIES TIE'S	10	7	6	6
ALN TRUNK DISTANCE	4000ft (1.2km)	4000ft (1.2km)	4000ft (1.2km)	3280ft (1km)

- TIE MUST BE USED TO ISOLATE ALN BETWEEN PXCM CONNECTED TO DIFFERENT SERVICE GROUNDS OR ON BOTH SIDES OF THE ALN CABLE THAT EXITS BUILDING.
- THE MAX ALN DISTANCE APPLIES TO EACH SIDE OF THE TIE.

GENERAL NOTES:

- COMPLY WITH LOCAL BUILDING CODES
- SIZE WIRE FOR LOAD, CURRENT, AND VOLTAGE.
- ALL WIRE TO BE APPROVED OR LISTED FOR THE INTENDED APPLICATION BY AGENCIES SUCH AS UL, NEC, CSA.
- ALWAYS REFER TO LOCAL CODES FOR CONDUIT SHARING.
- WIRING MUST HAVE INSULATION RATED FOR HIGHEST VOLTAGE CIRCUIT IN CONDUIT.
- THE ALN TRUNK MUST BE AN UNINTERRUPTED RUN BETWEEN CABINETS. NO SPLICES ALLOWED.
- CM/CMP/MM/MMP WIRE IS NOT USABLE FOR CLASS 1 CIRCUITS.
- FOR EXTENDED TEMPERATURE INSTALLATIONS USE ONLY COPPER WIRE LISTED FOR 90°C OR HIGHER

ENCLOSURE H x W x D (IN)

NOTES: All control valves and wells shall be installed by the heating contractor.

SIEMENS INDUSTRY, INC.
SMART INFRASTRUCTURE

Valve Submittal - Water

LOCATION:	NANUET, NY	PROJECT NAME:	NANUET BOND PHASE3 HIGH SCHC	DATE:	2/16/24
JOB NO:	44OP-366733			PAGE:	3
ENGR:	VB			REV:	0

GENERAL NOTES:

1. All valves 2-1/2" and larger have flanged ends, 2" and smaller have screwed ends.
2. All control valves and wells shall be installed by the mechanical contractor.
3. Standard abbreviations used on control valves are:

BODY TYPES: 3W - Three way; 2W - Two way; A - Angle; N.C. - Normally Closed; N.O. - Normally Open;
NOC - Ball Valve can be N.O. or N.C.; BF - Butterfly Valve; DS - Double Seated;

UNITS:

Steam inlet pressure, actual pressure drop, and shut off pressure indicated in PSIG.

ACTUATOR TYPES: SR - Spring Return; NSR - No Spring Return
CR - Capacitor Driven Return; DA - Double Acting

PROPOSED SEQUENCE OF OPERATION

UNIT VENTILATORS & HEAT PUMP

1. RUN CONDITIONS – SCHEDULED:

1) THE UNIT SHALL RUN ACCORDING TO A USER DEFINABLE TIME SCHEDULE IN THE FOLLOWING MODES:

a) OCCUPIED MODE: THE UNIT SHALL MAINTAIN

1) A 76°F (ADJ.) COOLING SETPOINT

2) A 70°F (ADJ.) HEATING SETPOINT.

b) UNOCCUPIED MODE (NIGHT SETBACK): THE UNIT SHALL MAINTAIN

1) A 85°F (ADJ.) COOLING SETPOINT.

2) A 64°F (ADJ.) HEATING SETPOINT.

2) UNIT VENTILATOR SENSORS SHALL INCLUDE LOCAL TEMPERATURE BUT SHALL NOT ALLOW USER TEMPERATURE SENSOR OVERRIDE CAPABILITY FROM THE SENSOR, THAT SHALL OCCUR AT THE DDC FRONT END.
- 3) ALARMS SHALL BE PROVIDED AS FOLLOWS:

a. HIGH ZONE TEMP: IF THE ZONE TEMPERATURE IS GREATER THAN THE COOLING SETPOINT BY A USER DEFINABLE AMOUNT (ADJ.).

b. LOW ZONE TEMP: IF THE ZONE TEMPERATURE IS LESS THAN THE HEATING SETPOINT BY A USER DEFINABLE AMOUNT (ADJ.).

c. ZONE UNOCCUPIED OVERRIDE:

a) A TIMED LOCAL OVERRIDE CONTROL SHALL ALLOW AN OCCUPANT TO OVERRIDE THE SCHEDULE AND PLACE THE UNIT INTO AN OCCUPIED MODE FOR AN ADJUSTABLE PERIOD OF TIME. AT THE EXPIRATION OF THIS TIME, CONTROL OF THE UNIT SHALL AUTOMATICALLY RETURN TO THE SCHEDULE.

d. FREEZE PROTECTION:

a) THE UNIT SHALL SHUT DOWN AND GENERATE AN ALARM UPON RECEIVING A LOW TEMPERATURE THERMOSTAT STATUS WHILE THE OUTSIDE/RETURN AIR DAMPER SHALL CLOSE THE OUTSIDE AIR DAMPER AND OPEN THE FACE AND BYPASS DAMPER FULLY OPEN TO THE BYPASS POSITION.

e. FAN:

a) THE FAN SHALL RUN ANYTIME THE UNIT IS COMMANDED TO RUN, UNLESS SHUTDOWN ON SAFETIES.

f. FACE AND BYPASS DAMPERS CONTROL:

a) THE UNIT SHALL MAINTAIN ZONE HEATING AND COOLING SETPOINTS BY MODULATING THE FACE AND BYPASS DAMPERS THROUGH ONE OF THE FOLLOWING:

- 1) HEATING:

a) WHEN THE ZONE TEMPERATURE IS LESS THAN THE HEATING SETPOINT, THE FACE AND BYPASS DAMPERS SHALL MODULATE OPEN TO FACE POSITION (CLOSED TO BYPASS POSITION) TO MAINTAIN SETPOINT BY MODULATING THE AIR PASSING OVER THE HEATING COIL.

b) WHEN THE ZONE TEMPERATURE IS GREATER THAN THE HEATING SETPOINT, THE FACE AND BYPASS DAMPERS SHALL CLOSE TO FACE POSITION (OPEN TO BYPASS POSITION).

c) HEATING COIL VALVE:

1) THE CONTROLLER SHALL MEASURE THE ZONE TEMPERATURE AND MODULATE THE HEATING COIL VALVE TO MAINTAIN ITS HEATING SETPOINT WITH THE FACE AND BYPASS DAMPER FULLY OPEN TO THE FACE (COIL) POSITION.

d) THE HEATING SHALL BE ENABLED WHENEVER:

1) OUTSIDE AIR TEMPERATURE IS LESS THAN 65°F (ADJ.).

2) AND THE ZONE TEMPERATURE IS BELOW HEATING SETPOINT.

3) AND THE FAN IS ON.

4) THE HEATING COIL VALVE SHALL OPEN WHENEVER THE LOW TEMPERATURE THERMOSTAT IS ON.
- g. ECONOMIZER:

a) THE CONTROLLER SHALL MEASURE THE ZONE TEMPERATURE AND MODULATE THE MIXED AIR DAMPERS IN SEQUENCE TO MAINTAIN THE ZONE COOLING SETPOINT. THE OUTSIDE AIR DAMPERS SHALL MAINTAIN A MINIMUM ADJUSTABLE POSITION OPEN BASED ON THE VENTILATION RATES DURING HEATING AND VENTILATION WHENEVER IN OCCUPIED AND NON-ECONOMIZER MODE.

b) THE ECONOMIZER SHALL BE ENABLED WHENEVER:

1) OUTSIDE AIR TEMPERATURE IS AT LEAST 2°F (ADJ.) LESS THAN THE ZONE TEMPERATURE.

2) AND THE OUTSIDE AIR TEMPERATURE IS LESS THAN 64°F (ADJ.)

3) THE OUTSIDE AIR DAMPER SHALL BE 100% OPEN AND THE RETURN DAMPER CLOSED WHEN IN ECONOMIZER MODE.

c) THE ECONOMIZER SHALL CLOSE WHENEVER THE LOW TEMPERATURE THERMOSTAT IS ON.

d) THE OUTSIDE AIR DAMPERS SHALL CLOSE AND THE RETURN AIR DAMPER SHALL OPEN WHEN THE UNIT IS OFF. IF OPTIMAL START UP IS AVAILABLE THE MIXED AIR DAMPER SHALL OPERATE AS DESCRIBED IN THE OCCUPIED MODE EXCEPT THAT THE OUTSIDE AIR DAMPER SHALL MODULATE TO FULLY CLOSED.

e) THE CONTROLLER SHALL MONITOR THE DISCHARGE AIR TEMPERATURE. SHOULD DISCHARGE TEMPERATURE DROP BELOW A USER DEFINABLE TEMPERATURE (ADJ.), THE CONTROLLER SHALL ENABLE THE HEATING, CLOSE THE OUTSIDE DAMPER AND OPEN THE RETURN DAMPER.

2. MECHANICAL COOLING VIA VARIABLE REFRIGERANT VOLUME (VRV) HEAT PUMP SYSTEM:

a) THE DDC SHALL INTEGRATE INTO THE BACNET CONTROLLER ON THE VRV HEAT PUMP SYSTEM TO PROVIDE START AND STOP OPERATION OF THE HEAT PUMP UNITS.

b) WHEN ECONOMIZER OPERATION IS AVAILABLE THROUGH THE DDC SYSTEM, THE HEAT PUMP SHALL BE LOCKED OFF FROM MECHANICAL COOLING OPERATION. WHEN THE OUTSIDE AIR TEMPERATURE IS ABOVE 64 DEGREES F(ADJUSTABLE) AND ANY UNIT VENTILATOR IS CALLING FOR COOLING, THE HEAT PUMPS SHALL BE ENABLED TO OPERATE.

c) WHEN AN INDIVIDUAL UNIT VENTILATOR IS CALLING FOR COOLING TO MEET THE SPACE TEMPERATURE SETPOINT, THE FOLLOWING SHALL OCCUR:

1) THE DDC SYSTEM SHALL SEND A DRY CONTACT TO THE UNIT VENTILATOR VRV CONTROL KIT TO ENABLE COOLING VIA THE VRV EXPANSION VALVE KIT AND A SEPARATE DRY CONTACT SENT TO THE VRV CONTROL KIT TO ENABLE THE UNIT VENTILATOR SUPPLY FAN.

2) THE DDC SYSTEM SHALL SEND A 0-10 VDC INPUT TO THE VRV EXPANSION VALVE KIT TO PROVIDE COOLING AS REQUIRED TO MEET THE SPACE SETPOINT.

3. MINIMUM OUTSIDE AIR VENTILATION – FIXED PERCENTAGE:

a) THE OUTSIDE AIR DAMPERS SHALL MAINTAIN A MINIMUM POSITION (ADJ.) AS DETERMINED BY THE BALANCING OPERATIONS DURING BUILDING OCCUPIED HOURS WHEN IN NON-ECONOMIZER MODE AND BE CLOSED DURING UNOCCUPIED HOURS.

4. DISCHARGE AIR TEMPERATURE:

a) THE CONTROLLER SHALL MONITOR THE DISCHARGE AIR TEMPERATURE.

b) ALARMS SHALL BE PROVIDED AS FOLLOWS:

1) HIGH DISCHARGE AIR TEMP: IF THE DISCHARGE AIR TEMPERATURE IS GREATER THAN 110°F (ADJ.).

2) LOW DISCHARGE AIR TEMP: IF THE DISCHARGE AIR TEMPERATURE IS LESS THAN 40°F (ADJ.).

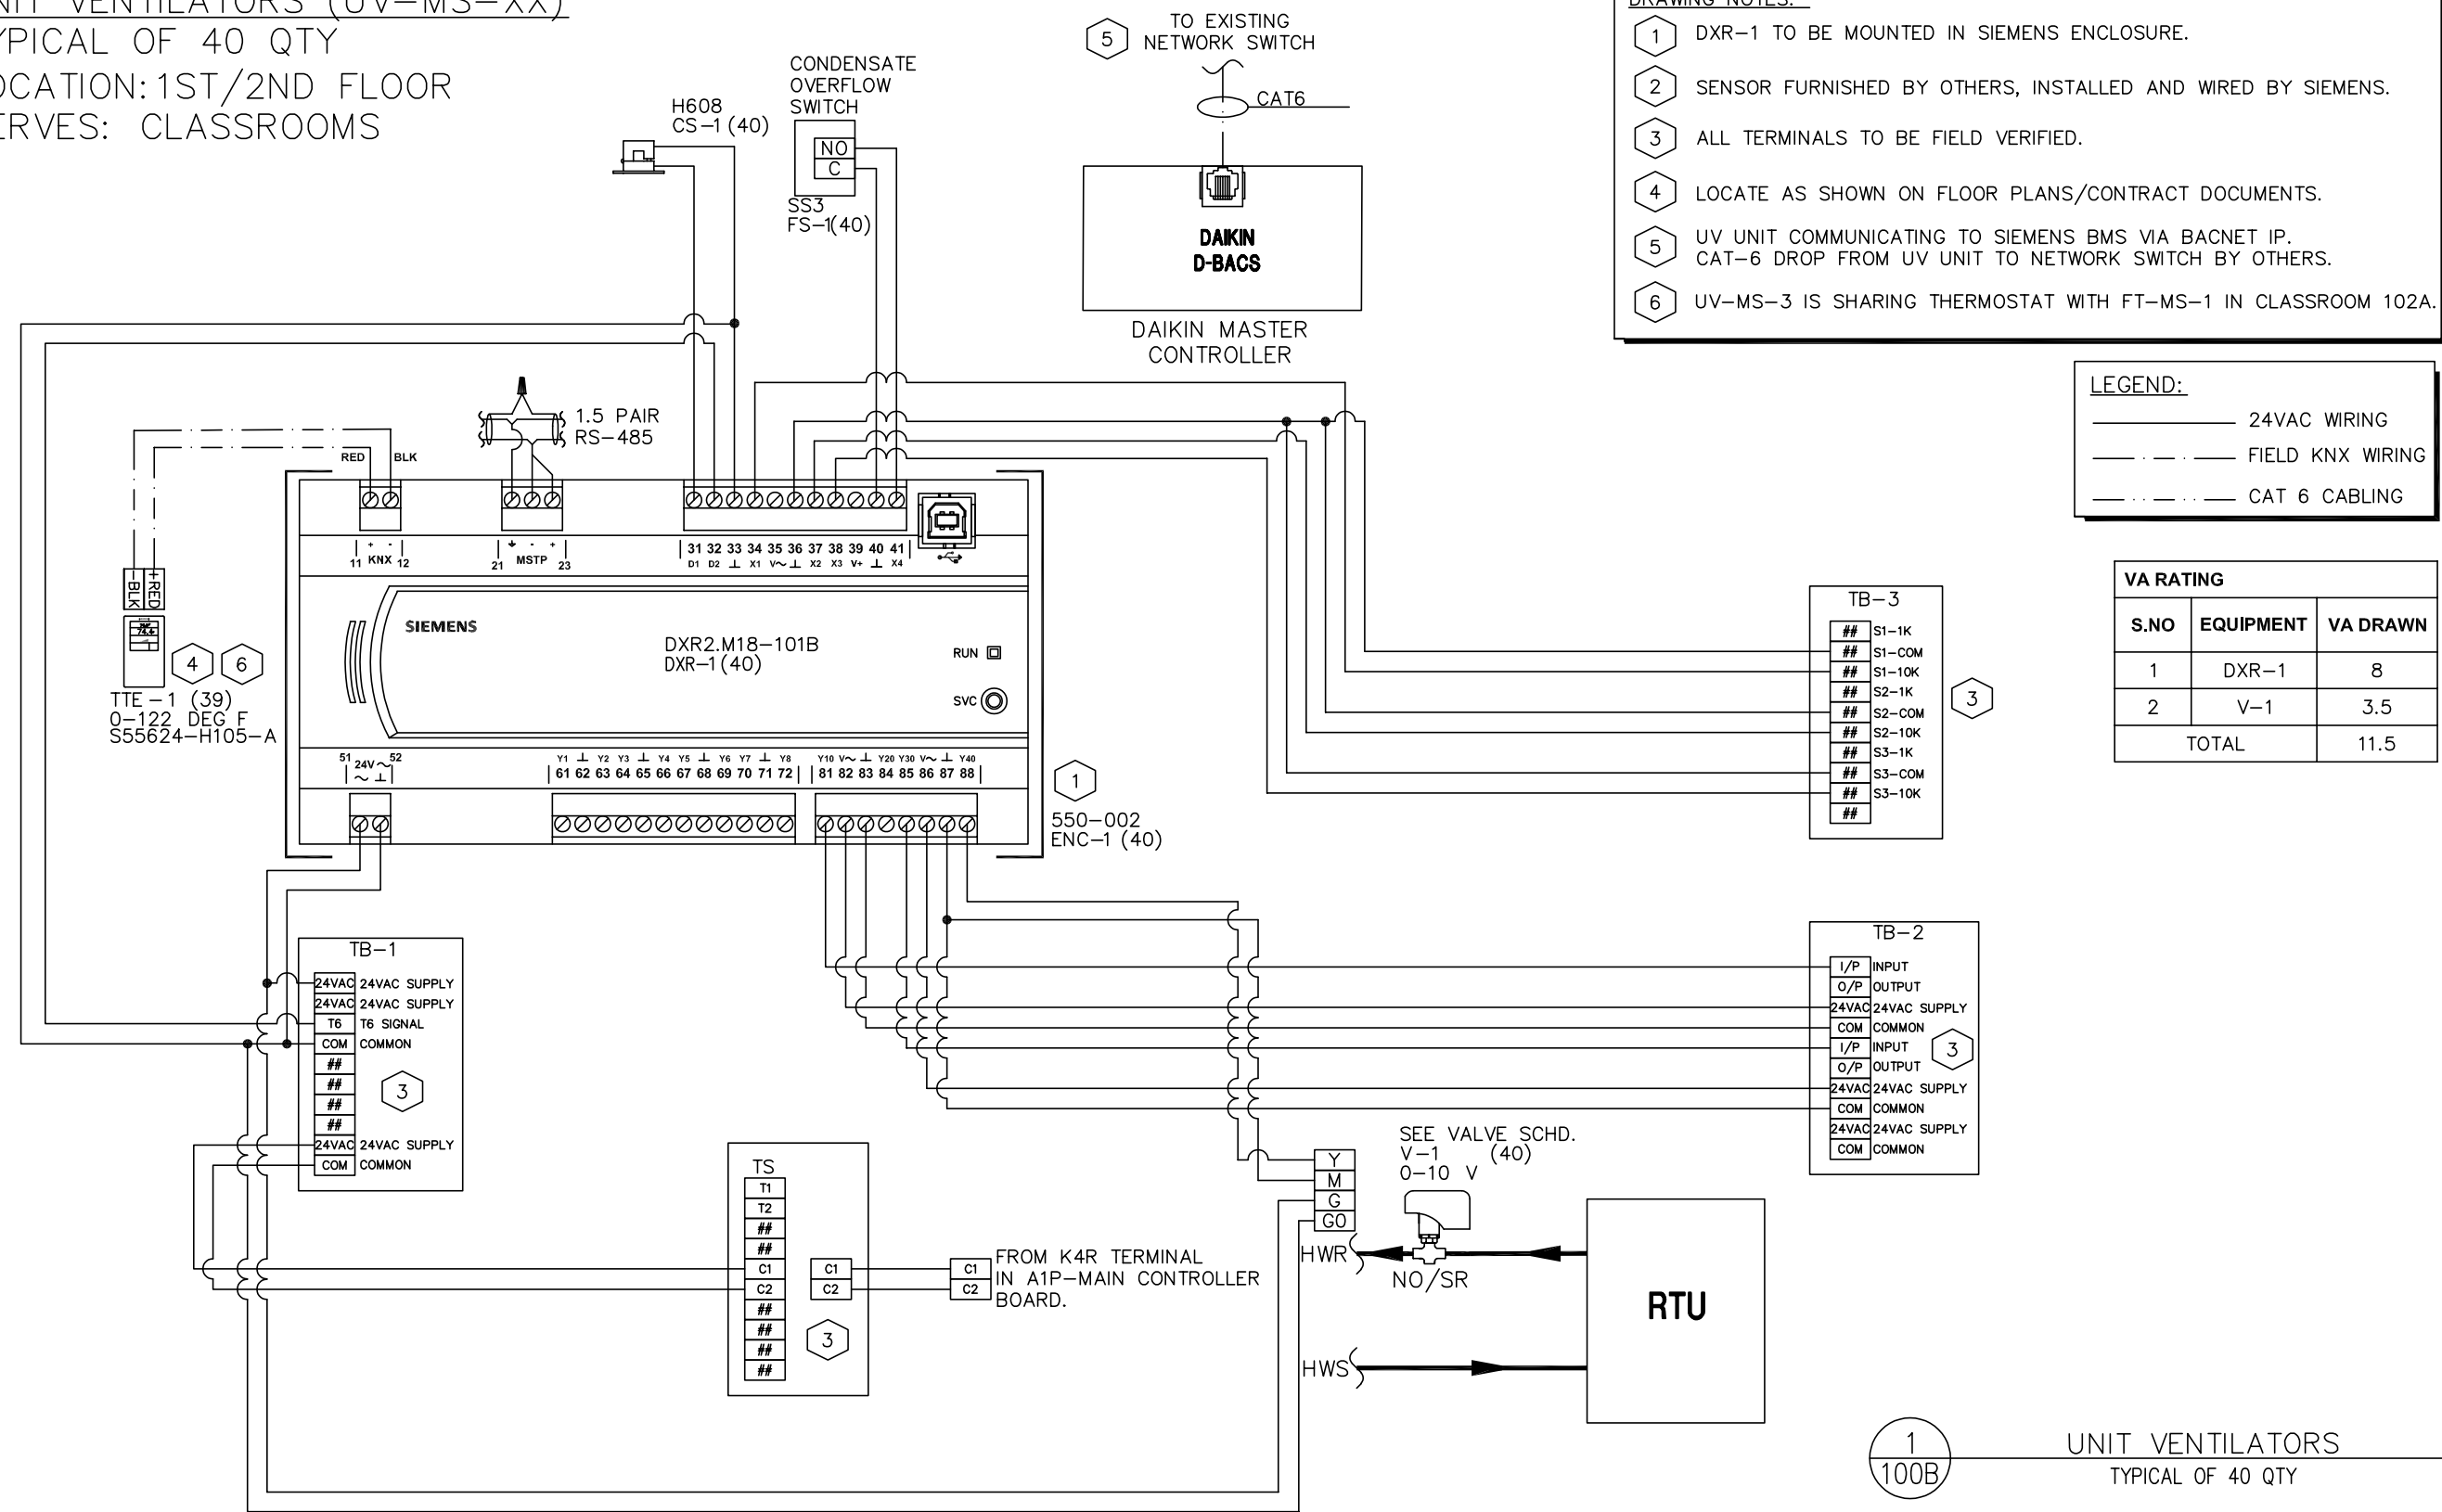

5. FAN STATUS:

SEQUENCE OF OPERATION

SCIENCE CLASSROOM EXHAUST FANS EF-MS-8/EF-MS-10:

- A. WHEN THE DDC SYSTEM DETERMINES THE BUILDING TO BE IN OCCUPED MODE, ROOFTOP EXHAUST FANS EF-MS-8 AND EF-MS-10 SHALL OPERATE, AND THE ASSOCIATED MOTORIZED DAMPER OPENED.
- B. EF-MS-8: FAN SPEED SHALL BE BASED ON VENTILATION CONDITIONS OF UV-MS-28 AND UV-MS-29. WHEN BOTH UVS ARE IN ECONOMIZER MODE, FAN SPEED SHALL BE SET TO EXHAUST 1,980 CFM. WHEN BOTH UVS ARE IN NON-ECONOMIZER, OCCUPIED VENTILATION MODE, FAN SPEED SHALL BE SET TO EXHAUST 1,075 CFM. THE TESTING AND BALANCING AGENCY SHALL NOTIFY THE DDC SYSTEM PROGRAMMER OF THE FAN SPEED AND 0-10 VDC INPUT VALUE REQUIRED TO EXHAUST EACH AIR RATE LISTED AND THE DDC PROGRAMMING SHALL ADJUST THE FAN SPEED TO THE REQUIRED RATE UNDER EACH CONDITION. WHEN THE UV OUTSIDE AIR DAMPERS ARE CLOSED THE EXHAUST FAN SHALL BE OFF.
- C. EF-MS-10: FAN SPEED SHALL BE BASED ON VENTILATION CONDITIONS OF UV-MS-31 AND UV-MS-32. WHEN BOTH UVS ARE IN ECONOMIZER MODE, FAN SPEED SHALL BE SET TO EXHAUST 2,050 CFM. WHEN BOTH UVS ARE IN NON-ECONOMIZER, OCCUPIED VENTILATION MODE, FAN SPEED SHALL BE SET TO EXHAUST 1,065 CFM. THE TESTING AND BALANCING AGENCY SHALL NOTIFY THE DDC SYSTEM PROGRAMMER OF THE FAN SPEED AND 0-10 VDC INPUT VALUE REQUIRED TO EXHAUST EACH AIR RATE LISTED AND THE DDC PROGRAMMING SHALL ADJUST THE FAN SPEED TO THE REQUIRED RATE UNDER EACH CONDITION. WHEN THE UV OUTSIDE AIR DAMPERS ARE CLOSED THE EXHAUST FAN SHALL BE OFF.

BOYS LOCKER ROOM EXHAUST FAN EF-MS-21:

- A. WHEN THE DDC SYSTEM DETERMINES THE BUILDING TO BE IN OCCUPED MODE, ROOFTOP EXHAUST FANS EF-MS-21 SHALL OPERATE, AND THE ASSOCIATED MOTORIZED DAMPER OPENED.

SIEMENS WALL SENSOR LOCATION DRAWING

KEYED NOTES

- 1 DISCONNECT AND REMOVE EXISTING AIR HANDLING UNIT 5-9.3-WAY PNEUMATIC CONTROL VALVE. DISCONNECT AND REMOVE ALL PNEUMATIC TUBING BACK TO PNEUMATIC MAN. PROVIDE ELECTRONIC 3-WAY CONTROL VALVE RATED AT 4.8 GPM. DISCONNECT AND REMOVE ALL 5.8 PNEUMATIC SENSORS AND CONTROL DEVICES AND CONVERT TO ELECTRONIC. THE ALL ELECTRONIC SENSORS FROM 5-9 INTO THE EXISTING 5-9 DDC SYSTEM CONTROLLER OUTLINED IN KEY NOTE 6.
- 2 DISCONNECT AND REMOVE EXISTING AIR HANDLING UNIT 5-8.3-WAY PNEUMATIC CONTROL VALVE. DISCONNECT AND REMOVE ALL PNEUMATIC TUBING BACK TO PNEUMATIC MAN. PROVIDE ELECTRONIC 3-WAY CONTROL VALVE RATED AT 9.6 GPM. DISCONNECT AND REMOVE ALL 5.8 PNEUMATIC SENSORS AND CONTROL DEVICES AND CONVERT TO ELECTRONIC. THE ALL ELECTRONIC SENSORS FROM 5-8 INTO THE EXISTING 5-8 DDC SYSTEM CONTROLLER OUTLINED IN KEY NOTE 8.
- 4 DISCONNECT AND REMOVE EXISTING AIR HANDLING UNIT 5-6.3-WAY PNEUMATIC CONTROL VALVE. DISCONNECT AND REMOVE ALL PNEUMATIC TUBING BACK TO PNEUMATIC MAN. PROVIDE ELECTRONIC 3-WAY CONTROL VALVE RATED AT 28.8 GPM. DISCONNECT AND REMOVE ALL 5.4 PNEUMATIC SENSORS AND CONTROL DEVICES AND CONVERT TO ELECTRONIC. THE ALL ELECTRONIC SENSORS FROM 5-6 INTO THE EXISTING 5-6 DDC SYSTEM CONTROLLER OUTLINED IN KEY NOTE 10.
- 6 DISCONNECT AND REMOVE EXISTING AIR HANDLING UNIT 5.8 PNEUMATIC MOTORIZED RETURN AIR DAMPER ACTUATOR AT LOCATION SHOWN AND REPLACE WITH ELECTRONIC MOTORIZED DAMPER ACTUATOR. THE CONTROL OF DAMPER INTO EXISTING DDC SYSTEM CONTROLLER SERVING 5.3. REMOVE PNEUMATIC TUBING FROM REMOVED DAMPER BACK TO PNEUMATIC PIPING MAN.
- 8 LOCATION OF EXISTING AIR HANDLING UNIT 5-9 DDC SYSTEM CONTROLLER. DISCONNECT AND REMOVE 3-WAY CONTROL VALVE ELECTRIC-TO-PNEUMATIC TRANSDUCER INCLUDING ASSOCIATED PNEUMATIC TUBING AND PNEUMATIC DIL DIL OPERATOR. REMOVE PNEUMATIC TUBING BACK TO PNEUMATIC PIPING MAN AND CAP. THE ELECTRONIC CONTROL VALVE OUTLINED IN KEY NOTE 11 INTO THE 5-9 DDC CONTROLLER AS REQUIRED.
- 7 DISCONNECT AND REMOVE EXISTING AIR HANDLING UNIT 5.8 PNEUMATIC MOTORIZED OUTSIDE AIR DAMPER ACTUATOR AT LOCATION SHOWN AND REPLACE WITH ELECTRONIC MOTORIZED DAMPER ACTUATOR. THE CONTROL OF DAMPER INTO EXISTING DDC SYSTEM CONTROLLER SERVING 5.8. REMOVE PNEUMATIC TUBING FROM REMOVED DAMPER BACK TO PNEUMATIC PIPING MAN.
- 10 LOCATION OF EXISTING AIR HANDLING UNIT 5.8 DDC SYSTEM CONTROLLER. DISCONNECT AND REMOVE ELECTRIC-TO-PNEUMATIC TRANSDUCER AND 3-WAY CONTROL VALVE ELECTRIC-TO-PNEUMATIC TRANSDUCER INCLUDING ASSOCIATED PNEUMATIC TUBING AND PNEUMATIC DIL DIL OPERATORS. REMOVE PNEUMATIC TUBING BACK TO PNEUMATIC PIPING MAN AND CAP. THE ELECTRONIC CONTROL VALVE AND ELECTRONIC MOTORIZED DAMPER OUTLINED IN KEY NOTE 2 AND 7 INTO THE 5.8 DDC CONTROLLER AS REQUIRED.
- 9 DISCONNECT AND REMOVE EXISTING AIR HANDLING UNIT 5.8 PNEUMATIC MOTORIZED OUTSIDE AIR DAMPER ACTUATOR AT LOCATION SHOWN AND REPLACE WITH ELECTRONIC MOTORIZED DAMPER ACTUATOR. THE CONTROL OF DAMPER INTO EXISTING DDC SYSTEM CONTROLLER SERVING 5.6. REMOVE PNEUMATIC TUBING FROM REMOVED DAMPER BACK TO PNEUMATIC PIPING MAN.
- 10 LOCATION OF EXISTING AIR HANDLING UNIT 5.8 DDC SYSTEM CONTROLLER. DISCONNECT AND REMOVE DAMPER ELECTRIC-TO-PNEUMATIC TRANSDUCER AND 3-WAY CONTROL VALVE ELECTRIC-TO-PNEUMATIC TRANSDUCER INCLUDING ASSOCIATED PNEUMATIC TUBING AND PNEUMATIC DIL DIL OPERATORS. REMOVE PNEUMATIC TUBING BACK TO PNEUMATIC PIPING MAN AND CAP. THE ELECTRONIC CONTROL VALVE AND ELECTRONIC MOTORIZED DAMPERS OUTLINED IN KEY NOTE 4, 5 AND 9 INTO THE 5.8 DDC CONTROLLER AS REQUIRED.
- 11 DISCONNECT AND REMOVE EXISTING AIR HANDLING UNIT 5.7 PNEUMATIC MOTORIZED OUTSIDE AIR DAMPER ACTUATOR AT LOCATION SHOWN AND REPLACE WITH ELECTRONIC MOTORIZED DAMPER ACTUATOR. THE CONTROL OF DAMPER INTO EXISTING DDC SYSTEM CONTROLLER SERVING 5.7. REMOVE PNEUMATIC TUBING FROM REMOVED DAMPER BACK TO PNEUMATIC PIPING MAN.
- 10 LOCATION OF EXISTING AIR HANDLING UNIT 5-7 DDC SYSTEM CONTROLLER. DISCONNECT AND REMOVE DAMPER ELECTRIC-TO-PNEUMATIC TRANSDUCER AND 3-WAY CONTROL VALVE ELECTRIC-TO-PNEUMATIC TRANSDUCER INCLUDING ASSOCIATED PNEUMATIC TUBING AND PNEUMATIC DIL DIL OPERATORS. REMOVE PNEUMATIC TUBING BACK TO PNEUMATIC PIPING MAN AND CAP. THE ELECTRONIC CONTROL VALVE AND ELECTRONIC MOTORIZED DAMPER OUTLINED IN KEY NOTE 3 AND 11 INTO THE 5-7 DDC CONTROLLER AS REQUIRED.
- 13 DISCONNECT AND REMOVE EXISTING HYBRID UNIT HEATER UHF-4 DIL PNEUMATIC FACE AND BYPASS DAMPER AT LOCATION SHOWN AND REPLACE WITH MANUAL DAMPER OPERATOR LOCKED IN OPEN POSITION. REMOVE PNEUMATIC TUBING FROM REMOVED DAMPER BACK TO PNEUMATIC PIPING MAN.
- 14 LOCATION OF EXISTING BUILDING HEATING PLANT DDC SYSTEM CONTROLLER.
- 15 DISCONNECT AND REMOVE MAN BUILDING HEATING LOOP 3-WAY PNEUMATIC MIXING CONTROL VALVE. DISCONNECT AND REMOVE ALL PNEUMATIC TUBING BACK TO PNEUMATIC MAN. DISCONNECT AND REMOVE 3-WAY CONTROL VALVE ELECTRIC-TO-PNEUMATIC TRANSDUCER INCLUDING ASSOCIATED PNEUMATIC TUBING AND PNEUMATIC DIL OPERATOR LOCATED ADJACENT TO BUILDING HEATING PLANT DDC SYSTEM CONTROLLER. REMOVE ASSOCIATED WIRING BACK TO CONTROL PANEL AS REQUIRED. AT LOCATIONS OF REMOVED PNEUMATIC 3-WAY MIXING VALVE PROVIDE AN ELECTRONIC 3-WAY MIXING CONTROL VALVE RATED AT 350 GPM. THE OPERATION OF MIXING VALVE INTO EXISTING BUILDING HEATING PLANT DDC SYSTEM CONTROLLER OUTLINED IN KEY NOTE 14.
- 16 DISCONNECT AND REMOVE PNEUMATIC PIPING AND ASSOCIATED PRESSURE DIL WITHIN THE PNEUMATIC CONTROL PANEL RELATED TO THE CONTROL PANEL. PRESSURE ON THE MAIN HOT WATER SUPPLY 3-WAY VALVE OUTLINED IN KEY NOTE 15. REMOVE PNEUMATIC PIPING BACK TO ASSOCIATED PIPING MAN AND CAP.
- 17 DISCONNECT AND REMOVE EXISTING DOMESTIC HOT WATER STORAGE TANK 1.5 PNEUMATIC CONTROL VALVE. DISCONNECT AND REMOVE ALL PNEUMATIC TUBING BACK TO PNEUMATIC MAN. PROVIDE ELECTRONIC 2-WAY CONTROL VALVE RATED AT 180 GPM. DISCONNECT AND REMOVE ALL STORAGE TANK PNEUMATIC SENSORS AND CONTROL DEVICES AND CONVERT TO ELECTRONIC. THE ALL ELECTRONIC SENSORS FROM THE STORAGE TANK INTO THE EXISTING DDC SYSTEM CONTROLLER OUTLINED IN KEY NOTE 14.
- 18 DISCONNECT AND REMOVE EXISTING DOMESTIC HOT WATER BOOSTER HEATER HEAT EXCHANGER 2-WAY PNEUMATIC CONTROL VALVE. DISCONNECT AND REMOVE ALL PNEUMATIC TUBING BACK TO PNEUMATIC MAN. PROVIDE ELECTRONIC 2-WAY CONTROL VALVE RATED AT 20 GPM. DISCONNECT AND REMOVE HEAT EXCHANGER PNEUMATIC DIL OPERATOR. DISCONNECT AND REMOVE PNEUMATIC TUBING BETWEEN PNEUMATIC CONTROL DEVICES AND EXISTING 5.4, 5.7 AND 5.8 SPACE SENSORS. **PROVIDE RELAYS FROM EXISTING 5.4, 5.7 AND 5.8 SPACE SENSORS TO EXISTING DDC CONTROL PANELS SERVING EACH UNIT TO ALLOW FOR ELECTRONIC ANALOG INPUT OF EACH SPACE TEMPERATURE TO THE DDC SYSTEM.**
- 19 DISCONNECT AND REMOVE ALL EXISTING AIR HANDLING UNITS 5.6, 5.7 AND 5.8 PNEUMATIC CONTROL FAN OPERATORS, SENSORS AND RELAY DEVICES. DISCONNECT AND REMOVE ALL PNEUMATIC TUBING BACK TO PNEUMATIC PIPING MAN AND CAP. CONVERT ALL PNEUMATIC CONTROL DEVICES SERVING 5.6, 5.7 AND 5.8 TO ELECTRONIC AND PROVIDE RELAYS FROM FAN STARTSTOP MOTOR STARTER TO EXISTING DDC CONTROL PANELS SERVING EACH UNIT TO ALLOW FOR ELECTRONIC FAN DIGITAL STARTSTOP CONTROL. DISCONNECT AND REMOVE PNEUMATIC TUBING BETWEEN PNEUMATIC CONTROL DEVICES AND EXISTING 5.4, 5.7 AND 5.8 SPACE SENSORS. **PROVIDE RELAYS FROM EXISTING 5.4, 5.7 AND 5.8 SPACE SENSORS TO EXISTING DDC CONTROL PANELS SERVING EACH UNIT TO ALLOW FOR ELECTRONIC ANALOG INPUT OF EACH SPACE TEMPERATURE TO THE DDC SYSTEM.**
- 20 DISCONNECT AND REMOVE OPEN-ENDED PVC HOSE FROM CONDENSATE DRAIN OUTLET CONNECTION ON EXISTING ELEVATOR MACHINE ROOM FAN COIL. UNIT AND PROVIDE A 3/4" HARD PIPE CONNECTION TO THE CONDENSATE OUTLET. PROVIDE A P-TAP BELOW FAN COIL UNIT. RUN ROUTE 3/4" CONDENSATE PIPING THROUGH ELEVATOR MACHINE ROOM TO MECHANICAL AREA OF BASEMENT AS SHOWN.
- 21 PROVIDE 3/4" CONDENSATE DROP DOWN AT LOCATION SHOWN TO FLOOR LEVEL. THEN ROUTE 3/4" CONDENSATE PIPING BELOW BOTTOM OF DROP OPENING TO RAIN DRAIN. THEN ROUTE 3/4" CONDENSATE PIPING TO FLOOR LEVEL. TO NEW FLOOR DRAIN BEING PROVIDED ON PLUMBING DRAWINGS. TERMINATE CONDENSATE PIPING OPEN-ENDED ABOVE NEW FLOOR DRAIN.

Valve Submittal - Steam

LOCATION:	NANUET, NY	PROJECT NAME:	NANUET BOND PHASE3 HIGH SCHC	DATE:	2/16/24
JOB NO:	44OP-366733			PAGE:	1
ENGR:	SN			REV:	0

GENERAL NOTES:	UNITS:
1. All valves 2-1/2" and larger have flanged ends, 2" and smaller have screwed ends.	Steam inlet pressure, actual pressure drop, and shut off pressure indicated in PSIG.
2. All control valves and wells shall be installed by the mechanical contractor.	
3. Standard abbreviations used on control valves are:	
BODY TYPES: 3W - Three way; 2W - Two way; A - Angle; N.C. - Normally Closed; N.O. - Normally Open;	ACTUATOR TYPES: SR - Spring Return; NSR - No Spring Return
NOC - Ball Valve can be N.O. or N.C.; BF - Butterfly Valve; DS - Double Seated;	CR - Capacitor Driven Return; DA - Double Acting

NOTES: All control valves and wells shall be installed by the heating contractor.

SIEMENS INDUSTRY, INC.
SMART INFRASTRUCTURE**Valve Submittal - Water**

LOCATION:	NANUET, NY	PROJECT NAME:	NANUET BOND PHASE3 HIGH SCHC	DATE:	2/16/24
JOB NO:	44OP-366733			PAGE:	4
ENGR:	SN			REV:	0

GENERAL NOTES:

1. All valves 2-1/2" and larger have flanged ends, 2" and smaller have screwed ends.
2. All control valves and wells shall be installed by the mechanical contractor.
3. Standard abbreviations used on control valves are:

BODY TYPES: 3W - Three way; 2W - Two way; A - Angle; N.C. - Normally Closed; N.O. - Normally Open;
NOC - Ball Valve can be N.O. or N.C.; BF - Butterfly Valve; DS - Double Seated;

UNITS:

Steam inlet pressure, actual pressure drop, and shut off pressure indicated in PSIG.

ACTUATOR TYPES: SR - Spring Return; NSR - No Spring Return
CR - Capacitor Driven Return; DA - Double Acting

SEQUENCE OF OPERATIONS

BLOWER COIL UNITS

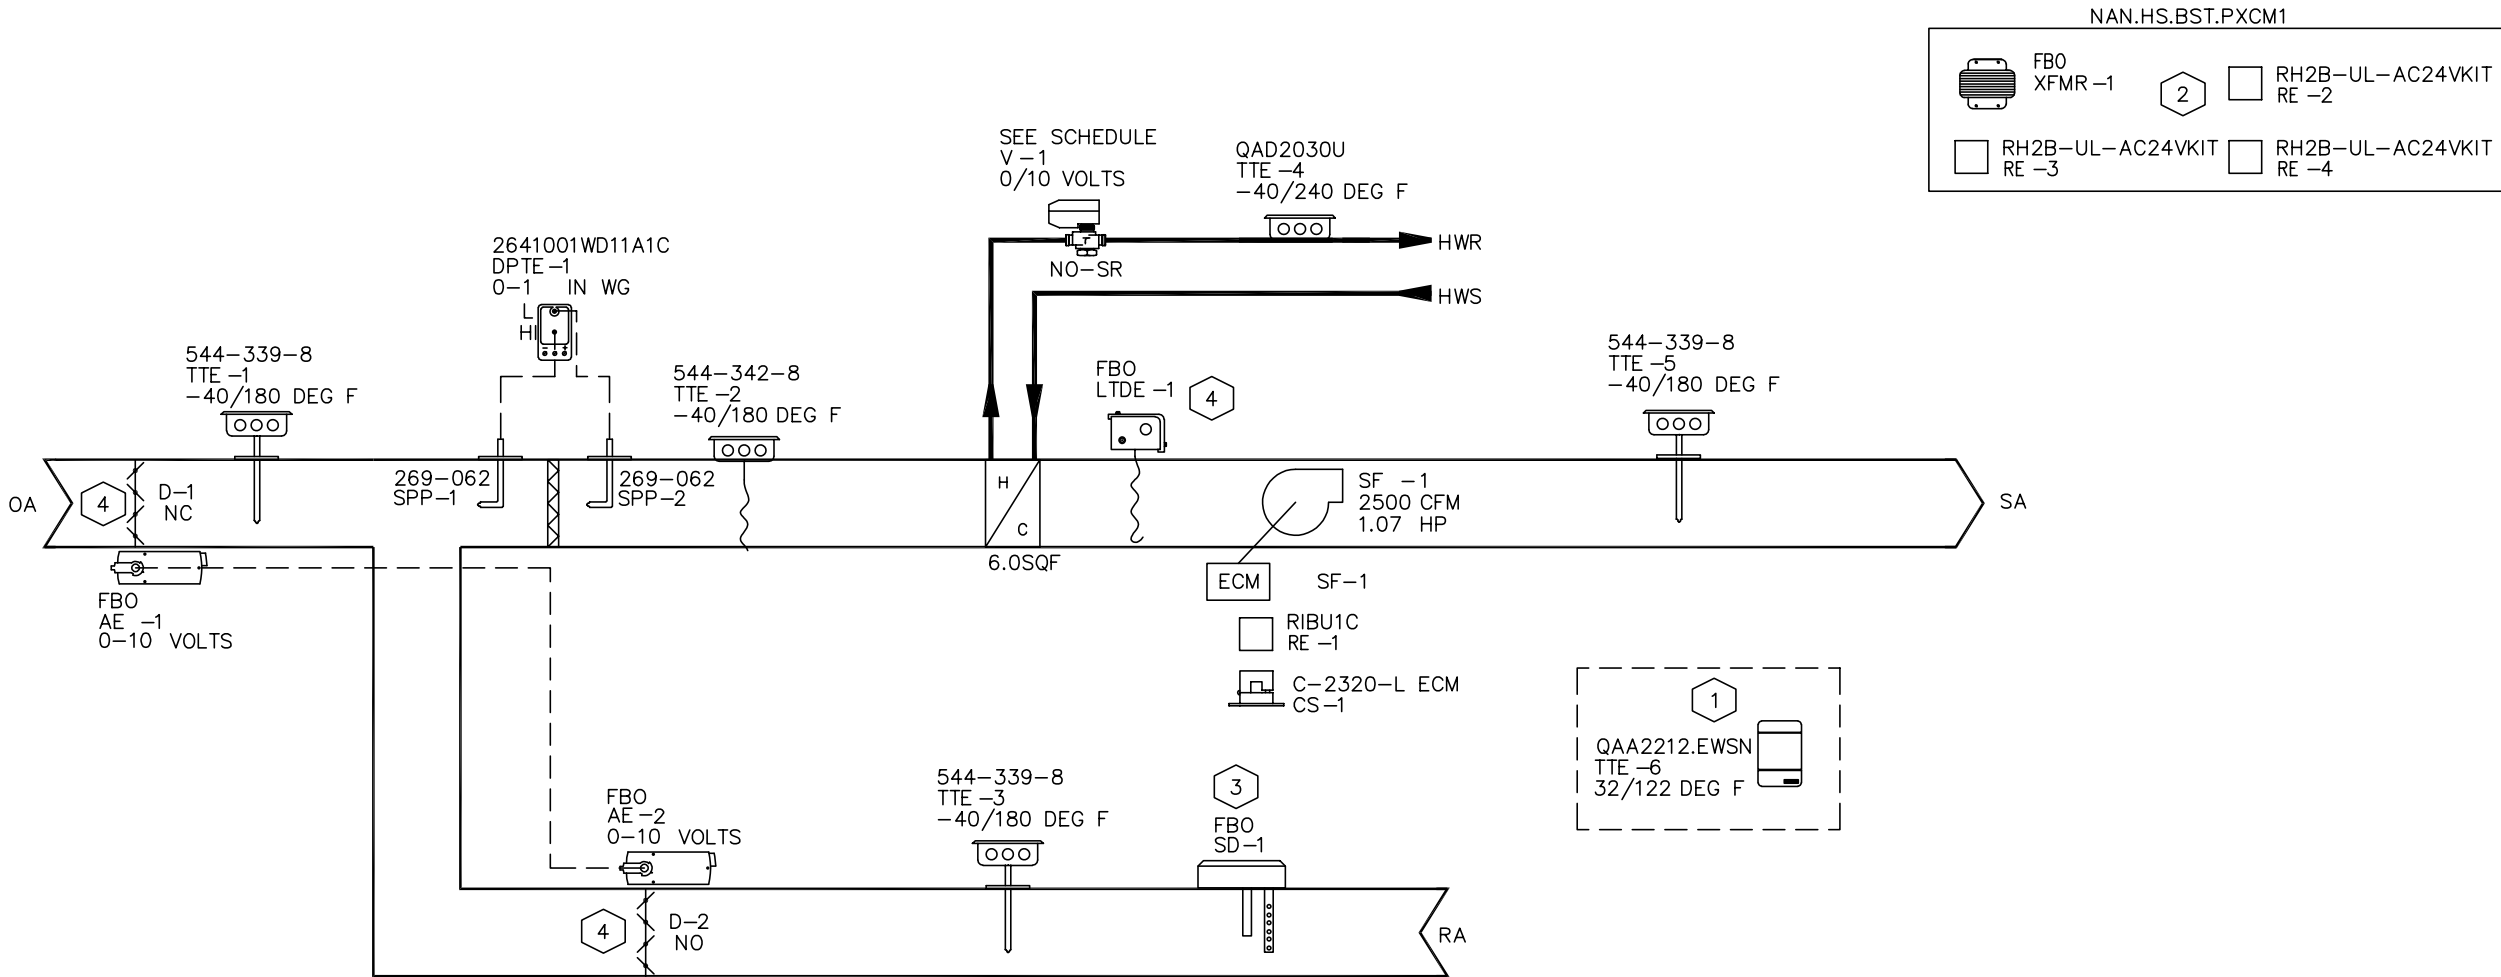

- A. FAN OPERATION: GENERAL: START BLOWER COIL UNIT FAN WHEN THE BMS SCHEDULE DETERMINES EQUIPMENT TO START. START FAN FOLLOWING CONTACT CLOSURE FOR FIRE ALARM SHUTDOWN, LOW TEMPERATURE THERMOSTAT, AND RETURN DUCT SMOKE DETECTOR (WHERE APPLICABLE). PROVE FAN FLOW FOR SUPPLY FAN INDIVIDUALLY THROUGH CURRENT SENSORS.

- 1) OPTIMAL START: THE SUPPLY FAN SHALL START PRIOR TO SCHEDULED OCCUPANCY BASED ON THE TIME NECESSARY FOR THE ZONES TO REACH THEIR OCCUPIED SETPOINTS. THE START TIME SHALL AUTOMATICALLY ADJUST BASED ON HANGES IN OUTSIDE AIR TEMPERATURE AND ZONE TEMPERATURES. THE INITIAL OPTIMAL START TIME SHALL BE 1 HOUR PRIOR TO OCCUPIED MODE STARTING (ADJUSTABLE).
- 2) UNOCCUPIED MODE: BLOWER COILS SHALL BE NORMALLY OFF IN UNOCCUPIED MODE AS DETERMINED BY THE BMS.
- B. DISCHARGE AIR SETPOINT CONTROL: DISCHARGE AIR TEMPERATURE SETPOINT SHALL BE RESET ACCORDING TO THE SPACE TEMPERATURE SENSOR SERVED BY THE BLOWER COILS. AS THE SPACE TEMPERATURE RISES ABOVE A SETPOINT OF 74 DEGREES F (FIELD ADJUSTABLE THROUGH BMS), THE DISCHARGE AIR SETPOINT SHALL BE REDUCED. AS SPACE TEMPERATURE DECREASES, THE DISCHARGE AIR SETPOINT SHALL BE INCREASED. THE MINIMUM DISCHARGE AIR TEMPERATURE SHALL BE 55 DEGREES F (FIELD ADJUSTABLE THROUGH BMS), AND THE MAXIMUM DISCHARGE AIR TEMPERATURE SHALL BE 90 DEGREES F (FIELD ADJUSTABLE THROUGH BMS).
- C. MINIMUM OUTSIDE AIR VENTILATION: NORMALLY CLOSED, OPPOSED BLADE OUTSIDE AIR DAMPER SHALL MOVE TO THE OPEN POSITION WHEN THE BLOWER COIL IS IN OPERATION, IN OCCUPIED MODE.
- D. ECONOMIZER COOLING:
- 1) WHEN THE DISCHARGE AIR TEMPERATURE SETPOINT AND THE SPACE TEMPERATURE SENSOR ARE CALLING FOR COOLING AND RETURN AIR TEMPERATURE IS HIGHER THAN THE OUTSIDE AIR TEMPERATURE, THE OUTSIDE AIR AND RETURN AIR DAMPERS SHALL MODULATE TO MEET THE DISCHARGE AIR TEMPERATURE TO COOL THE SPACE.
- E. HEATING CONTROL- OCCUPIED MODE: IF THE OUTSIDE AIR TEMPERATURE IS 65 DEGREES F (ADJUSTABLE) OR BELOW AND THE DISCHARGE AIR TEMPERATURE SETPOINT IS CALLING FOR HEATING, THE HOT WATER VALVE SHALL MODULATE TO MAINTAIN THE SUPPLY AIR TEMPERATURE AT THE SUPPLY AIR SETPOINT AS DETERMINED BY THE RESET SCHEDULE.
- 1) UNOCCUPIED MODE HEATING: THE BLOWER COIL SHALL BE NORMALLY OFF WHEN THE BMS DETERMINES THE BUILDING TO BE IN UNOCCUPIED MODE. WHEN THE SPACE TEMPERATURE SENSOR SERVED BY THE BLOWER COIL FALLS BELOW THE UNOCCUPIED SETPOINT OF 62 DEGREES F (ADJUSTABLE), THE BLOWER COIL SHALL OPERATE WITH OUTSIDE AIR DAMPER CLOSED, RETURN DAMPER 100% OPEN, HEATING CONTROL VALVE MODULATING TO PROVIDE 95 DEGREE AIR TO THE SPACE UNTIL THE UNOCCUPIED SETPOINT IS REACHED.
- F. LOW TEMPERATURE PROTECTION:
- 1) WHEN THE MIXED AIR TEMPERATURE DOWNSTREAM OF THE HEATING COIL IS BELOW 35 DEGREES F (ADJUSTABLE) IN ANY 12-INCH-LONG SECTION OF THE LOW TEMPERATURE THERMOSTAT CAPILLARY THE FOLLOWING SHALL OCCUR:
- 2) SEND AN ALARM TO THE BMS.
- 3) OPEN THE CONTROL VALVE TO 100% OPEN.
- 4) THE LOW TEMPERATURE THERMOSTAT SHALL BE OF THE MANUAL RESET TYPE.
- G. FILTER DIFFERENTIAL: PROVIDE ANALOG INPUT TO MEASURE STATIC PRESSURE DIFFERENTIAL ACROSS FILTER AND ALARM THROUGH THE BMS WHEN DIFFERENTIAL STATIC PRESSURE EXCEEDS FIELD ADJUSTABLE SETPOINT.
- H. FIRE ALARM SHUTDOWN: WHEN THE FIRE ALARM SYSTEM IS IN AN ALARM CONDITION AS NOTED THROUGH CONTACTS IN THE FIRE ALARM PANEL, THE UNIT SHALL BE SHUT DOWN AND ALL DAMPERS AND VALVE ACTUATORS SHALL BE PLACED IN THEIR NORMAL POSITIONS.
- I. THE OUTSIDE AIR DAMPERS SHALL CLOSE WHENEVER THE UNIT IS OFF.

SEQUENCE OF OPERATIONS

GYM AIR HANDLING UNIT AHU-HS-3

- A. FAN OPERATION: GENERAL: START AHU THROUGH 0-10 VDC INPUT SIGNAL ON THE AHU CONTROL BOX. IN AUTO POSITION, START UNIT OPERATION WHEN THE BMS SCHEDULE DETERMINES THE BUILDING IS IN OCCUPIED MODE. START FAN FOLLOWING CONTACT CLOSURE FOR LOW TEMPERATURE THERMOSTAT. WHEN AHU SUPPLY FAN STARTS, INTERLOCK

- ASSOCIATED LOCKER RETURN FAN F-HS-3 THROUGH THE FAN'S VFD. PROVE FAN FLOW FOR SUPPLY FAN AND RETURN FAN INDIVIDUALLY THROUGH CURRENT SENSORS.
- 1) OPTIMAL START: THE SUPPLY FAN SHALL START PRIOR TO SCHEDULED OCCUPANCY BASED ON THE TIME NECESSARY FOR THE ZONE TO REACH ITS OCCUPIED SETPOINTS. THE START TIME SHALL AUTOMATICALLY ADJUST BASED ON CHANGES IN OUTSIDE AIR TEMPERATURE AND ZONE TEMPERATURES.
- B. DISCHARGE AIR SETPOINT CONTROL: DISCHARGE AIR TEMPERATURE SETPOINT SHALL BE RESET ACCORDING TO THE SPACE TEMPERATURE SENSOR. AS THE SPACE TEMPERATURE SENSOR IN THE SELECTED SPACE INCREASES ABOVE A COOLING SETPOINT OF 75 DEGREES F (FIELD ADJUSTABLE THROUGH EMCS), THE DISCHARGE AIR SETPOINT SHALL BE REDUCED. AS SPACE TEMPERATURE DECREASES BELOW A HEATING SETPOINT OF 70 DEGREES F (FIELD ADJUSTABLE), THE DISCHARGE AIR SETPOINT SHALL BE INCREASED.
- C. THE MINIMUM DISCHARGE AIR TEMPERATURE SHALL BE 57 DEGREES F (FIELD ADJUSTABLE THROUGH EMCS), AND THE MAXIMUM DISCHARGE AIR TEMPERATURE SHALL BE 100 DEGREES F (FIELD ADJUSTABLE THROUGH EMCS).
- D. MINIMUM OUTSIDE AIR VENTILATION: NORMALLY CLOSED OUTSIDE AIR DAMPER SHALL MOVE TO THE OPEN POSITION WHEN AHU IS IN OPERATION. THE OUTSIDE AIR DAMPER POSITION SHALL BE SET TO PROVIDE 3,200 CFM (BASED ON POSITION SET UP BY TESTING AND BALANCING AGENCY) WHEN BUILDING IS IN OCCUPIED MODE AND THE AIR HANDLING UNIT FAN ARRAY SUPPLY FANS ARE OPERATING.
- E. ECONOMIZER OPERATION: WHEN OUTSIDE AIR DRY BULB TEMPERATURE IS LESS THAN 64 DEGREES F (FIELD ADJUSTABLE THROUGH BAS) AND THE OUTSIDE AIR DRY BULB TEMPERATURE IS 2 DEGREES F LESS THEN THE RETURN AIR TEMPERATURE AND THE DISCHARGE AIR TEMPERATURE SETPOINT IS LESS THAN THE OUTSIDE AIR TEMPERATURE, MODULATE THE OUTSIDE AIR DAMPER TO MAINTAIN A MIXED AIR TEMPERATURE SETTINGCORRESPONDING TO THE DISCHARGE AIR TEMPERATURE SETPOINT.
- 1) THE RETURN AIR DAMPER SHALL MODULATE CLOSED IN CONJUNCTION WITH THE OUTSIDE AIR DAMPER OPENING IN ECONOMIZER MODE WITH THE EXHAUST DAMPER OPENING IN CONJUNCTION WITH THE RETURN DAMPER CLOSING.
- F. HEATING:
- 1) WHEN THE ZONE TEMPERATURE IS LESS THAN THE HEATING SETPOINT, THE 2-WAY MODULATING CONTROL VALVE SHALL MODULATE OPEN AS REQUIRED TO MEET THE DISCHARGE AIR TEMPERATURE SETPOINT.
- 2) UNOCCUPIED MODE HEATING: AHU SHALL BE NORMALLY OFF WHEN THE EMCS DETERMINES THE BUILDING TO BE IN UNOCCUPIED MODE. WHEN THE SPACE TEMPERATURE SENSOR IN UNOCCUPIED MODE FALLS BELOW THE HEATING SETPOINT, THE AHU AND RETURN FAN F-HS-3 SHALL TURN ON WITH THE OUTSIDEAIR DAMPER CLOSED, THE EXHAUST AIR DAMPER CLOSED AND THE RETURN AIR DAMPER 100% OPEN (RUNNING THE UNIT IN 100% RECIRCULATION MODE). THE AHU SUPPLY FAN SHALL RUN TO AT 75% SUPPLY FAN SPEED WITH A DISCHARGE AIR SETPOINT OF 90 DEGREES F TO MEET THE UNOCCUPIED SETPOINT OF 60 DEGREES F.
- 3) WHEN HEATING COIL DISCHARGE AIR TEMPERATURE IS BELOW 40 DEGREES F (ADJUSTABLE) IN ANY 12 INCH LONG SECTION OF THE LOW TEMPERATURE THERMOSTAT CAPILLARY THE FOLLOWING SHALL OCCUR:
- a) SEND AN ALARM TO THE BAS.
- b) THE LOW TEMPERATURE THERMOSTAT SHALL BE MANUALLY RESET.
- c) MODULATE THE HEATING COIL CONTROL VALVE SERVED BY AHU TO 100% OPEN TO HEAT.
- G. DX COOLING:
- 1) IF THE CONDITIONS FOR ECONOMIZER COOLING ARE UNAVAILABLE AND THE DISCHARGE AIR TEMPERATURE SETPOINT IS CALLING FOR COOLING, THE DDC SYSTEM SHALL SEND A 0-10 VDC SIGNAL TO THE AHUS AIR COOLED CONDENSING UNIT REFRIGERATION CONTROLS TO STAGE THE COMPRESSORS AS REQUIRED TO MAINTAIN THE DISCHARGE AIR TEMPERATURE SETPOINT WHILE MAINTAINING A MINIMUM DISCHARGE AIR TEMPERATURE OF 57 DEGREES F AND A MAXIMUM DISCHARGE AIR TEMPERATURE OF 72 DEGREES F IN COOLING MODE.
- 2) UNOCCUPIED COOLING: IN UNOCCUPIED MODE, SHOULD THE SPACE TEMPERATURE EXCEED 80 DEGREES F (ADJUSTABLE), THE AHU SHALL OPERATE IN 100% RETURN AIR MODE/0% OUTSIDE AIR, WITH THE SUPPLY FAN OPERATING AT 100% SUPPLY AIRFLOW, EXHAUST DAMPER CLOSED, RETURN FAN ON AND A DISCHARGE AIR SETPOINT OF 57 DEGREES F UNTIL THE SPACE REACHES 78 DEGREES F.
- H. FILTER DIFFERENTIAL: PROVIDE ANALOG INPUT TO MEASURE STATIC PRESSURE DIFFERENTIAL ACROSS FILTER AND ALARM THROUGH THE EMCS WHEN DIFFERENTIAL STATIC PRESSURE EXCEEDS FIELD ADJUSTABLE SETPOINT.

SEQUENCE OF OPERATION

HEATING COILS HC-HS-2/HC-HS-4:

- A. THE DDC SYSTEM SHALL INTEGRATE THE HEATING COILS INTO THE EXISTING DDC PROGRAMMING SERVING EXISTING LOCKER ROOM AIR HANDLING UNITS AHU-1 AND AHU-2.
- B. HEATING CONTROL- OCCUPIED MODE: IF THE OUTSIDE AIR TEMPERATURE IS 65 DEGREES F (ADJUSTABLE) OR BELOW AND THE DISCHARGE AIR TEMPERATURE SETPOINT IS CALLING FOR HEATING, THE HEATING OPERATION SHALL BE STAGED TO MAINTAIN DISCHARGE AIR AT SETPOINT.

1) THE HEATING WATER 3-WAY CONTROL VALVE SHALL MODULATE OPEN TO MAINTAIN THE HEATING DISCHARGE AIR SETPOINT.

2) THE CONTROLLER SHALL MEASURE THE SUPPLY AIR TEMPERATURE AND MODULATE THE HEATING COIL VALVE OPEN TO HOT WATER FLOW TO MAINTAIN ITS HEATING SETPOINT.

3) THE HEATING COIL'S SSOCIATED HEATING COIL CIRCULATION PUMP SHALL OPERATE WHENEVER THE HEATING COIL VALVE IS CALLED TO OPEN FOR HEATING.

a. WHEN OUTSIDE AIR CONDITIONS ARE BELOW 40 DEGREES F (ADJUSTABLE) THE HEATING COIL CIRCULATION PUMP SHALL RUN REGARDLESS OF VALVE POSITION.

4) UNOCCUPIED MODE HEATING: AHU SHALL BE NORMALLY OFF WHEN THE EMCS DETERMINES THE BUILDING TO BE IN UNOCCUPIED MODE. WHEN A SPACE SENSOR CONNECTED TO THE AHU FALLS BELOW THE UNOCCUPIED SETPOINT OF 62 DEGREES F (ADJUSTABLE), THE AHU SHALL TURN ON AND THE DISCHARGE AIR TEMPERATURE SETPOINT SHALL BE 90 DEGREES F.

5) LOW TEMPERATURE PROTECTION:

a. WHEN THE MIXED AIR TEMPERATURE DOWNSTREAM OF THE HEATING COIL IS BELOW 35 DEGREES F

- (ADJUSTABLE) IN ANY 12-INCH-LONG SECTION OF THE LOW TEMPERATURE THERMOSTAT CAPILLARY THE FOLLOWING SHALL OCCUR:

1) SEND AN ALARM TO THE BAS.

2) MODULATE THE HEATING WATER CONTROL VALVE TO 100% OPEN AND OPERATE THE HEATING COIL CIRCULATION PUMP.

3) THE LOW TEMPERATURE THERMOSTAT SHALL BE AUTOMATICALLY RESET ONCE THE SENSOR TEMPERATURE INCREASES ABOVE 40 DEGREES F.

HEATING COIL HC-HS-3:

- A. THE DDC SYSTEM SHALL INTEGRATE THE HEATING COIL INTO THE EXISTING DDC PROGRAMMING SERVING EXISTING WEIGHT ROOM AIR HANDLING UNIT AC-1.
- B. HEATING CONTROL- OCCUPIED MODE: IF THE OUTSIDE AIR TEMPERATURE IS 65 DEGREES F (ADJUSTABLE) OR BELOW AND THE DISCHARGE AIR TEMPERATURE SETPOINT IS CALLING FOR HEATING, THE HEATING OPERATION SHALL BE STAGED TO MAINTAIN DISCHARGE AIR AT SETPOINT.

1) THE HEATING WATER 2-WAY CONTROL VALVE SHALL MODULATE OPEN TO MAINTAIN THE HEATING DISCHARGE AIR SETPOINT.

2) THE CONTROLLER SHALL MEASURE THE SUPPLY AIR TEMPERATURE AND MODULATE THE HEATING COIL VALVE OPEN TO HOT WATER FLOW TO MAINTAIN ITS HEATING SETPOINT.

3) UNOCCUPIED MODE HEATING: AHU SHALL BE NORMALLY OFF WHEN THE EMCS DETERMINES THE BUILDING TO BE IN UNOCCUPIED MODE. WHEN A SPACE SENSOR CONNECTED TO THE AHU FALLS BELOW THE UNOCCUPIED SETPOINT OF 62 DEGREES F (ADJUSTABLE), THE AHU SHALL TURN ON AND THE DISCHARGE AIR TEMPERATURE SETPOINT SHALL BE 90 DEGREES F.

4) LOW TEMPERATURE PROTECTION:

a. WHEN THE MIXED AIR TEMPERATURE DOWNSTREAM OF THE HEATING COIL IS BELOW 35 DEGREES F (ADJUSTABLE) IN ANY 12-INCH-LONG SECTION OF THE LOW TEMPERATURE THERMOSTAT CAPILLARY THE FOLLOWING SHALL OCCUR:

1) SEND AN ALARM TO THE BAS.

2) MODULATE THE HEATING WATER CONTROL VALVE TO 100% OPEN.

3) THE LOW TEMPERATURE THERMOSTAT SHALL BE AUTOMATICALLY RESET

4) ONCE THE SENSOR TEMPERATURE INCREASES ABOVE 40 DEGREES F.

SEQUENCE OF OPERATION

RTU-HS-4/RTU-HS-5.

PACKAGED RTU UNIT MANUFACTURER PROVIDED CONTROLS TO BE INLINE WITH BELOW SEQUENCE OF OPERATION.

- A. FAN OPERATION: GENERAL: START RTU THROUGH 0-10 VDC INPUT SIGNAL LOCATED ON RTU SUPPLY FAN VARIABLE SPEED DRIVE. IN AUTO POSITION, START UNIT OPERATION WHEN THE EMCS SCHEDULE DETERMINES EQUIPMENT TO START. START FAN FOLLOWING CONTACT CLOSURE FOR FIRE ALARM SHUTDOWN, LOW TEMPERATURE THERMOSTAT, RETURN DUCT SMOKE DETECTOR. WHEN RTU SUPPLY FAN STARTS, INTERLOCK ASSOCIATED EXHAUST FAN TO START THROUGH 0-10 VDC INPUT SIGNAL ON ELECTRICALLY COMMUTATED FAN MOTOR. PROVE FAN FLOW FOR SUPPLY FAN AND EXHAUST FAN INDIVIDUALLY THROUGH CURRENT SENSORS.
- 1) OPTIMAL START: THE SUPPLY FAN AND EXHAUST FAN SHALL START PRIOR TO SCHEDULED OCCUPANCY BASED ON THE TIME NECESSARY FOR THE ZONES TO REACH THEIR OCCUPIED SETPOINTS. THE START TIME SHALL

AUTOMATICALLY ADJUST BASED ON CHANGES IN OUTSIDE AIR TEMPERATURE AND ZONE TEMPERATURES. THE INITIAL OPTIMAL START TIME SHALL BE 1 HOUR PRIOR TO OCCUPIED MODE STARTING (ADJUSTABLE).

- B. SUPPLY FAN SPEED - MODULATE THE FAN SPEED TO MAINTAIN THE FOLLOWING:
- 1) OCCUPIED MODE: RTU IS A SINGLE ZONE VARIABLE AIR VOLUME AIR HANDLING SYSTEM. IN OCCUPIED MODE, THE MINIMUM FAN SPEED SHALL BE SET TO PROVIDE 5,650 CFM SUPPLY AIR.
- 2) EXHAUST FAN SPEED: AN AIRFLOW MEASURING STATION INSTALLED ON THE SUPPLY FAN SHALL MEASURE SUPPLY FAN AIRFLOW AND AN AIR MEASURING STATION SHALL BE INSTALLED TO MEASURE OUTSIDE AIRFLOW. A SIMILAR AIRFLOW MEASURING STATION INSTALLED ON THE EXHAUST FAN SHALL MEASURE EXHAUST FAN AIRFLOW. THE EXHAUST FAN VARIABLE SPEED DRIVE SHALL MODULATE TO MAINTAIN EXHAUST FAN AIRFLOW AS A FUNCTION OF THE OUTSIDE AIRFLOW.
- C. DISCHARGE AIR SETPOINT CONTROL: DISCHARGE AIR TEMPERATURE SETPOINT SHALL BE RESET ACCORDING TO THE AVERAGE OF THE SPACE TEMPERATURE SENSORS SERVED BY RTU. AS THE AVERAGE SPACE TEMPERATURE RISES ABOVE A SETPOINT OF 74 DEGREES F (FIELD ADJUSTABLE THROUGH EMCS), THE DISCHARGE AIR SETPOINT SHALL BE REDUCED. AS SPACE TEMPERATURE DECREASES, THE DISCHARGE AIR SETPOINT SHALL BE INCREASED. THE MINIMUM DISCHARGE AIR TEMPERATURE SHALL BE 55 DEGREES F (FIELD ADJUSTABLE THROUGH EMCS), AND THE MAXIMUM DISCHARGE AIR TEMPERATURE SHALL BE 95 DEGREES F (FIELD ADJUSTABLE THROUGH EMCS) THROUGH IN-DUCT HYDRONIC HEATING COILS LOCATED DOWNSTREAM OF THE RTU SUPPLY FAN.
- D. MINIMUM OUTSIDE AIR VENTILATION: NORMALLY CLOSED OUTSIDE AIR DAMPER SHALL MOVE TO THE OPEN POSITION WHEN RTU IS IN OPERATION IN OCCUPIED MODE. WHEN UNIT IS IN MINIMUM OUTSIDE AIR MODE AS DETERMINED BY THE EMCS, MODULATE DAMPER POSITION TO MAINTAIN MINIMUM SETPOINT OF 2,500 CFM. SETPOINT IN CFM SHALL BE A FIELD ADJUSTABLE SETPOINT THROUGH THE EMCS. THE UNIT DAMPER POSITION SHALL BE BALANCED TO ACHIEVE THIS AIRFLOW RATE AT THE MINIMUM LEVEL.
- E. HEAT RECOVERY WHEEL - VARIABLE SPEED:
- 1) THE CONTROLLER SHALL MODULATE THE HEAT WHEEL FOR ENERGY RECOVERY AS FOLLOWS.
- a) THE HEAT WHEEL SHALL RUN AT 100% SPEED WHENEVER THE DDC SYSTEM DETERMINES THE BUILDING TO BE IN OCCUPIED MODE AND THE RTU IS NOT OPERATING IN ECONOMIZER MODE. THE BYPASS DAMPER AROUND THE WHEEL SHALL BE CLOSED WHEN THE RTU IS NOT IN ECONOMIZER MODE.
- b) FROST PROTECTION:
- 1) THE HEAT WHEEL SHALL RUN AT 25% SPEED (ADJUSTABLE) WHENEVER:
- 2) EXHAUST AIR TEMPERATURE DROPS BELOW 20°F (ADJUSTABLE).
- c) ALARMS SHALL BE PROVIDED AS FOLLOWS:
- 1) HEAT WHEEL ROTATION FAILURE: COMMANDED ON, BUT THE STATUS IS OFF.
- 2) HEAT WHEEL IN HAND: COMMANDED OFF, BUT THE STATUS IS ON.
- 3) HEAT WHEEL VFD IN FAULT
- F. ECONOMIZER
- 1) THE CONTROLLER SHALL TURN OFF THE HEAT RECOVERY WHEEL WHEN ECONOMIZER OPERATION IS ENGAGED AND THE OUTSIDE AIR BYPASS DAMPER AND RETURN BYPASS DAMPER SHALL OPEN TO 100% BYPASS AIR.
- 2) THE ECONOMIZER SHALL BE ENABLED WHENEVER:
- a) OUTSIDE AIR TEMPERATURE IS LESS THAN 64°F (ADJUSTABLE).
- b) AND THE OUTSIDE AIR TEMPERATURE IS LESS THAN THE RETURN AIR TEMPERATURE.
- c) AND THE DISCHARGE AIR TEMPERATURE SETPOINT IS LESS THAN THE OUTSIDE AIR TEMPERATURE.
- d) AND THE SUPPLY FAN STATUS IS ON.

REVISION HISTORY				SIEMENS		NANUET BOND PHASE3 HIGH SCHOOL					440P-366733 0
RO	2/16/2024	VB	ISSUED FOR APPROVAL			NANUET, NY					
						ENGINEER VB	DRAFTER VB	CHECKED BY NSK	INITIAL RELEASE 02/16/24	LAST EDIT DATE 02/16/24	
				SIEMENS INDUSTRY, INC. SMART INFRASTRUCTURE		412 MT KEMBLE AVE. MORRISTOWN NJ. 07960 USA Phone: (973) 575-6300 Fax: (973) 575-7968		HS-RTU (RTU-HS-4,5) (BOM/SOO)			114

- 3) THE ECONOMIZER SHALL TURN OFF WHENEVER:

a) MIXED AIR TEMPERATURE DROPS FROM 45°F TO 40°F (ADJUSTABLE).

b) OR ON LOSS OF SUPPLY FAN STATUS.

c) OR LOW TEMPERATURE THERMOSTAT IS ON.
- 4) IN ECONOMIZER MODE THE RETURN AIR DAMPER SHALL CLOSE, THE OUTSIDE AIR DAMPER SHALL BE 100% OPEN AND THE EXHAUST FAN SHALL OPERATE TO EXHAUST AIRFLOW TO MATCH THE SUPPLY AIR.
- G. HEATING CONTROL– OCCUPIED MODE: IF THE OUTSIDE AIR TEMPERATURE IS 65 DEGREES F (ADJUSTABLE) OR BELOW AND THE DISCHARGE AIR TEMPERATURE SETPOINT IS CALLING FOR HEATING, THE GAS HEATING OPERATION SHALL BE MODULATED TO MAINTAIN DISCHARGE AIR AT SETPOINT.
- 1) THE CONTROLLER SHALL MEASURE THE SUPPLY AIR TEMPERATURE AND MODULATE THE HEATING OPERATION VIA A 0–10 VDC SIGNAL TO MAINTAIN ITS HEATING SETPOINT. THE RTU GAS HEATING SECTION SHALL BE OPERATED IN CONJUNCTION WITH THE HYDRONIC PERIMETER RADIATORS TO MAINTAIN SPACE SENSOR SETPOINT IN HEATING MODE.
- 2) UNOCCUPIED MODE HEATING: RTU SHALL BE NORMALLY OFF WHEN THE EMCS DETERMINES THE BUILDING TO BE IN UNOCCUPIED MODE. WHEN THE SPACE TEMPERATURE SENSOR IN UNOCCUPIED MODE FALLS BELOW THE HEATING SETPOINT, THE RTU SHALL TURN ON WITH THE OUTSIDE AIR DAMPER CLOSED, THE EXHAUST FAN OFF AND THE RETURN AIR DAMPER 100% OPEN (RUNNING THE UNIT IN 100% RECIRCULATION MODE). THE RTU SUPPLY FAN SHALL RUN TO AT 75% SUPPLY FAN SPEED WITH A DISCHARGE AIR SETPOINT OF 95 DEGREES F OUT OF THE GAS HEATING SECTION TO MEET THE UNOCCUPIED SETPOINT OF 64 DEGREES F.
- a) THE RTU SHALL NOT BE UTILIZED FOR UNOCCUPIED HEATING UNLESS THE HYDRONIC RADIATORS CANNOT MAINTAIN THE SETBACK SETPOINT FOR 30 MINUTES.
- 3) DX COOLING
- a) IF THE CONDITIONS FOR ECONOMIZER COOLING ARE UNAVAILABLE AND THE DISCHARGE AIR TEMPERATURE SETPOINT IS CALLING FOR COOLING, THE DDC SYSTEM SHALL SEND A 0–10 VDC SIGNAL TO THE RTU REFRIGERATION CONTROLS TO STAGE THE DX COOLING COIL COMPRESSORS AS REQUIRED TO MAINTAIN THE DISCHARGE AIR TEMPERATURE SETPOINT WHILE MAINTAINING A MINIMUM DISCHARGE AIR TEMPERATURE OF 55 DEGREES F AND A MAXIMUM DISCHARGE AIR TEMPERATURE OF 72 DEGREES F IN COOLING MODE.
- b) UNOCCUPIED COOLING: IN UNOCCUPIED MODE, SHOULD THE SPACE TEMPERATURE EXCEED 80 DEGREES F, THE RTU SHALL OPERATE IN 100% RETURN AIR MODE/0% OUTSIDE AIR, WITH THE SUPPLY FAN OPERATING AT 100% SUPPLY AIRFLOW, EXHAUST FAN OFF AND A DISCHARGE AIR SETPOINT OF 55 DEGREES F UNTIL THE SPACE REACHES 78 DEGREES F.
- 4) FILTER DIFFERENTIAL: PROVIDE ANALOG INPUT TO MEASURE STATIC PRESSURE DIFFERENTIAL ACROSS FILTER AND ALARM THROUGH THE EMCS WHEN DIFFERENTIAL STATIC PRESSURE EXCEEDS FIELD ADJUSTABLE SETPOINT.
- 5) SMOKE DETECTION: WHEN THE PRESENCE OF SMOKE IS DETECTED AT A DUCT SMOKE DETECTOR LOCATED IN THE RETURN DUCT, THEN THE FAN STARTER CIRCUIT SHALL BE DE–ENERGIZED AND THE EMCS SHALL BE ALARMED.
- 6) THE OUTSIDE AIR DAMPER SHALL CLOSE AND THE RETURN AIR DAMPER SHALL OPEN WHENEVER THE UNIT IS OFF.

SEQUENCE OF OPERATION

EXISTING UNIT VENTILATORS

1. RUN CONDITIONS – SCHEDULED:
- 1) THE UNIT SHALL RUN ACCORDING TO A USER DEFINABLE TIME SCHEDULE IN THE FOLLOWING MODES:

a) OCCUPIED MODE: THE UNIT SHALL MAINTAIN

1) A 76°F (ADJ.) COOLING SETPOINT

2) A 70°F (ADJ.) HEATING SETPOINT.

b) UNOCCUPIED MODE (NIGHT SETBACK): THE UNIT SHALL MAINTAIN

1) A 85°F (ADJ.) COOLING SETPOINT.

2) A 64°F (ADJ.) HEATING SETPOINT.

2) UNIT VENTILATOR SENSORS SHALL INCLUDE LOCAL TEMPERATURE BUT SHALL NOT ALLOW USER TEMPERATURE SENSOR OVERRIDE CAPABILITY FROM THE SENSOR, THAT SHALL OCCUR AT THE DDC FRONT END.

3) ALARMS SHALL BE PROVIDED AS FOLLOWS:

a. HIGH ZONE TEMP: IF THE ZONE TEMPERATURE IS GREATER THAN THE COOLING SETPOINT BY A USER DEFINABLE AMOUNT (ADJ.).

b. LOW ZONE TEMP: IF THE ZONE TEMPERATURE IS LESS THAN THE HEATING SETPOINT BY A USER DEFINABLE AMOUNT (ADJ.).

- c. ZONE UNOCCUPIED OVERRIDE:

a) A TIMED LOCAL OVERRIDE CONTROL SHALL ALLOW AN OCCUPANT TO OVERRIDE THE SCHEDULE AND PLACE THE UNIT INTO AN OCCUPIED MODE FOR AN ADJUSTABLE PERIOD OF TIME. AT THE EXPIRATION OF THIS TIME, CONTROL OF THE UNIT SHALL AUTOMATICALLY RETURN TO THE SCHEDULE.

d. FREEZE PROTECTION:

a) THE UNIT SHALL SHUT DOWN AND GENERATE AN ALARM UPON RECEIVING A LOW TEMPERATURE THERMOSTAT STATUS WHILE THE OUTSIDE/RETURN AIR DAMPER SHALL CLOSE THE OUTSIDE AIR DAMPER AND OPEN THE FACE AND BYPASS DAMPER FULLY OPEN TO THE BYPASS POSITION.

e. FAN:

a) THE FAN SHALL RUN ANYTIME THE UNIT IS COMMANDED TO RUN, UNLESS SHUTDOWN ON SAFETIES.

f. FACE AND BYPASS DAMPERS CONTROL:

a) THE UNIT SHALL MAINTAIN ZONE HEATING AND COOLING SETPOINTS BY MODULATING THE FACE AND BYPASS DAMPERS THROUGH ONE OF THE FOLLOWING:

1) HEATING:

a) WHEN THE ZONE TEMPERATURE IS LESS THAN THE HEATING SETPOINT, THE FACE AND BYPASS DAMPERS SHALL MODULATE OPEN TO FACE POSITION (CLOSED TO BYPASS POSITION) TO MAINTAIN SETPOINT BY MODULATING THE AIR PASSING OVER THE HEATING COIL.

b) WHEN THE ZONE TEMPERATURE IS GREATER THAN THE HEATING SETPOINT, THE FACE AND BYPASS DAMPERS SHALL CLOSE TO FACE POSITION (OPEN TO BYPASS POSITION).

c) HEATING COIL VALVE:

1) THE CONTROLLER SHALL MEASURE THE ZONE TEMPERATURE AND MODULATE THE HEATING COIL VALVE TO MAINTAIN ITS HEATING SETPOINT WITH THE FACE AND BYPASS DAMPER FULLY OPEN TO THE FACE (COIL) POSITION.

d) THE HEATING SHALL BE ENABLED WHENEVER:

1) OUTSIDE AIR TEMPERATURE IS LESS THAN 65°F (ADJ.).

2) AND THE ZONE TEMPERATURE IS BELOW HEATING SETPOINT.

3) AND THE FAN IS ON.

4) THE HEATING COIL VALVE SHALL OPEN WHENEVER THE LOW TEMPERATURE THERMOSTAT IS ON.

g. ECONOMIZER:

a) THE CONTROLLER SHALL MEASURE THE ZONE TEMPERATURE AND MODULATE THE MIXED AIR DAMPERS IN SEQUENCE TO MAINTAIN THE ZONE COOLING SETPOINT. THE OUTSIDE AIR DAMPERS SHALL MAINTAIN A MINIMUM ADJUSTABLE POSITION OPEN BASED ON THE VENTILATION RATES DURING HEATING AND VENTILATION WHENEVER IN OCCUPIED AND NON-ECONOMIZER MODE.

b) THE ECONOMIZER SHALL BE ENABLED WHENEVER:

1) OUTSIDE AIR TEMPERATURE IS AT LEAST 2°F (ADJ.) LESS THAN THE ZONE TEMPERATURE.

2) AND THE OUTSIDE AIR TEMPERATURE IS LESS THAN 64°F (ADJ.)

3) THE OUTSIDE AIR DAMPER SHALL BE 100% OPEN AND THE RETURN DAMPER CLOSED WHEN IN ECONOMIZER MODE.

c) THE ECONOMIZER SHALL CLOSE WHENEVER THE LOW TEMPERATURE THERMOSTAT IS ON.

d) THE OUTSIDE AIR DAMPERS SHALL CLOSE AND THE RETURN AIR DAMPER SHALL OPEN WHEN THE UNIT IS OFF. IF OPTIMAL START UP IS AVAILABLE THE MIXED AIR DAMPER SHALL OPERATE AS DESCRIBED IN THE OCCUPIED MODE EXCEPT THAT THE OUTSIDE AIR DAMPER SHALL MODULATE TO FULLY CLOSED.

e) THE CONTROLLER SHALL MONITOR THE DISCHARGE AIR TEMPERATURE. SHOULD DISCHARGE TEMPERATURE DROP BELOW A USER DEFINABLE TEMPERATURE (ADJ.), THE CONTROLLER SHALL ENABLE THE HEATING, CLOSE THE OUTSIDE DAMPER AND OPEN THE RETURN DAMPER.

2. MECHANICAL COOLING VIA VARIABLE REFRIGERANT VOLUME (VRV) HEAT PUMP SYSTEM:

a) THE DDC SHALL INTEGRATE INTO THE BACNET CONTROLLER ON THE VRV HEAT PUMP SYSTEM TO PROVIDE START AND STOP OPERATION OF THE HEAT PUMP UNITS.

b) WHEN ECONOMIZER OPERATION IS AVAILABLE THROUGH THE DDC SYSTEM, THE HEAT PUMP SHALL BE LOCKED OFF FROM MECHANICAL COOLING OPERATION. WHEN THE OUTSIDE AIR TEMPERATURE IS ABOVE 64 DEGREES F(ADJUSTABLE) AND ANY UNIT VENTILATOR IS CALLING FOR COOLING, THE HEAT PUMPS SHALL BE ENABLED TO OPERATE.

c) WHEN AN INDIVIDUAL UNIT VENTILATOR IS CALLING FOR COOLING TO MEET THE SPACE TEMPERATURE SETPOINT, THE FOLLOWING SHALL OCCUR:

1) THE DDC SYSTEM SHALL SEND A DRY CONTACT TO THE UNIT VENTILATOR VRV CONTROL KIT TO ENABLE

- COOLING VIA THE VRV EXPANSION VALVE KIT AND A SEPARATE DRY CONTACT SENT TO THE VRV CONTROL KIT TO ENABLE THE UNIT VENTILATOR SUPPLY FAN.
- 2) THE DDC SYSTEM SHALL SEND A 0–10 VDC INPUT TO THE VRV EXPANSION VALVE KIT TO PROVIDE COOLING AS REQUIRED TO MEET THE SPACE SETPOINT.
3. MINIMUM OUTSIDE AIR VENTILATION – FIXED PERCENTAGE:
- a) THE OUTSIDE AIR DAMPERS SHALL MAINTAIN A MINIMUM POSITION (ADJ.) AS DETERMINED BY THE BALANCING OPERATIONS DURING BUILDING OCCUPIED HOURS WHEN IN NON–ECONOMIZER MODE AND BE CLOSED DURING UNOCCUPIED HOURS.
4. DISCHARGE AIR TEMPERATURE:
- a) THE CONTROLLER SHALL MONITOR THE DISCHARGE AIR TEMPERATURE.
- b) ALARMS SHALL BE PROVIDED AS FOLLOWS:
- 1) HIGH DISCHARGE AIR TEMP: IF THE DISCHARGE AIR TEMPERATURE IS GREATER THAN 110°F (ADJ.).
- 2) LOW DISCHARGE AIR TEMP: IF THE DISCHARGE AIR TEMPERATURE IS LESS THAN 40°F (ADJ.).
5. FAN STATUS:
- a) THE CONTROLLER SHALL MONITOR THE FAN STATUS.
- b) ALARMS SHALL BE PROVIDED AS FOLLOWS:
- c) FAN FAILURE: COMMANDED ON, BUT THE STATUS IS OFF.
- d) FAN IN HAND: COMMANDED OFF, BUT THE STATUS IS ON.

SEQUENCE OF OPERATION

STEAM-TO-HOT WATER HEAT EXCHANGER HX-HS-2:

- A. HEAT EXCHANGER OPERATION SHALL BE ENABLED AT ALL TIMES BASED ON OUTSIDE AIR TEMPERATURE. WHEN THE OUTSIDE AIR TEMPERATURE IS BELOW 65 DEGREES F (ADJUSTABLE), THE HEAT EXCHANGER SHALL BE ENABLED.
- 1) THE STEAM CONTROL VALVES SHALL MODULATE TO MAINTAIN THE LEAVING WATER TEMPERATURE SETPOINT. THE HEAT EXCHANGER 1/3 CONTROL VALVE SHALL MODULATE FIRST TO MAINTAIN THE LEAVING WATER SETPOINT. SHOULD THE 1/3 CONTROL VALVE BE 100% OPEN AND NOT ABLE TO MEET SETPOINT, THE 1/3 CONTROL VALVE SHALL CLOSE AND THE 2/3 CONTROL VALVE SHALL MODULATE TO MAINTAIN THE HEATING SETPOINT. SHOULD THE 2/3 CONTROL VALVE BE 100% OPEN AND NOT ABLE TO MEET SETPOINT, THE 1/3 CONTROL VALVE SHALL MODULATE WITH THE 2/3 CONTROL VALVE 100% OPEN TO MAINTAIN SETPOINT. SHOULD THE LEAD HEAT EXCHANGER'S CONTROL VALVES FAIL TO OPEN ON A CALL FOR HEAT, ALARM THE DDC.
- B. WHENEVER THE OUTSIDE AIR TEMPERATURE IS 65 DEGREES OR BELOW (ADJUSTABLE) THE DDC SYSTEM SHALL TURN ON THE HEATING WATER LOOP PUMPS P-HS-3/P-HS-4. THE PUMP STATUS SHALL BE CONFIRMED WITH A CURRENT SENSOR. ONE OF THE TWO HEATING WATER PUMP P-HS-3/P-HS-4 SHALL BE OPERATED. ONE OF THE TWO PUMPS SHALL BE DEEMED THE LEAD PUMP, AND LEAD PUMP SHALL ROTATE WEEKLY. SHOULD THE LEAD PUMP FAIL TO START ON ALARM, THE LAG PUMP SHALL START.
- C. THE HEATING WATER SYSTEM CONTROLLER SHALL MEASURE HOT WATER DIFFERENTIAL PRESSURE AND MODULATE THE SPEED OF PUMPS P-HS-3/P-HS-4 TO MAINTAIN ITS DIFFERENTIAL PRESSURE SETPOINT. THE CONTROLLER SHALL MODULATE THE SPEED TO MAINTAIN A HOT WATER DIFFERENTIAL PRESSURE OF 15 PSIG (ADJUSTABLE).
- D. THE FINAL DIFFERENTIAL PRESSURE SETTING OF ALL PUMP SENSORS SHALL BE OPTIMIZED FOLLOWING INSTALLATION AND COMMISSIONING OF ALL DDC SYSTEMS BY SEQUENTIALLY LOWERING THE DIFFERENTIAL PRESSURE SETTING UNTIL THE SETPOINT CAN'T BE REACHED.
- 1) SHOULD THE PUMP SPEED ON THE VFD SHALL DROP DOWN TO 25% OF MAXIMUM PUMP SPEED, THE BYPASS CONTROL VALVE SHALL MODULATE OPEN TO MAINTAIN A MINIMUM 25% PUMP SPEED AT ALL TIMES.

LOCATION: BASEMENT & 1ST FLOOR

- DRAWING NOTES:
- 1 THERMOSTAT TO BE MOUNTED AS PER LOCATION SHOWN ON FLOOR PLAN DRAWINGS.
 - 2 REFER TO BUILDING POWER TRUNK DRAWING FOR 24 VAC POWER.
 - 3 R-2-1 & R-2-2, R-2-3 & R-2-4 ARE SHARING A SINGLE THERMOSTAT & ONE OUTPUT FROM U01 WILL CONTROL 2 VALVES.

PXC Modular Series for BACnet Networks

Figure 1. PXC Modular.

Description

The PXC Modular Series for BACnet networks is a high-performance modular Direct Digital Control (DDC) supervisory equipment controller, which is an integral part of the APOGEE Automation System. It is classified as a BACnet Building Controller (B-BC) and supports BACnet/IP and BACnet MS/TP protocols.

The field panel operates stand-alone or networked to perform complex control, monitoring, and energy management functions without relying on a higher level processor.

- Up to 100 PXC Modular field panels communicate on a peer-to-peer network.
- With the addition of TX-I/O modules and a TX-I/O Power Supply on a self-forming bus, the PXC Modular can directly control up to 500 points.

See the *APOGEE Wiring Guidelines for Field Panels and Equipment Controllers (125-3002)* for information on setting up this configuration.

- With the addition of an Expansion Module, the PXC Modular also provides central monitoring and control for distributed wireless or wired Field Level Network (FLN) devices.

Features

- BACnet Testing Laboratories (BTL) certified Classified as BACnet Building Controllers (B-BC) using the BACnet/IP protocol and/or BACnet MS/TP, or BACnet Advanced Application Controllers (B-AAC) using the BACnet MS/TP protocol for specific models.
- Modular hardware components match initial control requirements while providing for future expansion.
- DIN rail mounted device with removable terminal blocks simplifies installation and servicing.
- Proven program sequences to match equipment control applications.
- Built-in energy management applications and DDC programs for complete facility management.
- Comprehensive alarm management, historical data trend collection, operator control, and monitoring functions.
- Sophisticated Adaptive Control, a closed loop control algorithm that auto-adjusts to compensate for load/seasonal changes (License required with Firmware revision 3.5.1 and higher).
- HMI RS-232 and USB ports, which provide laptop connectivity for local operation and engineering.
- Extended battery backup of Real Time Clock.
- Back-up battery protection eliminating the need for time-consuming program and database re-entry in the event of an extended power failure.
- The PXC Modular illuminates a “battery low” status LED and can send an alarm message to selected printers or terminals.
- Optional support for MS/TP or P1 FLN devices.
- Optional support for P1 Wireless FLN.
- Optional operation as a MS/TP or P1 device with default applications.

- PPCL performance during an internal database backup has been significantly improved. PPCL will consistently execute during the backup cycle.
- Unused Ethernet ports are now disabled and do not require the field panel to cold start.
- The handling of COV subscriptions for large databases has been improved.
- The HMI prompt was changed from A, N, **M** (Application/flNdevice/Mstp) to A, N, **B** (**Application/flNdevice/Bacnet**); allowing the configuration of routed FLN types and clarifying that any BACnet device (MS/TP or IP) can be added to the BACnet ALN.
- The Available memory report has been extended to show installed Memory (physical memory installed in hardware), in addition to the existing metrics already provided:
 - Available RAM left
 - Number of Fragments of memory
 - Largest Contiguous memory
- Auto Save allows the database to be backed up to flash memory automatically whenever the database is changed, instead of being an operator-selected function. It does not provide any safeguard or protection against power loss.
- PXM10T and PXM10S support: Optional LCD Local user interface with HOA (Hand-off-auto) capability and point commanding and monitoring features.
- MS/TP Point Pickup Module (PPM) support: Universal Inputs can be configured for analog or digital input. Input/Output type is configured by writing to BACnet object properties.

The Simple Network Management Protocol (SNMP) Agent allows points in the field panel to communicate with an SNMP manager over Ethernet.

Hardware

PXC Modular

- The PXC Modular is a microprocessor-based multi-tasking platform for program execution and communication with other field panels. It scans field data, optimizes control parameters, and manages operator requests for data in seconds.
- The program and database information stored in the PXC Modular memory is protected with a battery backup. This eliminates the need for time-consuming program and database re-entry in the event of an extended power failure. When battery replacement is necessary, the PXC Modular

illuminates a “battery low” status LED and can send an alarm message to selected printers or terminals.

- The PXC Modular firmware, including the operating system, is stored in non-volatile flash memory.
- The PXC Modular provides both an Ethernet port as well as an RS-485 port for communication on Automation Level Networks supporting either BACnet/IP or BACnet MS/TP.
- LEDs provide instant visual indication of overall operation, network communication, and battery status.
- Two self-forming buses are an integral part of the flexibility of the PXC Modular. A self-forming bus to the right of the controller (see Figure 3) supports up to 500 points through TX-I/O™ modules. Another self-forming bus to the left of the controller (see Figure 5) supports hardware connection to subsystems through Expansion Modules.

TX-I/O Modules

TX-I/O Modules are modular expansion I/O consisting of an electronics module and terminal base. The electronics modules perform A/D or D/A conversion, signal processing and point monitoring and command output through communication with the PXC Modular. The terminal bases provide for termination of field wiring and connection of a self-forming bus. For more information, see the *TX-I/O Product Range Technical Specification Sheet* (149-476).

TX-I/O Power Supply

The TX-I/O Power Supply provides power for TX-I/O modules and peripheral devices. Multiple Power Modules can be used in parallel to meet the power needs of large concentrations of I/O points (see Figure 2 and Figure 3). For more information, see the *TX I/O Product Range Technical Specification Sheet* (149-476).

Figure 2. TX-I/O Power Supply and TX-I/O Modules.

Figure 3. PXC Modular, TX-I/O Power Supply, and TX I/O Modules.

PXC Modular Expansion Module

The PXC Modular Expansion Module (see Figure 4) provides the hardware connection for Field Level Network (FLN) devices.

Using the Triple RS-485 Expansion Module, the PXC Modular supports one RS-485 network of BACnet MS/TP devices (see Figure 5). With the Expansion Module the PXC Modular can also provide wireless FLN support.

Figure 4. RS-485 Expansion Module.

Figure 5. RS-485 Expansion Module and PXC Modular.

Modular Control Panels with Application Flexibility

The PXC Modular is a high performance controller with extensive flexibility. It can be customized with the exact hardware and program for the application. As a result, the user only purchases what is needed.

For example, in monitoring applications, the control panel can be customized with the number and type of points to match the sensor devices. For monitoring and controlling a large number of (on-off) fans or motors, more digital points can be added (see Figure 6).

Figure 6. PXC Modular, TX-I/O Power Supply, and TX I/O Modules.

Alternately, if no local point control is required, the PXC Modular can be used to monitor and control Field Level Network devices using the Expansion Module (see Figure 7).

Figure 7. RS-485 Expansion Module and PXC Modular.

Of course, the PXC Modular can be used for both direct point monitoring and control and as a system controller for Field Level Network devices (see Figure 8).

Figure 8. RS-485 Expansion Module, PXC Modular, TX-I/O Power Supply, and TX-I/O Modules.

In a stand-alone configuration, the PXC Modular can fulfill all requirements of a supervisory network coordinator by managing operation schedules and alarms and communicating for the connected devices.

The control program for each field panel is customized to exactly match the application. Proven Powers Process Control Language (PPCL), a "BASIC" type programming language, provides direct digital control and energy management sequences to precisely control equipment and optimize energy usage.

Available Options

Launch Pad

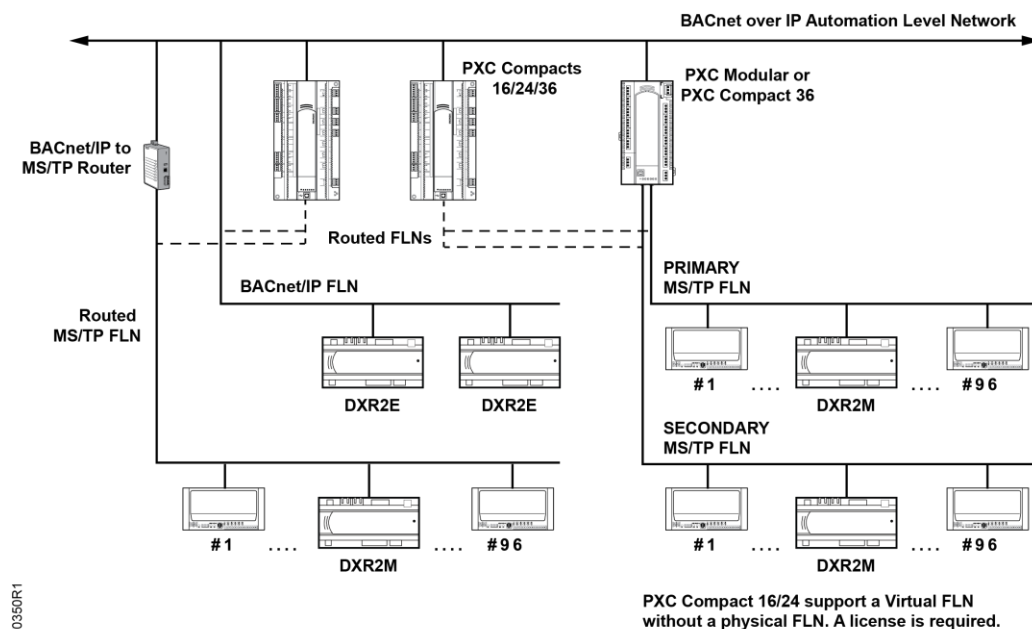

Siemens Launch Pad provides easy access to the applications required for configuring, monitoring, and controlling the Building Automation System. It allows you to deploy the Application MC tool to a field panel, load licenses, add shortcuts to other applications, and access user documentation.

The Launch Pad is an Adobe AIR-based application that allows you to do the following:

- Launch Adobe AIR-based UI that allows you to interact with Siemens Ethernet BACnet Field Panels and provides a more intuitive user interface for database interaction in comparison to line-by-line command prompts.
- Deploy browser-based Application MC to field panels.
- Deploy licenses to field panels.
- Add shortcut buttons so that other commonly-used Building Automation System applications are easily accessible and can be launched from Launch Pad.
- A shortcut button is automatically added, if WCIS has been installed along with Launch Pad.

Routed FLNs

A Routed FLN is a software configured network that allows you to group BACnet IP or MS/TP devices by network number. A network that resides in a field panel but does not have a physical connection to a piece of equipment.

Global Information Access

The HMI port supports operator devices, such as a local user interface or simple CRT terminal, and a phone modem for dial-in service capability. Devices connected to the operator terminal port gain global information access.

Multiple Operator Access

Multiple operators can access the network simultaneously. Multiple operator access ensures that alarms are reported to an alarm printer while an operator accesses information from a local terminal. When using the BACnet/IP ALN option, multiple operators may also access the controller through concurrent Telnet sessions and/or local operator terminal ports.

Menu Prompted, English Language Operator Interface

The PXC Modular includes a simple, yet powerful, menu-driven English Language Operator Interface that provides, among other things:

- Point monitoring and display
- Point commanding
- Historical trend collection and display for multiple points
- Event scheduling
- Program editing and modification via Powers Process Control Language (PPCL)
- Alarm reporting and acknowledgment
 - Continual display of dynamic information

Built-in Direct Digital Control Routines

The PXC Modular provides stand-alone Direct Digital Control (DDC) to deliver precise HVAC control and comprehensive information about system operation. It receives information from sensors in the building, processes the information, and directly controls the equipment. The following functions are available in the PXC Modular:

- Adaptive Control, an auto-adjusting closed loop control algorithm, which provides more efficient, adaptive, robust, fast, and stable control than the traditional PID control algorithm. It is superior in terms of response time and holding steady state, and at minimizing error, oscillations, and actuator repositioning.
- Closed Loop Proportional, Integral and Derivative (PID) control.
- Logical sequencing.
- Alarm detection and reporting.
 - Reset schedules.

Built-in Energy Management Applications

The following applications are programmed in the PXC Modular Series and require simple parameter input for implementation:

- Automatic Daylight Saving Time switchover
- Calendar-based scheduling
- Duty cycling
- Economizer control
- Equipment scheduling, optimization and sequencing
- Event scheduling
- Holiday scheduling
- Night setback control
- Peak Demand Limiting (PDL)
- Temperature-compensated duty cycling
 - Temporary schedule override

Modular Series Specifications

Dimensions (L × W × D)

PXC Modular	7.56" × 3.54" × 2.76" (192 mm × 90 mm × 70 mm)
FLN Expansion Module	1.26" × 3.54" × 2.76" (32 mm × 90 mm × 70 mm)
DIN rail (EN 60715 TH 35-7.5, steel)	1.38" × 0.30" × 0.04" (35 mm × 7.5 mm × 1 mm)

Processor, Battery, and Memory

Processor	MPC885 (PowerPC)
Processor Clock Speed	133 MHz
Memory	80 MB (64 MB SDRAM, 16 MB Flash ROM)
Serial EEPROM	4 KB
Secure Digital (SD) memory card (for future use)	Expandable or removable non-volatile memory
Battery backup of SDRAM	30 days (accumulated), AA (LR6) 1.5 Volt Alkaline (non-rechargeable)
Battery backup of Real Time Clock	12 months (accumulated), Coin cell (BR2032) 3 Volt lithium
Real Time Clock Initial Accuracy	±30 seconds/month typical @ 77°F (25°C)

Communication

BACnet/IP Automation Level Network (ALN)	10Base-T or 100Base-TX compliant
BACnet MS/TP Automation Level Network (ALN) or Secondary BACnet MS/TP Field Level Network (FLN)	RS-485, 9600 bps to 115.2 Kbps, 1/8 Load
BACnet MS/TP Field Level Network (FLN) on PXX-485.3 Expansion Module	RS-485, 9600 bps to 115.2 Kbps, 1/8 Load
P1 Wired/Wireless Field Level Network (FLN) on PXX-485.3 Expansion Module	RS-485 x 3, 4800 bps to 38.4 Kbps, 1/8 load
TX-I/O self-forming bus connection	115.2 Kbps, 5 pin connector (middle pin is not connected)
Human-Machine Interface (HMI) Advanced User Mode	RS-232 compliant, 1200 bps to 115.2 Kbps (default)
USB Device port (for non-smoke control applications only)	Standard 1.1 and 2.0 USB device port, Type B female connector
USB Host port on selected models (for ancillary smoke control applications only).	Standard 1.1 and 2.0 USB host port, Type A female connector

Electrical Rating

Power Requirements	24 Vac +/-20% input @ 50/60 Hz
Power Consumption (Maximum)	24 VA @ 24 Vac
AC Power	NEC Class 2
Communication	NEC Class 2

Operating Environment

Ambient operating environment	Operate in a dry location, which is protected from exposure to salt spray or other corrosive elements. Exposure to flammable or explosive vapors must be prevented.
Ambient operating temperature	32°F to 122°F (0°C to 50°C)
Shipping and storage environment	-13°F to 158°F (-25°C to 70°C)
Relative Humidity	5% to 95% rh, non-condensing
Mounting Surface	Building wall or structural member (Do not mount on HVAC components or any other vibrating surface.)
	CE Compliance Requires installation inside a metal enclosure rated at IP30 minimum.
	Smoke Control Applications Requires installation inside a PX series enclosure
Vibration	Compliance to IEC 60721, 3M2, and 2M2
Protection to EN60529	IP 20

Agency Listings

UL	UL 864 UUKL Smoke Control Equipment - Conforms to UL864 9th and 10th Edition. UL 864 UUKL7 Smoke Control Equipment - Conforms to UL864 9th and 10th Edition. CAN/ULC-S527-M8 UL 916 PAZX - Conforms to UL916 9th and 10th Edition. UL 916 PAZX7 - Conforms to UL916 9th and 10th Edition.
Agency Compliance	CFR47 Part 15, Class A; CFR47 Part 15, Class B - with metal enclosure, maximum opening Australian EMC Framework - with metal enclosure, maximum opening size is 34" European EMC Directive (CE) - with metal enclosure, maximum opening size is 34" RoHS Compliant UKCA - Electromagnetic Compatibility Regulations (S.I. 2016 No. 1091 / S.I. 2012 No. 3032)
OSHDP Seismic Certification	Product meets OSHDP Special Seismic Preapproval certification (OSH-0217-10) under California Building Code 2010 (CBC2010) and International Building Code 2009 (IBC2009) when installed within the following Siemens enclosure part numbers: PXA-ENC18, PXA-ENC19, or PXA-ENC34.
BTL	BACnet Testing Laboratories (BTL) Certified, Firmware Revision 3.0 and later

Electrical Disturbance Testing

Dips and Interrupts	per EN 61000-4-11
Electrical Fast Transients (EPT)	per EN 61000-4-4, 1 kV signal, 2 kV AC power
Electrical Surge Immunity	per EN 61000-4-5 AC power: 2 kV common mode, 1 kV differential mode Signal lines: 1 kV CM, 5 kV DM
Electrostatic Discharge (ESD)	per EN 61000-4-2, 4 kV contact, 8 kV air discharge
RF Conducted Immunity	per EN 61000-4-6 @ 10V
RF Radiated Immunity	per EN 61000-4-3 @ 10V/m

Ordering Information

PXC Modular Series

Product Number	Description
PXC00-E96.A	PXC Modular, BACnet/IP or MS/TP ALN, P1 or MS/TP FLN. PXX-485.3 is a connection for FLN devices.
PXC100-E96.A	PXC Modular, BACnet/IP or MS/TP ALN, P1 or MS/TP FLN, self-forming TX-I/O Island Bus. PXX-485.3 is also required as the connection to the FLN devices.
PXX-485.3	Provides FLN support for the PXC Modular. Includes three RS-485 P1 FLN connections or one MS/TP FLN connection; maximum of 96 devices supported.

Optional Licenses

Product Number	Description
PXF-TXIO.A	License to enable the Island Bus on PXC00-E96.A and PXC00-PE96.A.
LSM-SNMP	License to enable SNMP Agent on Siemens Modular or Compact hardware with BACnet Firmware Revision 3.2.3
LSM-ADAPT	License to use the Adaptive Control added in FW 3.5.1/2.8.18 and later

*) Field Panel Web Services are no longer available for sale. Launch Pad is a free download available from X:\StdApps\APOGEE_Products_FW_SW\Integrated_Solutions.

Accessories

Product Number	Description
PXM10S	Controller mounted Operator Display module with point monitor and optional blue backlight
PXM10T	Controller mounted Operator Display module
PXA-HMI.CABLEP5	Serial cable required for PXM10T/S connection to PXC Series controllers.
PXA-MOD.CON	PXC Modular Connector Kit - Fits one PXC Modular

Service Boxes and Enclosures

Product Number	Description
PXA-SB115V192VA	PX Series Service Box—115V, 24 Vac, 50/60 Hz, 192 VA
PXA-SB115V384VA	PX Series Service Box—115V, 24 Vac, 50/60 Hz, 384 VA
PXA-SB230V192VA	PX Series Service Box—230V, 24 Vac, 50/60 Hz, 192 VA
PXA-SB230V384VA	PX Series Service Box—230V, 24 Vac, 50/60 Hz, 384 VA
PXA-ENC18	18" Enclosure (Utility Cabinet) (UL Listed NEMA Type 1 Enclosure)
PXA-ENC19	19" Enclosure (UL Listed NEMA Type 1 Enclosure)
PXA-ENC34	34" Enclosure (UL Listed NEMA Type 1 Enclosure)

Documentation

Product Number	Description
125-3582	PXC Modular Series Owner's Manual
125-1896	APOGEE Powers Process Control Language (PPCL) User's Manual

Disposal

	<p>The device is considered an electronic device for disposal in accordance with the European Guidelines and may not be disposed of as domestic garbage.</p> <ul style="list-style-type: none"> <input type="checkbox"/> Dispose of the device through channels provided for this purpose. <input type="checkbox"/> Comply with all local and currently applicable laws and regulations.

TX-I/O Product Range

Description

TX-I/O™ is a range of I/O modules, with associated power and communication modules, for use within the APOGEE Automation System. The TX-I/O product range includes the following:

- Eight types of I/O modules, which act as signal converters. The I/O modules communicate between the PXC Modular or the PXC-36 and the related devices in the building services plant.
- TX-I/O Power Supply for the TX-I/O modules.
- TX-I/O Bus Connection Module, which bridges communication and power from one DIN rail to another.
- TX-I/O Island Bus Expansion (IBE) module, which bridges communication between the primary field panel and expansion field panels.
- P1 Bus Interface Module (BIM), which connects TX-I/O modules to the P1 FLN. The P1 BIM provides power for TX-I/O modules, but it does not contain applications or perform control; the control database for the TX-I/O points resides in a field panel.

TX-I/O Modules provide I/O points for APOGEE based upon TX-I/O Technology. TX-I/O Technology provides flexibility of point types, tremendous flexibility of signal types and support for manual operation.

There are eight types of TX-I/O modules:

- 8 point DI module (TXM1.8D)
- 16 point DI module (TXM1.16D)
- 6 point DO with Relay module (TXM1.6R)
- 6 point DO with Relay and Manual Override module (TXM1.6R-M)
- 8 point Universal module (TXM1.8U)
- 8 point Universal with local override/identification device (LOID) module (TXM1.8U-ML)
- 8 point Super Universal module (TXM1.8X)
- 8 point Super Universal with LOID module (TXM1.8X-ML)

Features

- The *self-forming TX-I/O island bus* transmits power as well as communication signals.
 - The TX-I/O island bus can be extended a maximum of 164 feet (50 meters).
 - Adding an Island Bus Expansion (IBE) module expands communication data up to an additional maximum of 200 feet (61 m) in two directions.
- *Hot-swappable electronic components* allow powered electronics to be disconnected and replaced without removing terminal wiring or disturbing the self-forming bus.

All TX-I/O modules include the following features:

- DIN rail mounting.
- High density (point count to physical dimensions).

- Hardware addressed with address keys.
- Removable label holder that allows for customized point labels.
- LEDs that provide status indication and diagnostic information for the I/O module, as well as for each point on the module.
- Separable into terminal base and plug-in I/O module electronics for:
 - Improved installation workflow, allowing field wiring to be terminated prior to installation of electronics.
 - Optimum diagnostics—connected peripheral devices can be measured without affecting or being affected by the I/O module.
 - Quick replacement of electronics for service.

Module Introduction

Digital Input Modules (TXM1.8D and TXM1.16D)

The TXM1.8D and TXM1.16D are dedicated to monitoring, respectively, 8 and 16 digital input points.

- They monitor status signals from normally open (NO) or normally closed (NC), latched voltage free/dry contacts.
- All 8 points on the TXM1.8D module, as well as 8 of the 16 points on the TXM1.16D module, may be used as pulse counters up to 10 Hz.
- Each input point has a green LED for status indication.

NOTE: No potential (dry contact) for all points.

Digital Output Modules (TXM1.6R and TXM1.6R-M)

The TXM1.6R and TXM1.6R-M Digital Output Modules provide six NO or NC (form C), maintained or pulsed, voltage free/dry contacts.

- The contacts are rated for a maximum of 250 Vac at 4A.
- Each I/O point has a green LED for status indication.
- The TXM1.6R-M module is also equipped with manual override switches. An orange LED per override switch indicates override status individually per point.

Universal Modules (TXM1.8U and TXM1.8U-ML)

The TXM1.8U and TXM1.8U-ML Universal I/O modules provide 8 points, which can be individually software configured as digital input, analog input, or analog output to best meet the specific application needs.

All Universal I/O modules provide:

- Class 2 AC distribution voltage for peripheral devices, such as valves and actuators.
- Green LED status per I/O point that varies in intensity according to the voltage and current (directly proportional).

Digital input support includes:

- Voltage free/dry contacts
- Pulse counters up to 25 Hz

Analog input sensor support includes:

- 1K Nickel – Landis & Gyr curve
- 1K Platinum – 375 and 385 coefficient
- 10K and 100K Thermistor – Type II Curve

Active input and output support includes:

- Analog input voltage 0-10 Vdc
- Analog output voltage 0-10 Vdc

TXM1.8U-ML modules are also equipped with a local override/identification device (LOID), which includes an LCD signal display. The LCD displays the following information for each I/O point:

- Configured signal type
- Symbolic display of process value
- Notification of faulty operation, short circuit, or sensor open circuit

Orange LEDs indicate override status individually per point.

Super Universal Modules (TXM1.8X and TXM1.8X-ML)

The TXM1.8X and TXM1.8X-ML Super Universal modules share all of the Universal module features, and also provide:

- Analog input current 4-20 mA
- Analog output current 4-20 mA (four current outputs maximum per module on Points 5 through 8)
- 24 Vdc distribution from power supply for sensors at a maximum of 200 mA per module

TX-I/O Power Supply (TXS1.12F4)

The TX-I/O Power Supply generates 24 Vdc at 1.2A to power TX-I/O modules and peripheral devices.

- Up to 4 TX-I/O Power Supplies can be operated in parallel, with a maximum of two per DIN rail.
- It can be located within a row of TX-I/O modules or at the beginning of a new DIN rail.

The TX-I/O Power Supply performs the following functions:

- Transfers 24 Vac at 4A to power TX-I/O modules and peripheral devices.
- Routes CS (+24 Vdc Communication Supply) and CD (Communication Data signal) between DIN rails.
- Provides an input point for 24 Vac to power additional peripheral devices.
- Isolates the 24 Vac peripheral device supply in case of overload or short-circuit with Class 2 distribution. The replaceable AC fuse can be accessed from an installed module.
- Indicates the AC fuse status (via LED) for easy diagnostics.

TX-I/O Bus Connection Module (TXS1.EF4)

The Bus Connection Module transfers DC power for TX-I/O modules and peripheral devices and transfers AC power for peripheral devices.

- It can be located within a row of TX-I/O modules or at the beginning of a new DIN rail.

The TX-I/O Bus Connection Module performs the following functions:

- Routes CS (+24 Vdc Communication Supply) and CD (Communication Data Signal) between DIN rails.
- Provides an input point for 24 Vac to power additional peripheral devices.
- Isolates the 24 Vac peripheral device supply in case of overload or short-circuit with Class 2 distribution. The replaceable AC fuse can be accessed from an installed module.
- Indicates the AC fuse status (via LED) for easy diagnostics.

TX-I/O Island Bus Expansion Module (TXA1.IBE)

The TX-I/O Island Bus Expansion (IBE) module increases the distance between the primary field panel and expansion field panels without affecting the TX-I/O island bus maximum distance.

- An LED provides an indication of island bus communication.
- The IBE converts the TX-I/O island bus signal on the self-forming rail to an RS-485 signal level on the connector.
 - Each IBE module supports a maximum of two RS-485 segments.
 - Each segment may extend up to 200 ft (61 m) from the primary enclosure.
 - The island bus length extended from the primary field panel is added to island bus length extended from any expansion panel. RS-485 segment length between the IBEs does not add to the island bus length.
- The IBE does not transfer power over the RS-485 segment.
- Switches set the IBE as the TX-I/O island bus master (BM) or an RS-485 end-of-line terminator.
- A programming tool is not required.
- A maximum of 5 IBEs may be installed on the island bus: one IBE in the primary enclosure plus one in each expansion enclosure (maximum of 4).

- Only one Island Bus Expansion (IBE) module per enclosure is permitted.
- Expansion enclosures must be supplied using a separate TX-I/O Power Supply. Loss of this power does not affect the primary enclosure.

P1 Bus Interface Module (TXB1.P1 and TXB1.P1-4)

The P1 Bus Interface Module (P1 BIM) provides P1 FLN communication and power for TX-I/O modules. It does not contain application or control for the TX-I/O modules.

The P1 BIM provides the following features:

- Communication on the P1 FLN or MEC Expansion Bus.
- 24 Vac input.
- Generation of 24 Vdc at 600 mA to power TX-I/O modules and peripheral devices.
- Plug-in screw terminals.
- Isolates the peripheral device supply in case of overload or short-circuit with Class 2 distribution. The replaceable AC fuse can be accessed from an installed module.
- Separate LEDs for module operation, FLN communication activity, 24 Vdc present on the TX-I/O island bus, and monitoring of the 24 Vac fuse.

TXB1.P1

- Support for 80 TX-I/O points.
- Support for up to 10 I/O modules.
- Transfer of 24 Vac at a maximum of 4A to power peripheral devices.
- Up to three TX-I/O Power Supplies can be operated in parallel, max of 2 per DIN.

TXB1.P1-4

- Support for 64 TX-I/O points.
- Support for up to 4 I/O modules.

TX-I/O island bus Extension

The following picture shows the TX-I/O island bus extended using a Bus Connection Module and TX-I/O Power Supply. This configuration allows the TX-I/O island bus to extend a maximum of 164 feet (50 meters), and may extend outside an enclosure.

The following picture shows the TX-I/O island bus expanded using five Island Bus Expansion modules.

I/O Functions by Module

TX-I/O™ function	Description	Module type							
		TXM1.8D	TXM1.16D	TXM1.8U	TXM1.8U-ML	TXM1.8X	TXM1.8X-ML	TXM1.6R	TXM1.6R-M
		Maximum number of functions per module							
Digital inputs									
Binary Input	Status indication, voltage-free/dry contact	8	16	8	8	8	8		
Counter	Count/accumulator, voltage-free/dry pulse contact	8	8	8	8	8	8		
Analog Inputs									
	Temperature LG-Ni1000			8	8	8	8		
	Temperature Pt 1000 375			8	8	8	8		
	Temperature Pt 1000 385			8	8	8	8		
	Temperature (NTC) 10 K			8	8	8	8		
	Temperature (NTC) 100 K			8	8	8	8		
	Voltage, DC 0, 10V *			8	8	8	8		
	Current DC 4, 20 mA *					8	8

* Active inputs and active outputs (0-10V and 4-20 mA) must be located on different modules if sensors are externally powered.

Specifications:

Dimensions (L × W × D)		
TX-I/O Modules	2.52" × 3.54" × 2.75" (64 mm × 90 mm × 70 mm)	
TX-I/O P1 BIM	5" × 3.54" × 2.75" (128 mm × 90 mm × 70 mm)	
TX-I/O Power Supply	3.78" × 3.54" × 2.75" (96 mm × 90 mm × 70 mm)	
TX-I/O Bus Connection Module	1.26" × 3.54" × 2.75" (32 mm × 90 mm × 70 mm)	
TX-I/O Island Bus Expansion (IBE) Module	1.26" × 3.54" × 2.75" (32 mm × 90 mm × 70 mm)	
Electrical		
Power Requirements	24 Vac +/-20% input @ 50 or 60 Hz	
Power Consumption		
Power Supply	35 VA with 96 VA pass-thru	
Bus Connection Module	0 VA with 96 VA pass-thru	
TX-I/O P1 BIM	20 VA with 96 VA pass-thru	
With the above power consumption, the Power Supply produces 28.8 W (1.2A at 24 Vdc) and the P1 BIM provides 14.4 W (0.6A at 24 Vdc) to be used by the following:		
TXM1.8D	1.1 W	
TXM1.16D	1.4 W	
TXM1.8U	1.5 W	
TXM1.8U-ML	1.8 W	
TXM1.8X	2.2 W	
TXM1.8X-ML	2.3 W	
TXM1.6R	1.7 W	
TXM1.6R-M	1.9 W	
Island Bus Expansion Module	1.2 W	
Terminations		
I/O Terminals	20-12 AWG Solid 20-14 AWG Stranded	
Power Supply, BCM, P1 BIM, and IBE	2-, 3-, or 4-position screw terminal pluggable blocks	
Operating Environment		
Ambient operating environment	Operate in a dry location, which is protected from exposure to salt spray or other corrosive elements. Exposure to flammable or explosive vapors must be prevented.	
Operating Temperature	32°F to +122°F (0°C to 50°C)	
Shipping & Storage Environment	-13°F to 158°F (-25°C to 70°C)	
Relative Humidity	5 to 93% rh, non-condensing

Regions where this Product is Sold

(US, Asia Pacific, Canada, Latin America, UK)

Disposal

The devices are considered electrical and electronic equipment for disposal in terms of the applicable European Directive and may not be disposed of as domestic garbage.

- Dispose of the devices through channels provided for this purpose.
- Comply with all local and currently applicable laws and regulations.

Information in this document is based on specifications believed correct at the time of publication. The right is reserved to make changes as design improvements are introduced. Designo™ Room Automation

DXR2 room automation stations, BACnet/MSTP, 24 V

DXR2.M18

Automation station with increased functionality and flexibility to support the demands for standard control of terminal HVAC equipment and Total Room Automation (TRA) applications. TRA offers the highest level of flexibility for energy-optimized solutions without sacrificing comfort.

- Compact, programmable room automation stations for HVAC, lighting, and shading.
- BACnet MS/TP Communication (BTL certified).
- KNX PL-Link bus to connect sensors, actuators, and operator units (including bus power).
- USB interface.
- Operating voltage AC 24V.
- Mounted on standard DIN rails or on the wall.
- Plug-in terminal blocks.

Features

- Total Room Automation applications combining multiple disciplines (HVAC, lighting, blinds/shading) into one comprehensive solution.
- BTL Listed as a BACnet Advanced Application Controller (B-AAC) device.
- Fully programmable using block programming.
- Proven, pre-loaded applications.
- Operational modes (Comfort, Standby, Economy, Protection, and so on).

Preconfigured applications

Fan Coil Unit (FCU)

- FAN COIL 2-Pipe CW/HW and HW Valves
- FAN COIL 4-Pipe CW and HW Valves
- FAN COIL staged DX Cooling and staged Heating
- FAN COIL with CW and staged Electric Heat
- FAN COIL–UNIT VENT with CW, HW and Outside Air Damper (OAD) control
- FAN COIL–UNIT VENT with CW, ELEC and OAD control
- FAN-COIL-UNIT VENT with DX, HW and OAD control
- FAN COIL-UNIT VENT with DX, ELEC and OAD control

Chilled Beam

- Chilled Beam Passive 2 Pipe Heating/Cooling and Radiator 1-Stage Electric

Heat Pump

- HP Variable Speed, Two Stage Elec Heat and One Stage Elec Rad with OAD
- HP Variable Speed, Water Source, HW Heat and Modulating Elec Rad with OAD
- HP Single Stage, One Stage Elec Heat and HW Rad with OAD
- HP Multi Stage, Two Stage Elec Heat and HW Rad with OAD
- HP Multi Stage, Hot Gas Reheat, One Stage Elec Heat and HW Rad with OAD
- HP Multi Stage, Ground Source, Hot Gas Reheat, One Stage Elec Heat and HW Rad with OAD

Additional Applications

- Electrical terminal heating coils, PWM, single, multi-stage or analog
- Terminal fans, single, multi-stage or analog
- Chill water, DX or hot water coils and heating/cooling coils (2-pipe or 4-pipe)
- Variable Air Volume (VAV), Dual Duct and Fan Powered VAV (FPB)
- Radiant ceiling including Chilled beams, cooling, heating and heating/cooling (2-pipe or 4-pipe) control
- Radiator/Baseboard: hot water, steam or electric
- Lighting – up to four separated or overlapping zones
 - Manual switching and dimming
 - Occupancy control and Vacancy control
 - Automatic Daylight Harvesting - step or constant level control
 - Stairwell lighting
 - Scene control

- Blinds – one or two separate zones
 - Manual control: Up, Down, Predefined positions
 - Occupancy control and Vacancy control
 - Glare Protection
 - Energy efficiency functions including solar radiation optimization
 - Slat angle
 - Scene control

Pre-loaded Application Options

Fan coil unit

- Single, multiple or variable speed fan control.
- Outside air damper control with economizer.
- Ventilation Control or Demand Control Ventilation (DCV) with separate outside air damper (OAD) setpoints for each operational mode.
- Supply (discharge) air temperature control for modulation heating or cooling coils.
- Dehumidification control.
- Terminal coils: heating (hot water or electric), cooling (chilled water or DX) and heating/cooling coil (2-pipe or 4-pipe).
- Radiant ceiling including Chilled beams and Radiator control.

Heat pump

- Heat Pump compressors: Single, multiple or variable speed.
- Air-to-air, water loop or ground water configurations.
- Single, multiple or variable speed fan control.
- Outside air damper control with economizer.
- Dehumidification control.
- Ventilation Control or Demand Control Ventilation (DCV) with separate outside air damper (OAD) setpoints for each operational mode.
- Terminal heating coil (hot water or electric) or hot gas coil.
- Radiant ceiling including Chilled beams and Radiator control.
- Greenleaf energy efficiency determination and display.
- Configurable plant operating modes (heating, cooling, warm up, cool down, flush/purge, and so on).

Functions

The selected application and its parameters as well as input and output configuration determine the room automation station's functionality.

A detailed description of functionality is available in the ABT (Automation Building Tool) online help.

Communication

- BACnet MS/TP
- USB connection for service and commissioning, firmware download, and LAN access.
- The following functions are available with the KNX PL-Link bus:
 - Communication with room operator units, switches, sensors, actuators, and luminaires.
 - Plug-and-play connection of Siemens field devices with KNX PL-Link.

Type summary

Product Number	SSN	Description	Inputs	Outputs
DXR2.M18-101B (Version with 60 data points*)	S55376-C124	DXR2.M18 Room Automation Station	2 DI, 4 UI	8 DO Triacs, 4 AO 0 to 10V
DXR2.M18-101K (Version with 60 data points)	S55376-C154	Smoke Control DXR2.M18 Room Automation Station	2 DI, 4 UI	8 DO Triacs, 4 AO 0 to 10V

Accessories

Product Number	Designation
985-124	499 ohm Resistor Kit

Technical data

Housing

Color	RAL 7035 (light-gray)
Dimensions	180 mm (7.09 in) x 104.5 mm (4.11 in) x 59.5 mm (2.34 in)
Weight Packaging	ca. 360 g (12.69 oz) ca. 40 g (1.41 oz)

Function data

Communication	
A/D Resolution (analog in)	14 Bits
D/A Resolution (analog out)	12 Bits

Power data

Power supply	
Operating voltage	AC 24V -15%/+20%
Frequency	50/60 Hz
Internal fuse	4 A irreversible
Transformer with secondary current limitation of max. 10 A or external secondary current fuse Non-renewable fuse Circuit breakers	Max. 10 A, slow Max. 13 A, characteristic B, C, D as per EN 60898

Apparent power (VA) for transformer design						
Base Model	Base load	Max. load Triac output AC 24V~ 0.25 A each	Max. load all Aux. outputs AC 24V~	Max. load KNX PL-Link (at 50 mA)	Max. load DC 24V+ (2.4 W) ¹	Max. Allowed Power consumption including connected field devices
DXR2.M18	6	8 x 6 = 48	18	4	6	70

Power for the Triac outputs must be reduced if the maximum load of 18 VA is required for AC 24V field supply on the DXR2.x18.

NOTE:

To calculate the total VA, add the Base Load + the number of Triacs + field supplies+ KNX PL-Link devices.

This cannot exceed the maximum power consumption. See the *Wiring Guidelines* for more information.

Inputs

Analog Inputs		
Resistance sensor	Temperature measurement	Voltage measurement
AI 1000 Ω	AI PT1K 375 (NA)*)	AI 0 to 10V
AI 2500 Ω	AI PT1K 385 (EU)*)	AI 0 to 10V (0 to 100%)
AI 10 KΩ	AI (LG-)Ni1000*)	
AI 100 KΩ	AI Ni1000 DIN*)	
	AI T1 (PTC)*)	
	AI NTC10K (Type II)**)	
	AI NTC100K**)	

* A fixed value of 1 Ω is calibrated to correct line resistance.

** Configurable default.

Digital Inputs	
Contact voltage	Universal input: 18V Digital input: 21V
Contact current	Universal input: 1.2 mA; 7.4 mA initial current Digital input: 1.6 mA; 9.4 mA initial current
Contact resistance for closed contacts	Max. 100 Ω
Contact resistance for open contacts	Min. 50 k Ω

Outputs

Analog Outputs	
0 to 10V	Max. 1 mA

Digital Outputs	
Type (Switching outputs triacs)	High side The Triac closes the contact to AC 24V
Switching voltage	AC 24V
Permissible load	250 mA/6 VA per output (cos phi 0.35) (500 mA/12 VA per output with PWM*)
Protection	Short-circuit proof

DC 24V output for field devices (1: V+)	
Output voltage	DC 24V
Permissible load	100 mA/2.4 W
Protection against overload	Short-circuit proof

Connections

Interfaces	
MSTP	Interface type: RS485 Galvanic isolation: Yes Baud rates: 9600, 19200, 38400, 76800, 115200 Protocol: BACnet over MS/TP Short-circuit proof Protection against faulty wiring at max. AC 24V
USB (2.0)	Plug: Type B Data rate: 12 Mbps
KNX PL-Link	Type: KNX TP1 PL-Link, galvanic isolation Baud rate: 9.6 kbps Bus power: 50 mA Short-circuit proof Protection against faulty wiring at max. AC 24V
Wiring connections	
Pluggable screw terminals	Copper wire or copper strands with ferrules 1 x 0.6 mm dia. to 2.5 mm ² (22 to 14 AWG) or 2 x 0.5 mm dia. to 1 mm ² (24 to 18 AWG) Copper strands without ferrules 1 x 0.6 mm dia. to 2.5 mm ² (22 to 14 AWG) or 2 x 0.5 mm dia. to 1.5 mm ² (24 to 16 AWG)
Slotted screws	Small 1/8" blade, tightening torque 0.6 Nm (0.44 lb-ft)
Wiring lengths for signals	KNX PL-Link 80 m (260 ft) with internal bus power or 300 m (990 ft) with external power supply MS/TP 1,000 m (3,290 ft) Signal lines 80 m (260 ft) For inputs AI 100 K Ω , AI NTC10K, AI NTC100K: 30 m (100 ft) or 80 m (260 ft), if shielded.

KNX/PL-Link Network and Power Wiring.*	
Cable configuration	1 or 2 twisted pair - Pair 1 red/black - Pair 2 yellow/white
Gauge	20 AWG (solid copper)
Twists per foot	4 Minimum
Capacitance	30 pF/foot or less
Shields	100% foil with drain wire
UL type	300Vrms, CMP (75 °C or higher)
CSA type	300Vrms, FT6 (75 °C or higher)

* Alternative 18 AWG STP CMP (Belden 6320FE 8771000)

Conformity

 CAUTION	
	National safety regulations Failure to comply with national safety regulations may result in personal injury and property damage. Observe national provisions and comply with the appropriate safety regulations.

Ambient Conditions and Protection classification

Climatic ambient conditions

- Transport and storage
 - Temperature -25 to 70°C (-13 to 158°F)
Air humidity 5 to 95% rh.
- Operation
 - Temperature -5 to 45°C (23 to 113°F)/
-5 to 50°C (23 to 122°F)
Air humidity 5 to 95% rh.

Standards, Directives and Approvals

UL Listing	UL 916 PAZX - Conforms to UL916 9th and 10th Edition. UL 864 UUKL Smoke Control Equipment - Conforms to UL864 9th and 10th Edition. (Smoke Control 'K' variant only)
Suitable for plenum area installation	UL1995

Designo™ Room Automation

DXR2 room automation stations, BACnet/MSTP, 24 V

DXR2.M11

Automation station with increased functionality and flexibility to support the demands for standard control of terminal HVAC equipment and Total Room Automation (TRA) applications. TRA offers the highest level of flexibility for energy-optimized solutions without sacrificing comfort.

- Compact, programmable room automation stations for HVAC, lighting, and shading.
- BACnet MS/TP Communication (BTL certified).
- KNX PL-Link bus to connect sensors, actuators, and operator units (including bus power).
- USB interface.
- Operating voltage AC 24V.
- Mounted on standard DIN rails or on the wall.
- Plug-in terminal blocks.

Features

- Total Room Automation applications combining multiple disciplines (HVAC, lighting, blinds/shading) into one comprehensive solution.
- BTL Listed as a BACnet Advanced Application Controller (B-AAC) device.
- Fully programmable using block programming.
- Proven, pre-loaded applications.
- Operational modes (Comfort, Standby, Economy, Protection, and so on).

Preconfigured applications

Fan Coil Unit (FCU)

- FAN COIL 2-Pipe CW/HW and HW Valves
- FAN COIL 4-Pipe CW and HW Valves
- FAN COIL staged DX Cooling and staged Heating
- FAN COIL with CW and staged Electric Heat
- FAN COIL–UNIT VENT with CW, HW and Outside Air Damper (OAD) control
- FAN COIL–UNIT VENT with CW, ELEC and OAD control
- FAN-COIL-UNIT VENT with DX, HW and OAD control
- FAN COIL-UNIT VENT with DX, ELEC and OAD control

Chilled Beam

- Chilled Beam Passive 2 Pipe Heating/Cooling and Radiator 1-Stage Electric

Heat Pump

- HP Variable Speed, Two Stage Elec Heat and One Stage Elec Rad with OAD
- HP Variable Speed, Water Source, HW Heat and Modulating Elec Rad with OAD
- HP Single Stage, One Stage Elec Heat and HW Rad with OAD
- HP Multi Stage, Two Stage Elec Heat and HW Rad with OAD
- HP Multi Stage, Hot Gas Reheat, One Stage Elec Heat and HW Rad with OAD
- HP Multi Stage, Ground Source, Hot Gas Reheat, One Stage Elec Heat and HW Rad with OAD

Additional Applications

- Electrical terminal heating coils, PWM, single, multi-stage or analog
- Terminal fans, single, multi-stage or analog
- Chill water, DX or hot water coils and heating/cooling coils (2-pipe or 4-pipe)
- Radiant ceiling including Chilled beams, cooling, heating and heating/cooling (2-pipe or 4-pipe) control
- Radiator/Baseboard: hot water, steam or electric
- Lighting – up to four separated or overlapping zones
 - Manual switching and dimming
 - Occupancy control and Vacancy control
 - Automatic Daylight Harvesting - step or constant level control
 - Stairwell lighting
 - Scene control

- Blinds – one or two separate zones
 - Manual control: Up, Down, Predefined positions
 - Occupancy control and Vacancy control
 - Glare Protection
 - Energy efficiency functions including solar radiation optimization
 - Slat angle
 - Scene control

Pre-loaded Application Options

Fan coil unit

- Single, multiple or variable speed fan control.
- Outside air damper control with economizer.
- Ventilation Control or Demand Control Ventilation (DCV) with separate outside air damper (OAD) setpoints for each operational mode.
- Supply (discharge) air temperature control for modulation heating or cooling coils.
- Dehumidification control.
- Terminal coils: heating (hot water or electric), cooling (chilled water or DX) and heating/cooling coil (2-pipe or 4-pipe).
- Radiant ceiling including Chilled beams and Radiator control.

Heat pump

- Heat Pump compressors: Single, multiple or variable speed.
- Air-to-air, water loop or ground water configurations.
- Single, multiple or variable speed fan control.
- Outside air damper control with economizer.
- Dehumidification control.
- Ventilation Control or Demand Control Ventilation (DCV) with separate outside air damper (OAD) setpoints for each operational mode.
- Terminal heating coil (hot water or electric) or hot gas coil.
- Radiant ceiling including Chilled beams and Radiator control.
- Greenleaf energy efficiency determination and display.
- Configurable plant operating modes (heating, cooling, warm up, cool down, flush/purge, and so on).

Functions

The selected application and its parameters as well as input and output configuration determine the room automation station's functionality.

A detailed description of functionality is available in the ABT (Automation Building Tool) online help.

Compact Series Unitary Equipment Controller

Figure 1. PXC Compact Series Unitary Equipment Controllers (PXC UEC-16/24).

Description

The PXC Compact Series Unitary Equipment Controller (Programmable Controller-Compact) for BACnet networks is a high-performance Direct Digital Control (DDC) equipment controller, which is an integral part of the APOGEE Automation System. The controllers are classified as a BACnet Advanced Application Controller (B-AAC) with support for BACnet MS/TP protocol.

The PXC Compact UEC Series offers integrated I/O based on state-of-the-art TX-I/O™ Technology, which provides superior flexibility of point and signal types, and makes it an optimal solution for Air Handling Unit (AHU) control.

The Unitary Equipment Controller communicates with other field panels or workstations on a peer-to-peer Automation Level Network (ALN), or on the Field Level Network (FLN), and supports the following communication options:

- I Native BACnet MS/TP on RS-485

Features

- I BACnet Testing Laboratories (BTL) certified
Classified as BACnet Advanced Application Controllers (B-AAC) using the BACnet MS/TP protocol for specific models.
- I Sophisticated Adaptive Control, a closed loop control algorithm that auto-adjusts to compensate for load/seasonal changes.
- I Message control for terminals, printers, pagers, and workstations.
- I HMI RS-232 and USB port, which provides laptop connectivity for local operation and engineering.
- I Extended battery backup of Real Time Clock.
- I Auto Save and persistent database backup and restore within the controller.
- I PXM10T and PXM10S support: Optional LCD Local user interface with HOA (Hand-off-auto) capability and point commanding and monitoring features.
- I An extended temperature range for the control of rooftop devices.

Compact Series Unitary Equipment Controller

The PXC Unitary Equipment Controller (UEC) is an MS/TP device, that can be configured as a programmable, stand-alone device or as a networked device on the BACnet MS/TP ALN (Automation Level Network) or FLN (Field Level Network) device.

PXC UEC-16

The PXC UEC-16 provides control for 16 points, including 8 software-configurable universal points.

Point count includes: 3 Universal Input (UI), 5 Universal I/O (U), 2 Digital Input (DI), 3 Analog Output (AOV), and 3 Digital Output (DO).

PXC UEC-24

The PXC UEC-24 provides control for 24 points, including 16 software-configurable universal points.

Point count includes: 3 Universal Input (UI), 9 Universal I/O (U), 4 Super Universal I/O (X), 3 Analog Output (AOV), 5 Digital Output (DO).

Extended Temperature Operation

The PXC Compact UEC "R" models support extended temperature operation, allowing for rooftop installations.

Hardware

The PXC Compact Series consists of the following major components:

- I Input/Output Points
- I Power Supply
- I Controller Processor

Input/Output Points

- I The PXC Compact input/output points perform A/D or D/A conversion, signal processing, point command output, and communication with the controller processor. The terminal blocks are removable for easy termination of field wiring.
- I The Universal and Super Universal points leverage TX-I/O™ Technology from Siemens Building Technologies to configure an extensive variety of point types.
- I Universal Input (UI) and Universal Input/Output (U) points are software-selectable to be:
 - 0-10V input
 - 4-20 mA input
 - Digital Input
 - Pulse Accumulator inputs
 - 1K Ni RTD @ 32°F (Siemens, Johnson Controls, DIN Standard)

- 1K Pt RTD (375 or 385 alpha) @ 32°F
- 10K NTC Thermistor (Type 2 and Type 3) @ 77°F
- 100K NTC Thermistor (Type 2) @ 77°F
- 0-10V Analog Output (Universal Input/Output (U) points only)
- I Super Universal (X) points are software-selectable to be:
 - 0-10V input
 - 4-20 mA input
 - Digital Input
 - Pulse Accumulator inputs
 - 1K Ni RTD @ 32°F (Siemens, Johnson Controls, DIN Standard)
 - 1K Pt RTD (375 or 385 alpha) @ 32°F
 - 10K NTC Thermistor (Type 2 and Type 3) @ 77°F
 - 100K NTC Thermistor (Type 2) @ 77°F
 - 0-10V Analog Output
 - 4-20 mA Analog Output
 - Digital Output (using external relay)
- I Digital Output (DO) points are 110/220V 4 Amp (resistive) Form C relays; LEDs indicate the status of each point.
- I All PXC Compact Series models support 0-10 Vdc Analog Output circuits.
- I The Super Universal points may be defined as either 0-10 Vdc or 4-20 mA Analog Output circuits.

Power Supply

- I The 24 volt DC power supply provides regulated power to the input/output points and active sensors. The power supply is internal to the PXC Compact housing, eliminating the need for external power supply and simplifying installation and troubleshooting.
- I The power supply works with the processor to ensure smooth power up and power down sequences for the equipment controlled by the I/O points, even through brownout conditions.

Controller Processor

- I The Unitary Equipment Controller includes a microprocessor-based multi-tasking platform for program execution and communications with the I/O points and with other UECs and field panels.

- I A Human Machine Interface (HMI) port, with a quick-connect phone jack (RJ-45), uses RS-232 protocol to support operator devices (such as a local user interface or simple CRT terminal), and a phone modem for dial-in service capability.
- I A USB Device port supports a generic serial interface for an HMI or Tool connection. The USB Device port does not support firmware flash upgrades.
- I The program and database information stored in the UEC RAM memory is battery-backed. This eliminates the need for time-consuming program and database re-entry in the event of an extended power failure.
- I The firmware, which includes the operating system, is stored in non-volatile flash ROM memory; this enables firmware upgrades in the field.
- I Brownout protection and power recovery circuitry protect the controller board from power fluctuations.
- I LEDs provide instant visual indication of overall operation, network communication, and low battery warning.

Programmable Control with Application Flexibility

The PXC Compact Series of high performance controllers provides complete flexibility, which allows the owner to customize each controller with the exact program for the application.

The control program for each UEC is customized to exactly match the application. Proven Powers Process Control Language (PPCL), a text-based programming structure like BASIC, provides direct digital control and energy management sequences to precisely control equipment and optimize energy usage.

Global Information Access

The HMI port supports operator devices, such as a local user interface or simple CRT terminal. Devices connected to the operator terminal port gain global information access.

Multiple Operator Access

Multiple operators can access the network simultaneously. Multiple operator access ensures that alarms are reported to an alarm printer while an operator accesses information from a local terminal. Multiple operators may also access the controller

through concurrent Telnet sessions and/or local operator terminal ports.

Menu Prompted, English Language Operator Interface

The UEC includes a simple, yet powerful, menu-driven English Language Operator Interface that provides, among other things:

- I Point monitoring and display
- I Point commanding
- I Historical trend collection and display for multiple points
- I Event scheduling
- I Program editing and modification via Powers Process Control Language (PPCL)
- I Alarm reporting and acknowledgment
- I Continual display of dynamic information

Built-in Direct Digital Control Routines

The UEC provides stand-alone Direct Digital Control (DDC) to deliver precise HVAC control and comprehensive information about system operation. It receives information from sensors in the building, processes the information, and directly controls the equipment. The following functions are available in the UEC:

- I Adaptive Control, an auto-adjusting closed loop control algorithm, which provides more efficient, adaptive, robust, fast, and stable control than the traditional PID control algorithm. It is superior in terms of response time and holding steady state, and at minimizing error, oscillations, and actuator repositioning.
- I Closed Loop Proportional, Integral and Derivative (PID) control.
- I Logical sequencing.
- I Alarm detection and reporting.
- I Reset schedules.

Built-in Energy Management Applications

The following applications are programmed in the Unitary Equipment Controller and require simple parameter input for implementation:

- I Automatic Daylight Saving Time switchover

- I Calendar-based scheduling
- I Duty cycling
- I Economizer control
- I Equipment scheduling, optimization and sequencing
- I Event scheduling
- I Holiday scheduling
- I Night setback control
- I Peak Demand Limiting (PDL)
- I Temperature-compensated duty cycling
- I Temporary schedule override

BACnet UEC Specifications

Dimensions (L × W × D)	
PXC Unitary Equipment Controller, 16 point, BACnet MS/TP	10.7" × 5.9" × 2.45" (272 mm × 150 mm × 62 mm)
PXC Unitary Equipment Controller, 24 point, BACnet MS/TP	10.7" × 5.9" × 2.45" (272 mm × 150 mm × 62 mm)
Processor, Battery, and Memory	
Processor and Clock Speed	Freescall MPC852T, 100 MHz
Memory	24 MB (16 MB SDRAM, 8 MB Flash ROM)
Battery backup of SDRAM (field replaceable)	AA (LR6) 1.5 Volt Alkaline (non-rechargeable) 180 days (accumulated) <i>Rooftop (Extended Temperature) Models:</i> 330 days (accumulated) AA (LR6) 3.6 Volt Lithium (non-rechargeable)
Battery backup of Real Time Clock	10 years (32°F to 122°F (0°C to 50°C)) Coin cell (BR2032) 3 Volt lithium Rooftop (Extended Temperature) Models 18 months
Communication	
A/D Resolution (analog in)	16 bits
D/A Resolution (analog out)	10 bits
BACnet MS/TP Automation Level Network (ALN)	9600 bps to 115.2 Kbps, up to 10 nodes per MS/TP ALN
BACnet MS/TP Field Level Network (FLN)	9600 bps to 115.2 Kbps
Human-Machine Interface (HMI)	RS-232 compliant, 1200 bps to 115.2 Kbps
USB Device port (for non-smoke control applications only)	USB 1.1 (12 Mbps) and 2.0 (480 Mbps), Type B female connector. Self-powered, does not use or supply USB power.
Prior to June 2013	USB 1.0 (1.5 Mbps) and 1.1 (12 Mbps)
Electrical	
Power Requirements	24 Vac ±20% input @ 50/60 Hz
Power Consumption (Maximum)	20 VA @ 24 Vac
A/D Resolution (analog in)	16 bits
D/A Resolution (analog out)	10 bits
AC Power and Digital Outputs	NEC Class 1 Power Limited
Communication and all other I/O	NEC Class 2

Electrical

PXA-ENC18	18" Enclosure (Utility Cabinet) (UL Listed NEMA Type 1 Enclosure)
PXA-ENC19	19" Enclosure (UL Listed NEMA Type 1 Enclosure)
PXA-ENC34	34" Enclosure (UL Listed NEMA Type 1 Enclosure)

Disposal

The devices are considered electrical and electronic equipment for disposal in terms of the applicable European Directive and may not be disposed of as domestic garbage.

- Dispose of the devices through channels provided for this purpose.
- Comply with all local and currently applicable laws and regulations.

Siemens MS/TP Point Pickup Module

Description

The Siemens Point Pickup Modules (PPM) are expansion I/O devices that communicate on a BACnet master-slave/token-passing (MS/TP) network, allowing for the incorporation of a cluster of remote points into the Building Automation Station over the MS/TP network.

The PPM family leverages the MS/TP network to extend the reach of any BTL-listed BACnet Building Controllers application program.

Each Universal Input can be configured for analog or digital input. Input/Output type is configured by writing to BACnet object properties.

Features

- Wide range of signal type support for flexible IO solutions.
- Device ID and Device name auto-populated for efficient start up (Device ID and Device name are also writable for customization).
- UL and cUL Listed as Enclosed Energy Management Equipment. No additional enclosure required.
- Evaluated and certified by UL¹⁾ as suitable for installation in plenum areas. (Building codes for plenum requirements vary by location; check with local building authority).
- LEDs, visible through the housing, indicate the power, communication, and DO status.
- Default communication at 19200 baud also supports 9600, 38400 and 76800 via DIP switch.
- 8-bit DIP switch to configure MAC address.
- Recover and resume communication on the network after a power interruption without operator intervention.
- Capable of mounting on electrical junction box without field modification or adaptors. (4 in. x 4 in. standard depth US box, 100 mm x 100 mm x 25 mm Asia/Pacific standard box.)
- DIN rail and surface mount installation also possible.
- Assembly has a cover label associated with the LEDs for easy labeling and identification.
- Supports unsolicited COVs when faster data point value updates are required.

1) The current version of PPM-3U63.BPR (for China only) is not certified by BTL or UL.

Hardware

Controller Board

The controller interfaces with, but does not provide, direct control of the following external devices:

- Digital input devices (dry contacts from motion sensors, alarm and door contacts) or Accumulator (gas, water, electrical)
- Digital output devices (fans, pumps, lighting)
- Analog input devices (temp, humidity, flow, pressure)
- Analog output (valves, actuators)

Fan Coil Unit Room Thermostat with BACnet MS/TP Communication

RDB160BNU

The RDB160BNU controls fan coil units with the following features:

- HVAC applications: 2-pipe, 2-pipe with electric heater, and 4-pipe
- Communication: BACnet MS/TP
- Operating voltage: AC 24 V
- Fan: 1, 2, 3-speed or DC 0...10 V (automatic or manual)
- Valve actuators: On/off, 3-position or DC...10 V
- Electric heater: On/off
- Built-in temperature sensor
- Three configurable inputs for external room/return air temperature, supply air temperature limitation, heating/cooling changeover, window contact, and occupancy sensor.
- Operating modes: Comfort, Standby (Economy), OFF, and mold protection
- Room temperature control: Based on built-in temperature sensor or room/return air temperature
- Heating/cooling changeover: manual, or automatic via water temperature sensor or digital input
- Supply air temperature limitation
- Automatic valve exercise
- Backlit LCD

Use

The RDB160BNU is suitable for commercial applications where communication to a building management system is required, such as offices, healthcare, education, retail, shopping malls or other commercial facilities.

Functions

Temperature control

- Built-in temperature sensor or
- External room/return air temperature

Operating modes

- Comfort
- Standby (Economy)
- OFF mode
- Mold protection (optional in OFF mode)

Additional functions

- Heating/cooling changeover
 - Manual: via thermostat (P02) or BACnet object
 - Automatic: via water temperature sensor or digital input
- Supply air temperature limitation function

Security functions

- Lock buttons
- Lock parameter menu access
- Block device during fire alarms
- Valve exercising feature

Energy efficiency functions

- Setpoint limitation
- Window state
- Occupancy

Fan operation

- Automatic and manual modes
- Fan operation in dead zone (fan kick)
- Fan over-run for electric heater

Fan blocking functions

- Block fan speed control in Auto mode
- Block fan speed control in Manual mode

BACnet MS/TP communication

- BACnet MS/TP MAC address: set from 0 to 127. Factory setting is 127.
- BACnet MS/TP device instance number: set from 0 to 4194302. Factory setting is 0.
- Baud rate: selectable between 9600, 19200, 38400 and 76800 (default setting) bps.

HVAC applications

The RDB160BNU can control fan coil units of the following types:

- 2-pipe system
- 2-pipe system with electric heater
- 4-pipe system

The applications can be configured using the local parameter menu or via BACnet objects:

YHC	Heating/cooling valve actuator	M1	Fan
YH	Heating valve actuator	B1	Return air temperature sensor or external room temperature sensor (optional)
YC	Cooling valve actuator	B2	Changeover sensor (optional)
YE	Electric heater		

Control applications

The RDB160BNU can control 29 different FCU control applications with up to 2 DC 0...10 V control outputs i.e., the control of a DC fan, DC cooling valve, and DC heating valve is not possible.

	2-pipe		2-pipe with electric heater		4-pipe		
Fan	1/2/3-speed	DC 0...10 V	1/2/3-speed	DC 0...10 V	1/2/3-speed	DC 0...10 V	
Output #1	On/Off, PWM, 3-position, DC 0...10 V		On/Off, PWM, DC 0...10 V		On/Off, PWM, DC 0...10 V	On/Off, PWM	DC 0...10 V
Output #2	N/A		On/Off			On/Off, PWM	

Mechanical design

The RDB160BNU consists of 3 parts:

- Mounting plate with screw terminals
- Plastic housing with electronics, buttons, display, and room temperature sensor
- Frame

Buttons

- | | |
|---|---------|
| 1 | On/Off |
| 2 | Up/down |
| 3 | Fan |

Display

- | | |
|----|--|
| 1 | 'AUTO/MAN': Automatic or manual mode indication for the fan |
| 2 | Current fan speed (Low, Medium, High) |
| 3 | Up/Down buttons to adjust setpoints and parameters |
| 4 | Occupancy indication |
| 5 | Current room temperature or setpoint in °F or °C (one decimal point) |
| 6 | Open window |
| 7 | 'COOL/HEAT': Shows the current control mode |
| 8 | 'STANDBY': Economy mode indication |
| | 'SERVICE': Commissioning mode (setting parameters) |
| 9 | 'OFF': OFF mode |
| 10 | Indoor / outdoor temperature |
| 11 | Setpoint temperature |
| 12 | Fan status |

Type summary

Type	Order number	Designation
RDB160BNU	S55770-T437	RDB160BNU BACnet FCU Room Thermostat

Equipment combinations

The thermostat can be combined with sensors and actuators with compatible signal types as listed in chapter 'Technical data'.

Product documentation

Topic	Document ID:
Installation instructions	A6V12045441
Commissioning instructions	A6V12045450

The Installation instructions document is available in English, Spanish, and French.

It is included with the thermostat in the same packaging box.

Related documents such as environmental declarations, CE declarations, etc., can also be downloaded at the following Internet address:

www.siemens.com/bt/download

The BTL listing can be found at <https://www.bacnetinternational.net/btl/>.

⚠ CAUTION

National safety regulations

Failure to comply with national safety regulations may result in personal injury and property damage.

- Observe national provisions and comply with the appropriate safety regulations.

Mounting

- The thermostat is suitable for mounting directly on the wall or on a 4" x 4" conduit box (using the ARG70 adapter plate).
- Recommended height: 1.5 m above the floor.
- Do not mount the devices in recesses, shelves, behind curtains or doors, or above or near heat sources.
- Avoid direct solar radiation and drafts.
- Seal the conduit box or the installation tube if any, as air currents can affect sensor readings.
- Adhere to allowed ambient conditions.

WARNING

No internal line protection for supply lines to external consumers

Risk of fire and injury due to short-circuits

- The AC 24 V mains supply line must have an external circuit breaker with a rated current of no more than 10 A.
- Adapt the supply line cable diameters as per local regulations to the rated value of the installed over-current protection device.
- Disconnect the thermostat from the power supply before removing it from the mounting plate.

WARNING

Relay outputs (DO1, DO2, DO3, DO4 or UO1) connected to mains voltage

Injuries caused by electric shock when touching the device

- Adapt the relay cable diameters as per local regulations to the rated value of the installed over-current protection device.
- Use only valve actuators rated for AC 24 V.

Commissioning

The RDB160BNU thermostat is delivered with pre-programmed control sequences. The relevant application and its parameters can be selected using the buttons on the thermostat. This can be done through:

- Setup Wizard: Only appears the first time the thermostat is powered on. It enables rapid system configuration of the most important parameters. For a list of these parameters, please refer to the installation instructions. See chapter 'Product documentation [► 6]'.
- Parameter Menu: Available anytime. Used to access and change the complete parameter set. For a list of these parameters, please refer to the commissioning instructions. See chapter 'Product documentation [► 6]'.

Disposal

The symbol with the crossed-out waste container means that electrical and electronic products and batteries may not be disposed of in normal household waste. They must be placed in separate collection and recycling containers according to the applicable laws. Please also refer to any applicable national labelling requirements. Proper disposal helps save valuable resources and prevents potentially harmful effects to people and the environment. Spent batteries and accumulators that can be removed from old devices for disposal, must be removed and placed in the indicated disposal channels. You are responsible for deleting any personal data from old devices for disposal. The registered manufacturers or distributors of electrical and electronic devices have established a common system for returning old devices. Suppliers of electrical devices must accept the returned devices at no charge. You can return old devices to the original sales location or to recycling or collection centers for old electrical devices. Please contact your regional or municipal offices/authorities for information on recycling centers or collection centers for old electrical devices.

Warranty

Technical data on specific applications are valid only together with Siemens products listed under "Equipment combinations". Siemens rejects any and all warranties in the event that third-party products are used.

General	
Operating voltage	AC 18...30 V
Frequency	50...60 Hz
Power consumption	2.5 VA
No internal fuse! External preliminary protection with max. C 10 circuit breaker required in all cases.	

Ambient conditions, environmental conditions	
Ambient temperature	32...122 °F (0...50 °C)
Storage temperature	-4...+158 °F (-20...+70 °C)
Ambient humidity	Max. 90%

Communication	
Communication	BACnet MS/TP
Communication speed	9600, 19200, 38400 or 76800 bps

Inputs	
Analog input (AI1)	PT1000-sensor, 32...122 °F (0...50 °C)
Universal input (UI1)	<ul style="list-style-type: none"> Analog input: PT1000 sensor, 32...212 °F (0...100 °C) Digital input: potential-free contact
Digital input (DI1)	Potential free contact
Common ('C') power output (for UI1 and DI1 only)	DC 24 V, max. 10 mA, short circuit-protected

Outputs	
Digital outputs (Dox)	AC 24 V, max. 0.5 A
Do NOT connect fans in parallel. Connect one fan directly. For additional fans, install one relay for each speed.	
Universal outputs (UOx)	<ul style="list-style-type: none"> Digital output (DO): AC 24 V, max. 2.0 A Analog output (AO): DC 0...10 V, max. 5 mA

Operational data	
Built-in temperature sensor	
Technology	NTC linearized 15 kΩ
Measuring range	32...122 °F (0...50 °C)
Accuracy	±0.9 °F (±0.5 °C) at 59...86 °F (15...30 °C)
Setpoint range	41...95 °F (5...35 °C)

Standards and directives	
UL certificates	UL916 *)
BACnet BTL Listing	BACnet Application Specific Controller (B-ASC)
EU conformity (CE)	See EU declaration of conformity *)
UK conformity (UKCA)	See UK declaration of conformity *)
The product environmental declaration contains data on environmentally compatible product design and assessments (RoHS compliance, materials composition, packaging, environmental benefit, disposal)	See product environmental declaration *)

General	
Mounting	Indoor, wall (directly, or on a 4" x 4" conduit box using the ARG70 adapter plate).
Terminal blocks	Lift type for max. cable cross-section: 2.1 mm ²
Display	Backlit LCD
Casing material	Polycarbonate, PC
Color	Signal white RAL 9003
Safety class	IP20
Net weight	3.88 ounces (110 g)

QMX3 Room Sensors for Siemens DXR Series Controllers

QMX3.P30/P40/P70
Sensing Only

QMX3.P02
Sensor/Room
Operator

QMX3.P34/P44/P74
Sensor with Full Display

QMX3.P37
Room Sensor/Operator
with Display

Description

The QMX3 Series includes sensors, switches and room operator units exclusively for use with Siemens DXR Series Controllers. The devices communicate with the controller using PL-Link protocols. All units can be installed on a standard 2" x 4" electrical box with no additional back plates required. No-logo versions are available for some units.

QMX3.P02

- Temperature sensor.
- Configurable touch keys for light and shade control.

QMX3.P30

- Temperature sensor.

QMX3.P34

- Temperature sensor.
- Backlit LCD display and touch keys for HVAC control.
- Green Leaf active energy management.

QMX3.P37

- Temperature sensor.
- Backlit LCD display and configurable touch keys for light and shade control.
- Green Leaf active energy management.

QMX3.P40

- Temperature and humidity sensor

QMX3.P44

- Temperature and humidity sensor
- Backlit LCD display and touch keys for HVAC control

QMX3.P70

- Temperature, humidity and air quality sensor.
- LED air quality indicator.

QMX3.P74

- Temperature, humidity and CO₂ sensor.
- Backlit LCD HMI and touch keys for HVAC control.
- Green Leaf active energy management.

Specifications*

Temperature	
Measuring range	32°F to 122°F (0°C to 50°C)
Accuracy	± 0.36°F @ 77°F (0.2°C @ 25°C)
Humidity (P4x and P7x)	
Measuring Range	0 to 95% rh
Accuracy	± 4% (20 to 80% rh)
CO ₂ (P70 and P74)	
Measuring Range	400 to 10,000 PPM
Accuracy < 2K ppm	± (30 ppm +4% measured CO ₂) @ 73°F (23°C) and 101.3 kPa
Temp. dependency	± 2 ppm/°C typical
Pressure dependency	0.14% of value/hPa
Long-term drift	± 20 ppm per year
Calibration	Not required
Operating voltage range	PL-Link DC 21 to 30V Max.
Power consumption	15 mA at 24 Vdc
Agency Listings	UL 916 FCC Part 15 CSA C22.2 #0 and #205
Color	White or black
Dimensions	5.25" x 3.5" x 0.71" (133.4 mm x 88.4 mm x 18 mm)
Shipping Weight	7.6 oz. (216 g)

*Accuracies shown are for sensing elements; actual system accuracy may vary.

Display (QMX3.P34 and QMX3.P74 Only)

NOTES:

- User-accessible values and settings will vary based on overall system configuration.
- Some values (for example, open window indicator, and outdoor air temperature) require additional

	Current Room Temperature/Humidity/Air Quality
	Indicates indoor or outdoor temperature (User-selectable).
	Indicates that a window is open.
	Heating/cooling mode indicator
	Green leaf indicates optimum settings are active. (One-touch resets to optimum setpoints.)
	Displays temperature setpoint (User-adjustable)
	Displays current fan speed (User-adjustable)
	Displays current room operating mode (User-selectable)
	Displayed value selector (RH/Temp/Air Quality) (User-selectable)
	Room occupancy indicator
	Start-up/commissioning mode indicators (See start-up and commissioning documents)
	Indicates parameters are locked

Series QAA2200 Room Temperature Sensors & Series QFA3200 Room Humidity Sensors

QxAx2xx.EWSN
Sensing Only

QxAx2xx.FWSN
Full HMI

Description

Series QAA2200 Room Temperature and Series QFA3200 Room Humidity + Temperature sensors are engineered to enable accurate and efficient control of room comfort. A wide variety of output signals is available for compatibility with nearly any control system. The patented housing design seamlessly blends into any décor and features strategically placed ventilation slots to maximize airflow and optimize accuracy.

The QFA3200 units combine a temperature sensor with a relative humidity sensor in a single housing to reduce installation time and improve overall room aesthetics.

Installation is quick and straightforward with all hardware included for mounting on a standard 2" x 4" electrical box. Screws and anchors are provided for mounting the sensor directly to a wall. Matching gaskets and trim rings are also available.

The "E" versions have a blank front to prevent unauthorized adjustments and are ideal for high traffic areas or remote spaces that are not supervised.

The "F" versions feature a full HMI that can display room conditions and temperature setpoint. The display is easily configured to limit the information that is available to the occupant. Temperature setpoint can be adjusted using soft touch plus (+) and minus (-) keys, and an override key enables the user to manually signal to the controller that the space is occupied.

Duct Temperature Sensors

Rigid Probe

Rigid Probe – Bracket Mount

Flexible Probe

Description

Siemens Duct Temperature Sensors monitor and transmit changes in duct air temperature to the HVAC control system. They provide an accurate, reliable indication of duct air temperature. The sensor resistance varies proportionally to the actual temperature being measured.

Sensors are offered with a variety of probe lengths to fit almost any size duct. Longer probes are typically flexible for easier handling and installation (see *Product Ordering Information* on the following page for details).

Multiple output signals are available to ensure compatibility with most common HVAC control systems.

Features

- Variety of sensing elements.
- Suitable for multiple duct applications.
- Responsive to temperature change.
- Accurate and reliable indication of duct temperature.
- Familiar installation process does not require special tools.

Specifications

Output Signals	100K Ω Thermistor 10K Ω Type 2 Thermistor 1K Ω @ 32°F Ni RTD 1K Ω Pt RTD (375a) 1K Ω Pt RTD (385a) 4 to 20 mA • -4°F to 122°F • 20°F to 120°F • 30°F to 250°F 10K Ω Matched Pair Thermistor • (For use with Siemens TEC only)

Immersion Well Temperature Sensors

Thermistor/RTD

4 to 20 mA

Description

Siemens Immersion Well Temperature Sensors monitor and transmit changes in liquid temperature to the HVAC control system. The sensor resistance varies proportionally to the actual temperature being measured.

All sensors are fully assembled with stainless steel thermowells, and are available in 2.5-inch, 4-inch and 6-inch insertion depths.

Multiple output signals are available to ensure compatibility with most common HVAC control systems.

Features

- Variety of sensing elements.
- Suitable for hot or chilled fluids.
- Responsive to temperature changes.
- Accurate and reliable indication of temperature.
- Familiar installation requires no special tools.

Surface Mount Temperature Sensors

With Electrical Box

Strap-on Cable Only

Self-Contained

Description

Siemens Surface Temperature Sensors monitor and transmit changes in temperature to the HVAC control system. The sensor resistance varies proportionally to the actual temperature being measured.

The self-contained sensors and units with electrical boxes are ideal for measuring pipe surface temperature as a surrogate for actual fluid temperature when it is not possible to retrofit a full immersion type sensor.

The strap-on cable style sensors can be used to acquire pipe surface temperature and can also be used to quickly acquire duct air temperature. When fitted with an appropriate protection tube, it can acquire temperature within a concrete slab.

The QAH11.1 is designed specifically for use as a changeover temperature sensor with Siemens RDG Series room thermostats.

Multiple output signals are available to ensure compatibility with most common HVAC control systems.

Features

- Variety of sensing elements.
- Suitable for hot or chilled fluids.
- Responsive to temperature change.
- Accurate and reliable indication of temperature.
- Easy installation requires no special tools.

Powersä Controls

Low Temperature Detection Thermostat

Description

The electric Low Temperature Detection Cut-out and Alarm Thermostat is a remote bulb instrument which opens an electrical circuit to stop the supply fan motor and/or closes an outside air damper when the temperature at the sensing element falls below the setting of the instrument. Simultaneously, it closes a circuit to indicate an alarm condition.

Features

- Manual reset
- Easy temperature setting with adjusting screw on top of enclosure
- Mounting bracket and two screws included
- Main and separate reverse-acting auxiliary contacts

Product Number

134-1504

Warning/Caution Notations

WARNING		Personal injury or loss of life may occur if a procedure is not performed as specified.
CAUTION		Equipment damage or loss of data may occur if you do not follow a procedure as specified.

Application

This instrument should only be used on those applications where the ambient temperature to which the instrument case and bellows are exposed remains above the temperature setting of the thermostat. This thermostat should be used in areas protected from the weather.

Prerequisites

WARNING:

This low temperature detection thermostat is designed for use only as an operating control. Where an operating control failure would result in personal injury and/or loss of property, it is the installer's responsibility to add devices (safety, limit controls) or systems (alarm, supervisory systems) that protect against, or warn of control failure.

CAUTION:

The switch contact position (LINE-M2) may be in either an open or closed state upon receipt due to possible exposure to freezing temperatures during shipping. It is strongly recommended that the reset button be manually pressed down and released before initial use to restore the switch position to a normal operating state before proceeding to installation; otherwise, the unit could remain in the tripped state.

Specifications

Switch Action	Main (LINE-M2) contacts open on temperature drop, simultaneously auxiliary contacts close
Range	15 to 55°F (-9 to 13°C)
Maximum bulb temperature	400°F (204°C)
Minimum differential	5°F (2.8°C) Non-adjustable
Sensing element	Vapor filled
Bulb length	1/8-inch OD x 20 feet (6 m)
Reset action	Manual
Electrical rating	See Table 1
Weight	2.4 lb (1.1 kg)
Dimensions	See Figures 2 and 5
Approvals	UL file SA 10816 CSA file LR948

Operation

This thermostat incorporates a temperature sensing element of the vapor-filled type which actuates a heavy duty contact through a rugged link mechanism.

Any one-foot length of the element subjected to temperatures below the temperature setting of the thermostat will actuate the thermostat switch mechanism regardless of the temperature being sensed by the remainder of the element. This makes the thermostats ideal for protecting large coils where air stratification could cause freezing conditions in a localized area.

The thermostat has a main and auxiliary contact unit. The main load circuit (LINE-M2) opens on temperature drop and simultaneously, an auxiliary or alarm circuit (LINE-M1) closes on temperature drop.

NOTE: The reset button must be manually pressed down and released to resume normal fan system operation.

Electrical Ratings

Table 1.

Pole Number	Line-M2 (Main)				Line-M1 (Auxiliary)			
Motor Rating	120V	208V	240V	277V	120V	208V	240V	277 V
AC Full Load Amps	16.0	9.2	8.0	$\frac{3}{4}$	6.0	3.3	3.0	$\frac{3}{4}$
AC Locked Rotor Amps	96.0	55.2	48.0	$\frac{3}{4}$	36.0	19.8	18.0	$\frac{3}{4}$
AC Non-Ind Amps	16.0	9.2	8.0	7.2	6.0	6.0	6.0	6.0
Pilot Duty-Both Poles	125 VA, 24 to 600 Vac 57.5 VA, 120 to 300 Vdc							

Mounting and Installation

General Guidelines

- Locate the sensing element in the downstream side of the coil.
- Locate the case and bellows where the ambient temperature is always warmer than the setpoint.
- Install the thermostat so that the reset button is readily accessible and the element bellows points down.
- Install as much of the bulb as possible in a horizontal plane. If too much of the bulb is vertical, it will not operate properly.
- Avoid sharp bends or kinks in the sensing element.

Large walk-in Ducts (Figure 1)

1. Attach the mounting bracket to the thermostat with the two round head screws provided.
2. Mount the two perforated steel strap hangers inside the duct with the wide part of the hanger strap parallel to the air flow.
3. Drill a hole in the side of the duct. With the bulb still coiled, thread the bulb through the hole using a rotary movement.
4. Mount the thermostat on the outside of the duct.
5. Carefully uncoil the bulb avoiding sharp bends or kinks in the sensing element.
6. Mount the bulb in a horizontal, serpentine manner, attaching the bulb to the strap as shown in detail in Figure 1.

The installation is complete.

NOTE: For an alternate method of mounting, use coil clips (Part Number 356-115) in the fins to hold the bulb in a horizontal, serpentine pattern.

Mounting and Installation, Continued

Figure 1. Typical Mounting in Walk-in Duct.

Limited Access Ducts (Figure 2)

1. Attach the mounting bracket to the thermostat with the two round head screws provided.
2. Attach a mounting flange (Part Number 808-412) on the opposite side of the duct (near the bottom) from where the thermostat will be mounted.
3. Mount a second flange on an 8-inch by 4-inch sheet metal plate. Cut an access opening for the bulb on the duct diagonally across from the duct-mounted flange. Drill mounting screw holes for the sheet metal plate.
4. Cut a length of copper tubing to fit diagonally across the duct. Stretch out the bulb and wrap it around the tubing. See Figure 2.
5. Insert the tubing and bulb through the access hole and into the duct-mounted flange. Fasten the 8-inch by 4-inch sheet metal plate to the duct.
6. Mount the thermostat on the outside of duct.

Figure 2. Bulb Mounting for Limited Access Ducts with 808-412 Mounting Flange.

Wiring

WARNING:

Disconnect the power supply before wiring connections are made to avoid possible electrical shock or damage to the equipment.

Make all wiring connections using copper conductors only and in accordance with the National Electrical Code and local regulations. Loads exceeding the rating of the thermostat should be handled by means of a relay or motor starter.

An opening for 1/2-inch conduit is provided in the bottom of the thermostat enclosure.

See Figure 3 for a typical wiring diagram.

Figure 3. Typical Wiring Diagram.

CAUTION:

Use terminal screws furnished (#8-32 x 1/4-inch binder head screw). Longer terminal screws can interfere with switch mechanism and damage the switch.

Adjustment	After mounting the thermostat, adjust the temperature setting using the setpoint adjusting screw on the top of the enclosure. See Figure 4. Observe a complete operating cycle to be sure that all components function correctly.
-------------------	--

Figure 4. Setpoint Adjustment Screw.

Calibration	There is no field calibration required for the thermostat.
Troubleshooting	Observe a complete operating cycle to be sure that all components function correctly.
Service	There is no servicing of the thermostat. Replace if inoperative.

Dimensions

Figure 5. Dimensions in Inches (Millimeters).

ET 134 Low Temperature Detection Control

Description	The Electric Low Temperature Detection Control has a remote bulb and a Single Pole Double Throw (SPDT) switch that closes and opens a circuit in both directions.
Features	<ul style="list-style-type: none"> • Compact and sturdy • Adjustable range with fixed differential • Unaffected by ambient temperature at case • Manual or automatic reset available • The set point adjustment screw is accessible at the bottom of the control or at the top with the cover removed • Mounting bracket standard

Product Numbers

Description	Product Numbers
Low Temperature Detection Control Automatic reset	134-1510
Manual reset	134-1511

Warning/Caution Notations

WARNING:		Personal injury/loss of life may occur if a procedure is not performed as specified.
CAUTION:		Equipment damage or loss of data may occur if the user does not follow a procedure as specified

Application

The electric low temperature detection controls are especially suited for sensing low temperature conditions to avoid freeze-up of hydronic heating coils, cooling coils, liquid heating pipes and similar applications. Typically, the switch opens an electrical circuit to stop the supply fan motor when the temperature at the sensing element falls below the setting of the instrument.

WARNING:

The low temperature detection control is designed for use only as an operating control. Where an operating control failure would result in personal injury and/or loss of property, it is the responsibility of the installer to add devices (safety, limit controls) or systems (alarm, supervisory systems) that protect against, or warn of control failure.

Specifications

Switch action	SPDT
Control purpose	Low temperature
Control construction	Electromechanical independently mounted
Cycles	30K auto reset, 6K manual reset
Mounting method	Permanently attached through mounting bracket hole
Grounding method	Wire bound screw terminal
Type 1 or Type 2 action	Type 1.B (micro-disconnection)
Pollution solution	External - Degree 3, Internal Degree 2
Rated impulse voltage	4,000 Vac
Ball pressure temperature	Switch component 302°F (150°C)
Range	35 to 45°F (2 to 7°C)
Maximum bulb temperature	250°F (121°C)
Ambient temperature at thermostat	0 to 140°F (-18 to 60°C)
Differential	
134-1510	12°F (6.7°C)
134-1511	Temperature must be 12°F (6.7°C) above cutout point before control can be reset
Bulb	1/8-inch (3.2 mm) x 20 feet (6 m)
Capillary length	4 feet (1.2 m)
Sensing element	Vapor filled
Reset type	See <i>Product Number</i>
Electrical ratings	See <i>Table 1</i>
Enclosure	UL: Type 1 (NEMA)
Conduit opening	7/8-inch (22 mm) for 1/2-inch conduit for 1/2" trade size (or PG16) conduit
Wiring connection	3 color-coded screw terminals (SPDT only) and one ground terminal
Wiring rating	Copper conductors only, rated at least 194°F (90°C)
Finish	Galvanized steel
Weight	1.8 lbs. (0.8 kg)
Dimensions	See <i>Figure 4</i>
Approvals	
North America	cULus listed; UL60730, CSA E60730 UL File: SA10816

Operation

Any 1-foot length of the element subjected to temperatures below the temperature setting of the control will actuate the control switch mechanism regardless of the temperature being sensed by the remainder of the element. The sensing element is unaffected by the ambient temperature at the control body if it is warmer than the set point temperature.

The 134-1511 control has a manual reset feature. (See *Figure 5*.)

- NOTES:** 1. The reset lever must be pressed manually and released to resume normal fan system operation.
2. The manual reset may have tripped during shipping and may need to be reset prior to installation for normal operation.

Table 1. Electrical Ratings.

Volts AC 50/60Hz	cULus		
	120	208	240
Full Load Amps	16	9.2	8
Lock Rotor Amps	96	55.2	48
Resistive Amps	16	9.2	8
Pilot Duty	125 VA, 24 to 277 Vac		

Mounting and Installation**General Guidelines**

- Locate the sensing element in the downstream side of the coil.
- Locate the case and bellows where the ambient temperature is always warmer than the set point.
- Install the control case so that the reset button is readily accessible and the element bellows point down.
- Avoid sharp bends or kinks in the sensing element.
- Install as much of the bulb as possible in a horizontal plane. If too much of the bulb is vertical, it will not operate properly.

Large Walk-in Ducts
(*Figure 1*)

1. Attach the mounting bracket to the control case with the two round head screws provided.
2. Mount the two perforated steel strap hangers inside the duct with the wide part of the hanger strap parallel to the air flow.
3. Drill a hole through the side of the duct. With the bulb still coiled, thread the bulb through the hole using a rotary movement.
4. Mount the control case on the outside of the duct.
5. Carefully uncoil the bulb avoiding sharp bends or kinks in the sensing element.
6. Mount the bulb in a horizontal serpentine manner. Attaching the bulb to the strap as shown in the detail in *Figure 1*.

The installation is now complete.

For an alternate method of mounting, use coil clips (part number 356-115) in the fins to hold the bulb in a horizontal serpentine pattern.

Mounting and Installation, continued

Figure 1. Typical Mounting in Walk-in Duct.

Limited Access Ducts (Figure 2)

1. Attach the mounting bracket to the control case with the two round head screws provided.
2. Attach a mounting flange (part number 808-412) on the opposite side of the duct (near the bottom) from where the control will be mounted.
3. Mount a second flange on an 8-inch by 4-inch sheet metal plate. Cut an access opening for the bulb on the duct diagonally across from the duct mounted flange. Drill mounting screw holes for the sheet metal plate.
4. Cut a length of copper tubing to fit diagonally across the duct. Stretch out the bulb and wrap it around the tubing.
5. Insert the tubing and bulb through the access hole and into the duct-mounted flange. Fasten the 8-inch by 4-inch sheet metal plate to the duct.
6. Mount the control case on the outside of the duct.

The installation is now complete.

Mounting and
Installation,
continued

Figure 2. Bulb Mounting for Limited Access Ducts with Mounting Flange.

Wiring

WARNING:

Disconnect the power supply before wiring connections are made to avoid possible electrical shock or damage to the equipment.

All wiring should conform to the National Electrical Code and local regulations. Loads exceeding the rating of the control should be handled by means of a relay or motor starter.

Red is common. See *Figure 3* for terminal identification.

Red to Yellow opens on temp. decrease below set point.

Red to Blue closes on temp. decrease below set point.

Red to Blue closes on temp. decrease below set point.

Red to Yellow opens on temp. decrease below set point.

Figure 3. Terminal Identification.

CAUTION:

Use terminal screws furnished (M4 x 8 mm combo binder head screw). Substitution of other screws can cause problems in making proper connections.

Dimensions

Figure 4. Dimensions of the 134-1510 and 134-1511 Control.

Adjustment

Change the set point by turning the adjusting screw until the pointer is opposite the desired cutout point.

The adjusting screw is accessible at the bottom of the control or at the top when the cover is removed. See *Figure 5* for the location of the adjusting screw.

The direct reading scale was calibrated at 800 feet (244 m) above sea level at 35°F (2°C). For critical installations in higher altitudes raise the set point by 1°F (0.56°C) for each 1,800 feet (549 m) of elevation.

Figure 5. Internal View of Control.

Troubleshooting

Observe a complete operating cycle to be sure that all components function correctly.

Service

There is no servicing of the control. Replace if inoperative.

Description

The Powermite 599 Series ANSI Class 250 MT Series 2-way valve bodies work with any MT Series pneumatic or electronic actuator with a 7/32-inch (5.5-mm) stroke. They are suitable for normally open or normally closed control. Typical applications include control of hot or chilled water, water-glycol solutions up to 50% and steam up to 15 psi (steam only with stainless steel trim). Compatible actuators deliver a minimum of 67 lbs (300 N) of force.

Features

- Direct-coupled universal bonnet
- Internal thread NPT end connections with either brass trim or stainless steel trim.
- ANSI Leakage Class IV (0.01% of Cv)

Product Numbers

Use the product numbers in the tables to order the valve and the actuator assembled together. The product number consists of a 3-digit prefix code, a hyphen, and a 5-digit suffix code. The prefix specifies an actuator. The suffix specifies the valve body.

Technical Data

Valve Size	1/2-inch to 1-inch
Body	Globe style, ANSI Class 250 1/2- and 3/4-inch C37700 Forged brass. 1-inch UNS CA 844 Bronze
Trim	Brass or Stainless Steel
Stem	Stainless steel ASTM A582 Type 303, 7/32-inch (5.5-mm) stroke
Seat	Metal-to-metal
Packing	Ethylene propylene O-ring
Close-off Ratings	According to ANSI/FCI 70-2 See Table 3.

Controlled Medium	Water, water-glycol solutions to 50%, low pressure steam <15 PSI (with stainless steel trim only).
--------------------------	--

Media Temperature	35°F to 250°F (2°C to 120°C)
--------------------------	------------------------------

Maximum Differential Pressure for Modulating Service:

Media	Brass Trim	Stainless Steel Trim
Liquid	25 psi (173 kPa)	50 psi (345 kPa)
Steam	—	15 psi (103 kPa)

Rangeability	Cv <1 = >50:1, Cv >1 = >100:1
---------------------	----------------------------------

Leakage Rate	Class IV (0.01% of Cv)
---------------------	------------------------

Flow Characteristics	Modified equal percentage
-----------------------------	---------------------------

Mounting	NEMA 1 (interior only)
-----------------	------------------------

Figure 1. Two-way Valve Dimensions in Inches (mm).

Typical Specifications

Automatic control valves shall have NPT threaded type fittings, 1/2 through 1-inch sizes, and shall be ANSI rated to withstand the pressures and temperatures encountered.

Valves shall have metal-to-metal seats, stainless steel stems, and Ethylene propylene O-ring packing.

Valves shall be ANSI Leakage Class IV (0.01% of Cv). Valves shall have >50:1 rangeability for Cv<1 rangeability and >100:1 for Cv>1.

All two-way valves shall be provided with equal-percentage contoured throttling plugs.

For complete technical details on valves with stainless steel trim, or union internal thread, angle internal thread, or union external thread end connections, see *Powermite 599 Series, MT Series Terminal Unit Two-way Valves Technical Instructions*, 155-196P25.

Disposal

Do not dispose of valves as household waste.

- Special handling of individual components may be mandated by law or make ecological sense.
- Observe all local and currently applicable laws and regulations.

The actuators are considered electrical and electronic equipment for disposal in terms of the applicable European Directive and may not be disposed of as domestic garbage.

- Dispose of the actuators through channels provided for this purpose.
- Comply with all local and currently applicable laws and regulations.

Flowrite™ 599 Series

1/2 to 2-Inch Valve (2-Way & 3-Way) and Actuator Assembly Selection

Description

This Technical Bulletin will aid in selecting a 1/2-inch to 2-inch Flowrite 599 Series valve and actuator assembly. Begin with the graph of water capacity and the chart of ANSI Class IV close-off pressures to select a valve and actuator according to specifications.

Use Tables 1 through 15 to identify two-way valve and actuator product numbers. Use Tables 16 through 18 to identify three-way valve and actuator product numbers. These tables show all the possible combinations of the 1/2-inch to 2-inch Flowrite 599 Series valves and compatible actuators that can be ordered as complete valve assemblies from the factory.

The dimensions of all 1/2-inch to 2-inch valves and the service envelope required for each actuator are included in Table 19 through Table 21.

How to Use the Selection Graphs

Use Figure 1, the Water Capacity graph, to select a valve. Locate the specified flow rate on the vertical axis. Follow across on the horizontal line to the point of intersection with the specified pressure drop. Choose the valve size from the heavy diagonal lines across the graph.

Use Figure 2, the Close-Off Pressure graph, to select an actuator. First locate the graph for the valve action and actuator power source specified. Locate the bar that represents the valve line size. The top of the bar indicates the maximum close-off pressure for tight close-off ANSI Class IV. Use the legend at the bottom of the graph to identify the actuator.

How To Use The Valve Tables

Tables have been organized to help select a valve and actuator combination using additional specifications.

Moving from left to right, identify the valve needed. Continue to the right to match the valve to a desired actuator.

A valve and actuator assembly part number is determined by combining the actuator prefix code with the suffix of the valve product number.

NOTES:

No valve will combine with all actuators.

The symbol “—” indicates a combination is not available.

Selection Example Specification

Select a two-way normally-open valve and pneumatic actuator assembly that will deliver 20 gpm (5 m³/h) chilled water with linear flow characteristic with no more than 5 psi (35 kPa) pressure drop across the fully-open valve. The valve must have standard packing and a internal thread-to-internal thread (IT×IT) connection.

The valve shall be operated by a standard 8-inch pneumatic actuator and must close off tightly against a pump head pressure of 50 psi (300 kPa).

Valve Sizing

Use Figure 1, the water capacity graph, to begin valve sizing.

1. Locate 20 gpm (5 m³/h) on the vertical axis to find the required flow.
2. Read across the horizontal axis to find 5 psi (35 kPa), the maximum allowable pressure drop across the open valve.
3. Select a 1-inch (25 mm), 10 Cv (8.6 Kvs) line size valve, because the point of intersection falls between the 3/4 inch and 1-inch line sizes.

Actuator Selection

Use Figure 2, the close-off pressure graph, to choose an actuator.

1. Locate the graph for pneumatic actuators for NO valves in the lower right side of the figure.
2. Locate the bar for 1-inch valves. The gray-shaded bar represents an 8-inch pneumatic actuator.
3. Notice that the 8-inch pneumatic actuator has the sufficient force to provide tight close-off (ANSI C IV) against more than 50 psi (300 kPa) differential. For a 1-inch valve, select an 8-inch, standard pneumatic actuator, with a 20 mm stroke.

Product Number Selection

Use *Table 1, Two-Way, Normally Open (NO), Equal Percentage Valves, Bronze Trim, Standard Packing*. Begin at the left and select the specifications necessary.

1. Select a standard packed valve, with an F×F connection according to the above specifications.
2. Select the 1-inch line size determined from the sizing example above. The valve part number is 599-03167.
3. Read across table to the 8-inch Standard Pneumatic actuator.
The actuator part number is 599-01050.
The actuator code number is 277.
4. Read down the column to determine the valve and actuator assembly product number is 277-03167.

NOTE: The valve and actuator can be ordered separately by using the part numbers from Steps 2 and 3.

Flowrite™ 599 Series

2-1/2 to 6-Inch Valve, Two-Way & Three-Way, and Actuator Assembly Selection

Description

This Technical Bulletin will aid in the selection of a Flowrite 599 Series 2-1/2 inch to 6-inch valve and actuator assembly. Begin with the graph of water capacity and the chart of close-off pressures to select a valve and actuator according to specifications. Use Tables 1 through 4 to identify product numbers.

These tables show all the possible combinations of the Flowrite 599 Series valves and compatible actuators that can be ordered as complete valve assemblies from the factory.

The dimensions of all valves and the service envelope required for each actuator are included in Tables 5 through 7.

How to Use the Selection Graphs

Use Figure 1, the water capacity graph, to select a valve. Locate the specified flow rate on the vertical axis. Follow across on the horizontal line to the point of intersection with the specified pressure drop. Choose the valve size from the heavy diagonal lines across the graph.

Use Figure 2, the close-off pressure graph, to select an actuator. First locate the valve action and actuator power source specified. Locate the bar that represents the valve line size. The top of the bar indicates the maximum close-off pressure for tight close-off.

Use the legend at the bottom of the graph to identify the actuator.

How To Use The Valve Tables

Tables have been organized to help select a valve and actuator combination using additional specifications.

Moving from left to right, identify the valve by selecting the combination of parameters needed. Continue to the right to match the selected valve to a desired actuator.

A valve and actuator assembly part number is determined by combining the actuator prefix code with the suffix of the valve product number.

NOTES:

1. No valve will combine with all actuators.
2. The symbol “—” indicates a combination is not available.

Selection Example

Specification

Select a two-way normally closed valve and actuator assembly for an ANSI 125 piping system that will deliver 500 gpm (113 m³/h) chilled water with an equal percentage flow characteristic with no more than 5 psi (35 kPa) pressure drop across the fully open valve.

The valve shall be operated by a 24 Vac powered, 0 to 10 Vdc control signal, spring return electronic actuator, and must close off tightly against a pump head pressure of 15 psi (1 bar).

Valve Sizing

Use Figure 1, the water capacity graph, to begin valve sizing.

1. Locate 500 gpm (113 m³/h) on the vertical axis to find the required flow.
2. Read across the horizontal axis to find 5 psi (35 kPa), the maximum allowable pressure drop across the open valve.
3. Select a 5-inch (125 mm) 250 Cv (214 Kvs) line size valve because the point of intersection falls close to the 5-inch line.

Actuator selection

Use Figures 2, the close-off pressure graph, to choose an actuator.

1. Locate the graph for electronic actuators for NC valves in the upper left side of the figure.
 2. Locate the bar for 5-inch valves. The black bar represents an SKB/C actuator.
 3. Notice that the SKB/C has the sufficient force to provide tight close-off against more than 20 psi (1.4 bar) differential. For a 5-inch valve, select an SKC actuator with a 40 mm stroke.
-

Product Number Selection

Use Table 1 for ANSI Class 125 valves. Begin at the left and select the specifications necessary.

1. Select a two-way, normally closed, equal percentage flow characteristic according to the specifications.
2. Select bronze trim for the low pressure water application and standard packing for chilled water.
3. Select the 5-inch line size determined from the sizing example above. Note the 40 mm stroke of the valve. The valve part number is 599-05993.
4. Read across the top of the table to Electronic-hydraulic, 40 mm, and 24 Vac, 0-10 Vdc control signal.
The actuator part number is SKC62U.
The actuator code number is 294.
5. Read down the column to determine the valve and actuator assembly product number is 294-05993.

NOTE: A valve and actuator can be ordered separately by using the part numbers from Steps 3 and 4.

Flowrite™ 599 Series High Pressure Close-off , 2-Way Valves, 2-1/2 to 6-Inch, Flanged Iron Body, ANSI Classes 125 & 250

Description

The Flowrite 599 Series high pressure close-off, two-way flanged valve iron bodies, are designed to work with either pneumatic or electronic actuators with 3/4-inch (20 mm) or 1-1/2-inch (40 mm) stroke. They are available in both ANSI Class 125 and 250 for normally open or normally closed action.

Typical applications include control of hot or chilled water; or 50% water-glycol solution.

Features

- Universal bonnet, for direct-coupled actuators
- Equal percentage flow characteristic
- Stainless steel trim
- ANSI Class IV leakage ($\leq 0.01\%$ of Cv)
- EPDM O-ring packing

Product Numbers

Use the product numbers in the tables to order the valve and the actuator assembled together. The product number consists of a 3-digit prefix code, a hyphen, and a 5-digit suffix code. The prefix specifies an actuator. The suffix specifies the valve body.

Typical Specifications

Automatic high pressure close-off control valves shall have flanged connections, 2-1/2-inch through 6-inch (65 mm through 150 mm) sizes, and shall be ANSI 125 or ANSI 250 rated to withstand the pressures and temperatures encountered.

Valves shall have metal-to-metal seats, stainless steel trim and stems, and EPDM O-ring packing.

Valve shall be ANSI Leakage Class IV (0.01% of Cv) at a close-off differential up to 200 psi. Valves shall have a 100:1 rangeability or better.

Technical Data

Valve Size	2-1/2 in. to 6-in. (65 mm to 150 mm)
Body	Cast iron ASTM A126 Class B
Trim	Stainless Steel
Stem	Stainless steel ASTM A582 Type 303
Stem Travel:	
2-1/2 and 3-inch	3/4-inch (20 mm) stroke
4, 5, and 6-inch	1-1/2-inch (40 mm) stroke
Seat	Metal-to-metal
Packing:	EPDM O-ring
Close-off Ratings	According to ANSI/FCI 70-2 See Tables 2 and 4.
Controlled Medium	Water, 50% water-glycol solution
Medium Temperature:	20°F to 250°F (-7°C to 120°C)
Maximum Recommended Differential Pressure for Modulating Service	50 psi (345 kPa)

Table 1. Flowrite Valve and Pneumatic Actuator.

NOTE: If an 8-inch or 12-inch pneumatic actuator without position relay is required, order the valve and actuator separately.

Resilient Seat Butterfly Valves

Description

Designed to last longer with minimal downtime, Siemens resilient seat butterfly valves are available in sizes from 2 to 24 inches (DN 50 to 600) built with the highest temperature and chemical resistance available in the market.

Available in 2-way and 3-way configurations, 2" through 20" butterfly valves are lug style. 24" valves are double-flanged. All have ANSI 125 rated bodies. 3-way valves can be used for mixing and diverting applications and are available in multiple configurations to match job site needs.

These valves are compatible with Siemens A-Series Industrial Electric, and OpenAir® Commercial Electric actuators. OpenAir actuators are available in both spring return and non-spring return variants for two-position (On/Off), Floating and Modulating control. All Industrial actuators include a heater to prevent condensation.

Resilient seat butterfly valves provide bubble-tight shut off (leakage class better than ANSI Class VI) up to 175 PSI (Full Cut) and 50 PSI (Under Cut) requirements.

Application

Siemens Resilient Seat butterfly valves are suitable for standard temperature (intermittent 250°F) or high temperature applications (continuous 250°F). Standard temperature assemblies can be field upgraded to high temperature at any time by updating the actuator. There is no need to remove the valve from the piping.

These valves can be used for isolation purposes or as modulating valves. Siemens butterfly valves are optimized for use in Chilled Water, Hot Water and Open Loop Cooling Tower applications.

Features

- High purity, peroxide cured, high temperature EPDM seats to ensure continuous operation at 250°F (121°C)
- Corrosion-resistant, 316 Stainless Steel disc (2" through 12")
- Corrosion-resistant Electroless Nickel Plated Ductile Iron (14" through 24")
- Internal disc-to-stem connection to eliminate leakage through the stem
- Wide variety of direct mount actuators.
- Full 175 PSI and 50 PSI close-off pressure ratings available.

Specifications

Material	Body	ASTM A126 Class A Cast Iron	
	Disc for sizes 2"-12"	316 Stainless Steel	
	Disc for sizes 14" and above	Electroless Nickel Plated Ductile Iron	
	Seat	High purity, peroxide-cured, high temperature EPDM	
	Stem	416 Stainless Steel	
	Stem Bearing	Heavy Duty Acetal	
	Packing	Nitrile Butadiene Rubber (NBR)	
	Tee	Ductile Iron (3-Way valves only)	
Operating	Body cold working pressure rating	250 psi (17.2 bar)	
	Media temperature	-20 to 250°F [continuous] (-28 to 121°C)	
	Controlled medium	Hot water, chilled water, condenser water up to 50% Glycol	
	Flow characteristic	Modified equal percentage	
	Flow Coefficients	Table 1.	
	Close-off (for electric actuator assemblies only)	2" to 12", 175 PSI, full cut 14" to 24", 150 PSI, full cut 50 PSI dead end service, full cut 50 PSI, all under cut discs	
	Angle of rotation	0° to 90°	
	Leakage	Bubble tight at 175 PSI close-off (better than ANSI class VI)	
	Maximum fluid velocity	30 feet/second (9 m/second)	
		Max recommended differential pressure with flow	29 psi (2 bar)
Size Range	2-inch through 24-inch (DN 50 to 600)		
Body Style	Lug (2" through 20") or double flange (24"), 2-way and 3-way, ANSI 125 rated		
Miscellaneous	Dimensions, service envelope, weight	See Tables 5 through 8	
	Agency Certification (for actuators)	UL	Meets UL 873 or UL 508
		cUL	Certified to Canadian Standard C22.2 No. 24.93 or C22.2 No. 14
		CE	European standard
	Agency Certification (for valves)	SIL	

NOTE:

These performance specifications are nominal and conform to acceptable industry standards. For application at conditions beyond these specifications, consult your local Siemens office. Siemens, Inc. shall not be liable for damages resulting from misapplication or misuse of its products.

20	72	632	1,595	2,786	4,536	7,144	12,535	1,812	22,339
24	259	1,028	2,387	4,244	6,962	11,040	18,235	27,186	33,154

Sizing and Selection

1. Determine the designed Cv as follows:

$$Cv = \frac{Q\sqrt{SG}}{\sqrt{\Delta P}}$$

Q = Flow in gallons per minute (GPM) required to pass through the valve

SG = Specific gravity of the fluid (water = 1)

ΔP = Designed pressure drop across the valve in PSI

Cv = Flow coefficient

NOTE: For modulating butterfly valves, size for design flow at 60° rotation.

2. Determine if the valve should be line sized or sized to match the designed pressure drop:

Option 1: On/Off Valves

Select the valve size to equal the pipe size

Option 2: Modulating Valves

Size the valve for design flow at 60° open

3. Determine actual pressure drop as follows:

$$\Delta P = \left(\frac{Q\sqrt{SG}}{Cv} \right)^2$$

Pressure drop is recommended to be no higher than 29 PSI or match the designed pressure drop. For modulating applications 3, 4, 5, and 6 PSI are commonly accepted.

4. Ensure that close-off requirements are met.

Actuator Product Numbers

Table 2. A-Series Industrial Electric Actuators, 24V.

Product Number	Operating Mode	Voltage 50/60 Hz	Torque		90° Stroke Time*	Current Draw (Amps)	
			(lb-in)	(Nm)		Full Load	Locked Rotor
A126.530	On/Off	24 Vac	530	60	31 sec. AC 40 sec. DC	1.0	1.7

* Operating times shown are with 60 Hz power supply. Actuators with 50 Hz power supply will be 20% slower.

Ordering a Valve/Actuator Assembly

Use the product numbers in the following table to order a valve or a valve and actuator assembly. The valve product number consists of the type, action, valve size, disc type, and valve configuration.

To order an assembly, add a (-) after the valve product number and then choose the application, actuator, voltage, control signal, end switches followed by a separator (.) and the actuator torque.

Table 4. Product Numbers.

Sample:	B	2	02	F	C	-	S	A	1	2	6	.	530
Valve Type: Butterfly													
Action: 2 = 2-Way 3 = 3-Way													
Valve Size: 02=2", 25=2.5", 03=3", 04=4" , 05=5", 06=6", 08=8" 10=10", 12=12", 14=14", 16=16", 18=18", 20=20", 24=24"

A-Series Industrial Electric Actuator (600 to 18,000 lb-in)

Description

The A-Series quarter-turn industrial electric actuator features a compact, reliable design that mounts directly to Siemens resilient seat butterfly valves without the need for brackets and linkages. Available in torque outputs from 600 to 18,000 lb-in (68 to 2,033 Nm), 24V and 120 Vac, Two-position (On/Off) and Modulating units all in NEMA 4x and IP65-rated housings.

Features

- Compact, lightweight design and direct mounting
- High visibility Beacon position indicator
- Manual, declutchable override handwheel
- Terminal strip for cable terminations
- Servo NXT option for modulating control
- Travel limit cams adjustable by hand or screwdriver
- UL-approved (120 Vac only)
- On/off or modulating control
- Available in 120, 24 Vac 50/60 Hz, single-phase, 24 Vdc voltages
- Output torque 600 lb-in (68 Nm) to 18,000 lb-in (2,033 Nm)
- ISO 5211 for direct mounting
- All actuators include a heater to prevent condensation build-up
- All modulating units include a feedback potentiometer

Servo NXT Features (for Modulating Actuators)

- Provides precise modulating control of valve position
- Single Finger Technology (SFT) menu driven, pushbutton, programming with LED confirmation of all settings:
 - Input Control – 4 to 20 mA, 0 to 10 Vdc, 0 to 5 Vdc or 2 to 10 Vdc
 - Position Feedback – 4 to 20 mA, 0 to 10 Vdc, or 0 to 5 Vdc
 - Auto Calibrating
 - Fail Position:
 - Loss of supply power - fail-in-place
 - Loss of control signal - selectable
 - Adjustable Speed Control
- Including:
 - Manual mode
 - Onboard signal generator to simplify field set-up
 - Fault display – Simplifies troubleshooting
 - Stall detection – Eliminates mechanical damage in case of obstruction or bad switch settings
- Optical isolation of all inputs/outputs
 - Provides interoperability with all controllers
 - Earth ground tolerant
 - Allows for parallel operation

Applications

These actuators are ideal for use on valves for chillers, cooling towers, boilers, heat exchangers and other outdoor applications. The actuators' advanced electronics assure reliable compatibility with virtually any analog control signal used in today's building automation and temperature control systems.

Specifications

Operating Conditions	Ambient Temperature	-20°F to 150°F (-29°C to 65°C)
	Fail Position	Loss of supply power - fail-in-place
	Motor Insulation	
	120 Vac:	Class F, 311°F (155°C) thermal trip at 275°F (135°C)
Physical Description	24 Vac/dc:	Class B, Slow Blow Fuse 5A @ 250 Vac
	Housing	ASTM B85 Pressure Die Cast Aluminum, Polyester Powder Coated
	Motor	
	120 Vac	Single-Phase, Reversible, Permanent Split Capacitor Induction Motor
	24 Vac/Vdc	Single-Phase, Permanent Magnet-Brush D.C. Motor
	Auxiliary/Limit Switches SPDT	
	120 Vac	10A- 1/3 HP
	12 Vdc	2A
	Terminal Strip	
	Switch Plate	12 to 22 AWG (2.0 to 0.65 mm)
	Servo	14 to 24 AWG (1.63 to 0.51 mm)
	Heater	5-Watt, PTC style
	Dimensions and weight	See Dimensions.
	Enclosure	Designed to meet NEMA Type 4, 4x and IP65 specifications
	Travel stops	Externally adjustable at both 0 and 90 degrees.
	Conduit entries	
	600 lb-in	Two 1/2" NPT (BSP)
	1200 lb-in and higher	Two 3/4" NPT
	Manual operation	Pull to engage, push to disengage - 30:1 drive ratio, 12 and 18K lb.-in. models are 90:1
Certifications		UL508 certified (120 Vac only)

Servo Specifications (for Use with Modulating Actuators)

Power Requirements		120 Vac 50/60 Hz +/- 10% 24 Vac 50/60 Hz +/- 10% 24 Vdc -10%, +30% 5 VA average (no load) Fuse: 5A Slow Blow 5 mm x 20 mm
Input Signal	Control Signal	4 to 20 mA, 0 to 10 Vdc, 0 to 5 Vdc, 2 to 10 Vdc
	Input Impedance	>100 Meg Ohms (0 to 10V, 2 to 10V, 0 to 5V)
Output Signal	Operating Modes	4 to 20 mA, 0 to 10 Vdc, 0 to 5 Vdc
	Output Impedance	<10 Ohms (0 to 5 Vdc, output, 0 to 10 V output) 200 Ohms (4 to 20 mA output mode)
	Loop Voltage	12 Vdc (4 to 20 mA output mode)
Resolution	Absolute Position Accuracy	<1%
	Dead Band Adjustment	1% (+/- 0.5%) to 6% (+/-3%) (3% default) 1% minimum increment
Potentiometer Feedback Signal	Supply Voltage	3.3 Vdc
	External Feedback Potentiometer	1K to 10K Ohms
Speed Control	Open/Close Speed	0% to 100% (default). Step size: 20%. Actuator open/close speed as a percentage of full speed. (See motor speed specification for maximum 90° run times.)
Operating Mode	Normal Mode	Modulating – follow setpoint
	Loss of Control Signal	Selectable to Open, Close, or Last
	Loss of Supply Power	Fail-in-place
	Reverse Acting Mode	Configurable for inverted input signal
	Autocalibration	Automatic endpoint detection
	Manual Operation	Keypad electrical manual operation of actuator (Open, Stop, Close)
Torque Protection	Stall Detection	Motor detected stationary >2 seconds (600 to 6500 lb-in units only)
	Torque Limit	(Optional) externally connected Open/Close torque limit switch
	Electronic Torque Limit	(Optional) factory-programmable current/torque limit switch
Environmental	Ambient Temperature	-20°F to 150°F (-29°C to 65°C)
	Compliance	120V units comply with UL, cUL, and CSA. All models are CE certified.

CAUTION:

Do not install or use the A-Series Industrial Electric Actuator in or near environments where corrosive substances or vapors could be present. Exposure of the electric actuator to corrosive environments may damage the internal components of the device and will void the warranty.

Ordering Information

A266.13K			13,000	1,470	110 sec.	2.30	3.10
A266.18K			18,000	2,034	110 sec.	2.50	3.10

* Operating times shown are with 60 Hz power supply. Actuators with 50 Hz power supply will be 20% slower.

NOTE: 13K and 18K torque models are available starting July 2020.

Wiring

Figure 1. 24 Vac/dc On/Off Wiring 600 and 2000 lb.-in. Models.

NOTE:
Use this A-Series Industrial Electric Actuator only to control equipment under normal operating conditions. Where failure or malfunction of the electric actuator could lead to personal injury or property damage to the controlled equipment or other property, additional precautions must be designed into the control system. Incorporate and maintain other devices such as supervisory or alarm systems or safety or limit controls intended to warn of, or protect against, failure or malfunction of the electric actuator.

Figure 2. 24 Vac Wiring 5000 lb.-in. Models.

Figure 3. 120 Vac Wiring, All Models.

Wiring, Continued

NOTES:

1. Command signal and feedback wires must be shielded and grounded for proper servo operation.
2. The command signal input (-) terminal is internally connected to the Servo neutral terminal. DO NOT connect the live to the neutral terminal on the servo.
3. Command signal and feedback signal must be isolated from each other and any other circuits. When using 0 to 10 Vdc, 0 to 5 Vdc, and 2 to 10 Vdc, the common of the command signal should NOT be ground/earth referenced.
4. Feedback loop is powered by the servo. Do NOT supply external power.
5. Command signal and feedback signal wires should be shielded properly, and shield should be grounded on one end only, preferably the controller end.
6. The 24V Servo (NXT) can be wired 3 or 4 wire configured.

Electromotoric actuator

SSC161.05U, SSC161.35U, SSC131.39U

For Powermite MT Series 2-way and 3-way globe valves

- SSC161.05U (fail-in-place), and SSC161.35U (fail-safe): Operating voltage AC/DC 24 V, modulating control signal DC 0...10 V
- SSC131.39U (fail-safe): Operating voltage AC 24 V, 3-position (floating) control signal
- All actuators are self-calibrating to the valve stroke
- Modulating variants have position feedback signal
- Direct mounting with coupling nut, no tools required
- Manual override
- Position and actuator motion indication (LED)
- Positioning force 67 lbf (300 N)
- Parallel operation of multiple actuators possible

Use

- For 2-way and 3-way Powermite 599 MT Series, 599-02000 - 599-02079
- Typical application in chilled ceiling, VAV, unit ventilators, fan coil unit and other terminal unit applications
- Max.10 units of SSC161.05DU, SSC161S.35DU are able to operate in parallel, provided the controller output suffices.
- For 3-position actuator, SSC131.39U, 24 actuators can run in parallel.

NOTICE

- SSC131.39U floating fail-safe actuators cannot be run in parallel with legacy SSC81.5U actuators.
- For parallel operation of floating fail-safe SSC actuators all actuators in parallel must be the same part number.

Technical design

When the actuator is driven by DC 0...10 V positioning signal, it produces a stroke, which is transmitted to the valve stem.

3-position control signal (for SSC131.39U only)

<ul style="list-style-type: none">• Voltage at Y1:	Stem extends	Normally open valve closes, normally closed valve opens
<ul style="list-style-type: none">• Voltage at Y2:	Stem retracts	Normally open valve opens, normally closed valve closes
<ul style="list-style-type: none">• No voltage at Y1 or Y2:	Actuator maintains its current position	
<ul style="list-style-type: none">• Voltage applied to both Y1 and Y2 (not recommended): <p>When no power is supplied, the SSC131.39U actuator fails with the stem fully retracted.</p>	Stem moves to Y2	

DC 0...10 V control signal

- The valve opens / closes in proportion to the control signal at Y.
- At DC 0 V, actuator stem is retracted, the normally closed valve is fully closed and the normally open valve is fully open.
- When no power is supplied, the SSC161.05U actuator maintains its current position and the SSC161.35U actuator fails with the stem fully retracted.
- This actuator provides a DC 0...10 V position feedback signal proportional to the stroke of the actuator stem.

Y = Control signal Y [V]

H = Percentage of calibrated valve stroke

LED indication

Status	LED indication patterns
Variants	SSC161.35U, SSC161.35U, SSC131.39U 
Modulation: Stem retracting	Flashing green in sequence: LED1-->LED2-->LED3 (500 ms each)
Modulation: Stem extending	Flashing green in sequence: LED3-->LED2-->LED1 (500 ms each)
Stem position	At H0 - H40: Constant green (LED3) At H40 - H60: Constant green (LED2) At H60 - H100: Constant green (LED1)
Fail-safe*	Flashing red (LED2): 500 ms on, 500 ms off
Calibration	Flashing green (LED2): 100 ms on, 100 ms off
Error	Constant red (LED2)
Manual operation	Flashing green/red alternatively (LED2): Green 500 ms, red 500 ms
Ultra-cap initial charging*	Constant green & red simultaneously (LED2): Constant orange

* Only available for SSC161.35U, SSC161.35U, SSC131.39U.

Type summary

Type	Stock number	Operating voltage	Running speed	Running time 5.5 mm	Control signal	Actuator characteristic
SSC161.05U	S55155-A110	AC/DC 24 V	5 s/mm	27.5 s ± 25 %	DC 0...10 V	Linear
SSC161.35U	S55155-A111	AC/DC 24 V	5 s/mm	27.5 s ± 25 %	DC 0...10 V	Linear
SSC131.39U	S55155-A109	AC 24 V	16 s/mm	88 s ± 25 %	AC 24 V	-

Ordering

When ordering, specify both type and quantity.

Example:

Type	Stock number	Designation	Quantity
SSC161.05U	S55155-A110	Electromotoric actuator	2

Delivery

Valves and actuators can be ordered assembled in the factory or ordered separately. For easier valve assembly, actuators ordered separately have the actuator stem fully retracted.

1	25	10	(8.6)	599-02071	599-02079

Note: To ensure trouble-free operation of third-party valves with the SSC... actuators, the valves must satisfy the following requirements:

- Threaded connections with coupling nut ¾".
- Nominal force $F > 67 \text{ lbf}$ (300 N)
- Dimension $X \geq 0.35 \text{ in}$ (8.8 mm)
- Dimension $Y \leq 0.56 \text{ in}$ (14.3 mm)

Notes

Mounting

⚠ WARNING

- Do not use pipe wrenches, pliers or similar tools.
- Avoid lateral pressure or (cable) tension on the mounted actuator!

Valve and actuator are easy to assemble on site before commissioning:

- Remove protective cover from the valve body.
- Position the actuator and tighten the connection nut manually.
- See "Mounting instruction" for graphical instructions.

Orientation

Engineering

The actuators must be electrically connected in accordance with local regulations (see "Connection diagrams [► 16]").

⚠ CAUTION

National safety regulations

Failure to comply with national safety regulations may result in personal injury and property damage.

- Observe national provisions and comply with the appropriate safety regulations.

Observe permissible temperatures (see "Technical data [► 12]").

Commissioning

When commissioning, check both wiring and functioning of the actuator.

- Actuator stem extends Normally open valve closes, normally closed valve opens
- Actuator stem retracts Normally open valve opens, normally closed valve closes

NOTICE

The actuator must be commissioned only with a correctly mounted valve in place!

Self-calibration

When operating voltage is applied, the actuator self-calibrates (fully retracted → fully extended → setpoint).

⚠ CAUTION

Never intervene manually during self-calibration.

NOTICE

- Correct calibration is only possible with valve stroke > 0.05 inch (1.2 mm). Valve stroke < 1.2 mm results in calibration failure.
- If calibration fails, the actuator performs another calibration automatically after 10 seconds.
- After three failed calibration attempts, the actuator stem remains in the extended position and the valves are open.

Electrical fail-safe function (for SSC161.35U, SSC131.39U only)

When first connected to power, or after a power failure, the capacitor which stores energy for the fail-safe function will be charged. This process takes up to 180 seconds. While the capacitor is being charged, the actuator cannot respond to any control signals.

In the event of a power failure of more than 5 seconds, the actuator will return to its fail-safe position within 30 seconds.

A 3-mm Allen wrench can be used to move the actuator to any position.

To move the actuator stem manually

1. Open the cover using a proper screwdriver.
2. Press and hold down button (a) illustrated below for at least three seconds.
 - The actuator ignores any control signal from the controller.
3. Adjust the position of the actuator stem by rotating Allen wrench (b) illustrated below clockwise or counter-clockwise.
 - The actuator stem moves down if you rotate clockwise; it moves up if you rotate counter-clockwise. The manually set position is retained.
4. To release the actuator from manual operation mode, press and hold down button (a) illustrated below again for at least three seconds.
 - The actuator runs a self-calibration automatically. Control signal sent from the controller takes effect.
5. Close the cover.

NOTICE

If operating voltage is applied to actuator, press button (a) before and after manually adjusting the position of the actuator stem. If no operating voltage and control signal are applied, manual operation can be done without pressing button (a).

Cabling operation

1. Unscrew cover screw
2. Remove cover
3. Remove terminal block and connect or disconnect wire terminals.
4. Re-install the terminal block
5. Install the cover
6. Screw in the cover screw

Maintenance

The actuators require no maintenance.

⚠ WARNING	
	Operating voltage must be switched off during any maintenance!

NOTICE	
	<p>When carrying out service work on the plant, note the following:</p> <ul style="list-style-type: none">• Switch off operating voltage.• If necessary, disconnect electrical connections from the terminals.• The actuator must be commissioned only with a correctly mounted valve in place!

Repair

The actuators cannot be repaired; the complete unit must be replaced.

Disposal

The device is considered an electronic device for disposal and may not be disposed of as domestic waste.

- Dispose of the device through channels provided for this purpose.
- Comply with all local and currently applicable laws and regulations.

Warranty

Technical data on specific applications are valid only together with Siemens products listed under "Equipment combinations". Siemens rejects any and all warranties in the event that third-party products are used.

FCC regulations

Modification of this device to receive cellular radio telephone service signals is prohibited under FCC rules and federal law.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

Reorient or relocate the receiving antenna.

Increase the separation between the equipment and receiver.

Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

Consult the dealer or an experienced radio/TV technician for help.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Statement

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Flowrite™ 599 Series

SKB/C Electronic Valve Actuator Proportional Control

Description	<p>The Flowrite 599 Series SKB/C Electronic Valve Actuator requires a 24 Vac supply and receives a 0 to 10 Vdc or a 4 to 20 mA control signal to proportionally control a valve. This actuator is designed to work with Flowrite 599 Series valves with a 3/4-inch (20 mm) or 1-1/2-inch (40 mm) stroke.</p>
--------------------	--

Features	<ul style="list-style-type: none"> • Direct-coupled installation requires no special tools or adjustments • Visual and electronic stroke indication • Die-cast aluminum housing • Manual override • Spring return to fail-safe position • Automatic stroke calibration • Maintenance-free
-----------------	--

Application	<p>These electronic actuators are designed to be used with Flowrite 599 Series valves with 3/4-inch (20 mm) stroke (SKB) and 1-1/2 inch (40 mm) stroke (SKC) in liquid and steam service applications.</p>
--------------------	--

Product Numbers

Actuator Stroke	Order Number	Actuator Prefix Code
3/4-inch (20 mm)	SKB62U	291
1-1/2 inch (40 mm)	SKC62U	294

Warning/Caution Notations

WARNING:		Personal injury/loss of life may occur if you do not perform a procedure as specified.
CAUTION:		Equipment damage or loss of data may occur if you do not follow a procedure as specified.

Figure 1. Auxiliary Switch.

ASC1.6 Auxiliary switch sends a signal to indicate the valve is in the 0% stroke position. Switching point is fixed at the 0% stroke position.

Switching capacity 24 Vac
 4A resistive,
 2A inductive

Lowest recommended current 10 mA

Figure 2. Stem Heating Element.

ASZ6.6 The stem heating element prevents the formation of ice on the stem when the medium temperature drops below 32°F (0°C). It is suited for universal use with valves having a stem or spindle diameter of 10 or 14 mm.

Operating voltage 24 Vac/dc ± 20%
Power consumption ≤ 40 VA/30W

Figure 3. Weather Shield.

599-10065 The SKB/C actuator is UL listed to meet NEMA Type 3R requirements (a degree of protection against rain, sleet, and damage from external ice formation) when installed with Weather Shield and outdoor-rated conduit fittings in the vertical position. See *Service Kits* for replacement ultraviolet resistant cable ties.

Stem retainer kit	
Contains one stem nut (Figure 7, Item 6) and one stem retainer clip.	
2-1/2 and 3-inch valves	599-10048
4, 5, and 6-inch valves	599-10049
Retainer clamp kit	599-10200
Ultraviolet (UV) resistant cable ties (pkg. of 8)	538-994

WARNING:

This product contains a spring under high compression. Do not attempt to disassemble the actuator.

Operation

A 0 to 10 Vdc or a 4 to 20 mA control signal controls the actuator. The actuator, mounted on a valve, produces a stroke proportional to the input signal. When power is turned off or in the event of a power failure, the actuator spring returns the valve to its normal position.

Figure 4. Input Signal.

8. Position indicator

Mounting and Installation

The vertical position is the required position for mounting and the only position for NEMA Type 3R rating with the Weather Shield. Acceptable mounting positions are shown in Figure 7.

Figure 7. Acceptable Mounting Positions.

Allow four inches (100 mm) around the sides and back of the actuator and eight inches (200 mm) above and to the front of the actuator.

See dimensions in Figure 17 and Figure 18.

Detailed installation instructions for field mounting are shipped with the actuator.

CAUTION:

Use care when removing the knockout. Do not damage the circuit board. Use the top knockout position, if possible.

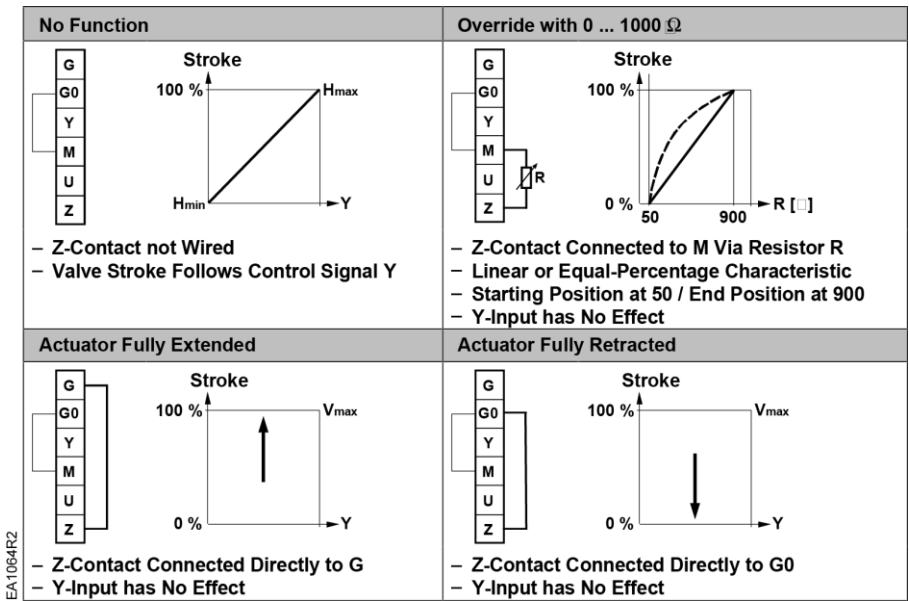

Start up

Check the wiring for proper connections.

NOTE: The valve body assembly determines the complete assembly action.

Override Control

The override control input (Z) has three modes of operation:

NOTE: The Z-modes have a direct acting factory setting.

Start-up, continued

Stroke Calibration

To determine the stroke positions 0% and 100% in the valve, calibration is required when the valve/actuator are commissioned for the first time. The actuator must be mechanically connected to a valve and must have a supply voltage of 24 Vac. Repeat the calibration procedure as often as necessary

CAUTION:

Before starting calibration, be sure that the manual adjuster is set to **Automatic** for the actual values to register.

There is a slot on the printed circuit boards for the actuators. To initiate the calibration procedure, the contacts inside this slot must be short-circuited (possibly with a screwdriver). See Figure 8.

Automatic calibration proceeds as follows (see Figure 9):

- Actuator runs to the 0% stroke position (1), green LED flashes.
- Actuator then runs to the 100% stroke position (2), green LED flashes.
- Measured values are stored in the EPROM.
- The actuator now moves to the position defined by control signal Y or Z (3), and the green LED now glows steady (normal operation).
- Throughout this procedure, output U is inactive, meaning the values only represent actual positions when the green LED stops flashing and remains on continuously.

Figure 8.

Figure 9.
Automatic Calibration

Table 1. LED Status.

LED	Display	Function	Action
Green	ON	Normal Operation	Automatic operation
	Flashing	Stroke calibration In Progress	Wait for calibration to be completed (LED stops flashing)
Red	ON	Faulty stroke calibration	- Check mounting - Restart stroke calibration (by short-circuiting calibration slot) - Replace electronics
		Internal Error	- Replace electronics
	Flashing	Inner valve jammed	Check the valve
Red	OFF	• No power supply	-Check mains

Standard Features

Figure 10. DIP Switches.

DIP Switches (From Left to Right)	1 Selection of Control Signal	2 Selection of Flow Characteristic
ON	4 to 20 mA	Modified*
OFF (Factory Settings)	0 to 10 Vdc	Default

* Changing the default setting will modify an equal percentage valve to a linear flow characteristic. When set to default, the flow characteristic is determined by the valve body.

Normally Closed Valve Actuator pressure cylinder moves:

- Outward (**0 to 1**): Valve opens.
- Inward (**1 to 0**): Valve closes.

Normally Open Valve Actuator pressure cylinder moves:

- Outward (**0 to 1**): Valve closes.
- Inward (**1 to 0**): Valve opens.

Start-up, continued

Three-way Valve

Actuator pressure cylinder moves:

- Outward (0 to 1): Valve opens between ports NC and C.
- Inward (1 to 0): Valve opens between ports NO and C.

Figure 11. Valve Stem Travel Indication.

Manual operation

Release the crank arm of the manual setting knob located on the top of the actuator. See Figure 12.

A red scale appears in a window in the manual setting knob as you turn the crank clockwise, (see Figure 12). This scale indicates the effective valve stroke in millimeters.

Each complete revolution (360°) is equal to 2 mm of stroke. The numbers 2 to 20 or 2 to 40 are visible depending on the stroke of the actuator.

If a signal is sent to the actuator while it is in manual operation, the actuator will move but the control will not be accurate. The valve cannot be commanded to its 0% position while in manual operation.

Figure 12. Manual Operation.

CAUTION:

Do not attempt automatic operation of the actuator when the red scale is visible.

Automatic operation

When returning to automatic control, turn the crank arm of the manual setting knob counterclockwise until the red numbers disappear. It is essential that the window is clear and the crank arm is snapped into position. See Figure 13.

NOTE: It is possible to secure the manual override handle in place by inserting a # 8 x1-1/4-inch or M5 x 30 mm thread-forming screw through the handle.

Figure 13. Automatic Operation.

Wiring

Do not use autotransformers. Use earth ground isolating step-down Class 2 transformers.

Determine supply transformer rating by summing total VA of all actuators used. The maximum rating for Class 2 step-down transformer is 100 VA.

Actuator	Power Consumption	Actuators per Class 2 Supply Circuit* (80% of transformer VA)
SKB62U	17 VA	4
SKC62U	28 VA	2

* Operating more actuators requires additional transformers or separate 100 VA power supplies.

Wiring Diagrams

The position output signal U will switch from 0 to 10 Vdc to 4 to 20 mA when a 4 to 20 mA input signal is selected and used on the Y terminal.

Figure 14. Connecting Terminals.

Flowrite™ 599 Series

SKD6xU Electronic Valve

Actuators

24 Vac Proportional Control

Description

The Flowrite 599 Series SKD6xU Electronic Valve Actuators require a 24 Vac supply and receive a 0 to 10 Vdc or a 4 to 20 mA control signal to proportionally control a valve. These actuators are designed to work with Flowrite 599 Series valves with a 3/4-inch (20 mm) stroke.

Features

- Direct-coupled installation requires no special tools or adjustments
- Visual and electronic stroke indication
- Die-cast aluminum housing
- Manual override
- Spring return to fail-safe position or non-spring return fail-in-place
- Automatic stroke calibration
- Maintenance-free

Application

These electronic actuators are designed to be used with Flowrite 599 Series valves with a 3/4-inch (20 mm) stroke in liquid and steam service applications.

Product Number

SKD62U, Spring Return	(Actuator Prefix Code 274)
SKD60U, Non-Spring Return	(Actuator Prefix Code 267)

Warning/Caution Notations

WARNING:		Personal injury or loss of life may occur if you do not perform a procedure as specified.
CAUTION:		Equipment damage or loss of data may occur if you do not perform a procedure as specified.

Accessories

NOTE: Installation instructions are included with each accessory.

Figure 1. Auxiliary Switch.

ASC1.6 Auxiliary switch.

Sends a signal to indicate the valve is in the 0% stroke position. Switching point is fixed at the 0% stroke position.

Switching capacity 24 Vac
 4A resistive
 2A inductive

Lowest recommended
current 10 mA

Figure 2. Stem Heating Element.

ASZ6.6 The stem heating element prevents the formation of ice on the stem when the medium temperature drops below 32°F (0°C). It is suited for universal use with valves having a stem or spindle diameter of 10 or 14 mm.

Operating voltage 24 Vac/dc ± 20%
Power consumption ≤ 40 VA/30W

Figure 3. Weather Shield.

599-10071 Weather Shield.

See *Service Kits* for replacement ultraviolet resistant cable ties.

Service Kits

The only field serviceable part is the circuit board.

Figure 4. SKD6xU Details.

Operation

The actuator accepts a 0 to 10 Vdc or a 4 to 20 mA control signal. The actuator mounted on a valve, produces a stroke proportional to the input signal. When power is turned off or in the event of a power failure, the SKD62U Actuator spring returns the valve to its normal position, and the SKD60U Actuator fails in place.

Figure 5.

Spring return: When power is turned off or in the event of a power failure, the actuator spring returns the valve to its normal position.

Figure 6.

Non-spring return: When power is turned off or in the event of a power failure, the actuator maintains its position.

Figure 7. Valve Stem Travel Indication.

Mounting and Installation

Figure 8. Acceptable Mounting Positions.

The vertical position is the recommended position for mounting. Other positions are allowed. When using the Weather Shield for NEMA 3R rating, the vertical position is required. See Weather Shield installation instructions and Figure 8.

Allow four inches (100 mm) around the sides and back of the actuator and eight inches (200 mm) above and to the front of the actuator.

See dimensions in Figure 16 and Figure 17.

Detailed installation instructions for field mounting are shipped with the actuator.

Start-up

Check the wiring for proper connections.

NOTE: The valve body assembly determines the complete assembly action.

Stroke Calibration

To determine the stroke positions 0% and 100% in the valve, calibration is required when the valve/actuator are commissioned for the first time.

The actuator must be mechanically connected to a valve and must have a 24 Vac power supply. The calibration procedure can be repeated as often as necessary.

CAUTION:

Before starting calibration, be sure the manual adjuster is set to **Automatic** to register the actual values.

There is a slot on the printed circuit boards of the actuators. To initiate the calibration procedure, the contacts inside this slot must be short-circuited, for example, with a screwdriver (see Figure 9).

Figure 9.

Automatic calibration proceeds as follows (see Figure 10):

- Actuator runs to the 0 stroke position (1), green LED flashes.
- Actuator then runs to the 100 stroke position (2), green LED flashes.
- Measured values are stored in the EPROM.
- The actuator now moves to the position defined by control signal **Y** or **Z** (3), and the green LED now glows steadily (normal operation).
- Throughout this procedure, output **U** is inactive; meaning, the values only represent actual positions when the green LED stops flashing and remains on continuously.

Figure 10.

Stroke Calibration, Continued

Table 1. LED Status.

LED	Display	Function	Action
Green	ON	Normal Operation	Automatic operation
	Flashing	Stroke calibration In Progress	Wait for calibration to be completed (LED stops flashing)
Red	ON	Faulty stroke calibration	- Check mounting - Restart stroke calibration (by short-circuiting calibration slot) - Replace electronics
		Internal Error	
	Flashing	Inner valve jammed	Check the valve
	OFF	<ul style="list-style-type: none"> No power supply Faulty electronics 	<ul style="list-style-type: none"> -Check mains -Replace electronics

Override Control

The override control input (Z) has three modes of operation:

No Function	Override with 0 ... 1000 Ω
 <ul style="list-style-type: none"> - Z-Contact not Wired - Valve Stroke Follows Control Signal Y 	 <ul style="list-style-type: none"> - Z-Contact Connected to M Via Resistor R - Linear or Equal-Percentage Characteristic - Starting Position at 50 / End Position at 900 - Y-Input has No Effect
Actuator Fully Extended	Actuator Fully Retracted
 <ul style="list-style-type: none"> - Z-Contact Connected Directly to G - Y-Input has No Effect 	 <ul style="list-style-type: none"> - Z-Contact Connected Directly to G0 - Y-Input has No Effect

The Z-modes have a "direct acting" factory setting.

Start-up, Continued

Figure 11. SKD Electronic Features.

DIP Switches (Left to right)	1 Selection of Control Signal	2 Selection of Flow Characteristic
ON	4 to 20 mA	Modified*
OFF Factory Setting	0 to 10 Vdc	Default

*Changing the default setting will modify an equal percentage valve to a linear flow characteristic. When set to default, the flow characteristic is determined by the valve body.

Normally Closed Valve

- Actuator pressure cylinder moves:
- Outward (**0** to **1**): Valve opens.
 - Inward (**1** to **0**): Valve closes.

Normally Open Valve

- Actuator pressure cylinder moves:
- Outward (**0** to **1**): Valve closes.
 - Inward (**1** to **0**): Valve opens.

Three-Way Valve

- Actuator pressure cylinder moves
- Outward (**0** to **1**): Valve opens between port NC and C.
 - Inward (**1** to **0**): Valve opens between ports NO and C.

The measuring voltage at terminal **U** provides valve stem position feedback to an indicating instrument or building automation system.

Manual Operation

Figure 12. The Manual Setting Knob in Manual and Automatic Position.

- Turn the manual setting knob clockwise for manual operation.
- A red indicator becomes visible as you begin to crank. Each complete revolution (360°) is equal to 3/32-inch (2.5 mm) stroke.
- If a signal is sent to the actuator while it is in manual operation, the actuator will move but the control will not be accurate.
- The valve cannot be commanded to its 0% position while in manual operation.

Automatic operation

For automatic operation the manual override knob must be in the fully closed position.

Turn the manual override knob counterclockwise until the red indicator disappears.

Wiring

Do not use autotransformers. Use earth ground isolating step-down Class 2 power supplies.

Determine supply transformer rating by summing total VA of all actuators used.

The maximum rating for Class 2 step-down transformer is 100 VA.

- Since SKD6xU actuators require ≈ 20 VA, a maximum of four actuators can be powered by one transformer (80% of transformer VA).
 - Operating more than four SKD6xU actuators requires additional transformers or separate 100 VA power supplies.
 - The position output signal **U** will switch from 0 to 10 Vdc to 4 to 20 mA when a 4 to 20 mA input signal is selected and used on the Y terminal.
-

Wiring Diagrams

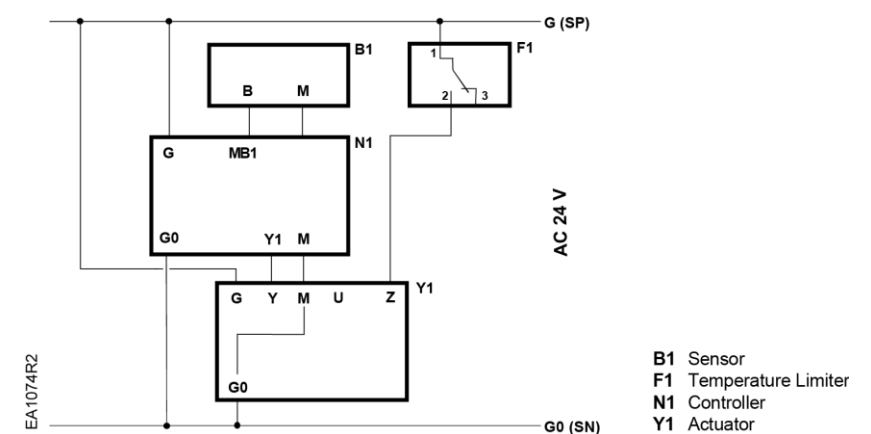

Figure 13. Connecting Terminals.

24 Vac	
G	System Potential (SP)
G0	System Neutral (SN)
Y	Control input 0 to 10 Vdc or 4 to 20 mA (DIP switch selectable)

Z	Override control

Table 2.

Actuator input signal	Receiving Impedance	
	Low (<500 Ohm)	High (>10K Ohm)
0 to 10 Vdc	0 to 20 mA	0 to 10 Vdc
4 to 20 mA	4 to 20 mA	2 to 10 Vdc

Figure 14. Auxiliary Switch ASC1.6.

Figure 15. Heating Element ASZ6.6.

Troubleshooting

- Check that the wires are connected correctly and attached securely.
- Check for adequate power supply.
- Check that the actuator is set for automatic operation. See the *Start-Up* section.

Dimensions

Figure 16. Dimensions of 599-10071 Weather Shield in Inches (Millimeters).

Dimensions, Continued

NOTE: The top knockout position should be used when installing the Weather Shield.

Flowrite™

599 Series Rack & Pinion Valves

Description	The Flowrite 599 Series Rack & Pinion Valve couples the OpenAir™ Actuator to a 1/2- to 2-inch Flowrite 599 Series two- or three-way valve via a linkage. The linkage transforms the actuator rotary movement into the linear motion required to position the valve.
Features	<ul style="list-style-type: none"> • Brushless DC motor technology with stall protection • Bi-directional fail-safe spring return (actuator dependent) • Direct or reverse acting selectable by field installation • All metal housing
Application	The Flowrite valves are used to control water and glycol solutions to 50 percent in small to large air handling units and central plant applications.
Warning/Caution Notations	WARNING:  Personal injury or loss of life may occur if you do not perform a procedure as specified.
	CAUTION:  Equipment damage may occur if you do not perform a procedure as specified.

- *Flowrite 599 Series Three-Way 1/2 to 2-inch Bronze Valves Technical Instructions (155-185P25)*

For OpenAir™ Electronic Damper Actuator specifications, see the following document:

OpenAir GCA Series Spring Return 142 lb in Electronic Damper Actuators (155-173P25)

Operation

599-03609 assembly with GCA161.1U actuator

A continuous 0 to 10 Vdc signal from a controller to Terminal Y (8, gray) of a normally-closed, direct-acting assembly operates the actuator and the valve opens respectively. The linkage proportionally translates the rotary actuator stroke into a linear valve stem motion.

A 0 to 10 Vdc position output feedback signal at Terminal U (9, pink) is available to monitor the position of the actuator.

In the event of a power failure or when the operating voltage is absent, the actuator returns to the fail-safe (90°) position and the valve closes.

In the event of a stall, the actuator is overload protected over the full range to prevent damage.

599-03611 assembly with GCA121.1U actuator

When power is applied to a normally-closed, direct-acting assembly, the actuator moves to the full-open (-5°) position and the valve opens. The linkage translates the rotary actuator stroke into a linear valve stem motion.

In the event of a power failure or when operating voltage is absent, the actuator returns to the fail-safe (90°) position and the valve closes.

In the event of a stall, the actuator is overload protected over the full range to prevent damage.

Life expectancy

An improperly-tuned loop will cause excessive repositioning that will shorten the life of the actuator.

Installation and Mounting

Flowrite Rack & Pinion Valves are suitable for water applications where, the actuator mounts on the linkage vertically. Units are shipped from the factory in the vertical position.

Flowrite Rack & Pinion Valves can be installed on normally-closed, normally-open, and three-way Flowrite valves for direct or reverse-acting control applications. The actuator orientation and the position of the actuator shaft adapter on the linkage determine whether the linkage shaft rotates clockwise or counterclockwise for the proper control action. *Flowrite 599 Series Rack & Pinion Valves Installation Instructions* (129-292), shipped with the assembly, provides details to configure the assembly for the desired control application.

For applications using an alternate OpenAir Electronic Actuator on the linkage, the actuator preload must be reset. *Flowrite 599 Series Rack & Pinion Valves Installation Instructions* (129-292), shipped with the assembly, provides preload details.

Install the Flowrite Rack & Pinion Valve so that the flow of the medium follows the direction of the arrow cast on the valve body. For best performance, install the valve with the actuator above the valve body. Figure 1 shows acceptable NEMA 2 mounting positions. Do not mount the assembly so that the actuator is below horizontal or upside-down.

Allow sufficient space for servicing the assembly. See *Dimensions* and the recommended service envelope in Figure 2.

Figure 1. Acceptable NEMA 2 Mounting Positions.

Wiring

All wiring must conform to NEC, and to local codes and regulations.

Use earth ground isolating step-down Class 2 transformers. Do not use autotransformers.

Determine the supply transformer rating by summing the total VA of all actuators used. The maximum rating for a Class 2 step-down transformer is 100 VA.

Table 2 shows the recommended maximum actuators per Class 2 circuit and includes a safety factor of 80% of the transformer VA. Operating additional actuators requires additional transformers or separate 100 VA power trunks.

Table 2. Recommended Maximum Power Consumption (VA) for a Class 2 Step-Down Transformer.		
Actuator	Power Consumption	Actuator per Class 2 Supply Circuit
GCA12x.	8 VA	10
GCA16x	9 VA	9

OpenAir™ GCA Series, Spring Return, 160 lb-in, Electronic Damper Actuators

Description

The OpenAir GCA Series spring return, 160 lb-in (18 Nm) electronic damper actuators provide modulating, two-position and floating control of building HVAC dampers.

Features

- Brushless DC motor technology with stall protection
- Bi-directional fail-safe spring return
- Patented self-centering shaft coupling
- Models available with dual independently adjustable auxiliary switches
- All modulating models offer built-in feedback
- Floating control models available with feedback potentiometer
- All metal housing
- Manual override
- 5° preload as shipped from factory
- Mechanical range adjustment capability by moving shaft coupling to desired position
- Easily visible position indicator
- Precabled
- CE, UL60730, and cUL (C22.2 No. 24-93) listed

Technical Data

24 Vac, 120 Vac Torque:	160 lb-in (18 Nm) running and spring return <360 lb-in (40 Nm) maximum
NOTE:	At -25°F, spring return is 142 lb-in (16 Nm)
Runtime for 90°:	90 sec. operating, 15 sec. typical (30 sec. max.) closing on power loss
Frequency:	50/60 Hz
Power consumption:	7 VA/5W (24 Vac/dc; GCA12x, GCA13x)
Running:	7 VA/5W (24 Vac/dc, GCA15x) 7 VA/5W (24 Vac/dc GCA16x) 8 VA (120 Vac GCA22x)
Power consumption:	
Holding	5 VA/3W (24 Vac/dc, GCA12x) 5 VA/3W (24 Vac/dc, GCA13x, GCA15x) 5 VA (24 Vac/dc, GCA16x) 6 VA (120 Vac, GCA22x)
Equipment rating (24V):	Class 2 per UL/CSA
Noise level:	<45 dBA (running)
Angle of rotation:	90° nominal, 95° max.
Shaft dimensions:	3/8-in to 1-in (8 to 25.6 mm) dia. 1/4-in to 3/4-in (6 to 18 mm) sq. 3/4-in (20 mm) min. length
Operating temperature:	-25°F to 130°F (-32°C to 55°C)
Storage temperature:	-40°F to 158°F (-40°C to 70°C)
Ambient humidity:	95% rh (non-condensing)
Pre-cabled connection:	18 AWG, 3 ft (0.9 m) long
Enclosure:	NEMA 2, IP54 per EN 60 529
Material:	Die cast aluminum alloy
Agency listings:	CE, UL60730, cUL C22.2 No. 24-93
Gear Lubrication:	Silicone-free
Weight:	4.85 lb (2.2 kg)
Dimensions:	11-13/16 in (300 mm) H 4-3/4 in (120 mm) W 2-7/8 in (72 mm) D

Typical Specifications

Spring return damper actuators shall be the type that requires no connecting linkages. The spring return actuators shall have a self-centering damper shaft coupling that assures concentric alignment of the actuator's output coupling with the damper shaft and be capable of direct mounting to a shaft up to a 1-inch diameter. Actuators shall use a brushless DC motor and provide stall protection throughout the full range of rotation. All spring return actuators shall be capable of both clockwise and counterclockwise spring return fail-safe operation using a continuously engaged mechanical return spring that returns the actuator to a fail-safe position in <20 seconds in response to a loss of power. All actuators shall provide a means of manually positioning the output coupling in the absence of power. Dual independently adjustable auxiliary switches must be integral to the actuator. All actuators must be precabled and provide an easily readable high contrast yellow on black position indicator. All actuators shall be UL60730 and CSA22.2 listed and manufactured under ISO 9002 and ISO 14000 procedures. Actuators shall be designed for a minimum of 60,000 full stroke cycles at the actuators rated torque and temperatures. Actuators shall be as manufactured by Siemens Industry, Inc.

Technical Data

Runtime for 90°:	90 sec. operating
Spring Return:	15 sec. typical (<60 seconds max. at -25°F (-32°C))
Frequency:	50/60 Hz
Power consumption: 24 Vac/dc	
Running:	5 VA/3.5W
Holding:	4 VA/3W
Power Consumption: 120 Vac	
Running and holding:	≤7 VA/5W
Equipment rating (24V):	Class 2 per UL/CSA
Angle of rotation:	90° nominal, 95° max.
Shaft dimensions:	1/4 to 3/4-in. (6.4 to 20.5 mm) dia., 1/4 to 1/2-in. (6.4 to 13 mm) sq., 1-in. (25.4 mm) min. length
Operating temperature:	-25°F to 130°F (-32°C to 55°C)
Storage temperature:	-40°F to 158°F (-40°C to 70°C)
Ambient humidity:	95% rh (non-condensing)

Description

The OpenAir direct-coupled, spring return electronic damper actuators provide modulating, two-position and three-position control of building HVAC dampers.

Features

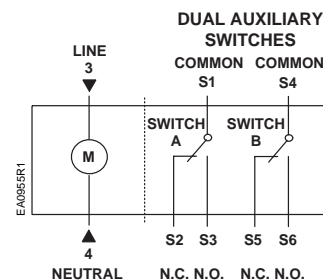

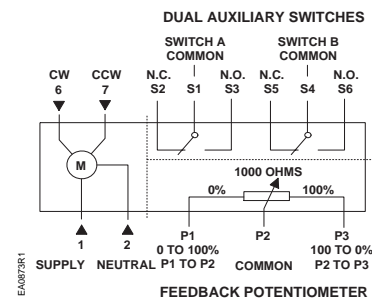

- Brushless motor technology
- Bi-directional fail-safe spring return
- Unique self-centering shaft coupling
- Models available with dual, independently adjustable auxiliary switches
- Floating control models available with feedback potentiometer
- All modulating control types include built-in feedback capability
- All metal housing
- Manual override
- Mechanical range adjustment capability
- Easily visible position indicator
- Precabled
- UL60730 (to replace UL873) and cUL (C22.2 No. 24-93) listed CE conformance
- Small actuator footprint with 62 lb-in of torque
- 24 Vac/dc compatible

Technical Data, continued

Enclosure:	NEMA 1
Precabled connection:	18 AWG, 3 ft (0.9 m) long
Agency listings:	UL60730 (to replace UL873) C-UL C22.2 No. 24-93
Material:	Die cast aluminum alloy
Gear lubrication:	Silicone free
Dimensions:	8-3/8" H × 3-1/4" W × 2-2/3" D (212 mm H × 83 mm W × 68 mm D)
Weight:	2.9 lb (1.3 kg)
Country of Origin	USA

Typical Specifications

Spring-return damper actuators shall be the direct-coupled type that requires no connecting linkages. These spring return actuators shall have a self-centering damper shaft coupling that assures concentric alignment of the actuator's output coupling with the damper shaft for <60 lb-in torque and be capable of direct mounting to a shaft up to a 3/4-inch in diameter. Actuators shall provide stall protection throughout the full range of rotation. All spring return actuators shall be capable of both clockwise and counterclockwise spring return fail-safe operation using a continuously engaged mechanical return spring that returns the actuator to a fail-safe position in <15 seconds in response to a loss of power. All actuators shall provide a means of manually positioning the output coupling in the absence of power. Dual, independently adjustable auxiliary switches are available for these actuators. All actuators must be precabled and provide an easily readable high contrast yellow on black position indicator. All actuators shall be CE conforming; UL60730 (to replace UL873) and CSA22.2 listed and manufactured under ISO 9002 and ISO 14000 procedures. Actuators shall be as manufactured by Siemens Industry, Inc.

Airflow Measurement with Temperature and Alarm Capability

OVERVIEW

- Thermal Dispersion Technology
- Supports up to 16 Sensor Nodes
- NIST-traceable Calibration
- %-of-reading Accuracy
- Airflow and Status Alarm
- Temperature Output Capability
- Combination Analog/Network Models
- Three Mounting Styles
- Remote Transmitter with LCD Display
- 3-year Warranty

The GTx116e-**P+** is EBTRON's top-of-the-line solution for accurate and repeatable measurement in ducts and plenums. Ideal for outdoor air delivery monitoring and airflow tracking applications. Temperature and alarm capability plus unsurpassed product features and connectivity options make this the best choice for today's high performance buildings. Bluetooth® low energy technology interface.¹

¹ Order with the /NR option when RF devices are not permitted.

Typical Applications

- ◆ Outdoor Air Delivery Monitoring
- ◆ Differential Airflow Tracking
- ◆ Hospital Pressurization
- ◆ Laboratory Pressurization
- ◆ Air Change Verification & Monitoring
- ◆ System Performance Monitoring

Benefits

- ◆ Comply with ASHRAE Standards
- ◆ Demonstrate Code Compliance
- ◆ Satisfy LEED Prerequisites and Credits
- ◆ Provide Acceptable IAQ
- ◆ Save Energy
- ◆ Reduce Liability
- ◆ Improve Performance

Product Highlights

- ◆ Best Installed Accuracy
- ◆ Low Airflow Capability
- ◆ Volumetric or Mass Airflow Measurement
- ◆ Long-term Stability
- ◆ "Plug and Play" Operation
- ◆ Intuitive User Interface
- ◆ Waterproof Sensor Assembly
- ◆ FEP Plenum Rated Cables

SPECIFICATIONS: GTx116e-P+

General

Probe and Sensor Node Configurations (max.)

- 2 probes x 8 sensor nodes/probe
- 4 probes x 4 sensor nodes/probe

Installed Airflow Accuracy¹

- Ducts/Plenums:** $\pm 3\%$ of reading
- Non-ducted OA Intakes:** better than or equal to $\pm 5\%$ of reading

P+ Sensor Density:

 Refer to the P+ sensor density table.

Sensor Node Averaging Method

- Airflow:** Independent, arithmetic average
- Temperature:** Independent, velocity weighted average

Listings & Compliance

- UL:** UL-873 and CSA C22.2 No. 24
- CE:** Non-UK European shipments only
- UKCA:** UK shipments only
- BACnet International:** BTL Listed (GTC116e and GTM116e transmitters)
- FCC:** This device complies with Part 15 of the FCC rules
- RoHS:** This device is RoHS2 compliant

Environmental Limits

- Temperature:**
 - Probes:** -20 to 160 °F [-28.9 to 71.1 °C]
 - Transmitter:** -20 to 120 °F [-28.9 to 48.9 °C]
- Humidity:** (non-condensing)
 - Probes:** 0 to 100%
 - Transmitter:** 5 to 95%

Individual Sensing Nodes

Sensing Node Sensors

- Self-heated sensor:** Precision, hermetically sealed, bead-in-glass thermistor probe
- Temperature sensor:** Precision, hermetically sealed, bead-in-glass thermistor probe

Sensing Node Housing

- Material:** Glass-filled Polypropylene (Kynar® with /SS option)
- Sensor Potting Materials:** Waterproof marine epoxy

Sensing Node Internal Wiring

- Type:** Kynar® coated copper

Airflow Measurement

- Accuracy:** $\pm 2\%$ of reading to NIST-traceable airflow standards (includes transmitter uncertainty)
- Calibrated Range:** 0 to 5,000 fpm [25.4 m/s]
- Calibration Points:** 16

Temperature Measurement

- Accuracy:** $\pm 0.15^\circ\text{F}$ [0.08 °C] to NIST-traceable temperature standards (includes transmitter uncertainty)
- Calibrated Range:** -20 to 160 °F [-28.9 to 71.1 °C]
- Calibration Points:** 3

Sensor Probe Assembly

Tube

- Material:** Gold anodized 6063 aluminum (316 stainless steel with /SS option)

Mounting Brackets

- Material:** 304 stainless steel

Mounting Options & Size Limits¹

- Insertion:** 6 to 191 in. [152.4 to 4851 mm]
- Stand-off:** 6 to 190 in. [152.4 to 4826 mm]
- Internal:** 8 to 194 in. [203.2 to 4928 mm]

Probe to Transmitter Cables

- Type:** FEP jacket, plenum rated CMP/CL2P, UL/cUL listed, -67 to 302 °F [-55 to 150 °C], UV tolerant
- Standard Lengths:** 10, 15, 20, 25, 30, 40 and 50 ft. [3.1, 4.6, 6.1, 7.6, 9.1, 12.2, and 15.2 m]
- Connecting Plug:** 13/16" [20.63 mm] nominal diameter with gold-plated connector pins

Transmitter

- Power Requirement:** 24 VAC (22.8 to 26.4 under load) @20V-A max.

- Connector Receptacle Pins and PCB Connections:** Gold-plated receptacle pins, PCB interconnects, PCB edge fingers, and test points

- User Interface:** 2 line x16-character backlit LCD display and 4 button interface

B.A.S. Connectivity Options

- All Transmitters:** Three field selectable (0-5/0-10 VDC or 4-20mA), scalable and isolated analog output signals (AO1=airflow, AO2=temperature or alarm, AO3=Not Used).

- GTA116e Transmitter:** No additional connectivity to B.A.S.

- GTC116e Transmitter:** One additional field selectable (BACnet MS/TP or Modbus RTU) and isolated RS-485 network connection - Individual sensor node airflow rates and temperatures are available via the network

- GTM116e Transmitter:** One additional isolated Ethernet (simultaneously supported BACnet Ethernet or BACnet IP, Modbus TCP and TCP/IP) network connection - Individual sensor node airflow rates and temperatures are available via the network

- GTF116e Transmitter:** One additional isolated Lonworks Free Topology network connection

- GTU116e Transmitter:** One additional USB connection for thumb drive data-logging of sensor node airflow rates and temperatures

Airflow Alarm

- Type:** Low and/or high user defined setpoint alarm
- Tolerance:** User defined % of setpoint
- Delay:** User defined
- Zero Disable:** Alarm can be disabled when the airflow rate falls below the low limit cutoff value (unoccupied periods)
- Reset Method:** Manual or automatic
- Visual Indication:** Yes, LCD display
- Analog Signal Indication:** Yes, on AO2 assignment

System Status Alarm

- Type:** Sensor diagnostic system trouble indication
- Visual Indication:** Yes, LCD display
- Analog Signal Indication:** Yes, on AO2 assignment

EB-Link Bluetooth® low energy Interface for Android® and

- iPhone®:** Display real-time airflow, velocity-weighted temperature, individual sensor node airflow/temperature data, settings and diagnostics.²

¹ Installed airflow accuracy allows for additional uncertainty that results from averaging a finite number of sensors in a contorted velocity profile created from up and downstream disturbances. The specified installed accuracy is based on the P+ sensor density rules for installations that meet or exceed EBTRON minimum placement requirements. P+ sensor density rules may not be available in certain duct sizes due to sensor placement limitations.

² Order with the /NR option when RF devices are not permitted.

Fan Array Airflow Measurement with Temperature and Alarm Capability

OVERVIEW

- Thermal Dispersion Technology
- Supports up to 8 Fans
- NIST-traceable Calibration
- %-of-reading Accuracy
- Individual Fan Airflow Alarms
- Temperature Output Capability
- Combination Analog/Network Models
- Four Mounting Styles
- Remote Transmitter with LCD Display
- 3-year Warranty

The GTx108e-**F**/An is EBTRON's solution for accurate and repeatable airflow measurement in fan arrays. One to eight fans are supported. Airflow, temperature and/or airflow alarming are available on all models. Individual fan airflow rates and fan alarming are available with combination analog output/network models. Does not affect fan performance. Bluetooth® low energy technology interface.¹

¹ Order with the /NR option when RF devices are not permitted.

Typical Applications

- ◆ Fan Airflow Tracking
- ◆ Air Change Verification & Monitoring
- ◆ Individual Fan Performance Monitoring & Fault Detection

Benefits

- ◆ Monitor up to 8 Fans with a Single Transmitter
- ◆ Demonstrate Fan Performance and Operation
- ◆ Improve Fan Tracking of VAV Systems
- ◆ Comply with ASHRAE Standards
- ◆ Save Energy
- ◆ Reduce Fan Horsepower

Product Highlights

- ◆ Accurate and Repeatable
- ◆ Long-term Stability
- ◆ Streamline Design
- ◆ Individual Fan Airflow Monitoring & Alarming
- ◆ Adjustable Mounting Brackets
- ◆ "Plug and Play" Operation
- ◆ FEP Plenum Rated Cables

General

Probe and Sensor Node Configurations

Fan Arrays (less than or equal to 4 fans): 2 probes x 1 sensor node per probe or 1 probe x 1 sensor node per probe in each fan

Fan Arrays (greater than 4 fans): 1 probe x 1 sensor node per probe in each fan (8 probe maximum)

Installed Airflow Accuracy¹

±(3% to 10%) of reading, depending on fan type and installation. May be improved by field adjustment using the Field Adjust Wizard (FAW) to a reliable reference.

Sensor Node Averaging Method

Airflow: Independent, arithmetic average per fan

Temperature: Independent, velocity weighted average

Listings and Compliance

UL: UL-873 and CSA C22.2 No. 24

CE: Non-UK European shipments only

UKCA: UK shipments only

BACnet International: BTL Listed (GTC108e and GTM108e transmitters)

RoHS: This device is RoHS2 compliant

Environmental Limits

Temperature:

Probes: -20 to 160 °F [-28.9 to 71.1 °C]

Transmitter: -20 to 120 °F [-28.9 to 48.9 °C]

Humidity: (non-condensing)

Probes: 0 to 100%

Transmitter: 5 to 95%

Individual Sensing Nodes

Sensing Node Sensors

Self-heated sensor: Precision, hermetically sealed, bead-in-glass thermistor

Temperature sensor: Precision, hermetically sealed, bead-in-glass thermistor

Sensing Node Housing

Material: Glass-filled Polypropylene

Sensor Potting Materials: Waterproof marine epoxy

Airflow Measurement

Accuracy: ±2% of reading to NIST-traceable airflow standards (includes transmitter uncertainty)

Calibrated Range: 0 to 10,000 fpm [0. to 50.8 m/s]

Calibration Points: 16

Temperature Measurement

Accuracy: ±0.15°F [0.08 °C] to NIST-traceable temperature standards (includes transmitter uncertainty)

Calibrated Range: -20 to 160 °F [-28.9 to 71.1 °C]

Calibration Points: 3

Sensor Probe Assembly

Mounting Rods

Material: Zinc plated steel

Mounting Brackets (Forward, Face, Flare)

Material: 304 stainless steel

Mounting Brackets (Cantilever)

Material: Zinc plated steel

Mounting Options & Size Limits

Forward: 6 to 64 inches [152.4 to 1625.6 mm] (diameter at inlet entrance)

Face: 11 to 77 inches [279.4 to 1955.8 mm] (diameter at inlet entrance)

Flare: 6 to 57 inches [152.4 to 1447.8 mm] (opening size at backdraft damper inlet)

Cantilever: 11 to 82 inches [279.4 to 2082.8 mm] (diameter at inlet entrance)

Probe to Transmitter Cables

Type: FEP jacket, plenum rated CMP/CL2P, UL/cUL listed, -67 to 302 °F [-55 to 150 °C], UV tolerant

Standard Lengths: 10, 25, and 50 ft. [3.1, 7.6 and 15.2 m]

Connecting Plug: 9/16" [14.29 mm] nominal diameter with gold-plated connector pins

Transmitter

Power Requirement: 24 VAC (22.8 to 26.4 under load) @16V-A

Connector Receptacle Pins and PCB Connections: Gold-plated receptacle pins, PCB interconnects, PCB edge fingers, and test points

User Interface: 2 line x16-character backlit LCD display and 4 button interface

B.A.S. Connectivity Options

All Transmitters: Three field selectable (0-5/0-10 VDC or 4-20mA), scalable and isolated analog output signals (AO1=airflow, AO2=temperature or alarm, AO3=Not Used).

GTA108e Transmitter: No additional connectivity to B.A.S.

GTC108e Transmitter: One additional field selectable (BACnet MS/TP or Modbus RTU) and isolated RS-485 network connection - Individual sensor node airflow rates and temperatures are available via the network

GTM108e Transmitter: One additional isolated Ethernet (simultaneously supported BACnet Ethernet or BACnet IP, Modbus TCP and TCP/IP) network connection - Individual sensor node airflow rates and temperatures are available via the network

GTU108e Transmitter: One additional isolated Lonworks Free Topology network connection

GTU108e Transmitter: One additional USB connection for thumb drive data-logging of sensor node airflow rates and temperatures

Airflow Alarm

Type: Low and/or high user defined setpoint alarm

Tolerance: User defined % of setpoint

Delay: User defined

Zero Disable: Alarm can be disabled when the airflow rate falls below the low limit cutoff value (unoccupied periods)

Reset Method: Manual or automatic

Visual Indication: Yes, LCD display

Network Indication: Yes (GTM108e and GTC108e only)

Analog Signal Indication: Yes, on AO2 assignment

Fan Alarm

Type: Minimum airflow, % deviation from median airflow, or % deviation from maximum airflow stored in memory

Tolerance: User defined % of setpoint

Delay: User defined

Zero Disable: Alarm can be disabled when the airflow rate falls below the low limit cutoff value (unoccupied periods)

Reset Method: Manual or automatic

Visual Indication: Yes, LCD display

Network Indication: Yes (GTM108e and GTC108e only)

Analog Signal Indication: Yes, on AO2 assignment

System Status Alarm

Type: Sensor diagnostic system trouble indication

Visual Indication: Yes, LCD display

Network Indication: Yes

Analog Signal Indication: Yes, on AO2 assignment

Model 264

Low Differential Pressure Transducer

Features

- Industry standard for very low differential pressure
- $\pm 0.25\%$, $\pm 0.4\%$, $\pm 1\%$ FS accuracy
- 3 year unconditional warranty
- Up to 10 PSI overpressure (range dependent)
- Installation time minimized w/ mounting options
- Reverse wiring protection
- Internal regulation permits use with unregulated DC power supplies
- Fire retardant case (UL 94 V-0 approved)
- CE & RoHS compliant

Applications

- HVAC/R systems
- Room pressurization for critical environments
- Energy management systems
- Variable air volume and fan control (VAV)
- Environmental pollution control
- Lab & fume hood control

With millions of sensors installed world wide, Setra's 264 is the "standard" for low differential pressure measurement in HVAC building automation. The 264 very low differential pressure transducer uses a dead-ended stainless steel welded capacitive sensing element that requires minimal amplification and delivers excellent accuracy and longterm stability in critical installations. The 264 has a 3 year, unconditional warranty, giving the end-user peace of mind well beyond the initial commissioning phase and guarantees performance well after the BAS warranty. The 264 utilizes a robust design that offers brass barbed fittings, and an optional conduit cover for easy and consistent installation.

The industry standard

The 264 has been a consistent and trusted HVAC sensor for over two decades. The reputation of reliability and quality with exceptional delivery time has helped the 264 remain the trusted choice for any low differential pressure applications.

Convenient installation

The 264 is available in both a wall and conduit versions providing the installer with flexible mounting options. The base mount allows the sensor to be installed anywhere, allowing for a simple installation.

The Setra sensor

The core technology of the 264 is the all stainless steel capacitive sensing element. Setra designs and manufactures all of their sensing elements resulting in full control over the process and quality of every single sensor. The welded dead-ended capacitive sensors requires minimal amplification and delivers excellent accuracy and longterm stability. Setra's technology has been used in over 8 million installations and has the highest field acceptance rate in the industry.

Dimensions

Model 230

True Wet-to-Wet Differential Pressure Transducer

The Model 230 is Setra's highest accuracy solution for monitoring differential pressure in wet-to-wet applications. Its single diaphragm design enables a true wet-to-wet differential pressure measurement with superior $\pm 0.25\%$ FS accuracy compared to competitive units which calculate differential pressure using two single point pressure sensors. The stainless steel capacitive sensor provides a highly accurate, linear analog output proportional to the pressure over a wide temperature range. The 230 is offered with an optional 3 or 5 valve machined brass manifold for ease of installation and maintenance.

Avoid Line Pressure w/ Single Diaphragm Sensor

Unlike the competition, the 230 is a true wet-to-wet sensor with a single diaphragm construction. The differential pressure range of a single diaphragm is not impacted by line pressure whereas dual differential pressure sensors require the individual sensors to measure gauge pressure, comparing the outputs to determine the differential pressure.

Increase the Sensors Response Time

The 230 utilizes an all stainless steel capacitive sensor which responds 20x faster than oil filled sensors and provides conditioned electronic circuitry with a highly accurate, linear analog output proportional to the pressure over a wide temperature range.

Save Time on Money & Installation

When time and project costs are a priority, the 230 is offered with an optional 3 or 5 valve machined brass manifold for ease of installation and maintenance. The brass body has no internal process connections, therefore eliminating the risk of internal leaks.

- Single Diaphragm Design
- All Stainless Steel Capacitive Sensor
- 3 or 5 Valve Manifold Assembly Options

Model 230 Features:

- Only true wet-to-wet differential pressure transducer on the market
- $\pm 0.25\%$ FS Accuracy
- Available to 1 PSID with 350 PSI Line Pressure
- No Liquid Fill Diaphragm
- NEMA 4 Rated Housing
- Low Line Pressure Effect
- Fast Response Time
- Gas & Liquid Compatible
- CE & RoHS Compliant

Applications:

- Energy Management Systems
- Process Control Systems
- Flow Measurement of Various Gases or Liquids
- Liquid Level Measurement or Pressurized Vessels
- Pressure Drop Across Filters

GENERAL SPECIFICATIONS

Performance Data		Physical Description (Model 230)	
Accuracy RSS ¹ (at constant temp)	±0.25% FS	Case	Stainless Steel/Aluminum
Non-Linearity, BFSI	±0.20% FS	Electrical Connection	Barrier strip terminal block with conduit enclosure & 0.875 DIA conduit opening.
Hysteresis	0.10% FS	Pressure Fittings	1/4"-18 NPT internal
Non-Repeatability	0.05% FS	Weight (approx.)	14.4 oz
Thermal Effects²		Sensor Cavity Volume	0.27 in ³ Positive Port, 0.08 in ³ Negative Port
Compensated Range °F(°C)	+30 to +150 (-1 to +65)	(With 1/4"NPT external fittings installed-does not include cavity volume of 1/4"NPT external fittings.)	
Zero Shift %FS/100°F(%FS/50°C)	2.0 (1.8)	Physical Description (3-Valve Manifold Assembly)⁴	
Span Shift %FS/100°F(%FS/50°C)	2.0 (1.8)	Manifold Block	Brass
Line Pressure Effect	Zero shift ±0.004% FS/PSIG line pressure	Valves (3) ⁵	V1 for Connection to + port V2 for Connection to - port V3 for Equalizing Pressure
Resolution	Infinite, limited only by output noise level (0.02%FS)	Valve Type	90° On/Off
Static Acceleration Effect	2%FS/g (most sensitive axis)	Process Connections	1/4"-18 NPT Internal Thread
Natural Frequency	500 Hz (gaseous media)	Dimensions	7.05"W x 6.25"H x 2.16"D
Warm-up Shift	±0.1% FS total	Weight	<2.5 lbs.
Response Time	30 to 50 milliseconds	Physical Description (5-Valve Manifold Assembly)⁶	
Long Term Stability	0.5%FS/1 YR	Manifold Block	Brass
Maximum Line Pressure	350 PSIG	Valve (5) ⁵	V1 for Connection to ± Port V2 for Connection to - Port V3 for Equalizing Pressure V4 & V5 for Connection to External Gauge or Alternate Plumbing Configuration
Environmental Data		Process Connection	1/4"-18 NPT Internal Thread
Operating ³ Temperature °F (°C)	0 to +175 (-18 to +80)	Dimensions	7.05"W x 6.25"H x 2.16"D
Storage Temperature °F (°C)	-65 to +250 (-54 to +121)	Weight	<3.8 lbs.
Vibration	5 g from 5 Hz to 500 Hz	Electrical Data (Voltage)	
Acceleration	10g	Circuit	3-Wire (Exc, Out, Com)
Shock	50g	Excitation	9 to 30 VDC for 0-5 VDC Output, 13 to 30 VDC for 0-10 VDC Output
Pressure Media		Output ⁷	0 to 5 VDC ⁸ , 0 to 10 VDC ⁸
Model 230		Output Impedance	100 ohms
Gases or liquids compatible with 17-4 PH Stainless Steel, 300 Series Viton O-Rings. Note: Hydrogen not recommended for use with 17-4 PH stainless steel. Optional Buna-N O'rings are recommended for hydrocarbon applications.		Electrical Data (Current)	
3 & 5 Valve Manifold		Circuit	2-Wire
Gases or liquids compatible with 360 brass, Copper 122, Acetal plug valves and Nitrile O-rings.		Output ⁹	4 to 20mA ¹⁰
		External Load	0 to 1000 ohms
		Minimum supply voltage (VDC)	9+ 0.02 x (Resistance of receiver plus line).
		Maximum supply voltage (VDC)	30+ 0.004 x (Resistance of receiver plus line).

¹ RSS of Non-Linearity, Hysteresis, and Non-Repeatability.

² Units calibrated at nominal 70°F. Maximum thermal error computed from this datum.

³ Operating temperature limits of the electronics only. Pressure media temperatures may be considerably higher.

⁴ Order assembled with the Model 230 (Code 3V) or separately as Option 891.

⁵ Refer to drawings

⁶ Order assembled with the Model 230 (Code 5V)

⁷ Calibrated into a 50K ohm load, operable into a 5000 ohm load or greater.

⁸ Zero output factory set to within ±25mV (for 5 VDC output) or ±50mV (for 10 VDC output)

Span (Full Scale) output factory set to ±25 mV (for 5 VDC output) or ±50 mV (for 10 VDC output)

⁹ Calibrated at factory with a 24 VDC loop supply voltage and a 250 ohm load.

¹⁰ Zero output factory set to within ±0.16mA. Span factory set to within ±0.16 mA

Specifications subject to change without notice.

Model 230

True Wet-to-Wet Differential Pressure Transducer

MODEL 230 DIMENSIONS

DIMENSIONS W/ 3-VALVE MANIFOLD ASSEMBLY

For differential pressure measurements at high line pressure (350 PSIG max), it is recommended that the pressure sensor be installed with a valve in each line, plus a shunt valve across the high and low (reference) pressure ports as shown.

Model 230

True Wet-to-Wet Differential Pressure Transducer

2301050PD3V11B

Please contact factory for versions not shown.

Ordering Example: 2301005PD2F11B = Model 230 0 to 5 PSID unidirectional, 1/4-18 NPT Ext. fitting, 4 to 20 mA Output, and Viton/Silicone Seals.
 2301005PD3V11B = Model 230, 0 to 5 PSID unidirectional, 3-Valve Manifold, 4 to 20 mA, Output, and Viton/Silicone Seals (Assembled w/3- Valve Manifold).

DIMENSIONS W/ 5-VALVE MANIFOLD ASSEMBLY

For differential pressure measurements at high line pressure (350 PSIG max), it is recommended that the pressure sensor be installed with a valve in each line, plus a shunt valve across the high and low (reference) pressure ports as shown.

Note: V6 and V7 bleed valves are not required when used with a Setra Model 230. Use the bleed screws on Model 230 to bleed the lines of air.

10 AMP PILOT CONTROL RELAYS

RIBU1C

Pilot Relay, 10 Amp SPDT, 10-30 Vac/dc/
120 Vac Coil, NEMA 1 Housing

RIBH1C

Pilot Relay, 10 Amp SPDT, 10-30 Vac/dc/
208-277 Vac Coil, NEMA 1 Housing

SPECIFICATIONS

Relays & Contact Type: One (1) SPDT Continuous Duty Coil
Expected Relay Life: 10 million cycles minimum mechanical
Operating Temperature: -30 to 140° F
Humidity Range: 5 to 95% (noncondensing)
Operate Time: 20ms
Relay Status: LED On = Activated
Dimensions: 1.70"H x 2.80"W x 1.50"D with 0.50" NPT nipple
Housing Detail: See **Housing A** in housing guide for dimensions
Origin: Made of US and non-US parts
Wires: 16", 600V Rated
Approvals: UL Listed, C-UL, CE, RoHS (All models)
 UL916 (RIBU1C, RIBH1C)
 UL864, California State Fire Marshal (RIBU1C-RD, RIBH1C-RD)
 UL508 (RIBU1C-N4, RIBH1C-N4)
Housing Rating: UL Accepted for Use in Plenum, NEMA 1
Gold Flash: Yes
Override Switch: No

 10-30 Vac/dc ; 208-277 Vac ; 50-60 Hz (RIBH1C)
 Drop Out = 2.1 Vac / 2.8 Vdc
 Pull In = 9 Vac / 10 Vdc

RH Series Compact Power Relays

RH2B-UL-AC24VKIT
RH3B-ULAC24V-KIT

Key features

- SPDT through 4PDT, 10A contacts
- Compact power type relays
- Miniature power relays with a large capacity
- 10A contact capacity
- Compact size saves space

Operating Instructions

Driving Circuit for Relays

1. To ensure correct relay operation, apply rated voltage to the relay coil.
2. Input voltage for the DC coil:
A complete DC voltage is best for the coil power to make sure of stable relay operation. When using a power supply containing a ripple voltage, suppress the ripple factor within 5%. When power is supplied through a rectification circuit, the relay operating characteristics, such as pickup voltage and dropout voltage, depend on the ripple factor. Connect a smoothing capacitor for better operating characteristics as shown below.

3. Leakage current while relay is off:
When driving an element at the same time as the relay operation, special consideration is needed for the circuit design. As shown in the incorrect circuit below, leakage current (I_o) flows through the relay coil while the relay is off. Leakage current causes coil release failure or adversely affects the vibration resistance and shock resistance. Design a circuit as shown in the correct example.

4. Surge suppression for transistor driving circuits:
When the relay coil is turned off, a high-voltage pulse is generated, causing a transistor to deteriorate and sometimes to break. Be sure to connect a diode to suppress the back electromotive force. Then, the coil release time becomes slightly longer. To shorten the coil release time, connect a Zener diode between the collector and emitter of the transistor. Select a Zener diode with a Zener voltage slightly higher than the power voltage.

Protection for Relay Contacts

1. The contact ratings show maximum values. Make sure that these values are not exceeded. When an inrush current flows through the load, the contact may become welded. If this is the case, connect a contact protection circuit, such as a current limiting resistor.
2. Contact protection circuit:
When switching an inductive load, arcing causes carbides to form on the contacts, resulting in increased contact resistance. In consideration of contact reliability, contact life, and noise suppression, use of a surge absorbing circuit is recommended. Note that the release time of the load becomes slightly longer. Check the operation using the actual load. Incorrect use of a contact protection circuit will adversely affect switching characteristics. Four typical examples of contact protection circuits are shown in the following table:

RC		This protection circuit can be used when the load impedance is smaller than the RC impedance in an AC load power circuit. • R: Resistor of approximately the same resistance value as the load • C: 0.1 to 1 μ F
		This protection circuit can be used for both AC and DC load power circuits. R: Resistor of approximately the same resistance value as the load C: 0.1 to 1 μ F
Diode		This protection circuit can be used for DC load power circuits. Use a diode with the following ratings. Reverse withstand voltage: Power voltage of the load circuit x 10 Forward current: More than the load current
Varistor		This protection circuit can be used for both AC and DC load power circuits. For a best result, when using a power voltage of 24 to 48V AC/DC, connect a varistor across the load. When using a power voltage of 100 to 240V AC/DC, connect a varistor across the contacts.

3. Do not use a contact protection circuit as shown below:

	This protection circuit is very effective in arc suppression when opening the contacts. But, the capacitor is charged while the contacts are opened. When the contacts are closed, the capacitor is discharged through the contacts, increasing the possibility of contact welding.
	This protection circuit is very effective in arc suppression when opening the contacts. But, when the contacts are closed, a current flows to charge the capacitor, causing contact welding.

Generally, switching a DC inductive load is more difficult than switching a DC resistive load. Using an appropriate arc suppressor, however, will improve the switching characteristics of a DC inductive load.

Soldering

1. When soldering the relay terminals, use a soldering iron of 30 to 60W, and quickly complete soldering (within approximately 3 seconds).
2. Use a non-corrosive rosin flux.

Operating Instructions can't

Other Precautions

1. General notice:
To maintain the initial characteristics, do not drop or shock the relay.

The relay cover cannot be removed from the base during normal operation. To maintain the initial characteristics, do not remove the relay cover.

Use the relay in environments free from condensation, dust, sulfur dioxide (SO₂), and hydrogen sulfide (H₂S).

Make sure that the coil voltage does not exceed applicable coil voltage range.
2. UL and CSA ratings may differ from product rated values determined by IDEC.
3. Do not use relays in the vicinity of strong magnetic field, as this may affect relay operation.

Safety Precautions

- Turn off the power to the relay before starting installation, removal, wiring, maintenance, and inspection of the relays. Failure to turn power off may cause electrical shock or fire hazard.
- Observe specifications and rated values, otherwise electrical shock or fire hazard may be caused.
- Use wires of the proper size to meet voltage and current requirements. Tighten the terminal screws on the relay socket to the proper tightening torque.
- Surge absorbing elements on AC relays with RC or DC relays with diode are provided to absorb the back electromotive force generated by the coil. When the relay is subject to an excessive external surge voltage, the surge absorbing element may be damaged. Add another surge absorbing provision to the relay to prevent damage.

Precautions for the RU Relays

- Before operating the latching lever of the RU relay, turn off the power to the RU relay. After checking the circuit, return the latching lever to the original position.
- Do not use the latching lever as a switch. The durability of the latching lever is a minimum of 100 operations.
- When using DC loads on 4PDT relays, apply a positive voltage to terminals of neighboring poles and a negative voltage to the other terminals of neighboring poles to prevent the possibility of short circuits.
- DC relays with a diode have a polarity in the coil terminals. Apply the DC voltage to the correct terminals.

TRANSFORMER

TR100VA002

Transformer 96 VA, 120 to 24 Vac, Circuit Breaker, Foot and Dual Threaded Hub Mount

SPECIFICATIONS

VA Rating: 96

Frequency: 50/60 Hz

Mounting: Foot & Dual Threaded Hubs

Over Current Protection: Circuit Breaker

Dimensions: 4.077" x 2.504" x 3.023" (w/ .500" NPT Hubs)

Wire Length: 8" Typical w/ .5" Strip

Operating Temperature: -30 to 140° F

MTBF: 100,000 Hours @ 77° F

Construction: Split-Bobbin

Approvals: Class 2 UL5085-3 Listed, C-UL, CE, RoHS

Transformer: One (1) 500 VA
Over Current Protection: Circuit Breaker
Primary: 480/277/240/120 Vac
Frequency: 50/60 Hz
Dimensions: 12.125" H x 12.125" W x 6.000" D (PSH500A)
 11.330" H x 11.400" W x 5.000" D (PSMN500A)
Origin: Made of US and non-US parts
Approvals: Class 2 (UL Approved UL5085-3), UL916, C-UL, CE, RoHS, Special
 ▲ Seismic Certification of Equipment and Components: OSP-0201-10
Housing: NEMA1 Metal Enclosure (PSH500A)
Sub-Panel: Plenum Rated Polymetal (PSMN500A)
Notes: • To order UL508, add "-IC" to end of model number.
 • Primary voltage terminal cover available.
 • Design is in accordance with ASCE 7-05 Chapter 13: ▲ <https://hcai.ca.gov/wp-content/uploads/2020/10/OSP-0201.pdf>
 • Consult factory for OSP labeling

5 Secondaries:
 24 Vac, with LED Indicators
 4 Amp breaker for each output

24 Vac ON/OFF:
 On / Off Switch & Breaker

Input:
 480/277/240/120 Vac **Finger-Safe Terminals**, 8-18 AWG

Output:
 5 Ungrounded, Isolated, 100 VA, Class 2, 24 Vac Outputs. Terminals accept 12-26 AWG wire.

Ambient Temperature Derating:
 4A up to 40° C ; 3A up to 50° C ; 2A up to 55° C
 (When All 5 Outputs Operated Simultaneously)

- With 240 Vac primary input voltage
- When all 5 outputs operated simultaneously, at room temperature

Standby Wattage:
 48.515 W @ 120 Vac
 48.699 W @ 240 Vac
 49.564 W @ 277 Vac
 48.255 W @ 480 Vac

Full Load Primary Current:
 4.66 A @ 120 Vac
 2.41 A @ 240 Vac
 2.06 A @ 277 Vac
 1.17 A @ 480 Vac

Secondary Output Voltage vs. Load:
 24.0 V @ 1 Amp
 23.0 V @ 2 Amp
 21.8 V @ 3 Amp
 21.1 V @ 4 Amp

ECMset

C-2320-L ECM

ECM (Brushless motor) Current Switch

Adjustable minimum turn-on

Prevents false trip due to ECM stand-by current

Split-core operation to 200A

N.O. 30VAC/DC output

DESCRIPTION

ECMSet™ is designed for no/go run detection on electronically commutated motors (ECMs). ECMs draw a small amount of AC standby current to power their inverter, up to 1A, even when the motor isn't running. The ECMSet features a high resolution adjustable turn-on setpoint to ignore standby current, preventing false ON status indications.

APPLICATIONS

- No/go run detection for EC motors
- On set-point prevents false trips due to EC inverter stand-by current
- Great for data center current switch sensing

Turn-on setpoint minimizes false trips due to standby ECM inverter draw.

Optional CR command relay for stop/start/status in a single labor saving device.

FEATURES

- Reliable operation on ECM motors
- Set trip point with easily scaled dial to that sensor only turns on when motor is actually running
- Super low turn-on adjustment scale Maintenance-free—no call backs
- No hazardous guesswork. Multi-turn adjustments are a thing of the past
- Reduce the risk of arc flash; sensor can be set without calibration in live enclosure
- Industry leading 7 year warranty

H614

Automatically Learns At Initial Power-Up

H614

The Hawkeye H614 is a microprocessor based, self-learning, self-calibrating current-sensitive switching device designed for use with VFD systems. At initial power-up, the H614 automatically learns the average current on the line with no action required by the installer. Once a current is learned, the switch monitors for changes in current greater than $\pm 20\%$ of the learned load. When calibrated for a given VFD system, the H614 is tolerant of gradual drifts in frequency due to expected conditions, such as an accumulation of debris in a filter, while still detecting a sudden drop due to a potential abnormal system condition (e.g., belt loss or other mechanical failure).

SPECIFICATIONS

Sensor Power	Induced from monitored conductor
Response Time	1 sec.
Learn Time	15 sec. learn period after frequency stabilizes
Frequency Range in Conductor	12 to 115 Hz ¹
Temperature Range	-15 to 60 °C (5 to 140 °F)
Humidity Range	10 to 90% RH non-condensing
Alarm Limits	$\pm 20\%$ of learned current in every 5 Hz freq. band ²
Normal-to-Alarm Status Output Delay	Approx. 7 sec.
Alarm-to-Normal Status Output Delay	1 sec. nominal ³
Off Delay	<30 sec. nominal
Contact Ratings	30 Vac/dc, 1 A
Insulation Class	600 Vac (UL); 300 Vac RMS (CE)
Terminal Block Wire Size	24 to 14 AWG (0.2 to 2.1 mm ²)
Terminal Block Torque	3.5 to 4.4 in-lbs (0.4 to 0.5 N-m)

Microcontroller based learning technology

Automatically learns load upon initial power-up...minimizes calibration labor

Automatic trip point

Automatic trip point (1.5 to 150 Amps, 12 to 115 Hz)...detect abnormal events

Under- and over-load

Microcontroller based learning technology...automatically learns load

APPLICATIONS

- Monitoring fans, pumps, motors, and other electrical loads for proper operation
- Detecting belt loss and motor failure...ideal for fan and pump status
- Verifying lighting circuit loads
- Monitoring critical motors (compressor, fuel, etc.)
- Monitoring industrial process equipment status (OEM)

Saves space

Small size fits easily inside small starter enclosures

100% solid state

100% solid state...no moving parts to fail

Flexibility

Removable mounting bracket for installation flexibility

WARRANTY

Limited Warranty	5 years
------------------	---------

AGENCY APPROVALS

Agency Approvals	UL508 open device, CE: EN61010-1, CAT III, Pollution Degree 2
------------------	---

- VFD systems generate fields that can disrupt electrical devices. Ensure that these fields are minimized and are not affecting the sensor.
- The H614 is not intended for use in applications where the current is expected to fluctuate by more than 20% due to acceptable causes other than VFD driven changes.
- If the H614 experiences a momentary loss of power, the Alarm-to-Normal output delay may exceed 1 sec.

Specification Note: For CE compliance, conductor shall be insulated according to IEC 61010-1

The product design provides for basic insulation only. Use wire with minimum 75°C rated insulation. Do not use the LED status indicators as evidence of applied voltage. This sensor detects abnormal operation by looking for sudden changes in current across the entire frequency range. In Learn mode, the sensor calculates a margin 20% above and 20% below the learned frequency curve. An abnormal condition in the circuit is one that falls outside this margin.

DIMENSIONAL DRAWING

* Terminal block may extend up to 1/8" over the height dimensions shown.

WIRING DIAGRAM

NOTE: The H614 is not intended for use in staged pump, variable inlet vane, and other applications in which the amperage changes under normal operation, independent of frequency. NOTE: (Optional) For added sensitivity in detecting amperage changes, use H614 devices on all three phases of the VFD

PRODUCT FUNCTIONS

HOW IT WORKS

During setup, the H614 automatically determines the normal amperage and frequency profile and stores it in memory. Then the microprocessor monitors for amperage changes greater than $\pm 20\%$ of this learned curve, indicating a potential system failure.

ORDERING INFORMATION

MODEL	AMPERAGE RANGE	FREQUENCY RANGE	STATUS OUTPUT	NOMINAL TRIP POINT TARGET RANGE	HOUSING	STATUS LED	UL	CE
H614	1.5 to 150 A ¹	12 to 115 Hz	N.O. 1.0 A @ 30 Vac/dc	$\pm 20\%$ in each of 20 bands	Split-core	•	• ²	•

1. If the current is above 1.5 A, but neither LED is illuminated, the H614 is considered to be in on/off status mode.

2. Listed for use on 75°C insulated conductors.

USAGE EXAMPLE

The H614 is designed for HVAC fan and blower systems, as well as some single stage pumping systems involving consistent viscosity liquids. If an H614 is installed on one phase of the VFD, it detects changes in that phase that result from the VFD compensating for changes elsewhere in the system. Alternatively, for increased sensitivity, H614s can be used on all three phases for immediate detection of phase balance changes anywhere in the system.

HX08 SERIES & H701

Detect Belt Loss, Coupling Shear, and Mechanical Failure

Hx08 Series and H701 adjustable current switches offer high performance, with a wide array of amperage range options. These products can accurately detect belt loss, coupling shear, or other mechanical failure on unit vents, exhaust fans, recirculation pumps, and other fixed loads down to as little as 1/5 HP.

SPECIFICATIONS

Sensor Power	Induced from monitored conductor
Insulation Class	600 Vac RMS (UL), 300VAC RMS (CE)
Frequency Range ²	50/60 Hz, On/Off status for Variable Frequency Drive (VFD) outputs at 12 to 115 Hz
Temperature Range	-15 to 60 °C (5 to 140 °F)
Humidity Range	10 to 90% RH non-condensing
Hysteresis	10% (typical)
Terminal Block Wire Size	H308: 22-16 AWG (0.3 to 1.3 mm ²) Others: 24-14 AWG (0.2 to 2.1 mm ²)
Terminal Block Torque	H308: 3.5 to 7 in-lbs (0.8 N-m) Others: 3.5 to 4.4 in-lbs (0.4 to 0.5 N-m)

WARRANTY

Limited Warranty	5 years
------------------	---------

AGENCY APPROVALS

Agency Approvals	UL 508 open device listing; CE: EN61010-1, CAT III, Pollution Degree 2, basic insulation
------------------	--

Retrofit or new construction

High performance devices in split- and solid-core housings

Adjustable trip point

Precise current trip point setting

Low setpoint

Minimum trip point as low as 0.5 A (H608)...no need for multiple wraps of the conductor through the sensor, even on loads as small as 1/5 HP

Small size

Fits easily inside small enclosures

Self-gripping iris

Self-gripping iris on split-core housings for easy installation

Status LEDs

Status LEDs available for easy setup and local indication

APPLICATIONS

- Detecting belt loss, coupling shear, and mechanical failure
- Verifying lighting circuit and other electrical service run times
- Monitoring status of industrial process equipment
- Monitoring status of critical motors (compressor, fuel, etc.)
- VFD output on/off status

DETECTS BELT LOSS/COUPLING SHEAR!

Now you can easily detect when drive belts slip, break, or pump couplings shear. In fact, a typical HVAC motor that loses its load has a reduction of current draw of up to 50%. That's why our sensors are the industry standard for status.

Notes: Do not use the LED status indicators as evidence of applied voltage.

If using this switch in an application that includes an electronically commutated motor (ECM), see Veris Application Note VN61, at www.veris.com.

VFD systems generate fields that can disrupt electrical devices. Ensure that these fields are minimized and are not affecting the sensor.

1. Listed for use on 75 °C insulated conductors.

2. Product provides functional insulation only.

DESCRIPTION

The **Rectorseal SS/SP Series** condensate overflow switches detect rising water in A/C condensate drain pans and shut off the system to prevent overflow and water damage. Designed for installation on auxiliary drain pan outlets or inline on primary drains, models are available with a solid state electronic probe or magnetic reed switch. Switches include mounting adapters and hardware.

Model SG1 condensate overflow alarm is wired across the normally closed contacts of the condensate switch. As the water level rises, the switch opens allowing current to flow through the alarm which sounds a buzzer and flashes an LED indicating a possible overflow condition. The SG1 works with most 24-volt overflow switches and pumps and comes pre-wired with 4-foot 18 AWG lead wires and 2-sided tape.

FEATURES

- **Waterproof**
- **Primary or auxiliary installation**
- **Easy to install and service**
- **Low voltage**
- **UL 508 listed**
- **Plenum rated models**
- **One year warranty**

PX Series Enclosures and Accessories

Figure 1. New PX Series Enclosures.

Enclosures

Description

PX series enclosures house both electronic and pneumatic components. The enclosures include a perforated backplane for mounting of the PXC series controllers, Power Modular Equipment Controllers, Point Expansion Modules or other electronic or pneumatic components.

Features

- Three sizes available to match installation needs.
- Sturdy construction accommodates secure conduit fittings and protects components against incidental contact and falling dirt.
- Multiple knockouts along top, sides and bottom.
- Perforated backplane extends wall-to-wall for mounting of additional equipment.
- DIN rail(s) for mounting of components.
- Spacious interior for easy routing and termination of wiring.
- Hinged door, key lock, wire tie bars, PXA series service boxes
- UL Smoke Control Listing is available on the 19" and 34" models.
- UL 916 rating is available on the 18" enclosure
- 18" enclosure pull-box type, utility cabinet for low cost installations (see Figure 2).

Figure 2. Complete 18" Enclosure Assembly.

Accessories

Service Boxes

Description

PXA series service boxes include all of the parts necessary for installation inside a 19 inch or 34 inch PX Series Enclosure Assemblies. The 192VA service box can also be used within existing MEC enclosures. The 384VA service box may only be installed in the 34 inch PX Series Enclosure.

Figure 3. SB115V384VA service box .

Features

- Four service boxes are available to step-down line voltage to 24Vac for use by electronic components.
- Service boxes are sized for:
 - 115V to 24V at 192VA
 - 115V to 24V at 384VA
 - 230V to 24V at 192VA
 - 230V to 24V at 384VA
- 384VA models mount inside the 34" enclosures.
- 192VA models mount inside the 19" and 34" enclosures.
- Two sidewall kits cover exposed circuits for use in other NEMA Type 1 enclosures such as motor control cabinets.
- Each service box includes an on/off circuit breaker for the transformer, transient protection on both primary and secondary sides, two NEC Class 1 power limited terminations for components inside the enclosure and one NEC Class 2 termination for external components such as TX-I/O Bus expansion or actuators.

- The 115V models provide an un-switched duplex outlet to power peripheral devices such as modems, trunk interfaces and Portable Operator's Terminals.
- UL864 Smoke Control rated when used in PXA Series Enclosure 19" or 34" or within existing MEC enclosures.

DIN Replacement Kit (PXA-DIN16KIT)

The DIN Replacement Kit can be used when additional 16" DIN rail is required.

This kit contains:

- Four 16" (406 mm) DIN rails for use when extra rails are needed
- Twelve Screws

Wire Tie Bar Kit (PXA-TIEBARKIT)

The Wire Tie Bar kit can be used when addition tie bars are needed to secure wiring within the enclosure.

This kit contains:

- Four 4.5" (114 mm) tie bars
- Four 9.5" (241 mm) tie bars
- Screws and cable ties

USB Modem Kit (PXA-USBMODEMKIT)

USB Modem kit contains everything needed for dial up modem connection using the USB Host port of the PXC Modular controller.

This kit contains:

- Sportsters Modem 56k BPS Dialup
- USB to RS232 Adapter
- Surge Suppressor Analog Telephone Line
- DB25M/F Right-Angle Adapter
- IBM 6' PC Cable DB9F to DB25M

USB to RS232 Adapter (PXA-USBADAPTER)

USB to RS232 Adapter converts USB Host signals (Type A male connector) to RS232 signals (DB9 male connector).

This adapter may be used for connection to a RS232 printer. It is part of the PXA-USBMODEMKIT.

Terminal Equipment Controller Enclosure

Product Description

A Terminal Equipment Controller enclosure is a general-purpose metal cabinet with a removable cover that houses an electronic output Terminal Equipment Controller (TEC). It is available in two versions: one to enclose a short platform TEC, and a larger multi-purpose model designed to enclose any of the following:

- Short platform TEC with or without actuator
- Long platform TEC
- TEC Actuator Package
- TEC Plug-in Relay Module (either direct or remote mounted)

Product Number

540-155 Enclosure for short platform TEC

550-002 Multi-purpose enclosure for short or long platform TEC and/or other components listed above

Agency Approvals

- UL listed as an industrial control panel enclosure per UL 508
- cUL certified as an industrial control panel enclosure per Canadian standard C22.2 No.14-95

Required Tools

- 1/4-inch hex nut driver
- If supplied screws are not used: electric drill and appropriate size bit
- Medium flat-blade screwdriver

Prerequisites

The mounting screws provided are designed for common sheet-metal duct surfaces. Have appropriate mounting hardware on hand if another surface is used.

Instructions

1. Remove enclosure cover.

NOTE: Enclosure 540-155 has cover screws that should be loosened but not removed. Enclosure 550-002 has no cover screws; see Figure 5 for tip on removing cover.

2. Remove appropriate knockouts.
3. Align the enclosure on the mounting surface and mark the position of the mounting holes (Figure 1 or Figure 2).
4. Mount the enclosure with the self-tapping screws provided or drill pilot holes and mount with other screws.
5. Do one of the following:
 - If the controller will not be installed at this time, replace the cover.
 - If the controller will be installed now, then snap it into the mounting rail and replace enclosure cover. (For enclosure 550-002, see Figure 4 for how to secure the mounting rail, and Figure 6 for how to replace the cover.)

The enclosure is installed.

Expected Installation Time

20 minutes

Dimensions in Inches (Millimeters)

Figure 2. Enclosure 550-002.

Enclosure 540-155 with Short Platform Controller

Enclosure 550-002 with Short Platform Controller and optional TEC Plug-in Relay Module (remotely mounted)

Enclosure 550-002 with Long Platform Controller and optional TEC Plug-in Relay Module (remotely mounted)

Note: TEC Plug-in Relay Module (optional) is not shown but is available with this configuration.

Enclosure 550-002 with TEC Actuator Package (shown with optional Autozero Module)

Figure 3. Enclosures with Controllers and Optional Components Installed.

With enclosure 550-002, the mounting rail does not mount with screws. Instead, it slides under and is secured by mounting flanges. **Exception:** TEC Actuator Package (P/N comes pre-assembled on a common base-plate that must be screwed in place.
Short platform mounting rail mounts in same manner as long platform mounting rail, but at right angle.

Figure 4. Enclosure 550-002, Method of Securing Mounting Rails.

NOTE: Long platform mounting rail shown above. Short platform mounting rail mounts in same manner but at right angle.

Figure 5. Enclosure 550-002 — First Step of Removing Cover (do both sides).

Figure 6. Enclosure 550-002 — Replacing Cover.
