- B. All fasteners: Stainless steel.

**PART 3 EXECUTION****3.01 INSTALLATION**

- A. Pursuant to manufacturers published instructions.
- B. Install plumb, level, and square, free of bowing, warping, or racking.
- C. All installations must fasten into solid structure or blocking.
- D. Fit flanges, escutcheons, and edges tight against finish surface.
- E. Provide all accessories keyed alike. Turn over all keys and/or access tools to the Owner.
- F. Remove and discard finish protective coverings.

**END OF SECTION 102813**

## PART – GENERAL

## 1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Agreement, including General and Supplementary Conditions, and Division 01 of the Project manual, apply to work of this Section.

## 1.02 SUMMARY

- A. This Section includes:
  - 1. Touchless Hand Sanitizer Dispenser.
  - 2. Associated Fasteners.
- B. Related Sections:
  - 1. Section 081429 – Prefinished Wood Doors.
  - 2. Section 092116 – Gypsum Board Assemblies for attachment to and strapping for these materials.

## 1.03 STANDARDS

- A. All work of this section shall conform to industry standards and/or manufacturer's recommendations.

## 1.04 SUBMITTALS

- A. Submit following pursuant to Section 013300 - Submittal Procedures.
- B. Submit pursuant to Section 016000 - Product Requirements.
- C. Product Data: Indicate manufacturer's name, product model number, mounting, special components, and location of each item.

## 1.05 QUALITY ASSURANCE

- A. All work of this section shall be performed by experienced workers familiar with the work and according to manufacturer's recommendations and/or industry standards.

## 1.06 PRODUCT DELIVERY, STORAGE AND HANDLING

- A. Pursuant to manufacturer's published instructions.
- B. Protect against moisture exposure and damage.
- C. Deliver to project site in manufacturer's original packaging with intended location marked on package. Include manufacturer's published installation instructions, fasteners, and installation tools.
- D. Retain finish protective coverings until final cleanup.

## PART 2 – PRODUCTS

## 2.01 MANUFACTURERS

- A. Manufacturers for Hygiene Accessories: Subject to compliance with requirements, manufacturer's offering products that may be incorporated in the Work include those listed below or Architect Approved Equivalents to the specified products.

**2.02 AC-08 TOUCHLESS HAND SANITIZER DISPENSER - PROVIDED BY OWNER, INSTALLED BY GC**

- A. Manufacturer:
  - 1. Best Sanitizers, Inc., PO Box 1360, Penn Valley, CA 95946, Phone: (888) 225-3267.
  - 2. Architect Approved Equivalent.
- B. Wall mounted touchless dispenser.
  - 1. Versa Clenz All-In-One Hand Hygiene System.
  - 2. ADA Compliant.
  - 3. Single bottle dispenser with multiple product available.
    - a. Foam Soap.
    - b. Hand Cleaner.
    - c. Hand Sanitizer Spray.
    - d. Hand Sanitizer Foam.
    - e. Hand and Body Lotions.
  - 4. Provide each dispenser with two (2) bottles (1000ML) of Apet E3 Plus Hand Sanitizer Spray and one set of batteries.

**2.03 FASTENERS – ALL ACCESSORIES**

- A. Pursuant to manufacturers published instructions.
- B. Install plumb, level, and square, free of bowing, wrapping, or racking.
- C. Install at elevations pursuant to applicable codes, manufacturer's published instructions, and as may be modified on Contract Drawings.
  - 1. Hand Sanitizer Dispenser to be mounted with bottom of unit 44" A.F.F.
- D. Provide hand sanitizer bottles and batteries to the Owner. Do not install in units where they would get utilized by construction personnel.

**END OF SECTION 102826**

## PART 1 GENERAL

## 1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Agreement, including General and Supplementary Conditions, and Division 01 of the Project Manual, apply to work of this section.

## 1.02 SUMMARY

- A. This Section includes Automated External Defibrillators (AED's) cabinets, and signage.
- B. Related Sections include the following:
  - 1. Section 042200 - Concrete Unit Masonry
  - 2. Section 061000 - Rough Carpentry
  - 3. Section 092116 - Gypsum Board Assemblies

## 1.03 STANDARDS AND REFERENCES

- A. All work of this section shall conform to industry standards and/or manufacturer's recommendations.
- B. ASTM International (ASTM):
  - 1. ASTM E814-11a, Standard Test Method for Fire Tests of Penetration Firestop Systems.

## 1.04 SUBMITTALS

- A. Pursuant to Section 013300 - Submittal Procedures.
- B. Pursuant to Section 016000 - Product Requirements
- C. Product Data: For each type of product indicated. Include construction details, materials descriptions, dimensions of individual components and profiles, and finishes for AED cabinets.
  - 1. Include roughing-in dimensions, details showing mounting methods, relationships of box and trim to surrounding construction, door hardware, cabinet type, trim style, and panel style.
- D. Shop Drawings: For AED cabinets. Include plans, elevations, sections, details, and attachments to other work.
- E. Maintenance Data: For AED cabinets.

## 1.05 QUALITY ASSURANCE

- A. Experienced workers familiar with the work and according to manufacturer's recommendations and/or industry standards shall perform all work of this section.

## 1.06 PRODUCT DELIVERY, STORAGE, AND HANDLING

- A. Pursuant to manufacturers published instructions.
- B. Protect against moisture exposure and damage.

## PART 2 PRODUCTS

## 2.01 MANUFACTURERS

- A. Defibrillator cabinet manufacturers:
  - 1. J. L. Industries, Inc., a division of Activar Construction Products Group, 9702 Newton Ave, S., Bloomington, MN 55431, Phone: 800-554-6077. Basis of Specification.
- B. Architect Approved Equivalent.

## 2.02 AED CABINETS

- A. Cabinet with steel trim and door: 1400 Lifestart™ Series, Model 1417FX2.
  - 1. Cabinet Style: Semi-recessed
  - 2. Location: Final location to be determined in field with owner and architect
  - 3. Components:
    - a. Tub: Cold-rolled steel.
      - 1) Finish: Factory-applied powder coat paint finish.
        - (a) Standard Color: White.
    - b. Door and Trim Construction: Cold-rolled steel; flush doors with 5/8 inch (15.88 mm) door stop attached by continuous hinge and equipped with zinc-plated with roller catch.
      - 1) Finish: Factory-applied powder coat paint finish.
        - (a) Standard Color: White
      - 2) Door Style:
        - (a) Style F17: Full Tempered Glazing; Pull & AED Decal
    - c. Trim Style and Depth:
      - 1) Semi-Recessed Cabinet:
        - (a) Rolled Edge: 3 inch (76.20 mm).
  - 4. Fire-Rating: Provide one hour rated cabinets in rated wall systems.
  - 5. Alarms: Standard: 85 db Commander (audible) cabinet-mounted alarm standard (battery operated) to protect against theft or tampering. Alarm deactivated when door is closed.
  - 6. Wall Signs and Cabinet Lettering:
    - a. AED wall signs: 14TS (Tent Wall Sign)
      - 1) Provide one sign above each cabinet.

## PART 3 EXECUTION

## 3.01 EXAMINATION

- A. Examine walls and partitions for suitable framing depth and blocking where recessed and semi-recessed cabinets will be installed and blocking where surface mounted cabinets will be installed.
  - 1. Notify the Contractor in writing of conditions detrimental to proper and timely completion of the installation.
  - 2. Proceed with installation only after unsatisfactory conditions have been corrected.

## 3.02 INSTALLATION

- A. Install cabinets in locations and at mounting heights indicated, or if not indicated, at heights to comply with applicable regulations of governing authorities.
  - 1. Prepare recesses in walls for defibrillator cabinets as required by type and size of cabinet and style of trim and to comply with manufacturer's instructions.

2. Securely fasten cabinets to structure, square and plumb, to comply with manufacturer's instructions.
  3. Maintain fire ratings where cabinets are recessed into fire-rated wall systems.
- B. Wall Signs:
1. Location: Where shown or directed.
  2. Apply on walls after field painting is completed and has been accepted.

### 3.03 ADJUSTING AND CLEANING

- A. Remove temporary protective coverings and strippable films, if any, as defibrillator cabinets are installed unless otherwise indicated in manufacturer's written installation instructions.
- B. Adjust cabinet doors to operate easily without binding. Verify that integral locking devices operate properly.
- C. On completion of cabinet installation, clean interior and exterior surfaces as recommended by manufacturer.
- D. Touch up marred finishes or replace cabinets that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by cabinet manufacturer.
- E. Replace cabinets that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

**END OF SECTION 104313**

## PART 1 GENERAL

## 1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Agreement, including General and Supplementary Conditions, and Division 01 of the Project Manual, apply to work of this Section.

## 1.02 SUMMARY

- A. This Section includes:
  - 1. Fire Extinguisher Cabinets (F.E.C.)
  - 2. Fire Extinguishers

## 1.03 STANDARDS

- A. All work of this section shall conform to industry standards and/or manufacturer's recommendations.
- B. NFPA 101 "National Fire Protection Agency Regarding Portable Fire Extinguishers"
- C. Fire extinguishers shall comply with all codes and requirements.

## 1.04 SUBMITTALS

- A. Pursuant to Section 013300 - Submittal Procedures
- B. Pursuant to Section 016000 - Product Requirements
- C. Product Data: Submit manufacturer's product data and installation instructions including roughing-in dimensions, and details showing mounting methods, relationships to surrounding construction, cabinet type and materials, and trim style.
- D. Shop drawings or manufacturer's literature showing size, configuration, capacity, contents and all additional pertinent information describing the equipment to be provided.

## 1.05 QUALITY ASSURANCE

- A. All work of this section shall be performed by experienced workmen familiar with the work and according to manufacturer's recommendations and/or industry standards.

## 1.06 PRODUCT DELIVERY, STORAGE AND HANDLING

- A. Pursuant to manufacturers published instructions.
- B. Protect against moisture exposure and damage.
- C. Do not test operate extinguishers.

## PART 2 PRODUCTS

## 2.01 MANUFACTURERS

- A. Manufacturers offering products which may be incorporated in the work include, but are not limited to, the following:
  - 1. Amerex Corporation
  - 2. J. L. Industries, Inc.

3. Larsen's Manufacturing Co.
4. Potter Roemer
5. Kidde
6. Knox Company (Knox Box)

**B. FIRE EXTINGUISHER CABINETS**

1. Construction: Manufacturer's standard enameled steel box, with trim, frame, door and hardware to suit cabinet type, trim, style, and door style indicated. Weld all joints and grind smooth. Miter and weld perimeter doorframes.
2. Cabinets in fire rated walls must be fire rated.
3. Cabinet Type: Suitable for mounting conditions indicated, of the following types.
  - a. Semi-recessed the maximum amount limited by the thickness of the wall cavity.
  - b. Inside Dimensions: 9-1/2" wide, 24" high, 6" deep.
  - c. Maximum projection into room, 4" as per ADA.
4. Trim Style: Fabricate trim in one piece with corners mitered, welded and ground smooth.
  - a. Exposed Trim: One-piece combination trim and perimeter doorframe overlapping surrounding wall surface with exposed trim face and wall return at outer edge (backbend).
    - 1) Rolled-Edge Trim: Rolled edges backbend as required.
5. Door Material and Construction: Manufacturer's standard door construction of material indicated, coordinated with cabinet type and trim style selected.
  - a. Stainless Steel: Satin finish, hollow steel door construction with tubular stiles and rails.
  - b. Door Glazing: Clear tempered float glass complying with FS DD-G1403, grade B, style I, type I, quality q3, class 1 (transparent).
  - c. Door Style: Manufacturer's standard design as indicated below.
    - 1) Full-Glass Panel: Solid metal door with vertical letters of contrasting color.
  - d. Door Hardware: Provide manufacturer's standard door operating hardware of proper type of cabinet type, trim style, and door material and style indicated. Provide either lever handle with cam action latch, or door pull, exposed or concealed, and friction latch. Provide concealed or continuous type of hinge permitting door to open 180 degrees.

**2.02 FACTORY FINISH**

- A. General: Comply with NAAMM "Metal Finishes Manual" for designations and applications recommendations except as otherwise indicated. Apply finishes in factory after products are assembled. Protect cabinets with plastic or paper covering prior to shipment.
- B. Painted Finishes: Provide painted finish to comply with requirements indicated below for extent, preparation and type.
  1. Extent of Painted Finish: Apply painted finish to both concealed and exposed surfaces of cabinet components.
  2. Color: Provide color indicated, or, if not otherwise indicated, as selected by Architect from manufacturer's standard colors.
  3. Preparation: Clean surfaces of dirt, grease and loose rust or mill scale.
  4. Powder Coated Baked Enamel Finish: Immediately after cleaning and pretreatment, apply cabinet manufacturer's standard baked enameled finish system to the following surfaces:
    - a. Interior of cabinets

**2.03 PORTABLE FIRE EXTINGUISHERS**

- A. Type FEC-1: Multi-purpose dry chemical type. Minimum 5-pound capacity, minimum UL rating 2A:10B:C with hose, nozzle, and color-coded pressure gauge. Amerex Model B500 or equal.
  1. For Fire Extinguisher Cabinets

- B. Type FE-1: Multi-purpose dry chemical type. Minimum 10-pound capacity, UL rating 4A: 80 B: C with hose, nozzle, and color-coded pressure gauge. Amerex Model B456 or equal.
  - 1. Supply mounting bracket for locations in apparatus bay and any other locations as shown on drawings and any other locations required by Codes.
  - 2. Provide rigid plastic 3-Way View Fire Extinguisher sign with arrow and graphic Style No. 84500 by Seton or Architect approved equivalent.
- C. Type FE-2: Wet chemical type. Minimum 6-liter capacity, UL rating 2A:K with spray applicator wand and color-coded pressure gauge. Amerex Model B260 or equal.
  - 1. Supply mounting bracket.
  - 2. Provide in Kitchen 118

### PART 3 EXECUTION

#### 3.01 INSTALLATION:

- A. Install cabinets to comply with manufacturer's instructions in locations to comply with applicable regulations of governing authorities.
  - 1. Prepare recesses in walls for cabinets as required by size of cabinet, style of trim, fire rating to be maintained if required and to comply with manufacturer's instructions.
  - 2. Securely fasten cabinets to structure, square and plumb.
  - 3. Install Fire Extinguisher Cabinets at locations indicated on the drawings. Top of cabinets shall be four feet six inches above finished floor.
- B. Install extinguishers at locations indicated on the drawings.
  - 1. Top of individually mounted extinguishers shall not be more than 54" above finished floor.
  - 2. Bottom shall not be less than 15" above finished floor.

#### 3.02 IDENTIFICATION

- A. Identify existence of fire extinguisher in cabinet with lettering spelling "FIRE EXTINGUISHER" applied to door by process indicated below. Provide lettering as selected by Architect from manufacturer's standard arrangements.
  - 1. Application Process: Die Cut.
- B. Provide each wall hung Type FE-1 fire extinguisher with a 3D plastic angle stand out sign mounted above each fire extinguisher. Top of sign to be placed 7'-6" AFF.

#### 3.03 INSPECTION

- A. Verify and ensure that all fire extinguishers are fully charged at the time of installation and that a current fire department inspection tag is prominently attached to each wall unit.
  - 1. Do not test discharge any fire extinguisher. If discharge occurs, recharge unit and secure and affix new inspection tag. Submit copy of new tag to Architect, identifying the affected unit and its installed location. Architect reserves the right to require recharging and inspection of any fire extinguisher which shows evidence of having been operated prior to acceptance.

### END OF SECTION 104400

## PART 1 - GENERAL- PROVIDED BY OWNER, INSTALLED BY GC

## 1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

## 1.02 SUMMARY

- A. Section Includes:
  - 1. Welded lockers.

## 1.03 ACTION SUBMITTALS

- A. Product Data: For each type of metal locker.
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of metal locker and bench.
- B. Shop Drawings: For metal lockers.
  - 1. Include plans, elevations, sections, details, and attachments to other work.
  - 2. Show locker trim and accessories.
  - 3. Include locker identification system and numbering sequence.
- C. Product Schedule: For lockers.

## 1.04 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Sample Warranty: For special warranty.

## 1.05 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For adjusting, repairing, and replacing locker doors and latching mechanisms to include in maintenance manuals.

## 1.06 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Full-size units of the following metal locker hardware items equal to 10 percent of amount installed for each type and finish installed, but no fewer than two units:
    - a. Locks.
    - b. Identification plates.
    - c. Hooks.

## 1.07 DELIVERY, STORAGE, AND HANDLING

- A. Do not deliver metal lockers until spaces to receive them are clean, dry, and ready for their installation.
- B. Deliver master and control keys to Owner by registered mail or overnight package service, addressed as follows:

### 1.08 FIELD CONDITIONS

- A. Field Measurements: Verify actual dimensions of recessed openings by field measurements before fabrication.

### 1.09 COORDINATION

- A. Coordinate sizes and locations of concrete bases for metal lockers.
- B. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of work specified in other Sections to ensure that metal lockers can be supported and installed as indicated.

### 1.10 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of metal lockers that fail in materials or workmanship, excluding finish, within specified warranty period.
  - 1. Failures include, but are not limited to, the following:
    - a. Structural failures.
    - b. Faulty operation of latches and other door hardware.
  - 2. Damage from deliberate destruction and vandalism is excluded.

## PART 2 - PRODUCTS

### 2.01 MANUFACTURERS

- A. Source Limitations: Obtain metal lockers and accessories from single source from single locker manufacturer.

### 2.02 PERFORMANCE REQUIREMENTS

- A. Accessibility Requirements: For lockers indicated to be accessible, comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines and ICC A117.1.
- B. Finished End Panels: Fabricated from 0.024-inch nominal-thickness steel sheet.

### 2.03 WELDED LOCKERS

- A. Products: Subject to compliance with requirements, provide one of the following:
  - 1. Apex by Debourgh
  - 2. Penco Products, Inc; All-Welded Lockers.
  - 3. Republic Storage Systems Company; All-Welded Ventilated.
  - 4. Or approved equal.
- B. Body: Assembled by welding body components together. Fabricate from unperforated steel sheet with thicknesses as follows:
  - 1. Tops and Bottoms: 0.060-inch nominal thickness, with single bend at edges.
  - 2. Backs: 0.048-inch nominal thickness.
  - 3. Shelves: 0.060-inch nominal thickness, with double bend at front and single bend at sides and back.
- C. Unperforated Sides: Fabricated from 0.060-inch nominal-thickness steel sheet.

- D. Perforated Sides: Fabricated from 0.060-inch nominal-thickness steel sheet with manufacturer's standard diamond perforations.
- E. Frames: Channel formed; fabricated from 0.060-inch nominal-thickness steel sheet or 0.097-inch (2.45-mm) nominal-thickness steel angles; lapped and factory welded at corners; with top and bottom main frames factory welded into vertical main frames. Form continuous, integral, full-height door strikes on vertical main frames.
  - 1. Cross Frames for Multi-Tier Lockers: Channel formed and fabricated from same material as main frames; welded to vertical main frames.
- F. Reinforced Bottoms: Structural channels formed from 0.075-inch nominal-thickness steel sheet; welded to front and rear of side-panel frames.
- G. Hinges: Welded to door and attached to door frame with no fewer than two factory-installed rivets per hinge that are completely concealed and tamper resistant when door is closed; fabricated to swing 180 degrees; self-closing.
  - 1. Continuous Hinges: Manufacturer's standard, steel; side or top mounted as required by locker configuration.
- H. Recessed Door Handle and Latch: Stainless-steel cup with integral door pull, recessed so locking device does not protrude beyond door face; pry and vandal resistant.
  - 1. Single-Point Latching: Non-moving latch hook with steel padlock loop that projects through recessed cup and is finished to match metal locker body.
    - a. Latch Hook: Equip each door with one latch hook, fabricated from 0.120-inch nominal-thickness steel sheet; welded midway up full-height door strike; with resilient silencer.
- I. Projecting Turn-Handle and Latch: Steel handle welded to manufacturer's standard, three-point, cremone-type latching mechanism consisting of steel rods or bars that engage locker frame at top and bottom of door, and center latch that engages strike jamb; with steel padlock loop.
- J. Locks: Padlock hasps, for padlocks provided by Owner.
- K. Identification Plates: Manufacturer's standard, etched, embossed, or stamped aluminum plates, with numbers and letters at least 3/8 inch (9 mm) high block font style (with ADA designation where required), in contrasting color.
- L. Hooks: Manufacturer's standard ball-pointed type, stainless steel .
- M. Recess Trim: Fabricated from 20 gage, 0.0359 inch (0.91 mm) nominal-thickness steel sheet.
- N. Filler Panels: Fabricated from 20 gage, 0.0359 inch (0.91 mm) nominal-thickness steel sheet.
- O. Sloped Top: 20 gage, 0.0359 inch (0.91 mm), with closed ends.
- P. Materials:
  - 1. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B, suitable for exposed applications.
  - 2. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with A60 (ZF180) zinc-iron, alloy (galvannealed) coating designation.
- Q. Finish: Baked enamel or powder coat.
  - 1. Color: As selected by Architect from manufacturer's full range.

## 2.04 FABRICATION

- A. Fabricate metal lockers square, rigid, without warp, and with metal faces flat and free of dents or distortion. Make exposed metal edges safe to touch and free of sharp edges and burrs.
  - 1. Form body panels, doors, shelves, and accessories from one-piece steel sheet unless otherwise indicated.
  - 2. Provide fasteners, filler plates, supports, clips, and closures as required for complete installation.
- B. Fabricate each metal locker with an individual door and frame; individual top, bottom, and back; and common intermediate uprights separating compartments. Factory weld frame members of each metal locker together to form a rigid, one-piece assembly.
- C. Equipment: Provide each locker with an identification plate and the following equipment:
  - 1. Single-Tier Units accessible ADA Type: Shelf, one double-prong ceiling hook, and two single-prong wall hooks.
  - 2. Triple-Tier Units: One double-prong ceiling hook.
- D. Welded Construction: Factory pre assemble metal lockers by welding all joints, seams, and connections; with no bolts, nuts, screws, or rivets used in assembly of main locker groups. Factory weld main locker groups into one-piece structures. Grind exposed welds flush.
- E. Accessible Lockers: Fabricate as follows:
  - 1. Locate bottom shelf no lower than 15 inches (381 mm) above the floor.
  - 2. Where hooks, coat rods, or additional shelves are provided, locate no higher than 48 inches (1219 mm) above the floor.
  - 3. Provide hardware that operates with a force of not more than 5 lbf.
- F. Continuous Sloping Tops: Fabricated in lengths as long as practical, without visible fasteners at splice locations; finished to match lockers.
- G. Recess Trim: Fabricated with minimum 2-1/2-inch (64-mm) face width and in lengths as long as practical; finished to match lockers.
- H. Filler Panels: Fabricated in an unequal leg angle shape; finished to match lockers. Provide slip-joint filler angle formed to receive filler panel.
- I. Finished End Panels: Designed for concealing unused penetrations and fasteners, except for perimeter fasteners, at exposed ends of non-recessed metal lockers; finished to match lockers.
- J. Center Dividers: Full-depth, vertical partitions between bottom and shelf; finished to match lockers.

## 2.05 ACCESSORIES

- A. Fasteners: Zinc- or nickel-plated steel, slotless-type, exposed bolt heads; with self-locking nuts or lock washers for nuts on moving parts.
- B. Anchors: Material, type, and size required for secure anchorage to each substrate.
  - 1. Provide nonferrous-metal or hot-dip galvanized anchors and inserts on inside face of exterior walls for corrosion resistance.

## PART 3 - EXECUTION

## 3.01 EXAMINATION

- A. Examine walls, floors, and support bases, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

## 3.02 INSTALLATION

- A. General: Install lockers level, plumb, and true; shim as required, using concealed shims.
  - 1. Anchor locker runs at ends and at intervals recommended by manufacturer, but not more than 36 inches (910 mm) o.c. Using concealed fasteners, install anchors through backup reinforcing plates, channels, or blocking as required to prevent metal distortion.
  - 2. Anchor single rows of metal lockers to walls near top of lockers and to floor.
  - 3. Anchor back-to-back metal lockers to floor.
- B. Welded Lockers: Connect groups together with standard fasteners, with no exposed fasteners on face frames.
- C. Equipment:
  - 1. Attach hooks with at least two fasteners.
  - 2. Attach door locks on doors using security-type fasteners.
  - 3. Identification Plates: Identify metal lockers with identification as indicated on the Shop Drawings.
    - a. Attach plates to each locker door, near top, centered, with at least two aluminum rivets.
    - b. Attach plates to upper shelf of each open-front metal locker, centered, with a least two aluminum rivets.
- D. Trim: Fit exposed connections of trim, fillers, and closures accurately together to form tight, hairline joints, with concealed fasteners and splice plates.
  - 1. Attach recess trim to recessed metal lockers with concealed clips.
  - 2. Attach filler panels with concealed fasteners. Locate filler panels where indicated on Drawings.
  - 3. Attach sloping-top units to metal lockers, with closures at exposed ends.
  - 4. Attach finished end panels using fasteners only at perimeter to conceal exposed ends of non-recessed metal lockers.

## 3.03 ADJUSTING

- A. Clean, lubricate, and adjust hardware. Adjust doors and latches to operate easily without binding. Verify that integral locking devices operate properly.

## 3.04 PROTECTION

- A. Protect metal lockers from damage, abuse, dust, dirt, stain, or paint. Do not permit use during construction.

- B. Touch up marred finishes, or replace metal lockers that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by locker manufacturer.

### 3.05 LOCKER SCHEDULE

- A. See drawings for Locker sizes
- B. Police Department: Metal lockers, wall mounted with matching closed base.
  - 1. Width: 12 inch and 18 inch as indicated on the drawings
  - 2. Depth: 12 inch and 18 inch as indicated on the drawings
  - 3. Height: 72 inches (1830 mm) and 48 inches (\_\_\_\_ m) at ADA locations
  - 4. Configuration: Single tier
  - 5. Fittings: Size and configuration as indicated on drawings.
    - a. Upper shelf.
    - b. Coat rod.
    - c. Hooks: One double prong.
    - d. Lower shelf/seat.
    - e. Single shoe shelf.
  - 6. Ventilation: Louvers at top and bottom of door panel..
  - 7. Locking: Built-in combination locks.
  - 8. Provide sloped top.

**END OF SECTION 105113**

## PART 1 GENERAL

## 1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Agreement, including General and Supplementary Conditions, and Division 01 of the Specifications, apply to work of this section.

## 1.02 SUMMARY

- A. This Section includes the following:
  - 1. Fixed wall mounted turnout gear lockers.
  - 2. Mobile turnout gear lockers.
  - 3. Owner will furnish the lockers to the jobsite. General Construction Contractor shall install.

## 1.03 STANDARDS

- A. All work of this section shall conform to industry standards and/or manufacturer's recommendations.

## 1.04 SUBMITTALS

- A. Pursuant to Section 013300 - SUBMITTALS.
- B. Pursuant to Section 016100 - BASIC PRODUCT REQUIREMENTS
- C. Shop Drawings shall be submitted showing individual locker construction and overall dimensions. Complete installation instructions shall be included and provided to the General Construction Contractor.

## 1.05 QUALITY ASSURANCE

- A. All work of this section shall be performed by experienced workmen familiar with the work and in accordance with the manufacturer's recommendations and/or industry standards.

## 1.06 PRODUCT DELIVERY, STORAGE AND HANDLING

- A. Pursuant to manufacturers published instructions.
- B. Protect against moisture exposure and damage.
- C. All finishes shall be protected from soiling and damage during handling.

## PART 2 PRODUCTS

## 2.01 MANUFACTURER

- A. Provide turnout gear lockers and firematic equipment listed below as manufactured by Mid-Minnesota Wire (GearGrid Product Line), 670 S.W. 15th St., Forest Lake, MN. 55025. Phone 888-643-6694.

## 2.02 GEAR LOCKERS

- A. Wall Mounted
  - 1. Size: 24" wide x 20" deep x 74 ½" high with secure door.
  - 2. Quantity: 40 - configurations as shown on drawings.

- B. Mobile
  - 1. Size: 24" wide x 20" deep x 83 1/2" high with secure door.
  - 2. Quantity: 26 lockers-configurations as shown on drawings.
- C. Color: As selected by Architect from manufacturer's standard & special-order colors.
- D. Accessories:
  - 1. Provide one (1) Geardryer™ coat drying hanger per locker.
  - 2. Provide one (1) Gearglove™ glove drying hanger per locker.
  - 3. Provide GearGrid topside storage rack on all wall mounted lockers.
  - 4. Provide one (1) Gearhanger™ horizontal hanging rod per locker.
  - 5. Provide three (3) apparel hooks per locker.

### PART 3 - EXECUTION

#### 3.01 INSTALLATION

- A. Assemble and install gear lockers at locations directed by owner in accordance with manufacturer's instructions for plumb, level, and square, free of bowing, warping or racking.
- B. All wall mounted lockers must fasten with stainless steel hardware into solid structure or blocking.
- C. Anchor the units with stainless steel fasteners in accordance with the manufacturer's printed instructions.
- D. Do not install until all painting and epoxy flooring (if any) is completed.

#### 3.02 TOUCH UP

- A. Touch up marred finishes; replace units that cannot be restored to factory-finished appearance. Use only materials furnished and procedures recommended by the locker manufacturer.

### END OF SECTION 105113.13

## PART 1 GENERAL

## 1.01 RELATED DOCUMENTS

- A. Drawings and General Provisions of the Agreement, including General and Supplementary Conditions, and Division 01 of the Project Manual, apply to work of this Section.

## 1.02 SUMMARY

- A. This Section includes the following:
  - 1. Building supported, pre-engineered metal canopies including fascia channels, decking, tension rods, downspouts and attachment hardware.
- B. Related Sections:
  - 1. Section 076200 - Sheet Metal Flashing and Trim.
  - 2. Section 079200 – Sealants.

## 1.03 REFERENCES

- A. Aluminum Association (AA) DAF 45 – Designation System for Aluminum Finishes.
- B. American Architectural Manufacturers Association (AAMA)
  - 1. AAMA 2605 - "Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels".
- C. American Society of Civil Engineers (ASCE) 7 – Minimum Design Loads for Buildings and Other Structures.
- D. ASTM B221– "Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles and Tubes".
- E. ASTM B429 - "Standard Specification for Aluminum-Alloy Extruded Structural Pipe and Tube".

## 1.04 SYSTEM DESCRIPTION

- A. Design Requirements:
  - 1. Design canopy system to withstand: wind pressure, snow load, and drifting snow load in accordance with current adopted requirements of the International Building Code or accepted requirements of local authorities having jurisdiction.

## 1.05 SUBMITTALS

- A. Pursuant to Section 013300 – Submittal Procedures.
- B. Pursuant to Section 016000 – Product Requirements.
- C. Manufacturer's Qualifications: Company specializing in the engineering and manufacture of preassembled canopies with a minimum of fifteen (15) years experience in canopy design and fabrication.
- D. Product Data:
  - 1. Manufacturer's catalogue cuts.
- E. Shop Drawings: Indicate system components, dimensions, attachments, and accessories.
  - 1. Professional Engineering calculations are required and must be signed and sealed by an Engineer licensed in the State canopy is to be installed.

- F. Color Samples for Initial Selection Purposes: Submit manufacturer's color samples of materials, consisting of complete color charts (3 copies) representing manufacturer's full range of available colors in the specified finish.
- G. Verification Samples:
  - 1. 3 x 3 inch coating samples in specified color and finish.
  - 2. 6 inch long fascia extrusion sample showing profile and standard finish.
  - 3. 6 inch decking samples showing profile and standard finish.

#### 1.06 QUALITY ASSURANCE

- A. Installer Qualifications: Minimum 5 years experience in installation of pre-engineered canopy systems.

#### 1.07 DELIVERY, STORAGE, AND HANDLING

- A. Deliver and store all canopy components in protected areas.

### PART 2 PRODUCTS

#### 2.01 MANUFACTURERS

- A. MASA Architectural Canopies. 250 Stelton Road, Piscataway, NJ 08854, Phone: (800) 761-7446. Web site: [www.architecturalcanopies.com](http://www.architecturalcanopies.com). (Basis of Design)
  - 1. Extrudeck
- B. FenWall Fabrication & Manufacturing, 13929 Lynmar Boulevard, Tampa, FL 33626, Phone: (813) 343-5979.
- C. Vestis Systems, 213 East Ermina Avenue, Spokane, WA 99207. Phone: (509) 213-1342.

#### 2.02 MATERIALS

- A. Aluminum Extrusions:
  - 1. ASTM B221 & ASTM B429/B429M 6063-T5 alloy and temper.
- B. Hardware:
  - 1. All fasteners shall be stainless steel for corrosion resistance.

#### 2.03 COMPONENTS

- A. Curved Side Canopy
  - 1. Framing: Type: Extruded aluminum "J" channel fascia.
    - a. Size: 8"
  - 2. Canopy Supports: Extruded Aluminum Canopy Support "I" Beam.
  - 3. Decking: 3" x 6" x .090" Interlocking Extruded aluminum standing seam soffit decking.
  - 4. Attachment: 1.050" diameter steel hanger rod with square wall plates, finished to match canopy.
  - 5. Custom Fascia Profiles: Square
  - 6. Other Components: Other components as indicated or as required for system attachment and performance.
- B. Curved Main Canopy
  - 1. Framing: Type: Extruded aluminum "J" channel fascia.
    - a. Size: 8"

2. Canopy Supports: Extruded Aluminum Canopy Support "I" Beam.
3. Decking: 3" x 6" x .090" Interlocking Extruded aluminum standing seam soffit decking.
4. Attachment: Post/Beam Mounted. Refer to drawings
5. Custom Fascia Profiles: Square
6. Other Components: Other components as indicated or as required for system attachment and performance.

#### 2.04 ACCESSORIES

- A. Down Spouts 2" x 3", 0.125 Heavy Extruded Finished to match canopy color and finish.
  1. Extend downspouts to precast concrete splash blocks at grade.
  2. Secure downspouts to building with matching brackets located at a maximum 5' - 0" o.c. with no less than two (2) brackets per downspout..

#### 2.05 FABRICATION

- A. Fabricate canopy system in accordance with approved Shop Drawings.
  1. Pre-assembled canopies are shop welded by MASA approved personnel.
  2. Drainage system to be concealed type. Covered surfaces direct water to field drilled drain, to be coordinated at site.

#### 2.06 FINISHES

- A. AAMA 2605 Fluoropolymer coating containing a minimum 70% PVDF Resins.
- B. Duranar by PPG Industries, Inc.
- C. Color: As selected by Architect from manufacturer's full color range.

### PART 3 EXECUTION

#### 3.01 FIELD DIMENSIONS

- A. Field verify dimensions of supporting structure at site of installation prior to fabrication.

#### 3.02 INSTALLATION

- A. Install in strict accordance with manufacturer's instructions and approved Shop Drawings.
- B. Protect the finish during handling and erection.
- C. Install components plumb and level, in proper plane, free from warp and twist.
- D. Anchor canopy system to building components; provide adequate clearance for movement caused by thermal expansion and contraction and wind loads.
- E. Provide compression spacers between canopy and veneer masonry.
- F. Surround wall anchors with watertight sealant.
- G. Embed all wall anchors washers in sealant to provide watertight seal.
- H. To ensure proper drainage, install canopy with positive camber.
- I. Seal all corners, edge seams, etc. Rain water must flow to gutter and downspout(s). Water shall not drip-thru canopy in any location.

3.03 ADJUSTING

- A. Touch up minor scratches and abrasions on finished surfaces to match original finish.
- B. Clean with mild, non-abrasive solution and a cotton cloth under low pressure.

**END OF SECTION 107316.13**

## PART 1 - GENERAL

## 1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Agreement, including General and Supplementary Conditions, and Division 01 of the Project Manual, apply to work of this Section.

## 1.02 SUMMARY

- A. This Section includes ground-set, fixed, cone tapered flagpole(s) and associated foundation.

## 1.03 RELATED SECTIONS:

- A. Section 033000 - CAST-IN PLACE CONCRETE

## 1.04 STANDARDS

- A. All work of this Section shall conform to industry standards and/or manufacturer's recommendations.
- B. Manufacturing Standards: Provide flagpole as a complete unit produced by a single manufacturer, including fittings, accessories, bases and anchorage devices.
- C. Design Criteria: Provide flagpole and installation constructed to withstand a 90-mph wind velocity minimum when flying flag of appropriate size. Use heavy pipe sizes if required for flagpole type and height shown.
- D. Pole Construction: Construct pole and ship to site in one piece if possible.

## 1.05 SUBMITTALS

- A. Pursuant to Section 013300 - Submittals.
- B. Pursuant to Section 016000 - Product Requirements.
- C. Shop drawings of flagpole and base, showing general layout, jointing, grounding method, and anchoring and supporting systems.
  - 1. Include details of foundation system for ground-set poles.
  - 2. Provide product cut sheets and wiring diagrams for pole mounted LED down light fixture.

## 1.06 QUALITY ASSURANCE

- A. All work of this section shall be performed by experienced workers familiar with the work and according to manufacturer's recommendations and/or industry standards.

## 1.07 PRODUCT DELIVERY, STORAGE AND HANDLING

- A. Pursuant to manufacturers published instructions.
- B. Protect against moisture exposure and damage.
- C. General: Spiral wrap flagpole with heavy Kraft paper or the weather-tight wrapping and prepare for shipment in hard fiber tube or another protective container.
- D. Deliver flagpole and accessories completely identified for installation procedure. Handle and store flagpole to prevent damage or soiling.

## PART 2 - PRODUCTS

## 2.01 MANUFACTURER:

- A. American Flagpole Division of Kearney-National, Inc.
- B. Baartol Co., Inc.
- C. Concord Industries, Inc.
- D. Eagle Mountain Flag and Flagpole (Basis of Design).
- E. John Ewing and Co., Inc.
- F. Pole-Tech Co., Inc.
- G. Architect Approved Equivalent

## 2.02 FLAGPOLE CONSTRUCTION

- A. Aluminum Flagpoles: Fabricate from seamless extruded tubing complying with ASTM B241/B241M, alloy 6063-T6, having a minimum wall thickness of 3/16 inch (0.1875 inch), 6 inch butt diameter, Tensile strength not less than 30,000 psi, and a yield point of 25,000 psi. Provide with factory installed handhole located 36" above grade. Heat-treat and age-harden after fabrication.
  - 1. Provide cone-tapered aluminum flagpole.
  - 2. One (1) required at 30'-0" from grade.
  - 3. Two (2) required at 25'-0" from grade
- B. FLAGPOLE TYPE - NAUTICAL
  - 1. Model ECP30-Y (30'), satin finish with 8'-6" yardarm as manufactured by Excel Sails Flags and Flagpoles, 32968 Stonecroft Drive, Gravois, MO 65037.

## 2.03 FLAGPOLE MOUNTING

- A. Provide manufacturer's standard base system for the type of flagpole installation required.
- B. Foundation Tube: For ground-set flagpole, provide 16-gage minimum galvanized corrugated steel tube, or 12-gage rolled steel tube, sized to suit flagpole and installation. Furnish complete with welded steel bottom base and support plate, lightening ground spike, and centering wedges, all welded construction. Provide loose hardwood wedges at tope for plumbing pole after erection. Galvanize steel parts after assembly, including foundation tube.
  - 1. Provide manufacturer's standard flash collar, finished to match flagpole.
  - 2. Provide 1" conduit with long sweep (90 degree) from 36" above top of foundation to 6" outside foundation below lowest point of pole. Conduit to be centered within flagpole.

## 2.04 SHAFT FINISH

- A. General: Comply with NAAMM "Metal Finishes Manual" for recommendations relative to application and designations of finishes.
- B. Aluminum: Finish designations prefixed by "AA" conform to the Aluminum Association system for designating aluminum finishes. Provide fine, directional, medium satin polish (AA-M32), Finished as follows:

1. Medium Matte Mechanical Satin Finish Natural Clear Anodized finish complying with AA-M32A41 (Mechanical Satin Finish - Clear Anodized), Class I (0.7 mil).

## 2.05 FITTINGS

- A. Finial Ball: Manufacturer's standard flush-seam ball, size as indicated or, if not indicated, to match pole butt diameter.
  1. 14-gage aluminum gold anodized.
- B. Truck: Ball bearing, non-fouling, revolving, double-truck assembly of cast metal finished to match pole shaft.
- C. Yardarm: Aluminum with pulleys and mounting bracket.
- D. Cleats: Two 9-inch cast metal cleats with fasteners, finished to match pole shaft. Three for Nautical Poles.
- E. Halyards: Provide two continuous halyards for flagpole as follows:
  1. Nylon, braided.
  2. Size: 3/8 inch (No. 12)
- F. Halyard Flag Snaps: Provide two swivel snaps per halyard, as follows:
  1. Brass

## PART 3 - EXECUTION

### 3.01 PREPARATION FOR GROUND-SET POLES

- A. Excavation: Excavate for foundation concrete to neat clean lines in undisturbed soil. Provide forms where required due to unstable soil conditions.
  1. 3,500 psi Compressive Strength after 28 days.
- B. Finish: Trowel exposed concrete surfaces to smooth, dense surface. Provide positive slope for water runoff to base perimeter.

### 3.02 FLAGPOLE INSTALLATION

- A. General: Prepare and install flagpoles where shown and in compliance with accepted shop drawings and manufacturer's instructions.
  1. Provide positive lighting ground for each flagpole installation.
  2. Paint below-grade portions of ground-set flagpole with heavy coat of bituminous paint.
  3. Coordinate with Electrical Contractor for wiring of driver/transformer.

**END OF SECTION 107516**

## PART 1 GENERAL

## 1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Agreement, including General and Supplementary Conditions, and Division 01 of the Project Manual, apply to work of this Section.

## 1.02 SUMMARY

- A. This Section includes commercial Gear Washer/Extractor.
- B. Equipment to be furnished by owner, installed by contractor.
- C. Related Sections include the following:
  - 1. Division 22 for plumbing connections to appliances.
  - 2. Division 26 for electrical services and connections to appliances.

## 1.03 STANDARDS

- A. All work of this section shall conform to industry standards and/or manufacturer's recommendations.
- B. UL Certification: Provide electric equipment and components that are evaluated by UL for fire, and electric shock according to applicable safety standards and that are UL certified for compliance and labeled for intended use.

## 1.04 SUBMITTALS

- A. Pursuant to Section 013300 - Submittal Procedures.
- B. Pursuant to Section 016100 - Product Requirements.
- C. Product Data: Manufacturer's data sheets on each product to be used, including:
  - 1. Preparation instructions and recommendations.
  - 2. Storage and handling requirements and recommendations.
- D. Shop Drawings: Include plans, elevations, sections, roughing-in dimensions, fabrication details, utility service requirements, and attachments to other work.
- E. Coordination Drawings: Indicate locations of laundry equipment and connections to utilities, and clearance requirements for equipment access and maintenance.

## 1.05 QUALITY ASSURANCE

- A. Installer Qualifications: An experienced installer who is an authorized representative of the appliance manufacturer for both installation and maintenance of appliances required for this Project.
- B. Product Options: Drawings and specifications indicate sizes, profiles, and dimensional requirements of appliances and are based on the specific types and models indicated. Other manufacturers' appliances with equal performance characteristics may be considered. Refer to Division 01 Section "Product Requirements".
- C. Electrical Appliances: Listed and Labeled as defined in NFPA 70, Article 100, by testing agency acceptable to authorities having jurisdiction.

- D. UL and NEMA Compliance: Provide electrical components required as part of appliances that are listed and labeled by UL and that comply with applicable NEMA Standards.

#### 1.06 DELIVERY, STORAGE, AND HANDLING

- A. Store equipment on site protected from weather, direct sunlight and temperature extremes. Do not remove packaging prior to storage.
- B. Consult manufacturer if machines are to be stored for an extended period of time.

#### 1.07 PROJECT CONDITIONS

- A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

### PART 2 PRODUCTS

#### 2.01 MANUFACTURERS

- A. Acceptable Manufacturer: Wascomat
- B. Requests for substitutions will be considered in accordance with provisions of Division 01 in the Project Manual.

#### 2.02 MATERIALS

- A. Washer Extractors - Stainless Steel: ASTM A 666, Type 304 with No. 4 finish (directional stain finish) on exposed surfaces.

#### 2.03 WASHER EXTRACTOR MODELS AND COMPONENTS LR-01

- A. Model No. EXSM230C.
  - 1. Design: Freestanding automatic laundry washer-extractor for processing water-washed linen items.
    - a. Construction: 304 equal stainless steel cylinder, tub, front and top panels.
    - b. Input Voltage: Z: 208-240V 1-Phase 60Hz 15 A
    - c. Dry weight capacity: 65 lb.
    - d. Wash cylinder volume: 8.5 cu. ft. minimum.
    - e. Overall width: 36 13/16 inches nominal.
    - f. Overall height: 56 5/16 inches nominal.
    - g. Overall depth: 34.25 inches nominal/
    - h. Number and size of water supply inlet valves: 3 with 3/4 inch BSP male connections (2 standard, 1 optional).
    - i. Number and size of drain outlets: 1 at 3 inches.
    - j. Overflow: internally plumbed.
    - k. Control system: Programmable microprocessor.
    - l. Cylinder drive: Single motor, 4 hp, capable of 980 RPM maximum, using a rotation sensor to monitor performance.
    - m. Bearing lubrication: Shall require lubrication once a month or every 200 working hours whichever comes first.
  - 2. Performance:
    - a. G-force at highest extract speed: 220 G's.
    - b. Chemical Supply System:
      - 1) Manually filled 5 compartment dry chemical dispensing system.

- 2) Automatic flushing and connections for 11 external supply lines and control sights for 8 external supplies.
- c. Control System:
  - 1) Programmable microprocessor.
  - 2) Thermal cooldown.
  - 3) Overnight soak.
- d. Drain valve automatically open in event of power failure.

### PART 3 EXECUTION

#### 3.01 EXAMINATION

- A. Do not begin installation until substrates have been properly prepared.
- B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

#### 3.02 PREPARATION

- A. Clean surfaces thoroughly prior to installation.
- B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

#### 3.03 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. System Startup and Commissioning: Arrange for local manufacturer's representative to inspect machines prior to startup and operation.

#### 3.04 PROTECTION

- A. Protect installed products until completion of project.
- B. Touch-up, repair or replace damaged products before Substantial Completion.

### END OF SECTION 112173.26

## PART 1 GENERAL

## 1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Project Manual, apply to this Section.

## 1.02 SUMMARY

- A. This Section includes the following:
  - 1. Gas Stove
  - 2. Refrigerator
- B. Equipment to be furnished by owner, installed by contractor.
- C. Related Sections: The following Sections contain requirements that relate to this Section:
  - 1. Division 22 for plumbing connections to appliances.
  - 2. Division 26 for electrical services and connections to appliances.

## 1.03 SUBMITTALS

- A. Product Data: For each appliance type required indicating compliance with requirements. Include complete operating and maintenance instructions for each appliance.

## 1.04 QUALITY ASSURANCE

- A. Installer Qualifications: An experienced installer who is an authorized representative of the appliance manufacturer for both installation and maintenance of appliances required for this Project.
- B. Product Options: Drawings and specifications indicate sizes, profiles, and dimensional requirements of appliances and are based on the specific types, models and manufacturers indicated. Other manufacturers' appliances with equal performance characteristics meeting all size requirements may be considered. Refer to Division 01 Section "Product Requirements".
- C. Electrical Appliances: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction.
- D. UL and NEMA Compliance: Provide electrical components required as part of appliances that are listed and labeled by UL and that comply with applicable NEMA standards.
- E. AGA and ANSI Standards: Provide gas-burning appliances that carry the design certification seal of AGA and that comply with ANSI Z21-Series standards.
- F. AHAM Standards: Provide appliances that comply with the following AHAM standards:
  - 1. Refrigerators and Freezers: Total volume and shelf area ratings certified according to ANSI/AHAM HRF-1.
    - a. Energy Ratings: Provide appliances that carry labels indicating energy-cost analysis (estimated annual operating costs) and efficiency information as required by the Federal Trade Commission.

## 1.05 DELIVERY

- A. Deliver appliances only after utility rough in is complete and construction in the spaces to receive appliances is substantially complete and ready for installation.

## 1.06 WARRANTIES

- A. Written warranties, executed by manufacturer of each appliance specified agreeing to repair or replace appliances or components that fail in materials or workmanship within specified warranty period.

## PART 2 PRODUCTS

## 2.01 CK-01 GAS RANGE

- A. Manufacturer: GE Appliances, a Haier company, Rapid City, SD 57709
- B. Model: JGBS30REKSS, 30" 4-Burner Gas Range
- C. 4.8 CU oven.
- D. 6" Adjustable legs
- E. Electronic pilot ignition system for open tops

## 2.02 CK-02 REFRIGERATOR

- A. Manufacturer: KitchenAid, 553 Benson Road, Benton Harbor, MI 49022
- B. Model: [KRFC300ESS, 30" 4-Burner Gas Range
- C. Total Capacity: 20 cu ft
  - 1. Refrigerator Capacity: 14 cu ft
  - 2. Freezer Capacity: 6 cu ft
- D. Energy Star Certified
- E. Type: French Door
- F. Ice maker, interior water dispenser

## PART 3 - EXECUTION

## 3.01 EXAMINATION

- A. Examine roughing-in for plumbing, mechanical, and electrical services, with Installer present, to verify actual locations of services before appliance installation.
  - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

## 3.02 INSTALLATION

- A. General: Comply with manufacturer's written instructions.
- B. Freestanding Equipment: Place units in final locations after finishes have been completed in each area. Verify that clearances are adequate to properly operate equipment.
- C. Utilities: Refer to Divisions 22 and 26 for plumbing and electrical requirements.

**3.03 ADJUSTING AND CLEANING**

- A. Test each item of appliances to verify proper operation. Make necessary adjustments.
- B. Verify that accessories required have been furnished and installed.
- C. Remove packing material from appliances and leave units in clean condition, ready for operation.

**END OF SECTION 113013.13**

## PART 1 GENERAL

## 1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Agreement, including General and Supplementary Conditions and Division 01 Project Manual, apply to work of this this Section.

## 1.02 SUMMARY

- A. This Section includes the following:
  - 1. Washing Machine
  - 2. Electric Clothes Dryer
- B. Equipment to be furnished by owner, installed by contractor.
- C. Related Sections: The following Sections contain requirements that relate to this Section:
  - 1. Division 22 for plumbing connections to appliances.
  - 2. Division 26 for electrical services and connections to appliances.

## 1.03 SUBMITTALS

- A. Pursuant to Section 013300 – Submittal Procedures.
- B. Pursuant to Section 016000 – Product Requirements.
- C. Product Data:
  - 1. For each appliance type required indicating compliance with requirements.  
Include:
    - a. Rough-in drawings.
    - b. Operating and Maintenance instructions.
    - c. Sample Warranty.
  - 2. Product cut sheet on wall mounted shelf with integral clothes hanging bar.

## 1.04 QUALITY ASSURANCE

- A. Installer Qualifications: An experienced installer who is an authorized representative of the appliance manufacturer for both installation and maintenance of appliances required for this Project.
- B. Product Options: Drawings indicate sizes, profiles, and dimensional requirements of appliances and are based on the specific types and models indicated. Other manufacturers' appliances with equal performance characteristics may be considered.  
Refer to Division 01 Section "Product Requirements".
- C. Electrical Appliances: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction.
- D. UL and NEMA Compliance: Provide electrical components required as part of appliances that are listed and labeled by UL and that comply with applicable NEMA standards.
- E. AGA and ANSI Standards: Provide gas-burning appliances that carry the design certification seal of AGA and that comply with ANSI Z21-Series standards.
- F. Energy Ratings: Provide appliances that carry labels indicating energy-cost analysis (estimated annual operating costs) and efficiency information as required by the Federal Trade Commission.

### 1.05 DELIVERY

- A. Deliver appliances only after utility rough in is complete and construction in the spaces to receive appliances is substantially complete and ready for installation.

### 1.06 WARRANTIES

- A. Written warranties, executed by manufacturer of each appliance specified agreeing to repair or replace appliances or components that fail in materials or workmanship within specified warranty period.

## PART 2 PRODUCTS

### 2.01 TOP LOAD WASHER LR-02

- A. Manufacturer: GE Appliances, a Haier company, Rapid City, SD 57709
- B. Model: Existing- GTWN4250DOWS
- C. Color: White

### 2.02 FRONT LOAD DRYER LR-03

- A. Manufacturer: GE or Architect Approved Equivalent.
- B. Model: GTD84GCSN/GCPN
- C. Color: Per Owner
- D. Energy Star® Certified.
- E. ADA Compliant (Lower unit).

## PART 3 - EXECUTION

### 3.01 EXAMINATION

- A. Examine roughing-in for plumbing, mechanical, and electrical services, with Installer present, to verify actual locations of services before appliance installation.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.02 INSTALLATION

- A. General: Comply with manufacturer's written instructions.
- B. Freestanding Equipment: Place units in final locations after finishes have been completed in each area. Verify that clearances are adequate to properly operate equipment.
- C. Utilities: Refer to Divisions 22 and 26 for plumbing and electrical requirements.

### 3.03 ADJUSTING AND CLEANING

- A. Test each item of appliances to verify proper operation. Make necessary adjustments.
- B. Verify that accessories required have been furnished and installed.

- C. Remove packing material from appliances and leave units in clean condition, ready for operation.

**END OF SECTION 113033.23**

## PART 1 - GENERAL

## 1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

## 1.02 SUMMARY

- A. Section Includes:
  - 1. Fabricated equipment.
  - 2. Cooking equipment.
  - 3. Self-contained refrigeration equipment.
- B. Owner-Furnished Equipment: Where indicated, Owner will furnish equipment for installation by Contractor.

## 1.03 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include the following:
  - 1. Manufacturer's model number.
  - 2. Accessories and components that will be included for Project.
  - 3. Clearance requirements for access and maintenance.
  - 4. Utility service connections for water, drainage, power, and fuel; include roughing-in dimensions.
- B. Shop Drawings: For fabricated equipment. Include plans, elevations, sections, roughing-in dimensions, fabrication details, utility service requirements, and attachments to other work.

## 1.04 INFORMATIONAL SUBMITTALS

- A. Warranty: Samples of special warranty.

## 1.05 QUALITY ASSURANCE

- A. NSF Standards: Provide equipment that bears NSF Certification Mark or UL Classification Mark certifying compliance with applicable NSF standards.
- B. UL Certification: Provide electric and fuel-burning equipment and components that are evaluated by UL for fire, electric shock, and casualty hazards according to applicable safety standards, and that are UL certified for compliance and labeled for intended use.
- C. Steam Equipment: Provide steam-generating and direct-steam heating equipment that is fabricated and labeled to comply with ASME Boiler and Pressure Vessel Code.

## 1.06 REGULATORY REQUIREMENTS:

- A. ASTM C1330 - Standard Specification for Cylindrical Sealant Backing for Use with Cold Liquid-Applied Sealants; 2018.
- B. ASHRAE Std 15, "Safety Code for Mechanical Refrigeration."
- C. NFPA 54, "National Fuel Gas Code."
- D. NFPA 70, "National Electrical Code."

- E. NFPA 96, "Ventilation Control and Fire Protection of Commercial Cooking Operations."

#### 1.07 PROJECT CONDITIONS

- A. Field Measurements: Verify actual dimensions of construction contiguous with foodservice equipment by field measurements before fabrication. Indicate measurements on Coordination Drawings.

#### 1.08 COORDINATION

- A. Coordinate foodservice equipment layout and installation with other work, including layout and installation of lighting fixtures, HVAC equipment, and fire-suppression system components.
- B. Coordinate locations and requirements of utility service connections.
- C. Coordinate sizes, locations, and requirements of the following:
1. Overhead equipment supports.
  2. Equipment bases.
  3. Floor depressions.
  4. Insulated floors.
  5. Floor areas with positive slopes to drains.
  6. Floor sinks and drains serving foodservice equipment.
  7. Roof curbs, equipment supports, and penetrations.

#### 1.09 WARRANTY

- A. Refrigeration Compressor Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace compressors that fail in materials or workmanship within specified warranty period.
1. Failure includes, but is not limited to, inability to maintain set temperature.
  2. Warranty Period: Five years from date of Substantial Completion.

### PART 2 - PRODUCTS

#### 2.01 FABRICATED EQUIPMENT

- A. Equipment to be supplied by owner and installed by Contractor.
- B. Stainless-Steel Two Compartment Sink with Drainboards: K-04\_\_\_\_\_. (TO BE SUPPLIED BY OWNER)
1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:
    - a. Advance Tabco FC-2-2424-18RL.
    - b. Or approved equal.
  2. Description: Two -compartment sink. Fabricate units of welded stainless steel, sound deadened.
    - a. Bowls: Stainless steel, Type 304, 16 ga
    - b. Integral Drainboards: Stainless steel, Type 304, 0.078 inch (1.98 mm) thick.
    - c. Body: Stainless steel, Type 304, 16 ga.
      - 1) Back Splash: 8.5"
    - d. Legs and Feet: Stainless steel tubing legs with adjustable feet.
    - e. Faucet Holes: Provided, coordinate with plumbing fixtures.
- C. Splash Mount Prerinse Faucet: K-05 (TO BE SUPPLIED BY OWNER)
1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:
    - a. Advance Tabco: DTA-53

- b. Or approved equal.
  - 2. Description:
    - a. Materials: Brass chrome plated body, chrome plated handles
    - b. 8" O.C. water supply
    - c. Quarter-turn wedge style handles
    - d. Spray head with continuous water ring
    - e. Heavy duty hose spring
    - f. wall mount bracket
    - g. Adjustable spray head hook
    - h. Flow Rate: 1.6 GPM @ 60 PSI
- D. 8" Swing Spout Splash Mount Faucet: [K-06] (TO BE SUPPLIED BY OWNER)
  - 1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:
    - a. Advance Tabco: K-101
    - b. Or approved equal.
  - 2. Description:
    - a. Materials: Brass chrome plated body and spout, chrome plated handles
    - b. 8" O.C. water supply.
    - c. Quarter-turn wedge style handles
    - d. Colored hot & cold Indexes.
    - e. 1.5 GPM/5.7 LPM Aerator. 60 PSI
- E. Stainless-Steel Two-compartment Sink with DrainboardS: SC-01 (TO BE SUPPLIED BY OWNER)
  - 1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:
    - a. Advance Tabco: 93-22-40-24RL.
    - b. or approved equal.
  - 2. Description: Two -compartment sink. Fabricate units of welded stainless steel, sound deadened.
    - a. Bowls: Stainless steel, Type 304, 16 ga
    - b. Integral Drainboards: Stainless steel, Type 304, 0.078 inch (1.98 mm) thick.
    - c. Backsplash: 9 inches tall with 2 inch wide return.
    - d. Legs and Feet: Stainless steel tubing legs with adjustable feet.
    - e. Faucet Holes: Provided, coordinate with plumbing fixtures.
- F. Stainless-Steel Table:K-08 \_\_\_\_\_ (TO BE SUPPLIED BY OWNER)
  - 1. Products: Subject to compliance with requirements, provide the following:
    - a. Advance Tabco KMS-240.
    - b. or approved equal.
  - 2. Description: Flat-countertop table.
    - a. Tops: Stainless steel, Type 304, 0.078 inch (1.98 mm) thick, reinforced and sound deadened.
      - 1) Edge: Bullnose on front edge and splash on back , straight on sides.
    - b. Adjustable Undershelf: Stainless steel, Type 304, 0.050 inch (1.27 mm) thick.
    - c. Legs: Stainless-steel tubing.
    - d. Backsplash: 5" with 1" return on rear side
  - 3. Materials:
    - a. Stainless-Steel Sheet: ASTM A 240/A 240M, austenitic stainless steel, type as indicated.
  - 4. Stainless-Steel Finish: Directional satin finish, No. 4.
- G. Stainless-Steel Wall Shelf: K-09 (TO BE SUPPLIED BY OWNER)
  - 1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:
    - a. Eagle SWS1548.
    - b. Or approved equal.

2. Description: Snap-n-Slide Wall Shelf with Rolled Front Edge
  - a. Materials: 14 gauge, 304 stainless steel with satin finish.
  - b. Front rolled edge with 1 1/2" upturn on rear and ends
  - c. Dimensions: 48inches long by 15 inches wide, with 10-1/2 inch deep welded shelf brackets.
- H. Microwave Shelves: K-07 (TO BE SUPPLIED BY OWNER)
  1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:
    - a. Advance Tabco: MS-20-30.
    - b. Or approved equal.
  2. Description: Wall mounted.
    - a. Materials: 18 ga. stainless steel, Exposed surfaces polished to a satin finish
    - b. Dimensions: 20 inches wide by 30 inches long
    - c. All TIG welded

## 2.02 COOKING EQUIPMENT

- A. Ranges: K-01 (TO BE SUPPLIED BY OWNER)
  1. Products: Subject to compliance with requirements, provide the following:
    - a. Garland Model G60-6G24CC1.
    - b. or approved equal.
  2. Description:
    - a. Top Configuration:
      - 1) Open-Burner Unit:
        - (a) Standard Burners: Six burners and griddle
        - (b) Cast iron top and stainless steel griddle cover.
        - (c) Stainless Steel Front and Sides
        - (d) Stainless Steel 5" Plate rail
        - (e) Stainless steel backguard with removable shelf
    - b. Base Configuration:
      - 1) Double Convection Ovens
    - c. Accessories:
      - 1) 6" Leveling swivel casters with front locking
    - d. Gas Service: Natural gas.
- B. Microwave Oven: K-14 (TO BE SUPPLIED BY OWNER)
  1. Products: Subject to compliance with requirements, provide the following:
    - a. Panasonic NE-1054F.
    - b. or approved equal.
  2. Description: Commercial Microwave Oven.
    - a. Output: 1000 watts.
    - b. Materials: Stainless steel exterior, transparent door and lit interior.
    - c. Capacity: 0.8 cu. ft.
    - d. Operation: Programmable operation with digital display and four cooking stages.
  3. Accessories:
    - a. Adapter to convert unit to hold three 4-quart inserts.
  4. Power: 120v, 60 Hz, 13.4 amps, single phase, NEMA 5-15R or NEMA 5-20R

## 2.03 SELF-CONTAINED REFRIGERATION EQUIPMENT

- A. Refrigerators: K-02 (TO BE SUPPLIED BY OWNER)
  1. Products: Subject to compliance with requirements, provide the following:
    - a. True Food Service Equipment - T-49-HC
    - b. or approved equal
  2. Description: Reach-in type.

- a. Exterior Finish: Stainless steel.
  - b. Interior Finish: Stainless steel.
  - c. Doors: Full length.
  - d. Accessories:
    - 1) 4" swivel Casters.
    - 2) Stainless steel front, sides, aluminum interior with stainless steel floor.
    - 3) Re-hinging feature for doors.
    - 4) Top mount self-contained compressor, 1/3 HP, 115v/60/1, 5.4 amps, NEMA 5-15P, NSF-7, ETL, ENERGY STAR.
    - 5) (3) PE coated wire shelves per section, chrome-plated shelf clips.
  - e. Electrical Service: Equip unit with plug and cord for service indicated on Drawings.
- B. Freezers: K-03 (TO BE SUPPLIED BY OWNER)
- 1. Products: Subject to compliance with requirements, provide the following:
    - a. True Food Service Equipment - T-23F-HC
    - b. or approved equal.
  - 2. Description: Reach-in type.
    - a. Exterior Finish: Stainless steel.
    - b. Interior Finish: Stainless steel.
    - c. Doors: Full length.
    - d. Accessories:
      - 1) 4" swivel Casters.
      - 2) Stainless steel front, sides, aluminum interior with stainless steel floor.
      - 3) Re-hinging feature for doors.
      - 4) Top mount self-contained compressor, 1/3 HP, 115v/60/1, 3.7 amps, NEMA 5-15P, NSF-7, ETL, ENERGY STAR.
      - 5) (3) PE coated wire shelves per section, chrome-plated shelf clips.
    - e. Electrical Service: Equip unit with plug and cord for service indicated on Drawings.
- C. Ice-Making Machine: K-10 (TO BE SUPPLIED BY OWNER)
- 1. Products: Subject to compliance with requirements, provide the following:
    - a. Manitowoc: iT0620
    - b. or approved equal
  - 2. Description: Freestanding unit.
    - a. Production: dice sized ice cubes.
    - b. Capacity: 525 lb (kg). per 24-hour period.
    - c. Air cooled.
    - d. Self-contained condenser.
    - e. 115v/60/1, 1.6 amps, 6' cord with NEMA 5-15P
    - f. Accessories:
      - 1) Storage Bin: D-400 with K00443
        - (a) Storage Capacity: 365 lb (kg), 6" adjustable legs
      - 2) 3-year parts & labor Commercial warranty.

#### 2.04 MISCELLANEOUS MATERIALS

- A. Installation Accessories, General: NSF certified for end-use application indicated.
- B. Elastomeric Joint Sealant: ASTM C 920; silicone. Type S (single component), Grade NS (non-sag), Class 25, Use NT (non-traffic) related to exposure, and Use M, G, A, or O as applicable to joint substrates indicated.
  - 1. Public Health and Safety Requirements:
    - a. Sealant is certified for compliance with NSF standards for end-use application indicated.

- b. Washed and cured sealant complies with the FDA regulations for use in areas that come in contact with food.
- 2. Cylindrical Sealant Backing: ASTM C1330, Type C, closed-cell polyethylene, in diameter greater than joint width.

## 2.05 FINISHES

- A. Stainless-Steel Finishes:
  - 1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
  - 2. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
    - a. Run grain of directional finishes with long dimension of each piece.
    - b. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
- B. Powder-Coat Finishes: Immediately after cleaning and pretreating, electrostatically apply manufacturer's standard, baked-polymer, thermosetting powder finish. Comply with resin manufacturer's written instructions for application, baking, and minimum dry film thickness.

## PART 3 - EXECUTION

### 3.01 INSTALLATION

- A. Install food service equipment level and plumb, according to manufacturer's written instructions.
  - 1. Connect equipment to utilities.
  - 2. Provide cutouts in equipment, neatly formed, where required to run service lines through equipment to make final connections.
- B. Complete equipment assembly where field assembly is required.
  - 1. Provide closed butt and contact joints that do not require a filler.
  - 2. Grind field welds on stainless-steel equipment until smooth and polish to match adjacent finish.
- C. Install equipment with access and maintenance clearances that comply with manufacturer's written installation instructions and with requirements of authorities having jurisdiction.
- D. Install cabinets and similar equipment on bases in a bed of sealant.
- E. Install closure-trim strips and similar items requiring fasteners in a bed of sealant.
- F. Install joint sealant in joints between equipment and abutting surfaces with continuous joint backing unless otherwise indicated. Produce airtight, watertight, vermin-proof, sanitary joints.

### 3.02 CLEANING AND PROTECTING

- A. After completing installation of equipment, repair damaged finishes.
- B. Clean and adjust equipment as required to produce ready-for-use condition.
- C. Protect equipment from damage during remainder of the construction period.

### 3.03 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain food service equipment.

**END OF SECTION 114000.13**

## PART 1 GENERAL

## 1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Agreement, including General and Supplementary Conditions, and Division 01 of the Project Manual, apply to work of this Section.

## 1.02 SUMMARY

- A. This Section includes, but is not limited to, the following:
  - 1. Lavatory countertops, backsplashes, side splashes and aprons.
  - 2. Kitchen countertops, backsplashes and side splashes.
  - 3. Meeting Room 116 countertop and backspalshes
- B. Related Sections: The following Sections contain requirements that relate to this Section:
  - 1. Section 061000 - Rough Carpentry
  - 2. Section 064100 – Architectural Wood Casework
  - 3. Section 079200 - Sealants
  - 4. Section 092900 – Gypsum Board
  - 5. Section 093013 - Ceramic Tiling
  - 6. Division 22: Plumbing - furnishing, installation, and hook-up of sinks, fixtures, outlets, strainers, tailpieces, traps, vacuum breakers, stops, etc., shall be performed by the Plumbing Contractor in accordance with Federal, State and local building codes.

## 1.03 STANDARDS

- A. All work of this section shall conform to industry standards and/or manufacturer's recommendations.
- B. ANSI/NSF 51 -"Food Equipment Materials"
- C. ASTM C170 – "Standard Test Method for Compressive Strength of Dimension Stone".
- D. ASTM E84 – "Standard Test Method for Surface Burning Characteristics of Building Materials".

## 1.04 SUBMITTALS

- A. Pursuant to Section 013300 - Submittal Procedures.
- B. Pursuant to Section 016000 - Product Requirements.
- C. Sustainable Design Reporting:
  - 1. Provide documentation from manufacturer of the amounts of pre-consumer and/or post-consumer recycled content for products.
  - 2. Provide documentation from manufacturer showing manufacturing locations for products manufactured and sourced within 500 miles of project site.
  - 3. Provide documentation from manufacturer that products meet or exceed emissions guidelines for volatile organic compounds (VOCs).
  - 4. Provide documentation from manufacturer indicating that adhesives and sealants applied on project site meet or exceed emissions guidelines for volatile organic compounds (VOCs) and comply with SCAQMD Rule #1168.
- D. Manufacturer certifications:
  - 1. Signed by manufacturers certifying that they comply with the following requirements:
    - a. NSF/ANSI Standard 51: Food Contact
    - b. UL 723 (ASTM E84): Surface Burning Characteristics

- E. Product Data:
  - 1. Submit manufacturer's technical product data on material characteristics, performance properties, fabrication instructions and installation instructions.
- F. Shop Drawings:
  - 1. Show location of each item; provide complete detailed and dimensioned plans and elevations, large-scale details, attachment devices and other components.
    - a. Show the following:
      - 1) Full-size details, edge details, attachments, backsplashes, side splashes, aprons, etc.
      - 2) Locations and sizes of furring, blocking, including concealed blocking and reinforcement specified in other Sections.
      - 3) Fabrication details for brackets.
      - 4) Details of anchorage to cabinets and to walls.
      - 5) Locations and sizes of cutouts and holes for plumbing fixtures, faucets, soap dispensers, waste receptacle and other items installed in quartz surface.
      - 6) Locations and sizes of cutouts for sink installation and lavatory installation.
      - 7) Type of sealant.
      - 8) Type of adhesive.
      - 9) Seam locations.
      - 10) Show direction of directional pattern, if any.
- G. Samples:
  - 1. 2" x 2" sample for each of Manufacturer's full line of colors, pattern, and finishes for initial selection.
  - 2. Two (2) 6" x 6" samples of each color selected.
  - 3. 4" long samples of each style of Custom Edging.
- H. Maintenance Data:
  - 1. Submit manufacturer's care and maintenance data, including repair and cleaning instructions.
  - 2. Include in project closeout documents.

#### 1.05 QUALITY ASSURANCE

- A. Provide Certified Statement by technical representative of the solid surfacing manufacturer that the fabricator and installer are certified or approved.
- B. Applicable Standards:
  - 1. Standards of the following, as referenced herein:
    - a. American National Standards Institute (ANSI)
    - b. American Society for Testing and Materials (ASTM)
    - c. NSF International
  - 2. Fire test response characteristics:
    - a. Provide with the following Class A (Class 1) surface burning characteristics as determined by testing identical products per UL 723 (ASTM E84) or another testing and inspecting agency acceptable to authorities having jurisdiction:
      - 1) Flame Spread Index: 25 or less
      - 2) Smoke Developed Index: 450 or less
- C. Verify all dimensions in field.
- D. Allowable Tolerances:
  - 1. +/- 1/8" in component size over a 10 foot length.

2. +/- 1/8" in location of openings from indicated location.
3. Minimum of 1/16 inch and a maximum of 1/8 inch clearance between quartz surfaces and each wall.

#### 1.06 PRODUCT DELIVERY, STORAGE AND HANDLING

- A. Pursuant to manufacturers published instructions.
- B. Protect countertops during transit, delivery, storage and handling to prevent moisture exposure, damage, soiling and deterioration.
- C. Store components indoors in clean and dry area prior to installation.
- D. Do not deliver until painting, wet work, grinding and similar operations, which could be performed before installation of casework, have been completed in installation areas.

#### 1.07 WARRANTY

- A. Provide manufacturer's 10-year warranty against defects in materials. Warranty shall provide material and labor to repair or replace defective materials. Warranty shall begin at date of substantial completion.

### PART 2 PRODUCTS

#### 2.01 MANUFACTURERS

- A. Manufacturers:
  1. Silestone by Cosentino SA, Apdo No. 1 Macael 04867, Almeria, Spain. (Basis of Physical Characteristics)
  2. Cambria USA, 11000 West 78th Street, Suite 220, Eden Prairie, MN 55344 Phone: 866-226-2742.
  3. Corian® Design, Corian® Quartz (formerly known as Zodiac®), Chestnut Run Plaza, 974 Centre Road, P.O. Box 2915, Wilmington, DE 19805, Phone: 800-426-7426.
  4. Architect approved equivalent.

#### 2.02 COUNTERTOP MATERIALS

- A. Engineered Stone Countertops
  1. Composition: Quartz aggregate, resin, and color pigments formed into flat slabs.
  2. Physical Characteristics:
    - a. Water absorption: Maximum 0.04 percent, tested per ASTM C 97
    - b. Bond strength: Average of 211 PSI (1.4 MPa), tested per ASTM C482
    - c. Modulus of rupture: Average of 6200 PSI (5.11 MPa), tested per STAM C99
    - d. Flexural strength: 5620 PSI (50.3 MPa), tested per ASTM C 880
    - e. Abrasion index: Minimum 62, tested per ASTM C 241
    - f. Thermal shock: Pass 5 cycles, tested per ASTM C 484
    - g. Thermal expansion:  $1.747 \times 10^{-5}$ , tested per ASTM C 531
    - h. Freeze thaw: Class MR3+, tested per ASTM 1026
    - i. Deicing: Pass ASTM C 672
    - j. Flame spread: Class 1 (FS-25 or less), tested per ASTM E84
    - k. Mohs hardness: 6 to 6.5
    - l. Stain resistance: Stains completely removed, tested per ASTM C 650, excluding hydroxide.
  3. Thickness: 3/4"
  4. Edge detail: Bullnose or miter edge, see detail on Contract Drawings.

5. Color: To be selected from manufacturer's colors in ALL price groups.
6. Surface finish: Polished.
7. Provide  $\frac{3}{4}$ " x 4" backsplash with profiled edges on all countertops unless noted otherwise.  
Provide  $\frac{3}{4}$ " x 4" side splashes with profiled edges where shown on the Contract Drawings.

### 2.03 SETTING MATERIALS

- A. Adhesive: Liquid nails or other approved by countertop manufacturer.

### 2.04 ACCESSORIES

- A. Epoxy Adhesive: K-bond epoxy type provided by countertop manufacturer.
- B. Joint Sealant: Single component silicone sanitary sealant and backing materials; specified in Section 079200 - Sealants.

### 2.05 FABRICATION

- A. Fabricate components to greatest extent practical to sizes and shapes indicated, in accordance with approved shop drawings and manufacturer's printed instructions and technical bulletins.
- B. Form joints between components using manufacturer's standard joint adhesive.
  1. Reinforce as required.
  2. Provide factory cutouts for plumbing fittings and bath accessories as indicated on the drawings.
  3. Rout and finish component edges with clean, sharp returns.
  4. Rout cutouts, radii and contours to template.
- C. Smooth edges.

## PART 3 EXECUTION

### 3.01 JOB CONDITIONS

- A. Conditioning: Comply with manufacturer's recommendations for temperature and humidity requirements in installation areas. Do not install countertops until required temperature and relative humidity have been stabilized and will be maintained in installed areas.
- B. Do not install countertops until walls and ceilings of the spaces to receive the Work have been finished.

### 3.02 INSTALLATION

- A. Fabricate components in shop to greatest extent practical to sizes and shapes indicated, in accordance with approved shop drawings and manufacturers requirements.
- B. Install in accordance with manufacturer's instructions.
- C. Provide factory cutouts for plumbing fittings and accessories.
- D. Provide surfaces with a uniform finish.
- E. Install countertop plumb, level, true and straight with no distortions. Shim as required using concealed shims.
  1. Tops:
    - a. Flat and true to within 1/8 inch of a flat surface over a 10-foot length.

- b. Allow a minimum of 1/16 inch to a maximum of 1/8 inch clearance between surface and each wall.
  - c. Form field joints using manufacturer's recommended adhesive, with joint widths no greater than 1/16 inch in finished work.
  - d. Keep components and hands clean when making joints.
- F. Where countertop abuts other finished work, scribe and cut for accurate fit.
- G. The party responsible for provision of countertops is also responsible for provision of penetrations through countertop; penetrations include but are not limited to cutouts for sinks, faucets, and soap dispenser.
- H. Form field joints using manufacturer's recommended adhesive, with joints inconspicuous in finished work. Reinforce joints as required.
- I. Adhere sinks to tops using manufacturer's recommended sealant, adhesive and mounting hardware.
- J. Anchor countertop securely in place with concealed fasteners and adhesives as recommended by manufacturer.
- K. Provide backsplashes and side splashes as indicated on the Contract Drawings.
  - 1. Adhere to countertops using silicone sealant.

### 3.03 CLEANING AND PROTECTION

- A. Repair or remove and replace defective work as directed upon completion of installation.
- B. Do NOT allow harsh chemicals, such as lacquer thinner, turpentine, nail polish remover (acetone) or stove and drain cleaners, to REMAIN in contact with the surface. Hot pans and heat-producing appliances should be placed on heat shields or hot pads.
- C. Clean exposed and semi-exposed surfaces, touch-up as required. Remove and refinish damaged or soiled areas.
- D. Apply heavy kraft paper or other heavy protective coating masked in place to prevent surface damage. Remove kraft paper at building turn over to Owner and clean countertops.

**END OF SECTION 123661**

## PART 1 - GENERAL

## 1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

## 1.02 SUMMARY

- A. Section Includes:
  - 1. Solid surface material countertops.
  - 2. Solid surface material backsplashes.
  - 3. Solid surface material apron fronts.

## 1.03 ACTION SUBMITTALS

- A. Comply with Section 013300 - SUBMITTALS.
- B. Product Data: For countertop materials.
- C. Shop Drawings: For countertops. Show materials, finishes, edge and backsplash profiles, methods of joining, and cutouts for plumbing fixtures.
  - 1. Show locations and details of joints.
  - 2. Show direction of directional pattern, if any.
- D. Samples for Initial Selection: For each type of material exposed to view.

## 1.04 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For fabricator.

## 1.05 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For solid surface material countertops to include in maintenance manuals. Include Product Data for care products used or recommended by Installer and names, addresses, and telephone numbers of local sources for products.

## 1.06 QUALITY ASSURANCE

- A. Fabricator Qualifications: Shop that employs skilled workers who custom-fabricate countertops similar to that required for this Project, and whose products have a record of successful in-service performance.
- B. Installer Qualifications: Fabricator of countertops.

## 1.07 FIELD CONDITIONS

- A. Field Measurements: Verify dimensions of countertops by field measurements before countertop fabrication is complete.

## 1.08 COORDINATION

- A. Coordinate locations of utilities that will penetrate countertops or backsplashes.

## PART 2 - PRODUCTS

## 2.01 SOLID SURFACE COUNTERTOP MATERIALS

- A. Solid Surface Material: Homogeneous-filled plastic resin complying with ICPA SS-1.
  - 1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
    - a. E. I. du Pont de Nemours and Company: Corian
    - b. Or approved equal.
  - 2. Colors and Patterns: As selected by Architect from manufacturer's full range.
- B. Plywood: Exterior softwood plywood complying with DOC PS 1, Grade C-C Plugged, touch sanded.

## 2.02 COUNTERTOP FABRICATION

- A. Fabricate countertops according to solid surface material manufacturer's written instructions and to the AWI/AWMA/VI's "Architectural Woodwork Standards."
  - 1. Grade: Custom.
- B. Configuration:
  - 1. Front: Radius edge with apron - 2 inch high with 1/4 inch radius.
  - 2. Backsplash: Straight, with 1/4 inch radius top edge and vertical corner edges.
  - 3. End Splash: None.
- C. Countertops: 3/4 inch thick, solid surface material.
- D. Fabricate tops with shop-applied edges and backsplashes unless otherwise indicated. Comply with solid surface material manufacturer's written instructions for adhesives, sealers, fabrication, and finishing.
  - 1. Fabricate with loose backsplashes for field assembly.
  - 2. Install integral sink bowls in countertops in the shop.
- E. Joints: Fabricate countertops without joints.
- F. Cutouts and Holes:
  - 1. Undercounter Plumbing Fixtures: Make cutouts for fixtures in shop using template or pattern furnished by fixture manufacturer. Form cutouts to smooth, even curves.
    - a. Provide vertical edges, slightly eased at juncture of cutout edges with top and bottom surfaces of countertop and projecting 3/16 inch into fixture opening.
    - b. Provide vertical edges, rounded to 3/8-inch radius at juncture of cutout edges with top surface of countertop, slightly eased at bottom, and projecting 3/16 inch (5 mm) into fixture opening.
    - c. Provide 3/4-inch full bullnose edges projecting 3/8 inch into fixture opening.
  - 2. Counter-Mounted Plumbing Fixtures: Prepare countertops in shop for field cutting openings for counter-mounted fixtures. Mark tops for cutouts and drill holes at corners of cutout locations. Make corner holes of largest radius practical.
  - 3. Fittings: Drill countertops in shop for plumbing fittings, undercounter soap dispensers, and similar items.

## 2.03 INSTALLATION MATERIALS

- A. Adhesive: Product recommended by solid surface material manufacturer.
  - 1. Adhesives shall have a VOC content of 70 g/L or less.

2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- B. Sealant for Countertops: Comply with applicable requirements in Section 079200 - JOINT SEALANTS.

### PART 3 - EXECUTION

#### 3.01 EXAMINATION

- A. Examine substrates to receive solid surface material countertops and conditions under which countertops will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of countertops.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

#### 3.02 INSTALLATION

- A. Install countertops level to a tolerance of 1/8 inch in 8 feet, 1/4 inch maximum. Do not exceed 1/64-inch difference between planes of adjacent units.
- B. Fasten subtops to cabinets by screwing through subtops into wall cleats. Shim as needed to align subtops in a level plane.
- C. Secure countertops to subtops with adhesive according to solid surface material manufacturer's written instructions. Align adjacent surfaces and, using adhesive in color to match countertop, form seams to comply with manufacturer's written instructions. Carefully dress joints smooth, remove surface scratches, and clean entire surface.
- D. Bond joints with adhesive and draw tight as countertops are set. Mask areas of countertops adjacent to joints to prevent adhesive smears.
  1. Clamp units to temporary bracing, supports, or each other to ensure that countertops are properly aligned and joints are of specified width.
- E. Install backsplashes by adhering to wall and countertops with adhesive. Mask areas of countertops and splashes adjacent to joints to prevent adhesive smears.
- F. Install aprons to backing and countertops with adhesive. Mask areas of countertops and splashes adjacent to joints to prevent adhesive smears. Fasten by screwing through backing. Predrill holes for screws as recommended by manufacturer.
- G. Complete cutouts not finished in shop. Mask areas of countertops adjacent to cutouts to prevent damage while cutting. Make cutouts to accurately fit items to be installed, and at right angles to finished surfaces unless beveling is required for clearance. Ease edges slightly to prevent snipping.
- H. Apply sealant to gaps at walls; comply with Section 079200 - JOINT SEALANTS.

**END OF SECTION 123661.16**

## PART 1 - GENERAL

## 1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

## 1.02 SUMMARY

- A. Section Includes:
  - 1. Resilient entrance mats.
  - 2. Recessed frames.

## 1.03 COORDINATION

- A. Coordinate size and location of recesses in concrete to receive floor mats and frames.

## 1.04 ACTION SUBMITTALS

- A. Product Data: For each type of product.
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for floor mats and frames.

## 1.05 WARRANTY

- A. Provide manufacturer's warranty

## PART 2 - PRODUCTS

## 2.01 MANUFACTURER

- A. Manufacturer: Forbo Flooring, Inc.
  - 1. Contact: 8 Maplewood Dr., Humboldt Industrial Park, P.O. Box 667, Hazleton, PA 18202; Telephone +800 842 7839 or +570 459 0771; Fax + 570 450 0258
  - 2. Or Approved Equal

## 2.02 INTERIOR ENTRANCE FLOORING

- A. Proprietary Product(s): Coral® Duo Entrance Flooring and Adhesive.
  - 1. Description: Incorporates alternating strips of Coral® Brush Activ and Coral® Classic, which are reinforced with tough resilient monofilament fibers. The Coral® Brush Activ strips are composed of capillary, active scraping, and heavy duty textured yarns. The Coral® Classic strips are composed of thin solution dyed yarns, thick monofilament yarns. The innovative EVERFORT® vinyl backing is a solid vinyl which is flexible, strong, and heavy in weight. It lays flat, making installation easier. It is impervious to water, making it suitable for intensive wet cleaning.
  - 2. Sizes:
    - a. Apparatus Bay to Corridor: 6' x 4'
    - b. Stair A to Exterior: 6' x 4'
    - c. Vendor Drop Off to Exterior: 3' x 5'
    - d. Gear Area to Exterior: 6' x 4'
    - e. Main Vestibule: 6'x 4'
  - 3. Gauge: 0.394"
  - 4. Backing: EVERFORT® vinyl
  - 5. Pattern and Color: [As selected by Architect from manufacturer's standard patterns and colors.

6. Adhesive: Forbo Flooring, Inc., FRS 885 Adhesive

### 2.03 FRAMES

- A. Recessed Frames: Manufacturer's standard extrusion or Model RF-14 by R.C. Musson Rubber Co.
  1. Extruded Aluminum: ASTM B221, Alloy 6061-T6 or Alloy 6063-T5, T6, or T52.
  2. Thickness: 1/4 inch
  3. Color: Clear Anodized.
  4. Install per manufacturer's recommendations to receive specified Mat and to accommodate specified flooring material outside frame

### 2.04 FABRICATION

- A. Floor Mats: Shop fabricate units to greatest extent possible in sizes indicated. Unless otherwise indicated, provide single unit for each mat installation; do not exceed manufacturer's recommended maximum sizes for units that are removed for maintenance and cleaning. Where joints in mats are necessary, space symmetrically and away from normal traffic lanes. Miter corner joints in framing elements with hairline joints or provide prefabricated corner units without joints.
- B. Recessed Frames: As indicated, for permanent recessed installation, complete with corner pins or reinforcement and anchorage devices.
  1. Fabricate edge-frame members in single lengths or, where frame dimensions exceed maximum available lengths, provide minimum number of pieces possible, with hairline joints equally spaced and pieces spliced together by straight connecting pins.
- C. Coat concealed surfaces of aluminum frames that contact cementitious material with manufacturer's standard protective coating.

## PART 3 - EXECUTION

### 3.01 EXAMINATION

- A. Examine substrates and floor conditions for compliance with requirements for location, sizes, minimum recess depth, and other conditions affecting installation of floor mats and frames.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.02 INSTALLATION

- A. Install recessed mat frames to comply with manufacturer's written instructions. Set mat tops at height recommended by manufacturer for most effective cleaning action; coordinate tops of mat surfaces with bottoms of doors that swing across mats to provide clearance between door and mat.
  1. In areas of tile flooring, coordinate recessed frame height with tile thickness to allow for aligned walking surface.
  2. Install necessary shims, spacers, and anchorages for proper location, and secure attachment of frames.
  3. Install grout and fill around frames and, if required to set mat tops at proper elevations, in recesses under mats. Finish grout and fill smooth and level.

3.03 PROTECTION

- A. After completing frame installation and concrete work, provide temporary filler of plywood or fiberboard in recesses and cover frames with plywood protective flooring. Maintain protection until construction traffic has ended and Project is near Substantial Completion.

**END OF SECTION 124813**

## PART 1 - GENERAL

## 1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

## 1.02 SUMMARY

- A. Section Includes:
  - 1. Structural-steel framing.
  - 2. Metal roof panels.
  - 3. Metal wall panels.
  - 4. Foam-insulation-core metal Wall and Roof panels.
  - 5. Thermal insulation.
  - 6. Doors and frames.
  - 7. Accessories.

## 1.03 DEFINITIONS

- A. Terminology Standard: See MBMA's "Metal Building Systems Manual" for definitions of terms for metal building system construction not otherwise defined in this Section or in referenced standards.

## 1.04 ADMINISTRATIVE REQUIREMENTS

- A. Preinstallation Meeting: Convene two weeks before starting work of this section.
- B. Review materials, installation, protection, and coordination with other work.

## 1.05 ACTION SUBMITTALS

- A. Comply with Section 013300 - SUBMITTALS.
- B. Product Data: For each type of metal building system component. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for the following:
  - 1. Structural-steel-framing system.
  - 2. Metal roof panels.
  - 3. Metal wall panels.
  - 4. Foam-insulation-core metal Wall panels.
  - 5. Roof Panels with thermal liner
  - 6. Thermal Insulation and vapor retarder facings.
  - 7. Flashing and trim. 0.034-inch
  - 8. Accessories.
- C. Shop Drawings: For the following metal building system components. Include plans, elevations, sections, details, and attachments to other work.
  - 1. Anchor-Bolt Plans: Submit anchor-bolt plans and templates before foundation work begins. Include location, diameter, and projection of anchor bolts required to attach metal building to foundation. Indicate column reactions at each location.
  - 2. Structural-Framing Drawings: Show complete fabrication of primary and secondary framing; include provisions for openings. Indicate welds and bolted connections, distinguishing between shop and field applications. Include transverse cross-sections.
  - 3. Metal Roof and Metal Wall Panel Layout Drawings: Show layouts of metal panels including methods of support. Include details of edge conditions, joints, panel profiles,

corners, anchorages, trim, flashings, closures, and special details. Distinguish between factory- and field-assembled work; show locations of exposed fasteners.

- a. Show roof-mounted items including stack type roof vents, penetrations and flashing with connections, rain collars, z channels and sealants required to mount and weatherproof new roof vent replacements for the metal building.
  - b. Show wall-mounted items including sliding door hardware including but not limited to:
  - c. Sliding door track rail and hangers, stop, end caps, cover flashing, door binders, door hanger/ roller trolleys, wall mounted door stays / rollers, door panels, door pulls, floor bolts/receivers and door end receivers.
4. Accessory Drawings: Include details of the following items, at a scale of not less than 1-1/2 inches per 12 inches (1:8):
- a. Flashing and trim.
  - b. Gutters.
  - c. Downspouts.
  - d. Louvers.
- D. Samples for Initial Selection: For units with factory-applied color finish.
- E. Erection Drawings: Indicate members by label, assembly sequence, and temporary erection bracing.
- F. Delegated-Design Submittal: For metal building systems indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

#### 1.06 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified erector & manufacturer's professional engineer.
- B. Manufacturer Accreditation: Written certification prepared and signed by a Professional Engineer, licensed to practice in the state of New York verifying that the building system design and metal roof and wall systems design (including panels, clips, and support systems) meet the indicated loading requirements and codes of authorities having jurisdiction and produced by a manufacturer accredited according to the International Accreditation Service's IAS AC472.
- C. Welding certificates.
- D. Metal Building System Certification: For each type of metal building system, from manufacturer.
1. Letter of Design Certification: Signed and sealed by a qualified professional engineer. Include the following:
    - a. Name and location of Project.
    - b. Order number.
    - c. Name of manufacturer.
    - d. Name of Contractor.
    - e. Building dimensions including width, length, height, and roof slope.
    - f. Indicate compliance with AISC standards for hot-rolled steel and AISI standards for cold-rolled steel, including edition dates of each standard.
    - g. Governing building code and year of edition.
    - h. Design Loads: Include dead loads, live loads, collateral loads, snow loads (including drifting loads where applicable), deflection, wind loads/speeds and exposure, seismic design category or effective peak velocity-related acceleration/peak acceleration, tributary load reductions (if applicable) and auxiliary loads (cranes).
    - i. Load Combinations: Indicate that loads were applied acting simultaneously with concentrated loads, according to governing building code.
    - j. Building-Use Category: Indicate category of building use and its effect on load importance factors.

- E. Installer / Erector Qualifications Certification: Written certification that Installer/Erector has been regularly engaged, for the past 5 years, in the installation of metal building systems of similar type to that specified. Append a minimum of three recent project references with contact information to the certification submission.
- F. Manufacturer Product Certificates: Provide on the approved manufacturer's letterhead, certificates for each product being utilized on this project.
- G. Material Test Reports: For each of the following products:
  - 1. Structural steel including chemical and physical properties.
  - 2. Bolts, nuts, and washers including mechanical properties and chemical analysis.
  - 3. Tension-control, high-strength, bolt-nut-washer assemblies.
  - 4. Shop primers and paint systems for metal coil and panel systems.
  - 5. Nonshrink grout.
- H. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for insulation. Include reports for thermal resistance, fire-test-response characteristics, water-vapor transmission, and water absorption.
- I. Warranties: Sample of special warranties.

#### 1.07 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For metal panel finishes - include in maintenance manuals.

#### 1.08 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer and member of MBMA.
  - 1. Accreditation: According to the International Accreditation Service's IAS AC472.
  - 2. Engineering Responsibility: Preparation of comprehensive engineering analysis and Shop Drawings by a professional engineer who is legally qualified to practice in jurisdiction where Project is located.
- B. Erector Qualifications: An experienced erector who specializes in erecting and installing work similar in material, design, and extent to that indicated for this Project and who is acceptable to manufacturer.
- C. Source Limitations: Obtain metal building system components, including primary and secondary framing and metal panel assemblies, from single source from single manufacturer.
- D. Welding Qualifications: Qualify procedures and personnel according to the following:
  - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
  - 2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."
- E. Welders' Qualification Statement: Welders' certificates in accordance with AWS B2.1/B2.1M and dated no more than 12 months before start of scheduled welding work.
- F. Structural Steel: Comply with AISC 360, "Specification for Structural Steel Buildings," for design requirements and allowable stresses.
- G. Cold-Formed Steel: Comply with AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members" for design requirements and allowable stresses.

### 1.09 DELIVERY, STORAGE, AND HANDLING

- A. Deliver components, sheets, panels, and other manufactured items so as not to be damaged or deformed in manufacturer's original, unopened containers and packaging with labels clearly identifying the product name and manufacturer. Package metal panels for protection during transportation and handling.
- B. Unload, store, and erect metal panels in accordance with the manufacturer's instructions to prevent bending, warping, twisting, and surface damage.
- C. Stack metal panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal panels to ensure dryness, with positive slope for drainage of water. Do not store metal panels in contact with other materials that might cause staining, denting, or other surface damage.

### 1.10 PROJECT CONDITIONS

- A. Weather Limitations: Proceed with installation only when weather conditions permit metal panels to be installed according to manufacturers' written instructions and warranty requirements.
- B. Field Measurements:
  - 1. Established Dimensions for Foundations: Comply with established dimensions on approved anchor-bolt plans, establishing foundation dimensions and proceeding with fabricating structural framing without field measurements. Coordinate anchor-bolt installation to ensure that actual anchorage dimensions correspond to established dimensions.
  - 2. Established Dimensions for Metal Panels: Field measurements shall be made prior to commencement of Sliding Door and roof vent Fabrications.

### 1.11 COORDINATION

- A. Coordinate sizes and locations of concrete foundations and casting of anchor-bolt inserts into foundation walls and footings. Concrete, reinforcement, and formwork requirements are specified in Section 033000 - HISTORIC TREATMENT OF WOOD WINDOWS.
- B. Coordinate metal panel assemblies with flashing, trim, and construction of supports and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

### 1.12 WARRANTY

- A. See Section 017800 - Closeout Submittals, for additional warranty requirements.
- B. Special Warranty on Metal Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
  - 1. Warranty shall be signed by the metal building systems manufacturer and state that the coating contains 70 percent "Kynar 500" or "Hylar 5000" resin.
  - 2. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
    - a. Color fading more than 5 Hunter units when tested according to ASTM D2244.
    - b. Chalking in excess of a No. 8 rating when tested according to ASTM D4214.
    - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
  - 3. Finish Warranty Period: 25 years from date of Substantial Completion.

- C. Special Weathertightness Warranty for Standing-Seam Metal Roof Panels: Manufacturer's standard form in which manufacturer agrees to repair or replace standing-seam metal roof panel assemblies that leak or otherwise fail to remain weathertight within specified warranty period.
  - 1. Warranty Period: 25 years from date of Substantial Completion.
  - 2. Warranty shall be signed by both the manufacturer and the installer / erector.
- D. Warranty terms shall be submitted in writing with the bid submission package.

## PART 2 - PRODUCTS

### 2.01 MANUFACTURERS

- A. Metal Building System Manufacturer: Butler Manufacturing, PO Box 419917, Kansas City, Missouri 64141. Telephone: 816.968.3000. [www.buttermfg.com](http://www.buttermfg.com) (Basis of Design) or an approved equivalent by one of the following:
  - 1. Nucor Building Systems.
  - 2. VP Buildings; a United Dominion company.
  - 3. Star Building Systems.
- B. See Section 012500 - PRODUCT SUBSTITUTION PROCEDURES.

### 2.02 METAL BUILDING SYSTEMS

- A. Description: Provide a complete, integrated set of metal building system manufacturer's standard mutually dependent components and assemblies that form a metal building system capable of withstanding structural and other loads, thermally induced movement, and exposure to weather without failure or infiltration of water into building interior.
  - 1. Provide metal building system of size and with bay spacings, roof slopes, and spans indicated.
- B. Primary-Frame Type:
  - 1. Rigid Clear Span: Solid-member, structural-framing system without interior columns.
- C. End-Wall Framing: Manufacturer's standard, for buildings not required to be expandable, consisting of load-bearing end-wall and corner columns and rafters.
- D. End-Wall Framing: Engineer end walls to be expandable. Provide primary frame, capable of supporting full-bay design loads, and end-wall columns.
- E. Secondary-Frame Type: Manufacturer's standard purlins and joists and exterior-framed (bypass) girts.
- F. Eave Height: As indicated on the drawings.
- G. Bay Spacing: As indicated on the drawings..
- H. Roof Slope: as indicated on the drawings.
- I. Roof System: Manufacturer's standard vertical-rib, standing-seam field- insulated metal roof panels.
- J. Exterior Wall System: Manufacturer's standard pre-insulated metal wall panels as indicated on the drawings.

- K. Trim, Closure Pieces, Caps, Flashings, Gutters, Downspouts, Rain Water Diverter, Fascias, and Infills: Same material, thickness and finish as exterior sheets; brake formed to required profiles.

### 2.03 METAL BUILDING SYSTEM PERFORMANCE

- A. Delegated Design: Design metal building system, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Structural Performance: Metal building systems shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated according to procedures in MBMA's "Metal Building Systems Manual."
  - 1. Design Loads: As indicated on Drawings.
  - 2. Design Loads: As required by MBMA's "Metal Building Systems Manual." ASCE/SEI 7. and as required by NYS IBC.
  - 3. Deflection Limits: Design metal building system assemblies to withstand design loads with deflections no greater than the following:
    - a. Primary Framing: Roof Snow Load:  $L/180$
    - b. Primary Framing: Walls:  $H/60$  for 10-year wind load.
    - c. Secondary Framing:  $L/150$  for roof dead load + roof snow load; but not less than that required to maintain positive drainage for the greater of dead load +  $1/2$  roof snow load or dead load + 5 psf.
    - d. Secondary wall and roof framing:  $L/120$  for 10-year wind load.
    - e. Secondary Framing: Sheeting:  $L/180$  for roof snow load (but not less than 20 psf).
    - f. Design secondary-framing system to accommodate deflection of primary framing and construction tolerances, and to maintain clearances at openings.
  - 4. Metal panel assemblies shall withstand the effects of gravity loads and loads and stresses within limits and under conditions indicated according to ASTM E1592.
- C. Seismic Performance: Metal building systems shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
- D. Collateral Load:
  - 1. Collateral load in pounds per square foot shall be applied to the entire structure to account for the weight of additional permanent materials other than the building system, such as sprinklers, mechanical systems, electrical systems, hung partitions, and ceilings.
  - 2. This allowance does not include the weight of hung equipment weighing 50 pounds or more.
  - 3. Equipment loads of 50 pounds or more are indicated on the Drawings and the structure shall be strengthened as required.
  - 4. Architect will provide the metal building system manufacturer with the magnitude and approximate location of concentrated loads greater than 50 pounds before design of the building starts.
- E. Auxiliary Loads: Auxiliary loads shall include dynamic loads, such as cranes and material handling systems, and are as listed in the Contract Documents.
- F. Load Combinations: Load combinations used to design primary and secondary structural members shall be in accordance with the governing code.
- G. Thermal Movements: Allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other

detrimental effects. Base engineering calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 deg F (49 deg C), ambient; 180 deg F (82 deg C), material surfaces.
- H. Air Infiltration for Metal Roof Panels: Air leakage through assembly of not more than 0.06 cfm/sq. ft. of roof area when tested according to ASTM E1680 at negative test-pressure difference of 1.57 lbf/sq. ft.
- I. Water Penetration for Metal Wall Panels: No water penetration when tested according to ASTM E331 at a wind-load design pressure of not less than 2.86 lbf/sq. ft.
- J. Wind-Uplift Resistance: Provide metal roof panel assemblies that comply with UL 580 for Class 90.
- K. Thermal Performance: Provide insulated metal panel assemblies with the following maximum U-factors and minimum R-values for opaque elements when tested according to ASTM C1363 or ASTM C518:
1. Metal Roof Panel Assemblies:
    - a. R-Value: 30 for a system height of 9.25".
  2. Metal Wall Panel Assemblies:
    - a. R-Values: 30.86 for 4" thick panels, 00
- L. Energy Performance: Provide roof panels that are listed on the DOE's ENERGY STAR Roof Products Qualified Product List for low -slope roof products.

#### 2.04 STRUCTURAL-STEEL FRAMING

- A. Primary Framing: Manufacturer's standard primary-framing system, designed to withstand required loads and specified requirements. Primary framing includes transverse and lean-to frames; rafter, rake, and canopy beams; sidewall, intermediate, end-wall, and corner columns; and wind bracing.
1. General: Provide frames with attachment plates, bearing plates, and splice members. Factory drill for field-bolted assembly. Provide frame span and spacing indicated.
  2. Rigid Clear-Span Frames: I-shaped frame sections fabricated from shop-welded, built-up steel plates or structural-steel shapes. Interior columns are not permitted.
  3. Rigid Modular Frames: I-shaped frame sections fabricated from shop-welded, built-up steel plates or structural-steel shapes.
  4. Frame Configuration: Gable - Rigid Frame.
  5. Exterior Column Type: Tapered.
  6. Rafter Type: Tapered.
- B. End-Wall Framing: Manufacturer's standard primary end-wall framing fabricated for field-bolted assembly to comply with the following:
1. End-Wall and Corner Columns: I-shaped sections fabricated from structural-steel shapes; shop-welded, built-up steel plates; or C-shaped, cold-formed, structural-steel sheet.
  2. End-Wall Rafters: C-shaped, cold-formed, structural-steel sheet; or I-shaped sections fabricated from shop-welded, built-up steel plates or structural-steel shapes.
- C. Secondary Framing: Manufacturer's standard secondary framing, including purlins, girts, eave struts, flange bracing, base members, gable angles, clips, headers, jambs, and other miscellaneous structural members. Unless otherwise indicated, fabricate framing from either cold-formed, structural-steel sheet or roll-formed, metallic-coated steel sheet, prepainted with coil coating, to comply with the following:
1. Purlins: 'Z'-shaped sections; precision-roll-formed, acrylic-coated G30 galvanized steel in different gauges to meet specified load conditions, minimum 2-1/2-inch wide flanges.

- a. Depth: As needed to comply with system performance requirements.
  - 2. Eave Struts: Unequal-flange, C-shaped sections; precision-roll-formed, acrylic-coated G30 galvanized steel in different gauges to meet specified load conditions; to provide adequate backup for metal panels.
    - a. Depth: as indicated on the drawings.
  - 3. Girts: 'C' or 'Z'-shaped sections; precision-roll-formed, acrylic-coated G30 galvanized steel in different gauges to meet specified load conditions, minimum 2-1/2-inch wide flanges.
    - a. Depth: As needed to comply with system performance requirements.
  - 4. Flange Bracing: Minimum 2 inch by 2 inch by 1/8 inch structural-steel angles or 1 inch diameter, cold-formed structural tubing to stiffen primary-frame flanges.
  - 5. Purlin and Girt Clips: Manufacturer's standard clips fabricated from steel sheet. Provide galvanized clips where clips are connected to galvanized framing members.
  - 6. Framing for Openings: Channel shapes; fabricated from cold-formed, structural-steel sheet or structural-steel shapes. Frame head and jamb of door openings and head, jamb, and sill of other openings.
- D. Canopy Framing: Manufacturer's standard structural-framing system, designed to withstand required loads; fabricated from shop-welded, built-up steel plates or structural-steel shapes. Provide frames with attachment plates and splice members, factory drilled for field-bolted assembly.
- 1. Type: Box Type .
- E. Bracing: Provide adjustable wind bracing as follows:
- 1. Cable: ASTM A475, 1/4-inch (6 mm) diameter, extra-high-strength grade, Class B, zinc-coated, seven-strand steel; with threaded end anchors.
  - 2. Rigid Portal Frames: Fabricated from shop-welded, built-up steel plates or structural-steel shapes to match primary framing; of size required to withstand design loads.
- F. Bolts: Provide plain-finish bolts for structural-framing components that are primed or finish painted. Provide hot-dip galvanized bolts for structural-framing components that are galvanized.
- G. Materials:
- 1. W-Shapes: ASTM A992/A992M; ASTM A572/A572M, Grade 50 or 55; or ASTM A529/A529M, Grade 50 or 55.
  - 2. Channels, Angles, M-Shapes, and S-Shapes: ASTM A36/A36M; ASTM A572/A572M, Grade 50 or 55; or ASTM A529/A529M, Grade 50 or 55.
  - 3. Plate and Bar: ASTM A36/A36M; ASTM A572/A572M, Grade 50 or 55; or ASTM A529/A529M, Grade 50 or 55.
  - 4. Steel Pipe: ASTM A53/A53M, Type E or S, Grade B.
  - 5. Cold-Formed Hollow Structural Sections: ASTM A500/A500M, Grade B or C, structural tubing.
  - 6. Unheaded Anchor Rods: ASTM F 1554, Grade 36.
    - a. Configuration: Straight.
    - b. Nuts: ASTM A563 heavy-hex carbon steel.
    - c. Plate Washers: ASTM A36/A36M carbon steel.
    - d. Washers: ASTM F436/F436M hardened carbon steel.
    - e. Finish: Hot-dip zinc coating, ASTM A153/A153M, Class C.
- H. Finish: Factory primed. Apply specified primer immediately after cleaning and pretreating.
- 1. Prime galvanized members with specified primer after phosphoric acid pretreatment.

## 2.05 METAL ROOF SYSTEM (MR-24)

- A. Metal Roof System: Butler Manufacturing "MR-24®" roof system.

- B. Roof System Design:
  - 1. Design roof panels and liner panels in accordance with AISI North American Specification for the Design of Cold-Formed Steel Structural Members.
  - 2. Design roof paneling system to support design live, snow, and wind loads.
  - 3. Endwall Trim and Roof Transition Flashings: Allow roof panels to move relative to wall panels and/or parapets as roof expands and contracts with temperature changes.
- C. Roof System Performance Testing:
  - 1. UL Wind Uplift Classification Rating, UL 580: Class 90.
  - 2. Structural Performance Under Uniform Static Air Pressure Difference: Test roof system in accordance with ASTM E1592.
  - 3. Roof system has been tested in accordance with U.S. Army Corps of Engineers Unified Facilities Guide Specification Section 076113.
  - 4. FM Global (Factory Mutual):
    - a. Roof system has been tested in accordance with FMRC Standard 4471 and approved as a Class 1 Panel Roof.
    - b. Metal Building System Manufacturer: Provide specific assemblies to meet required wind rating in accordance with FM Global.
    - c. Installation modifications or substitutions can invalidate FM Global approval.
- D. Roof Panels:
  - 1. Factory roll-formed, 24 inches wide, with 2 major corrugations, 2 inches high (2-3/4 inches including seam), 24 inches on center.
  - 2. Flat of the Panel: Cross flutes 6 inches on center, perpendicular to major corrugations in entire length of panel to reduce wind noise.
  - 3. Variable Width Panels:
    - a. For roof lengths not evenly divisible by the 2'-0" panel width, factory-manufactured variable-width (9-inch, 12-inch, 15-inch, 18-inch, and 21-inch-wide) panels shall be used to ensure modular, weathertight roof installation.
    - b. Minimum Length: 15 feet.
    - c. Supply maximum possible panel lengths.
  - 4. Panel Material and Finish:
    - a. 24-gauge galvanized steel, G90 coating; ASTM A653/A653M, G90.
    - b. Paint with exterior colors of "Butler-Cote™" finish system, full-strength, 70 percent "Kynar 500" or "Hylar 5000" fluoropolymer (PVDF) coating.
    - c. PVDF Coating Warranty: Metal building system manufacturer shall warrant coating for 25 years for the following.
      - 1) Not to peel, crack, or chip.
      - 2) Chalking: Not to exceed ASTM D4214, #8 rating.
      - 3) Fading: Not more than 5 color-difference units, ASTM D2244.
  - 5. Use panels of maximum possible lengths to minimize end laps.
  - 6. Extend eave panels beyond structural line of sidewalls.
  - 7. Factory punch panels at panel end to match factory-punched holes in eave structural member.
  - 8. Panel End Splices: Factory punched and factory notched.
  - 9. Panel End Laps: Locate directly over, but not fastened to, a supporting secondary roof structural member and be staggered, to avoid 4-panel lap-splice condition.
  - 10. End Laps: Floating. Allows roof panels to expand and contract with roof panel temperature changes.
  - 11. Self-Drilling Fasteners: Not permitted in weathering membrane of roof system.
  - 12. Ridge Assembly:
    - a. Design ridge assembly to allow roof panels to move lengthwise with expansion and contraction as roof panel temperature changes.
    - b. Factory punch parts for correct field assembly.

- c. Install panel closures and interior reinforcing straps to seal panel ends at ridge.
  - d. Do not expose attachment fasteners on weather side.
  - e. Use lock seam plug to seal lock seam portion of panel.
  - f. High-Tensile Steel Ridge Cover: Span from panel closure to panel closure and flex as roof system expands and contracts.
- E. Insulation System:
  - 1. Roof Insulation System: Butler Manufacturing™ "ThermaLiner™" roof insulation system
    - a. Sub-Structural System:
      - 1) 3-inch nominal zee-shaped members (nominal 0.060-inch-thick, acrylic-coated, galvanized steel), factory punched for specific roof system being installed.
      - 2) Support Brackets: 3-inch, 5-inch, or 8-inch height support zee and provide space for various thicknesses of insulation. Install with self-drilling fasteners through interior liner panel and into building structure.
    - b. Insulation:
      - 1) Unfaced Insulation: NAIMA 202
      - 2) Top Layer of Blanket Insulation: 3-inch-thick insulation installed between roof panels and 3-inch zee
        - (a) Furnish insulation in rolls of 3-foot, 4-foot, 5-foot, or 6-foot width.
      - 3) Bottom Layer of Blanket Insulation: Furnish in rolls of 3-foot, 4-foot, 5-foot, or 6-foot width or 5-foot by 5-foot batts.
        - (a) Thickness of Bottom Layer: 6" (R-19)
      - 4) Zee Member: Insulated using 3/4-inch-nominal-thick extruded polystyrene foam insulation block along each zee location to minimize thermal break between zee and roof panels.
- F. Vapor Retarder:
  - 1. PSK Light Duty (WMP-VR) 0.0015-inch minimum thickness, UV-stabilized, white polypropylene, laminated to 11-pound Kraft paper / metalized polyester and reinforced with glass fiber and polyester scrim.
  - 2. Perm Rating: 0.09.
- G. Interior Liner Panels:
  - 1. Form panels from 0.0149 - inch minimum total coated thickness coated steel with minimum yield strength of 80,000 psi.
  - 2. Painted Panel Finish:
    - a. Exposed Side: 0.15-mil min primer and 0.70-mil minimum interior white polyester paint.
    - b. Unexposed Side: 0.1-mil minimum primer and 0.40 minimum polyester backer
    - c. Panel Dimensions: Nominal 36 inches wide with corrugations 1/2 inches high, 3 inches on center.
  - 3. Factory cut panels to lengths required.
- H. Provision for Expansion and Contraction:
  - 1. Provision for Thermal Expansion Movement of Roof Panels: Clips with movable tab.
    - a. Stainless Steel Tabs: Factory centered on roof clip to ensure full movement in either direction.
    - b. Maximum Force of 8 Pounds: Required to initiate tab movement.
    - c. Each Clip: Accommodates a minimum of 1.25-inch movement in either direction.
  - 2. Roof: Provide for thermal expansion and contraction without detrimental effects on roof panels, with plus or minus 100-degree F temperature difference between interior structural framework of building and of roof panels.
- I. Fasteners:

1. Make connections of roof panels to structural members, except at eaves, with clips with movable stainless steel tabs, seamed into standing seam side lap.
  2. Fasten insulation board, bearing plates, and panel clips to structural members with "Scrubolt™" fasteners in accordance with erection drawings furnished by metal building system manufacturer, using factory-punched or field-drilled holes in structural members.
    - a. Fasteners: Metal-backed rubber washer to serve as torque indicator.
  3. Fasteners penetrating metal membrane at the following locations do not exceed the frequency listed:
    - a. Basic Panel System: 0 per square foot.
    - b. High Eave Trim, No Parapet: 2 per linear foot.
    - c. Exterior Eave Gutter: 2 per linear foot.
    - d. Panel Splices: 2 per linear foot.
    - e. Gable Trim: 0 per linear foot.
    - f. High Eave with Parapet: 0 per linear foot.
    - g. Ridge: 0 per linear foot.
    - h. Low Eave Structural: 1.5 per linear foot.
- J. Accessories:
1. Accessories (i.e., gutters, fascia, and trim): Standard with metal building system manufacturer, unless otherwise noted and furnished as specified.
  2. Metal Coating on Gutters, Downspouts, Gable Trim, and Eave Trim: "Butler-Cote™" finish system, full-strength, 70 percent "Kynar 500" or "Hylar 5000" fluoropolymer (PVDF) coating.
  3. Location of Standard Accessories: Indicated on erection drawings furnished by metal building system manufacturer.
  4. Material used in flashing and transition parts and furnished as standard by metal building system manufacturer may or may not match roof panel material.
    - a. Parts: Compatible and not cause corrosive condition.
    - b. Copper and Lead Materials: Do not use with Galvalume or optional aluminum-coated panels.
- K. Thermal Performance:
1. Determine thermal performance in accordance with ASTM C 1363 and test U-factors for composite roof section.
  2. "Thermax" Insulation Thicknesses: Maximum 4 inches.
- L. Physical Properties:
1. WMP-VR Vapor Retarder:
    - a. Water Vapor Permeance (perm) Rating, ASTM E96/E96M: 0.09.
    - b. Minimum Workability Temperature: 40 degrees F.
  2. Vapor Retarder UL Fire Hazard Classification Ratings, UL 723:
    - a. WMP-VR Vapor Retarder:
      - 1) Flame Spread: 10.
      - 2) Smoke Development: 10.
  3. Insulation Board Facing:
    - a. Water Vapor Permeance (perm) Rating, ASTM E96/E96M: 0.03.
  4. "Thermax" Metal Building Board Insulation:
    - a. Class I Factory Mutual Approval and UL Fire Hazard Classification Ratings, UL 723:
      - 1) Flame Spread: 25 or less.

## 2.06 METAL ROOF PANEL ACCESSORIES

- A. General: Provide complete metal panel assemblies incorporating trim, copings, fasciae, gutters and downspouts, and miscellaneous flashings. Provide required fasteners, closure strips, and sealants as indicated in manufacturer's written instructions.

- B. Flashing and Trim: Match material, thickness, and finish of metal panel face sheet.
- C. Panel Fasteners: Self-tapping screws and other acceptable fasteners recommended by metal panel manufacturer. Provide corrosion-resistant fasteners with heads matching color of metal panels by means of factory-applied coating, with weathertight resilient washers.
- D. Joint Sealers: Provide Tape Mastic Sealants and Concealed Joint Sealants per Section 079200 - JOINT SEALANTS.
- E. Roof Accessories: Approved by metal panel manufacturer. Refer to Section 077200 - ROOF ACCESSORIES - HATCHES, SUPPORTS, AND CURBS for requirements for heat and smoke vents, and preformed flashing sleeves.
- F. Snow Guards: Compatible with standing seam roof and approved by metal panel manufacturer. Refer to Section 077253 - SHEATHING for requirements for snow guards attached to metal roof panels.

#### 2.07 METAL WALL SYSTEM (BUTLER THERMAWALL TM FLAT)

- A. Exterior Metal Wall System: Butler Manufacturing™ “Butler Thermawall TM Flat” wall system.
- B. Wall System Design: Design wall panels in accordance with AISI North American Specification for the Design of Cold-Formed Steel Structural Members.
- C. Wall Panels:
  - 1. Steel-faced, shop-assembled, factory-foamed, insulated panel units.
  - 2. Double tongue-and-groove, side-joint design, with fasteners concealed within side joint.
  - 3. Nominal Thickness: 4 inches.
  - 4. One piece from base to top of wall.
  - 5. Maximum Panel Length: 40 feet.
  - 6. Exterior Face:
    - a. Nominal Width: 36 inches.
    - b. Roll-formed, flat surface from galvanized steel.
    - c. Finish: Non-directional embossed finish.
  - 7. Interior Face: Roll-formed from pre-painted steel with 1/16-inch-deep corrugations on 6-inch centers.
- D. Panel Material and Finish:
  - 1. Corrugated Exterior-Faced Panels: 22-gauge, AZ50 aluminum-zinc coated steel.
  - 2. Interior Face: 26-gauge, AZ50 aluminum-zinc coated steel.
  - 3. Core: Poured-in-place polyurethane foam with a minimum 93 percent closed-cell structure.
  - 4. Exterior Panel Finish: Pre-finished with “Butler-Cote™” finish system, full-strength, 70 percent Kynar 500 fluoropolymer (PVDF) coating in metal building system manufacturer’s standard colors.
  - 5. PVDF Coating Warranty: Metal building system manufacturer shall warrant coating for 25 years for the following.
    - a. Not to peel, crack, or chip.
    - b. Chalking: Not to exceed ASTM D4214, #8 rating.
    - c. Fading: Not more than 5 color-difference units, ASTM D2244.
  - 6. Interior Panel Finish: Paint with USDA-approved interior white polyester paint.
- E. Panel Physical Properties:
  - 1. Calculated U-Value: Based on actual test results from ASTM C 518 of panel core material.

- a. 4-Inch-Thick Panels: 0.034.
- 2. Insulated Panels:
  - a. Factory Mutual Class 1 Rating for wall and ceiling construction FM 4880.
  - b. Guide NYWR, Insulated Wall Construction Subject 1040.
  - c. Surface Burning Characteristics: Panel core (6-inch unfaced) tested in accordance with ASTM E 84.
    - 1) Flame Spread: 25.
    - 2) Smoke Developed: 450.
- F. Fasteners:
  - 1. Base, Top, and Girt Connections and Panel Joint Clip Attachments: #14 self-drilling screws.
    - a. Install additional "Lockrivet" fasteners, if necessary due to wind load.
  - 2. Panel-to-Panel Fasteners:
    - a. Connections: Hidden, eliminating exposed fasteners.
- G. Accessories:
  - 1. Accessories (i.e., doors, windows): Design to fit wall panel system or framed openings and furnish as standard by metal building system manufacturer, unless otherwise noted.
  - 2. Location of Standard Accessories: Indicated on erection drawings furnished by metal building system manufacturer.

## 2.08 METAL WALL PANEL ACCESSORIES

- A. General: Provide complete metal panel assemblies incorporating trim, copings, fasciae, gutters and downspouts, and miscellaneous flashings. Provide required fasteners, closure strips, and sealants as indicated in manufacturer's written instructions.
- B. Flashing and Trim: Match material, thickness, and finish of metal panels.
- C. Panel Clips: ASTM A653/A653M, G90 (Z180) hot-dip galvanized zinc coating, one-piece, configured for concealment in panel joints, and identical to clips utilized in tests demonstrating compliance with performance requirements.
- D. Panel Fasteners: Self-drilling or Self-tapping screws and other acceptable fasteners recommended by metal panel manufacturer. Where exposed fasteners cannot be avoided, supply corrosion-resistant fasteners with heads matching color of metal panels by means of factory-applied coating, with weathertight resilient washers.
- E. Joint Sealers:
  - 1. Sealants: Provide Tape Mastic Sealants, Non-skinning sealants, and Urethane Sealants in accordance with manufacturers standards
  - 2. Vertical Joint Gasket: Manufacturers standard EPDM gasket. Color: As selected by the Architect from the manufacturer's full color offering.
- F. Materials:
  - 1. Polyisocyanurate Insulation: Modified polyisocyanurate foam using a non-CFC blowing agent, foamed-in-place or board type as indicated, with maximum flame-spread and smoke-developed indexes of 25 and 450, respectively.
    - a. Closed-Cell Content: 90 percent when tested according to ASTM D6226.
  - 2. Metallic-Coated Steel Sheet: Restricted-flatness steel sheet, metallic coated by the hot-dip process and prepainted by the coil-coating process to comply with ASTM A755/A755M.
    - a. Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A792/A792M, Class AZ50 coating designation, Grade 40 (Class AZM150 coating designation, Grade 275); structural quality.
    - b. Surface: Smooth, flat finish.

## 2.09 DOORS AND FRAMES

- A. Swinging Personnel Doors and Frames: As specified in Section 081113 - HOLLOW METAL DOORS AND FRAMES.
- B. Finishes for Personnel Doors and Frames:
  - 1. Prime Finish: Factory-apply manufacturer's standard primer immediately after cleaning and pretreating.
- C. Overhead Doors: Specified in Section 083613.
- D. Overhead Door Frame: Manufacturer's standard as indicated on the drawings.

## 2.10 WINDOWS

- A. See Section 085113 - Aluminum Windows for information.

## 2.11 ACCESSORIES

- A. General: Provide accessories as standard with metal building system manufacturer and as specified. Fabricate and finish accessories at the factory to greatest extent possible, by manufacturer's standard procedures and processes. Comply with indicated profiles and with dimensional and structural requirements.
  - 1. Form exposed sheet metal accessories that are without excessive oil-canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
- B. Roof Panel Accessories: Provide components required for a complete metal roof panel assembly including ridge closures, clips, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal roof panels unless otherwise indicated.
  - 1. Closures: Provide closures at ridge roof ventilator openings, fabricated of same material as metal roof panels.
  - 2. Clips: Manufacturer's standard, formed from stainless-steel sheet, designed to withstand negative-load requirements.
  - 3. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum 1 inch thick, flexible closure strips; cut or premolded to match metal roof panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.
- C. Wall Panel Accessories: Provide components required for a complete metal wall panel assembly including clips, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal wall panels unless otherwise indicated.
- D. Flashing and Trim: Formed from 0.034-inch nominal-thickness, metallic-coated steel sheet or aluminum-zinc alloy-coated steel sheet prepainted with coil coating; finished to match adjacent metal panels.
  - 1. Provide flashing and trim as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, corners, bases, framed openings, ridges, and fillers.
  - 2. Opening Trim: Formed from 0.034-inch nominal-thickness, metallic-coated steel sheet or aluminum-zinc alloy-coated steel sheet prepainted with coil coating. Trim head and jamb of door openings, and head, jamb, and sill of other openings.
- E. Gutters: Formed from 0.040 inch nominal-thickness, metallic-coated steel sheet or aluminum-zinc alloy-coated steel sheet prepainted with coil coating; finished to match roof

fascia and rake trim. Match profile of gable trim, complete with end pieces, outlet tubes, and other special pieces as required. Fabricate in minimum 96-inch (2438-mm) long sections, sized according to SMACNA's "Architectural Sheet Metal Manual."

1. Gutter Supports: Fabricated from same material and finish as gutters.
  2. Strainers: Bronze, copper, or aluminum wire ball type at outlets.
- F. Downspouts: Formed from 0.034-inch nominal-thickness, zinc-coated (galvanized) steel sheet or aluminum-zinc alloy-coated steel sheet prepainted with coil coating; finished to match metal wall panels. Fabricate in minimum 10-foot (3-m) long sections, complete with formed elbows and offsets.
1. Mounting Straps: Fabricated from same material and finish as gutters.
- G. Louvers: See Section 089119 for louvers. Provide opening, sill and head flashing as specified in this section to finish each gable end fan opening.
1. Blades: Fixed
  2. Free Area: Not less than 7.0 sq. ft. for 48-inch wide by 48-inch high louver.
  3. Bird Screening: Galvanized steel, 1/2-inch square mesh, 0.041-inch wire; with rewirable frames, removable and secured with clips; fabricated of same kind and form of metal and with same finish as louvers.
    - a. Mounting: Interior face of louvers.
  4. Vertical Mullions: Provide mullions at spacings recommended by manufacturer, or 72 inches o.c., whichever is less.
- H. Materials:
1. Fasteners: Self-tapping screws, bolts, nuts, self-locking rivets and bolts, end-welded studs, and other suitable fasteners designed to withstand design loads. Provide fasteners with heads matching color of materials being fastened by means of plastic caps or factory-applied coating.
    - a. Fasteners for Metal Roof Panels: Self-drilling, Type 410 stainless-steel or self-tapping, Type 304 stainless-steel or zinc-alloy-steel hex washer head, with EPDM washer under heads of fasteners bearing on weather side of metal panels.
    - b. Fasteners for Metal Wall Panels: Self-drilling, Type 410 stainless-steel or self-tapping, Type 304 stainless-steel or zinc-alloy-steel hex washer head, with EPDM sealing washers bearing on weather side of metal panels.
    - c. Fasteners for Flashing and Trim: Blind fasteners or self-drilling screws with hex washer head.
    - d. Blind Fasteners: High-strength aluminum or stainless-steel rivets.
  2. Corrosion-Resistant Coating: Cold-applied asphalt mastic, compounded for 15-mil dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.
  3. Metal Panel Sealants:
    - a. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene-compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape of manufacturer's standard size.
    - b. Joint Sealant: ASTM C920; one-part elastomeric polyurethane or polysulfide; of type, grade, class, and use classifications required to seal joints in metal panels and remain weathertight; and as recommended by metal building system manufacturer.

## 2.12 FABRICATION

- A. General: Design components and field connections required for erection to permit easy assembly.
1. Mark each piece and part of the assembly to correspond with previously prepared erection drawings, diagrams, and instruction manuals.

- B. Metal Panels: Fabricate and finish metal panels at the factory to greatest extent possible, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements. Comply with indicated profiles and with dimensional and structural requirements.
  - 1. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of metal panel.

### PART 3 - EXECUTION

#### 3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with erector present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Before erection proceeds, survey elevations and locations of concrete and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments to receive structural framing, with erector present, for compliance with requirements and metal building system manufacturer's tolerances.
- C. Proceed with erection only after unsatisfactory conditions have been corrected.

#### 3.02 PREPARATION

- A. Clean and prepare surfaces to be painted according to manufacturer's written instructions for each particular substrate condition.
- B. Provide temporary shores, guys, braces, and other supports during erection to keep structural framing secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural framing, connections, and bracing are in place unless otherwise indicated.

#### 3.03 ERECTION OF STRUCTURAL FRAMING

- A. Erect metal building system according to manufacturer's written erection instructions and erection drawings.
- B. Do not field cut, drill, or alter structural members without written approval from metal building system manufacturer's professional engineer.
- C. Set structural framing accurately in locations and to elevations indicated, according to AISC specifications referenced in this Section. Maintain structural stability of frame during erection.
- D. Base and Bearing Plates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials, and roughen surfaces prior to setting plates. Clean bottom surface of plates.
  - 1. Set plates for structural members on wedges, shims, or setting nuts as required.
  - 2. Tighten anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.
  - 3. Promptly pack grout solidly between bearing surfaces and plates so no voids remain. Neatly finish exposed surfaces; protect grout and allow to cure. Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.
- E. Align and adjust structural framing before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that will be in permanent contact with framing. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.

1. Level and plumb individual members of structure.
  2. Make allowances for difference between temperature at time of erection and mean temperature when structure will be completed and in service.
- F. Primary Framing and End Walls: Erect framing level, plumb, rigid, secure, and true to line. Level baseplates to a true even plane with full bearing to supporting structures, set with double-nutted anchor bolts. Use grout to obtain uniform bearing and to maintain a level base-line elevation. Moist-cure grout for not less than seven days after placement.
1. Make field connections using high-strength bolts installed according to RCSC's "Specification for Structural Joints Using ASTM A325 or ASTM A490 Bolts" for bolt type and joint type specified.
    - a. Joint Type: Snug tightened or pretensioned.
- G. Secondary Framing: Erect framing level, plumb, rigid, secure, and true to line. Field bolt secondary framing to clips attached to primary framing.
1. Provide rake or gable purlins with tight-fitting closure channels and fasciae.
  2. Locate and space wall girts to suit openings such as doors and windows.
  3. Locate canopy framing as indicated.
  4. Provide supplemental framing at entire perimeter of openings, including doors, windows, louvers, ventilators, and other penetrations of roof and walls.
- H. Steel Joists: Install joists and accessories plumb, square, and true to line; securely fasten to supporting construction according to SJI's "Standard Specifications and Load Tables for Steel Joists and Joist Girders," joist manufacturer's written instructions, and requirements in this Section.
- I. Bracing: Install bracing in roof and sidewalls where indicated on erection drawings.
1. Tighten rod and cable bracing to avoid sag.
  2. Locate interior end-bay bracing only where indicated.
- J. Framing for Openings: Provide shapes of proper design and size to reinforce openings and to carry loads and vibrations imposed, including equipment furnished under mechanical and electrical work. Securely attach to structural framing.
- K. Erection Tolerances: Maintain erection tolerances of structural framing within AISC 303.

### 3.04 METAL PANEL INSTALLATION, GENERAL

- A. Examination: Examine primary and secondary framing to verify that structural-panel support members and anchorages have been installed within alignment tolerances required by manufacturer.
1. Examine roughing-in for components and systems penetrating metal panels, to verify actual locations of penetrations relative to seams before metal panel installation.
- B. General: Anchor metal panels and other components of the Work securely in place, with provisions for thermal and structural movement.
1. Field cut metal panels as required for doors, windows, and other openings. Cut openings as small as possible, neatly to size required, and without damage to adjacent metal panel finishes.
    - a. Field cutting of metal panels by torch is not permitted unless approved in writing by manufacturer.
  2. Install metal panels perpendicular to structural supports unless otherwise indicated.
  3. Flash and seal metal panels with weather closures at perimeter of openings and similar elements. Fasten with self-tapping screws.
  4. Locate and space fastenings in uniform vertical and horizontal alignment.

5. Locate metal panel splices over, but not attached to, structural supports with end laps in alignment.
  6. Lap metal flashing over metal panels to allow moisture to run over and off the material.
- C. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with corrosion-resistant coating, by applying rubberized-asphalt underlayment to each contact surface, or by other permanent separation as recommended by metal roof panel manufacturer.
- D. Joint Sealers: Install gaskets, joint fillers, and sealants where indicated and where required for weatherproof performance of metal panel assemblies. Provide types of gaskets, fillers, and sealants indicated; or, if not indicated, provide types recommended by metal panel manufacturer.
1. Seal metal panel end laps with double beads of tape or sealant the full width of panel. Seal side joints where recommended by metal panel manufacturer.
  2. Prepare joints and apply sealants to comply with requirements in Section 079200 - JOINT SEALANTS.

### 3.05 METAL ROOF PANEL INSTALLATION

- A. Standing-Seam Metal Roof Panels: Fasten metal roof panels to supports with concealed clips at each standing-seam joint, at location and spacing and with fasteners recommended by manufacturer.

### 3.06 METAL WALL PANEL INSTALLATION

- A. General: Install metal wall panels in orientation, sizes, and locations indicated on Drawings. Install panels perpendicular to girts, extending full height of building, unless otherwise indicated. Anchor metal wall panels and other components of the Work securely in place, with provisions for thermal and structural movement.
1. Unless otherwise indicated, begin metal panel installation at corners with center of rib lined up with line of framing.
  2. Shim or otherwise plumb substrates receiving metal wall panels.
  3. When two rows of metal panels are required, lap panels 4 inches minimum.
  4. When building height requires two rows of metal panels at gable ends, align lap of gable panels over metal wall panels at eave height.
  5. Rigidly fasten base end of metal wall panels and allow eave end free movement due to thermal expansion and contraction. Predrill panels.
  6. Flash and seal metal wall panels with weather closures at eaves, rakes, and at perimeter of all openings. Fasten with self-tapping screws.
  7. Install screw fasteners in predrilled holes.
  8. Install flashing and trim as metal wall panel work proceeds.
  9. Apply elastomeric sealant continuously between metal base channel (sill angle) and concrete, and elsewhere as indicated; or, if not indicated, as necessary for waterproofing.
  10. Align bottom of metal wall panels and fasten with blind rivets, bolts, or self-drilling or self-tapping screws.
  11. Provide weatherproof escutcheons for pipe and conduit penetrating exterior walls.
- B. Metal Wall Panels: Install metal wall panels on exterior side of girts. Attach metal wall panels to supports with fasteners as recommended by manufacturer.
- C. Installation Tolerances: Shim and align metal wall panels within installed tolerance of 1/4 inch in 20 feet, non-accumulative, on level, plumb, and on location lines as indicated, and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

### 3.07 THERMAL INSULATION INSTALLATION

- A. General: Install insulation concurrently with metal panel installation, in thickness indicated to cover entire surface, according to manufacturer's written instructions.
  - 1. Install blankets straight and true in one-piece lengths. Install vapor retarder over insulation, with both sets of facing tabs sealed, to provide a complete vapor retarder.
- B. Blanket Roof Insulation: Comply with the following installation method:
  - 1. Between-Purlin Installation: Extend insulation and vapor retarder between purlins. Carry vapor-retarder-facing tabs up and over purlin, overlapping adjoining facing of next insulation course and maintaining continuity of retarder. Hold in place with bands and crossbands below insulation.

### 3.08 DOOR AND FRAME INSTALLATION

- A. General: Install doors and frames plumb, rigid, properly aligned, and securely fastened in place according to manufacturers' written instructions. Coordinate installation with wall flashings and other components. Seal perimeter of each door frame with elastomeric sealant used for metal wall panels.
- B. Personnel Doors and Frames: Install doors and frames according to ANSI/SDI A250.8. Fit non-fire-rated doors accurately in their respective frames, with the following clearances:
  - 1. Between Doors and Frames at Jambs and Head: 1/8 inch (3 mm).
  - 2. Between Edges of Pairs of Doors: 1/8 inch.
  - 3. At Door Sills with Threshold: 3/8 inch.
  - 4. At Door Sills without Threshold: 3/4 inch.
  - 5. At fire-rated openings, install frames according to, and doors with clearances specified in, NFPA 80.

### 3.09 WINDOW INSTALLATION

- A. Install windows and components to drain condensation, water penetrating joints, and moisture migrating within windows to the exterior.
- B. Mount screens directly to frames with tapped screw clips.

### 3.10 ACCESSORY INSTALLATION

- A. General: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.
  - 1. Install components required for complete metal roof ventilator assemblies, including flashing, rain collars, ridge closures, flashings, sealants, gaskets, fillers, closure strips, and similar items.
  - 2. Install components for complete metal wall sliding door assemblies, including trim, corners, flashings, sealants, gaskets, fillers, closure strips, and similar items.
  - 3. Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with corrosion-resistant coating, by applying rubberized-asphalt underlayment to each contact surface, or by other permanent separation as recommended by manufacturer.
- B. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.

1. Install exposed flashing and trim that is without excessive oil-canning, buckling, and tool marks and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to result in waterproof and weather-resistant performance.
- C. Gutters: Join sections with riveted-and-soldered or lapped-and-sealed joints. Attach gutters to eave with gutter hangers spaced as required for gutter size, but not more than 30 inches o.c. using manufacturer's standard fasteners. Provide end closures and seal watertight with sealant. Provide for thermal expansion.
- D. Downspouts: Join sections with 1-1/2-inch telescoping joints. Provide fasteners designed to hold downspouts securely 1 inch away from walls; locate fasteners at top and bottom and at approximately 60 inches o.c. in between.
  1. Provide elbows at base of downspouts to direct water away from building.
  2. Tie downspouts to underground drainage system indicated.
- E. Louvers: Locate and place louver units level, plumb, and at indicated alignment with adjacent work.
  1. Use concealed anchorages where possible. Provide brass or lead washers fitted to screws where required to protect metal surfaces and to make a weathertight connection.
  2. Provide perimeter reveals and openings of uniform width for sealants and joint fillers.
  3. Protect galvanized- and nonferrous-metal surfaces from corrosion or galvanic action by applying a heavy coating of corrosion-resistant paint on surfaces that will be in contact with concrete, masonry, or dissimilar metals.
  4. Install concealed gaskets, flashings, joint fillers, and insulation as louver installation progresses, where weathertight louver joints are required. Comply with Section 079200 - JOINT SEALANTS for sealants applied during louver installation.

### 3.11 FIELD QUALITY CONTROL

- A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:
  1. Inspection of fabricators.
  2. Steel construction.
- B. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- C. Tests and Inspections:
  1. High-Strength, Field-Bolted Connections: Connections shall be tested and inspected during installation according to RCSC's "Specification for Structural Joints Using ASTM A325 or ASTM A490."
  2. Welded Connections: In addition to visual inspection, field-welded connections shall be tested and inspected according to AWS D1.1/D1.1M and the following inspection procedures, at inspector's option:
    - a. Liquid Penetrant Inspection: ASTM E165/E165M.
    - b. Magnetic Particle Inspection: ASTM E709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration will not be accepted.
    - c. Ultrasonic Inspection: ASTM E164.
    - d. Radiographic Inspection: ASTM E94/E94M.
- D. Product will be considered defective if it does not pass tests and inspections.
- E. Prepare test and inspection reports.

### 3.12 ADJUSTING

- A. Doors: After completing installation, test and adjust doors to operate easily, free of warp, twist, or distortion.
- B. Door Hardware: Adjust and check each operating item of door hardware and each door to ensure proper operation and function of every unit. Replace units that cannot be adjusted to operate as intended.
- C. After completing installation, including work by other trades, lubricate, test, and adjust units to operate easily and be free of warp, twist, or distortion as needed to provide fully functioning units.

### 3.13 CLEANING AND PROTECTION

- A. Repair damaged galvanized coatings on galvanized items with galvanized repair paint according to ASTM A780/A780M and manufacturer's written instructions.
- B. Touchup Painting: After erection, promptly clean, prepare, and prime or reprime field connections, rust spots, and abraded surfaces of prime-painted structural framing, bearing plates, and accessories.
  - 1. Clean and prepare surfaces by SSPC-SP 2, "Hand Tool Cleaning," or by SSPC-SP 3, "Power Tool Cleaning."
  - 2. Apply a compatible primer of same type as shop primer used on adjacent surfaces.
- C. Touchup Painting: Cleaning and touchup painting are specified in Section 099113 - Exterior Painting and 099123 - Interior Painting
- D. Metal Panels: Remove temporary protective coverings and strippable films, if any, as metal panels are installed. On completion of metal panel installation, clean finished surfaces as recommended by metal panel manufacturer. Maintain in a clean condition during construction.
  - 1. Replace metal panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.
- E. Doors and Frames: Immediately after installation, sand rusted or damaged areas of prime coat until smooth and apply touchup of compatible air-drying primer.
  - 1. Immediately before final inspection, remove protective wrappings from doors and frames.
- F. Windows: Clean metal surfaces immediately after installing windows. Avoid damaging protective coatings and finishes. Remove excess sealants, glazing materials, dirt, and other substances. Clean factory-glazed glass immediately after installing windows.
- G. Louvers: Clean exposed surfaces that are not protected by temporary covering, to remove fingerprints and soil during construction period. Do not let soil accumulate until final cleaning.
  - 1. Restore louvers damaged during installation and construction period so no evidence remains of corrective work. If results of restoration are unsuccessful, as determined by Architect, remove damaged units and replace with new units.
    - a. Touch up minor abrasions in finishes with air-dried coating that matches color and gloss of, and is compatible with, factory-applied finish coating.

**END OF SECTION 133419**

## PART 1 - GENERAL

## 1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

## 1.02 SUMMARY

- A. Section includes passenger elevators including but not limited to:
  - 1. Pre-engineered MRL Traction passenger elevator.
  - 2. Elevator Car enclosure, hoistway entrances and signal equipment.
  - 3. MRL Equipment
  - 4. Operation and control systems.
  - 5. Accessibility provisions for physically handicapped persons.
  - 6. Equipment, machines, controls, systems and devices as required for safely operating the specified elevators at their rated capacity and speed.
  - 7. Materials and accessories as required to complete the elevator installation.
  - 8. Inserts mounted in block walls for rail attachments.
  - 9. Furnish elevator hoistbeam and safety tube. Installation by General Contractor.
  - 10. Furnish and install pit ladder.

## 1.03 RELATED SECTIONS:

- A. Section 015000 - Temporary Facilities and Controls: protection of openings and personnel barriers, temporary power and lighting including but not limited to:
  - 1. Removable barricades at all hoistway openings, in compliance with OSHA 29 CFR 1926.502 in addition to any local code requirements.
  - 2. Lifeline attachments capable of withstanding 5000 lb load in accordance with OSHA 29 CFR 1926.502. Provide a minimum of 2 at the top, front of each hoistway
- B. Section 033000 - CAST-IN PLACE CONCRETE for setting sleeves, inserts, and anchoring devices in concrete.
- C. Section 042200 - CONCRETE UNIT MASONRY for setting sleeves, inserts, and anchoring devices and coordinating wall openings for oil line and wiring ducts in masonry and for grouting elevator entrance frames installed in masonry walls.
- D. Section 051200 - Structural Steel Framing for the following:
  - 1. Attachment plates, angle brackets, and other preparation of structural steel for fastening guide-rail brackets.
  - 2. Divider beams.
  - 3. Structural-steel shapes for subsills that are part of steel frame.
- E. Section 055000 - METAL FABRICATIONS for the following:
  - 1. Attachment plates and angle brackets for supporting guide-rail brackets.
  - 2. Divider beams.
  - 3. Hoist beams furnished by Elevator Company, installed by General Contractor.
  - 4. Structural-steel shapes for subsills.
  - 5. Pit ladders.
  - 6. Cants in hoistways made from steel sheet.
- F. Division 07: Waterproofing: waterproofing of elevator pits.

- G. Division 08: Openings: Access Doors: As required for access to governor and/or seismic switch. Access door shall be self-closing, self-locking if necessary and operable from the inside without a key.
- H. Division 09 for finish flooring in elevator cars.
- I. Section 099123 - INTERIOR PAINTING for field painting of hoistway entrance doors and frames.
- J. Section 223500 - for sump pumps, oil interceptors, sumps, and sump covers in elevator pits.
- K. Division 26 for:
  - 1. Smoke detectors in elevator lobbies to initiate emergency recall operation and heat detectors in shafts and machine rooms to disconnect power from elevator equipment before sprinkler activation and for connection to elevator controllers.
  - 2. Providing electrical service to elevator, including fused disconnect switches.
  - 3. Emergency power supply, transfer switch and auxiliary contacts.
  - 4. Convenience outlets and illumination in Machine Room, hoistway and pit.
  - 5. Light outlet in the center of hoistway as indicated by the elevator contractor.
  - 6. Standby Power Supply Systems: emergency generator for elevator operations.
  - 7. Telephone Systems: ADAAG required emergency communications systems.
  - 8. Provision of telephone and convenience outlet on control panel.
- L. Division 23: Heating, Ventilating and Air Conditioning:
  - 1. Heating and Ventilating of hoistways and Machine Rooms.

#### 1.04 REGULATORY REQUIREMENTS

- A. 29 CFR 1926.502 - Fall protection systems criteria and practices; Current Edition.
- B. ADA Standards - Americans with Disabilities Act Accessibility Guidelines.
- C. ASME A17.1 - Safety Code for Elevators and Escalators; 2019.
- D. ICC A117.1 - Accessible and Usable Buildings and Facilities; 2017.
- E. ISO 9001 - Quality management systems -- Requirements; 2015.
- F. NFPA 13 - Standard for the Installation of Sprinkler Systems; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
- G. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
- H. NFPA 80 - Standard for Fire Doors and Other Opening Protectives; 2019.
- I. UL 10B - Standard for Fire Tests of Door Assemblies; Current Edition, Including All Revisions.
- J. ICC A117.1, Buildings and Facilities, Providing Accessibility and Usability for Physically Handicapped People.

#### 1.05 SYSTEM DESCRIPTION

- A. Application: Machine Room Less (MRL).

- B. Machine Location: Top of the hoistway mounted on car and counterweight guide rails.
- C. Control Space Location: Top landing entrance frame.
- D. Elevator Types and Performance Requirements:

|     |                           |                                               |
|-----|---------------------------|-----------------------------------------------|
| 1.  | Quantity of Elevators:    | One (1)                                       |
| 2.  | Elevator Model:           | Kone MonoSpace 300                            |
| 3.  | Operation System:         | Simplex                                       |
|     | Drive:                    | Non-Regenerative                              |
| 4.  | Elevator Number(s):       | Elevator No. No. 1                            |
| 5.  | Service:                  | General Service                               |
| 6.  | Number of stops /opgs.    |                                               |
|     | Elevator No. 1            | Two (2) Stops / Both front                    |
| 7.  | Travel:                   |                                               |
|     | Elevator No. 1            | 14'-0"                                        |
| 8.  | Rated Capacity:           |                                               |
|     | All Elevators             | 2500 lb. capacity                             |
| 9.  | Speed:                    |                                               |
|     | All Elevators             | 150 fpm                                       |
| 10. | Cab Size:                 |                                               |
|     | Elevator No. 1            | 6"-10 5/8" wide by 5'-10 1/16" deep           |
| 11. | Cab Heights:              | All 7'-6" height nominal or as indicated.     |
| 12. | Hoistway Entrance Size:   | All 3'-6" wide x 7'-0" high                   |
| 13. | Door Type:                | Two Speed Side-Slide                          |
| 14. | Power Characteristics:    | 208 volts, 3 Phase, 60 Hz.                    |
| 15. | Seismic:                  | No                                            |
| 16. | Fixture and Button Style: | Stainless Steel 301 Push Buttons.             |
| 17. | Special Operations:       | Fire Service Phase 1 and Fire Service Phase 2 |

E. Ride Quality:

|    |                                 |                                                 |
|----|---------------------------------|-------------------------------------------------|
| 1. | Vertical Vibration (maximum):   | 15 mg                                           |
| 2. | Horizontal Vibration (maximum): | 12 mg                                           |
| 3. | Vertical Jerk (maximum):        | 3 ft/sec <sup>3</sup> (1m/s <sup>3</sup> )      |
| 4. | Acceleration (maximum):         | 1.3 ft/sec <sup>2</sup> (0.4 m/s <sup>2</sup> ) |
| 5. | In Car Noise:                   | 55 dB(A) Maximum                                |
| 6. | Stopping Accuracy:              | ±0.2 inches (5 mm)                              |
| 7. | Starts per hour (maximum):      | 180                                             |

F. Elevator Operation:

- 1. a. Simplex Collective Operation: Using a microprocessor based controller, operation shall be automatic by means of the car and hall buttons. When all calls have been answered, the car shall park at the last landing served.

G. Operating Features - Standard:

- 1. Door Light Curtain Protection
- 2. Static AC Drive
- 3. Phase Monitor Relay
- 4. Cab Overload with Indicator
- 5. Load-weighing

6. Central Alarm
7. Remote Monitoring
8. Firefighter's Operation
9. Automatic Evacuation
  - a. When the main line power is lost for longer than 5 seconds the emergency battery power supply provides power automatically to the elevator controller. If the car is at a floor when the power fails, it remains at that floor, opens its doors, and shuts down. If the car is between floors, it is raised or lowered to the first available landing, opens its doors, and shuts down.
10. Independent Service

#### 1.06 ACTION SUBMITTALS

- A. Comply with Section 013300 - SUBMITTALS.
- B. Product Data: Include capacities, sizes, performances, operations, safety features, finishes, and similar information. Include product data for car enclosures, hoistway entrances, and operation, control, and signal systems.
- C. Shop Drawings:
  1. Include plans, elevations, sections, and large-scale details indicating service at each landing, pit and hoistway, erection and anchorage, details of assembly and coordination with building structure, relationships with other construction, and locations of equipment.
  2. Include equipment arrangements in the control space, pit and hoistway.
  3. Include large-scale layout of car-control station.
  4. Indicate floors served, travel distances, maximum dynamic and static loads imposed on building structure at points of support, and maximum and average power demands.
  5. Indicate electrical power requirements, Horsepower, starting current, running current, machine and control heat release and branch circuit protection devices recommended.
- D. Samples for Initial Selection: For finishes involving color selection such as powder coating, plastic laminates, metals and other exposed finishes requiring selection.
- E. Operation and Maintenance Manual: Submit manufacturer/installer's operation and maintenance manual; including operation, maintenance, adjustment, and cleaning instructions; trouble shooting guide; renewal parts catalogs; and electrical wiring diagrams.
- F. Warranty: Submit manufacturer/installer's standard warranty.

#### 1.07 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Manufacturer Certificates: Signed by elevator manufacturer certifying that hoistway, pit, and machine room layout and dimensions, as shown on Drawings, and electrical service including standby power generator, as shown and specified, are adequate for elevator system being provided.
- C. Sample Warranty: For special warranty.

#### 1.08 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For elevators to include in emergency, operation, and maintenance manuals, wiring diagrams and Parts list with recommended parts inventory.

1. In addition to items specified in Section 017823 - OPERATING AND MAINTENANCE DATA include diagnostic and repair information available to manufacturer's and Installer's maintenance personnel.
- B. Inspection and Acceptance Certificates and Operating Permits: As required by authorities having jurisdiction for normal, unrestricted elevator use.

#### 1.09 QUALITY ASSURANCE

- A. Manufacturer Qualifications: An approved manufacturer with minimum fifteen (15) years experience in manufacturing, installing, and servicing elevators of the type required for the project.
  1. Must be the manufacturer of the power unit, controller, signal fixtures, door operators cab, entrances, and all other major parts of the elevator operating equipment.
    - a. The major parts of the elevator equipment shall be manufactured in the United States, and not be an assembled system.
    - b. All safety components must be certified by a qualified 3rd party certification body (ie. Safety, governor, brakes, rope grippers, ascending car protection, and door locks).
  2. The manufacturer shall have a documented, on-going quality assurance program.
  3. ISO 9001:2000 Manufacturer Certified
  4. ISO-14001:2004 Environmental Management System Certified.
- B. Installer Qualifications: Elevator manufacturer or an authorized representative who is trained and approved by manufacturer. Installer shall have a least fifteen (15) years of satisfactory experience installing elevators equal in scope, character and performance to the project elevators.
- C. Fire-rated Entrance Assemblies: Opening protective assemblies including frames, hardware, and operation shall comply with ASTM E2074, CAN4-S104 (ULC-S104), UL 10B, and NFPA 80. Provide entrance assembly units bearing Class B or 1 1/2 hour label by a Nationally Recognized Testing Laboratory.
- D. Inspection and testing: Elevator Installer shall obtain and pay for all required inspections, tests, permits and fees for elevator installation.
  1. Arrange for inspections and make required tests.
  2. Deliver to the Owner upon completion and acceptance of elevator work.

#### 1.10 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle materials, components and equipment in manufacturer's protective packaging. Store materials, components, and equipment off of ground, under cover, and in a dry location.
- B. Manufacturer will deliver elevator materials, components and equipment and the contractor is responsible to provide secure and safe storage on job site in accordance with manufacturer/installer's instructions.
- C. Handling: Protect materials during handling and installation to prevent damage.

#### 1.11 PROJECT CONDITIONS

- A. Prohibited Use: Elevators shall not be used for temporary service or for any other purpose during the construction period before Substantial Completion and acceptance by the purchaser unless agreed upon by Elevator Contractor and General Contractor with signed temporary agreement.

- B. General Construction Contractor shall coordinate the provisions for temporary electric and GFCI-protected electricity to be available for the installation of elevator components.
- C. General Construction Contractor shall provide a temporary work platform at the top floor of the hoistway compliant with applicable codes and in accordance with the layout drawing specification provided by the approved elevator manufacturer.

#### 1.12 COORDINATION

- A. Coordinate installation of sleeves, block outs, elevator equipment with integral anchors, and other items that are embedded in concrete or masonry for elevator equipment. Furnish templates, sleeves, elevator equipment with integral anchors, and installation instructions and deliver to Project site in time for installation.
- B. Coordinate locations and dimensions of other work relating to the elevators including pit ladders; sumps and floor drains in pits; entrance subsills; electrical service; and electrical outlets, lights, and switches in hoistways, and pits.
- C. Prohibited Use: Elevators shall not be used for temporary service or for any other purpose during the construction period before Substantial Completion and acceptance by the purchaser unless agreed upon by Elevator Contractor and General Contractor with signed temporary agreement.

#### 1.13 WARRANTY

- A. Manufacturer's Special Warranty: Manufacturer agrees to repair, restore, or replace elevator work that fails in materials or workmanship within specified warranty period.
  - 1. Failures include, but are not limited to, operation or control system failure, including excessive malfunctions; performances below specified ratings; excessive wear; unusual deterioration or aging of materials or finishes; unsafe conditions; need for excessive maintenance; abnormal noise or vibration; and similar unusual, unexpected, and unsatisfactory conditions.
  - 2. Warranty Period: One (1) year from date of Substantial Completion.

#### 1.14 MAINTENANCE

- A. Furnish maintenance and 24-hour, 7 days a week call back service for a period of 12 months for each elevator from date of Substantial Completion during normal working hours, excluding callbacks. Service shall consist of periodic examination of the equipment, adjustment, lubrication, cleaning, supplies and parts to keep the elevators in proper operation.
  - 1. Manufacturer shall have a service office and full time service personnel within a 100 mile radius of the project site.
  - 2. Elevator maintenance service shall be performed by elevator manufacturer/installer.
- B. Elevator Control System:
  - 1. Include built-in remote diagnostic module to relay constant status of elevators and control system to a 24-hour, 7-days-a-week central-monitoring facility.
  - 2. Remote Monitoring Device: Transmit information on current status of elevators, including malfunctions, system errors, and shutdown.

## PART 2 - PRODUCTS

## 2.01 MANUFACTURERS

- A. Manufacturer: Subject to compliance with requirements, provide products by Kone Elevator 4225 Naperville Road, Lisle, IL 60532. Phone (630) 577-1650. Website [www.kone.us](http://www.kone.us).
  - 1. Architect approved equivalent.
- B. Source Limitations: Obtain elevators from single manufacturer.
  - 1. Major elevator components, controllers, signal fixtures, door operators, car frames, cars, and entrances, shall be manufactured by single manufacturer.
- C. Elevator shall be installed by elevator manufacturer or an manufacturers approved / licensed installer.

## 2.02 MATERIALS, GENERAL

- A. All Elevator Cab materials including frame, buttons, lighting, wall and ceiling assembly, laminates and carpet shall have an EPD and an HPD and shall be as selected by the Interior Designer.
- B. Colors, patterns, and finishes: As selected by the Architect or Interior Designer from manufacturer's standard colors, patterns, and finish charts.
- C. Steel:
  - 1. Shapes and bars: Carbon.
  - 2. Sheet: Cold-rolled steel sheet, commercial quality, Class 1, matte finish.
  - 3. Finish: Factory-applied baked enamel.
- D. Plastic laminate: Decorative high-pressure type, complying with NEMA LD3, Type GP-50 General Purpose Grade, nominal 0.050" thickness. Laminate selection shall be based on elevator manufacture's standard selections.
- E. Floor Finish: By others. See Division 09 and indicated finish on the drawings.

## 2.03 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Comply with ASME A17.1.
- B. Accessibility Requirements: Comply with Section 407 in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines and with ICC A117.1.

## 2.04 EQUIPMENT: CONTROL COMPONENTS AND CONTROL SPACE

- A. Controller: Provide microprocessor based control system to perform all of the functions of safe elevator operation, as well as perform car and group operational control.
  - 1. All high voltage (110v or above) contact points inside the inspection and test panel shall be protected from accidental contact in a situation where the access panels are open.
  - 2. The controller shall be distributed throughout the elevator system located in the overhead, cab and inspection and test panel. The inverter will be mounted in the overhead adjacent to the hoist machine and an inspection and test panel will be located in the door jamb at the top floor or one floor below the top floor. No elevator equipment mechanical rooms or closets are required.

3. Provide multi-bus control architecture to reduce cabling, material and waste.
- B. Drive: Provide a Variable Voltage Variable Frequency AC Closed Loop drive system. Provide stable start without high peak current, quickly reaching a low energy consumption level.
- C. Inspection and Test Panel: Integrated control equipment, main inspection and test panel in door frame at top level served or at one floor below the top level served.

## 2.05 EQUIPMENT: HOISTWAY COMPONENTS

- A. Machine:
  1. Gearless asynchronous AC motor with integral drive sheave, service and emergency brakes.
  2. Design machine to enable direct power transfer, thereby avoiding loss of power.
  3. Design machine to be compact, lightweight and durable to optimize material usage and save space.
  4. Mount to structural support channels on top of guide rail system as applicable in hoistway overhead.
- B. Governor:
  1. Tension type over-speed governor with remote manual reset.
  2. Mount to structural support channels as applicable in hoistway overhead.
- C. Buffers, Car and Counterweight: Compression spring type buffers to meet code.
- D. Hoistway Operating Devices:
  1. Emergency Stop switch in the pit.
  2. Terminal stopping switches.
  3. Emergency stop switch on the machine.
- E. Positioning System: System consisting of proximity sensors and door zone vanes.
- F. Guide Rails and Attachments: Provide Tee-section steel rails with brackets and fasteners. Side counterweight arrangements shall have a dual purpose bracket that combines both counterweight guide rails, and one of the car guide rails to building fastening.
- G. Suspension System: Industry standard steel wire rope.
- H. Governor rope: Steel wire rope with 6 mm diameter.

## 2.06 EQUIPMENT: HOISTWAY ENTRANCES

- A. Hoistway Doors and Frames:
  1. UL rated with required fire rating.
  2. Doors: Rigid flush panel construction with reinforcement ribs.
  3. Frames: Securely fasten at corners to form unit frame. Frames shall be bolted.
- B. Finish:
  1. Exposed Areas of Corridor Frames: #4 Brushed Stainless Steel - All Floors
  2. Doors: #4 Brushed Stainless Steel - All Floors
  3. Sills: Aluminum - All Floors
- C. Entrance Markings and Jamb Plates: Provide standard entrance jamb tactile markings on both jambs, at all floors. Plate Mounting: Refer to manufacturer drawings.

## 2.07 EQUIPMENT: CAR COMPONENTS

- A. Car Frame and Safety: Provide car frame with adequate bracing to support the platform and car enclosure. The safety shall be integral to the car frame and shall be flexible guide clamp type.
- B. Platform: Provide platform of steel construction with plywood subfloor and aluminum threshold.
- C. Car Guides: Provide sliding guide shoes mounted to top and bottom of both car and counterweight frame. Arrange each guide shoe assembly to maintain constant contact on the rail surfaces. Provide retainers in areas with Seismic design requirements.
- D. Provide central guiding system to reduce mechanical friction and energy consumption.
- E. Steel Cab:
  - 1. Fire rating: Provide Class B fire rating for cab, or Class A fire rating where required by local Code.
  - 2. Car wall finish: Wood Laminate, final color to be determined by AOR and owner for Elevator(s) No. 1.
  - 3. Base and frieze: #4 Brushed Stainless Steel.
  - 4. Car front finish: #4 Brushed Stainless Steel.
  - 5. Car door finish: #4 Brushed Stainless Steel on Cab side, Baked Enamel on Lobby side. Color to be determine by Architect from Manufacturer's full range.
  - 6. Ceiling: Canopy ceiling, Rectangular, LED Spotlights (CL94\*\*) Brushed Stainless Steel (4SS)
  - 7. Handrail: Provide 1 1/2 inch Round on side and rear walls. Handrails shall have a #4 Brushed Stainless Steel finish.
  - 8. Flooring: See Finish Schedule. Note: Not to exceed 1/2" finished depth and 3lbs/sqft.
  - 9. Ventilation: Manufacturer's standard cab fan.
  - 10. Emergency Car Lighting: Provide an emergency power unit employing a 12 volt sealed rechargeable battery and static circuits to illuminate the elevator car and provide current to the alarm bell in the event of building power failure.
  - 11. Emergency Siren: Provide siren mounted on top of the car that is activated when the Alarm button in the car operating panel is engaged. Siren shall have rated sound pressure level of 80 dB(A) at a distance of three feet from device. Siren shall respond with a delay of not more than one second after activation of alarm button.
  - 12. Emergency Exit Switch: Provide an electrical contact to open the safety circuit when the emergency car top exit is opened. When the exit door is opened, the top exit switch shall signal the control and the car will be unable to move.
  - 13. Emergency Exit Lock: Provide an emergency exit lock where required by local code.

## 2.08 DOOR OPERATOR AND REOPENING DEVICES

- A. Door Operator: Provide a closed loop VVVF high performance door operator with frequency controlled drive for fast and reliable operation to open and close the car and hoistway doors simultaneously. Door movement shall be cushioned at both limits of travel. Electro-mechanical interlock shall be provided at each hoistway entrance to prevent operation of the elevator unless all doors are closed and locked. An electric contact shall be provided on the car at each car entrance to prevent the operation of the elevator unless the car door is closed.
- B. In case of interruption or failure of electric power, the doors can be readily opened by hand from within the car, in accordance with applicable code. Provide emergency devices and keys for opening doors from the landing as required by local code.

- C. Doors shall open automatically when the car has arrived at or is leveling at the respective landings. Doors shall close after a predetermined time interval or immediately upon pressing of a car button. Provide door open button in the car operating panel. Momentary pressing of this button shall reopen the doors and reset the time interval.
- D. Provide door hangers and tracks for each car and hoistway door. Contour tracks to match the hanger sheaves. Design hangers for power operation with provisions for vertical and lateral adjustment. Hanger sheaves shall have polyurethane tires and pre-lubricated sealed for life bearings.
- E. Electronic Door Safety Device: Equip car doors with concealed transmitter and receiver infrared beam devices to detect presence of object in process of passing through hoistway entrance and car doorway (light curtain device).
  - 1. Use multi-beam scanning without moving parts to detect obstructions in door opening.
  - 2. Detector Device: Prevent doors from closing, or if they have already started closing, cause doors to reopen and remain open while object is within detection zone.
  - 3. Horizontal Beams: Minimum of 33 infra red beams to fill doorway from ground level to a height of 6 feet.

## 2.09 EQUIPMENT: SIGNAL DEVICES AND FIXTURES

- A. Car Operating Panel: Provide a car operating panel with all push buttons, key switches and message indicators for elevator operation. Fixture finish to be Brushed Stainless Steel.
  - 1. Main Flush mounted car operating panel shall contain a bank of round, mechanical, illuminated buttons marked to correspond to landings served, emergency call button, door open button, door close button, and key switches for lights, inspection, and exhaust fan. Buttons have Amber Dot Matrix illumination (halo). All buttons to have raised text and Braille marking on left hand side. The car operating display panel shall be Amber Dot Matrix. All texts, when illuminated, shall be Amber Dot Matrix. The car operating panel shall have a Brushed Stainless Steel finish.
  - 2. Comply with handicap requirements.
  - 3. Emergency Buttons: Provide in accordance with code. Emergency alarm button, door open and door close buttons.
- B. Features of the Car Operating Panel Shall Include:
  - 1. Audible chime to signal that the car is either stopping at or passing a floor served by the elevator.
  - 2. Raised markings and Braille provided to the left hand side of each push button.
  - 3. Car Lantern: Provide LED illuminated car lantern with direction arrows to comply with local code when hall lanterns are not provided.
  - 4. Door open and close push buttons.
  - 5. Firefighter's hat and Phase 2 Key-switch
  - 6. Inspection key-switch.
  - 7. Key-switch for optional Independent Service Operation
  - 8. Illuminated alarm button with raised marking.
  - 9. Elevator Data Plate marked with elevator capacity and car number.
  - 10. Help Button: Activation of help button will initiate two-way communication between car and a location inside the building, switching over to alternate location if call is unanswered, where personnel are available to take the appropriate action. Visual indicators are provided for call initiation and call acknowledgement.
- C. Hall Fixtures: Provide hall fixtures with necessary push buttons and key switches for elevator operation. Hall fixtures shall have a Brushed Stainless Steel finish.
  - 1. Push buttons: Metallic tactile push buttons, up button and down button at intermediate floors, single button at each terminal floor.

2. Height: Comply with handicap requirements.
  3. Illumination: Illuminating using long-lasting low power LEDs.
- D. Hall Lanterns and Position Indicators.
1. LED illuminated direction arrows with audible and visible call acknowledgement.
- E. Car Lantern and Chime: A directional lantern visible from the corridor shall be provided in the car entrance. When the car stops and the doors are opening, the lantern shall indicate the direction in which the car is to travel, and a chime will sound. The chime will sound once for up and twice for down. The car riding lantern face plate shall have a Brushed Stainless Steel finish
- F. Hoistway access switches: Provide key-switch at top and/or bottom floor in entrance jamb as required by local code.
- G. Firefighter's Phase 1 Service: Key switch in brushed stainless steel cover plate.
- H. Fixture Cover Plates: For push buttons, hall lanterns and position indicators, resistant white back-printed glass, no screws required for mounting. Provide stainless steel cover plates for Firefighter's Phase I switch and hoistway access switches, with tamper resistant screws in same finish.
- I. Mounting: Mount hall fixtures in entrance frames.

## 2.10 DOOR REOPENING DEVICES

- A. Infrared Array: Provide door reopening device with uniform array of 36 or more microprocessor-controlled, infrared light beams projecting across car entrance. Interruption of one or more light beams shall cause doors to stop and reopen.
- B. Nudging Feature: After car doors are prevented from closing for predetermined adjustable time, through activating door reopening device, a loud buzzer shall sound and doors shall begin to close at reduced kinetic energy.

## PART 3 - EXECUTION

### 3.01 EXAMINATION

- A. Before starting elevator installation, inspect hoistway, hoistway openings, pits and machine rooms/control space, as constructed and verify all critical dimensions, and examine supporting structures and all other conditions under which elevator work is to be installed. Do not proceed with elevator installation until unsatisfactory conditions have been corrected in a manner acceptable to the installer.
- B. Verify hoistway is clear and plumb, with variations not to exceed -0 to +1 inch at any point. Verify projections greater than 4" must be beveled not less than 75 degrees from horizontal. No negative tolerance is permitted for minimum hoistway dimensions.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work. Proceed with installation only after unsatisfactory conditions have been corrected.
- D. Installation constitutes acceptance of existing conditions and responsibility for satisfactory performance.

### 3.02 INSTALLATION

- A. Install elevator systems components and coordinate installation of hoistway wall construction.

1. Work shall be performed by competent elevator installation personnel in accordance with ASME A17.1, manufacturer's installation instructions and approved shop drawings.
  2. Comply with the National Electrical Code for electrical work required during installation.
- B. Coordination: Coordinate elevator work with the work of other trades, for proper time and sequence to avoid construction delays. Use benchmarks, lines, and levels designated by the Contractor, to ensure dimensional coordination of the work.
- C. Alignment: Coordinate installation of hoistway entrances with installation of elevator guide rails for accurate alignment of entrances with cars. Where possible, delay final adjustment of sills and doors until car is operable in shaft. Reduce clearances to minimum safe, workable dimensions at each landing. Verify hoistway is clear and plumb, with variations not to exceed -0 to +1 inch at any point. Verify projections greater than 4" must be beveled not less than 75 degrees from horizontal. No negative tolerance is permitted for minimum hoistway dimensions.
- D. Lubricate operating parts of systems as recommended by manufacturers.
- E. Leveling Tolerance: 1/4 inch, up or down, regardless of load and travel direction.
- F. Set sills flush with finished floor surface at landing. Fill space under sill solidly with non-shrink, nonmetallic grout.
- G. Locate hall signal equipment for elevators as follows, unless otherwise indicated:
1. Place hall lanterns either above or beside each hoistway entrance.
  2. Mount hall lanterns at a minimum of 72 inches above finished floor.

### 3.03 FIELD QUALITY CONTROL

- A. Acceptance Testing: On completion of elevator installation and before permitting elevator use (either temporary or permanent), perform acceptance tests as required and recommended by ASME A17.1 and by governing regulations and agencies.
- B. Advise Owner, Architect, and authorities having jurisdiction in advance of dates and times that tests are to be performed on elevators.

### 3.04 ADJUSTING

- A. Make necessary adjustments of operating devices and equipment to ensure elevator operates smoothly and accurately.
- B. Adjust elevators for smooth acceleration and deceleration of car so not to cause passenger discomfort.
- C. Adjust doors to prevent opening of doors at landing on corridor side, unless car is at rest at that landing, or is in leveling zone and stopping at that landing.
- D. Adjust automatic floor leveling feature at each floor to within 1/4 inch of landing.

### 3.05 PROTECTION

- A. Temporary Use: Limit temporary use for construction purposes to one elevator. Comply with the following requirements for elevator used for construction purposes:
1. Provide car with temporary enclosure, either within finished car or in place of finished car, to protect finishes from damage.
  2. Provide strippable protective film on entrance and car doors and frames.
  3. Provide padded wood bumpers on entrance door frames covering jambs and frame faces.

4. Provide other protective coverings, barriers, devices, signs, and procedures as needed to protect elevator and elevator equipment.
  5. Do not load elevators beyond their rated weight capacity.
  6. Engage elevator Installer to provide full maintenance service. Include preventive maintenance, repair or replacement of worn or defective components, lubrication, cleanup, and adjustment as necessary for proper elevator operation at rated speed and capacity. Provide parts and supplies same as those used in the manufacture and installation of original equipment.
  7. Engage elevator Installer to restore damaged work, if any, so no evidence remains of correction. Return items that cannot be refinished in the field to the shop, make required repairs and refinish entire unit, or provide new units as required.
- B. At time of Substantial Completion of elevator work, or portion thereof, provide suitable protective coverings, barriers, devices, signs, or other such methods or procedures to protect elevator work from damage or deterioration. Maintain protective measures throughout remainder of construction period.

### 3.06 DEMONSTRATION

- A. Instruct Owner's personnel in proper use, operations, adjustments, and daily maintenance of elevators. Review emergency provisions, including emergency access and procedures to be followed at time of failure in operation and other building emergencies. Train Owner's personnel in normal procedures to be followed in checking for sources of operational failures or malfunctions, adjusting and maintaining.
- B. Make a final check of each elevator operation, with Owner's personnel present, immediately before date of substantial completion. Determine that control systems and operating devices are functioning properly.
- C. Check operation of each elevator with Owner's personnel present before date of Substantial Completion and again not more than one month before end of warranty period. Determine that operation systems and devices are functioning properly.

### 3.07 CLEANING

- A. Before final acceptance, remove protection from finished surfaces and clean and polish surfaces in accordance with manufacturer's recommendations for type of material and finish provided. Stainless steel shall be cleaned with soap and water and dried with a non-abrasive surface; shall not be cleaned with bleached-based cleansers.
- B. At completion of elevator work, remove tools, equipment, and surplus materials from site. Clean equipment rooms and hoist way. Remove trash and debris.

### 3.08 MAINTENANCE

- A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service shall include 12 months full maintenance by skilled employees of elevator Installer. Include monthly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper elevator operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.
1. Perform maintenance during normal working hours.
  2. Perform emergency callback service during normal working hours with response time of two hours or less.
  3. Include 24-hour-per-day, 7-day-per-week emergency callback service with response time of two hours or less.

**END OF SECTION 142100.11**

## PART 1 GENERAL

## 1.01 SECTION INCLUDES

- A. Above ground piping.
- B. Buried piping.
- C. Escutcheons.
- D. Mechanical couplings.
- E. Pipe hangers and supports.
- F. Pipe sleeves.
- G. Pipe sleeve-seal systems.

## 1.02 RELATED REQUIREMENTS

- A. Section 078400 - Firestopping.
- B. Section 099123 - Interior Painting: Preparation and painting of interior fire protection piping systems.
- C. Section 210523 - General-Duty Valves for Water-Based Fire-Suppression Piping.
- D. Section 210553 - Identification for Fire Suppression Piping and Equipment: Piping identification.
- E. Section 211300 - Fire-Suppression Sprinkler Systems: Sprinkler systems design.

## 1.03 REFERENCE STANDARDS

- A. ASME A112.18.1 - Plumbing Supply Fittings; 2018, with Errata.
- B. ASME BPVC-IX - Qualification Standard for Welding, Brazing, and Fusing Procedures; Welders; Brazers; and Welding, Brazing, and Fusing Operators - Welding Brazing and Fusing Qualifications; 2019.
- C. ASME B16.1 - Gray Iron Pipe Flanges and Flanged Fittings: Classes 25, 125, and 250; 2015.
- D. ASME B16.3 - Malleable Iron Threaded Fittings: Classes 150 and 300; 2016.
- E. ASME B16.4 - Gray Iron Threaded Fittings: Classes 125 and 250; 2016.
- F. ASME B16.5 - Pipe Flanges and Flanged Fittings NPS 1/2 Through NPS 24 Metric/Inch Standard; 2017.
- G. ASME B16.9 - Factory-Made Wrought Buttwelding Fittings; 2018.
- H. ASME B16.11 - Forged Fittings, Socket-welding and Threaded; 2016 (Errata 2017).
- I. ASME B16.25 - Buttwelding Ends; 2017.
- J. ASME B36.10M - Welded and Seamless Wrought Steel Pipe; 2018.

- K. ASTM A47/A47M - Standard Specification for Ferritic Malleable Iron Castings; 1999, with Editorial Revision (2018).
- L. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless; 2018.
- M. ASTM A234/A234M - Standard Specification for Piping Fittings of Wrought Carbon Steel and Alloy Steel for Moderate and High Temperature Service; 2019.
- N. ASTM A536 - Standard Specification for Ductile Iron Castings; 1984 (Reapproved 2019)e1.
- O. ASTM A795/A795M - Standard Specification for Black and Hot-Dipped Zinc-Coated (Galvanized) Welded and Seamless Steel Pipe for Fire Protection Use; 2021.
- P. ASTM C592 - Standard Specification for Mineral Fiber Blanket Insulation and Blanket-Type Pipe Insulation (Metal-Mesh Covered) (Industrial Type); 2016.
- Q. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2019b.
- R. ASTM E814 - Standard Test Method for Fire Tests of Penetration Firestop Systems; 2013a (Reapproved 2017).
- S. AWS A5.8M/A5.8 - Specification for Filler Metals for Brazing and Braze Welding; 2011 (Amended 2012).
- T. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2015, with Errata (2016).
- U. AWWA C105/A21.5 - Polyethylene Encasement for Ductile-Iron Pipe Systems; 2010.
- V. AWWA C110/A21.10 - Ductile-Iron and Gray-Iron Fittings; 2012.
- W. AWWA C151/A21.51 - Ductile-Iron Pipe, Centrifugally Cast; 2017, with Errata (2018).
- X. AWWA C606 - Grooved and Shouldered Joints; 2015.
- Y. FM (AG) - FM Approval Guide; current edition.
- Z. ITS (DIR) - Directory of Listed Products; current edition.
- AA. NFPA 13 - Standard for the Installation of Sprinkler Systems; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
- AB. UL (DIR) - Online Certifications Directory; Current Edition.
- AC. UL 723 - Standard for Test for Surface Burning Characteristics of Building Materials; Current Edition, Including All Revisions.

#### 1.04 SUBMITTALS

- A. See Section 013000 - Administrative Requirements for submittal procedures.

#### 1.05 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with minimum three years documented experience.

- B. Installer Qualifications: Company specializing in performing work of the type specified in this section.
  - 1. Minimum three years experience.
- C. Comply with FM (AG), UL (DIR), and ITS (DIR) or Warnock Hersey requirements.
- D. Valves: Bear FM (AG), UL (DIR), and ITS (DIR) or Warnock Hersey product listing label or marking. Provide manufacturer's name and pressure rating marked on valve body.
- E. Clean equipment, pipes, valves, and fittings of grease, metal cuttings, and sludge that may have accumulated from the installation and testing of the system.

#### 1.06 DELIVERY, STORAGE, AND HANDLING

- A. Deliver and store valves in shipping containers, with labeling in place.
- B. Provide temporary protective coating on cast iron and steel valves.
- C. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.

### PART 2 PRODUCTS

#### 2.01 GENERAL REQUIREMENTS

- A. Sprinkler-based System:
  - 1. Comply with NFPA 13.
  - 2. See Section 211300.
- B. Welding Materials and Procedures: Comply with ASME BPVC-IX.
- C. Provide system pipes, fittings, sleeves, escutcheons, seals, and other related accessories.

#### 2.02 BURIED PIPING

- A. Steel Pipe: ASTM A53/A53M Schedule 40 or ASTM A795/A795M Standard Weight, black, with AWWA C105/A21.5 polyethylene jacket, or double layer, half-lapped polyethylene tape.
  - 1. Steel Fittings: ASME B16.9, wrought steel, butt welded, ASME B16.25, butt weld ends, ASTM A234/A234M, wrought carbon steel or alloy steel, ASME B16.5, steel flanges and fittings, or ASME B16.11, forged steel socket welded and threaded; with double layer, half-lapped polyethylene tape.
  - 2. Joints: Welded in accordance with AWS D1.1/D1.1M.

#### 2.03 ABOVE GROUND PIPING

- A. Steel Pipe: ASTM A795 Schedule 40, black.
  - 1. Steel Fittings: ASME B16.5, steel flanges and fittings.
  - 2. Cast Iron Fittings: ASME B16.1, flanges and flanged fittings and ASME B16.4, threaded fittings.
  - 3. Malleable Iron Fittings: ASME B16.3, threaded fittings and ASTM A47/A47M.
  - 4. Mechanical Grooved Couplings: Malleable iron housing clamps to engage and lock, "C" shaped elastomeric sealing gasket, steel bolts, nuts, and washers; galvanized for galvanized pipe.

5. Mechanical Formed Fittings: Carbon steel housing with integral pipe stop and O-ring pocked and O-ring, uniformly compressed into permanent mechanical engagement onto pipe.

#### 2.04 PIPE SLEEVES

- A. Vertical Piping:
  1. Sleeve Length: 1 inch (25 mm) above finished floor.
  2. Provide sealant for watertight joint.
  3. Drilled Penetrations: Provide 1-1/2 inch (40 mm) angle ring or square set in silicone adhesive around penetration.
- B. Plastic, Sheet Metal, or Moisture-Resistant Fiber: Pipe passing through interior walls, partitions, and floors, unless steel or brass sleeves are specified below.
- C. Pipe Passing Through Below Grade Exterior Walls:
  1. Zinc-coated or cast-iron pipe.
  2. Provide watertight space with link rubber or modular seal between sleeve and pipe on both pipe ends.
- D. Clearances:
  1. Wall, Floor, Floor, Partitions, and Beam Flanges: 1 inch (25 mm) greater than external; pipe diameter.
  2. Rated Openings: Caulked tight with firestopping material complying with ASTM E814 in accordance with Section 078400 to prevent the spread of fire, smoke, and gases.

#### 2.05 PIPE SLEEVE-SEAL SYSTEMS

- A. Manufacturers:
  1. Advance Products & Systems, Inc; \_\_\_\_\_: [www.apsonline.com/#sle](http://www.apsonline.com/#sle).
  2. GPT, a company of Enpro Industries, Inc; \_\_\_\_\_: [www.gptindustries.com/#sle](http://www.gptindustries.com/#sle).
  3. Substitutions: See Section 016000 - Product Requirements.
- B. Modular Mechanical Seals:
  1. Elastomer-based interlocking links to continuously fill annular space between pipe and wall-sleeve, wall or casing opening.
  2. Watertight seal between pipe and wall-sleeve, wall or casing opening.
  3. Size and select seal component materials in accordance with service requirements.
  4. Service Requirements:
    - a. Underground, buried, and wet conditions.
    - b. Fire Resistance: 1 hour, UL (DIR) approved.
  5. Glass-reinforced plastic pressure end plates.
- C. Wall Sleeve: PVC material with waterstop collar, and nailer end caps.
- D. Sleeve-Forming Disk: Nonconductive plastic-based material, 3 inch (76.2 mm) thick.
- E. Pipeline-Casing Seals:
  1. End Seals: 1/8 inch (3.1 mm), pull-on type, rubber or synthetic rubber based.

#### 2.06 ESCUTCHEONS

- A. Manufacturers:
  1. Fire Protection Products, Inc; \_\_\_\_\_: [www.fppi.com/#sle.com/#sle](http://www.fppi.com/#sle.com/#sle).
  2. Tyco Fire Protection Products; \_\_\_\_\_: [www.tyco-fire.com/#sle](http://www.tyco-fire.com/#sle).
  3. Viking Group Inc; \_\_\_\_\_: [www.vikinggroupinc.com/#sle](http://www.vikinggroupinc.com/#sle).

4. Substitutions: See Section 016000 - Product Requirements.
- B. Material:
  1. Metals and Finish: Comply with ASME A112.18.1.
- C. Construction:
  1. One-piece for mounting on chrome-plated tubing or pipe and one-piece or split-pattern type elsewhere.
  2. Internal spring tension devices or setscrews to maintain a fixed position against a surface.

## 2.07 PIPE HANGERS AND SUPPORTS

- A. Hangers for Pipe Sizes 1/2 to 1-1/2 inch (15 to 40 mm): Malleable iron, adjustable swivel, split ring.
  1. Manufacturers:
    - a. AFCON, a brand of Anvil International; \_\_\_\_\_: [www.anvilintl.com/#sle](http://www.anvilintl.com/#sle).
    - b. FNW; \_\_\_\_\_: [www.fnw.com/#sle](http://www.fnw.com/#sle).
    - c. Substitutions: See Section 016000 - Product Requirements.
- B. Hangers for Pipe Sizes 2 inches (50 mm) and Over: Carbon steel, adjustable, clevis.
  1. Manufacturers:
    - a. AFCON, a brand of Anvil International; \_\_\_\_\_: [www.anvilintl.com/#sle](http://www.anvilintl.com/#sle).
    - b. FNW; \_\_\_\_\_: [www.fnw.com/#sle](http://www.fnw.com/#sle).
    - c. Substitutions: See Section 016000 - Product Requirements.
- C. Multiple or Trapeze Hangers: Steel channels with welded spacers and hanger rods.
- D. Wall Support for Pipe Sizes to 3 inches (80 mm): Cast iron hook.
- E. Wall Support for Pipe Sizes 4 inches (100 mm) and Over: Welded steel bracket and wrought steel clamp.
- F. Vertical Support: Steel riser clamp.
- G. Seismic Hangers and Couplings:
  1. Provide resettable and reusable, break away couplings.

## 2.08 MECHANICAL COUPLINGS

- A. Manufacturers:
  1. Anvil International; \_\_\_\_\_: [www.anvilintl.com/#sle](http://www.anvilintl.com/#sle).
  2. Shurjoint Piping Products, Inc; \_\_\_\_\_: [www.shurjoint.com/#sle](http://www.shurjoint.com/#sle).
  3. Tyco Fire Protection Products; \_\_\_\_\_: [www.tyco-fire.com/#sle](http://www.tyco-fire.com/#sle).
  4. Victaulic Company; FireLock Style 009H: [www.victaulic.com/#sle](http://www.victaulic.com/#sle).
  5. Substitutions: See Section 016000 - Product Requirements.
- B. Rigid Mechanical Couplings for Grooved Joints:
  1. Dimensions and Testing: Comply with AWWA C606.
  2. Minimum Working Pressure: 300 psig (2065 kPa).
  3. Housing Material: Fabricate of ductile iron complying with ASTM A536.
  4. Housing Coating: Factory applied orange enamel.
  5. Gasket Material: EPDM suitable for operating temperature range from minus 30 degrees F (minus 34 degrees C) to 230 degrees F (110 degrees C).
  6. Bolts and Nuts: Hot-dipped-galvanized or zinc-electroplated steel.

## PART 3 EXECUTION

## 3.01 PREPARATION

- A. Remove scale and foreign material, from inside and outside, before assembly.
- B. Prepare piping connections to equipment with flanges or unions.

## 3.02 INSTALLATION

- A. Install sprinkler system and service main piping, hangers, and supports in accordance with NFPA 13.
- B. Route piping in orderly manner, plumb and parallel to building structure. Maintain gradient.
- C. Install piping to conserve building space, to not interfere with use of space and other work.
- D. Group piping whenever practical at common elevations.
- E. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.
- F. Pipe Hangers and Supports:
  - 1. Install hangers to provide minimum 1/2 inch (15 mm) space between finished covering and adjacent work.
  - 2. Place hangers within 12 inches (300 mm) of each horizontal elbow.
  - 3. Use hangers with 1-1/2 inch (40 mm) minimum vertical adjustment. Design hangers for pipe movement without disengagement of supported pipe.
  - 4. Support vertical piping at every other floor. Support riser piping independently of connected horizontal piping.
  - 5. Where several pipes can be installed in parallel and at same elevation, provide multiple or trapeze hangers.
- G. Slope piping and arrange systems to drain at low points. Use eccentric reducers to maintain top of pipe level.
- H. Prepare pipe, fittings, supports, and accessories for finish painting. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc-rich primer to welding.
- I. Provide sleeves when penetrating footings, floors, walls, and partitions. Seal pipe including sleeve penetrations to achieve fire resistance equivalent to fire separation required.
  - 1. Underground Piping: Caulk pipe sleeve watertight with lead and oakum or mechanically expandable chloroprene inserts with bitumen sealed metal components.
  - 2. Aboveground Piping:
    - a. Pack solid using mineral fiber complying with ASTM C592.
    - b. Fill space with an elastomer caulk to a depth of 0.50 inch (15 mm) where penetrations occur between conditioned and unconditioned spaces.
  - 3. All Rated Openings: Caulk tight with firestopping material complying with ASTM E814 in accordance with Section 078400 to prevent the spread of fire, smoke, and gases.
- J. Manufactured Sleeve-Seal Systems:
  - 1. Install manufactured sleeve-seal systems in sleeves located in grade slabs and exterior concrete walls at piping entrances into building.

2. Provide sealing elements of the size, quantity, and type required for the piping and sleeve inner diameter or penetration diameter.
3. Locate piping in center of sleeve or penetration.
4. Install field assembled sleeve-seal system components in annular space between sleeve and piping.
5. Tighten bolting for a watertight seal.
6. Install in accordance with manufacturer's recommendations.

K. Escutcheons:

1. Install and firmly attach escutcheons at piping penetrations into finished spaces.
2. Provide escutcheons on both sides of partitions separating finished areas through which piping passes.
3. Use chrome plated escutcheons in occupied spaces and to conceal openings in construction.

- L. When installing more than one piping system material, ensure system components are compatible and joined to ensure the integrity of the system. Provide necessary joining fittings. Ensure flanges, unions, and couplings for servicing are consistently provided.

### 3.03 CLEANING

- A. Upon completion of work, clean all parts of the installation.
- B. Clean equipment, pipes, valves, and fittings of grease, metal cuttings, and sludge that may have accumulated from the installation and testing of the system.

**END OF SECTION 210500**

## SECTION 210523 - GENERAL-DUTY VALVES FOR WATER-BASED FIRE-SUPPRESSION PIPING **H2M**

### PART 1 GENERAL

#### 1.01 SECTION INCLUDES

- A. Two-piece ball valves with indicators.
- B. Check valves.
- C. Iron OS&Y gate valves.
- D. Trim and drain valves.

#### 1.02 RELATED REQUIREMENTS

- A. Section 078400 - Firestopping.
- B. Section 210500 - Common Work Results for Fire Suppression: Pipe and fittings.
- C. Section 210548 - Vibration and Seismic Controls for Fire Suppression Piping and Equipment.
- D. Section 210553 - Identification for Fire Suppression Piping and Equipment.
- E. Section 211300 - Fire-Suppression Sprinkler Systems.
- F. Section 260583 - Wiring Connections: Electrical characteristics and wiring connections.

#### 1.03 ABBREVIATIONS AND ACRONYMS

- A. EPDM: Ethylene-propylene diene monomer.
- B. NBR: Acrylonitrile-butadiene, Buna-N, or nitrile rubber.
- C. NRS: Non-rising stem.
- D. OS&Y: Outside screw and yoke.
- E. PTFE: Polytetrafluoroethylene.
- F. SBR: Styrene-butadiene rubber.

#### 1.04 REFERENCE STANDARDS

- A. ASME B1.20.1 - Pipe Threads, General Purpose (Inch); 2013 (Reaffirmed 2018).
- B. ASME B16.1 - Gray Iron Pipe Flanges and Flanged Fittings: Classes 25, 125, and 250; 2015.
- C. ASME B31.9 - Building Services Piping; 2017.
- D. ASME BPVC-IX - Qualification Standard for Welding, Brazing, and Fusing Procedures; Welders; Brazers; and Welding, Brazing, and Fusing Operators - Welding Brazing and Fusing Qualifications; 2019.
- E. AWWA C508 - Swing-Check Valves for Waterworks Service, 2-In. Through 48-In. (50-mm Through 1,200-mm) NPS; 2017.
- F. AWWA C509 - Resilient-Seated Gate Valves for Water Supply Service; 2015.

## SECTION 210523 - GENERAL-DUTY VALVES FOR WATER-BASED FIRE-SUPPRESSION PIPING

### H2M

- G. AWWA C606 - Grooved and Shouldered Joints; 2015.
- H. FM (AG) - FM Approval Guide; current edition.
- I. NFPA 13 - Standard for the Installation of Sprinkler Systems; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
- J. UL (DIR) - Online Certifications Directory; Current Edition.
- K. UL 262 - Gate Valves for Fire-Protection Service; Current Edition, Including All Revisions.
- L. UL 312 - Check Valves for Fire-Protection Service; Current Edition, Including All Revisions.
- M. UL 1091 - Standard for Butterfly Valves for Fire-Protection Service; Current Edition, Including All Revisions.

#### 1.05 SUBMITTALS

- A. See Section 013000 - Administrative Requirements for submittal procedures.
- B. Product Data: Provide data on valves including manufacturers catalog information. Submit performance ratings, rough-in details, weights, support requirements, and piping connections.
- C. Operation and Maintenance Data: Include manufacturer's descriptive literature, operating instructions, maintenance and repair data, and parts listings.

#### 1.06 QUALITY ASSURANCE

- A. Manufacturer Qualifications:
  - 1. Obtain valves for each valve type from single manufacturer.
  - 2. Company must specialize in manufacturing products specified in this section, with not less than three years of documented experience.
- B. Where listed products are specified, provide products listed, classified, and labeled by FM (AG), UL (DIR), or testing firm acceptable to authorities having jurisdiction as suitable for the purpose indicated.
- C. Welding Materials and Procedures: Comply with ASME BPVC-IX.

#### 1.07 DELIVERY, STORAGE, AND HANDLING

- A. Prepare valves for shipping as follows:
  - 1. Protect internal parts against rust and corrosion.
  - 2. Set valves open to minimize exposure of functional surfaces.
- B. Use the following precautions during storage:
  - 1. Maintain valve end protection and protect flanges and specialties from dirt.
    - a. Provide temporary inlet and outlet caps.
    - b. Maintain caps in place until installation.
  - 2. Store valves in shipping containers and maintain in place until installation.
    - a. Store valves indoors and maintain at higher than ambient dew point temperature.
    - b. If outdoor storage is unavoidable, store valves off the ground in watertight enclosures.
- C. Use the following precautions for handling:
  - 1. Use sling to handle large valves, rigged to avoid damage to exposed parts.

SECTION 210523 - GENERAL-DUTY VALVES FOR WATER-BASED FIRE-SUPPRESSION PIPING  
**H2M**

2. Do not use operating handles or stems as lifting or rigging points.

PART 2 PRODUCTS

2.01 GENERAL REQUIREMENTS

- A. UL Listed: Provide valves listed in UL (DIR) under following headings and bearing UL mark:
  1. Main Level: HAMV - Fire Main Equipment.
    - a. Level 1: HCBZ - Indicator Posts, Gate Valve.
    - b. Level 1: HLOT - Valves.
    - c. Level 3: HLUG - Ball Valves, System Control.
    - d. Level 3: HMER - Check Valves.
    - e. Level 3: HMRZ - Gate Valves.
  2. Main Level: VDGT - Sprinkler System & Water Spray System Devices.
    - a. Level 1: VQGU - Valves, Trim, and Drain.
- B. FM Global Approved: Provide valves listed in FM (AG) Approval Guide under the following headings:
  1. Automated Sprinkler Systems:
    - a. Indicator posts.
    - b. Valves:
      - 1) Gate valves.
      - 2) Single check valves.
      - 3) Miscellaneous valves.
- C. ASME Compliance:
  1. ASME B16.1 for flanges on iron valves.
  2. ASME B1.20.1 for threads on threaded-end valves.
  3. ASME B31.9 for building services piping valves.
- D. Comply with AWWA C606 for grooved-end connections.
- E. Comply with NFPA 13 for valves.
- F. Valve Pressure Ratings: Not less than minimum pressure rating indicated or higher as required.
- G. Valve Sizes: Same as upstream piping unless otherwise indicated.

2.02 TWO-PIECE BALL VALVES WITH INDICATORS

- A. Manufacturers:
  1. FNW; \_\_\_\_\_: [www.fnw.com/#sle](http://www.fnw.com/#sle).
  2. Substitutions: See Section 016000 - Product Requirements.
- B. UL 1091, except with ball instead of disc and FM (AG) standard listing for indicating valves (butterfly or ball type), Class Number 1112.
- C. Description:
  1. Minimum Pressure Rating: 175 psig (1200 kPa).
  2. Body Design: Two piece.
  3. Body Material: Forged brass or bronze.
  4. Port Size: Full or standard.
  5. Seat: PTFE.
  6. Stem: Bronze or stainless steel.
  7. Ball: Chrome-plated brass.

## SECTION 210523 - GENERAL-DUTY VALVES FOR WATER-BASED FIRE-SUPPRESSION PIPING **H2M**

8. Actuator: Worm gear or traveling nut.

### 2.03 CHECK VALVES

- A. Manufacturers:
  1. FNW; \_\_\_\_\_: [www.fnw.com/#sle](http://www.fnw.com/#sle).
  2. Substitutions: See Section 016000 - Product Requirements.
- B. UL 312 and FM (AG) standard listing for check valves, Class Number 1045.
- C. AWWA C508 compliant check valves.
- D. Minimum Pressure Rating: 175 psig (1200 kPa).
- E. Type: Center guided check valve.
- F. Body Material: Cast iron, ductile iron.
- G. Center guided check with elastomeric seal.
- H. Hinge Spring: Stainless steel.
- I. End Connections: Flanged, grooved, or threaded.

### 2.04 IRON OS&Y GATE VALVES

- A. Manufacturers:
  1. FNW; 751 Series: [www.fnw.com/#sle](http://www.fnw.com/#sle).
  2. Substitutions: See Section 016000 - Product Requirements.
- B. Listed and Body Marked: AWWA C509, FM (AG), and UL 262.
- C. Maximum Working Pressure: 175 psi (1,200 kPa).
- D. Body and Bonnet Material: Cast or ductile iron.
- E. Wedge: Cast or ductile iron, or bronze with elastomeric coating.
- F. Stem: Brass, bronze, or stainless steel.
- G. Packing: Non-asbestos PTFE.
- H. Supervisory Switch: External.

### 2.05 TRIM AND DRAIN VALVES

- A. Ball Valves:
  1. Description:
    - a. Pressure Rating: 175 psig (1200 kPa).
    - b. Body Design: Two piece.
    - c. Body Material: Forged brass or bronze.
    - d. Port Size: Full or standard.
    - e. Seat: PTFE.
    - f. Stem: Bronze or stainless steel.
    - g. Ball: Chrome-plated brass.
    - h. Actuator: Hand-lever.

SECTION 210523 - GENERAL-DUTY VALVES FOR WATER-BASED FIRE-SUPPRESSION PIPING  
**H2M**

PART 3 EXECUTION

3.01 EXAMINATION

- A. Confirm valve interior to be free of foreign matter and corrosion.
- B. Remove packing materials.
- C. Examine guides and seats by operating valves from the fully open position to the fully closed position.
- D. Examine valve threads and mating pipe for form and cleanliness.

3.02 INSTALLATION

- A. Comply with specific valve installation requirements and application in the following Sections:
  - 1. Section 211300 for application of valves in wet and dry pipe, fire-suppression sprinkler systems.
- B. Install listed fire protection shutoff valves supervised-open, located to control sources of water supply except from fire department connections.
- C. Valves in horizontal piping installed with stem at or above the pipe center.
- D. Position valves to allow full stem movement.
- E. Install valve tags. Comply with Section 210553 requirements for valve tags, schedules, and signs on surfaces concealing valves; and the appropriate NFPA standard applying to the piping system in which valves are installed.

**END OF SECTION 210523**

## PART 1 GENERAL

## 1.01 SECTION INCLUDES

- A. Nameplates.
- B. Tags.
- C. Stencils.
- D. Pipe markers.
- E. Ceiling tacks.

## 1.02 REFERENCE STANDARDS

- A. ASME A13.1 - Scheme for the Identification of Piping Systems; 2020.
- B. ASTM D709 - Standard Specification for Laminated Thermosetting Materials; 2017.

## 1.03 SUBMITTALS

- A. See Section 013000 - Administrative Requirements, for submittal procedures.
- B. List: Submit list of wording, symbols, letter size, and color coding for mechanical identification.
- C. Chart and Schedule: Submit valve chart and schedule, including valve tag number, location, function, and valve manufacturer's name and model number.
- D. Product Data: Provide manufacturers catalog literature for each product required.
- E. Manufacturer's Installation Instructions: Indicate special procedures, and installation instructions.

## PART 2 PRODUCTS

## 2.01 IDENTIFICATION APPLICATIONS

- A. Automatic Controls: Tags.
- B. Control Panels: Nameplates.
- C. Instrumentation: Tags.
- D. Major Control Components: Nameplates.
- E. Piping: Tags.
- F. Small-sized Equipment: Tags.
- G. Valves: Nameplates and ceiling tacks where above lay-in ceilings.

## 2.02 NAMEPLATES

- A. Manufacturers:
  - 1. Brimar Industries, Inc; \_\_\_\_\_: [www.pipemarker.com/#sle](http://www.pipemarker.com/#sle).
  - 2. Kolbi Pipe Marker Co; \_\_\_\_\_: [www.kolbipipemarkers.com/#sle](http://www.kolbipipemarkers.com/#sle).

3. Seton Identification Products, a Tricor Direct Company; \_\_\_\_\_: [www.seton.com/#sle](http://www.seton.com/#sle).
  4. Substitutions: See Section 016000 - Product Requirements.
- B. Description: Laminated three-layer plastic with engraved letters.
1. Letter Color: White.
  2. Letter Height: 1/4 inch (6 mm).
  3. Background Color: Black.
  4. Thickness: 1/8 inch (3 mm).
  5. Plastic: Comply with ASTM D709.

### 2.03 TAGS

- A. Manufacturers:
1. Advanced Graphic Engraving, LLC; \_\_\_\_\_: [www.advancedgraphicengraving.com/#sle](http://www.advancedgraphicengraving.com/#sle).
  2. Brady Corporation; \_\_\_\_\_: [www.bradycorp.com/#sle](http://www.bradycorp.com/#sle).
  3. Brimar Industries, Inc; \_\_\_\_\_: [www.pipemarker.com/#sle](http://www.pipemarker.com/#sle).
  4. Craftmark Pipe Markers; \_\_\_\_\_: [www.craftmarkid.com/#sle](http://www.craftmarkid.com/#sle).
  5. Kolbi Pipe Marker Co; \_\_\_\_\_: [www.kolbipipemarkers.com/#sle](http://www.kolbipipemarkers.com/#sle).
  6. Seton Identification Products, a Tricor Direct Company; \_\_\_\_\_: [www.seton.com/#sle](http://www.seton.com/#sle).
  7. Substitutions: See Section 016000 - Product Requirements.
- B. Plastic Tags: Laminated three-layer plastic with engraved black letters on light contrasting background color. Tag size minimum 1-1/2 inch (40 mm) diameter.
- C. Metal Tags: Brass with stamped letters; tag size minimum 1-1/2 inch (40 mm) diameter with smooth edges.

### 2.04 STENCILS

- A. Manufacturers:
1. Brady Corporation; \_\_\_\_\_: [www.bradycorp.com/#sle](http://www.bradycorp.com/#sle).
  2. Craftmark Pipe Markers; \_\_\_\_\_: [www.craftmarkid.com/#sle](http://www.craftmarkid.com/#sle).
  3. Insite Solutions, LLC; \_\_\_\_\_: [www.stop-painting.com/#sle](http://www.stop-painting.com/#sle).
  4. Kolbi Pipe Marker Co; \_\_\_\_\_: [www.kolbipipemarkers.com/#sle](http://www.kolbipipemarkers.com/#sle).
  5. Seton Identification Products, a Tricor Direct Company; \_\_\_\_\_: [www.seton.com/#sle](http://www.seton.com/#sle).
  6. \_\_\_\_\_.
- B. Stencils: With clean cut symbols and letters of following size:
1. 3/4 to 1-1/4 inch (20-30 mm) Outside Diameter of Insulation or Pipe: 8 inch (200 mm) long color field, 1/2 inch (15 mm) high letters.
  2. 1-1/2 to 2 inch (40-50 mm) Outside Diameter of Insulation or Pipe: 8 inch (200 mm) long color field, 3/4 inch (20 mm) high letters.
  3. 2-1/2 to 6 inch (65-150 mm) Outside Diameter of Insulation or Pipe: 12 inch (300 mm) long color field, 1-1/4 inch (30 mm) high letters.
  4. Equipment: 2-1/2 inch (65 mm) high letters.

### 2.05 PIPE MARKERS

- A. Manufacturers:
1. Brady Corporation; \_\_\_\_\_: [www.bradycorp.com/#sle](http://www.bradycorp.com/#sle).
  2. Brimar Industries, Inc; \_\_\_\_\_: [www.pipemarker.com/#sle](http://www.pipemarker.com/#sle).
  3. Craftmark Pipe Markers; \_\_\_\_\_: [www.craftmarkid.com/#sle](http://www.craftmarkid.com/#sle).
  4. Kolbi Pipe Marker Co; \_\_\_\_\_: [www.kolbipipemarkers.com/#sle](http://www.kolbipipemarkers.com/#sle).
  5. Seton Identification Products, a Tricor Company; \_\_\_\_\_: [www.seton.com/#sle](http://www.seton.com/#sle).
  6. Substitutions: See Section 016000 - Product Requirements.

- B. Color: Comply with ASME A13.1.
- C. Plastic Pipe Markers: Factory fabricated, flexible, semi- rigid plastic, preformed to fit around pipe or pipe covering; minimum information indicating flow direction arrow and identification of fluid being conveyed.
- D. Underground Plastic Pipe Markers: Bright-colored continuously printed plastic ribbon tape, minimum 6 inches (150 mm) wide by 4 mil, 0.004 inch (0.10 mm) thick, manufactured for direct burial service.
- E. Color code as follows:
  - 1. Fire Quenching Fluids: Red with white letters.

## 2.06 CEILING TACKS

- A. Manufacturers:
  - 1. Craftmark Pipe Markers; \_\_\_\_\_: [www.craftmarkid.com/#sle](http://www.craftmarkid.com/#sle).
  - 2. Substitutions: See Section 016000 - Product Requirements.
- B. Description: Steel with 3/4 inch (20 mm) diameter color coded head.

## PART 3 EXECUTION

### 3.01 PREPARATION

- A. Degrease and clean surfaces to receive adhesive for identification materials.

### 3.02 INSTALLATION

- A. Install nameplates with corrosive-resistant mechanical fasteners, or adhesive. Apply with sufficient adhesive to ensure permanent adhesion and seal with clear lacquer.
- B. Install tags with corrosion resistant chain.
- C. Apply stencil painting in accordance with Section 099123.
- D. Install plastic pipe markers in accordance with manufacturer's instructions.
- E. Install underground plastic pipe markers 6 to 8 inches (150 to 200 mm) below finished grade, directly above buried pipe.
- F. Use tags on piping 3/4 inch (20 mm) diameter and smaller.
  - 1. Identify service, flow direction, and pressure.
  - 2. Install in clear view and align with axis of piping.
  - 3. Locate identification not to exceed 20 feet (6 m) on straight runs including risers and drops, adjacent to each valve and Tee, at each side of penetration of structure or enclosure, and at each obstruction.

## END OF SECTION 210553

## PART 1 GENERAL

## 1.01 SECTION INCLUDES

- A. Wet-pipe sprinkler system.
- B. Dry-pipe sprinkler system.
- C. System design, installation, and certification.
- D. Fire department connections.

## 1.02 RELATED REQUIREMENTS

- A. Section 078400 - Firestopping.
- B. Section 210500 - Common Work Results for Fire Suppression: Pipe and fittings.
- C. Section 210523 - General-Duty Valves for Water-Based Fire-Suppression Piping.
- D. Section 210548 - Vibration and Seismic Controls for Fire Suppression Piping and Equipment.
- E. Section 210553 - Identification for Fire Suppression Piping and Equipment.

## 1.03 REFERENCE STANDARDS

- A. FM (AG) - FM Approval Guide; current edition.
- B. ICC-ES AC01 - Acceptance Criteria for Expansion Anchors in Masonry Elements; 2015.
- C. ICC-ES AC106 - Acceptance Criteria for Predrilled Fasteners (Screw Anchors) in Masonry Elements; 2015.
- D. ICC-ES AC193 - Acceptance Criteria for Mechanical Anchors in Concrete Elements; 2015.
- E. ICC-ES AC308 - Acceptance Criteria for Post-Installed Adhesive Anchors in Concrete Elements; 2016.
- F. ITS (DIR) - Directory of Listed Products; current edition.
- G. NFPA 13 - Standard for the Installation of Sprinkler Systems; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
- H. NFPA 1963 - Standard for Fire Hose Connections; 2019.
- I. UL (DIR) - Online Certifications Directory; Current Edition.
- J. UL 405 - Fire Department Connection Devices; Current Edition; Including All Revisions.

## 1.04 SUBMITTALS

- A. See Section 013000 - Administrative Requirements for submittal procedures.
- B. Product Data: Provide data on sprinklers, valves, and specialties, including manufacturers catalog information. Submit performance ratings, rough-in details, weights, support requirements, and piping connections.

- C. Shop Drawings:
  - 1. Submit preliminary layout of finished ceiling areas indicating only sprinkler locations coordinated with ceiling installation.
  - 2. Indicate hydraulic calculations, detailed pipe layout, hangers and supports, sprinklers, components, and accessories. Indicate system controls.
  - 3. Submit shop drawings to Authorities Having Jurisdiction for approval. Submit proof of approval to Architect/Engineer.
- D. Installer's qualification statement.
- E. Operation and Maintenance Data: Include components of system, servicing requirements, record drawings, inspection data, replacement part numbers and availability, and location and numbers of service depot.
- F. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
  - 1. See Section 016000 - Product Requirements for additional provisions.
  - 2. Extra Sprinklers: Type and size matching those installed in quantity required by referenced NFPA design and installation standard.
  - 3. Sprinkler Wrenches: For each sprinkler type.
- G. Project Record Documents: Record actual locations of sprinklers and deviations of piping from drawings. Indicate drain and test locations.

#### 1.05 QUALITY ASSURANCE

- A. Comply with FM (AG) requirements.
- B. Equipment and Components: Provide products that bear UL (DIR) label or marking.
- C. Products Requiring Electrical Connection: Listed and classified by UL (DIR) as suitable for the purpose specified and indicated.

#### 1.06 DELIVERY, STORAGE, AND HANDLING

- A. Store products in shipping containers and maintain in place until installation. Provide temporary inlet and outlet caps. Maintain caps in place until installation.

### PART 2 PRODUCTS

#### 2.01 MANUFACTURERS

- A. Sprinklers, Valves, and Equipment:
  - 1. Anvil International; \_\_\_\_\_: [www.anvilintl.com/#sle](http://www.anvilintl.com/#sle).
  - 2. Tyco Fire Protection Products; \_\_\_\_\_: [www.tyco-fire.com/#sle](http://www.tyco-fire.com/#sle).
  - 3. Viking Corporation; \_\_\_\_\_: [www.vikinggroupinc.com/#sle](http://www.vikinggroupinc.com/#sle).
  - 4. Substitutions: See Section 016000 - Product Requirements.

#### 2.02 SPRINKLER SYSTEM

- A. Sprinkler System: Provide coverage for entire building.
- B. Occupancy: Light Hazard, Ordinary Hazard - Group 1, Ordinary Hazard - Group 2; comply with NFPA 13
- C. Water Supply: Determine volume and pressure from water flow test data.

- D. Provide fire department connections where indicated.
- E. Storage Cabinet for Spare Sprinklers and Tools: Steel, located adjacent to alarm valve.
- F. Pipe Hanger Fasteners: Attach hangers to structure using appropriate fasteners, as follows:
  - 1. Concrete Wedge Expansion Anchors: Complying with ICC-ES AC193.
  - 2. Masonry Wedge Expansion Anchors: Complying with ICC-ES AC01.
  - 3. Concrete Screw Type Anchors: Complying with ICC-ES AC193.
  - 4. Masonry Screw Type Anchors: Complying with ICC-ES AC106.
  - 5. Concrete Adhesive Type Anchors: Complying with ICC-ES AC308.
  - 6. Other Types: As required.

### 2.03 SPRINKLERS

- A. Suspended Ceiling Type: Concealed pendant type with matching push on cover plate.
  - 1. Response Type: Quick.
  - 2. Coverage Type: Standard.
  - 3. Finish: Brass.
  - 4. Cover Plate Finish: White.
  - 5. Fusible Link: Fusible solder link type temperature rated for specific area hazard.
- B. Exposed Area Type: Upright type.
  - 1. Response Type: Quick.
  - 2. Coverage Type: Standard.
  - 3. Finish: Brass.
  - 4. Fusible Link: Fusible solder link type temperature rated for specific area hazard.
- C. Sidewall Type: Semi-recessed horizontal sidewall type with matching push on escutcheon plate.
  - 1. Response Type: Quick.
  - 2. Coverage Type: Standard, Extended.
  - 3. Fusible Link: Fusible solder link type temperature rated for specific area hazard.
- D. Dry Sprinklers: Concealed pendant type with matching push on escutcheon plate.
  - 1. Response Type: Quick.
  - 2. Coverage Type: Standard.
  - 3. Finish: Brass.
  - 4. Fusible Link: Fusible solder link type temperature rated for specific area hazard.

### 2.04 PIPING SPECIALTIES

- A. Wet Pipe Sprinkler Alarm Valve: Check type valve with divided seat ring, rubber-faced clapper to automatically actuate water motor alarm, pressure retard chamber and variable pressure trim with the following additional capabilities and features:
  - 1. Activate electric alarm.
  - 2. Test and drain valve.
  - 3. Replaceable internal components without removing valve from installed position.
  - 4. Manufacturers:
    - a. Victaulic Company; Series 751 with Series 760 motor alarm: [www.victaulic.com/#sle](http://www.victaulic.com/#sle).
    - b. Substitutions: See Section 016000 - Product Requirements.
- B. Dry Pipe Sprinkler Alarm Valve: Check type valve with divided seat ring, rubber faced clapper to automatically actuate water motor alarm, accelerator, and with the following additional capabilities and features:

1. Activate electric alarm.
  2. Test and drain valve.
  3. Externally resettable.
  4. Replaceable internal components without removing valve from installed position.
  5. Manufacturers:
    - a. Victaulic Company; Series 768 - NXT: [www.victaulic.com/#sle](http://www.victaulic.com/#sle).
    - b. Substitutions: See Section 016000 - Product Requirements.
- C. Backflow Preventer: Double check valve assembly backflow preventer with drain and OS & Y gate valve on each end.
- D. Test Connections:
1. Inspector's Test Connection for Preaction Systems:
    - a. Provide test connections approximately 6 ft (2 m) above floor for each sprinkler system equipped with an alarm device, located at the most remote part of each system.
    - b. Route test connection to an open-site drain location, excluding janitor sinks, accepting full flow without negative consequences.
    - c. Supply discharge orifice with same size as corresponding sprinkler orifice.
    - d. Limit vertical height of exterior wall penetration to 2 ft (0.61 m) above finished grade.
- E. Electric Alarm: Electrically operated red enameled gong with pressure alarm switch.
- F. Water Flow Switch: Vane type switch for mounting horizontal or vertical, with two contacts; rated 10 amp at 125 volt AC and 2.5 amp at 24 volt DC.
- G. Fire Department Connections:
1. Type: Exposed, projected wall mount made of corrosion resistant metal complying with UL 405.
    - a. Inlets: Two way, 2-1/2 inch (65 DN) swivel fittings, internal threaded. Thread size and inlets according to NFPA 1963 or Authority Having Jurisdiction. Brass caps with gaskets, chains, and lugs.

## 2.05 AIR COMPRESSOR

- A. Compressor: Single-unit, electric motor driven, motor, motor starter, safety valves, check valves, air maintenance device incorporating electric pressure switch and unloader valve.

## PART 3 EXECUTION

### 3.01 INSTALLATION

- A. Install in accordance with referenced NFPA design and installation standard.
- B. Install equipment in accordance with manufacturer's instructions.
- C. Locate outside alarm gong on building wall as indicated.
- D. Place pipe runs to minimize obstruction to other work.
- E. Place piping in concealed spaces above finished ceilings.
- F. Center sprinklers in two directions in ceiling tile and provide piping offsets as required.

- G. Apply masking tape or paper cover to ensure concealed sprinklers, cover plates, and sprinkler escutcheons do not receive field paint finish. Remove after painting. Replace painted sprinklers.
- H. Install air compressor on vibration isolators. Refer to Section 210548.
- I. Flush entire piping system of foreign matter.
- J. Hydrostatically test entire system.
- K. Require test be witnessed by Fire Marshal.

**END OF SECTION 211300**

## PART 1 GENERAL

## 1.01 SECTION INCLUDES

- A. Flexible pipe connectors.

## 1.02 RELATED REQUIREMENTS

- A. Section 221005 - Plumbing Piping.

## 1.03 REFERENCE STANDARDS

- A. EJMA (STDS) - EJMA Standards; Tenth Edition.
- B. FM (AG) - FM Approval Guide; current edition.
- C. ITS (DIR) - Directory of Listed Products; current edition.
- D. UL (DIR) - Online Certifications Directory; Current Edition.

## 1.04 SUBMITTALS

- A. See Section 013000 - Administrative Requirements for submittal procedures.
- B. Product Data:
  - 1. Flexible Pipe Connectors: Indicate maximum temperature and pressure rating, face-to-face length, live length, hose wall thickness, hose convolutions per foot (meter) and per assembly, fundamental frequency of assembly, braid structure, and total number of wires in braid.
  - 2. Expansion Joints: Indicate maximum temperature and pressure rating, and maximum expansion compensation.
- C. Manufacturer's Instructions: Indicate manufacturer's installation instructions, special procedures, and external controls.
- D. Maintenance Data: Include adjustment instructions.
- E. Project Record Documents: Record installed locations of flexible pipe connectors, expansion joints, anchors, and guides.
- F. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
  - 1. See Section 016000 - Product Requirements for additional provisions.
  - 2. Extra Packing for Packed Expansion Joints: One set for each joint.

## PART 2 PRODUCTS

## 2.01 REGULATORY REQUIREMENTS

- A. Comply with UL (DIR) requirements.

## 2.02 FLEXIBLE PIPE CONNECTORS - COPPER PIPING

- A. Manufacturers:
  - 1. Mercer Rubber Company; \_\_\_\_\_: [www.mercer-rubber.com/#sle](http://www.mercer-rubber.com/#sle).
  - 2. The Metraflex Company; \_\_\_\_\_: [www.metraflex.com/#sle](http://www.metraflex.com/#sle).
  - 3. Substitutions: See Section 016000 - Product Requirements.

- B. Inner Hose: Bronze.
- C. Exterior Sleeve: Braided bronze.
- D. Pressure Rating: \_\_\_\_ psi up to \_\_\_\_ inch (\_\_\_\_ kPa up to \_\_\_\_ mm, DN).
- E. End Connections: Flanged.
- F. Size: Use pipe sized units.
- G. Application: Copper piping.

### PART 3 EXECUTION

#### 3.01 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Install in accordance with EJMA (Expansion Joint Manufacturers Association) Standards.
- C. Install flexible pipe connectors on pipes connected to vibration isolated equipment. Provide line size flexible connectors.
- D. Provide support and equipment required to control expansion and contraction of piping. Provide loops, pipe offsets, and swing joints, or expansion joints where required.

**END OF SECTION 220516**

## PART 1 GENERAL

## 1.01 SECTION INCLUDES

- A. Pipe sleeves.
- B. Pipe sleeve-seals.

## 1.02 RELATED REQUIREMENTS

- A. Section 078400 - Firestopping.
- B. Section 099113 - Exterior Painting: Preparation and painting of exterior piping systems.
- C. Section 099123 - Interior Painting: Preparation and painting of interior piping systems.
- D. Section 220523 - General-Duty Valves for Plumbing Piping.
- E. Section 220553 - Identification for Plumbing Piping and Equipment: Piping identification.
- F. Section 220719 - Plumbing Piping Insulation.

## 1.03 REFERENCE STANDARDS

- A. ASTM C592 - Standard Specification for Mineral Fiber Blanket Insulation and Blanket-Type Pipe Insulation (Metal-Mesh Covered) (Industrial Type); 2016.
- B. ASTM E814 - Standard Test Method for Fire Tests of Penetration Firestop Systems; 2013a (Reapproved 2017).

## 1.04 SUBMITTALS

- A. See Section 013000 - Administrative Requirements for submittal procedures.
- B. Shop Drawings: Indicate pipe materials used, jointing methods, supports, floor and wall penetration seals. Indicate installation, layout, weights, mounting and support details, and piping connections.
- C. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
  - 1. See Section 016000 - Product Requirements, for additional provisions.
  - 2. Extra Valve Stem Packings: Two for each type and size of valve.

## 1.05 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with minimum three years documented experience.
- B. Installer Qualifications: Company specializing in performing work of the type specified this section.
  - 1. Minimum three years experience.
- C. Clean equipment, pipes, valves, and fittings of grease, metal cuttings, and sludge that may have accumulated from the installation and testing of the system.

### 1.06 DELIVERY, STORAGE, AND HANDLING

- A. Deliver and store sleeve and sleeve seals in shipping containers, with labeling in place.
- B. Provide temporary protective coating on cast iron and steel sleeves if shipped loose.

### 1.07 WARRANTY

- A. See Section 017800 - Closeout Submittals, for additional warranty requirements.
- B. Correct defective Work within a five year period after Date of Substantial Completion.

## PART 2 PRODUCTS

### 2.01 PIPE SLEEVES

- A. Manufacturers:
  - 1. Flexicraft Industries; Pipe Wall Sleeve: [www.flexicraft.com/#sle](http://www.flexicraft.com/#sle).
  - 2. Substitutions: See Section 016000 - Product Requirements.
- B. Vertical Piping:
  - 1. Sleeve Length: 1 inch (25 mm) above finished floor.
  - 2. Provide sealant for watertight joint.
  - 3. Blocked Out Floor Openings: Provide 1-1/2 inch (40 mm) angle set in silicon adhesive around opening.
  - 4. Drilled Penetrations: Provide 1-1/2 inch (40 mm) angle ring or square set in silicone adhesive around penetration.
- C. Pipe Passing Through Below Grade Exterior Walls:
  - 1. Zinc coated or cast iron pipe.
  - 2. Provide watertight space with link rubber or modular seal between sleeve and pipe on both pipe ends.
- D. Clearances:
  - 1. Provide allowance for insulated piping.
  - 2. Wall, Floor, Partitions, and Beam Flanges: 1 inch (25 mm) greater than external pipe diameter.
  - 3. All Rated Openings: Caulked tight with fire stopping material complying with ASTM E814 in accordance with Section 078400 to prevent the spread of fire, smoke, and gases.

### 2.02 PIPE-SLEEVE SEALS

- A. Manufacturers:
  - 1. Advance Products & Systems, LLC; Innerlynx: [www.apsonline.com/#sle](http://www.apsonline.com/#sle).
  - 2. Flexicraft Industries; PipeSeal: [www.flexicraft.com/#sle](http://www.flexicraft.com/#sle).
  - 3. Substitutions: See Section 016000 - Product Requirements.

## PART 3 EXECUTION

### 3.01 PREPARATION

- A. Ream pipe and tube ends. Remove burrs. Bevel plain end ferrous pipe.
- B. Remove scale and foreign material, from inside and outside, before assembly.

### 3.02 INSTALLATION

- A. Route piping in orderly manner, plumb and parallel to building structure. Maintain gradient.
- B. Install piping to conserve building space, to not interfere with use of space and other work.
- C. Install piping and pipe sleeves to allow for expansion and contraction without stressing pipe, joints, or connected equipment.
- D. Provide sleeves when penetrating footings, floors, walls, and partitions. Seal pipe including sleeve penetrations to achieve fire resistance equivalent to fire separation required.
  - 1. Underground Piping: Caulk pipe sleeve watertight with lead and oakum or mechanically expandable chloroprene inserts with bitumen sealed metal components.
  - 2. Aboveground Piping:
    - a. Pack solid using mineral fiber complying with ASTM C592.
    - b. Fill space with an elastomer caulk to a depth of 0.50 inch (15 mm) where penetrations occur between conditioned and unconditioned spaces.
  - 3. All Rated Openings: Caulk tight with fire stopping material complying with ASTM E814 in accordance with Section 078400 to prevent the spread of fire, smoke, and gases.
  - 4. Caulk exterior wall sleeves watertight with lead and oakum or mechanically expandable chloroprene inserts with mastic-sealed components.
- E. Manufactured Sleeve-Seal Systems:
  - 1. Install manufactured sleeve-seal systems in sleeves located in grade slabs and exterior concrete walls at piping entrances into building.
  - 2. Provide sealing elements of the size, quantity, and type required for the piping and sleeve inner diameter or penetration diameter.
  - 3. Locate piping in center of sleeve or penetration.
  - 4. Install field assembled sleeve-seal system components in annular space between sleeve and piping.
  - 5. Tighten bolting for a water-tight seal.
  - 6. Install in accordance with manufacturer's recommendations.
- F. When installing more than one piping system material, ensure system components are compatible and joined to ensure the integrity of the system. Provide necessary joining fittings. Ensure flanges, union, and couplings for servicing are consistently provided.

### 3.03 CLEANING

- A. Upon completion of work, clean all parts of the installation.
- B. Clean equipment, pipes, valves, and fittings of grease, metal cuttings, and sludge that may have accumulated from the installation and testing of the system.

**END OF SECTION 220517**

## PART 1 GENERAL

## 1.01 SECTION INCLUDES

- A. Ball valves.
- B. Butterfly valves.
- C. Check valves.
- D. Gate valves.
- E. Globe valves.

## 1.02 RELATED REQUIREMENTS

- A. Section 078400 - Firestopping.
- B. Section 220553 - Identification for Plumbing Piping and Equipment.
- C. Section 220719 - Plumbing Piping Insulation.
- D. Section 221005 - Plumbing Piping.
- E. Section 221500 - General-Service Compressed-Air Systems.

## 1.03 ABBREVIATIONS AND ACRONYMS

- A. CWP: Cold working pressure.
- B. EPDM: Ethylene propylene copolymer rubber.
- C. NBR: Acrylonitrile-butadiene, Buna-N, or nitrile rubber.
- D. NRS: Non-rising stem.
- E. OS&Y: Outside screw and yoke.
- F. PTFE: Polytetrafluoroethylene.
- G. RS: Rising stem.
- H. TFE: Tetrafluoroethylene.
- I. WOG: Water, oil, and gas.

## 1.04 REFERENCE STANDARDS

- A. API STD 594 - Check Valves: Flanged, Lug Wafer, and Butt-Welding; 2017.
- B. ASME B1.20.1 - Pipe Threads, General Purpose (Inch); 2013 (Reaffirmed 2018).
- C. ASME B16.1 - Gray Iron Pipe Flanges and Flanged Fittings: Classes 25, 125, and 250; 2015.
- D. ASME B16.5 - Pipe Flanges and Flanged Fittings NPS 1/2 Through NPS 24 Metric/Inch Standard; 2017.

- E. ASME B16.10 - Face-to-Face and End-to-End Dimensions of Valves; 2017.
- F. ASME B16.18 - Cast Copper Alloy Solder Joint Pressure Fittings; 2018.
- G. ASME B16.34 - Valves - Flanged, Threaded and Welding End; 2017.
- H. ASME B31.9 - Building Services Piping; 2017.
- I. ASME BPVC-IX - Qualification Standard for Welding, Brazing, and Fusing Procedures; Welders; Brazers; and Welding, Brazing, and Fusing Operators - Welding Brazing and Fusing Qualifications; 2019.
- J. ASTM A48/A48M - Standard Specification for Gray Iron Castings; 2003 (Reapproved 2016).
- K. ASTM A126 - Standard Specification for Gray Iron Castings for Valves, Flanges, and Pipe Fittings; 2004 (Reapproved 2019).
- L. ASTM A395/A395M - Standard Specification for Ferritic Ductile Iron Pressure-Retaining Castings for Use at Elevated Temperatures; 1999 (Reapproved 2018).
- M. ASTM A536 - Standard Specification for Ductile Iron Castings; 1984 (Reapproved 2019)e1.
- N. ASTM B62 - Standard Specification for Composition Bronze or Ounce Metal Castings; 2017.
- O. AWWA C606 - Grooved and Shouldered Joints; 2015.
- P. MSS SP-45 - Bypass and Drain Connections; 2003 (Reaffirmed 2008).
- Q. MSS SP-67 - Butterfly Valves; 2017.
- R. MSS SP-70 - Cast Iron Gate Valves, Flanged and Threaded Ends; 2011.
- S. MSS SP-71 - Cast Iron Swing Check Valves, Flanged and Threaded Ends; 2018.
- T. MSS SP-72 - Ball Valves with Flanged or Butt-Welding Ends for General Service; 2010a.
- U. MSS SP-78 - Cast Iron Plug Valves, Flanged and Threaded Ends; 2011.
- V. MSS SP-80 - Bronze Gate, Globe, Angle and Check Valves; 2013.
- W. MSS SP-85 - Cast Iron Globe & Angle Valves, Flanged and Threaded Ends; 2011.
- X. MSS SP-110 - Ball Valves Threaded, Socket-Welding, Solder Joint, Grooved and Flared Ends; 2010.
- Y. MSS SP-125 - Gray Iron and Ductile Iron In-Line, Spring-Loaded, Center-Guided Check Valves; 2018.
- Z. NSF 61 - Drinking Water System Components - Health Effects; 2019.
- AA. NSF 372 - Drinking Water System Components - Lead Content; 2016.

#### 1.05 SUBMITTALS

- A. See Section 013000 - Administrative Requirements for submittal procedures.

- B. Product Data: Provide data on valves including manufacturers catalog information. Submit performance ratings, rough-in details, weights, support requirements, and piping connections.
- C. Warranty: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.
- D. Operation and Maintenance Data: Include manufacturer's descriptive literature, operating instructions, maintenance and repair data, and parts listings.
- E. Maintenance Materials: Furnish Owner with one wrench for every five plug valves, in each size of square plug valve head.
  - 1. See Section 016000 - Product Requirements for additional provisions.

#### 1.06 QUALITY ASSURANCE

- A. Manufacturer:
  - 1. Obtain valves for each valve type from single manufacturer.
  - 2. Company must specialize in manufacturing products specified in this section, with not less than three years of documented experience.
- B. Welding Materials and Procedures: Comply with ASME BPVC-IX.

#### 1.07 DELIVERY, STORAGE, AND HANDLING

- A. Prepare valves for shipping as follows:
  - 1. Minimize exposure of operable surfaces by setting plug and ball valves to open position.
  - 2. Protect valve parts exposed to piped medium against rust and corrosion.
  - 3. Protect valve piping connections such as grooves, weld ends, threads, and flange faces.
  - 4. Adjust globe, gate, and angle valves to the closed position to avoid clattering.
  - 5. Secure check valves in either the closed position or open position.
  - 6. Adjust butterfly valves to closed or partially closed position.
- B. Use the following precautions during storage:
  - 1. Maintain valve end protection and protect flanges and specialties from dirt.
    - a. Provide temporary inlet and outlet caps.
    - b. Maintain caps in place until installation.
  - 2. Store valves in shipping containers and maintain in place until installation.
    - a. Store valves indoors in dry environment.

#### 1.08 EXERCISE THE FOLLOWING PRECAUTIONS FOR HANDLING:

- A. Handle large valves with sling, modified to avoid damage to exposed parts.
- B. Avoid the use of operating handles or stems as rigging or lifting points.

### PART 2 PRODUCTS

#### 2.01 APPLICATIONS

- A. Listed pipe sizes shown using nominal pipe sizes (NPS) and nominal diameter (DN).
- B. Provide the following valves for the applications if not indicated on drawings:
  - 1. Shutoff: Ball, butterfly, gate or plug.
  - 2. Throttling: Provide globe, ball, or butterfly.

- C. Substitutions of valves with higher CWP classes or WSP ratings for same valve types are permitted when specified CWP ratings or WSP classes are not available.
- D. Low Pressure, Compressed Air Valves 150 psi (1,035 kPa) or Less:
  - 1. 2 inch (50 mm, DN) and Smaller:
    - a. Bronze: Provide with solder-joint ends.
    - b. Ball: One piece, full port, brass with brass trim.
- E. High Pressure, Compressed Air Valves 150 psi (1,035 kPa) to 200 psi (1,380 kPa):
  - 1. 2 inch (50 mm, DN) and Smaller:
    - a. Bronze: Provide with solder-joint ends.
    - b. Ball: One piece, full port, brass with brass trim.
- F. Domestic, Hot and Cold Water Valves:
  - 1. 2 inch (50 mm, DN) and Smaller:
    - a. Bronze: Provide with solder-joint ends.
    - b. Ball: One piece, full port, brass with brass trim.
    - c. Bronze Gate: Class 125, NRS.
    - d. Bronze Globe: Class 125, bronze disc.

## 2.02 GENERAL REQUIREMENTS

- A. Valve Pressure and Temperature Ratings: No less than rating indicated; as required for system pressures and temperatures.
- B. Valve Sizes: Match upstream piping unless otherwise indicated.
- C. Valve Actuator Types:
  - 1. Gear Actuator: Quarter-turn valves 8 inch (200 mm, DN) and larger.
  - 2. Handwheel: Valves other than quarter-turn types.
  - 3. Hand Lever: Quarter-turn valves 6 inch (150 mm, DN) and smaller except plug valves.
  - 4. Wrench: Plug valves with square heads.
- D. Insulated Piping Valves: With 2 inch (50 mm, DN) stem extensions and the following features:
  - 1. Gate Valves: Rising stem.
  - 2. Ball Valves: Extended operating handle of non-thermal-conductive material, and protective sleeve that allows operation of valve without breaking the vapor seal or disturbing insulation.
  - 3. Butterfly Valves: Extended neck.
- E. Valve-End Connections:
  - 1. Threaded End Valves: ASME B1.20.1.
  - 2. Flanges on Iron Valves: ASME B16.1 for flanges on iron valves.
  - 3. Pipe Flanges and Flanged Fittings 1/2 inch (15 mm, DN) through 24 inch (600 mm, DN): ASME B16.5.
  - 4. Solder Joint Connections: ASME B16.18.
- F. General ASME Compliance:
  - 1. Ferrous Valve Dimensions and Design Criteria: ASME B16.10 and ASME B16.34.
  - 2. Solder-joint Connections: ASME B16.18.
  - 3. Building Services Piping Valves: ASME B31.9.
- G. Potable Water Use:
  - 1. Certified: Approved for use in compliance with NSF 61 and NSF 372.

2. Lead-Free Certified: Wetted surface material includes less than 0.25 percent lead content.

H. Valve Bypass and Drain Connections: MSS SP-45.

### 2.03 BRASS, BALL VALVES

- A. Two Piece, Full Port with Brass Trim and Female Thread, Male thread, or Solder Connections:
  1. Comply with MSS SP-110.
  2. WSP Rating: 150 psi (1,035 kPa).
  3. WOG Rating: 600 psi (4,140 kPa).
  4. Body: Forged brass.
  5. Seats: PTFE.
  6. Ball: Chrome-plated brass.
  7. Operator: Lockable handle and memory stop.
  8. Manufacturers:
    - a. Apollo Valves; \_\_\_\_\_: [www.apollovalves.com/#sle](http://www.apollovalves.com/#sle).
    - b. FNW; 410A: [www.fnw.com/#sle](http://www.fnw.com/#sle).
    - c. Jomar Valves, a division of Jomar Group; \_\_\_\_\_: [www.jomarvalve.com/#sle](http://www.jomarvalve.com/#sle).
    - d. Substitutions: See Section 016000 - Product Requirements.

### 2.04 BRONZE, BALL VALVES

- A. General:
  1. Fabricate from dezincification resistant material.
  2. Copper alloys containing more than 15 percent zinc are not permitted.
- B. One Piece, Reduced Port with Bronze Trim:
  1. Comply with MSS SP-110.
  2. WSP Rating: 400 psi (2,760 kPa).
  3. CWP Rating: 600 psi (4,140 kPa).
  4. Body: Bronze.
  5. End Connections: Pipe press.
  6. Seats: PTFE.
  7. Stem: Bronze.
  8. Ball: Chrome plated brass.
  9. Manufacturers:
    - a. Viega LLC; \_\_\_\_\_: [www.viega.us/#sle](http://www.viega.us/#sle).
    - b. Substitutions: See Section 016000 - Product Requirements.
- C. Two Piece, Full Port with Bronze Trim:
  1. Comply with MSS SP-110.
  2. WSP Rating: 150 psi (1,035 kPa).
  3. WOG Rating: 600 psi (4,140 kPa).
  4. Body: Forged bronze or dezincified-brass alloy.
  5. Ends Connections: Pipe thread or solder.
  6. Seats: PTFE.
  7. Stem: Bronze, blowout proof.
  8. Ball: Chrome plated brass.
  9. Manufacturers:
    - a. Apollo Valves; \_\_\_\_\_: [www.apollovalves.com/#sle](http://www.apollovalves.com/#sle).
    - b. Viega LLC; \_\_\_\_\_: [www.viega.us/#sle](http://www.viega.us/#sle).
    - c. Substitutions: See Section 016000 - Product Requirements.

## 2.05 BRONZE, GATE VALVES

- A. General:
  - 1. Fabricate from dezincification resistant material.
  - 2. Copper alloys containing more than 15 percent zinc are not permitted.

## 2.06 BRONZE, GLOBE VALVES

- A. General:
  - 1. Fabricate from dezincification resistant material.
  - 2. Copper alloys containing more than 15 percent zinc are not permitted.

## PART 3 EXECUTION

## 3.01 EXAMINATION

- A. Discard all packing materials and verify that valve interior, including threads and flanges are completely clean without signs of damage or degradation that could result in leakage.
- B. Verify valve parts to be fully operational in all positions from closed to fully open.
- C. Confirm gasket material to be suitable for the service, to be of correct size, and without defects that could compromise effectiveness.
- D. Should valve is determined to be defective, replace with new valve.

## 3.02 INSTALLATION

- A. Provide unions or flanges with valves to facilitate equipment removal and maintenance while maintaining system operation and full accessibility for servicing.
- B. Provide separate valve support as required and locate valve with stem at or above center of piping, maintaining unimpeded stem movement.
- C. Where valve support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welds.

**END OF SECTION 220523**

**PART 1 GENERAL****1.01 SECTION INCLUDES****1.02 RELATED REQUIREMENTS**

- A. Section 033000 - Cast-in-Place Concrete: Concrete equipment pads.
- B. Section 055000 - Metal Fabrications.

**1.03 REFERENCE STANDARDS**

- A. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2017.
- B. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware; 2016a.
- C. ASTM A181/A181M - Standard Specification for Carbon Steel Forgings, for General - Purpose Piping; 2014.
- D. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2014.
- E. ASTM A47/A47M - Standard Specification for Ferritic Malleable Iron Castings; 1999, with Editorial Revision (2018).
- F. ASTM B633 - Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel; 2019.
- G. ASTM D635 - Standard Test Method for Rate of Burning and/or Extent and Time of Burning of Plastics in a Horizontal Position; 2018.
- H. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2019b.
- I. ASTM E96/E96M - Standard Test Methods for Water Vapor Transmission of Materials; 2016.
- J. MSS SP-58 - Pipe Hangers and Supports - Materials, Design, Manufacture, Selection, Application, and Installation; 2018.
- K. NFPA 101 - Life Safety Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
- L. UL 723 - Standard for Test for Surface Burning Characteristics of Building Materials; Current Edition, Including All Revisions.

**1.04 ADMINISTRATIVE REQUIREMENTS**

- A. Coordination:
  - 1. Coordinate sizes and arrangement of supports and bases with the actual equipment and components to be installed.
  - 2. Coordinate the work with other trades to provide additional framing and materials required for installation.
  - 3. Coordinate compatibility of support and attachment components with mounting surfaces at the installed locations.

4. Coordinate the arrangement of supports with ductwork, piping, equipment and other potential conflicts installed under other sections or by others.
  5. Notify Architect/Engineer of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.
- B. Sequencing:
1. Do not install products on or provide attachment to concrete surfaces until concrete has fully cured in accordance with Section 033000.

#### 1.05 SUBMITTALS

- A. See Section 013000 - Administrative Requirements for submittal procedures.
- B. Product Data: Provide manufacturer's standard catalog pages and data sheets for metal channel (strut) framing systems, nonpenetrating rooftop supports, post-installed concrete and masonry anchors, and thermal insulated pipe supports.
- C. Shop Drawings: Include details for fabricated hangers and supports where materials or methods other than those indicated are proposed for substitution.
- D. Installer's Qualifications: Include evidence of compliance with specified requirements.
- E. Manufacturer's Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

#### 1.06 QUALITY ASSURANCE

- A. Comply with applicable building code.
- B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.
- C. Installer Qualifications for Field-Welding: As specified in Section 055000.
- D. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

#### 1.07 DELIVERY, STORAGE, AND HANDLING

- A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

### PART 2 PRODUCTS

#### 2.01 GENERAL REQUIREMENTS

- A. Provide required hardware to hang or support piping, equipment, or fixtures with related accessories as necessary to complete installation of plumbing work.
- B. Provide hardware products listed, classified, and labeled as suitable for intended purpose.
- C. Materials for Metal Fabricated Supports: Comply with Section 055000.
1. Zinc-Plated Steel: Electroplated in accordance with ASTM B633 unless stated otherwise.
  2. Galvanized Steel: Hot-dip galvanized in accordance with ASTM A123/A123M or ASTM A153/A153M unless stated otherwise.

- D. Corrosion Resistance: Use corrosion-resistant metal-based materials fully compatible with exposed piping materials and suitable for the environment where installed.

### PART 3 EXECUTION

#### 3.01 EXAMINATION

- A. Verify that field measurements are as indicated.
- B. Verify that mounting surfaces are ready to receive support and attachment components.
- C. Verify that conditions are satisfactory for installation prior to starting work.

#### 3.02 INSTALLATION

- A. Install products in accordance with manufacturer's instructions.
- B. Provide independent support from building structure. Do not provide support from piping, ductwork, conduit, or other systems.
- C. Unless specifically indicated or approved by Architect/Engineer, do not provide support from suspended ceiling support system or ceiling grid.
- D. Unless specifically indicated or approved by Architect/Engineer, do not provide support from roof deck.
- E. Do not penetrate or otherwise notch or cut structural members without approval of Structural Engineer.
- F. Equipment Support and Attachment:
  - 1. Use metal fabricated supports or supports assembled from metal channel (strut) to support equipment as required.
  - 2. Use metal channel (strut) secured to studs to support equipment surface-mounted on hollow stud walls when wall strength is not sufficient to resist pull-out.
  - 3. Use metal channel (strut) to support surface-mounted equipment in wet or damp locations to provide space between equipment and mounting surface.
  - 4. Unless otherwise indicated, mount floor-mounted equipment on properly sized 3 inch (80 mm) high concrete pad constructed in accordance with Section 033000.
  - 5. Securely fasten floor-mounted equipment. Do not install equipment such that it relies on its own weight for support.
- G. Secure fasteners according to manufacturer's recommended torque settings.
- H. Remove temporary supports.

#### 3.03 FIELD QUALITY CONTROL

- A. See Section 014000 - Quality Requirements for additional requirements.
- B. Inspect support and attachment components for damage and defects.
- C. Repair cuts and abrasions in galvanized finishes using zinc-rich paint recommended by manufacturer. Replace components that exhibit signs of corrosion.

- D. Correct deficiencies and replace damaged or defective support and attachment components.

**END OF SECTION 220529**

## PART 1 GENERAL

## 1.01 SECTION INCLUDES

- A. Constant wattage resistance electric heating cable.
- B. Cable outer jacket markings.
- C. Connection kits.

## 1.02 RELATED REQUIREMENTS

- A. Section 220553 - Identification for Plumbing Piping and Equipment
- B. Section 220719 - Plumbing Piping Insulation.
- C. Section 221005 - Plumbing Piping.
- D. Section 221006 - Plumbing Piping Specialties.
- E. Section 260519 - Low-Voltage Electrical Power Conductors and Cables.
- F. Section 260526 - Grounding and Bonding for Electrical Systems.
- G. Section 260533.13 - Conduit for Electrical Systems.
- H. Section 260583 - Wiring Connections.

## 1.03 REFERENCE STANDARDS

- A. IEEE 515.1 - IEEE Standard for the Testing, Design, Installation, and Maintenance of Electrical Resistance Trace Heating for Commercial Applications; 2012.
- B. ITS (DIR) - Directory of Listed Products; current edition.
- C. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
- D. UL (DIR) - Online Certifications Directory; Current Edition.

## 1.04 ADMINISTRATIVE REQUIREMENTS

- A. Sequencing: Ensure that utility connections are achieved in an orderly and expeditious manner.
- B. Coordinate the work with other trades to provide ground fault protection for electric heat tracing circuits as required by NFPA 70.
- C. Coordinate the work with other trades to provide circuit breaker ratings suitable for installed circuit lengths.

## 1.05 SUBMITTALS

- A. See Section 013000 - Administrative Requirements, for submittal procedures.
- B. Product Data: Provide data for electric heat tracing.

- C. Shop Drawings: Indicate electric heat tracing layout, electrical terminations, thermostats, controls, and branch circuit connections.
- D. Manufacturer's Installation Instructions: Indicate installation instructions and recommendations.
- E. Field Quality Control Submittals: Indicate test reports and inspection reports.
- F. Project Record Documents: Record actual locations of electric heat tracing lines and thermostats.
- G. Operation and Maintenance Data: Include manufacturer's descriptive literature, operating instructions of equipment and controls, maintenance and repair data, and parts listings.
- H. Warranty: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

#### 1.06 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with minimum three years of documented experience.
- B. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years of documented experience.
- C. Copies of Documents at Project Site: Maintain at the project site a copy of each referenced document that prescribes execution requirements.

#### 1.07 WARRANTY

- A. See Section 017800 - Closeout Submittals, for additional warranty requirements.

### PART 2 PRODUCTS

#### 2.01 CONSTANT WATTAGE RESISTANCE ELECTRIC HEATING CABLE

- A. Manufacturers:
  - 1. Chromalox, Inc; Chromalox-30: [www.chromalox.com/#sle](http://www.chromalox.com/#sle).
  - 2. Substitutions: See Section 016000 - Product Requirements.
- B. Provide products listed, classified, and labeled by UL (DIR), ITS (DIR), or testing firm acceptable to authorities having jurisdiction (AHJ).

#### 2.02 CABLE OUTER JACKET MARKINGS

- A. Name of manufacturer, trademark, or other recognized symbol of identification.
- B. Catalog number, reference number, or model.
- C. Month and year of manufacture, date coding, applicable serial number, or equivalent.
- D. Agency listing or approval.

#### 2.03 CONNECTION KITS

- A. Provide power connection, splice/tee, and end seal kits compatible with the heating cable and without requiring cutting of the cable core to expose bus wires.

- B. Provide with NEMA 4X rating for prevention of corrosion and water ingress.

## PART 3 EXECUTION

### 3.01 EXAMINATION

- A. Verify that piping and equipment are ready to receive work.
- B. Verify field measurements are as indicated on shop drawings.
- C. Verify required power is available, in proper location, and ready for use.

### 3.02 PREPARATION

- A. Clean exposed surfaces prior to installation.
- B. Prepare surfaces using approved methods as recommended by manufacturer.

### 3.03 INSTALLATION

- A. Install in accordance with manufacturer's written installation instructions.
- B. Comply with installation requirements of IEEE 515.1 and NFPA 70, Article 427.
- C. Apply heating cable linearly on pipe with fiberglass tape only after piping has successfully completed any required pressure testing.
- D. Comply with applicable local building codes and requirements of authorities having jurisdiction.
- E. Identification:
  - 1. After thermal insulation installation, apply external pipeline decals to indicate presence of the thermal insulation cladding at intervals not to exceed 20 ft (6 m) including cladding over each valve or other equipment that may require maintenance.

### 3.04 FIELD QUALITY CONTROL

- A. See Section 014000 - Quality Requirements, for additional requirements.
- B. Perform start-up by factory technician or factory representative as per Owner's requirements.
- C. Field Testing and Inspections:
  - 1. Commission system in accordance with installation and operation manual.
  - 2. Inspect for sources of water entry and proper sealing.
  - 3. Inspect weather barrier to confirm that no sharp edges are contacting the trace heating.
  - 4. Insulation Resistance: Greater than 20 megohms at a test voltage of 2500 VDC for polymer insulated trace heaters.
  - 5. Test heating cable integrity with megohmmeter at the following intervals:
    - a. Prior to initial start-up (commissioning).
  - 6. Measure voltage and current at each unit.
  - 7. Controls:
    - a. Verify control parameters are set to the application requirements.

### 3.05 CLOSEOUT ACTIVITIES

- A. See Section 017800 - Closeout Submittals.

3.06 PROTECTION

- A. Protect installed products from damage until Date of Substantial Completion.

**END OF SECTION 220533**

## PART 1 GENERAL

## 1.01 SECTION INCLUDES

- A. Tags.
- B. Stencils.
- C. Pipe markers.

## 1.02 RELATED REQUIREMENTS

- A. Section 099123 - Interior Painting: Identification painting.

## 1.03 REFERENCE STANDARDS

- A. ASME A13.1 - Scheme for the Identification of Piping Systems; 2020.
- B. ASTM D709 - Standard Specification for Laminated Thermosetting Materials; 2017.

## 1.04 SUBMITTALS

- A. See Section 013000 - Administrative Requirements for submittal procedures.
- B. Schedules:
  - 1. Submit plumbing component identification schedule listing equipment, piping, and valves.
  - 2. Detail proposed component identification data in terms of of wording, symbols, letter size, and color coding to be applied to corresponding product.
  - 3. Valve Data Format: Include id-number, location, function, and model number.
- C. Product Data: Provide manufacturers catalog literature for each product required.
- D. Manufacturer's Installation Instructions: Indicate special procedures, and installation.

## PART 2 PRODUCTS

## 2.01 PLUMBING COMPONENT IDENTIFICATION GUIDELINE

- A. Pipe Markers: 3/4 inch (20 mm) diameter and higher.

## 2.02 NAMEPLATES

- A. Manufacturers:
  - 1. Brimar Industries, Inc; \_\_\_\_\_: [www.pipemarker.com/#sle](http://www.pipemarker.com/#sle).
  - 2. Kolbi Pipe Marker Co; \_\_\_\_\_: [www.kolbipipemarkers.com/#sle](http://www.kolbipipemarkers.com/#sle).
  - 3. Seton Identification Products; \_\_\_\_\_: [www.seton.com/#sle](http://www.seton.com/#sle).
  - 4. Substitutions: See Section 016000 - Product Requirements.
- B. Description: Laminated piece with up to three lines of text.
  - 1. Letter Color: White.
  - 2. Letter Height: 1/4 inch (6 mm).
  - 3. Background Color: Black.

## 2.03 TAGS

- A. Manufacturers:

1. Advanced Graphic Engraving; \_\_\_\_\_: [www.advancedgraphicengraving.com/#sle](http://www.advancedgraphicengraving.com/#sle).
  2. Brady Corporation; \_\_\_\_\_: [www.bradycorp.com/#sle](http://www.bradycorp.com/#sle).
  3. Brimar Industries, Inc; \_\_\_\_\_: [www.pipemarker.com/#sle](http://www.pipemarker.com/#sle).
  4. Craftmark Pipe Markers; \_\_\_\_\_: [www.craftmarkid.com/#sle](http://www.craftmarkid.com/#sle).
  5. Kolbi Pipe Marker Co; \_\_\_\_\_: [www.kolbipipemarkers.com/#sle](http://www.kolbipipemarkers.com/#sle).
  6. Seton Identification Products; \_\_\_\_\_: [www.seton.com/#sle](http://www.seton.com/#sle).
  7. Substitutions: See Section 016000 - Product Requirements.
- B. Flexible: Vinyl with engraved black letters on light contrasting background color with up to three lines of text. Minimum tag size 1-1/2 inch (40 mm) in diameter.
- C. Metal: Brass, 19 gauge 1-1/2 inch (40 mm) in diameter with smooth edges, blank, smooth edges, and corrosion-resistant ball chain. Up to three lines of text.

#### 2.04 PIPE MARKERS

- A. Manufacturers:
1. Brady Corporation; \_\_\_\_\_: [www.bradycorp.com/#sle](http://www.bradycorp.com/#sle).
  2. Brimar Industries, Inc; \_\_\_\_\_: [www.pipemarker.com/#sle](http://www.pipemarker.com/#sle).
  3. Craftmark Pipe Markers; \_\_\_\_\_: [www.craftmarkid.com/#sle](http://www.craftmarkid.com/#sle).
  4. Kolbi Pipe Marker Co; \_\_\_\_\_: [www.kolbipipemarkers.com/#sle](http://www.kolbipipemarkers.com/#sle).
  5. Seton Identification Products; \_\_\_\_\_: [www.seton.com/#sle](http://www.seton.com/#sle).
  6. Substitutions: See Section 016000 - Product Requirements.
- B. Comply with ASME A13.1.
- C. Flexible Marker: Factory fabricated, semi-rigid, preformed to fit around pipe or pipe covering; minimum information indicating flow direction arrow and identification of fluid conveyed.
- D. Underground Flexible Marker: Bright-colored continuously printed ribbon tape, minimum 6 inches (150 mm) wide by 4 mil, 0.004 inch (0.10 mm) thick, manufactured for direct burial service.
- E. Identification Scheme, ASME A13.1:
1. Primary: External Pipe Diameter, Uninsulated or Insulated.
  2. Secondary: Color scheme per fluid service.
    - a. Water; Potable, Cooling, Boiler Feed, and Other: White text on green background.

### PART 3 EXECUTION

#### 3.01 PREPARATION

- A. Degrease and clean surfaces to receive identification products.

#### 3.02 INSTALLATION

- A. Install flexible nameplates with corrosive-resistant mechanical fasteners, or adhesive. Apply with sufficient adhesive to ensure permanent adhesion and seal with clear lacquer.
- B. Install tags in clear view and align with axis of piping
- C. Install plastic pipe markers in accordance with manufacturer's instructions.
- D. Install plastic tape pipe marker around pipe in accordance with manufacturer's instructions.

- E. Install underground plastic pipe markers 6 to 8 inches (150 to 200 mm) below finished grade, directly above buried pipe.
- F. Locate ceiling tacks to locate valves or dampers above lay-in panel ceilings. Locate in corner of panel closest to equipment.

**END OF SECTION 220553**

## PART 1 GENERAL

## 1.01 SECTION INCLUDES

- A. Glass fiber insulation.
- B. Jacketing and accessories.

## 1.02 RELATED REQUIREMENTS

- A. Section 078400 - Firestopping.
- B. Section 099113 - Exterior Painting: Painting insulation jacket.
- C. Section 099123 - Interior Painting: Painting insulation jacket.
- D. Section 221005 - Plumbing Piping: Placement of hangers and hanger inserts.

## 1.03 REFERENCE STANDARDS

- A. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar; 2015.
- B. ASTM C177 - Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus; 2019.
- C. ASTM C195 - Standard Specification for Mineral Fiber Thermal Insulating Cement; 2007 (Reapproved 2013).
- D. ASTM C449 - Standard Specification for Mineral Fiber Hydraulic-Setting Thermal Insulating and Finishing Cement; 2007 (Reapproved 2013).
- E. ASTM C518 - Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus; 2017.
- F. ASTM C533 - Standard Specification for Calcium Silicate Block and Pipe Thermal Insulation; 2017.
- G. ASTM C534/C534M - Standard Specification for Preformed Flexible Elastomeric Cellular Thermal Insulation in Sheet and Tubular Form; 2020a.
- H. ASTM C547 - Standard Specification for Mineral Fiber Pipe Insulation; 2019.
- I. ASTM C552 - Standard Specification for Cellular Glass Thermal Insulation; 2017, with Editorial Revision (2018).
- J. ASTM C553 - Standard Specification for Mineral Fiber Blanket Thermal Insulation for Commercial and Industrial Applications; 2013 (Reapproved 2019).
- K. ASTM C578 - Standard Specification for Rigid, Cellular Polystyrene Thermal Insulation; 2019.
- L. ASTM C585 - Standard Practice for Inner and Outer Diameters of Thermal Insulation for Nominal Sizes of Pipe and Tubing; 2010 (Reapproved 2016).
- M. ASTM C591 - Standard Specification for Unfaced Preformed Rigid Cellular Polyisocyanurate Thermal Insulation; 2021.

- N. ASTM C610 - Standard Specification for Molded Expanded Perlite Block and Pipe Thermal Insulation; 2017.
- O. ASTM C795 - Standard Specification for Thermal Insulation for Use in Contact with Austenitic Stainless Steel; 2008 (Reapproved 2018).
- P. ASTM C1410 - Standard Specification for Cellular Melamine Thermal and Sound-Absorbing Insulation; 2017.
- Q. ASTM C1695 - Standard Specification for Fabrication of Flexible Removable and Reusable Blanket Insulation for Hot Service; 2020.
- R. ASTM D1056 - Standard Specification for Flexible Cellular Materials-Sponge or Expanded Rubber; 2020.
- S. ASTM D2842 - Standard Test Method for Water Absorption of Rigid Cellular Plastics; 2019.
- T. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2019b.
- U. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements; 2009 (Reapproved 2016).
- V. ASTM E96/E96M - Standard Test Methods for Water Vapor Transmission of Materials; 2016.
- W. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi; 2015.
- X. UL 723 - Standard for Test for Surface Burning Characteristics of Building Materials; Current Edition, Including All Revisions.

#### 1.04 SUBMITTALS

- A. See Section 013000 - Administrative Requirements for submittal procedures.
- B. Product Data: Provide product description, thermal characteristics, list of materials and thickness for each service, and locations.
- C. Manufacturer's Instructions: Indicate installation procedures that ensure acceptable workmanship and installation standards will be achieved.

#### 1.05 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with not less than three years of documented experience.

#### 1.06 DELIVERY, STORAGE, AND HANDLING

- A. Accept materials on site, labeled with manufacturer's identification, product density, and thickness.

#### 1.07 FIELD CONDITIONS

- A. Maintain ambient conditions required by manufacturers of each product.
- B. Maintain temperature before, during, and after installation for minimum of 24 hours.

## PART 2 PRODUCTS

## 2.01 REGULATORY REQUIREMENTS

- A. Surface Burning Characteristics: Flame spread index/Smoke developed index of 25/50, maximum, when tested in accordance with ASTM E84 or UL 723.

## 2.02 GLASS FIBER INSULATION

- A. Manufacturers:
1. CertainTeed Corporation; \_\_\_\_\_: [www.certainteed.com/#sle](http://www.certainteed.com/#sle).
  2. Johns Manville Corporation; \_\_\_\_\_: [www.jm.com/#sle](http://www.jm.com/#sle).
  3. Knauf Insulation; Earthwool 1000 Degree Pipe Insulation: [www.knaufinsulation.com/#sle](http://www.knaufinsulation.com/#sle).
  4. Owens Corning Corporation; Fiberglas Pipe Insulation ASJ: [www.ocbuildingspec.com/#sle](http://www.ocbuildingspec.com/#sle).
  5. Owens Corning Corporation; VaporWick Pipe Insulation: [www.ocbuildingspec.com/#sle](http://www.ocbuildingspec.com/#sle).
  6. Substitutions: See Section 016000 - Product Requirements.
- B. Insulation: ASTM C547 and ASTM C795; rigid molded, noncombustible.
1. K (Ksi) Value: ASTM C177, 0.24 at 75 degrees F (0.035 at 24 degrees C).
  2. Maximum Service Temperature: 850 degrees F (454 degrees C).
  3. Maximum Moisture Absorption: 0.2 percent by volume.
- C. Insulation: ASTM C547 and ASTM C795; rigid molded, noncombustible, with wicking material to transport condensed water to the outside of the system for evaporation to the atmosphere.
1. K (Ksi) Value: ASTM C177, 0.23 at 75 degrees F (0.034 at 24 degrees C).
  2. Maximum Service Temperature: 220 degrees F (104 degrees C).
  3. Maximum Moisture Absorption: 0.2 percent by volume.
- D. Insulation: ASTM C547 and ASTM C795; semi-rigid, noncombustible, end grain adhered to jacket.
1. K (Ksi) Value: ASTM C177, 0.24 at 75 degrees F (0.035 at 24 degrees C).
  2. Maximum Service Temperature: 650 degrees F (343 degrees C).
  3. Maximum Moisture Absorption: 0.2 percent by volume.
- E. Vapor Barrier Jacket: White Kraft paper with glass fiber yarn, bonded to aluminized film; moisture vapor transmission when tested in accordance with ASTM E96/E96M of 0.02 perm (0.029 ng/(Pa s m)).
- F. Vapor Barrier Lap Adhesive: Compatible with insulation.
- G. Fibrous Glass Fabric:

## 2.03 JACKETING AND ACCESSORIES

- A. PVC Plastic Jacket:
1. Manufacturers:
    - a. Johns Manville Corporation; \_\_\_\_\_: [www.jm.com/#sle](http://www.jm.com/#sle).
    - b. Substitutions: See Section 016000 - Product Requirements.
  2. Jacket: One piece molded type fitting covers and sheet material, off-white color.
    - a. Minimum Service Temperature: 0 degrees F (Minus 18 degrees C).
    - b. Maximum Service Temperature: 150 degrees F (66 degrees C).
    - c. Moisture Vapor Permeability: 0.002 perm inch (0.0029 ng/(Pa s m)), maximum, when tested in accordance with ASTM E96/E96M.

- d. Thickness: 10 mil, 0.010 inch (0.25 mm).
- e. Connections: Brush on welding adhesive.
- 3. Covering Adhesive Mastic: Compatible with insulation.

## PART 3 EXECUTION

### 3.01 EXAMINATION

- A. Verify that piping has been tested before applying insulation materials.
- B. Verify that surfaces are clean and dry, with foreign material removed.

### 3.02 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Install in accordance with North American Insulation Manufacturers Association (NAIMA) National Insulation Standards.
- C. Exposed Piping: Locate insulation and cover seams in least visible locations.
- D. Insulated pipes conveying fluids below ambient temperature: Insulate entire system including fittings, valves, unions, flanges, strainers, flexible connections, pump bodies, and expansion joints.
- E. Glass fiber insulated pipes conveying fluids below ambient temperature:
  - 1. Provide vapor barrier jackets, factory-applied or field-applied. Secure with self-sealing longitudinal laps and butt strips with pressure-sensitive adhesive. Secure with outward clinch expanding staples and vapor barrier mastic.
  - 2. Insulate fittings, joints, and valves with molded insulation of like material and thickness as adjacent pipe. Finish with glass cloth and vapor barrier adhesive or PVC fitting covers.
- F. For hot piping conveying fluids 140 degrees F (60 degrees C) or less, do not insulate flanges and unions at equipment, but bevel and seal ends of insulation.
- G. For hot piping conveying fluids over 140 degrees F (60 degrees C), insulate flanges and unions at equipment.
- H. Glass fiber insulated pipes conveying fluids above ambient temperature:
  - 1. Provide standard jackets, with or without vapor barrier, factory-applied or field-applied. Secure with self-sealing longitudinal laps and butt strips with pressure-sensitive adhesive. Secure with outward clinch expanding staples.
  - 2. Insulate fittings, joints, and valves with insulation of like material and thickness as adjoining pipe. Finish with glass cloth and adhesive or PVC fitting covers.
- I. Continue insulation through walls, sleeves, pipe hangers, and other pipe penetrations. Finish at supports, protrusions, and interruptions. At fire separations, see Section 078400.
- J. Buried Piping: Provide factory fabricated assembly with inner all-purpose service jacket with self-sealing lap, and asphalt impregnated open mesh glass fabric, with one mil, 0.001 inch (0.025 mm) thick aluminum foil sandwiched between three layers of bituminous compound; outer surface faced with a polyester film.

- K. Heat Traced Piping: Insulate fittings, joints, and valves with insulation of like material, thickness, and finish as adjoining pipe. Size large enough to enclose pipe and heat tracer. Cover with aluminum jacket with seams located on bottom side of horizontal piping.

**END OF SECTION 220719**

## PART 1 GENERAL

## 1.01 SECTION INCLUDES

- A. Sanitary waste piping, buried within 5 feet (1500 mm) of building.
- B. Sanitary waste piping, above grade.
- C. Domestic water piping, buried within 5 feet (1500 mm) of building.
- D. Domestic water piping, above grade.
- E. Storm drainage piping, buried within 5 feet (1500 mm) of building.
  - 1. Storm drainage piping, above grade.
  - 2. Natural gas piping, buried beyond 5 feet (1500 mm) of building.
  - 3. Natural gas piping, buried within 5 feet (1500 mm) of building.
  - 4. Natural gas piping, above grade.
  - 5. Pipe flanges, unions, and couplings.
  - 6. Pipe hangers and supports.
  - 7. Pipe sleeve-seal systems.
  - 8. Ball valves.
  - 9. Butterfly valves.
  - 10. Balancing valves.
  - 11. Strainers.

## 1.02 RELATED REQUIREMENTS

- A. Section 078400 - Firestopping.
- B. Section 083100 - Access Doors and Panels.
- C. Section 099113 - Exterior Painting.
- D. Section 099123 - Interior Painting.
- E. Section 220516 - Expansion Fittings and Loops for Plumbing Piping.
- F. Section 220553 - Identification for Plumbing Piping and Equipment.
- G. Section 220719 - Plumbing Piping Insulation.
- H. Section 260583 - Wiring Connections: Electrical characteristics and wiring connections.
- I. Section 312316 - Excavation.
- J. Section 312323 - Fill.
- K. Section 330110.58 - Disinfection of Water Utility Piping Systems.

## 1.03 REFERENCE STANDARDS

- BV. UL 723 - Standard for Test for Surface Burning Characteristics of Building Materials; Current Edition, Including All Revisions.

#### 1.04 SUBMITTALS

- A. See Section 013000 - Administrative Requirements for submittal procedures.
- B. Product Data: Provide data on pipe materials, pipe fittings, valves, and accessories. Provide manufacturers catalog information. Indicate valve data and ratings.
- C. Shop Drawings: For non-penetrating rooftop supports, submit detailed layout developed for this project, with design calculations for loadings and spacings.
- D. Sustainable Design Documentation: For soldered copper joints, submit installer's certification that the specified installation method and materials were used.
- E. Sustainable Design Documentation: For products meeting regulatory lead-content restrictions.
- F. Project Record Documents: Record actual locations of valves.
- G. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
  - 1. See Section 016000 - Product Requirements for additional provisions.
  - 2. Valve Repacking Kits: One for each type and size of valve.

#### 1.05 QUALITY ASSURANCE

- A. Perform work in accordance with applicable codes.
- B. Valves: Manufacturer's name and pressure rating marked on valve body.
- C. Welding Materials and Procedures: Comply with ASME BPVC-IX and applicable state labor regulations.
- D. Welder Qualifications: Certified in accordance with ASME BPVC-IX.
- E. Identify pipe with marking including size, ASTM material classification, ASTM specification, potable water certification, water pressure rating.

#### 1.06 DELIVERY, STORAGE, AND HANDLING

- A. Accept valves on site in shipping containers with labeling in place. Inspect for damage.

- B. Provide temporary protective coating on cast iron and steel valves.
- C. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.
- D. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.

#### 1.07 FIELD CONDITIONS

- A. Do not install underground piping when bedding is wet or frozen.

### PART 2 PRODUCTS

#### 2.01 GENERAL REQUIREMENTS

- A. Potable Water Supply Systems: Provide piping, pipe fittings, and solder and flux (if used), that comply with NSF 61 and NSF 372 for maximum lead content; label pipe and fittings.
- B. Plenum-Installed Acid Waste Piping: Flame-spread index equal or below 25 and smoke-spread index equal or below 50 according to ASTM E84 or UL 723 tests.

#### 2.02 SANITARY WASTE PIPING, BURIED WITHIN 5 FEET (1500 MM) OF BUILDING

- A. Cast Iron Pipe: ASTM A74 extra heavy weight.
  - 1. Fittings: Cast iron.
  - 2. Joints: Hub-and-spigot, CISPI HSN compression type with ASTM C564 neoprene gaskets or lead and oakum.
- B. Cast Iron Pipe: CISPI 301, hubless.
  - 1. Fittings: Cast iron.
  - 2. Joints: CISPI 310, neoprene gasket and stainless steel clamp and shield assemblies.

#### 2.03 SANITARY WASTE PIPING, ABOVE GRADE

- A. Cast Iron Pipe: ASTM A74, service weight.
  - 1. Fittings: Cast iron.
  - 2. Joint Seals: ASTM C564 neoprene gaskets, or lead and oakum.
- B. Cast Iron Pipe: CISPI 301, hubless, service weight.
  - 1. Fittings: Cast iron.
  - 2. Joints: CISPI 310, neoprene gaskets and stainless steel clamp-and-shield assemblies.
- C. PVC Pipe: ASTM D2729.
  - 1. Fittings: PVC.
  - 2. Joints: Solvent welded, with ASTM D2564 solvent cement.

#### 2.04 DOMESTIC WATER PIPING, BURIED WITHIN 5 FEET (1500 MM) OF BUILDING

- A. Copper Pipe: ASTM B42, hard drawn.
  - 1. Fittings: ASME B16.18, cast copper alloy or ASME B16.22 wrought copper and bronze.
  - 2. Joints: ASTM B32, alloy Sn95 solder.

## 2.05 DOMESTIC WATER PIPING, ABOVE GRADE

- A. Copper Tube: ASTM B88 (ASTM B88M), Type K (A), Drawn (H).
  - 1. Fittings: ASME B16.18, cast copper alloy or ASME B16.22, wrought copper and bronze.
  - 2. Joints: ASTM B32, alloy Sn95 solder.
  - 3. Mechanical Press Sealed Fittings: Double-pressed type, NSF 61 and NSF 372 approved or certified, utilizing EPDM, nontoxic, synthetic rubber sealing elements.
    - a. Manufacturers:
      - 1) Anvil International; \_\_\_\_\_: [www.anvilintl.com/#sle](http://www.anvilintl.com/#sle).
      - 2) Apollo Valves; \_\_\_\_\_: [www.apollovalves.com/#sle](http://www.apollovalves.com/#sle).
      - 3) Grinnell Products; \_\_\_\_\_: [www.grinnell.com/#sle](http://www.grinnell.com/#sle).
      - 4) Viega LLC; \_\_\_\_\_: [www.viega.us/#sle](http://www.viega.us/#sle).
      - 5) Substitutions: See Section 016000 - Product Requirements.

## 2.06 STORM DRAINAGE PIPING, BURIED WITHIN 5 FEET (1500 MM) OF BUILDING

- A. Cast Iron Pipe: ASTM A74 extra heavy weight.
  - 1. Fittings: Cast iron.
  - 2. Joint Seals: ASTM C564 neoprene gaskets, or lead and oakum.
- B. Cast Iron Pipe: CISPI 301, hubless, service weight.
  - 1. Fittings: Cast iron.
  - 2. Joints: Neoprene gaskets and stainless steel clamp-and-shield assemblies.

## 2.07 NATURAL GAS PIPING, BURIED BEYOND 5 FEET (1500 MM) OF BUILDING

- A. Steel Pipe: ASTM A53/A53M Schedule 40 black.
  - 1. Fittings: ASTM A234/A234M, wrought steel welding type, with AWWA C105/A21.5 polyethylene jacket or double layer, half-lapped 10 mil (0.25 mm) polyethylene tape.
  - 2. Joints: ASME B31.1, welded.

## 2.08 NATURAL GAS PIPING, BURIED WITHIN 5 FEET (1500 MM) OF BUILDING

## 2.09 NATURAL GAS PIPING, ABOVE GRADE

- A. Steel Pipe: ASTM A53/A53M Schedule 40 black.
  - 1. Fittings: ASME B16.3, malleable iron, or ASTM A234/A234M, wrought steel welding type.
  - 2. Joints: Threaded or welded to ASME B31.1.

## 2.10 PIPE FLANGES, UNIONS, AND COUPLINGS

- A. Unions for Pipe Sizes 3 inch (80 mm, DN) and Under:
  - 1. Ferrous Pipe: Class 150 malleable iron threaded unions.
  - 2. Copper Tube and Pipe: Class 150 bronze unions with soldered joints.
- B. Flanges for Pipe Sizes Over 1 inch (25 mm, DN):
  - 1. Ferrous Pipe: Class 150 malleable iron threaded or forged steel slip-on flanges; preformed neoprene gaskets.
- C. Dielectric Connections: Union with galvanized or plated steel threaded end, copper solder end, water impervious isolation barrier.

## 2.11 PIPE HANGERS AND SUPPORTS

- A. Provide hangers and supports that comply with MSS SP-58.

1. If type of hanger or support for a particular situation is not indicated, select appropriate type using MSS SP-58 recommendations.
  2. Overhead Supports: Individual steel rod hangers attached to structure or to trapeze hangers.
  3. Trapeze Hangers: Welded steel channel frames attached to structure.
  4. Vertical Pipe Support: Steel riser clamp.
- B. Plumbing Piping - Drain, Waste, and Vent:
1. Hangers for Pipe Sizes 1/2 to 1-1/2 inch (15 to 40 mm, DN): Malleable iron, adjustable swivel, split ring.
  2. Hangers for Pipe Sizes 2 inch (50 mm, DN) and Over: Carbon steel, adjustable, clevis.
  3. Wall Support for Pipe Sizes to 3 inch (80 mm, DN): Cast iron hook.
  4. Wall Support for Pipe Sizes 4 inch (100 mm, DN) and Over: Welded steel bracket and wrought steel clamp.
  5. Copper Pipe Support: Carbon steel ring, adjustable, copper plated.
- C. Plumbing Piping - Water:
1. Hangers for Pipe Sizes 1/2 to 1-1/2 inch (15 to 40 mm, DN): Malleable iron, adjustable swivel, split ring.
  2. Hangers for Cold Pipe Sizes 2 inch (50 mm, DN) and Over: Carbon steel, adjustable, clevis.
  3. Hangers for Hot Pipe Sizes 2 to 4 inch (50 to 100 mm, DN): Carbon steel, adjustable, clevis.
  4. Wall Support for Pipe Sizes Up to 3 inch (80 mm, DN): Cast iron hook.

## 2.12 PIPE SLEEVE-SEAL SYSTEMS

- A. Manufacturers:
1. The Metraflex Company; MetraSeal: [www.metraflex.com/#sle](http://www.metraflex.com/#sle).
  2. Substitutions: See Section 016000 - Product Requirements.
- B. Modular Mechanical Seals:
1. Elastomer-based interlocking links continuously fill annular space between pipe and wall-sleeve, wall or casing opening.
  2. Watertight seal between pipe and wall-sleeve, wall or casing opening.
  3. Size and select seal component materials in accordance to service requirements.
  4. Glass reinforced plastic pressure end plates.

## 2.13 BALL VALVES

- A. Manufacturers:
1. Anvil International; \_\_\_\_\_: [www.anvilintl.com/#sle](http://www.anvilintl.com/#sle).
  2. Apollo Valves; \_\_\_\_\_: [www.apollovalves.com/#sle](http://www.apollovalves.com/#sle).
  3. Grinnell Products; \_\_\_\_\_: [www.grinnell.com/#sle](http://www.grinnell.com/#sle).
  4. Nibco, Inc; \_\_\_\_\_: [www.nibco.com/#sle](http://www.nibco.com/#sle).
  5. SharkBite, a brand of Reliance Worldwide Corporation; \_\_\_\_\_: [www.sharkbite.com/#sle](http://www.sharkbite.com/#sle).
  6. Uponor, Inc; \_\_\_\_\_: [www.uponorengineering.com/#sle](http://www.uponorengineering.com/#sle).
  7. Viega LLC; \_\_\_\_\_: [www.viega.us/#sle](http://www.viega.us/#sle).
  8. Substitutions: See Section 016000 - Product Requirements.
- B. Construction, 4 inch (100 mm, DN) and Smaller: MSS SP-110, Class 150, 400 psi (2760 kPa) CWP, bronze or ductile iron body, 304 stainless steel or chrome plated brass ball, regular port, teflon seats and stuffing box ring, blow-out proof stem, lever handle with balancing stops, threaded or grooved ends with union.

## 2.14 BUTTERFLY VALVES

- A. Manufacturers:
  - 1. Anvil International; \_\_\_\_\_: [www.anvilintl.com/#sle](http://www.anvilintl.com/#sle).
  - 2. Apollo Valves; \_\_\_\_\_: [www.apollovalves.com/#sle](http://www.apollovalves.com/#sle).
  - 3. Crane Company; \_\_\_\_\_: [www.cranecpe.com/#sle](http://www.cranecpe.com/#sle).
  - 4. Flomatic Valves; \_\_\_\_\_: [www.flomatic.com/#sle](http://www.flomatic.com/#sle).
  - 5. Substitutions: See Section 016000 - Product Requirements.
- B. Construction 1-1/2 inch (40 mm, DN) and Larger: MSS SP-67, 200 psi (1380 kPa) CWP, cast or ductile iron body, nickel-plated ductile iron disc, resilient replaceable EPDM seat, wafer ends, extended neck, 10 position lever handle.
- C. Provide gear operators for valves 8 inches (150 mm, DN) and larger, and chain-wheel operators for valves mounted over 8 feet (2400 mm) above floor.

## 2.15 BALANCING VALVES

- A. Manufacturers:
  - 1. Anvil International; \_\_\_\_\_: [www.anvilintl.com/#sle](http://www.anvilintl.com/#sle).
  - 2. ITT Bell & Gossett; \_\_\_\_\_: [www.bellgossett.com/#sle](http://www.bellgossett.com/#sle).
  - 3. Jomar Valves, a division of Jomar Group; \_\_\_\_\_: [www.jomarvalve.com/#sle](http://www.jomarvalve.com/#sle).
  - 4. Griswold Controls; \_\_\_\_\_: [www.griswoldcontrols.com/#sle](http://www.griswoldcontrols.com/#sle).
  - 5. Taco, Inc; \_\_\_\_\_: [www.taco-hvac.com/#sle](http://www.taco-hvac.com/#sle).
  - 6. Substitutions: See Section 016000 - Product Requirements.
- B. Construction: Class 125, brass or bronze body with union on inlet and outlet, temperature and pressure test plug on inlet and outlet, blowdown/backflush drain.
- C. Manual Operated Y-Pattern Globe, Size 1/2 to 2 inch (15 to 50 mm, DN):
  - 1. Class 125, brass or bronze body, multi-turn handwheel, memory stop, variable orifice, soldered connections, dual PT (hot and cold pressure-temperature) test ports for 300 psi (2,068 kPa), minus 4 to 250 deg F (minus 20 to 121.1 deg C) WOG service.
- D. Calibration: Control flow within five percent of selected rating, over operating pressure range of 10 times minimum pressure required for control, maximum minimum pressure 3.5 psi (24 kPa).

## 2.16 STRAINERS

- A. Manufacturers:
  - 1. Armstrong International, Inc; \_\_\_\_\_: [www.armstronginternational.com/#sle](http://www.armstronginternational.com/#sle).
  - 2. Green Country Filter Manufacturing; \_\_\_\_\_: [www.greencountryfilter.com/#sle](http://www.greencountryfilter.com/#sle).
  - 3. Jomar Valves, a division of Jomar Group; \_\_\_\_\_: [www.jomarvalve.com/#sle](http://www.jomarvalve.com/#sle).
  - 4. WEAMCO; \_\_\_\_\_: [www.weamco.com/#sle](http://www.weamco.com/#sle).
  - 5. Substitutions: See Section 016000 - Product Requirements.
- B. Size 1/2 inch (15 mm, DN) to 3 inch (80 mm, DN):
  - 1. Class 150, threaded forged bronze Y-pattern body, stainless steel perforated mesh screen with cap, and rated for 150 psi (1,034 kPa), 250 deg F (121.1 deg C) WOG service.

## PART 3 EXECUTION

## 3.01 EXAMINATION

- A. Verify that excavations are to required grade, dry, and not over-excavated.

## 3.02 PREPARATION

- A. Ream pipe and tube ends. Remove burrs. Bevel plain end ferrous pipe.
- B. Remove scale and dirt, on inside and outside, before assembly.
- C. Prepare piping connections to equipment with flanges or unions.

## 3.03 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Provide non-conducting dielectric connections wherever jointing dissimilar metals.
- C. Route piping in orderly manner and maintain gradient. Route parallel and perpendicular to walls.
- D. Install piping to maintain headroom, conserve space, and not interfere with use of space.
- E. Group piping whenever practical at common elevations.
- F. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment. See Section 220516.
- G. Provide clearance in hangers and from structure and other equipment for installation of insulation and access to valves and fittings.
- H. Provide access where valves and fittings are not exposed.
  - 1. Coordinate size and location of access doors with Section 083100.
- I. Provide support for utility meters in accordance with requirements of utility companies.
- J. Prepare exposed, unfinished pipe, fittings, supports, and accessories for finish painting.
- K. Excavate in accordance with Section 312316.
- L. Backfill in accordance with Section 312323.
- M. Install valves with stems upright or horizontal, not inverted. See Section 220523.
- N. Install water piping to ASME B31.9.
- O. Copper Pipe and Tube: Make soldered joints in accordance with ASTM B828, using specified solder, and flux meeting ASTM B813; in potable water systems use flux also complying with NSF 61 and NSF 372.
- P. PVC Pipe: Make solvent-welded joints in accordance with ASTM D2855.
- Q. Sleeve pipes passing through partitions, walls, and floors.
- R. Pipe Hangers and Supports:
  - 1. Install in accordance with ASME B31.9.
  - 2. Install hangers to provide minimum 1/2 inch (15 mm) space between finished covering and adjacent work.
  - 3. Place hangers within 12 inches (300 mm) of each horizontal elbow.

4. Use hangers with 1-1/2 inch (40 mm) minimum vertical adjustment. Design hangers for pipe movement without disengagement of supported pipe.
  5. Where several pipes can be installed in parallel and at same elevation, provide multiple or trapeze hangers.
  6. Support cast iron drainage piping at every joint.
- S. Pipe Sleeve-Seal Systems:
1. Install manufactured sleeve-seal systems in sleeves located in grade slabs and exterior concrete walls at piping entrances into building.
  2. Provide sealing elements of the size, quantity, and type required for the piping and sleeve inner diameter or penetration diameter.
  3. Locate piping in center of sleeve or penetration.
  4. Install field assembled sleeve-seal system components in annular space between sleeve and piping.
  5. Tighten bolting for a watertight seal.
  6. Install in accordance with manufacturer's recommendations.

### 3.04 APPLICATION

- A. Use grooved mechanical couplings and fasteners only in accessible locations.
- B. Install unions downstream of valves and at equipment or apparatus connections.
- C. Install gate valves for shut-off and to isolate equipment, part of systems, or vertical risers.
- D. Install globe valves for throttling, bypass, or manual flow control services.

### 3.05 TOLERANCES

- A. Drainage Piping: Establish invert elevations within 1/2 inch (10 mm) vertically of location indicated and slope to drain at minimum of 1/8 inch per foot (1:100) slope.
- B. Water Piping: Slope at minimum of 1/32 inch per foot (1:400) and arrange to drain at low points.

### 3.06 DISINFECTION OF DOMESTIC WATER PIPING SYSTEM

- A. Disinfect water distribution system in accordance with Section 330110.58.
- B. Prior to starting work, verify system is complete, flushed, and clean.

### 3.07 SERVICE CONNECTIONS

- A. Provide new sanitary sewer services. Before commencing work, check invert elevations required for sewer connections, confirm inverts and ensure that these can be properly connected with slope for drainage and cover to avoid freezing.
- B. Provide new water service complete with approved reduced pressure backflow preventer and water meter with by-pass valves, and sand strainer.

### END OF SECTION 221005

## PART 1 GENERAL

## 1.01 SECTION INCLUDES

- A. Drains.
- B. Cleanouts.
- C. Hose bibbs.
- D. Washing machine boxes and valves.
- E. Backflow preventers.
- F. Double check valve assemblies.
- G. Water hammer arrestors.
- H. Sanitary waste interceptors.
- I. Mixing valves.
- J. Floor drain trap seals.
- K. Catch basins and manholes.
- L. Exterior penetration accessories.
- M. Fire-rated enclosures.

## 1.02 RELATED REQUIREMENTS

- A. Section 011000 - Summary: Product requirements for Owner furnished kitchen equipment.
- B. Section 016000 - Product Requirements: Procedures for Owner-supplied products.
- C. Section 033000 - Cast-in-Place Concrete: Manhole bottoms.
- D. Section 033000 - Cast-in-Place Concrete: Execution requirements for concrete catch basin bases.
- E. Section 221005 - Plumbing Piping.
- F. Section 223000 - Plumbing Equipment.
- G. Section 224000 - Plumbing Fixtures.

## 1.03 REFERENCE STANDARDS

- A. ADA Standards - Americans with Disabilities Act (ADA) Standards for Accessible Design; 2010.
- B. ASME A112.6.3 - Floor and Trench Drains; 2019.
- C. ASSE 1011 - Performance Requirements for Hose Connection Vacuum Breakers; 2017.
- D. ASSE 1012 - Performance Requirements for Backflow Preventers with an Intermediate Atmospheric Vent; 2009.

- E. ASSE 1013 - Performance Requirements for Reduced Pressure Principle Backflow Preventers and Reduced Pressure Principle Fire Protection Backflow Preventers; 2011.
- F. ASTM B210/B210M - Standard Specification for Aluminum and Aluminum-Alloy Drawn Seamless Tubes; 2019a.
- G. ASTM B85/B85M - Standard Specification for Aluminum-Alloy Die Castings; 2018, with Editorial Revision.
- H. ASTM C478/C478M - Standard Specification for Circular Precast Reinforced Concrete Manhole Sections; 2020.
- I. NSF 61 - Drinking Water System Components - Health Effects; 2019.
- J. NSF 372 - Drinking Water System Components - Lead Content; 2016.
- K. PDI-WH 201 - Water Hammer Arresters; 2017.

#### 1.04 SUBMITTALS

- A. See Section 013000 - Administrative Requirements for submittal procedures.
- B. Product Data: Provide component sizes, rough-in requirements, service sizes, and finishes.
- C. Shop Drawings: Indicate dimensions, weights, and placement of openings and holes.
- D. Manufacturer's Instructions: Indicate Manufacturer's Installation Instructions: Indicate assembly and support requirements.
- E. Sustainable Design Documentation: Submit appropriate evidence that materials used in potable water systems comply with the specified requirements.
- F. Manufacturer's qualification statement.
- G. Project Record Documents: Record actual locations of equipment, cleanouts, backflow preventers, and water hammer arrestors.
- H. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
  - 1. See Section 016000 - Product Requirements for additional provisions.

#### 1.05 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with not less than three years documented experience.

#### 1.06 DELIVERY, STORAGE, AND HANDLING

- A. Accept specialties on site in original factory packaging. Inspect for damage.

### PART 2 PRODUCTS

#### 2.01 GENERAL REQUIREMENTS

- A. Specialties in Potable Water Supply Systems: Provide products that comply with NSF 61 and NSF 372 for maximum lead content.

## 2.02 DRAINS

- A. Manufacturers:
  - 1. See Plumbing Fixture Schedule on Sheets P1 002 and P2 003.
  - 2. Substitutions: See Section 016000 - Product Requirements.

## 2.03 CLEANOUTS

- A. Manufacturers:
  - 1. Zurn Industries, LLC; \_\_\_\_\_: [www.zurn.com/#sle](http://www.zurn.com/#sle).
  - 2. Substitutions: See Section 016000 - Product Requirements.
- B. Cleanouts at Interior Finished Floor Areas (CO-3):
  - 1. Lacquered cast iron body with anchor flange, reversible clamping collar, threaded top assembly, and round gasketed scored cover in service areas and round gasketed depressed cover to accept floor finish in finished floor areas.

## 2.04 HOSE BIBBS

- A. Manufacturers:
  - 1. See Plumbing Fixture Schedule on Sheets P1 002 and P2 003.
  - 2. Substitutions: See Section 016000 - Product Requirements.

## 2.05 WASHING MACHINE BOXES AND VALVES

- A. Box Manufacturers:
  - 1. Oatey Supply Chain Services, Inc; \_\_\_\_\_: [www.oatey.com/#sle](http://www.oatey.com/#sle).
  - 2. Substitutions: See Section 016000 - Product Requirements.
- B. Valve Manufacturers:
  - 1. Cash Acme, a brand of Reliance Worldwide Corporation; \_\_\_\_\_: [www.cashacme.com/#sle](http://www.cashacme.com/#sle).
  - 2. Zurn Industries, LLC; \_\_\_\_\_: [www.zurn.com/#sle](http://www.zurn.com/#sle).
  - 3. Substitutions: See Section 016000 - Product Requirements.
- C. Description: Plastic preformed rough-in box with brass long shank valves with wheel handles, socket for 2 inch (50 mm) waste, slip in finishing cover.

## 2.06 BACKFLOW PREVENTERS

- A. Manufacturers:
  - 1. Watts Regulator Company, a part of Watts Water Technologies; \_\_\_\_\_: [www.wattsregulator.com/#sle](http://www.wattsregulator.com/#sle).
  - 2. Substitutions: See Section 016000 - Product Requirements.
- B. Reduced Pressure Backflow Preventer Assembly:
  - 1. ASSE 1013; cast bronze body and stainless steel springs; two independently operating, spring loaded check valves; diaphragm type differential pressure relief valve located between check valves; third check valve that opens under back pressure in case of diaphragm failure, and non-threaded vent outlet.
  - 2. Size: 1-1/2 inch (\_\_\_\_\_ mm) assembly with threaded full port ball valves.
  - 3. Accessories: Provide air gap fitting, lead-free Y-strainer, and test cocks.

## 2.07 DOUBLE CHECK-VALVE ASSEMBLIES

- A. Manufacturers:
  - 1. Watts Regulator Company, a part of Watts Water Technologies; \_\_\_\_\_: [www.wattsregulator.com/#sle](http://www.wattsregulator.com/#sle).
  - 2. Substitutions: See Section 016000 - Product Requirements.
- B. Double Check Valve Assembly:
  - 1. ASSE 1012; cast bronze body with corrosion resistant internal parts and stainless steel springs; two independently operating check valves with intermediate atmospheric vent.
  - 2. Size: 3/4 to 2 inch, NPS (20 to 50 mm, DN) assembly with threaded full port ball valves.

## 2.08 WATER HAMMER ARRESTORS

- A. Manufacturers:
  - 1. Cash Acme, a brand of Reliance Worldwide Corporation; \_\_\_\_\_: [www.cashacme.com/#sle](http://www.cashacme.com/#sle).
  - 2. Jay R. Smith Manufacturing Company; \_\_\_\_\_: [www.jrsmith.com/#sle](http://www.jrsmith.com/#sle).
  - 3. Watts Regulator Company, a part of Watts Water Technologies; \_\_\_\_\_: [www.wattsregulator.com/#sle](http://www.wattsregulator.com/#sle).
  - 4. Zurn Industries, LLC; \_\_\_\_\_: [www.zurn.com/#sle](http://www.zurn.com/#sle).
  - 5. Substitutions: See Section 016000 - Product Requirements.
- B. Water Hammer Arrestors:
  - 1. Stainless steel construction, bellows type sized in accordance with PDI-WH 201, precharged suitable for operation in temperature range minus 100 to 300 degrees F (minus 73 to 149 degrees C) and maximum 250 psi (1700 kPa) working pressure.

## 2.09 SANITARY WASTE INTERCEPTORS

- A. Oil Interceptors:
  - 1. Construction:
    - a. Material: Epoxy coated fabricated steel.
    - b. Rough-in: Fully recessed flush with floor (deep rough-in) with anchor flange.
    - c. Cover: Steel, epoxy coated, non-skid with gasket, securing handle, and enzyme injection port, recessed for floor finish.
  - 2. Manufacturers:
    - a. See Interceptors Scheule on Sheet P2 003.
    - b. Substitutions: See Section 016000 - Product Requirements.
- B. Grease Interceptors:
  - 1. Construction:
    - a. Material: High-density polyethylene.
    - b. Rough-in: Fully recessed (shallow rough-in) with anchor flange.
    - c. Cover: Steel, epoxy coated, non-skid with gasket, securing handle, and enzyme injection port, recessed for floor finish.
  - 2. Manufacturers:
    - a. See Interceptor Schedule on Sheet P2 003.
    - b. Substitutions: See Section 016000 - Product Requirements.

## 2.10 MIXING VALVES

- A. Thermostatic Mixing Valves:
  - 1. Manufacturers:

- a. Substitutions: See Section 016000 - Product Requirements.
2. Valve: Chrome-plated cast brass body, stainless steel or copper alloy bellows, integral temperature adjustment.

#### 2.11 FLOOR DRAIN TRAP SEALS

- A. Manufacturers:
  1. Substitutions: See Section 016000 - Product Requirements.
- B. Description: Push-fit EPDM or silicone fitting with a one-way membrane.

#### 2.12 CATCH BASINS AND MANHOLES

- A. Manufacturers:
  1. Substitutions: See Section 016000 - Product Requirements.

#### 2.13 FIRE-RATED ENCLOSURES

- A. Manufacturers:
  1. Fire Rated Product Specialties Corp; \_\_\_\_\_: [www.frpsonline.com/#sle](http://www.frpsonline.com/#sle).
  2. Substitutions: See Section 016000 - Product Requirements.
- B. Provide as required to preserve fire resistance rating of building elements.

### PART 3 EXECUTION

#### 3.01 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Extend cleanouts to finished floor or wall surface. Lubricate threaded cleanout plugs with mixture of graphite and linseed oil. Ensure clearance at cleanout for rodding of drainage system.
- C. Install floor cleanouts at elevation to accommodate finished floor.
- D. Install approved potable water protection devices on plumbing lines where contamination of domestic water may occur; on boiler feed water lines, janitor rooms, fire sprinkler systems, premise isolation, irrigation systems, flush valves, interior and exterior hose bibbs.
- E. Pipe relief from backflow preventer to nearest drain.
- F. Install water hammer arrestors complete with accessible isolation valve on hot and cold water supply piping to lavatory sinks.

#### END OF SECTION 221006

## PART 1 GENERAL

## 1.01 SECTION INCLUDES

## 1.02 RELATED REQUIREMENTS

- A. Section 078400 - Firestopping.
- B. Section 220523 - General-Duty Valves for Plumbing Piping.
- C. Section 220553 - Identification for Plumbing Piping and Equipment.

## 1.03 REFERENCE STANDARDS

- A. ABMA STD 9 - Load Ratings and Fatigue Life for Ball Bearings; 2015.
- B. ASME B16.3 - Malleable Iron Threaded Fittings: Classes 150 and 300; 2016.
- C. ASME B16.18 - Cast Copper Alloy Solder Joint Pressure Fittings; 2018.
- D. ASME B16.22 - Wrought Copper and Copper Alloy Solder-Joint Pressure Fittings; 2018.
- E. ASME B16.26 - Cast Copper Alloy Fittings for Flared Copper Tubes; 2018.
- F. ASME B31.1 - Power Piping; 2018.
- G. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless; 2018.
- H. ASTM A234/A234M - Standard Specification for Piping Fittings of Wrought Carbon Steel and Alloy Steel for Moderate and High Temperature Service; 2019.
- I. ASTM A536 - Standard Specification for Ductile Iron Castings; 1984 (Reapproved 2019)e1.
- J. ASTM B32 - Standard Specification for Solder Metal; 2008 (Reapproved 2014).
- K. ASTM B88 - Standard Specification for Seamless Copper Water Tube; 2016.
- L. ASTM F1476 - Standard Specification for Performance of Gasketed Mechanical Couplings for Use in Piping Applications; 2007 (Reapproved 2019).
- M. NSF 372 - Drinking Water System Components - Lead Content; 2016.

## 1.04 SUBMITTALS

- A. See Section 013000 - Administrative Requirements for submittal procedures.
- B. Product Data: Provide manufacturers catalog literature with capacity, weight, and electrical characteristics and connection requirements.
- C. Shop Drawings: Indicate piping system schematic with electrical characteristics and connection requirements.
- D. Manufacturer's Instructions: Indicate manufacturer's installation instructions, hoisting and setting requirements, starting procedures.

- E. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.
- F. Project Record Documents: Record actual locations of equipment and components. Modify shop drawings to indicate final locations.

#### 1.05 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum three years of documented experience.

#### 1.06 DELIVERY, STORAGE, AND HANDLING

- A. Protect piping and equipment from weather and construction traffic.

#### 1.07 WARRANTY

- A. See Section 017800 - Closeout Submittals for additional warranty requirements.

### PART 2 PRODUCTS

### PART 3 EXECUTION

#### 3.01 INSTALLATION

- A. Install equipment in accordance with manufacturer's instructions.
- B. Make air cock and drain connection on horizontal casing.
- C. Install line size gate valve and check valve on compressor discharge. See Section 220523.
- D. Install compressed air couplings, female quick connectors, and pressure gauges where outlets are indicated.
- E. Identify piping system and components. See Section 220553.

#### 3.02 FIELD QUALITY CONTROL

- A. See Section 014000 - Quality Requirements, for additional requirements.
- B. Compressed Air Piping Leak Test: Prior to initial operation, clean and test compressed air piping in accordance with ASME B31.1.
- C. Repair or replace compressed air piping as required to eliminate leaks, and retest to demonstrate compliance.
- D. Cap and seal ends of piping when not connected to mechanical equipment.

### END OF SECTION 221500

## PART 1 GENERAL

## 1.01 SECTION INCLUDES

- A. Commercial gas-fired water heaters.
- B. Commercial electric water heaters.
- C. Diaphragm-type compression tanks.
- D. In-line circulator pumps.
- E. Submersible sump pumps.

## 1.02 RELATED REQUIREMENTS

- A. Section 220548 - Vibration and Seismic Controls for Plumbing Piping and Equipment.
- B. Section 260583 - Wiring Connections: Electrical characteristics and wiring connections.

## 1.03 REFERENCE STANDARDS

- A. ABMA STD 9 - Load Ratings and Fatigue Life for Ball Bearings; 2015.
- B. AHRI Directory of Certified Product Performance - Air-Conditioning, Heating, and Refrigeration Institute (AHRI); Current Edition.
- C. ANSI Z21.10.3 - Gas-Fired Water Heaters - Volume III - Storage Water Heaters with Input Ratings Above 75,000 Btu per Hour, Circulating and Instantaneous; 2015.
- D. ASHRAE Std 90.1 I-P - Energy Standard for Buildings Except Low-Rise Residential Buildings; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
- E. ASME BPVC-VIII-1 - Boiler and Pressure Vessel Code, Section VIII, Division 1: Rules for Construction of Pressure Vessels; 2019.
- F. NEMA MG 1 - Motors and Generators; 2018.
- G. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
- H. UL 174 - Standard for Household Electric Storage Tank Water Heaters; Current Edition, Including All Revisions.

## 1.04 ADMINISTRATIVE REQUIREMENTS

- A. Sequencing: Ensure that utility connections are achieved in an orderly and expeditious manner.

## 1.05 SUBMITTALS

- A. See Section 013000 - Administrative Requirements for submittals procedures.
- B. Product Data:
  - 1. Provide dimension drawings of water heaters indicating components and connections to other equipment and piping.
  - 2. Indicate pump type, capacity, power requirements.

3. Provide certified pump curves showing pump performance characteristics with pump and system operating point plotted. Include NPSH curve when applicable.
  4. Provide electrical characteristics and connection requirements.
- C. Shop Drawings:
1. Indicate dimensions of tanks, tank lining methods, anchors, attachments, lifting points, tapings, and drains.
- D. Project Record Documents: Record actual locations of components.
- E. Operation and Maintenance Data: Include operation, maintenance, and inspection data, replacement part numbers and availability, and service depot location and telephone number.
- F. Warranty Documentation: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.
- G. Project Record Documents: Record actual locations of components.
- H. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
1. See Section 016000 - Product Requirements for additional provisions.

#### 1.06 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum three years of documented experience.
- B. Certifications:
1. Water Heaters: NSF approved.
  2. Gas Water Heaters: AHRI Directory of Certified Product Performance.
  3. Electric Water Heaters: UL listed and labeled to UL 174.
  4. Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories Inc., as suitable for the purpose specified and indicated.
- C. Identification: Provide pumps with manufacturer's name, model number, and rating/capacity identified by permanently attached label.
- D. Performance: Ensure pumps operate at specified system fluid temperatures without vapor binding and cavitation, are non-overloading in parallel or individual operation, operate within 25 percent of midpoint of published maximum efficiency curve.

#### 1.07 WARRANTY

- A. See Section 017800 - Closeout Submittals for additional warranty requirements.
- B. Provide five year manufacturer warranty for domestic water heaters.

### PART 2 PRODUCTS

#### 2.01 WATER HEATERS

- A. Manufacturers:
1. A.O. Smith Water Products Co; \_\_\_\_\_: [www.hotwater.com/#sle](http://www.hotwater.com/#sle).
  2. Substitutions: See Section 016000 - Product Requirements.
- B. Commercial Gas-Fired Water Heaters:
1. Type: Automatic, natural gas-fired, vertical storage.

2. Minimum Efficiency Required: ASHRAE Std 90.1 I-P.
  3. Tank: Glass lined welded steel ASME labeled; multiple flue passages, 4 inch (100 mm) diameter inspection port, thermally insulated with minimum 2 inches (50 mm) glass fiber, encased in corrosion-resistant steel jacket; baked-on enamel finish; floor shield and legs.
  4. Accessories:
    - a. Water Connections: Brass.
    - b. Dip Tube: Brass.
    - c. Drain valve.
    - d. Anode: Magnesium.
  5. Applications:
    - a. Automatic storage water heater.
  6. Controls: Automatic water thermostat with temperature range adjustable from 120 to 180 degrees F (49 to 82 degrees C), automatic reset high temperature limiting thermostat factory set at 195 degrees F (90 degrees C), gas pressure regulator, multi-ribbon or tubular burner, 100 percent safety shut-off pilot and thermocouple, flue baffle and draft hood.
- C. Commercial Electric Water Heaters:
1. Type: Factory-assembled and wired, electric, vertical storage.
  2. Minimum Efficiency Required: ASHRAE Std 90.1 I-P.
  3. Performance:
  4. Electrical Characteristics:
  5. Tank: Glass lined welded steel; 4 inch (100 mm) diameter inspection port, thermally insulated with minimum 2 inches (50 mm) glass fiber encased in corrosion-resistant steel jacket; baked-on enamel finish.
  6. Controls: Automatic immersion water thermostat; externally adjustable temperature range from 60 to 180 degrees F (16 to 82 degrees C), flanged or screw-in nichrome elements, high temperature limit thermostat.
  7. Accessories:
    - a. Water Connections: Brass.
    - b. Dip Tube: Brass.
    - c. Drain valve.
    - d. Anode: Magnesium.
  8. Heating Elements: Flange-mounted immersion elements; individual elements sheathed with Incoloy corrosion-resistant metal alloy, rated less than 75 W/sq in (11.6 W/sq m).

## 2.02 DIAPHRAGM-TYPE COMPRESSION TANKS

- A. Manufacturers:
1. Amtrol Inc; \_\_\_\_\_: [www.amtrol.com/#sle](http://www.amtrol.com/#sle).
- B. Construction: Welded steel, tested and stamped in accordance with ASME BPVC-VIII-1; supplied with National Board Form U-1, rated for working pressure of 125 psig (860 kPa), with flexible EPDM diaphragm sealed into tank, and steel legs or saddles.
- C. Accessories: Pressure gauge and air-charging fitting, tank drain; contractor to set pressure of expansion tank to match water supply pressure prior to installation. Expansion tank to be mounted vertically.

## 2.03 IN-LINE CIRCULATOR PUMPS

- A. Manufacturers:
1. Taco Inc.[]: <https://www.tacocomfort.com/#sle>.
  2. Substitutions: See Section 016000 - Product Requirements.

- B. Casing: Bronze, rated for 125 psig (860 kPa) working pressure, with stainless steel rotor assembly.
- C. Impeller: Bronze.
- D. Shaft: Alloy steel with integral thrust collar and two oil lubricated bronze sleeve bearings.
- E. Seal: Carbon rotating against a stationary ceramic seat.
- F. Drive: Flexible coupling.

#### 2.04 SUBMERSIBLE SUMP PUMPS

- A. Manufacturers:
  - 1. Zoeller Company; \_\_\_\_\_: [www.zoeller.com/#sle](http://www.zoeller.com/#sle).
  - 2. Substitutions: See Section 016000 - Product Requirements.
- B. Type: Completely submersible, vertical, centrifugal.
- C. Casing: Cast iron pump body and oil filled motor chamber.
- D. Impeller: Cast iron; open non-clog, stainless steel shaft.
- E. Bearings: Ball bearings.
- F. Sump: Fiberglass basin with steel cover plate; \_\_\_\_ inches (\_\_\_\_ mm) diameter, \_\_\_\_ inches (\_\_\_\_ mm) deep.
- G. Accessories: Oil resistant 6 foot (2 m) cord and plug with three-prong connector for connection to electric wiring system including grounding connector.
- H. Servicing: Slide-away coupling consisting of discharge elbow secure to sump floor, movable bracket, guide pipe system, lifting chain and chain hooks.

### PART 3 EXECUTION

#### 3.01 INSTALLATION

- A. Install plumbing equipment in accordance with manufacturer's instructions, as required by code, and complying with conditions of certification, if any.
- B. Coordinate with plumbing piping and related fuel piping work to achieve operating system.
- C. Domestic Water Storage Tanks:
  - 1. Provide steel pipe support, independent of building structural framing members.
  - 2. Clean and flush prior to delivery to site. Seal until pipe connections are made.
- D. Pumps:
  - 1. Ensure shaft length allows sump pumps to be located minimum 24 inches (600 mm) below lowest invert into sump pit and minimum 6 inches (150 mm) clearance from bottom of sump pit.
  - 2. Ensure pumps operate at specified system fluid temperatures without vapor binding and cavitation, are non-overloading in parallel or individual operation, and operate within 25 percent of midpoint of published maximum efficiency curve.

#### END OF SECTION 223000

## SPECIFICATION DESCRIPTION- SPECIFIER'S NOTES:

- 1.01 THESE SPECIFICATIONS ARE INTENDED TO PROVIDE PROSPECTIVE BIDDERS WITH INFORMATION NECESSARY TO UNDERSTAND THE REQUIREMENTS TO PURCHASE AND INSTALL A HIGHLAND TANK ABOVEGROUND FIREGUARD® STORAGE TANK (AST) WITH THE HL-77 TURNKEY FUEL DISPENSING SYSTEM FOR DIESEL FUEL DISPENSING.
- 1.02 THESE SPECIFICATIONS DESCRIBE THE OPERATING CHARACTERISTICS FOR A HIGH-LINK® FUEL MANAGEMENT SYSTEM AND DETAIL THE REQUIREMENTS NECESSARY FOR THE PROPER FUNCTIONING OF THE SYSTEM.
- 1.03 ALL CONNECTIONS ARE TO BE NPT UNLESS SPECIFIED OTHERWISE. ALL PIPE DIAMETERS REPRESENT THE INSIDE DIAMETER (I.D.) UNLESS NOTED OTHERWISE.

## HIGHLAND TANK ABOVEGROUND STORAGE TANK

- 2.01 NOMINAL CAPACITY: 1000-GALLONS, AS INDICATED ON DRAWING. NOMINAL TANK DIMENSIONS: DIAMETER LENGTH
- 2.02 PRIMARY TANK: 4-FEET, 0-INCHES DIAMETER / 10-FEET, 8-INCHES LENGTH. SECONDARY TANK: 4-FEET, 6-INCHES DIAMETER / 11-FEET, 3-INCHES LENGTH.
- 2.03 MINIMUM STEEL THICKNESS FOR PRIMARY TANK: HEAD = 7-GAUGE, SHELL = 7-GAUGE
- 2.04 MINIMUM STEEL THICKNESS FOR SECONDARY TANK: HEAD = 7-GAUGE, SHELL = 7-GAUGE
- 2.05 TANK SHALL BE MANUFACTURED, TESTED, AND LABELED IN CONFORMANCE WITH UNDERWRITERS LABORATORIES'
- 2.06 UL-2085 STANDARD FOR PROTECTED ABOVEGROUND TANKS FOR FLAMMABLE AND COMBUSTIBLE LIQUIDS, DOUBLE-WALL CONSTRUCTION. TANK SHALL BE MANUFACTURED AND LABELED IN STRICT ACCORDANCE WITH STEEL TANK INSTITUTE (STI) FIREGUARD® THERMALLY INSULATED, DOUBLE-WALL STEEL ABOVEGROUND STORAGE TANK STANDARDS AS APPLIED BY A LICENSEE OF THE STI. TANK SHALL BE SUBJECT TO THE STI'S QUALITY ASSURANCE PROGRAM AND SHALL BE BACKED BY THE STI 30-YEAR LIMITED WARRANTY.
- 2.07 THE TANK SHALL BE A CYLINDRICAL, HORIZONTAL, STEEL TANK INTENDED FOR THE STORAGE OF FLAMMABLE AND COMBUSTIBLE LIQUIDS AT ATMOSPHERIC PRESSURE. TANK SHALL INCLUDE INTEGRAL STEEL SECONDARY CONTAINMENT AND THERMAL INSULATION THAT PROVIDES A MINIMUM TWO-HOUR FIRE RATING. THE TANK DESIGN SHALL COMPLY WITH UL 2085 "PROTECTED" TANK STANDARD HAVING BEEN TESTED FOR BALLISTICS, IMPACT, HOSE STREAM, AND POOL FIRE PERFORMANCE STANDARDS. TANK SHALL BE DESIGNED FOR POSSIBLE RELOCATION AT A FUTURE DATE. CONCRETE ENCASED TANK DESIGNS ARE NOT EQUAL AND WILL NOT BE PERMITTED.
- 2.08 INNER (PRIMARY) AND OUTER (SECONDARY) TANKS SHALL BE FABRICATED FROM MILD CARBON STEEL WITH FLAT- FLANGED HEADS, AND LAP-WELDS AT ALL SEAMS AND JOINTS. PRIMARY AND SECONDARY TANKS ARE AIR TESTED AT THE FACTORY. (PRIMARY TANK MAY NEED TO BE RETESTED FOR TIGHTNESS AT THE JOBSITE PRIOR TO COMMISSIONING. CONSULT AHJ FOR REQUIREMENTS.) TANK SHALL BE SUPPLIED WITH EMERGENCY VENTS FOR THE PRIMARY AND THE SECONDARY CONTAINMENT TANKS. EMERGENCY VENTING BY "FORM OF CONSTRUCTION" IS NOT EQUAL AND WILL NOT BE PERMITTED.
- 2.09 TANK SHALL COMPLY WITH THE LATEST EDITION OF NATIONAL FIRE PROTECTION

ASSOCIATION NFPA 30 FLAMMABLE AND COMBUSTIBLE LIQUIDS CODE. THE TANK SYSTEM SHALL ALSO MEET OR EXCEED THE REQUIREMENTS OF:

- A. National Fire Protection Association NFPA 30A Automobile And Marine Service Station Code
- B. 1997 Uniform Fire Code (UFC) "Protected" AST criteria as per Appendix II-F, including ballistics protection
- C. California Air Resources Board (CARB) testing requirements for air emissions
- D. International Fire Code

## 2.10 CONSTRUCTION

- A. Tank shall be of double-wall construction and provide complete secondary containment of the primary storage tank's contents by an impervious steel outer wall. Inner and outer tanks shall be manufactured in accordance with UL-142 Standard for Steel Aboveground Tanks for
- B. Flammable and Combustible Liquids as referenced in UL-2085. Tank shall be fabricated of mild carbon steel with shell seams of continuous lap weld construction.
- C. A minimum of 3" of porous, lightweight monolithic thermal insulation material shall be installed at the factory within the interstitial space between the inner and outer wall. Thermal insulating material:
  - 1. Shall be in accordance with American Society of Testing Materials (ASTM) Standards C-332 and C-495.
  - 2. Shall allow liquid to migrate through it to the monitoring point.
  - 3. Shall not be exposed to weathering and shall be protected by the steel secondary containment outer wall (an exterior concrete wall or vault exposed to the elements will NOT be permitted).
- D. Each tank shall be delivered as a complete UL-listed assembly including the following fittings and components: (All fittings NPT or flanged, shall be supplied with plastic protectors for shipment)
- E. Standard tanks shall include, at a minimum, fittings for normal vent, interstitial monitoring, emergency vent for primary tank, emergency vent for secondary tank, product fill, product pump/supply and liquid level gauge. See standard drawings at [www.highlandtank.com](http://www.highlandtank.com) for quantity, size, and location of fittings on standard tanks. All fittings must be located above the maximum fluid level per UL-2085 / STI Fireguard requirements. Normal vent sizes are equal to, or larger than largest fitting to be used for fill or withdraw from the tank. Emergency vent size is based on the wetted surface area of the tank.

## 2.11 TWO (2) WELDED-ON SADDLES - DESIGN, SIZE AND LOCATION DETERMINED PER STI SPECIFICATIONS

## 2.12 LIFTING LUGS SHALL BE PROVIDED AT BALANCING POINTS TO FACILITATE HANDLING AND INSTALLATION.

- A. Exterior Protective Coating:

## 2.13 SURFACE PREPARATION: GRIT BLAST - SSPC-SP-6 WHITE BLAST

## 2.14 FINISH: WHITE URETHANE PAINT SYSTEM 5-7 DFT ON THE SHELL AND HEADS.

## 2.15 EXECUTION

- A. Tank to be set level on a solid foundation of reinforced concrete constructed by owner of installer.
- B. Installation and testing shall be in strict accordance with STI's Fireguard® Installation Instructions and performed by a licensed installer.

## 2.16 WARRANTY

- A. The tank is warranted by Highland Tank & Mfg. Co. to be free from defects in manufacturing, workmanship, and materials. Highland Tank will repair or replace, at its sole discretion F.O.B. factory, within a period of one year after date of shipment, any item of our manufacture. All other items shall be warranted by their respective manufacturers. Liability hereunder is limited, as stated above, and does not include labor, installation costs, indirect or consequential damages of any kind. Tanks must be returned to the factory and if found to be defective upon examination, will be repaired, replaced or credit will be issued at our option.
- B. Tank to be manufactured by Highland Tank at one of the following locations: Stoystown, PA; Manheim, PA; Watervliet, NY; Greensboro, NC; Friedens, PA; Clarkston, MI or Mancelona, MI.
  - 1. The storage tank shall contain Diesel

## TURNKEY FUEL DISPENSING SYSTEM PACKAGES

## 3.01 VENT PACKAGE

- A. Diesel Vent Package
  - 1. Includes (2) emergency vents, opening size and connection type depending on tank volume and fill package. Emergency vents for diesel applications are lightweight aluminum and spring tensioned for operation.
    - a. Diesel emergency vents operate at 8oz/sq.in. pressure
  - 2. Atmospheric/Normal Vent
    - a. Vent size is dependent on UL-142 codes based on tank size and fill size. Tanks with a 2" fill will use 2" vents. Tanks with a 3" fill will use a 3" vent.
  - 3. Standpipe
    - a. Standpipe length is sized the same diameter as the atmospheric vent and is tall enough to bring the vent to the required venting height (12').

## 3.02 GAUGE PACKAGE

- A. Mechanical Level Gauge
  - 1. A mechanical level gauge is included for an immediate non-electric reliant visual representation of the fluid level in the tank.
    - a. The mechanical gauge shall be a clock gauge installed in a 2" port near the tank filling area.
- B. Mechanical pop-up style leak gauge (standard leak detection) (alternative audible/visual alarm available – please see sections F&G for alternative leak detection methods)

## 3.03 FILL PACKAGE

- A. The fill package provides the necessary components to facilitate tank filling using a truck mounted pumping system. When using a remote fill, for tanks 8,000 gallons and smaller, 2" pipe and accessories are standard. For tanks 10,000 gallons and larger, 3" pipe and accessories are standard.
1. Spill Containment
    - a. For tanks 1,000 gallons, 64" diameter and larger, a remote fill port is used, pipe size dependent on tank volume. For tanks 1,000 gallons, 48" diameter and smaller, a tank top spill bowl (3.5 gallons) is standard.
      - 1) A larger spill bowl may be used if requested.
  2. Quick Connect Coupling
    - a. A 2" male quick connect coupling (cam lock coupling) and dust cap for ease of connection for fuel supplier to fill the tank.
  3. Overfill Prevention Valve
    - a. A 2" overfill prevention valve as a mechanical means to prevent the tank from being overfilled. If the tank is filled above the pre-set max-fill level the float in the valve closes the valve to prevent further filling. A bleed hole in the unit prevents siphoning and relieves fill side pressure. The valve handles flow rates from 5 to 350 GPM. The level shut off provides mechanical closure of the inlet connection when tank level reaches the 90% to 95% preset level. The level shut off allows for a flow rate of less than 2% of rated flow for pressure relief purposes.
    - b. A 2" drop tube is included if the product stored is gasoline. If it is diesel, a drop tube is not necessary, but may be added if desired.
  4. Single Step-Up Mounted on Head of Tank
    - a. A single step is mounted on the head of the tank to facilitate access to the filling area on the tank. The step is on the same head of the tank as the filling station. The step is no more than 11" off the ground, depending on the overall tank height. The stair depth is approx. 20" deep, and the treads are yellow fiberglass grating with grip texture surface for a step surface. The grating allows debris, water, snow, or ice to fall through and provides grip on the step.
    - b. In lieu of the single step, stairs or ladders are available upon request.

## 3.04 PUMP PACKAGE MODEL HL-77

- A. The pump package includes all components necessary to pump fuel from the tank into the desired vehicle. All inlet, outlet, accessory, or pipe diameters as specified are I.D. measurements with NPT connection unless otherwise noted.
1. Dispenser Cabinet with Internal Pump
    - a. The pump is a 220VAC, 5.7-amp max, 3/4 HP pump with a maximum flow rate of 35GPM from the pump outlet.
    - b. Dispenser Cabinet
      - 1) The dispenser cabinet provides a 4-digit readout of gallons pumped per transaction and a totalizer for lifetime gallons pumped.
      - 2) Internal hammer arrestor valve
      - 3) Inline security solenoid valve
      - 4) Internal explosion-proof junction box and intrinsically safe barrier
      - 5) Pulse Output
      - 6) Lever switch to manually turn pump on/off once power is provided to the switch.
      - 7) Nozzle hanger and boot so that nozzle may be hung to the side of the pump when not in use and covered to protect it from the elements.
      - 8) Housing to protect all components from the elements.
      - 9) 2" inlet and 1" outlet
    - c. Pump specs are as follows:

- 1) Connects to a 2" fitting nearest to the dispensing head of the tank.
  - 2) Continuous duty cycle
  - 3) Includes thermal protection for the motor.
  - 4) 1" inlet and outlet
- d. Meter specs are as follows:
  - 1) Meter is integral to the dispenser cabinet above and is not a separate part.
  - 2) 6-40 GPM flow rate
  - 3) Approved for gasoline, diesel, kerosene, and other similar fluids.
  - 4) Accuracy of +/- 1.25%
  - 5) Maximum pressure at 50 psi
  - 6) Operating temp -15 to 140 deg. F.
2. 40 GPM/30 Micron Particulate Spin-On Filter and Filter Head
  - a. Filter captures contaminants flowing from the tank before reaching the vehicle tank.
  - b. Filter specs are as follows:
    - 1) 30 Micron Filter
    - 2) 50psi max
    - 3) 40gpm max
    - 4) The filter head fits the above supplied filter and has a 1" inlet and outlet. Filter head is installed immediately after the meter outlet in a horizontal run of piping.
3. Hose Swivel, Whip Hose, Breakaway, and Nozzle
  - a. The swivel, whip hose, breakaway, and nozzle are common fuel dispensing parts that ensure the functionality and longevity of the fuel dispensing system.
    - 1) The swivel allows the nozzle to naturally move without added stress to the fuel hose.
    - 2) Diesel – 1"
    - 3) The whip hose serves as a flexible connector piece of hose to connect the breakaway to a rigid pipe outlet.
    - 4) Diesel – 1"
    - 5) The breakaway serves to protect the entire fuel dispensing system if the vehicle driver forgets to remove the nozzle from the vehicle after fueling. The breakaway is designed to break with approx. 600lbs of pulling force and is non-reconnectable.
    - 6) Diesel – 1"
    - 7) The nozzle inserts into the vehicle fuel inlet to dispense fuel into the vehicle. The nozzle is automatic, has a locking position trigger, and a rubber colored handle to indicate the fuel type.
    - 8) Diesel, Green Handle– 1"

### 3.05 HOSE PACKAGE

- A. The hose package includes the hose, hose reel and ball stop. Hose packages are offered in both 15' and 25' configurations for both gasoline and diesel applications.
  1. The fuel hose has a static wire and internal spring guards.
  2. The hose reel is a manual spring rewind model that has been pre- selected to handle the diameter and length hose provided with the hose package.
  3. The ball stop is provided to clamp around the fuel hose to prevent stress on the threaded connections from the force of the hose reel pulling the hose back.
  4. The flexible hose connects the hard piping section out of the dispenser outlet to the hose reel inlet.
  5. A hose reel mount is supplied to attach the hose reel directly to the hose.
    - a. The mount is comprised of 2 painted pieces of angle steel welded vertically to the tank head. Angles face out for ease of access behind the legs. Steel pieces are sized and space according to the hose reel mounting hole locations. Mount is centered at approx. 36" from the ground.
    - b. Hose packages are available in the following configurations, please select:

- 1) ?Diesel- 1" Accessories – 15' Hose
- 2) Hose reel for 1" x 15' Hose
- 3) 15'x 1" Hose
- 4) Ball Stop for 1" Hose
- 5) SS Braided Flexible Hose – 1"
- 6) ?Diesel- 1" Accessories – 25' Hose
- 7) Hose reel for 1" 25' Hose
- 8) 15'x 1" Hose
- 9) Ball Stop for 1" Hose.
- 10) SS Braided Flexible Hose – 1"

### 3.06 ELECTRONIC LEAK/OVERFILL PACKAGE

- A. The electronic leak & overfill package provides audible/visual local alarms for both interstitial leak and 90% full alarms.
1. The leak sensor is an interstitial float-switch style sensor. The sensor activates with any liquid intrusion in the interstitial space of the tank. The sensor housing is mesh stainless steel, the stem is PVC, the float is Buna. A NEMA 4 head is included.
    - a. Sensor used in place of pop-up leak gauge as mentioned above.
  2. The overfill sensor is a one-float stem sensor that activates when the tank reaches 90% full. The sensor stem is made of brass, the floats are Buna. A NEMA 4 head is included.
  3. The sensors are wired to alarm relays built into the FuelShield enclosure as specified below in section G. If the FuelShield is not used with the system, then an alternate 2 channel alarm panel may be used for audible/visual alarm functions.

### 3.07 HIGH-LINK® FUELSHIELD MINI PLUS PACKAGE

- A. Provide a FuelShield MINI Plus fuel management system that uses the High-LINK cloud-based software application for system operation, maintenance, reporting, alerts, and data analysis.
1. Provide a cabinet-style pump control and fuel management system that requires user and vehicle authentication before fuel may be dispensed into the vehicle. The FuelShield records the driver, vehicle, date, time, pump
  2. number/ID, fuel type, and amount of fuel dispensed and creates a transaction. The FuelShield MINI is pre-mounted to the head of the tank when the Turnkey Assembly Package is selected as described below in section H.
- B. Standard Authentication Options (required)
1. Pin Pad Entry for Driver Authentication
  2. User enters pin codes on the FuelShield keypad to identify the driver.
  3. Dallas Key for Vehicle Authentication
  4. User presents the magnetic button attached to a fob handle w. keyring holder to the reader on the FuelShield to identify the vehicle.
  5. Additional/alternate authentication options available in section 5 below.
- C. User input is required before beginning fueling, such as vehicle odometer, job number, purchase order number, site number, VIN number, or any other alphanumeric information the site owner/operator may wish to collect at the time of fueling.

### 3.08 FUELSHIELD MINI POWER/CONTROL REQUIREMENTS

- A. Operating Voltages: 12-24VDC or 110-230VAC
- B. Control rating: 15 Amps
1. FuelShield MINI Construction
    - a. Enclosure Material:

- 1) Hot compression molded fiberglass reinforced polyester (thermoset)
  - (a) Locking front door
  - (b) Enclosure Ratings
  - (c) UL508A, UL50 & UL50E
  - (d) NEMA 1,3,3S,3R,4X,12
  - (e) NFPA NO. 1101 Flame Spread: Class A (1)
  - (f) Flammability Rating: UL94-5V
  - (g) Self-Extinguishing: Non halogenated, non-flame propagating
  - (h) Physical Dimensions: 13" W x 15" H x 7" D (Approx.)
  - (i) Operating Temperature Range
  - (j) -32F to 135F without heater
  - (k) -55F to 135F with heater
  - (l) Controls/Inputs
  - (m) Controls up to (4) Fuel Hoses.
  - (n) Accepts up to (8) tank probes.
  - (o) Manage unlimited drivers and vehicles.
2. Internet Access – Internet access is required for use of system. The FuelShield Plus system is managed from and reports to the High-LINK® cloud-based software application using an internet connection. The unit will continue to function and record transactions locally if offline if power is provided, and the transaction data will synchronize to the cloud when the connection is restored.
  - a. Cellular (4G GPRS – Verizon or AT&T) is standard on all units unless specified otherwise.
  - b. Other available internet communication options (please indicate)
    - 1) ?Wi-Fi
    - 2) ?Ethernet/Hardwired Internet/LAN Cable

### 3.09 SYSTEM STANDARD OPTIONS

- A. Heater Kit (component warmth and anti-condensation)
- B. Alphanumeric keypad with function buttons
- C. Dallas key reader
- D. GPRS Modem
- E. Alarm Relays for Interstitial/Overfill audible/visual alarms.
- F. 2-row, 16-block backlit LCD Digital Display
- G. Emergency stop button.
  1. The emergency stop button will only stop the power from flowing to the pump, not cut power to the entire site. Some jurisdictions require an emergency stop button to cut power to the entire fueling area in case of emergency. This emergency stop button does not replace this function and is not intended to do so. Please inquire with your local AHJ for local codes and regulations.
    - a. Other options shall be added depending on the desired system setup, including:
      - 1) HID Card Reader
        - (a) RFID Authorization System Kit
        - (b) Magnetic Card Reader Kit
        - (c) Wi-Fi Modem
    - b. LevelShield Magnetostrictive Probe
      - 1) The LevelShield Magnetostrictive Probe monitors tank levels, including tank product level, water level, and liquid temperature. Level monitoring is

accomplished with two floats on a rigid shaft. One float will float on fuels, the other will only float on water. A thermocouple is centered along the interior of the probe shaft for temperature monitoring.

- 2) The Probe is sized according to the tank diameter.
- 3) The probe is supplied with a  $\frac{3}{4}$ " compression fitting to allow for subtle flexibility of the probe height in the tank. It is also supplied with a  $\frac{3}{4}$ "x2" reducer bushing to allow the probe to mount in a 2" fitting. 2" is the minimum fitting size to install the probe due to the float diameter. Please refer to the probe installation manual for more details, available upon request from your Highland Tank representative.
- 4) The probe is pre-installed in the tank and pre-wired to the FuelShield system when the turnkey assembly package is selected as described below. See section H.
- 5) Construction
  - (a) NEMA 4X rated aluminum blue-painted head.
  - (b) 316 Stainless Steel Tubing Body
  - (c) SP-P Fuel Float, SP-A Water Float
  - (d) Accuracy: +/- 0.02", Resolution +/- 0.004"
- 6) Operating Temperature a. -40F – 185F
- 7) RS-485 Communication
- 8) Certifications
  - (a) Explosion-Proof ATEX CESA & IENRIS-OMIL R85
  - (b) Class 1, Div. 1 Zone 1&2
- c. On-Site Startup and Installation assistance
  - 1) One technician will come to the site to perform startup on the system. The technician will train site administrators and end-users on the system operation and basic troubleshooting procedures. The technician will also perform the High-LINK software initial training for the site administrator. Further training will be conducted via a skype web presentation upon request from the end user.

#### H. Turnkey Assembly Package

1. The turnkey assembly package includes complete in-house assembly, wiring, and piping of all accessories and components to the specified tank when Highland Tank's standard system configuration is used. Any modifications to Highland Tank's standard design may require some components ship loose.
2. Turnkey assembly packages apply only to tanks 96" in diameter and smaller. Tanks with larger diameters may require some accessories to be installed on site due to shipping height restrictions. Ship loose components will be shown on the system drawing. Any component that will ship loose will be pre-fit in the factory for easy assembly on site.
3. The atmospheric vent or pressure/vacuum vent must ship loose due to shipping height restrictions and shall be installed by others on-site.
  - a. Tank Head Component Mounting
    - 1) Strips of Unistrut shall be welded horizontally across the head of the tank with the angle down for mounting of all tank head components and bracing of any pipe, conduit, Junction Box, or other accessory. Unistrut will be spaced 12" apart, centered to the horizontal centerline of the tank.
  - b. Electrical Hardware
    - 1) A Class 1, Div.1 explosion-proof rated junction box serves as a single- point electrical power connection for this system. A labeled terminal strip will be mounted in the box.
    - 2) All wiring in rigid conduit.
    - 3) All conduit junctures use explosion-proof seal-off fittings.
    - 4) All wiring, including high and low voltages, will shall be completed prior to shipping.
    - 5) System function testing will be performed prior to shipment.
  - c. Piping

- 1) Piping in this system shall consist of piping from the pump to the dispenser cabinet, and from the dispenser cabinet to the hose reel.
    - (a) The pump outlet is 1". A bushing will be used to increase to 2" directly off the pump to accommodate the dispenser cabinet inlet size, which is 2".
  - 2) Piping shall be 2" schedule 40 black steel pipe, painted white.
    - (a) Piping shall include breakdown flanges immediately after the pump, halfway down the vertical pipe run, and immediately before turning up into the dispenser cabinet.
  - 3) No valves in the piping run from the dispenser outlet to the hose reel inlet are in the standard design for this turnkey package. If valves are required/desired, please discuss with Highland Tank.
  - 4) All connections must always be tightened after shipment. Always check for leaks upon first use of the entire system.
  - 5) Valves are installed in the piping run as follows:
    - (a) 2" Stainless Steel Full Port Locking Ball Valve
    - (b) 1-1/4" Pressure Relief Valve with copper line back into the tank
    - (c) 2" Anti-Siphon Valve
    - (d) 2" External Emergency Valve
    - (e) 2" Bottom-Clean Out Strainer with 40 Mesh
    - (f) 2" Emergency Valve
    - (g) Installed in bottom of the dispenser
- I. Canopy & Explosion-Proof Light Package (96" dia & larger tanks only)
1. Provide a tank canopy extends 6' off the head of the tank over the dispensing area. Painted white.
  2. Included:
    - a. An explosion-proof 120VAC LED light shall be mounted in the center of the canopy to light the area below.
    - b. An explosion-proof photocell shall be mounted halfway down the tank head for auto on at dusk and auto off at dawn functionality.
    - c. All wiring shall be in rigid conduit with seal-offs at every juncture.
- J. High-LINK® Software Application & Cellular Data
1. The High-LINK® software application allows system administrators to efficiently manage the entire fueling operation from any web browser on any computer, tablet, or smartphone.
    - a. The application allows unlimited access, unlimited users, and allows the user to remotely manage their fueling operation, such as adding/removing drivers and vehicles from the system, running fuel use reports, setting customizable alerts, checking tank levels, bidding for fuel prices, reconciling inventory, and more. [Click here](#) to learn more about High-LINK® Integrated Systems.
    - b. The application is a yearly recurring software agreement.
  2. Cellular Data
    - a. Cellular data is the standard form of internet connectivity from the FuelShield Plus system to the software application. A cellular modem is standard with all FuelShield models. Cellular data is not applicable if another form of internet communication is used as specified above. The standard service provider is Verizon. AT&T may be used upon request or if coverage is better in the area with AT&T.
- K. Additional FuelShield Authentication Options:
1. Magnetic Card (Driver or Vehicle)
    - a. The user swipes the card in the card reader on the FuelShield to identify either the driver, vehicle, or both.
  2. HID Fob/Card (Driver or Vehicle)
    - a. User presents a wireless, contactless HID fob in front of the HID reader (optional) on the FuelShield to identify the driver.

3. RFID (Vehicle Only)
  - a. RFID rings are placed around the fuel inlet of the vehicle, and a reader is placed on the nozzle. The nozzle reader wirelessly identifies the vehicle when it is inserted into the vehicle fuel inlet. The reader wirelessly communicates to the FuelShield.
  - b. The system requires the nozzle to be in the vehicle during the entire duration of the transaction. When it is removed, the transaction will stop.
4. Barcode Reader (Vehicle Only)
  - a. A barcode scanner will scan a vehicle barcode to identify the vehicle. The barcode can represent any number assigned to the vehicle, such as: VIN, stock number, asset number, etc. The barcode scanner will be in a separate enclosure with a locking handle. It shall be mounted on a separate pedestal as manufactured by Highland Tank. The barcode reader is weatherproof, rated for cold temperatures, and highly impact resistant.
5. Fleet Fueling Card Integration (Vehicle Only)
  - a. FuelShield can be used in conjunction with EFS/WEX fleet fueling card solutions. Fleet fueling cards allow over-the-road and private fueling transactions to work seamlessly together. Please inquire for more information.
6. Indicate choices by choosing from the drop-down lists below:
  - a. Choose an item. Driver ID
  - b. Choose an item. Vehicle ID

#### 3.10 ENGINEERING NOTE:

- A. The fuel dispensing system as described above represents a standard design with standard accessories. The system is customizable to meet specific or alternate demands as required per the site conditions. Please call 814.893.5701 to discuss system needs with a product specialist.

**END OF SECTION 223500**

## PART 1 GENERAL

## 1.01 SECTION INCLUDES

- A. Flush valve water closets.
- B. Bidets.
- C. Wall hung urinals.
- D. Lavatories.
- E. Wall-hung, solid surface, multistation lavatory units.
- F. Wall-hung, multistation wash fountains.
- G. Sinks.
- H. Under-lavatory pipe supply covers.
- I. Bathtubs and showers.
- J. Shower receptors.
- K. Eye wash fountains.
- L. Bottle filling drinking fountains.
- M. Service sinks.

## 1.02 RELATED REQUIREMENTS

- A. Section 011000 - Summary: Owner-furnished fixtures.
- B. Section 221005 - Plumbing Piping.
- C. Section 221006 - Plumbing Piping Specialties.
- D. Section 223000 - Plumbing Equipment.
- E. Section 260583 - Wiring Connections: Electrical characteristics and wiring connections.

## 1.03 REFERENCE STANDARDS

- A. ADA Standards - Americans with Disabilities Act (ADA) Standards for Accessible Design; 2010.
- B. ASME A112.6.1M - Supports for Off-the-Floor Plumbing Fixtures for Public Use; 1997 (Reaffirmed 2017).
- C. ASME A112.18.1 - Plumbing Supply Fittings; 2018, with Errata.
- D. ASME A112.18.9 - Protectors/Insulators for Exposed Waste and Supplies on Accessible Fixtures; 2011 (Reaffirmed 2017).
- E. ASME A112.19.1 - Enamelled Cast Iron and Enamelled Steel Plumbing Fixtures; 2018.
- F. ASME A112.19.2 - Ceramic Plumbing Fixtures; 2018.

- G. ASME A112.19.5 - Flush Valves and Spuds for Water Closets, Urinals, and Tanks; 2017.
- H. ASSE 1070 - Performance Requirements for Water Temperature Limiting Devices; 2015.
- I. ASTM C177 - Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus; 2019.
- J. ASTM C1822 - Standard Specification for Insulating Covers on Accessible Lavatory Piping; 2021.
- K. ASTM D638 - Standard Test Method for Tensile Properties of Plastics; 2014.
- L. FM (AG) - FM Approval Guide; current edition.
- M. ICC A117.1 - Accessible and Usable Buildings and Facilities; 2017.
- N. ITS (DIR) - Directory of Listed Products; current edition.
- O. NSF 61 - Drinking Water System Components - Health Effects; 2019.
- P. NSF 372 - Drinking Water System Components - Lead Content; 2016.
- Q. UL (DIR) - Online Certifications Directory; Current Edition.

#### 1.04 SUBMITTALS

- A. See Section 013000 - Administrative Requirements for submittal procedures.
- B. Product Data: Provide catalog illustrations of fixtures, sizes, rough-in dimensions, utility sizes, trim, and finishes.
- C. Manufacturer's Instructions: Indicate installation methods and procedures.
- D. Sustainable Design Documentation: Submit appropriate evidence that materials used in potable water systems comply with the specified requirements.
- E. Maintenance Data: Include fixture trim exploded view and replacement parts lists.
- F. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.
- G. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
  - 1. See Section 016000 - Product Requirements for additional provisions.
  - 2. Extra Faucet Washers: One set of each type and size.
  - 3. Extra Lavatory Supply Fittings: One set of each type and size.
  - 4. Extra Toilet Seats: One of each type and size.
  - 5. Flush Valve Service Kits: One for each type and size.

#### 1.05 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum three years of documented experience.

## 1.06 DELIVERY, STORAGE, AND HANDLING

- A. Accept fixtures on site in factory packaging. Inspect for damage.
- B. Protect installed fixtures from damage by securing areas and by leaving factory packaging in place to protect fixtures and prevent use.

## 1.07 WARRANTY

- A. See Section 017800 - Closeout Submittals for additional warranty requirements.
- B. Provide five year manufacturer warranty for electric water cooler.

## PART 2 PRODUCTS

## 2.01 GENERAL REQUIREMENTS

- A. Potable Water Systems: Provide plumbing fittings and faucets that comply with NSF 61 and NSF 372 for maximum lead content; label pipe and fittings.
- B. Water Efficiency: EPA WaterSense label is required for all water closets, urinals, lavatory faucets, and showerheads.

## 2.02 REGULATORY REQUIREMENTS

- A. Comply with applicable codes for installation of plumbing systems.
- B. Comply with UL (DIR) requirements.
- C. Perform work in accordance with local health department regulations.
- D. Provide certificate of compliance from Authority Having Jurisdiction indicating approval of installation.

## 2.03 FLUSH VALVE WATER CLOSETS

- A. Water Closets:
  - 1. Vitreous china, ASME A112.19.2, floor mounted, siphon jet flush action, china bolt caps.
  - 2. Manufacturers:
    - a. See Plumbing Fixture Schedule on Sheets P1 002 and P2 003.
    - b. Substitutions: See Section 016000 - Product Requirements.
- B. Flush Valves:
  - 1. Manufacturers:
    - a. See Plumbing Fixture Schedule on Sheets P1 002 and P2 003.
    - b. Substitutions: See Section 016000 - Product Requirements.
- C. Toilet Seats:
  - 1. Manufacturers:
    - a. American Standard, Inc; \_\_\_\_\_: [www.americanstandard-us.com/#sle](http://www.americanstandard-us.com/#sle).
    - b. Substitutions: See Section 016000 - Product Requirements.
  - 2. Solid white plastic, open front, extended back, self-sustaining hinge, brass bolts, without cover.
- D. Water Closet Carriers:

1. Manufacturers:
  - a. See Plumbing Fixture Schedule on Sheets P1 002 and P2 003.
  - b. Substitutions: See Section 016000 - Product Requirements.
2. ASME A112.6.1M; adjustable cast iron frame, integral drain hub and vent, adjustable spud, lugs for floor and wall attachment, threaded fixture studs with nuts and washers.

#### 2.04 WALL HUNG URINALS

- A. Manufacturers:
  1. See Plumbing Fixture Schedule on Sheets P1 002 and P2 003.
  2. Substitutions: See Section 016000 - Product Requirements.
- B. Flush Valves:
  1. Manufacturers:
    - a. See Plumbing Fixture Schedule on Sheets P1 002 and P2 003.
    - b. Substitutions: See Section 016000 - Product Requirements.
- C. Urinal Carriers:
  1. Manufacturers:
    - a. Zurn Industries, LLC; Z1221: [www.zurn.com/#sle](http://www.zurn.com/#sle).
    - b. Substitutions: See Section 016000 - Product Requirements.
  2. ASME A112.6.1M; cast iron and steel frame with tubular legs, lugs for floor and wall attachment, threaded fixture studs for fixture hanger, bearing studs.

#### 2.05 LAVATORIES

- A. Manufacturers:
  1. See Plumbing Fixture Schedule on Sheets P1 002 and P2 003.
  2. Substitutions: See Section 016000 - Product Requirements.

#### 2.06 SINKS

- A. Manufacturers:
  1. See Plumbing Fixture Schedule on Sheets P1 002 and P2 003.
  2. Substitutions: See Section 016000 - Product Requirements.

#### 2.07 UNDER-LAVATORY PIPE SUPPLY COVERS

- A. Manufacturers:
  1. Plumberex Specialty Products, Inc; \_\_\_\_\_: [www.plumberex.com/#sle](http://www.plumberex.com/#sle).
  2. Substitutions: See Section 016000 - Product Requirements.
- B. Basis of Design: Plumberex Specialty Products, Inc; [www.plumberex.com/#sle](http://www.plumberex.com/#sle).
  1. Slim Fit Under-Lavatory Insulators (Non-Sewn): Plumberex Trap Gear.
- C. General:
  1. Insulate exposed drainage piping including hot, cold and tempered water supplies under lavatories or sinks per ADA Standards.
  2. Construction: 1/8 inch (3.2 mm) PVC with antimicrobial, antifungal and UV resistant properties.
    - a. Comply with ASTM C1822 Type I for covers on accessible lavatory piping.
    - b. Comply with ASME A112.18.9 for covers on accessible lavatory piping.
    - c. Comply with ICC A117.1.

## 2.08 SHOWERS

- A. Manufacturers:
  - 1. See Plumbing Fixture Schedule on Sheets P1 002 and P2 003.
  - 2. Substitutions: See Section 016000 - Product Requirements.
- B. Thermostatic Mixing Valve:
  - 1. ASSE 1070 listed with combination stop, strainer, and check valves, and flexible stainless steel connectors.

## 2.09 BOTTLE FILLING DRINKING FOUNTAINS

- A. Manufacturers:
  - 1. See Plumbing Fixture Schedule on Sheets P1 002 and P2 003.
  - 2. Substitutions: See Section 016000 - Product Requirements.

## 2.10 SERVICE SINKS

- A. Manufacturers:
  - 1. See Plumbing Fixture Schedule on Sheets P1 002 and P2 003.
  - 2. Substitutions: See Section 016000 - Product Requirements.

## 2.11 EMERGENCY EYE AND FACE WASH

- A. Manufacturers:
  - 1. See Plumbing Fixture Schedule on Sheets P1 002 and P2 003.
  - 2. Substitutions: See Section 016000 - Product Requirements.
- B. Thermostatic Mixing Valve: Thermostatic mixing valve, ASSE 1070 listed, with combination stop, strainer, and check valves, and flexible stainless steel connectors.

# PART 3 EXECUTION

## 3.01 EXAMINATION

- A. Verify that walls and floor finishes are prepared and ready for installation of fixtures.
- B. Verify that electric power is available and of the correct characteristics.
- C. Confirm that millwork is constructed with adequate provision for the installation of counter top lavatories and sinks.

## 3.02 PREPARATION

- A. Rough-in fixture piping connections in accordance with minimum sizes indicated in fixture rough-in schedule for particular fixtures.

## 3.03 INSTALLATION

- A. Install each fixture with trap, easily removable for servicing and cleaning.
- B. Provide chrome-plated rigid or flexible supplies to fixtures with loose key stops, reducers, and escutcheons.
- C. Install components level and plumb.

- D. Install and secure fixtures in place with wall supports and bolts.

**3.04 INTERFACE WITH WORK OF OTHER SECTIONS**

- A. Review millwork shop drawings. Confirm location and size of fixtures and openings before rough-in and installation.

**3.05 ADJUSTING**

- A. Adjust stops or valves for intended water flow rate to fixtures without splashing, noise, or overflow.

**3.06 CLEANING**

- A. Clean plumbing fixtures and equipment.

**3.07 PROTECTION**

- A. Protect installed products from damage due to subsequent construction operations.
- B. Repair or replace damaged products before Date of Substantial Completion.

**END OF SECTION 224000**

## PART 1 - GENERAL

## 1.01 DESCRIPTION OF WORK

- A. This section describes the general requirements for all mechanical items and systems required by the Contract Documents.
- B. Comply with all Contract Requirements, General Conditions, Supplementary Conditions and Division 1 Sections applying to or affecting the Work of Division 23.
- C. Unless specifically dimensioned, the Work shown on the Drawings is in diagrammatic form only to show general arrangement.
- D. Include, in the Work, all accessories and appurtenances, necessary and integral, for the intended operation of any system, component or device, as such systems, components and devices are specified.
- E. Do not install pipe or conduit through ductwork.
- F. If the pipe or duct size shown on the Drawings does not match the connection size of the equipment that it is connected to, provide the necessary transition pieces at the piece of equipment.
- G. Do not use or allow to be used asbestos or asbestos-containing materials on this project. Be rigorous in assuring that all materials, equipment, systems and components thereof do not contain asbestos. Any deviations from this requirement shall be remedied at the Contractor's expense without regard to prior submittal approvals.

## 1.02 RELATED DOCUMENTS

- A. The General Conditions and General Requirements Division 1 apply to the Work of this Section.

## 1.03 REFERENCE STANDARDS

- A. Compliance with the following codes and standards shall be required:
  - 1. Codes, Rules and Regulations of the State of New York
  - 2. USAS USA Standards Institute (Formerly ASA)
  - 3. AMCA Air Moving and Conditioning Association
  - 4. ADC Air Diffusion Council
  - 5. NEMA National Electrical Manufacturers Association
  - 6. FM Factory Mutual
  - 7. NFPA National Fire Protection Association
  - 8. ASTM American Society for Testing Materials
  - 9. UL Underwriters Laboratories, Inc.
  - 10. NEC National Electrical Code
  - 11. ASME American Society of Mechanical Engineers
  - 12. ANSI American National Standards Institute
  - 13. OSHA Occupational Safety and Health Act
  - 14. BSA Board of Standards and Appeals
  - 15. MEA Materials and Equipment Acceptance
  - 16. DEC New York State Department of Environmental Conservation - 6 NYCRR Part 613 Handling and Storage of Petroleum
  - 17. ASHRAE American Society of Heating, Refrigeration and Air Conditioning Engineers.
  - 18. AWWA American Water Works Association

#### 1.04 DEFINITIONS

- A. "Provide" means furnish and install, complete the specified material, equipment or other items and perform all required labor to make a finished installation.
- B. "Furnish and install" has the same meaning as given above for "Provide."
- C. Refer to General Conditions for other definitions.

#### 1.05 ABBREVIATIONS

- A. Reference by abbreviation may be made in the Specifications and the Drawings in accordance with the following list:
  - 1. HVAC Heating, Ventilating and Air Conditioning
  - 2. CM Construction Manager
  - 3. AC Air Conditioning
  - 4. H & V Heating and Ventilating
  - 5. AWG American Wire Gauge
  - 6. BWG Birmingham Wire Gauge
  - 7. USS United States Standard
  - 8. B & S Brown & Sharpe
  - 9. OS & Y Outside Screw and Yoke
  - 10. IBBM Iron Body Brass Mounted
  - 11. WSP Working Steam Pressure
  - 12. PSIG Pounds per Square Inch Gauge
  - 13. PRV Pressure Reducing Valve
  - 14. GPM Gallons per Minute
  - 15. MBH Thousand BTU per hour
  - 16. BTU British Thermal Units
  - 17. WG Water Gage
  - 18. LB Pound (Also shown as: #)
  - 19. ASME American Society of Mechanical Engineers

- 20. ASTM American Society for Testing Materials
  - 21. ABMA American Boiler Manufacturers Association
  - 22. ASA American Standards Associates
  - 23. MER Mechanical Equipment Room
- See Drawings for additional abbreviations

#### 1.06 REVIEW OF CONTRACT DOCUMENTS AND SITE

- A. Give written notice with the submission of bid to the Architect/Engineer of any materials or apparatus believed inadequate or unsuitable, in violation of laws, ordinances, rules or regulations of Authorities having jurisdiction, and any necessary items of work omitted. In the absence of such written notice it is mutually agreed that the Contractor has included the cost of all required items in his proposal for a complete project.
- B. Contractors shall acknowledge that they have examined the Plans, Specifications and Site, and that from his own investigations he has satisfied himself as to the nature and location of the Work; the general and local conditions, particularly those bearing upon transportation, disposal, handling and storage of materials; availability of labor, utilities, roads and uncertainties of weather; the composition and condition of the ground; the characters quality and quantity of subsurface materials to be encountered; the character of equipment and facilities needed preliminary to and during the execution of the Work; all federal, state, county, township and municipal laws, ordinances and regulations particularly those relating to employment of labor, rates of wages, and construction methods; and all other matters which can in any way affect the Work or the cost thereof under this Contract. Any failure by the Contractor to acquaint himself with the available information concerning these conditions will not relieve him from the responsibility for successfully performing the Work.
- C. Owner assumes no responsibility for any understanding or representation made during or prior to the negotiation and execution of this Contract unless such understanding or representations are expressly stated in the Contract and the Contract expressly provides that the responsibility, therefore, is assumed by the Owner.

#### 1.07 MEASUREMENTS

- A. Base all measurements, both horizontal and vertical from established bench marks. Make all Work agree with these established lines and levels. Verify all measurements at site; and check the correctness of same as related to the Work.

#### 1.08 LABOR AND MATERIALS

- A. Provide all materials and apparatus required for the Work of new and first-class quality. Furnish, deliver, arrange, erect, connect and finish all materials and equipment in every detail, so selected and arranged as to fit properly into the building spaces.
- B. Remove all materials delivered, or work erected, which does not comply with Drawings or Specifications, and replace with proper materials, or correct such work as directed, at no additional cost to the Owner.

#### 1.09 COVERING OF WORK

- A. Do not cover up or hide from view any duct, piping, fitting, or other work of any kind before it has been examined or approved by the Architect/Engineer and/or other authority having jurisdiction over the same. Remove and correct immediately any unacceptable or imperfect work or unauthorized or disapproved materials discovered immediately after being disapproved.

## 1.10 PROTECTION

- A. Protect the Work and material of all trades from damage and replace all damaged material with new.
- B. Protect work and equipment until the Work is finally inspected, tested, and accepted; protect the Work against theft, injury or damage; and carefully store material and equipment received on site which is not immediately installed; close open ends of work with temporary covers or plugs during construction to prevent entry of foreign material.
- C. Preserve all public and private property, along and adjacent to the Work, and use every precaution necessary to prevent damage or injury thereto. Use suitable precautions to prevent damage to pipes, conduits and other underground structures or utilities, and carefully protect from disturbance or damage all property marks until an authorized agent has witnessed or otherwise referenced their location, and do not remove them until directed.

## 1.11 CUTTING AND PATCHING

- A. Provide all cutting and rough patching required for the Work. Perform all finish patching.
- B. Furnish and locate all sleeves and inserts required before the floors and walls are built, pay the cost of cutting and patching required for pipes where sleeves and inserts were not installed in time, or where incorrectly located. Provide all drilling required for the installation of hangers.
- C. Punch or drill all holes cut through concrete slabs or arches from the underside. Do not cut structural members without the approval of the Architect/Engineer. Perform all cutting in a manner directed by the Architect/Engineer.
- D. Do not do any cutting that may impair strength of building construction. Do not drill any holes, except for small screws, in beams or other structural members without obtaining prior approval. All Work shall be done in a neat manner by mechanics skilled in their trades and as approved.

## 1.12 SUBMITTALS

- A. Submit for review, shop drawings for all materials and equipment furnished and installed under this Contract. Submissions shall include but not be limited to:
  - 1. Ductwork layout drawings, air devices and accessories
  - 2. Breeching layout drawings
  - 3. Piping and equipment layout drawings.
  - 4. Piping materials, valves, hangers, supports and accessories
  - 5. Automatic temperature control equipment, diagrams and control sequences
  - 6. Equipment, fixtures, and appurtenances
  - 7. Insulation
  - 8. Rigging Plan - Include the name of the rigging company; a layout drawing that details the crane with its outriggers extended outward. Provide dimensions showing how rigging operations will affect the road and parking lines being used, the type of crane and its specification including crane arm height, lift capacity, crane reach.
- B. Reports
  - 1. Compliance with listings and approvals for equipment and for fire ratings.
  - 2. Acceptance certificates from inspecting agencies.
  - 3. Complete printed and illustrated operating instructions in report format.
  - 4. Manufacturer's performance tests of equipment.
  - 5. Field pipe and duct testing reports.
  - 6. Field operating test results for equipment.

7. Performance report on the balancing of air and water systems.
  8. Performance reports for vibration isolation equipment.
  9. Manufacturer's reports on motorized equipment alignment and installation.
- C. Specific references to any article, device, product or material, fixture or item of equipment by name, make or catalog number shall be interpreted as establishing a basis of cost and a standard of quality. All devices shall be of the make and type listed by Special Agencies, such as the Underwriters' Laboratories, and where required, approved by the Fire Department.

#### 1.13 SPACE ALLOTMENTS AND SUBSTITUTIONS

- A. The space allotments and equipment layouts on the Drawings are based on the manufacturer's model indicated or scheduled as the "Basis of Design". Ensure that any equipment that is submitted other than the "Basis of Design" will fit in the space allotment and will provide the necessary maintenance clearances as recommended by the manufacturer. If maintenance clearances are not met, pay for any changes such that maintenance clearances will be met.
- B. Bear all costs associated with re-layout of the equipment, changes to piping/ductwork, and other changes as required if approved equipment other than the "Basis of Design" equipment is purchased. This shall also include any structural steel modifications and structural steel design changes. Submit, at no cost to the Owner, a steel design stamped by a structural engineer licensed in the state in which the Work is to be performed for structural modifications that must be made resulting from the use of equipment other than the "Basis of Design" or not specified.

#### 1.14 PAINTING

- A. Prime paint all bare supplemental steel, supports and hangers required for the installation of Division 23 Work in accordance with "Painting" Specification Section. Touch up welds of galvanized surfaces with galvanizing primer.

#### 1.15 MATERIAL SAFETY DATA SHEETS

- A. Submit material safety data sheets (MSDS) for all chemicals, hydraulic fluids, seal oils, lubricating oils, glycols and any other hazardous materials used in the performance of the Work, in accordance with the US Department of Labor, Occupational Safety and Health Administration (OSHA) hazard communication and right-to-know requirements stipulated in 29 CFR 1910.1200 (g).

#### 1.16 MOTORS AND STARTERS

- A. Provide new NEMA Standard electric motors, sized and designed to operate at full load and full speed continuously without causing noise, vibration, and temperature rise in excess of their rating. Provide motors with a service factor of at least 1.15.
- B. Equip motors for belt driven equipment with rails with adjusting screws for belt tension adjustment. Weather protect motors exposed to the weather.
- C. Install high efficiency electric motors for air handling units, relief fans, and exhaust fans.
- D. Provide all motors for use with Variable Frequency Drives with "high efficiency inverter duty" insulation class "F" with class "B" temperature rise and that conform to or exceed the International Energy Conservation Code or the Federal EP Act of 1992 requirements for efficiency.
- E. Provide stainless steel nameplates, permanently attached to the motor, and having the following information as a minimum:

1. Manufacturer
  2. Type
  3. Model
  4. Horsepower
  5. Service Factor
  6. RPM
  7. Voltage/Phase/Frequency
  8. Enclosure Type
  9. Frame Size
  10. Full-Load Current
  11. UL Label (where applicable)
  12. Lead Connection Diagram
  13. Bearing Data
  14. Efficiency at Full Load.
- F. Provide motors whose sound power levels do not exceed that recommended in NEMA MG 1-12.49.
- G. Provide motors with drive shafts long enough to extend completely through belt sheaves when sheaves are properly aligned and balanced.
- H. Protect motor starters on equipment located outdoors in weatherproof NEMA 4X enclosures.
- I. Provide weatherproof NEMA 4X disconnect switches when located outdoors.
- J. Motor Characteristics:
1. 120V/1/60 Hz, 208V/1/60 Hz or 240V/1/60 Hz: Capacitor start, open drip-proof type, ball bearing, rated 40 C. continuous rise.
  2. 208V/3/60 Hz, 240V/3/60 Hz or 460/3/60 Hz: NEMA B, normal starting torque, single speed, squirrel-cage type, open drip-proof, rated 40 C continuous rise, with ball bearings rated for B-10 life of 100,000 hours and fitted with grease fittings and relief ports. Provide motors with aluminum end brackets with steel inserts in bearing cavities.

#### 1.17 ACOUSTICAL PERFORMANCE OF EQUIPMENT AND SYSTEMS

- A. Install the Work in such a manner that noise levels from operation of motor driven equipment, whether airborne or structure-borne, and noise levels created by or within air handling equipment and air distribution and control media, do not to exceed sound pressure levels determined by the noise criteria curves published in the ASHRAE guide.
- B. Acoustical Tests
1. Owner may direct the Contractor to conduct sound tests for those areas he deems too noisy.
  2. If NC level exceeds the requirements of the Contract Documents due to improper installation or operation of mechanical systems, make changes or repairs to bring noise levels to within required levels.
  3. Retest until specified criteria have been met.

#### 1.18 OPERATING AND MAINTENANCE INSTRUCTIONS

- A. Instructions and Demonstration for Owner's Personnel
1. Provide operating and maintenance instruction to the Owner when project is completed and all HVAC equipment serving the building is ready to be turned over to the Owner.
  2. Turn over the HVAC equipment to the Owner only after the final testing and proper balancing of HVAC systems.

3. Instruct the Owner's personnel in the use, operation and maintenance of all equipment of each system.
4. The above instruction requirements are in addition to that specified for specific equipment or systems. Conform to specified requirements if more stringent or longer instruction is specified for specific equipment or systems.

#### 1.19 CODES, RULES, PERMITS & FEES

- A. Give all necessary notices, obtain all permits and pay all government sales taxes, fees, and other costs, in connection with the Work. Unless indicated otherwise, fees for all utility connections, extensions, and tap fees for water, storm, sewer, gas, telephone, and electricity will be paid directly to utility companies and/or agencies by the Owner. File all necessary plans, prepare all documents and obtain all necessary approvals of all governmental departments having jurisdiction; obtain all required certificates of inspection for the Work and deliver same to the Owner's Representative before request for acceptance and final payment for the Work.
- B. Conform to the requirements of the NFPA, NEC, FM, UL and any other local or State codes which may govern.

#### 1.20 RECORD DRAWINGS

- A. During the progress of the Work, make a record set of drawings of all changes by which the actual installation differs from the Drawings.
- B. Create all record drawings in AutoCAD version 2002 or later in .dwg format. Upon completion of the Work, submit to the Architect/Engineer for approval three complete sets of hard copies of the record drawings, of the same size as the Drawings for approval. Upon approval by the Architect/Engineer furnish the Owner a CD copy of the record drawings along with one hard copy for his records.

### PART 2 - PRODUCTS

NOT USED

### PART 3 - EXECUTION

#### 3.01 CLEANING AND ADJUSTING

- A. Cleaning
  1. Blow out, clean and flush each system of piping and equipment, to thoroughly clean the systems.
  2. Clean all materials and equipment; leave in condition ready to operate and ready to receive final finishes where required.
  3. Clean the operating equipment and systems to be dust free inside and out.
  4. Clean concealed and unoccupied areas such as plenums, pipe and duct spaces and equipment rooms to be free of rubbish and dust.
- B. Adjusting
  1. Adjust and align equipment interconnected with couplings or belts.
  2. Adjust valves of all types and operating equipment of all types to provide proper operation.
  3. Clean all strainers after system cleaning and flushing and again before system startup.
- C. Lubrication
  1. Lubricate equipment as recommended by the manufacturer, during temporary construction use.
  2. Provide complete lubrication just prior to acceptance.

- D. Permanent Equipment Operating During Construction
  - 1. Use only in same service as the permanent applications.
  - 2. Use disposable filters during temporary operation.
  - 3. Replace expendable media, including belts used for temporary operation and similar materials just prior to acceptance of the Work.
  - 4. Repack packing in equipment operated during construction just prior to system acceptance, using materials and methods specified by the equipment manufacturer.
- E. Retouch or repaint equipment furnished with factory finish as required to provide same appearance as new.
- F. Tools
  - 1. Provide one set of specialized or non-standard maintenance tools and devices required for servicing the installed equipment.

### 3.02 EQUIPMENT BASES, PLATFORMS AND SUPPORTS

- A. Provide supporting platforms, steel supports, anchor bolts, inserts, etc., for all equipment and apparatus provided.
- B. Obtain prior approval for installation method of structural steel required to frame into building structural members for the proper support of equipment, conduit, etc. Welding will be permitted only when approved by the Architect/Engineer.
- C. Submit shop drawings of supports to the Architect/Engineer for approval before fabricating or constructing.
- D. Provide leveling channels, anchor bolts, complete with nuts and washers, for all apparatus and equipment secured to concrete pads and further supply exact information and dimensions for the location of these leveling channels, anchor bolts, inserts, concrete bases and pads.
- E. Where supports are on concrete construction, take care not to weaken concrete or penetrate waterproofing.

### 3.03 ACCESSIBILITY

- A. Install valves, dampers and other items requiring access conveniently and accessibly located with reference to the finished building.

### 3.04 USE OF EQUIPMENT

- A. The use of any equipment, or any part thereof, even with the Owner's consent, is not an indication of acceptance of the Work on the part of the Owner, nor shall it be construed to obligate the Owner in any way to accept improper work or defective materials.

### 3.05 MODIFICATIONS OF EXISTING WORK

- A. Coordinate the Work with all other contractors and provide necessary dimensions for all openings. Provide all cuts and openings which are necessary for the Work for passage of piping and ductwork
- B. Upon completion, remove all temporary piping and equipment, shoring, scaffolds, etc., and leave all areas clean and free from material and debris resulting from the Work performed under this Section. Provide rough patching in areas required.

## 3.06 EQUIPMENT INSTALLATION

- A. Locate and set equipment anchor bolts, dowels and aligning devices for equipment requiring them.
- B. Level and shim the equipment; coordinate and oversee the grouting work.
- C. Perform field assembly, installation and alignment of equipment under direct supervision provided by the manufacturer or with inspections, adjustments and approval by the manufacturer.
- D. Alignment and Lubrication Certification for Motor Driven Apparatus
  - 1. After permanent installation has been made and connections have been completed, but before the equipment is continuously operated, have a qualified representative of the equipment manufacturer inspect the installation and report in writing on the manufacturer's letterhead on the following:
    - a. Whether shaft, bearing, seal, coupling, and belt drive alignment and doweling is within the manufacturer's required tolerances so that the equipment will remain aligned in the normal service intended by the Contract Documents and that no strain or distortion will occur in normal service.
    - b. That all parts of the apparatus are properly lubricated for operation.
    - c. That the installation is in accordance with manufacturer's instructions.
    - d. That suitable maintenance and operating instructions have been provided for the Owner's use.
    - e. Make any corrections to items that are required or recommended based on the manufacturer's inspection and have the equipment re-inspected.
- E. Belt Drives
  - 1. V-belt drives - a driving and driven sheave grooved for belts of trapezoidal cross-section. Construct belts of fabric and rubber so designed so as not to touch the bottom of the grooves, the power being transmitted by the contact between the belts and V-shaped groove sides. Design drives for a minimum of 150 percent of motor horsepower. Provide companion type driven sheaves.
  - 2. Select drives to provide for 12-1/2 percent variation in speed, plus or minus, from specified speed. Provide all motors with adjustable sheaves except where indicated otherwise in the Specifications or on the Drawings.
  - 3. Install all fans with adjustable pitch sheaves on their drive motors. Select sheaves to provide air quantities under specified conditions. Put air systems into operation, and determine as a result of the completed air balance the actual size of sheaves required to produce specified air quantities on installed systems. The adjustable pitch sheaves shall then be replaced with the proper size fixed sheaves. Remove adjustable pitch sheaves from premises. Provide fixed motor sheaves manufactured by Wood's.
  - 4. Where indicated on the Drawings or specified, provide spare motor, bearings, and belts.
- F. Machinery Guards
  - 1. Protect motor drives by guards furnished by the equipment manufacturer or in accordance with the Sheet Metal and Air Conditioning Contractors National Association's Low Pressure Duct Manual. Provide guards of all types approved as acceptable under OSHA Standards.
- G. Equipment Start-up
  - 1. Require each equipment manufacturer to provide qualified personnel to inspect and approve equipment and installation and to supervise the start-up of the equipment and to supervise the operating tests of the equipment.
  - 2. If a minimum number of hours for start-up and instruction are not stated with the equipment specifications, these shall be 2 full 8-hour working days as a minimum.

3. Advise Owner of start-up at least 72 hours in advance.

### 3.07 CLOSEOUT PROCEDURES

- A. General Operating and Maintenance Instructions: Arrange for each installer of operating equipment and other work that requires regular or continuing maintenance, to meet at the site with the Owner's personnel to provide necessary basic instructions in the proper operation and maintenance of the entire Work. Where installers are not expert in the required procedures, include instruction by the manufacturer's representatives.
- B. Where applicable, provide instruction and training, including application of special coatings systems, at manufacturer's recommendation.
- C. Provide a detailed review of the following items:
  1. Maintenance manuals
  2. Record documents and catalog cuts for each piece of equipment.
  3. Spare parts and materials
  4. Tools
  5. Lubricants
  6. Fuels
  7. Identification systems
  8. Control sequences
  9. Hazards
  10. Cleaning
- D. Warranties, bonds, maintenance agreements, and similar continuing commitments.
- E. Demonstrate the following procedures:
  1. Start-up
  2. Shut-down
  3. Emergency operations
  4. Noise and vibration adjustments
  5. Safety procedures
  6. Economy and efficiency adjustments
  7. Effective energy utilization.
- F. Prepare instruction periods to consist of approximately 50% classroom instruction and 50% "hands-on" instruction. Provide minimum instruction periods as follows:

| <b>Systems or Equipment</b>       | <b>Training Time (Hours)</b> |
|-----------------------------------|------------------------------|
| Variable Refrigerant Flow Systems | 16 hrs.                      |
| Roof Top Units                    | 8 hrs.                       |
| Boilers and Burners               | 16 hrs                       |
| DDC Control System                | 24 hrs.                      |
| All other equipment               | 4 hrs. (each)                |

Note: Consult individual equipment specification sections for additional training requirements.

- G. Prepare a written agenda for each session and submit for review and approval. Include date, location, purpose, specific scope, proposed attendance and session duration.

- H. Record training sessions in digital format, format as selected by the Owner. Turn over digital files to the Owner after training has been completed.

**END OF SECTION 230010**

## PART 1 - GENERAL

## 1.01 DESCRIPTION OF WORK

- A. The Work covered under this Section consists of the furnishing of all necessary labor, supervision, materials, equipment, and services to completely execute the pipe hanger and supports as described in this Specification. Size hangers and supports to fit the outside diameter of the

## 1.02 REFERENCES

- A. ASTM B633 - Specification for Electrodeposited Coatings of Zinc on Iron and Steel
- B. ASTM A123 - Specification for Zinc (Hot-Galvanized) Coatings on Products Fabricated from Rolled, Pressed, and Forged Steel Shapes, Plates, Bars, and Strip
- C. ASTM A653 - Specification for Steel Sheet, Zinc-Coated by the Hot-Dip Process
- D. ASTM A1011 - Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy and High-Strength Low-Alloy with Improved Formability (Formerly ASTM A570)
- E. MSS SP58 - Manufacturers Standardization Society: Pipe Hangers and Supports- Materials, Design, and Manufacture
- F. MSS SP69 - Manufacturers Standardization Society: Pipe Hangers and Supports- Selection and Application
- G. MSS SP89 - Pipe Hangers and Supports - Fabrication and Installation Practices

## 1.03 QUALITY ASSURANCE

- A. Provide hangers and supports used in fire protection piping systems listed and labeled by Underwriters Laboratories.
- B. Steel pipe hangers and supports shall have the manufacturer's name, part number, and applicable size stamped in the part itself for identification.
- C. Design and manufacture hangers and supports in conformance with MSS SP 58.

## 1.04 SUBMITTALS

- A. Submit product data on all hanger and support devices, including shields and attachment methods. Include as a minimum as part of product data materials, finishes, approvals, load ratings, and dimensional information.
- B. Submit Pipe Hanger and Support Application Schedule.

## PART 2 - PRODUCTS

## 2.01 ACCEPTABLE MANUFACTURERS

- A. Manufacturer: Subject to compliance with these specifications, provide pipe hanger and support systems manufactured by:
  - 1. Cooper B-Line, Inc.
  - 2. Carpenter and Patterson

## 3. Grinnell

## 2.02 PIPE HANGERS AND SUPPORTS

## A. Hangers

1. Uninsulated pipes 2 inch and smaller:
  - a. Adjustable steel swivel ring (band type) hanger, B-Line B3170.
  - b. Adjustable steel swivel J-hanger, B-Line B3690.
  - c. Malleable iron ring hanger, B-Line B3198R or hinged ring hanger, B3198H.
  - d. Malleable iron split-ring hanger with eye socket, B-Line B3173 with B3222.
  - e. Adjustable steel clevis hanger, B-Line B3104 or B3100.
2. Uninsulated pipes 2-1/2 inch and larger:
  - a. Adjustable steel clevis hanger, B-Line B3100.
  - b. Pipe roll with sockets, B-Line B3114.
  - c. Adjustable steel yoke pipe roll, B-Line B3110.
3. Insulated pipe- Hot or steam piping:
  - a. 2 inch and smaller pipes: use adjustable steel clevis with galvanized sheet metal shield. B-Line B3100 with B3151 series.
  - b. 2-1/2 inch and larger pipes
    - 1) Adjustable steel yoke pipe roll with pipe covering protection saddle. B-Line B3110 with B3160-B3165 series.
    - 2) Pipe roll with sockets with pipe covering protection saddle, B-Line B3114 with B3160-B3165 series.
4. Insulated pipe- Cold or chilled water piping:
  - a. 5 inch and smaller pipes: use adjustable steel clevis with galvanized sheet metal shield. B-Line B3100 with B3151 series.
  - b. 6 inch and larger pipes:
    - 1) Pipe roll with sockets with pipe covering protection saddle, B-Line B3114 with B3160-B3165 series.
    - 2) Adjustable steel yoke pipe roll with pipe covering protection saddle. B-Line B3110 with B3160-B3165 series.

## B. Pipe Clamps

1. When flexibility in the hanger assembly is required due to horizontal movement, use pipe clamps with weldless eye nuts, B-Line B3140 or B3142 with B3200. For insulated lines use double bolted pipe clamps, B-Line B3144 or B3146 with B3200.

## C. Multiple or Trapeze Hanger

1. Construct trapeze hangers from 12 gauge roll formed ASTM A1011 SS Grade 33 structural steel channel, 1-5/8 inch by 1-5/8 inch minimum, B-Line B22 strut or stronger as required.
2. Mount pipes to trapeze with 2 piece pipe straps sized for outside diameter of pipe, B-Line B2000 Series.
3. For pipes subjected to axial movement:
  - a. Strut mounted roller support, B-Line B3126. Use pipe protection shield or saddles on insulated lines.
  - b. Strut mounted pipe guide, B-Line B2417.

## D. Wall Supports

1. Pipes 4 inch and smaller:
  - a. Carbon steel hook, B-Line B3191.
  - b. Carbon steel J-hanger, B-Line B3690.
2. Pipes larger than 4 inch:
  - a. Welded strut bracket and pipe straps, B-Line B3064 and B2000 series.

- b. Welded steel brackets, B-Line B3066 or B3067, with roller chair or adjustable steel yoke pipe roll. B-Line B3120 or B3110. Use pipe protection shield or saddles on insulated lines.
- E. Floor Supports
  - 1. Hot piping under 6 inch and all cold piping:
    - a. Carbon steel adjustable pipe saddle and nipple attached to steel base stand sized for pipe elevation. B-Line B3093 and B3088T or B3090 and B3088. Screw or weld pipe saddle to appropriate base stand.
  - 2. Hot piping 6 inch and larger:
    - a. Adjustable Roller stand with base plate, B-Line B3117SL
    - b. Adjustable roller support and steel support sized for elevation, B-Line B3124
- F. Vertical Supports
  - 1. Steel riser clamp sized to fit outside diameter of pipe, B-Line B3373.
  - 2. Copper Tubing Supports
    - a. Size hangers to fit copper tubing outside diameters.
      - 1) Adjustable steel swivel ring (band type) hanger, B-Line B3170CT.
      - 2) Malleable iron ring hanger, B-Line B3198RCT or hinged ring hanger B3198HCT.
      - 3) Malleable iron split-ring hanger with eye socket, B-Line B3173CT with B3222.
      - 4) Adjustable steel clevis hanger, B-Line B3104CT.
    - b. For supporting vertical runs use epoxy painted or plastic coated riser clamps, B-Line B3373CT or B3373CTC.
    - c. For supporting copper tube to strut use epoxy painted pipe straps sized for copper tubing, B-Line B2000 series, or plastic inserted vibration isolation clamps, B-Line BVT series.
- G. Plastic Pipe Supports
  - 1. V-Bottom clevis hanger with galvanized 18-gauge continuous support channel, B-Line B3106 and B3106V, to form a continuous support system for plastic pipe or flexible tubing.
  - 2. Supplementary Structural Supports
    - a. Design and fabricate supports using structural quality steel bolted framing materials as manufactured by Cooper B-Line. Provide roll formed channels, 12 gauge ASTM A1011 SS Grade 33 steel, 1-5/8 inch by 1-5/8 inch or greater as required by loading conditions. Submit designs for pipe tunnels, pipe galleries, etc., to Architect/Engineer for approval. Use clamps and fittings designed for use with the strut system.
- H. Pipe Supports Between Anchors and Pipe Expansion Loops
  - 1. Provide supports between pipe anchors designed to cause minimal resistance to piping movement. Provide roller hanger supports or slide plates between anchors.
  - 2. Provide supports near the L bends of pipe thermal expansion loops. No more than 12 inches from either side of the horizontal elbow.

### 2.03 UPPER ATTACHMENTS

- A. Beam Clamps
  - 1. Use beam clamps where piping is to be suspended from building steel. Select clamp type on the basis of load to be supported, and load configuration.
  - 2. Use center loaded beam clamps where specified. For steel clamps provide B-Line B3050, or B3055. For malleable iron or forged steel beam clamps with cross bolt provide B-Line B3054 or B3291-B3297 Series as required to fit beams.
- B. Concrete Inserts
  - 1. Use cast in place spot concrete inserts where applicable; either steel or malleable iron body, B-Line B2500 or B3014. Select spot inserts to allow for lateral adjustment and to

- have means for attachment to forms. Select inserts to suit threaded hanger rod sizes, B-Line N2500 or B3014N series.
2. Use continuous concrete inserts where applicable. Provide 12 gauge channels, ASTM A1011 SS Grade 33 structural quality carbon steel, complete with Styrofoam inserts and end caps with nail holes for attachment to forms. Provide continuous concrete inserts with a load rating of 2,000 lbs/ft. in concrete, B-Line B22I, 32I, or 52I. Select channel nuts suitable for strut and rod sizes.
  3. Provide Drop-In, shell type anchors with an internally threaded, all-steel shell with expansion cone insert and flush embedment lip. Manufacture anchors from plated carbon steel, 18-8 stainless steel and 316 stainless steel. Install anchors with carbide tipped hammer drill bits made in accordance to ANSI B212.15-1994 specifications. Test anchors to ASTM E488 criteria and listed by ICC (formerly ICBO) and SBCCI. Provide anchors listed by the following agencies as required by the local building code: UL, FM. Select inserts to suit threaded hanger rod sizes, Redhead Multi-Set.

#### 2.04 ACCESSORIES

- A. Hanger Rods shall be threaded both ends or continuous threaded rods of circular cross section. Use adjusting locknuts at upper attachments and hangers. No wire, chain, or perforated straps are allowed.
- B. Provide shields that are 180 degree galvanized sheet metal, 12 inch minimum length, 18 gauge minimum thickness, designed to match outside diameter of the insulated pipe, B-Line B3151.
- C. Pipe protection saddles shall be formed from carbon steel, 1/8 inch minimum thickness, sized for insulation thickness. Saddles for pipe sizes greater than 12 inch shall have a center support rib.

#### 2.05 FINISHES

- A. Indoor Finishes
  1. Coat hangers and clamps for support of bare copper piping with copper colored epoxy paint, B-Line Dura-Copper®. Use additional PVC coating of the epoxy painted hanger where necessary.
  2. Zinc plate hangers for other than bare copper pipe in accordance with ASTM B633 OR provide an electro-deposited green epoxy finish, B-Line Dura-Green®.
  3. Provide pre-galvanized strut channels in accordance with ASTM A653 SS Grade 33 G90 or provide an electro-deposited green epoxy finish, B-Line Dura-Green®.
- B. Outdoor and Corrosive Area Finishes
  1. Hot dip galvanize hangers and struts located outdoors after fabrication in accordance with ASTM A123. Provide all hanger hardware as hot dip galvanized or stainless steel. Zinc plated hardware is not acceptable for outdoor or corrosive use.
  2. Provide hangers and strut manufactured of type 304 stainless steel with stainless steel hardware where located in corrosive areas.

### PART 3 - EXECUTION

#### 3.01 PIPE HANGERS AND SUPPORTS

- A. Adequately support pipe by pipe hanger and supports specified in PART 2 PRODUCTS. Allow for forces imposed by expansion joints, satisfy structural requirements and maintain proper clearances with respect to adjacent piping, equipment and structures. Size hangers for insulated pipes sized to accommodate insulation thickness.

- B. Keep the different types of hangers to a minimum and provide hangers that are neat, without complicated bolting and with the number of parts of each hanger and its anchor kept to a minimum.
- C. Make accurate weight balance calculations to determine the required supporting forces at each hanger or support location and the pipe weight load at each equipment connection.
- D. Provide pipe hangers capable of supporting the pipe in all conditions of operation selected to allow free expansion and contraction of the piping, and prevent excessive stress resulting from transferred weight being induced into the pipe or connected equipment.
- E. Painted or shop prime all hangers and supports that are not galvanized.
- F. Support horizontal steel piping in accordance with MSS SP-69 Tables 3 and 4, excerpts of which follow below:

| NOMINAL PIPE SIZE<br>(INCHES) | ROD DIAMETER<br>(INCHES) | MAXIMUM SPACING<br>(FEET) |
|-------------------------------|--------------------------|---------------------------|
| 1/2 to 1-1/4                  | 3/8                      | 6                         |
| 1-1/2                         | 3/8                      | 9                         |
| 2                             | 3/8                      | 10                        |
| 2-1/2                         | 1/2                      | 11                        |
| 3                             | 1/2                      | 12                        |
| 3-1/2                         | 1/2                      | 13                        |
| 4                             | 5/8                      | 14                        |
| 5                             | 5/8                      | 16                        |
| 6                             | 3/4                      | 17                        |
| 8                             | 3/4                      | 19                        |
| 10                            | 7/8                      | 22                        |
| 12                            | 7/8                      | 23                        |
| 14                            | 1                        | 25                        |
| 16                            | 1                        | 27                        |

- G. Support horizontal copper tubing in accordance with MSS SP-69 Tables 3 and 4, excerpts of which follow below:

| NOMINAL PIPE SIZE<br>(INCHES) | ROD DIAMETER<br>(INCHES) | MAXIMUM SPACING<br>(FEET) |
|-------------------------------|--------------------------|---------------------------|
| 1/2 to 3/4                    | 3/8                      | 5                         |
| 1                             | 3/8                      | 6                         |
| 1-1/4                         | 3/8                      | 6                         |
| 1-1/2                         | 3/8                      | 8                         |
| 2                             | 3/8                      | 8                         |
| 2-1/2                         | 1/2                      | 9                         |
| 3                             | 1/2                      | 10                        |
| 3-1/2                         | 1/2                      | 11                        |
| 4                             | 1/2                      | 12                        |
| 5                             | 1/2                      | 13                        |
| 6                             | 5/8                      | 14                        |
| 8                             | 3/4                      | 16                        |

H. For grooved end steel pipe:

| NOMINAL PIPE SIZE<br>(INCHES) | MAXIMUM SPACING<br>(FEET) |
|-------------------------------|---------------------------|
| 1-1/2 and under               | 7                         |
| 2 through 4                   | 10                        |
| 5 and over                    | 12                        |

Do not leave any pipe length unsupported between any two coupling joints.

- I. Provide means of preventing dissimilar metal contact such as plastic coated hangers, copper colored epoxy paint, or non adhesive isolation tape- B-Line Iso-pipe. Galvanized felt isolators sized for copper tubing may also be used, B-Line B3195CT.
- J. Install hangers to provide a minimum of 1/2 inch space between finished covering and adjacent work.
- K. Place a hanger within 12 inches of each horizontal elbow.
- L. Support vertical piping independently of connected horizontal piping. Support vertical pipes at every floor. Wherever possible, locate riser clamps directly below pipe couplings or shear lugs.
- M. Where several pipes can be installed in parallel and at the same elevation, provide trapeze hangers as specified in section 2.02 C. Space trapeze hangers according to the smallest pipe size, or install intermediate supports according to schedules in this Section.
- N. Do not support piping from other pipes, ductwork or other equipment that is not building structure.
- O. Where horizontal piping movements are greater than 1/2 inch, or where the hanger rod angularity from the vertical is greater than four degrees from the cold to hot position of the pipe, offset the hanger pipe and structural attachments in such a manner that the rod is vertical in the hot position.
- P. In any part of the building which is steel-framed, attach hangers to the building structural steel beams. Where hangers do not correspond with the building structural steel beams, provide supplemental steel members continuously welded or bolted to the building structural steel beams. Provide two (2) coats of primer on the supplemental steel. In any parts of the building which is a concrete structure, attach hangers to the concrete structure by installing anchors into the concrete.

### 3.02 CONCRETE INSERTS

- A. Secure pipe hangers attached to concrete structure and slabs with embedded inserts, anchor bolts or concrete fasteners. Use a safety factor of 5 in selection of all inserts and expansion bolts unless there are seismic requirements (See "Seismic Restraint" specification if applicable). In which case, the larger of the two loadings shall govern the design.
- B. Provide inserts for placement in formwork before concrete is poured.
- C. Provide inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.
- D. Where concrete slabs form finished ceilings, provide inserts to be flush with slab surface.

- E. E. Provide hooked rod to concrete reinforcement section for inserts carrying pipe over 4 inch.

**END OF SECTION 230529**

## PART 1 - GENERAL

## 1.01 RELATED WORK SPECIFIED ELSEWHERE

- A. Subbase for Concrete Pads: Section 310000.

## 1.02 REFERENCES

- A. Except as shown or specified otherwise, the Work of this Section shall conform to the requirements of Specifications for Structural Concrete for Buildings ACI 301-99 of the American Concrete Institute.

## 1.03 SUBMITTALS

- A. Submittals Package: Submit product data for design mix and materials for concrete specified below at the same time as a package.
- B. Shop Drawings: Placing drawings for bar reinforcement.
- C. Product Data:
  - 1. Concrete design mix with name and location of batching plant.
  - 2. Portland Cement: Brand and manufacturer's name.
  - 3. Fly Ash: Name and location of source, and DOT test numbers.
  - 4. Air-Entraining Admixture: Brand and manufacturer's name.
  - 5. Aggregates: Name and location of source, and NYS test numbers.
  - 6. Bonding Agent (Adhesive): Brand and manufacturer's name, and preparation and application instructions.
- D. Samples:
  - 1. Fabric Reinforcement: 8 inches square.
  - 2. Bar Supports: Full size.
- E. Quality Control Submittals:
  - 1. Certificates: Bar reinforcement manufacturer's certification that bar material conforms with ASTM A 615 and specified grade.

## 1.04 STORAGE

- A. Store materials as required to insure the preservation of their quality and fitness for the Work.

## PART 2 - PRODUCTS

## 2.01 MATERIALS

- A. Anchor Bolts: Standard bolts, ASTM A 307, with lock washers and nuts.
- B. Steel Plates: ASTM A 36.
- C. Sleeves: Steel Pipe, Schedule 40, black, ASTM A 53.
- D. Steel Shims and Fillers: ASTM A 569.
- E. Reinforcement: Furnish the following unless otherwise indicated on the Drawings:
  - 1. Fabric Reinforcement: ASTM A 185 welded wire fabric, 6 x 6 - W2.9 x W2.9 fabricated into flat sheets unless otherwise indicated.
  - 2. Bar Reinforcement: ASTM A 615, Grade 60, deformed.

3. Metal Bar Supports: Galvanized or AISI Type 430 stainless steel, and without plastic tips.
  4. Tie Wire: Black annealed wire, 16 gage minimum.
- F. Fly Ash: ASTM C 618, including Table 1A (except for footnote A), Class F except that loss on ignition shall not exceed 4.0 percent.
- G. Bonding Agent (Adhesive): Epoxy-resin-base bonding system, Type II, complying with ASTM C 881. Grade and class as required by conditions of use.
- H. Cement Grout: Portland cement and clean natural sand mixed at a ratio of 1.0 part cement to 3.0 parts sand, with only the minimum amount of water required for placement and hydration.
- I. Dowels: ASTM A 36 steel bars 1/2 inch in diameter by 5 inches long, unless otherwise indicated on the Drawings.

## 2.02 PROPORTIONING OF CONCRETE MIXES

- A. Compressive Strength: Minimum 4000 psi.
- B. Weight: Normal.
- C. Durability: Concrete shall be air-entrained. Design air content shall be 6 percent by volume, with an allowable tolerance of plus or minus 1.5 percent for total air content. Entrained air shall be provided by use of an approved air-entraining admixture. Air-entrained cement shall not be used.
- D. Slump: Between 2 inches and 4 inches.
- E. Admixtures: Do not use admixtures in concrete unless specified or approved in writing by the Director.
- F. Selection of Proportions: Concrete proportions shall be established on the basis of previous field experience or laboratory trial batches, unless otherwise approved in writing by the Director. Proportion mix with a minimum cement content of 611 pounds per cubic yard for 4000 psi concrete.
1. Optional Material: Fly ash may be substituted for (Portland) cement in normal weight concrete up to a maximum of 15 percent by weight of the required minimum (Portland) cement. If fly ash is incorporated in a concrete design mix, make necessary adjustments to the design mix to compensate for the use of fly ash as a partial replacement for (Portland) cement.
  2. Adjustments shall include the required increase in air-entraining admixture to provide the specified air content.

## 2.03 FABRICATION OF ANCHOR BOLT ASSEMBLIES

- A. Bolts: Diameter 1/8 inch less than the bolt holes in the equipment supports and length equal to the depth of the pad minus 1 inch plus the additional length required to provide full thread through nuts after shims, equipment, and washers are in place.
- B. Sleeves: Diameter 1/2 inch larger than the bolt diameter and length as required to extend from the head of the bolt to the top of the pad.
- C. Plates: 3 x 3 x 1/4 inch steel plate.
- D. Weld a plate to the head end of a bolt. Center the bolt in a sleeve and tack-weld the sleeve to the plate.

## PART 3 - EXECUTION

## 3.01 EXAMINATION AND PREPARATION

- A. Concrete materials, reinforcement, forms, and earth which will be in contact with fresh concrete shall be free from frost at the time of concrete placement.

## 3.02 BONDING TO EXISTING CONCRETE SLABS

- A. Where more than one pad is required for a single piece of equipment, install 2 dowels in existing slab for each pad. Drill existing slab as required to install dowels 3 inches into the existing concrete. Grout dowels in the drilled holes.
- B. Prior to placing concrete, thoroughly roughen and clean existing concrete slab. Saturate existing concrete surface with clean water. Immediately prior to depositing concrete for pad, apply a coat of cement grout over the existing damp concrete or allow existing concrete to dry and apply bonding agent (adhesive) over the existing concrete in accordance with manufacturer's printed instructions.

## 3.03 INSTALLING ANCHOR BOLTS AND SLEEVES

- A. Install anchor bolts (with sleeves) for all bolt holes in equipment supports.
- B. Accurately position and securely support anchor bolts and sleeves prior to placing concrete. Support head of bolt 1 inch above bottom of pad. Temporarily close open end of sleeves to prevent entry of concrete.
- C. Grout anchor bolts in sleeves with cement grout or approved shrink-resistant grout after final positioning.

## 3.04 REINFORCING

- A. Except where other reinforcement is shown on the Drawings, install welded wire fabric at mid-depth of each pad, extending to 1 inch from perimeter of pad.

## 3.05 FINISHES

- A. Formed Surfaces: Provide a smooth rubbed finish, with rounded or chamfered external corners, on all concrete surfaces exposed to view.
- B. Unformed Surfaces: Provide a troweled finish on top surface of pads.

**END OF SECTION 230549**

## PART 1 - GENERAL

## 1.01 DESCRIPTION OF WORK

- A. This Section describes the marking and identification materials for identifying mechanical equipment, ductwork and piping systems.
- B. Mark and identify all mechanical equipment, ductwork and piping systems described herein, and as shown and specified in the Contract Documents.

## 1.02 REFERENCES

- A. ANSI A13.1 - Scheme for the Identification of Piping Systems.
- B. Z53.1 - Safety Color Code for Marking Physical Hazards.
- C. OSHA 29 CFR 1910 - Subpart J, General Environmental Controls

## 1.03 SUBMITTALS

- A. Identification Scheme - Submit scheme of identification codes.
- B. Steam Trap Schedule - Submit steam trap schedules listing proposed steam trap number, location, type, sizes and service.
- C. Valve Schedules - Submit valve chart and schedule, including valve tag number, location, function, and valve manufacturer's name and model number.
- D. Samples - Submit samples of tags, attachments, labeled and identified.
- E. Equipment Schedules - Submit mechanical equipment schedules, listing proposed equipment numbers, and their location and function.
- F. Product Data: Provide manufacturers catalog literature for each product required.

## PART 2 - PRODUCTS

## 2.01 APPROVED MANUFACTURERS

- A. Seton
- B. Bunting
- C. W.H. Brady Company

## 2.02 VALVE TAGS

- A. Provide valve tags for all valves installed for this project. Valve tags shall be constructed of brass with stamped letters and service designation tag size minimum 1-1/2 inches (38 mm) diameter with smooth edges, brass S hook.
- B. Valve tags shall be permanently stamped and marked with a service designation, normal valve position, and an identifying number as large as possible. Each valve shall have a separate and distinct number coordinated with the service designations shown on the Drawings and the Owners existing valve numbering system. Coordinate with the Architect/Engineer and Owner before finalizing the valve tag numbering system.

### 2.03 PIPE MARKERS

- A. All accessible piping installed indoors for this project, insulated and uninsulated shall be identified with wraparound pipe markers. Pipe markers shall be factory fabricated, flexible, semi-rigid plastic, preformed to fit around pipe or pipe covering. "Accessible" piping shall include exposed piping, and piping located above lay-in ceilings. Markers shall include system name, flow arrow, and color code and pipe diameter.
- B. All piping installed outdoors for this project, insulated and uninsulated, shall be identified with wraparound pipe markers. Pipe markers shall be factory fabricated, flexible, semi-rigid plastic, preformed to fit around pipe or pipe covering. The marker shall be printed with weather-resistant ink.
- C. Where pipes are too small or not readily accessible for application of pipe markers, a brass identification tag at least 1 ½ inches in diameter, with depressed ½ inch high black letters and numerals, shall be securely fastened at locations specified for pipe markers.
- D. See pipe marker schedule for size requirements of pipe markers.

### 2.04 MECHANICAL EQUIPMENT MARKERS

- A. Identify all mechanical equipment, bare or insulated, installed in the rooms or on the roof, by means of lettered and numbered nameplate (not stenciled) identifying the equipment and service. Refer to the Drawings for equipment identifications. Nameplates shall be aluminum with permanent 1 ½ inch high white letters on a black background, mechanically affixed and installed in a readily visible location on the equipment. Coordinate the final equipment designation with the Owner.
- B. In addition to markers, all mechanical equipment shall be furnished with the manufacturer's identification plate showing the name of equipment, manufacturer's name and address, date of purchase, model number and performance data.

### 2.05 DUCT WORK IDENTIFICATION

- A. Provide full air distribution system identification at each side of a wall penetration, in a mechanical room, at all changes in direction and at no more than 50 foot intervals. Provide arrows identifying direction of flow.
- B. Fire damper or Smoke damper access points shall be permanently identified on the exterior by a label having letters not less than 0.5 inch in height reading: SMOKE DAMPER or FIRE DAMPER.
- C. Identification shall be preprinted labels.
- D. Letter Size: 1-1/2 inches in height.

## PART 3 - EXECUTION

### 3.01 INSTALLATION

- A. Apply piping system markers and valve tags in the following locations:
  - 1. Adjacent to each valve and fitting.
  - 2. At each branch location and riser take-off
  - 3. At each side of a pipe passage through floors, walls, ceiling and partitions.
  - 4. At each pipe passage to and from underground areas.

5. Every 20 feet on all horizontal and vertical pipe runs.
- B. Provide arrow markers showing direction of flow incorporated into or adjacent to each piping system marker. Use double-headed arrows if flow is in both directions.
- C. Apply all piping system markers where view is unobstructed; markers and legends shall be clearly visible from operating positions.
- D. Apply all tags and piping system markers in accordance with the manufacturer's instructions. Do not attach tags to valve handle such that the normal or emergency operation of the valve will be hindered.

### 3.02 VALVE CHART

- A. Provide valve and steam trap chart identifying each valve's and steam trap's number, size of valve and service.
- B. Frame the chart and locate the schedule in the Mechanical Equipment Room. (Aluminum Frame with plastic window).
- C. Provide a compact disc that has the valve and steam trap chart schedule in a spreadsheet format. The spreadsheet software to be used for the schedule shall be identified by the Owner.

### 3.03 LAY IN CEILING TILES AND ACCESS DOORS

- A. Provide a lettered and numbered nameplate for each access door indicating the mechanical equipment that the door provides access too.

### 3.04 SCHEDULES

- A. Pipe Marker Letter Size Schedule:

| <b>Outside diameter of<br/>insulation or pipe<br/>Inches</b> | <b>Letter height<br/>Inches</b> | <b>Color field<br/>Inches</b> |
|--------------------------------------------------------------|---------------------------------|-------------------------------|
| 3/4 to 1-1/4                                                 | 1/2                             | 8                             |
| 1-1/2 to 2                                                   | 3/4                             | 8                             |
| 2-1/2 to 6                                                   | 1 - 1/4                         | 12                            |
| 8 to 10                                                      | 2 - 1/2                         | 24                            |
| Over 10                                                      | 3 - 1/2                         | 24                            |

**END OF SECTION 230555**

## PART 1 - GENERAL

## 1.01 DESCRIPTION OF WORK

- A. This section specifies requirements for testing, adjusting, and balancing of all air and hydronic fluid distribution systems, including the equipment and devices associated with each system.
- B. The work includes setting speed and flow, adjusting equipment and devices installed for systems, recording data, conducting tests, preparing and submitting reports, and recommending modifications to the mechanical installations specified in other Sections of the Specifications.

## 1.02 RELATED WORK

- A. Drawings and general provisions of the Contract, including General Conditions, any Supplemental Conditions and Division 1 Specification Sections, govern the work of this section.

## 1.03 SUBMITTALS

- A. Submit proof that the testing, adjusting and balancing agency meets the requirements of Section 1.04 "Quality Assurance", and all other specified requirements.
- B. Prior to performing the work, submit sample blank forms of the test reports that will be submitted by the entity performing work of this Section, indicating all data and parameters included.
- C. Submit certified test reports, signed by the authorized representative of the testing and balancing agency. Certify the reports to be proof that the systems have been tested, adjusted and balanced in accordance with the selected reference standards (NEBB or AABC); are an accurate representation of how the systems have been installed; are a true representation of how the systems are operating at completion of the testing, adjusting and balancing procedures; and are an accurate record of all final quantities measured, to establish normal operating values of the systems. Submittal of test report shall be in the following format:
  - 1. Draft Report: Upon completion of testing, adjusting and balancing procedures, prepare draft reports on the approved forms. Draft report may be handwritten, but must be complete, factual, accurate and legible. Organize and format draft reports in the same manner specified herein for the final reports. Submit two complete sets of draft reports. Only one complete set of draft reports will be returned.
  - 2. Final Report: Upon verification and approval of draft reports, prepare final reports, type written and organized and formatted as described herein. Submit two complete sets of final reports.
    - a. Report Format: Submit reports using the standard forms prepared by the referenced standard for each respective item and system to be tested, adjusted and balanced. Include schematic systems diagrams. Enclose the report contents in a 3-ring binder. Divide the contents into the below listed divisions, separating them by divider tabs with titles descriptive of the contents:
      - 1) General Information and Summary.
      - 2) Air Systems.
      - 3) Hydronic Systems.
    - b. Report Contents: Provide the following minimum information, forms and data:
      - 1) General Information and Summary: Identify the testing, adjusting and balancing Agency, Contractor, Owner, Architect/Engineer, and Project on the inside cover sheet. Include addresses, and contact names and telephone numbers. Include a certification sheet containing the seal and name, address, telephone number and signature of the Agency's responsible certified Test and Balance Engineer.

Include in this division a listing of the instrumentation used for the procedures, along with the proof of calibrations.

- 2) Include in the remainder of the reports the appropriate forms containing, as a minimum, the information indicated on the standard report forms prepared by AABC or NEBB, for each item of equipment and system. Prepare a schematic diagram for each item of equipment and system, to accompany each respective report form.
- c. Calibration Reports: Submit proof that all required instrumentation has been calibrated to tolerances specified in the referenced standards within a period not exceeding six months prior to conducting the test procedures.
- d. Existing Systems: Where existing systems are to be added to or modified include in the report results of operational tests taken prior to modifications including but not limited to existing fan and pump curves, pressure readings and flow measurements. Include in the report copies of the equipment and motor nameplate data along with equipment performance curves indicating operating points prior to any modifications and, where existing equipment is retained, operating points after system balance. Where terminals are adjusted or modified include terminal performance curves/data and final readings.

#### 1.04 QUALITY ASSURANCE

- A. Test, adjust and balance systems and equipment by using competent mechanics regularly employed by a testing, adjusting and balancing Subcontractor whose primary business is the testing, adjusting and balancing of building mechanical systems. The testing, adjusting and balancing Subcontractor shall be a business established for a minimum of 10 years.
- B. The testing, adjusting, and balancing Subcontractor shall be certified by the Associated Air Balance Council (AABC) or the National Environmental Balancing Bureau (NEBB).
- C. Instrumentation type, quantity, and accuracy shall be as described in AABC's "National Standards for Field Measurement and Instrumentation, or Total System Balance, or NEBB's "Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems."
- D. All instrumentation shall be calibrated at least every 6 months or more frequently if required by the instrument manufacturer.

#### 1.05 PERFORMANCE REQUIREMENTS

- A. Comply with all applicable Federal, State and Local laws, ordinances, regulations and codes, and the latest industry standards including, but not limited to the entities listed below for procedures, measurements, instruments and test reports for testing, adjusting and balancing work:
  1. American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE)
  2. Sheet Metal and Air Conditioning Contractors National Association (SMACNA)
  3. National Environmental Balancing Bureau (NEBB)
  4. Associated Air Balance Council (AABC)
- B. Set the air delivery or intake of each diffuser, grille and register to be as designed or within five percent of the air flow rates shown on the Drawings.
- C. Set the fan air flow rate and static pressure rise across the fan to be within 10 percent above the design value at design speed.

### 1.06 JOB CONDITIONS

- A. Require the testing and balancing specialist to review his work with the respective manufacturers of the equipment and devices involved, and coordinate and schedule all work.
- B. Furnish and install balancing dampers, pressure taps, gauges, valves, and other components as required for a properly balanced system, whether or not specified herein or shown on the Drawings, all at no additional cost to the Owner. Make all adjustment or replacement parts recommended by the testing and balancing specialist in strict accordance with the respective equipment manufacturer's recommendations.
- C. Coordinate with the control manufacturer's representative to set the adjustment of the automatically operated dampers and control valves to operate as required.

### 1.07 GENERAL

- A. The Owner will occupy the building during the entire testing, adjusting, and balancing period. Cooperate with the Owner during testing, adjusting, and balancing operations to minimize conflicts with the Owner's operations.
- B. Complete all tests specified herein to the satisfaction of the Architect/Engineer before final acceptance.
- C. The Architect/Engineer, or his representative, is the sole judge of the acceptability of the tests. The Architect/Engineer may direct the performance of any such additional tests, as he deems necessary in order to determine the acceptability of the systems, equipment, material and workmanship. No additional payment will be made for any test required by the Architect/Engineer.

## PART 2 - PRODUCTS

NOT USED.

## PART 3 - EXECUTION

### 3.01 EXAMINATION

- A. Obtain design drawings and specifications and become thoroughly acquainted with the design intent.
- B. Obtain copies of approved shop drawings of all air handling and hydronic equipment, air outlets (supply, return and exhaust), manual valves, automatic valves and the temperature control diagrams, including intended sequence of operations.
- C. Existing Systems: Where existing systems are to be added to or modified perform operational tests prior to modifications including but not limited to existing fans and pumps curves, pressure readings and flow measurements.
  - 1. Obtain copies of the equipment and motor nameplate data along with equipment performance curves indicating operating points prior to any modifications. Where terminal units are to be adjusted or modified obtain performance data for these units.
- D. Examine installed work and conditions under which testing is to be done to ensure that work has been completed, cleaned, and is operable. Do not proceed with testing, adjusting and balancing until unsatisfactory conditions have been corrected in a manner approved by the testing and balancing specialist.

- E. Examine the air systems to see that they are free from obstructions. Determine that all dampers and registers are open, moving equipment is lubricated, clean filters are installed, and automatic controls are functioning; and perform other inspections and maintenance activities necessary for proper operation of the systems.
- F. Examine the hydronic systems to see that they are free from abnormal obstructions, and that all piping, valves and equipment have been properly made fully operational. Determine that all equipment and control systems are performing correctly by functional testing.
- G. Where existing systems are to be modified or added to ensure that all strainers and filters are clean and any operational problems that will prevent system balance have been brought to the attention of the Owner and repaired.

### 3.02 TESTING, ADJUSTING AND BALANCING

- A. Notify the Owner 48 hours in advance of starting any tests. Do not perform any tests until acknowledgment of notification and approval has been received from the Owner.
- B. Provide all necessary instruments and personnel for the tests. If, in the opinion of the Architect/Engineer, the results of such tests show that the Work has not complied with the requirements of the Contract Documents, make all additions or changes necessary to put the system in proper working condition and pay all expenses for all subsequent tests which are necessary to determine whether the Work is satisfactory. Any additional work or subsequent tests shall be carried out at the convenience of the Architect/Engineer.
- C. Test all packaged equipment in strict accordance with the equipment manufacturer's requirements.
- D. Perform any and all other tests that may be required by the local municipality or other governing body, board or agency having jurisdiction.
- E. Perform testing, adjusting, and balancing after leakage and pressure tests on air and water distribution systems have been satisfactorily completed.
- F. Actuate all safety devices in a manner that clearly demonstrates their workability and operation.
- G. Cut insulation, ductwork and piping for installation of test probes to the minimum extent necessary to allow adequate performance of test procedure.
- H. Perform tests and compile test data for all air systems and hydronic systems.
- I. Include a schematic diagram locating the air inlets, outlets, fans, equipment, dampers and regulating devices for air systems, and a schematic diagram for location of balancing valves, flow indicators, equipment, and devices for hydronic systems.
- J. All instruments used shall be provided by the entity performing the Work of this Section, and shall be accurately calibrated and maintained in good working order.
- K. Air Systems

Perform the testing, adjusting and balancing of air systems in accordance with the detailed procedures outlined in the referenced standards; including but not be limited to the following:

1. Test, record and adjust fan rpm to design requirements.
2. Test and record motor full load amperes.
3. Make a pitot tube traverse of main supply ducts and obtain design flow rate at fans.

4. Test and record system static pressure, velocity pressure and total pressure.
5. Test and adjust system for design supply, transfer and return air flow rate.
6. Test and adjust system for minimum and maximum design flow rates of outside air.
7. Test and record return air temperatures.
8. Test and record coil and fan leaving air temperatures.
9. Adjust all main supply, return, relief, and exhaust air ducts to proper design flow rate.
10. Adjust all zones to proper design flow rate for supply, return, transfer, relief and exhaust air.
11. Test and adjust each diffuser, grille and register.
12. Identify each grille, diffuser and register as to location and area on the schematic diagram.
13. Identify and list in the final report size, type and manufacturer of diffusers, grilles and registers and all tested equipment. Use manufacturer's data on all equipment to make required calculations for testing, adjusting and balancing. Include design required velocity and test resultant velocity, required flow rate and test resultant flow rate after adjustment as part of readings and tests of diffusers, grilles and registers.
14. Adjust all diffusers, grilles and registers to minimize drafts in all areas.
15. Permanently mark all dampers after air balance is complete so that they can be restored to their correct position, if disturbed later.
16. Seal openings in ductwork for pitot tube insertion with snap-in plugs after air balance is complete.

L. Hydronic Systems

1. Perform the testing, adjusting and balancing of hydronic systems in accordance with the detailed procedures outlined in the referenced standards; and including but not limited to the following:
  - a. Preliminary procedure prior to balancing:
    - 1) Examine water in system and determine if water has been treated and cleaned.
    - 2) Check expansion tank to determine that it is not air bound and the system is completely full of water.
    - 3) Purge all air vents of water systems, check automatic air vents and determine if they are operating properly. Repair or replace any air vents that are not operating properly.
    - 4) Coordinate with control manufacturer for required cooling and heating temperature controls and corresponding, automatic valve operation settings.
    - 5) Open all normally open valves to full open position. Set automatic valves to full coil flow.
    - 6) Complete air balance before final water balance begins.
    - 7) Check water pumps for pump rotation and for proper flow rate delivery against manufacturer's pump curves.
    - 8) Set all balancing valves for required flow delivery at mains and branch mains to cooling and heating elements.
    - 9) Upon completion of flow readings and adjustments of balancing valves, mark all settings and record data, so that they can be restored to their correct "balanced" position, if disturbed later.
  - b. Include the following as part of the final balancing:
    - 1) After required cooling and heating temperature controls and automatic valve operation settings are made, recheck pump flow requirements and readjust system as required.
    - 2) Record pressure drop through coil at set flow rate of coil for full cooling and for full heating. Set pressure drop across bypass valve to match coil pressure drop.
    - 3) Record and check the following items at each cooling and heating element:
    - 4) Inlet water temperatures and static pressure at connections.
    - 5) Leaving water temperatures and pressure drop of each coil.
    - 6) Flow rate through coil with control valve stroked manually wide open.

- 7) Record operating suction and discharge pressures of each pump and final total dynamic head and rated amperage versus actual amperage of pump motors.
- 8) Record entering and leaving water temperatures and flow through all equipment and devices.
- 9) Check and record all flow rates at all locations in the piping system with flow meters.
- 10) Upon completion of air and hydronic systems testing, patch insulation, ductwork and housings, using materials identical to those removed.
- 11) Perform final testing, adjusting and balancing during summer season for air conditioning systems and during winter season for heating systems, including operation when outside conditions are within 5 degrees F wet bulb temperature of maximum summer design condition, and within 10 degrees F dry bulb temperature of minimum winter design condition.
- 12) Retest, adjust, and balance systems subsequent to system modifications. Resubmit test results.

#### 1.04 DEFINITIONS

- A. Greenguard: Greenguard Environmental Institute
- B. IAQ: Indoor Air Quality
- C. EPA: Environmental Protection AgencyA
- D. WHO: World Health Organization
- E. ASJ: All Service Jacket
- F. SSL: Self-Sealing Lap
- G. FSK: Foil-Scrim-Kraft; jacketing
- H. PSK: Poly-Scrim-Kraft; jacketing
- I. PVC: Polyvinyl Chloride
- J. FRP: Fiberglass Reinforced Plastic
- K. Cold Service Piping/ Surfaces: Pipes or surfaces where the normal operating temperature is 60 degrees F or lower.
- L. Hot Service Piping/ Surfaces: Pipes or surfaces where the normal operating temperature is 105 degrees F or higher.

#### 1.05 SUBMITTALS

- A. Product data: Provide product description, thermal characteristics, list of materials and thickness for each service, and locations.
- B. Manufacturer's Instructions: Indicate installation procedures that ensure acceptable workmanship and installation standards will be achieved.

## 1.06 QUALITY ASSURANCE

- A. Qualifications:
  - 1. Manufacturer: Company specializing in manufacturing products specified with minimum 3 years documented experience.
  - 2. Installer: Company specializing in performing the Work of this Section with minimum 3 years documented experience.
- B. Materials:
  - 1. Flame spread/smoke developed rating of 25/50 or less in accordance with ASTM E84, NFPA 255 and UL 723.
  - 2. Insulation for duct, pipe and equipment for above grade exposed to weather outside building shall be certified as being self-extinguishing for 1" thickness in less than 53 seconds when tested in accordance with ASTM D1692.

## 1.07 DELIVERY, STORAGE, AND HANDLING

- A. Accept materials on site, labeled with manufacturer's identification, product density, and thickness.
- B. Follow manufacturer's recommended storage and handling practices.

## 1.08 ENVIRONMENTAL REQUIREMENTS

- A. Maintain ambient conditions required by manufacturers of each product (tapes, adhesives, mastics, cements, insulation, etc.).
- B. Maintain temperature before, during, and after installation for a minimum of 24 hours.
- C. Supply fiberglass products that assure excellent IAQ (Indoor Air Quality) performance through Greenguard Certification.
- D. Mold: Carefully inspect any insulation that has been exposed to water. If it shows any sign of mold growth remove it from the Site. If the material is wet but shows no sign of mold, dry rapidly and thoroughly. If it shows signs of facing degradation from wetting remove it from the Site.

## PART 2 - PRODUCTS

## 2.01 FIBER GLASS INSULATION

- A. Approved Manufacturers:
  - 1. Knauf Insulation
  - 2. Johns Manville Corporation
  - 3. Owens Corning Corporation
  - 4. CertainTeed Corporation
- B. Fiber glass insulation meeting ASTM C547, ASTM C585, and ASTM C795; rigid molded, noncombustible.
- C. Factory applied vapor barrier jacket: ASJ/SSL conforming to ASTM C1136 Type I and ASTM E96, secured with self-sealing longitudinal laps and butt strips.

## 2.02 FIBER GLASS INSULATION JACKETS AND ACCESSORIES

- A. Field-Applied Jackets and Fitting Covers

1. PVC - 25/50 or Indoor/Outdoor, UV-resistant fittings, jacketing and accessories, white or colored. Fitting cover system consisting of pre-molded, high-impact PVC materials with fiber glass inserts. Approved Manufacturer: Proto Corporation.
    - a. Thickness: 10 mil.
    - b. Closures: stainless steel tacks, matching PVC tape, or PVC adhesive per manufacturer's recommendations.
  2. ASTM B209 formed aluminum, 0.016-inch thick in smooth, corrugated, or embossed finish with factory-applied moisture barrier. Approved Manufacturer: Childers.
    - a. Overlap: 2-inch minimum.
    - b. Fittings: 0.016-inch thick die-shaped with factory-applied moisture barrier.
    - c. Metal jacket bands: 3/8-inch wide, 0.015-inch thick aluminum or 0.010-inch thick stainless steel.
  3. ASTM A666, Type <<302; 304; 316>> stainless Steel, 0.010-inch thick in smooth, corrugated, or embossed finish with factory-applied moisture barrier. Approved Manufacturer: Childers.
    - a. Overlap: 2-inch minimum.
    - b. Fittings: 0.016-inch thick die-shaped with factory-applied moisture barrier.
    - c. Metal jacket bands: 3/8-inch wide, 0.010-inch thick stainless steel.
  4. Laminated Self-Adhesive Water and Weather Seals - Permanent acrylic self-adhesive System; weather resistant, high puncture and tear resistance; meeting or exceeding requirements of UL 723; applied in strict accordance with manufacturers' recommendations.
- B. Fitting Insulation
1. Pre-formed fiberglass, preformed perlite, mitered fiberglass, mitered perlite or calcium silicate in lieu of PVC systems. Protect fittings with field-applied fitting covers.
- C. Tapes
1. Vapor barrier type, self-sealing, non-corrosive, fire-retardant. Approved Manufacturer: Compac Corporation

## 2.03 ELASTOMERIC INSULATION

- A. Approved Manufacturers:
1. Armacell LLC
  2. K-Flex USA, Inc.
- B. Flexible, tubular (Type 1) or sheet/roll form (Type 2) closed-cell elastomeric insulation complying with ASTM C534 <<Grade 1 - Standard (temperature range -297°F to 220°F); Grade 2 - High Temperature (to 350°F); Grade 3 - Contains no halogens>>; use molded tubular material wherever possible.

## 2.04 ELASTOMERIC INSULATION ACCESSORIES

- A. Adhesives:
1. Air dried, waterproof vapor barrier contact adhesive, compatible with insulation for joining of seams and butt joints.
- B. Finishes:
1. Provide a weather and UV resistant protective finish for outdoor applications in accordance with the manufacturer's recommendations.

## 2.05 CELLULAR GLASS INSULATION

- A. Approved Manufacturers:
1. Pittsburgh Corning Corporation

- B. Cellular glass insulation meeting ASTM C552, Type II.

## 2.06 HIGH DENSITY JACKETED INSULATION INSERTS FOR HANGERS AND SUPPORTS

- A. For use with Fiberglass Insulation:
  - 1. Cold Service Piping:
    - a. Polyurethane Foam: Minimum density 4 pcf, K of 0.13 at 75 degrees F, minimum compressive strength of 125 psi.
  - 2. Hot Service Piping:
    - a. Calcium Silicate: Minimum density 15 pcf, K of 0.50 at 300 degrees F; ASTM C 533.
    - b. Perlite: Minimum density 12 pcf, K of 0.60 at 300 degrees F; ASTM C 610.
- B. For Use with Flexible Elastomeric Foam Insulation: Hardwood dowels and blocks, length or thickness equal to insulation thickness, other dimensions as specified or required.

## PART 3 - EXECUTION

### 3.01 EXAMINATION

- A. Verify that all piping is tested and approved prior to insulation installation.
- B. Verify that all surfaces are clean, dry and without foreign material before applying insulation materials.

### 3.02 INSTALLATION (GENERAL)

- A. Install all materials using skilled labor regularly engaged in this type of work. Install all materials in strict accordance with manufacturer's recommendations, building codes, and industry standards.
- B. Locate insulation and cover seams in the least visible location. Extend all surface finishes in such a manner as to protect all raw edges, ends and surfaces of insulation.
- C. On cold surfaces where a vapor retarder must be maintained, apply insulation with a continuous, unbroken moisture and vapor seal. Insulate and vapor seal all hangers, supports, anchors, or other projections secured to cold surfaces to prevent condensation.
- D. Insulated pipes conveying fluids below ambient temperature; insulate entire system including fittings, valves, unions, flanges, strainers, flexible connections, pump bodies, and expansion joints.
- E. For hot piping conveying fluids <<140°F>> or less, do not insulate flanges and unions at equipment, but bevel and seal ends of insulation.
- F. For hot piping conveying fluids over <<140°F>>, insulate flanges and unions at equipment.
- G. Maintain continuous pipe insulation through walls, ceiling or floor openings, or sleeves except where firestop or firesafing materials are required.
- H. Install insulation neatly, accurately and without voids, in accordance with manufacturer's instructions and NIAC National Commercial and Industrial Insulation Standards.
- I. Insulate fittings, valves and flanges using premolded covers with precut insulation inserts.
- J. Insulate piping using insulation of type and thickness scheduled in this Section.

- K. Install metal shields between hangers or supports and the piping insulation. Install rigid insulation inserts as required between the pipe and the insulation shields. Fabricate inserts to be of equal thickness to the adjacent insulation and vapor seal as required. Insulation inserts shall be no less than the following lengths:

|                  |          |
|------------------|----------|
| 1½" to 2½" IPS   | 10" long |
| 3" to 6" IPS     | 12" long |
| 8" to 10" IPS    | 16" long |
| 12" and over IPS | 22" long |

- L. Pipe exposed in Mechanical Equipment Rooms or Finished Spaces (less than 10 feet above finished floor) to be finished with PVC jacket and fitting covers, aluminum jacket, or stainless steel jacket.
- M. Buried Piping: Provide factory fabricated assembly with inner all-purpose service jacket with self-sealing lap, and asphalt impregnated open mesh glass fabric, with one mil thick aluminum foil sandwiched between three layers of bituminous compound; outer surface faced with polyester film.
- N. Heat Traced Piping: Insulate fittings, joints, and valves with insulation of like material, thickness, and finish as adjoining pipe. Size large enough to enclose pipe and heat tracer. Cover with <<aluminum; stainless steel>> jacket with seams located on bottom side of horizontal piping. Coordinate insulation installation with heat-tracing installation and testing. Insulate piping after tracing or heat distribution tape has been installed and tested for continuity.

### 3.03 INSTALLATION (FIBER GLASS)

- A. Provide a continuous vapor retarder on piping operating below ambient temperatures. Seal all joints, seams and fittings.
- B. Firmly butt and secure ends with appropriate butt-strip material. On high-temperature piping, double layering with staggered joints when recommended by the insulation manufacturer. When double layering, the inner layer should not be jacketed.
- C. Insulated pipes conveying fluids below ambient temperature:
1. Provide vapor barrier jackets, factory-applied or field-applied; secure with self-sealing longitudinal laps and butt strips with pressure sensitive adhesive. Secure with outward clinch expanding staples and vapor barrier mastic.
  2. Insulate fittings, joints, and valves with molded insulation of like material and thickness as adjacent pipe. Finish with glass cloth and vapor barrier adhesive or PVC fitting covers.
- D. Insulated pipes conveying fluids above ambient temperature:
1. Provide standard jackets, with or without vapor barrier, factory-applied or field-applied. Secure with self-sealing longitudinal laps and butt strips with pressure sensitive adhesive. Secure with outward clinch expanding staples.
  2. Insulate fittings, joints, and valves with insulation of like material and thickness as adjacent pipe. Finish with glass cloth and vapor barrier adhesive or PVC fitting covers.
- E. Exterior Applications:
1. Jacket piping and fittings exposed to the elements using aluminum or stainless steel jackets with a factory applied moisture barrier. Hold firmly in place with a friction type Z lock or a minimum 2" overlap joint. Seal all joints completely along the longitudinal seam and install so as to shed water. Seal all circumferential joints by use of preformed butt strips; minimum 2" wide or a minimum 2" overlap. Overlap butt strips to the adjacent

jacketing a minimum ½-inch and completely weather seal. Install a 6" to 10" unsealed slide joint every 25 to 30 lineal feet to allow for the thermal expansion of the pipe and jacketing. In addition, apply a thin bead of silicone grease in the overlap to prevent water migration while allowing the joint to slide. Install an unsealed slide joint where distance between fittings exceeds 8 lineal feet.

2. Provide vapor barrier jacket. Insulate fittings, joints, and valves with insulation of like material and thickness as adjoining pipe, and finish with glass mesh reinforced vapor barrier cement. Cover with <<aluminum; stainless steel>> jacket with seams located on bottom side of horizontal piping.

F. Cold Piping Insulation:

1. On below freezing applications and in high abuse areas protect the ASJ jacket with a PVC vapor retarding outer jacket. Seal exposed ends of the insulation with a vapor retarder mastic installed per the manufacturer's recommendations. Apply vapor seals at butt joints at every fourth pipe section joint and at each fitting to isolate any water incursion.
2. On chilled water systems operating in conditions of: RH of 90% and above, follow the same guidelines as described above for below freezing applications.

### 3.04 INSTALLATION (ELASTOMERIC)

A. Piping:

1. Install pipe insulation by slitting tubular sections and applying onto piping or tubing. Alternately, slide unslit sections over the open ends of piping or tubing. Adhere and seal all seams and butt joints using adhesive.
2. Push insulation onto the pipe, never pull. Stretching of insulation may result in open seams and joints.
3. Tape the ends of the tubing before slipping the insulation over the new pipes to prevent dust from entering the pipe.
4. Clean cut all edges. Do not leave rough or jagged edges of the insulation. Use proper tools such as sharp non-serrated knives.
5. On cold piping, adhere insulation directly to the piping at the high end of the run using a two-inch strip of adhesive on the inner diameter of the insulation and on the pipe. Coat all exposed end cuts of the insulation with adhesive. Adhere all penetrations through the insulation and termination to the substrate to prevent condensation migration.
6. Use sheet insulation on all pipes larger than 6-inch diameter. Do not stretch insulation around the pipe. On pipes larger than 12-inch diameter, adhere insulation directly to the pipe on the lower 1/3 of the pipe. On pipes greater than 24-inch diameter, completely adhere insulation.
7. Stagger seams when applying multiple layers of insulation.

B. Valves, Flanges and Fittings:

1. Insulate all fittings with the same insulation thickness as the adjacent piping. Adhere all seams and mitered joints with adhesive. Sleeve screwed fittings and adhere with a minimum 1" overlap onto the adjacent insulation.
2. Insulate valves, flanges, strainers, and Victaulic couplings using donuts covered with sheet or oversized tubular insulation.

C. Hangers:

1. Support piping system using high density inserts with sufficient compressive strength. Apply elastomeric foam insulation with the same or greater thickness than the pipe insulation to pipe supports. Seal all joints with adhesive.
2. Standard and split hangers - Insulate piping supported by ring hangers with the same insulation thickness as the adjacent pipe. Seal all seams and butt joints with adhesive. Sleeve ring hangers using oversized tubular insulation. On cold piping, extend insulation up the hanger rod a distance equal to four times the insulation thickness. Insulation tape may be used to a thickness equal to the adjacent insulation thickness.

3. Clevis hangers or other pipe support systems - Install saddles under all insulated lines at unistrut clamps, clevis hangers, or locations where insulation may be compressed due to the weight of the pipe. Insert and adhere wooden dowels or blocks of a thickness equal to the insulation to the insulation between the pipe and the saddle.
4. Pre-insulated pipe hangers can be used to prevent compression of insulation at standard split, clevis hangers or other pipe support systems. Adhere a pair of non-skid pads to the clamps to minimize the movement. In addition, to prevent loosening of the clamps, use an antivibratory fastener, such as a nylon-locking nut.

D. Exterior Applications:

1. Paint all outdoor exposed piping with two coats of UV resistant finish. Prior to applying the finish, wipe the insulation with denatured alcohol. Do not tint the finish.
2. Locate seams for all outdoor exposed piping on the lower half of the pipe.

### 3.05 PIPING INSULATION MATERIAL SCHEDULE

| SYSTEM OR SERVICE      | LOCATION | INSULATION TYPE | JACKET             |
|------------------------|----------|-----------------|--------------------|
| HEATING HOT WATER      | INSIDE   | FIBER GLASS     | ALL SERVICE JACKET |
| HEATING HOT WATER      | INSIDE   | FIBER GLASS     | ALL SERVICE JACKET |
| HEATING HOT WATER      | OUTSIDE  | FIBER GLASS     | ALUMINUM JACKET    |
| HEATING HOT WATER      | OUTSIDE  | FIBER GLASS     | ALUMINUM JACKET    |
| CONDENSATE DRAINS      | INSIDE   | ELASTOMERIC     |                    |
| HVAC REFRIGERANT LINES | INSIDE   | ELASTOMERIC     |                    |
| HVAC REFRIGERANT LINES | OUTSIDE  | ELASTOMERIC     | EXTERIOR COATING   |

### 3.06 MINIMUM PIPING INSULATION THICKNESS (IN.)

| FLUID<br>OPERATING<br>TEMP<br>RANGE (°F) | SYSTEMS<br>IN TEMP<br>RANGE | INSULATION<br>CONDUCTIVITY                |                             | NOMINAL PIPE OR TUBE SIZE<br>(IN.) |                    |                    |                |     |

**END OF SECTION 230700**

## PART 1 - GENERAL

## 1.01 DESCRIPTION OF WORK

- A. This section describes the insulation, jackets and insulating accessories for sheet metal ductwork as scheduled in Part 3 of this Section and as shown on the Drawings.

## 1.02 REFERENCES

- A. National Fire Protection Association (NFPA):
  - 1. NFPA 255 - Surface Burning Characteristics of Building Materials.
- B. Greenguard
- C. 2020 New York State Energy Conservation Code
- D. Sheet Metal and Air Conditioning Contractors National Association (SMACNA):
- E. SMACNA - HVAC Duct Construction Standards - Metal and Flexible.
- F. Underwriters Laboratories, Inc. (UL):
  - 1. UL 723 - Surface Burning Characteristics of Building Materials.
- G. American Society for Testing and Materials (ASTM):
  - 1. ASTM B209 - Aluminum and Aluminum-Alloy Sheet and Plate.
  - 2. ASTM C177 - Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus.
  - 3. ASTM C518 - Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus.

## 1.03 DEFINITIONS

- A. Greenguard: Greenguard Environmental Institute
- B. IAQ: Indoor Air Quality
- C. EPA: Environmental Protection Agency
- D. WHO: World Health Organization
- E. ASJ: All Service Jacket
- F. SSL: Self-Sealing Lap
- G. FSK: Foil-Scrim-Kraft; jacketing

- H. PSK: Poly-Scrim-Kraft; jacketing
- I. PVC: Polyvinyl Chloride
- J. FRP: Fiberglass Reinforced Plastic
- K. Cold Piping/Ductwork/Surfaces: Pipes or surfaces where the normal operating temperature is 60 degrees F or lower.

#### 1.04 SUBMITTALS

- A. Product data: To include product description, manufacturer's installation instructions, types and recommended thicknesses for each application, and location of materials.
- B. Provide samples and mock-ups of systems as required.

#### 1.05 ENVIRONMENTAL REQUIREMENTS

- A. Maintain ambient conditions required by manufacturers of tapes, adhesives, mastics, cements, and insulation materials.
- B. Follow manufacturer's recommended handling practices.
- C. Supply fiberglass products that assure excellent IAQ (Indoor Air Quality) performance through Greenguard Certification.
- D. Mold: Carefully inspect any insulation that has been exposed to water. If it shows any sign of mold growth remove it from the Site. If the material is wet but shows no sign of mold, dry rapidly and thoroughly. If it shows signs of facing degradation from wetting remove it from the Site. Discard air handling insulation used in the air stream if exposed to water.

#### 1.06 QUALITY ASSURANCE

- A. Qualifications:
  - 1. Manufacturer: Company specializing in manufacturing Products specified with minimum 3 years documented experience.
  - 2. Installer: Company specializing in performing the Work of this Section with minimum 3 years documented experience.
- B. Materials:
  - 1. Flame spread/smoke developed rating of 25/50 or less in accordance with ASTM E84, NFPA 255 and UL 723.
  - 2. Certify insulation for duct, pipe and equipment for above grade exposed to weather outside building as being self-extinguishing for 1" thickness in less than 53 seconds when tested in accordance with ASTM D1692.

### PART 2 - PRODUCTS

#### 2.01 FIBERGLASS DUCT WRAP

- A. Flexible Fiber Glass Blanket meeting ASTM C 553 Types I, II and III, and ASTM C 1290; Greenguard compliant.
- B. Factory Applied Vapor Retarder Jacket: FSK or PSK conforming to ASTM C 1136 Type II.

- C. Maximum service temperature of 250° F (Faced) or 350° F (Unfaced).
- D. Density:
  - 1. Concealed areas: Minimum 0.75 PCF.
  - 2. Exposed areas: Minimum 1.0 PCF.
- E. Approved Products:
  - 1. Friendly Feel Duct Wrap by Knauf

#### 2.02 FIBERGLASS RIGID BOARD

- A. Rigid Fiber Glass Board insulation meeting ASTM C 612 Type IA and IB.
- B. Mean temperature by ASTM C 177 and a maximum service temperature of 450° F.
- C. Factory Applied Vapor Retarder Jacket: ASJ conforming to ASTM C 1136 Type I, or FSK or PSK conforming to ASTM C 1136 Type II.
- D. Density:
  - 1. Concealed areas: Minimum 3 PCF
  - 2. Exposed areas: Minimum 6 PCF
- E. Approved Products:
  - 1. Insulation Board by Knauf

#### 2.03 INTERNAL DUCT LINING

- A. Conforming to ASTM C 1071 Type 1 and NFPA 90A & 90B.
- B. Noise Reduction Coefficient (NRC): ASTM C 423 Type A Mounting, 0.40 or higher for ½" product, 0.60 or higher for 1" product.
- C. Rated for a maximum air velocity of 6000 Feet per minute.
- D. Approved Products:
  - 1. Textile Duct Liner with Hydrosshield® Technology by Knauf.

#### 2.04 FIBERGLASS INSULATION ACCESSORIES

- A. Aluminum Jacket - 0.016-inch (0.406 mm) thick in smooth, corrugated, or embossed finish with factory applied moisture barrier. Overlap 2-inch (50 mm) minimum.
- B. Laminated Self-Adhesive Water and Weather Seals - apply per manufacturers' recommendations.
- C. Tapes - Vapor barrier type, self-sealing, non-corrosive, fire-retardant. Approved Manufacturer: Compac Corporation
- D. Adhesives - Approved Manufacturer: Foster
- E. Mastic - Approved Manufacturer: Foster
- F. Vapor Barrier Coating - Approved Manufacturer: Foster

## 2.05 SHEET WATERPROOFING MEMBRANE

- A. Prefabricated, self-adhering, sheet-type waterproofing membrane shall be FlexClad-400 by MFM Building Products Corp. or approved equal.
- B. Description:
  - 1. Top Layer: Stucco-embossed, UV-resistant aluminum weathering surface.
  - 2. Middle Layer: Multiple layers of high-density cross-linked polymer film.
  - 3. Bottom Layer: Uniform layer of rubberized asphalt adhesive, protected by disposable silicone release paper.
- C. Color: As selected by Architect/Engineer.
- D. Material Thickness: ASTM D 1970, 40 Mils Nominal
- E. Flexibility: ASTM D 1970, Pass.
- F. Vapor Permeance: ASTM E 96, 0 perms.
- G. Nail Sealability: ASTM D 1970, Pass.
- H. Heat Aging: ASTM D 794, Pass.
- I. Tear Resistance: ASTM D 1424, Average: 660 grams.
- J. Ultimate Elongation MD: ASTM D 412, 434 percent.
- K. Ultimate Elongation CMD: ASTM D 412, 246 percent.
- L. Low Temperature Flexibility: 1,000,000 Cycles at -10 Degrees F, 1,200 Cycles at -20 Degrees F, No cracking.
- M. Flame Spread Index: ASTM E 84, 0.
- N. Smoke Density Index: ASTM E 84, 5.
- O. Wind-Driven Rain: SFBC TAS-110-95, 100 mph, No leakage or failure.
- P. UV Stability: Excellent.
- Q. Accessories: MFM Spray Adhesive

## 2.06 FIRE RATED BLANKET (KITCHEN HOOD EXHAUST DUCT)

- A. Thermal Material: 2192°F rated core blanket, manufactured from calcium magnesium silicate.
- B. Fully encapsulated thermal material in fiberglass reinforced aluminum/polypropylene scrip (FSP).
  - 1. Encapsulation FSP marked with UL Classification Mark.
  - 2. Encapsulation FSP marked with ICC-ES report number ESR 2213.
  - 3. Collars supplied in 6 inch wide by 25 feet long rolls.
- C. Product Characteristics:
  - 1. Thickness: 1-1/2 inch.
  - 2. Nominal Density: 6 pcf.

3. R-Value: 7.35 per layer when tested in accordance with ASTM C 518 at 75°F.
4. Flame Spread: <25 when tested in accordance with ASTM E 84.
5. Smoke Spread: <50 when tested in accordance with ASTM E 84.

D. Approved Products:

1. FireMaster FastWrap XL by Thermal Ceramics.

## 2.07 FIRE RATED BLANKET INSULATION ACCESSORIES

- A. Glass Filament Tape: Minimum  $\frac{3}{4}$  inch wide - used to temporarily secure blanket until permanent attachment using steel banding and/or steel insulation pins.
- B. Aluminum Foil Tape: Minimum 3 inches used to seal cut edges.
- C. Carbon Steel or Stainless Strapping Material Minimum:  $\frac{1}{2}$  inch wide and 0.015 inch thick.
- D. Steel Insulation Pins: Minimum 12 gage, length sufficient to penetrate through duct wrap insulation.
- E. Insulation Clips: Galvanized steel, minimum 1-1/2 inches round or square.
- F. Through Penetration Firestop Sealants:
  1. Packing Material: Remove encapsulation material from wrap, use core blanket (white) as penetration packing material.
  2. Firestop sealants per applicable building code report and/or laboratory design listings.
- G. Grease and HVAC Duct Access Doors:
  1. Thermal Ceramics FastDoor XL Access doors

## 2.08 LOUVER BLANK OFF PANELS

- A. Facing: 0.032 inch thick aluminum on both sides.
- B. Perimeter Frame: 0.050 inch thick-formed aluminum channels.
- C. Core: Expanded polystyrene (EPS), R value of 8

## PART 3 - EXECUTION

### 3.01 EXAMINATION

- A. Verify that all ductwork is tested and approved prior to insulation installation.
- B. Verify that all surfaces are clean, dry and without foreign material before applying insulation materials.

### 3.02 DUCTWORK REQUIRING INSULATION

- A. Insulate Ductwork as specified in the DUCTWORK INSULATION SCHEDULE.
  1. Insulate any additional ductwork or plenums indicated to be insulated on the Drawings.

### 3.03 INSTALLATION (GENERAL)

- A. Install all materials using skilled labor regularly engaged in this type of work. Install all materials in strict accordance with manufacturer's recommendations, building codes, and industry standards.

- B. Locate insulation and cover seams in the least visible location. Extend all surface finishes in such a manner as to protect all raw edges, ends and surfaces of insulation.
- C. On cold surfaces where a vapor retarder must be maintained, apply insulation with a continuous, unbroken moisture and vapor seal. Insulate and vapor seal all hangers, supports, anchors, or other projections secured to cold surfaces to prevent condensation.
- D. Install insulation neatly, accurately and without voids, in accordance with manufacturer's instructions and NIAC National Commercial and Industrial Insulation Standards.
- E. Install ductwork hanger supports on the outside of the insulation. Where vertical ducts are supported to the building structure, insulate the ductwork supports to prevent condensation.
- F. Insulate ductwork using insulation of the type and thickness scheduled at the end of this Section.
- G. If specified insulation board thickness does not cover ductwork standing seams and reinforcing angles, insulate them by adhering a grooved strip of fiberglass board with a thickness at least 1 ½ inches greater than the height of the seam or angle covered over the standing seam or angle.

#### 3.04 FIBERGLASS INTERNAL DUCT LINING

- A. Apply Duct Lining in strict accordance with the latest edition of SMACNA's "HVAC Duct Construction Standard Metal & Flexible" and NAIMA's "Fibrous Glass Duct Liner Standard".
- B. Select length of mechanical fasteners in accordance with the manufacturer's recommendation as listed on each product. Install mechanical fasteners perpendicular to the duct surface, and such that the pin does not compress the liner more than 2% relative to the nominal thickness of the insulation.
- C. Adhesive shall conform to ASTM C 916. Apply adhesive to the sheet metal with a 90% minimum coverage. Coat all exposed edges of the duct liner with the same adhesive. Repair all rips and tears using an adhesive that conforms to ASTM C 916.
- D. Cover all internal duct areas with duct liner. Firmly butt transverse joints with no gaps and coat with adhesive. Overlap and compress longitudinal corner joints.
- E. When air velocities are 4000 to 6000 FPM, apply metal nosing to all upstream transverse edges to additionally secure the insulation.

#### 3.05 FIBERGLASS WRAP INSULATION

- A. Apply external duct wrap per insulation schedule even where internally lined.
- B. Install Duct Wrap to obtain specified R-value using a maximum compression of 25%.
- C. Firmly butt all joints.
- D. Overlap the longitudinal seam of the vapor retarder a minimum of 2 inches.
- E. Where vapor retarder performance is required, repair all penetrations and damage to the facing using pressure-sensitive foil tape or mastic prior to system startup.
- F. Use pressure-sensitive foil tapes a minimum 3 inches wide and apply by moving pressure using a squeegee or other appropriate sealing tool.

- G. Additionally secure Duct Wrap to the bottom of rectangular ductwork over 24 inches wide using mechanical fasteners on 18-inch centers. Do not over-compress insulation during installation.
- H. Overlap unfaced Duct Wrap a minimum of 2 inches and fasten using 4-inch to 6-inch nails or skewers spaced 4 inches apart, or secured with a wire/banding system. Do not damage the Duct Wrap.

### 3.06 FIBERGLASS BOARD INSULATION

- A. Fit insulation by scoring, cutting and mitering to fit the contour of the ductwork.
- B. Attach insulation to ductwork in thickness scheduled by brushing adhesive uniformly on all sides of ductwork covering 100 percent of ductwork surface. Press insulation into place, making complete contact with adhesive. Butt edges of insulation board tightly together without gaps.
- C. Additionally, hold insulation in place by impaling on pins welded to all four sides of the ductwork. Locate and weld pins a minimum 12 inch on center with a minimum of 2 rows per side of duct and no less than 3 inches from the edges of the ductwork. Secure insulation to pins with 1 inch diameter hold-down washers. As an alternate to welded pins, provide "Gripnail" mechanical surface fasteners by Gripnail Corporation using pneumatic hammer designed for this work.
- D. Seal all joints, seams, breaks, and punctures in facing with adhesive and cover with 3 inch wide sealing tape. Flash supports with vapor barrier coating.
- E. For rectangular ducts and plenums exposed to weather, pitch ductwork or insulation board minimum ¼ inch per foot to prevent rainwater from accumulating on top of duct or plenum. Cover insulation board with Sheet Waterproofing Membrane.

### 3.07 SHEET WATERPROOFING MEMBRANE

- A. Surface Preparation:
  - 1. Prepare surfaces in accordance with manufacturer's instructions.
  - 2. Ensure tops of ducts have sufficient slope to eliminate ponding water.
  - 3. Ensure bottoms of ducts have foil-faced rigid insulation boards installed.
  - 4. Ensure surfaces are clean and dry.
  - 5. Remove dirt, dust, oil, grease, hand oils, processing lubricants, moisture, frost, and other contaminants that could adversely affect adhesion of waterproofing membrane.
  - 6. Prime metal, concrete, and masonry surfaces with primers approved by waterproofing membrane manufacturer.
- B. Application:
  - 1. Apply waterproofing membrane in accordance with manufacturer's instructions on all exterior insulated ductwork and at locations indicated on the Drawings.
  - 2. Apply membrane to clean, dry, primed metal ductwork and foil-faced rigid insulation boards. Do not apply over wet or non-rigid insulation.
  - 3. Apply membrane in accordance with manufacturer's air, material, and surface temperature requirements.
  - 4. Apply firm, uniform pressure with hand roller to entire membrane to ensure proper adhesion. Concentrate pressure at seams and on underside of ductwork.
  - 5. Apply membrane to ducts in accordance with manufacturer's instructions.
  - 6. Apply membrane shingle fashion to shed water over, not against laps.
  - 7. Do not terminate membrane on bottom of duct.
  - 8. Apply minimum 3-inch laps and minimum 6-inch end laps for ductwork applications.
  - 9. Embed membrane to bottom of ducts over 24 inches wide in light continuous layer of adhesive applied to insulation face.

10. Apply membrane to bottom of insulated ducts over 36 inches wide using mechanical attachment, in addition to adhesive, in accordance with manufacturer's instructions. Install pints on 12-inch centers with rows staggered.
11. Apply adhesive to areas where special adhesion requirements exist, including duct bottoms, flashings, transitions, joints, elbows, valves, tees, and other fittings.

C. Protection:

1. Protect applied waterproofing membrane and fabric flexible duct connections from damage during construction.

### 3.08 FIRE RATED BLANKET

- A. Install insulation in direct contact with the ductwork in accordance with the manufacturer's instructions and referenced standards.
- B. Install 2 layers of FireMaster FastWrap XL for zero clearance and a 1 and 2 hour commercial kitchen grease duct application per ASTM E 2336.
  1. Consult with manufacturer of proposed substitutions for required thickness to maintain a 2-hr fire rating with a zero clearance to combustibles.
- C. Install 1 layer of FireMaster FastWrap XL for a 1 and 2 hour air ventilation duct enclosure per ISO 6944-1985.
- D. Where exhaust duct penetrates firewall install ductwrap as per the manufacturer's instructions for through penetrations.
- E. Locate doors on 20-foot centers on straight runs of ductwork and at each change of direction. Position doors on the side of duct a minimum of 1.5 inches above the bottom of the duct.

### 3.09 DUCTWORK INSULATION SCHEDULE

A. Fiber Glass Insulation Schedule:

| Ductwork System                                                                                             | Type                            | Minimum R-Value |
|-------------------------------------------------------------------------------------------------------------|---------------------------------|-----------------|
| Supply Ducts and Plenums, Concealed                                                                         | Fiberglass Duct Wrap            | 6               |
| Return Ducts and Plenums, Concealed                                                                         | Fiberglass Duct Wrap            | 6               |
| Supply and Return Ducts and Plenums, Exposed in the Space Served                                            | Uninsulated                     | NA              |
| Supply and Return Ducts and Plenums, Exposed Other Than in the Space Served                                 | Fiberglass Rigid Board          | 6               |
| Outdoor Air Intake Ducts, Indoors                                                                           | Fiberglass Rigid Board          | 6               |
| Ducts Located Outdoors                                                                                      | Fiberglass Rigid Board          | 8               |
| Unused Portions of Louvers                                                                                  | Louver Blank Off Panels         | As Specified    |
| Ductwork 20 Feet Upstream and Downstream of Air Handling Units and Supply and Return Fans, Located Indoors  | Fiberglass Internal Duct Lining | Note 1          |
| Ductwork 20 Feet Upstream and Downstream of Air Handling Units and Supply and Return Fans, Located Outdoors | Fiberglass Internal Duct Lining | Note 1          |
| General Exhaust Ducts Except as Noted                                                                       | Uninsulated                     | NA              |

NOTE 1 - Ductwork to be provided with 1-inch internal lining in addition to externally applied insulation in accordance with the table above.

**END OF SECTION 230719**

## PART 1 - GENERAL

## 1.01 DESCRIPTION

- A. General provisions and other mechanical systems are specified in other Sections of Division 23.
- B. Commissioning is an ongoing process and shall be performed throughout construction. Commissioning requires the participation of Division 23 to ensure that all systems are operating in a manner consistent with the Contract Documents. Division 23 shall be familiar with the commissioning plan issued by the Commissioning Authority (CA) as it applies to the work of Division 23 and shall execute all commissioning responsibilities assigned to them in the Contract Documents. The Contractors should also review Specifications Section 019113 for additional information.
- C. Commissioning shall conclude with the completion of all required deferred testing, training and system documentation as specified and required to ensure the proper operation of the mechanical equipment and systems provided by this Division.
- D. This Section covers mechanical systems commissioning, as required to demonstrate that the equipment and systems of Division 23 are ready for safe and satisfactory operation, as defined by project documents. Commissioning shall include, but shall not be limited to, identification of piping and equipment, cleaning, lubrication, start-up, check-out, and testing, adjusting, and balancing of systems, preparation of equipment and systems documentation and of maintenance and operation manuals, Owner training, and preparation of record drawings.
- E. This section does not alter the commissioning requirements indicated in Section 019113 of the General Commissioning Requirements. This section is to help define/supplement the requirements of Section 019113 where applicable.

## 1.02 QUALITY ASSURANCE

- A. The mechanical contractor shall identify a mechanical commissioning supervisor. The mechanical commissioning supervisor should have a minimum of ten years experience in mechanical contracting. The mechanical commissioning supervisor shall become familiar with the design intent and the requirements of the commissioning process as defined in this Section. The mechanical commissioning supervisor shall attend all commissioning meetings and coordinate the commissioning schedule as outlined by the CA. The mechanical commissioning supervisor shall assist the CA in coordinating and executing the required commissioning activities.

## 1.03 MECHANICAL, PLUMBING, AND FIRE PROTECTION CONTRACTOR RESPONSIBILITIES

- A. Include and itemize the cost of commissioning in the contract price with an estimated breakdown of hours for meeting and functional testing requirements.
- B. The mechanical commissioning supervisor shall be responsible for scheduling, supervising, and coordinating the startup, testing and commissioning activities as specified herein with the CA. Specific requirements of the mechanical contractor and associated subcontractors are identified in this Section and in other Sections of this Division.
- C. The CA shall conduct independent verification of installation, pre-functional, start-up and functional testing as per section 019113.
- D. Mechanical commissioning shall take place in three phases. Commissioning requirements for each phase are as follows:
  - 1. Construction Phase

- a. The Contractor shall attend a Commissioning Scoping meeting and additional commissioning meetings as required throughout the commissioning process. These commissioning meetings will be monthly during early construction and may increase in frequency to weekly during the start-up, pre-functional and functional testing phases. The Contractor shall assure that all subcontractors who have commissioning responsibilities attend the Commissioning Scoping meeting and other commissioning meetings, as appropriate, during the construction process.
- b. The Contractor shall report, in writing, to the CA at least as often as commissioning meetings are scheduled concerning the status of his activities as they affect the commissioning process, the status of each discrepancy identified, the pre-functional and functional testing process, explanations of any disagreements with the identified deficiencies, and proposed resolution and schedule.
- c. The Contractor shall provide the CA with normal cut sheets and shop drawing submittals of equipment that is to be commissioned.
- d. The Contractor shall provide documentation to the CA for development of pre-functional and functional performance testing procedures, prior to normal O&M manual submittals. This documentation shall include detailed manufacturer installation, start-up, operating, troubleshooting and maintenance procedures; full details of any owner-contracted tests; fan and pump curves; full factory testing reports, if any; and full warranty information, including all responsibilities of the Owner to keep the warranty in force clearly identified. In addition, the installation, start-up and checkout materials that are actually shipped inside the equipment and the actual field checkout sheet forms to be used by the factory or field technicians shall be submitted to the CA. The CA may request further documentation necessary for the development of functional performance testing and the commissioning process. This data request may be made prior to normal submittals.
- e. The Contractor shall develop and submit to CA, for review prior to equipment or system startup, a complete startup and initial checkout plan using manufacturer's start-up procedures.
- f. The Contractor shall review and complete the CA's pre-functional check-sheets and sign-off on the appropriate areas when the Contractor and sub-contractors are complete. The pre-functional test sheets will be developed by the CA. The CA may conduct their own pre-functional testing check in parallel with the Contractors or verify the contractors completed pre-functional forms after submission.
- g. The Contractor shall provide a copy of the O&M manuals and submittals of commissioned equipment, through normal channels, to the CA for review.
- h. The Contractor shall assist in clarifying the proposed operation and control of commissioned equipment in areas where the specifications, control drawings or equipment documentation is not sufficient for writing detailed testing procedures.
- i. The CA shall prepare the specific functional test procedures as specified herein. The Contractors shall review the CA's proposed functional performance test procedures to ensure feasibility, safety and equipment protection and provide necessary written alarm limits to be used during the tests.
- j. Contractor shall prepare a preliminary schedule for Division 23 commissioning activities, to include pipe and duct system testing, flushing and cleaning, equipment start-up, and TAB start and completion, for use by the CA and shall update the schedule as appropriate. CA will assist in providing expected time durations for Cx activities.
- k. The Contractor shall update the commissioning activities and notify any delays in the progress meetings. Contractor shall notify the CA during the commissioning meetings when commissioning activities not yet performed or not yet scheduled will delay construction. Mechanical equipment start-up shall not be initiated until the complete sign-off of the pre-functional check-sheets as developed by the CA as specified in other Sections of Division 23.
- l. The Contractor shall provide startup testing for all HVAC equipment, including the building automation control system and shall execute the mechanical-related portions

of the pre-functional checklists for all commissioned equipment during the startup and initial checkout process. The CA shall conduct an independent start-up once the Contractor is complete with their requirements.

- m. The Contractor shall perform and clearly document all completed start-up and system operational checkout procedures, providing a copy to the CA.
- n. The Contractor shall correct current A/E punch list and CA deficiency items before functional performance testing can begin. Air and water TAB shall be completed with discrepancies and problems remedied before functional testing of the respective air or water related systems.
- o. The CA shall generate the functional testing procedure and record to the mechanical contractor. The mechanical contractor shall review and provide support to the functional testing process. Contractor shall operate boilers, pumps, etc., and systems in accordance with the CA requirements, open and close disconnects and switch normal and emergency power requirements as directed by the CA and the functional testing procedures.
- p. The Contractor shall report in writing to the CA at least as often as commissioning meetings are being scheduled concerning the status of each outstanding discrepancy identified during commissioning, pre-functional and functional performance testing. Report shall include description of the identified discrepancy, explanations of any disagreements, and proposals and schedule for correction of the discrepancy.
  - 1) Acceptance Phase. The Contractor shall assist and cooperate with the CA in the commissioning process by:
    - (a) Putting all HVAC equipment and systems into operation and continuing the operation during each working day of the test and balance and commissioning effort, as required.
    - (b) For a given area, have all required pre-functional checklists, calibrations, startup and selected functional tests of the mechanical system and associated controls completed and approved by the CA prior to beginning the test and balance process.
    - (c) Provide a qualified technician to operate the controls as required to assist the TAB contractor in performing TAB, or provide sufficient training for TAB to operate the system without assistance.
    - (d) Provide a TAB representative to assist the CA on conducting a random 10% check of the air and water distribution requirements.
    - (e) Including cost of sheaves and belts that may be required to obtain required equipment performance, as measured by the test and balance effort.
    - (f) Providing test holes in ducts and plenums where directed by TAB to allow air measurements and air balancing. Providing an approved plug.
    - (g) Providing temperature and pressure taps according to the Construction Documents for TAB and commissioning testing.
    - (h) Installing a P/T plug at each water sensor that is an input point to the Control System.
    - (i) Providing skilled technicians to execute starting and operation of equipment.
    - (j) The CA will conduct functional performance testing. The Contractor may be required to have a skilled technician present during functional testing, although it is suggested that one be available to make adjustments or assist in problem-solving.
    - (k) The CA will require full and part load performance verifications as well as seasonal and simulated testing requirements. The Contractor shall be prepared to operate different components of various systems (example, DX and hot water systems to generate loading strategies) during the functional testing.
    - (l) Correct deficiencies (differences between specified and observed performance) as interpreted by the CA and A/E.

- (m) Prepare O&M manuals according to the Contractor Documents, including clarifying and updating the original sequence of operation to as-built conditions.
  - (n) Maintain on site redline as built drawings and produce final "As-built" drawings for all project drawings and contractor-generated coordination drawings. List and clearly identify on the as-built drawings the locations of all airflow stations and sensor installations that are not equipment mounted.
  - (o) Provide specified training of the Owner's operating personnel in accordance with the CA's overview and outline.
  - (p) Coordinate with equipment manufacturers to determine specific requirements to maintain the validity of the warranty.
  - (q) Provide updated diagrammatical logic for all TAB adjustments to the system.
- 2) Warranty Period. During the warranty period, the Contractor shall:
- (a) Be available during seasonal or deferred functional performance testing conducted by the CA, according to the specifications.
  - (b) Correct deficiencies and make necessary adjustments to O&M manuals and as-built drawings for applicable issues identified in any seasonal testing.

#### 1.04 TAB CONTRACTOR RESPONSIBILITIES

- A. Six weeks prior to the starting of the T&B, submit to the CA, the qualifications of the site technician(s) for the project, including three (3) names of contractors and facility managers of recent projects on which the personnel were in charge. The Owner and CA will approve the site technician for this job.
- B. Three months prior to the start of the TAB, submit a TAB plan and approach for each system. The plan shall be reviewed by the TAB and the CA for review and approval. The submitted plan shall include:
- 1. Certification that the TAB contractor has reviewed the construction documents and the systems with the design engineers and Contractors to sufficiently understand the design intent for each system.
  - 2. An explanation of the intended use of the building control system.
  - 3. All field check-out sheets and logs to be used that lists each piece of equipment to be tested adjusted and balanced with the data cells to be gathered for each.
  - 4. Final test report forms to be used during this process:
    - a. Detailed step by step procedures for TAB work for each system and issue: terminal flow calibration; diffuser proportioning; branch and submain proportioning; total flow calculations; and rechecking diversity issues.
    - b. List all air flow, water flow, sound level, system capacity and efficiency measurements to be performed and a description of each of the test procedures, parameters and formulas to be used.
    - c. Details of how total flow will be determined (Air: sum of terminal flows via BMS calibrated readings or via hood, pitot tube or flow stations). Details of how total water flow will be determined (Water: pump curves, circuit setters, flow station, ultrasonic, etc.).
    - d. The identification and types of measurement instruments to be used and their most recent calibration date.
    - e. Specific procedures that will ensure that both air and watersides will be operating at there lowest possible pressure at the point where the system will operate.
    - f. Confirmation that the TAB contractor understands the outside air ventilation criteria under all conditions and how this will be measured during normal, economizer and unoccupied conditions.
    - g. Details of how building static, room static and exhaust fan capacity will be checked.

- h. Proposed selection points for traverse measurement locations on the as-built documents. Review the placement of the HVAC measurement devices for proper straight runs and accuracy.
- i. Submit a plan for testing and checking the fume hood system exhaust requirements.
- j. Plan for formal progress reports including scope and frequency.
- k. Plan for formal deficiency reports including scope and frequency.
  - 1) TAB contractor shall attend commissioning meetings as directed by the CA and the general contractor.
  - 2) TAB contractor shall communicate in writing to the controls contractor and the CA all setpoint and parameter changes made or problems and discrepancies identified during the TAB process that would affect the control loop system set-up and operation.
  - 3) Submit written report of discrepancies, deficit or uncompleted work by others, contract interpretation requests and list of completed tests to the CA at least once per week.
  - 4) After the TAB plan is accepted and two-weeks prior to TAB work, the contractor shall conduct a pre-balancing conference. Prior to the pre-balancing conference, the TAB contractor shall inspect the system readiness for testing and balancing. The TAB contractor shall prepare a list of deficiencies and uncompleted work that will affect the TAB process. This list shall be submitted to the CA and the general contractor.
  - 5) The TAB contractor shall review the projected schedule and provide, in writing, to the CA and CM any delays in the schedule and what items will require completion prior to the TAB work.
  - 6) The CA agent shall conduct independent verification of 10% of air and water end-devices for acceptance after the TAB contractor states in writing that they are complete with Testing & Balancing. The TAB contractor shall provide a mechanic to assist the CA in this verification and shall include this in the scope and price of the Work.
  - 7) The TAB agent shall submit the TAB report to the CA for his review and comment. All data contained shall be re-verified in the field by the CA. A minimum of ten percent of the airflow readings shall be verified by the CA using his own equipment. All selection points shall be random. Total airflow shall be verified on all mains in the supply and the exhaust ducts.

#### 1.05 CONTROL CONTRACTOR RESPONSIBILITIES

- A. Include and itemize the cost of commissioning in the contract price with an estimated breakdown of hours for meeting and functional testing requirements.
- B. The controls commissioning supervisor shall be responsible for scheduling, supervising, and coordinating the startup, testing and commissioning activities as specified herein with the CA. Specific requirements of the controls contractor and associated subcontractors are identified in this Section and in other Sections of this Division.
- C. The CA shall conduct independent verification of installation, pre-functional, start-up and functional testing as per section 019113.
- D. Controls commissioning shall take place in three phases. Commissioning requirements for each phase are as follows:
  - 1. Construction Phase
    - a. Contractor shall attend a Commissioning Scope meeting and additional commissioning meetings as required throughout the commissioning process. These commissioning meetings will be monthly during early construction and increase in frequency to weekly during the start-up, pre-functional and functional testing phases. Contractor shall assure that all subcontractors who have commissioning

- responsibilities attend the Commissioning Scope meeting and other commissioning meetings, as appropriate, during the construction process.
- b. Contractor shall report, in writing, to the CA at least as often as commissioning meetings are scheduled concerning the status of his activities as they affect the commissioning process, the status of each discrepancy identified, the pre-functional and functional testing process, explanations of any disagreements with the identified deficiencies, and proposed resolution and schedule.
  - c. Contractor shall provide the CA with normal cut sheets and shop drawing submittals of equipment that is to be commissioned.
  - d. Contractor shall provide documentation to the CA for development of pre-functional and functional performance testing procedures, prior to normal O&M manual submittals. This documentation shall include detailed manufacturer installation, start-up, operating, troubleshooting and maintenance procedures; full details of any owner-contracted tests; points listing; full factory testing reports, if any; and full warranty information, including all responsibilities of the Owner to keep the warranty in force clearly identified. In addition, the installation, start-up and checkout materials that are actually shipped inside the equipment and the actual field checkout sheet forms to be used by the factory or field technicians shall be submitted to the CA. The CA may request further documentation necessary for the development of functional performance testing and the commissioning process. This data request may be made prior to normal submittals.
  - e. The Contractor shall develop and submit to CA, for review prior to equipment or system startup, a complete startup and initial checkout plan using manufacturer's start-up procedures.
  - f. The Contractor shall review and complete the CA's pre-functional check-sheets and sign-off on the appropriate areas when the Contractor and sub-contractors are complete. The pre-functional test sheets will be developed by the CA. The CA may conduct their own pre-functional testing check in parallel with the Contractors or verify the contractors completed pre-functional forms after submission.
  - g. Contractor shall provide a copy of the O&M manuals and submittals of commissioned equipment, through normal channels, to the CA for review.
  - h. Contractor shall assist in clarifying the proposed operation and control of commissioned equipment in areas where the specifications, control drawings or equipment documentation is not sufficient for writing detailed testing procedures.
  - i. CA shall prepare for the specific functional test procedures as specified herein. The Contractors shall review the CA's proposed functional performance test procedures to ensure feasibility, safety and equipment protection and provide necessary written alarm limits to be used during the tests.
  - j. Controls contractor shall prepare a preliminary schedule for their commissioning activities, to include wiring, instrument installation, calibration, point-to-point verification, sequence of operation testing and emergency operating procedural testing for use by the CA and shall update the schedule as appropriate. The Contractor shall update the commissioning activities and notify any delays in the progress meetings. Contractor shall notify the CA during the commissioning meetings when commissioning activities not yet performed or not yet scheduled will delay construction.
  - k. Controls instrument and equipment start-up shall not be initiated until the complete sign-off of the pre-functional check-sheets as developed by the CA as specified in other Sections of Division 23.
  - l. Contractor shall provide startup testing for all HVAC equipment, including the building automation control system and shall execute the mechanical/controls-related portions of the pre-functional checklists for all commissioned equipment during the startup and initial checkout process. The CA shall conduct an independent start-up once the Contractor is complete with their requirements.
  - m. Contractor shall perform and clearly document all completed startup and system operational checkout procedures, providing a copy to the CA.

- n. Contractor shall correct current A/E punch list and CA deficiency items before functional performance testing can begin. Point-to-point verification shall be completed with discrepancies and problems remedied before functional testing of the respective controls related systems.
- o. The CA shall generate the functional testing procedure and record to the controls contractor. The controls contractor shall review and provide support to the functional testing process. Contractor shall aid in operating boilers, pumps, etc., and systems in accordance with the CA requirements, turn on and off normal and emergency power requirements as directed by the CA and the functional testing procedures.
- p. Contractor shall report, in writing, to the CA at least as often as commissioning meetings are being scheduled concerning the status of each outstanding discrepancy identified during commissioning, pre-functional and functional performance testing. Report shall include description of the identified discrepancy, explanations of any disagreements, and proposals and schedule for correction of the discrepancy.
  - 1) Acceptance Phase. Contractor shall assist and cooperate with the CA in the commissioning process by:
    - (a) Putting all HVAC equipment and systems into operation and continuing the operation during each working day of the test and balance and commissioning effort, as required.
    - (b) For a given area, have all required, pre-functional checklists, calibrations, startup and selected functional tests of the mechanical system and associated controls completed and approved by the CA prior to beginning the test and balance process.
    - (c) Provide a qualified technician to operate the controls as required to assist the TAB contractor in performing TAB, or provide sufficient training for TAB to operate the system without assistance.
    - (d) Provide a controls representative to assist the CA on conducting a random 10% check of the air and water distribution requirements.
    - (e) Providing skilled technicians to execute starting and operation of equipment.
    - (f) The CA will conduct functional performance testing. The Contractor may be required to have a skilled technician present during functional testing, although it is suggested that one be available to make adjustments or assist in problem-solving.
    - (g) The CA will require full and part load performance verifications as well as seasonal and simulated testing requirements. The Contractor shall be prepared to operate different components of various systems (example, chilled water and hot water systems to generate loading strategies) during the functional testing.
    - (h) Correct deficiencies (differences between specified and observed performance) as interpreted by the CA and A/E.
    - (i) Prepare O&M manuals according to the Contractor Documents, including clarifying and updating the original sequence of operation to as-built conditions.
    - (j) Maintain on site redline as built drawings and produce final "As-built" drawings for all project drawings and contractor-generated coordination drawings. List and clearly identify on the as-built drawings the locations of all airflow stations and sensor installations that are not equipment mounted.
    - (k) Provide specified training of the Owner's operating personnel in accordance with the CA's overview and outline.
    - (l) Coordinate with equipment manufacturers to determine specific requirements to maintain the validity of the warranty.
    - (m) Provide a detailed marked up drawings of all the instruments and their installed location (P&ID) for instruments and components.
  - 2) Warranty Period. During the warranty period, the Contractor shall:
    - (a) Be available during seasonal or deferred functional performance testing conducted by the CA, according to the specifications.

- (b) Correct deficiencies and make necessary adjustments to O&M manuals and as-built drawings for applicable issues identified in any seasonal testing.

## PART 2 - PRODUCTS

### 2.01 SYSTEMS TO BE COMMISSIONED

- A. The following are systems to be commissioned:
  - 1. Hot Water Boilers (2 Units - BL-1, BL-2)
  - 2. Dedicated Outdoor Air System (1 Unit - DOAS-1)
  - 3. Rooftop Units (1 Unit - RTU-208)
  - 4. Variable Refrigerant Flow Evaporators, Branch Boxes and Condensers (24 Units - EU-X, FCU-X, BC-X, CU-X)
  - 5. Exhaust Fans (8 units - GX-X, TX-X, ERXF-1)
  - 6. Kitchen Hood System (2 Units - KX-1, MAU-1)
  - 7. Hot Water Pumps (6 Units - HHWP-1,2,3,4,5&6)
  - 8. Cabinet Unit Heaters (3 Units - CUH-A,B,126)
  - 9. High Volume Low Speed Fans (3 Units - HVLS-1,2,3)
  - 10. Air Outlets (7 types, X Units – Test 10%)
  - 11. ATC System (test functionality as it has been modified by systems above)

### 2.02 TEST EQUIPMENT

- A. All standard testing equipment required to the mechanical portion startup, initial checkout shall be provided by the Contractor responsible for the equipment or system being tested. This includes TAB and controls verification.
- B. The CA shall perform their own system verification and performance check-out. The CA shall provide their own calibrated equipment as required for this testing.
- C. All testing equipment associated with functional performance verification and point-to-point required by the CA shall be the responsibility of the CA. All testing equipment associated with the control's contractor point-to-point verification shall be the responsibility of the control's contractor.
- D. Special equipment, tools and instruments (only available from vendor or specific to a piece of equipment) required for the functional testing of that equipment, according to the requirements of the contract documents and the functional test procedures shall be provided to the CA by the installing contractor and shall become the property of the Owner at project completion as indicated in the specification.
- E. Proprietary test equipment and software required by any manufacturer for programming and/or start-up, whether specified or not, shall be provided by the manufacturer of the equipment. Manufacturer shall provide test equipment, demonstrate its use and assist in the commissioning process as needed. Proprietary test equipment (and software) shall become the property of the Owner upon successful completion of the commissioning process as required in the specifications.

## PART 3 - EXECUTION

### 3.01 SUBMITTALS

- A. Division 23 shall provide submittal documentation relative to commissioning as required in this Section Part 1 and Section 019113.

## 3.02 STARTUP PLAN AND PREFUNCTIONAL TESTING

- A. The mechanical contractor and associated subcontractors shall be responsible for the installation of complete systems and sub-systems, fully functional, meeting the design objectives of the Contract Documents. Contractor shall follow the approved start-up, initial checkout, and pre-functional testing procedures. The commissioning procedures and functional testing do not relieve or lessen this responsibility or shift that responsibility to the CA or Owner.
- B. Pre-functional testing as directed and performed by the contractor shall be required for each piece of equipment to ensure that the equipment and systems are properly installed and ready for operation, so that functional performance testing may proceed without delays. Sampling strategies shall not be used for pre-functional testing. The pre-functional testing for all equipment and subsystems of a given system shall be successfully completed and documented prior to functional performance testing of the system. The mechanical contractor and sub-contractors shall sign off on the CA's pre-functional test sheets that they are complete and the system is ready. The CA will verify and conduct their own independent verification and start-up in parallel to the Contractor's verification. Any deficiencies identified during this process shall be noted and reviewed by the Contractors. Start-up and functional testing shall not proceed until all the deficiencies are corrected and verified by the CA.
- C. The following procedures shall apply to all equipment and systems to be commissioned.
  - 1. Start-up and Initial Checkout Plan. The contractor shall develop the detailed start-up and pre-functional testing plans for all equipment to be reviewed by the CA. The primary role of the CA in this process shall be to review the installation for construction completeness and ensure that all components have been installed as per the design documents. Only when pre-functional testing is complete and signed off by all Contractors, shall the Contractor start-up the equipment. Equipment and systems to be commissioned are identified in this Section Part 2.
  - 2. The start-up and initial checkout plan shall consist of the following as a minimum:
    - a. The manufacturer's standard written start-up and checkout procedures copied from the installation manuals and manufacturer's normally used field checkout sheets. The plan shall include checklists and procedures with specific boxes or lines for recording and documenting the checking and inspections of each procedure and a summary statement with a signature block at the end of the plan.
    - b. First-run checklist for equipment, to include:
      - 1) Equipment properly set.
      - 2) Alignment of shafts and couplings.
      - 3) Adjustment of vibration isolators.
      - 4) Piping and equipment properly connected.
      - 5) Completion of initial lubrication procedures.
      - 6) Clean filters in place, as appropriate.
      - 7) Wiring properly connected.
      - 8) Electrical overload relays appropriate for load.
      - 9) Electrical accessories properly installed and adjusted.
      - 10) Controls, safeties, and time switches properly calibrated and set-up.
      - 11) Verification of direction of motor rotation after final electrical connections by jogging motor.
      - 12) Measurements of ampere draw of electric motors and comparison with nameplate rating and with overload heater ratings.
      - 13) The Contractor shall submit the start-up reports to the CA for review.
- D. The CA shall review and approve the procedures and the format for documenting them, noting any procedures that need to be added.

- E. Two weeks prior or startup, the Contractor shall schedule start-up and checkout with the Owner and CA. The execution of the start-up and checkout shall be directed and performed by the Contractor, in accordance with manufacturer's published procedures and with the approved procedures. The CA may be present for the Contractor's required startup and checkout of all systems and equipment to be commissioned.
- F. Sensor Calibration. Calibration of all sensors shall be included as part of the pre-functional testing and listed on the appropriate test checklists and reports, according to the specified procedures and accuracies for the devices and systems being tested.
- G. All contractor responsible start-up, checkout forms shall be completed and submitted to the CA for review.

### 3.03 FUNCTIONAL PERFORMANCE TESTS

- A. Functional Performance Verification (FPV) is the dynamic testing of systems (rather than just individual components) under full, part and seasonal requirements. Systems are tested under various loads and control sequences, such as low cooling and heating loads, component failures, unoccupied modes, fire alarm, etc. The systems are run through all the control sequences of operation and components are verified to be responding as the design intent and documents. FPV shall include; testing all sequences of operations, verification of system capacity, generating simulated signals to simulate sensor values, conducting simulated conditions to tests all loads and verify system performance during all conditions of operation and verifying design intent. In addition, each system shall be tested through all modes of operation (seasonal, occupied, unoccupied, warm-up, cool-down, part and full load). Proper responses such as power failures, freeze conditions, low-oil pressures, equipment failures, etc. shall also be tested. The CA develops the functional test sheets and procedures in sequential written form, coordinates the testing, conducts the testing and documents the testing. Each contractor is required to supply personnel to assist during the functional performance testing where applicable.
- B. No system, equipment or component thereof shall be tested until the Contractor and the CM has certified, in writing, that the system, equipment and / or components are complete, have been tested, adjusted and balanced and are ready for validating and performance testing. FPV is scheduled by the CA after the pre-functional testing requirements are complete and signed-off by the CM and the CA. FPV will not be conducted until a written notice of completion by the CM confirming that the system is ready for FPV. The air balancing and water balancing must be complete and the controls must be debugged prior to the performance verification.
- C. Functional testing shall be conducted by the CA. Functional testing may not proceed until the systems have been properly installed, started-up and all deficiencies have been corrected.
- D. Functional testing is intended to begin upon completion of a system. Functional testing may proceed prior to the completion of systems or sub-systems at the discretion of the CA and CM. Beginning system testing before full completion shall not relieve the Contractor from fully completing the system, including all pre-functional checklists.
- E. The Contractor shall provide personnel to operate the systems while functional performance testing is commencing. This shall include but not be limited to; starting and stopping of systems, opening and closing valves to create false loads on the system (with the capabilities of the existing system) and allowing the CA to manipulate the building automation systems to modulate the system requirements.
- F. The Contractor shall review the commissioning functional performance testing procedure supplied by the CA. After functional testing commences, the Contractor and the CA shall sign

the functional test record and provide the owner and the CM a copy to review. All deficiencies either corrected in the field or outstanding shall be documented on the functional test forms for review by all parties.

- G. All functional testing must be completed and approved by the CA and the owner before the project will be considered substantially complete.

### 3.04 DEFERRED TESTING

- A. **Deferred Testing.** The Contractor shall be available to assist in seasonal testing (Summer, Winter and Intermediate), tests delayed until weather or other conditions until building construction is completed, required building occupancy or loading, or other conditions are suitable for the demonstration of equipment or system's performance, as specified. These deferred tests shall be conducted in the same manner as the seasonal tests as soon as possible. Deferred testing shall be executed, documented and deficiencies corrected as specified herein for functional performance testing. Any adjustments or corrections to the O&M manuals and "As built" documents required by the results of the testing shall be made before the seasonal testing process is considered complete.

### 3.05 TESTING DOCUMENTATION, NON-CONFORMANCE AND APPROVALS

- A. The CA shall clearly list any outstanding items of the initial start-up and pre-functional procedures that were not completed successfully. The testing form and any outstanding deficiencies shall be provided to the CM/Owner within two days of test completion. The CA shall review the Contractor's startup testing reports and shall submit either a non-compliance report or an approval form to the Contractor. The CA shall work with the Contractor and others as necessary, to correct and retest deficiencies or uncompleted items. The Contractor shall correct all areas that are deficient or incomplete in the checklists and tests in a timely manner, and shall notify the CA as soon as outstanding items have been corrected and resubmit an updated start-up report with a Statement of Correction on the original non-compliance report. When all requirements are satisfactorily completed, the CA shall recommend approval of the startup and pre-functional testing of each system and schedule the functional testing of the equipment or system.
- B. As functional performance testing progresses and a deficiency is identified, the CA shall discuss the issue with the executing contractor and the commissioning team.
  - 1. When there is no dispute of the deficiency and the Contractor accepts responsibility for correcting it, the CA shall document the deficiency and the Contractor's response and intentions and the testing shall proceed, if possible. Corrections of minor deficiencies identified may be made by the Contractor during the functional performance testing, at the discretion of the CA. Every effort shall be made or expedite the testing process and minimize unnecessary delays, while not compromising the integrity of the commissioning effort.
  - 2. When the identified deficiency is corrected, the Contractor shall sign the statement of correction at the bottom of the non-compliance form, certifying that the equipment is ready to be retested, and return the form to the CA. The CA shall schedule the retest of the equipment or system involved.
  - 3. If there is a dispute about an identified deficiency, the CA shall document the deficiency and the Contractor's response, and provide a copy to the Contractor. Every attempt shall be made to resolve the dispute at the lowest management level possible. When the dispute resolution has been decided, the appropriate party corrects the deficiency, signs the statement of correction on the non-compliance form and returns the form to the CA. The CA shall schedule the retest of the equipment or system involved. Final interpretive authority shall be the A/E. Final acceptance authority shall be the Owner.

- C. During the functional performance testing of multiple units of similar equipment, the CA will test all of the installed equipment and components identified. If, under such a testing procedure, three or more identical pieces of equipment (size along does not constitute difference) fail to perform to the requirements of the Contract Documents (mechanically or substantively) due to manufacturing or installation defects not allowing it to meet its submitted performance spec, all identical units may be considered unacceptable by the CA. In such a case, the Contractor shall provide the CA with the following:
1. Within one week of notification from the CA, the Contractor or manufacturer's representative shall examine all other identical units making a record of the findings. The findings shall be provided to the CA within two weeks of the original notice.
  2. Within two weeks of the original notification, the Contractor shall provide the CA and the A/E a signed and dated, written explanation of the problem, cause of failures, etc., and proposed solution, including full equipment submittals for corrective or replacement equipment, if appropriate. The proposed solution shall not be for less than the specification requirements of the original installation.
  3. When approved, two examples of the proposed solution shall be installed by the Contractor and the CA shall schedule and conduct functional testing of the proposed solution. Upon completion of the functional testing of the proposed solution, the CA shall recommend the acceptance or disapproval of the proposed solution to the Owner.
  4. Upon acceptance of the proposed solution by the Owner, the Contractor shall replace or repair all identical items, at their expenses and extend the warranty accordingly, if the original equipment warranty had begun. The replacement/repair work shall proceed with reasonable speed beginning within one week of approval of the proposed solution.
  5. Cost of Retesting
    - a. The cost for CA and/or Owner personnel to conduct the retesting of a functional performance testing requirements necessitated because a specific pre-functional or start-up test item, reported to have been successfully completed, but found to be incomplete or faulty, shall be the responsibility of the Contractor.
    - b. For a deficiency identified during the functional testing, not related to any pre-functional checklist or start-up fault, the CA and Owner shall direct the retesting of the equipment once at "no charge" for their time. However, all costs for any subsequent retesting shall be the responsibility of the Contractor.
    - c. Items left incomplete, which later cause deficiencies or delays during functional testing may result in back-charges to the responsible party.

### 3.06 OPERATION AND MAINTENANCE (O&M) MANUALS

- A. The following O&M manual requirements do not replace O&M manual documentation requirements elsewhere in these specifications. A detailed listing of O&M requirements is listed in Section 019113.
- B. Division 23 shall compile and prepare documentation for all equipment and systems covered in Division 23 and deliver this documentation to the CM for inclusion in the O&M manuals, according to this section and Section 019113, prior to the training of owner personnel.
- C. The CA shall receive a copy of the O&M manuals for review.
- D. Operation and maintenance documentation, in hardback 3-ring loose-leaf binders except full size drawings and diskettes, shall cover all mechanical systems. Documentation shall include the following: operations and maintenance documentation directory; emergency information; operating manual; emergency information; maintenance manual; test reports; and construction documents.

- E. The operation and maintenance documentation package shall be submitted as one comprehensive package to the Owner and CA before systems start-up and commissioning, and shall be updated, revised and completed during, and at completion of, commissioning.

### 3.07 TRAINING OF OWNER PERSONNEL

- A. The mechanical commissioning supervisor shall be responsible for training coordination and scheduling of required training and for ensuring that all required training is completed. The CA shall oversee the content and adequacy of the training of Owner personnel.
- B. Prepare and submit a syllabus describing an overview of the program, describing how the program will be conducted, when and where meetings are to be held, names and company affiliations of lecturers, description of contents and outline for each lecture, and recommended reference material and outside reading. Obtain direction from the Owner on which operating personnel shall be instructed in each system. Proposed training schedules, materials, and lesson plans shall be submitted to the CA for review of the content and adequacy of the training of Owner personnel for commissioned equipment or systems.
- C. Mechanical Contractor. The mechanical contractor shall have the following training responsibilities:
  - 1. Provide the CA with training plan one week before the planned training.
  - 2. Provide designated Owner personnel with comprehensive orientation and training in the understanding of the systems and the operation and maintenance of each piece of equipment.
  - 3. Training shall normally start with classroom sessions followed by hands-on training on each piece of equipment.
  - 4. During any demonstration, should the system fail to perform in accordance with the requirements of the O&M manual or sequence of operations, the system will be repaired or adjusted as necessary and the demonstration repeated.
  - 5. The appropriate trade or manufacturer's representative shall provide the instructions on each major piece of equipment. This person may be the start-up technician for the piece of equipment, the installing contractor or manufacturer's representative. Practical building operating expertise, as well as in-depth knowledge of all modes of operation of the specific piece of equipment, is required. More than one party may be required to execute the training.
  - 6. The controls contractor shall attend sessions other than the controls training, for each type of equipment controlled by the BAS, to discuss the interaction of the BAS as it relates to the equipment being discussed.
  - 7. The training sessions shall follow the outline in the Table of Contents of the operation and maintenance manual and illustrate whenever possible the use of the O&M manuals for reference.

### 3.08 WRITTEN WORK PRODUCTS

- A. Written work products of Contractors shall consist of the start-up and initial checkout plan and the filled out start-up, initial checkout and pre-functional checklists.

**END OF SECTION 230800**

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

- A. All work of this Division shall be coordinated and provided by the single Building Management System (BMS) Contractor.
- B. The work of this Division shall be scheduled, coordinated, and interfaced with the associated work of other trades. Reference the Division 23 Sections for details.
- C. The work of this Division shall be as required by the Specifications, Point Schedules and Drawings.
- D. If the BMS Contractor believes there are conflicts or missing information in the project documents, the Contractor shall promptly request clarification and instruction from the design team.

1.02 BMS DESCRIPTION

- A. The Building Management System (BMS) shall be a complete system designed for use with the enterprise IT systems. This functionality shall extend into the equipment rooms. Devices residing on the automation network located in equipment rooms and similar shall be fully IT compatible devices that mount and communicate directly on the IT infrastructure in the facility. Contractor shall be responsible for coordination with the owner's IT staff to ensure that the BMS will perform in the owner's environment without disruption to any of the other activities taking place on that LAN.
- B. All points of user interface shall be on standard PCs that do not require the purchase of any special software from the BMS manufacturer for use as a building operations terminal. The primary point of interface on these PCs will be a standard Web Browser.
- C. Servers shall be used for the purpose of providing a location for extensive archiving of system configuration data, and historical data such as trend data and operator transactions. All data stored will be through the use of a standard data base platform: Microsoft SQL Server Express or Microsoft SQL Server as dictated elsewhere in this specification.
- D. The work of the single BMS Contractor shall be as defined individually and collectively in all Sections of this Division specification together with the associated Point Sheets and Drawings and the associated interfacing work as referenced in the related documents.
- E. The BMS work shall consist of the provision of all labor, materials, tools, equipment, software, software licenses, software configurations and database entries, interfaces, wiring, tubing, installation, labeling, engineering, calibration, documentation, samples, submittals, testing, commissioning, training services, permits and licenses, transportation, shipping, handling, administration, supervision, management, insurance, temporary protection, cleaning, cutting and patching, warranties, services, and items, even though these may not be specifically mentioned in these Division documents which are required for the complete, fully functional and commissioned BMS.
- F. Provide a complete, neat and workmanlike installation. Use only manufacturer employees who are skilled, experienced, trained, and familiar with the specific equipment, software, standards and configurations to be provided for this Project.
- G. The BMS as provided shall incorporate, at minimum, the following integrated features, functions and services:
  - 1. Operator information, alarm management and control functions.

2. Enterprise-level information and control access.
3. Information management including monitoring, transmission, archiving, retrieval, and reporting functions.
4. Diagnostic monitoring and reporting of BMS functions.
5. Offsite monitoring and management access.
6. Energy management
7. Standard applications for terminal HVAC systems.
8. BACnet integration to the Variable Refrigerant Flow Equipment

### 1.03 QUALITY ASSURANCE

#### A. General

1. The Building Management System Contractor shall be a manufacturer-owned branch office of a recognized national manufacturer that is regularly engaged in the engineering, programming, installation and service of total integrated Building Management Systems.
2. Quality Management Program
  - a. Designate a competent and experienced employee to provide BMS Project Management. The designated Project Manager shall be empowered to make technical, scheduling and related decisions on behalf of the BMS Contractor. At minimum, the Project Manager shall:
    - 1) Manage the scheduling of the work to ensure that adequate materials, labor and other resources are available as needed.
    - 2) Manage the financial aspects of the BMS Contract.
    - 3) Coordinate as necessary with other trades.
    - 4) Be responsible for the work and actions of the BMS workforce on site.

### 1.04 WORK BY OTHERS

- A. The demarcation of work and responsibilities between the BMS Contractor and other related trades shall be as outlined in the BMS RESPONSIBILITY MATRIX:

| WORK                                                                              | FURNISH         | INSTALL         | LOW VOLT. WIRING/TUBE | LINE POWER            |
|-----------------------------------------------------------------------------------|-----------------|-----------------|-----------------------|-----------------------|
| BMS low voltage wiring                                                            | BMS             | BMS             | BMS                   | N/A                   |
| BMS communications bus wiring                                                     | BMS             | BMS             | BMS                   | N/A                   |
| BMS conduits and raceway                                                          | BMS             | BMS             | BMS                   | BMS                   |
| Automatic dampers                                                                 | BMS             | HVAC Contractor | N/A                   | N/A                   |
| Automatic valves                                                                  | HVAC Contractor | HVAC Contractor | BMS                   | N/A                   |
| Pipe insertion devices and taps including thermowells, flow and pressure stations | BMS             | HVAC Contractor | BMS                   | BMS                   |
| BMS Current Switches                                                              | BMS             | BMS             | BMS                   | N/A                   |
| BMS Control Relays                                                                | BMS             | BMS             | BMS                   | N/A                   |
| All BMS Nodes, equipment, housings, enclosures and panels                         | BMS             | BMS             | BMS                   | Electrical Contractor |
| Packaged RTU Network Thermostats                                                  | BMS             | BMS             | BMS                   | Electrical Contractor |
| Packaged RTU factory-mounted controls                                             | HVAC Contractor | HVAC Contractor | HVAC Contractor       | Electrical Contractor |

### 1.05 SUBMITTALS

- A. Shop Drawings, Product Data, and Samples
  - 1. The BMS contractor shall submit a list of all shop drawings with submittals dates within 30 days of contract award.
  - 2. Submittals shall be in defined packages. Each package shall be complete and shall only reference itself and previously submitted packages. The packages shall be as approved by the Architect and Engineer for Contract compliance.
  - 3. Allow 15 working days for the review of each package by the Architect and Engineer in the scheduling of the total BMS work.
  - 4. Equipment and systems requiring approval of local authorities must comply with such regulations and be approved. Filing shall be at the expense of the BMS Contractor where filing is necessary. Provide a copy of all related correspondence and permits to the Owner.
  - 5. Prepare an index of all submittals and shop drawings for the installation. Index shall include a shop drawing identification number, Contract Documents reference and item description.
  - 6. The BMS Contractor shall correct any errors or omissions noted in the first review.
  - 7. At a minimum, submit the following:
    - a. BMS network architecture diagrams including all nodes and interconnections.
    - b. Systems schematics, sequences and flow diagrams.
    - c. Points schedule for each point in the BMS, including: Point Type, Object Name, Expanded ID, Display Units, Controller type, and Address.
    - d. Samples of Graphic Display screen types and associated menus.
    - e. Detailed Bill of Material list for each system or application, identifying quantities, part numbers, descriptions, and optional features.
    - f. Control Damper Schedule including a separate line for each damper provided under this section and a column for each of the damper attributes, including: Code Number, Fail Position, Damper Type, Damper Operator, Duct Size, Damper Size, Mounting, and Actuator Type.
    - g. Details of all BMS interfaces and connections to the work of other trades.
    - h. Product data sheets or marked catalog pages including part number, photo and description for all products including software.

### 1.06 RECORD DOCUMENTATION

- A. Operation and Maintenance Manuals
  - 1. Three (3) copies of the Operation and Maintenance Manuals shall be provided to the Owner's Representative upon completion of the project. The entire Operation and Maintenance Manual shall be furnished on Compact Disc media, and include the following for the BMS provided:
    - a. Table of contents.
    - b. As-built system record drawings. Computer Aided Drawings (CAD) record drawings shall represent the as-built condition of the system and incorporate all information supplied with the approved submittal.
    - c. Manufacturer's product data sheets or catalog pages for all products including software.
    - d. System Operator's manuals.
    - e. Archive copy of all site-specific databases and sequences.
    - f. BMS network diagrams.
    - g. Interfaces to all third-party products and work by other trades.
    - h. The Operation and Maintenance Manual CD shall be self-contained, and include all necessary software required to access the product data sheets. A logically organized

table of contents shall provide dynamic links to view and print all product data sheets.

Viewer software shall provide the ability to display, zoom, and search all documents.

2. On-Line documentation: After completion of all tests and adjustments the contractor shall provide a copy of all as-built information and product data to be installed on a customer designated computer workstation or server

#### 1.07 WARRANTY

- A. Standard Material and Labor Warranty:
  1. Provide a one-year labor and material warranty on the BMS.
  2. If within twelve (12) months from the date of acceptance of product, upon written notice from the owner, it is found to be defective in operation, workmanship or materials, it shall be replaced, repaired or adjusted at the option of the BMS Contractor at the cost of the BMS Contractor.
  3. Maintain an adequate supply of materials within 100 miles of the Project site such that replacement of key parts and labor support, including programming. Warranty work shall be done during BMS Contractor's normal business hours.

### PART 2 - PRODUCTS

#### 2.01 LARGE GENERAL DESCRIPTION

- A. The Building Management System (BMS) shall use an open architecture and fully support a multi-vendor environment. To accomplish this effectively, the BMS shall support open communication protocol standards and integrate a wide variety of third-party devices and applications. The system shall be designed for use on the Internet, or intranets using off the shelf, industry standard technology compatible with other owner provided networks.
- B. The Building Management System shall consist of the following:
  1. Standalone Network Automation Engine(s)
  2. Field Equipment Controller(s)
  3. Input/Output Module(s)
  4. Local Display Device(s)
  5. Distributed User Interface(s)
  6. Network processing, data storage and communications equipment
  7. Other components required for a complete and working BMS
  8. The system shall be modular in nature, and shall permit expansion of both capacity and functionality through the addition of sensors, actuators, controllers and operator devices, while re-using existing controls equipment.
  9. System architectural design shall eliminate dependence upon any single device for alarm reporting and control execution.
    - a. The failure of any single component or network connection shall not interrupt the execution of control strategies at other operational devices.
    - b. The System shall maintain all settings and overrides through a system reboot.
  10. System architectural design shall eliminate dependence upon any single device for alarm reporting and control execution.
  11. Acceptable Manufacturers
    - a. LG, MultiSITE
    - b. Johnson Controls, Metasys
    - c. Trane, Tracer

#### 2.02 BMS ARCHITECTURE

- A. Automation Network

1. The automation network shall be based on a PC industry standard of Ethernet TCP/IP. Where used, LAN controller cards shall be standard "off the shelf" products available through normal PC vendor channels.
  2. The BMS shall network multiple user interface clients, automation engines, system controllers and application-specific controllers. Provide one (1) application and data system server for long term data storage that also permits up to five (5) simultaneous system users.
  3. All BMS devices on the automation network shall be capable of operating at a communication speed of 100 Mbps, with full peer-to-peer network communication.
  4. Network Automation Engines (NAE) and Network Control Engines (NCE) shall reside on the automation network.
  5. The automation network will be compatible with other enterprise-wide networks. Where indicated, the automation network shall be connected to the enterprise network and share resources with it by way of standard networking devices and practices.
- B. Control Network
1. Network Automation Engines (NAE) and Network Control Engines (NCE) shall provide supervisory control over the control network and shall be capable of supporting both of the following communication protocols as required:
    - a. BACnet Standard MS/TP Bus Protocol ASHRAE SSPC-135, Clause 9
    - b. LonWorks enabled devices using the Free Topology Transceiver (FTT-10a).
  2. The Network Engines shall be BACnet Testing Labs (BTL) certified and carry the BTL Label. The NAE shall be tested and certified as a BACnet Building Controller (B-BC).
  3. Control networks shall provide either "Peer-to-Peer," Master-Slave, or Supervised Token Passing communications, and shall operate at a minimum communication speed of 9600 baud.
  4. DDC Controllers shall reside on the control network.
  5. Control network communication protocol shall be BACnet Standard MS/TP Bus Protocol ASHRAE SSPC-135. LonWorks is only acceptable for third party integration where the third party device is unable to communicate using BACnet protocol.
  6. A BACnet Protocol Implementation Conformance Statement (PICS) shall be provided for each controller device (master or slave) that will communicate on the BACnet MS/TP Bus.
  7. The PICS shall be submitted prior to contract award, when requested, as a condition of award. Otherwise, they shall be part of the project submittal package.
- C. Integration
1. BACnet Protocol Integration - BACnet
    - a. The neutral protocol used between systems shall be either BACnet over Ethernet and comply with the ASHRAE BACnet standard 135-2008 or BACnet MS/TP communicating at 38,400 baud.
    - b. A complete Protocol Implementation Conformance Statement (PICS) shall be provided for all BACnet system devices.
    - c. The ability to command, share point object data, change of state (COS) data and schedules between the host and BACnet systems shall be provided.

## 2.03 USER INTERFACE

- A. Dedicated Web Based User Interface
1. The BMS Contractor shall provide and install on the maintenance manager's personal computer the ability for command entry, information management, network alarm management, and database management functions for the BMS. All real-time control functions, including scheduling, history collection and alarming, shall be resident in the BMS Network Automation Engines to facilitate greater fault tolerance and reliability.
  2. Dedicated User Interface Architecture - The architecture of the computer shall be implemented to conform to industry standards, so that it can accommodate applications

provided by the BMS Contractor and by other third party applications suppliers, including but not limited to Microsoft Office Applications. Specifically it must be implemented to conform to the following interface standards.

- a. Microsoft Internet Explorer for user interface functions
  - b. Microsoft Office Professional for creation, modification and maintenance of reports, sequences other necessary building management functions
  - c. Microsoft Outlook or other e-mail program for supplemental alarm functionality and communication of system events, and reports
  - d. Required network operating system for exchange of data and network functions such as printing of reports, trends and specific system summaries
3. Peripheral Hardware
- a. Reports printer:
    - 1) Printer Make - Hewlett Packard DeskJet
    - 2) Print Speed - 600 DPI Black, 300 DPI Color
    - 3) Buffer - 64 K Input Print Buffer
    - 4) Color Printing - Include Color Kit
- B. Distributed Web Based User Interface
1. All features and functions of the dedicated user interface previously defined in this document shall be available on any computer connected directly or via a wide area or virtual private network (WAN/VPN) to the automation network and conforming to the following specifications.
  2. The software shall run on the Microsoft Internet Explorer (7.0 or higher) browser supporting the following functions:
    - a. Configuration
    - b. Commissioning
    - c. Data Archiving
    - d. Monitoring
    - e. Commanding
    - f. System Diagnostics
  3. Minimum hardware requirements:
    - a. 1GB RAM
    - b. 2.0 GHz Clock Speed Pentium 4 Microprocessor
    - c. 100 GB Hard Drive.
    - d. 1 Keyboard with 83 keys (minimum).
    - e. SVGA 1024x768 resolution display with 64K colors and 16 bit color depth
    - f. Mouse or other pointing device
- C. Site Management User Interface Application Components
1. Operator Interface
    - a. An integrated browser based client application shall be used as the user operator interface program.
    - b. The System shall employ an event-driven rather than a device polling methodology to dynamically capture and present new data to the user.
    - c. All Inputs, Outputs, Setpoints, and all other parameters as defined within Part 3, shown on the design drawings, or required as part of the system software, shall be displayed for operator viewing and modification from the operator interface software.
    - d. The user interface software shall provide help menus and instructions for each operation and/or application.
    - e. The system shall support customization of the UI configuration and a home page display for each operator.
    - f. The system shall support user preferences in the following screen presentations:
      - 1) Alarm
      - 2) Trend
      - 3) Display

- 4) Applications
- g. All controller software operating parameters shall be displayed for the operator to view/modify from the user interface. These include: setpoints, alarm limits, time delays, PID tuning constants, run-times, point statistics, schedules, and so forth.
- h. The Operator Interface shall incorporate comprehensive support for functions including, but not necessarily limited to, the following:
  - 1) User access for selective information retrieval and control command execution
  - 2) Monitoring and reporting
  - 3) Alarm, non-normal, and return to normal condition annunciation
  - 4) Selective operator override and other control actions
  - 5) Information archiving, manipulation, formatting, display and reporting
  - 6) BMS internal performance supervision and diagnostics
  - 7) On-line access to user HELP menus
  - 8) On-line access to current BMS as-built records and documentation
  - 9) Means for the controlled re-programming, re-configuration of BMS operation and for the manipulation of BMS database information in compliance with the prevailing codes, approvals and regulations for individual BMS applications
- i. The system shall support a list of application programs configured by the users that are called up by the following means:
  - 1) The Tools Menu
  - 2) Hyperlinks within the graphics displays
  - 3) Key sequences
- j. The operation of the control system shall be independent of the user interface, which shall be used for operator communications only. Systems that rely on an operator workstation to provide supervisory control over controller execution of the sequences of operations or system communications shall not be acceptable.
2. Navigation Trees
  - a. The system will have the capability to display multiple navigation trees that will aid the operator in navigating throughout all systems and points connected. At minimum provide a tree that identifies all systems on the networks.
  - b. Provide the ability for the operator to add custom trees. The operator will be able to define any logical grouping of systems or points and arrange them on the tree in any order. It shall be possible to nest groups within other groups. Provide at minimum 5 levels of nesting.
  - c. The navigation trees shall be "dockable" to other displays in the user interface such as graphics. This means that the trees will appear as part of the display, but can be detached and then minimized to the Windows task bar. A simple keystroke will reattach the navigation to the primary display of the user interface.
3. Alarms
  - a. Alarms shall be routed directly from Network Automation Engines to PCs and servers. It shall be possible for specific alarms from specific points to be routed to specific PCs and servers. The alarm management portion of the user interface shall, at the minimum, provide the following functions:
    - 1) Log date and time of alarm occurrence.
    - 2) Generate a "Pop-Up" window, with audible alarm, informing a user that an alarm has been received.
    - 3) Allow a user, with the appropriate security level, to acknowledge, temporarily silence, or discard an alarm.
    - 4) Provide an audit trail on hard drive for alarms by recording user acknowledgment, deletion, or disabling of an alarm. The audit trail shall include the name of the user, the alarm, the action taken on the alarm, and a time/date stamp.
    - 5) Provide the ability to direct alarms to an e-mail address or alphanumeric pager. This must be provided in addition to the pop up window described above.

Systems that use e-mail and pagers as the exclusive means of annunciating alarms are not acceptable.

- 6) Any attribute of any object in the system may be designated to report an alarm.
- b. The BMS shall annunciate diagnostic alarms indicating system failures and non-normal operating conditions.
- c. The BMS shall allow a minimum of 4 categories of alarm sounds customizable through user defined wav.files.
- d. The BMS shall annunciate application alarms at minimum, as required by Part 3.
4. Reports and Summaries
  - a. Reports and Summaries shall be generated and directed to the user interface displays, with subsequent assignment to printers, or disk. As a minimum, the system shall provide the following reports:
    - 1) All points in the BMS
    - 2) All points in each BMS application
    - 3) All points in a specific controller
    - 4) All points in a user-defined group of points
    - 5) All points currently in alarm
    - 6) All points locked out
    - 7) All user defined and adjustable variables, schedules, interlocks and the like.
  - b. Summaries and Reports shall be accessible via standard UI functions and not dependent upon custom programming or user defined HTML pages.
  - c. Selection of a single menu item, tool bar item, or tool bar button shall print any displayed report or summary on the system printer for use as a building management and diagnostics tool.
  - d. Provide the capability to view, command and modify large quantities of similar data in tailored summaries created online without the use of a secondary application like a spreadsheet. Summary definition shall allow up to seven user defined columns describing attributes to be displayed including custom column labels. Up to 100 rows per summary shall be supported. Summary viewing shall be available over the network using a standard Web browser.
5. Schedules
  - a. A graphical display for time-of-day scheduling and override scheduling of building operations shall be provided. At a minimum, the following functions shall be provided:
    - 1) Weekly schedules
    - 2) Exception Schedules
    - 3) Monthly calendars
  - b. Weekly schedules shall be provided for each group of equipment with a specific time use schedule.
  - c. It shall be possible to define one or more exception schedules for each schedule including references to calendars
  - d. Monthly calendars shall be provided that allow for simplified scheduling of holidays and special days for a minimum of five years in advance. Holidays and special days shall be user-selected with the pointing device or keyboard, and shall automatically reschedule equipment operation as previously defined on the exception schedules.
  - e. Changes to schedules made from the User Interface shall directly modify the Network Automation Engine schedule database.
  - f. Schedules and Calendars shall comply with ASHRAE SP135/2008 BACnet Standard.
  - g. Selection of a single menu item or tool bar button shall print any displayed schedule on the system printer for use as a building management and diagnostics tool.
  - h. Software shall be provided to configure and implement optimal start and stop programming based on existing indoor and outdoor environmental conditions as well as equipment operating history
6. Password

- a. Multiple-level password access protection shall be provided to allow the user/manager to user interface control, display, and database manipulation capabilities deemed appropriate for each user, based on an assigned password.
  - b. Each user shall have the following: a user name (accept 24 characters minimum), a password (accept 12 characters minimum), and access levels.
  - c. The system shall allow each user to change his or her password at will.
  - d. When entering or editing passwords, the system shall not echo the actual characters for display on the monitor.
  - e. A minimum of six levels of access shall be supported individually or in any combination as follows:
    - 1) Level 1 = View Data
    - 2) Level 2 = Command
    - 3) Level 3 = Operator Overrides
    - 4) Level 4 = Database Modification
    - 5) Level 5 = Database Configuration
    - 6) Level 6 = All privileges, including Password Add/Modify
  - f. A minimum of 100 unique passwords shall be supported.
  - g. Operators shall be able to perform only those commands available for their respective passwords. Display of menu selections shall be limited to only those items defined for the access level of the password used to log-on.
  - h. Operators shall be further limited to only access, command, and modify those buildings, systems, and subsystems for which they have responsibility. Provide a minimum of 100 categories of systems to which individual operators may be assigned.
  - i. The system shall automatically generate a report of log-on/log-off and system activity for each user. Any action that results in a change in the operation or configuration of the control system shall be recorded, including: modification of point values, schedules or history collection parameters, and all changes to the alarm management system, including the acknowledgment and deletion of alarms.
7. Screen Manager
- a. The User Interface shall be provided with screen management capabilities that allow the user to activate, close, and simultaneously manipulate a minimum of 4 active display windows plus a network or user defined navigation tree.
8. Dynamic Color Graphics
- a. The graphics application program shall be supplied as an integral part of the User Interface. Browser or Workstation applications that rely only upon HTML pages shall not be acceptable.
  - b. The graphics applications shall include a create/edit function and a runtime function. The system architecture shall support an unlimited number of graphics documents (graphic definition files) to be generated and executed.
    - 1) The graphics shall be able to display and provide animation based on real-time data that is acquired, derived, or entered.
  - c. Graphics runtime functions - A maximum of 16 graphic applications shall be able to execute at any one time on a user interface or workstation with 4 visible to the user. Each graphic application shall be capable of the following functions:
    - 1) All graphics shall be fully scalable
    - 2) The graphics shall support a maintained aspect ratio.
    - 3) Multiple fonts shall be supported.
    - 4) Unique background shall be assignable on a per graphic basis.
    - 5) The color of all animations and values on displays shall indicate the status of the object attribute.
    - 6) Graphics that represent buildings or systems shall allow natural links and transitions between related detailed tabular views of data that compliment the graphic.

- d. Operation from graphics - It shall be possible to change values (setpoints) and states in system controlled equipment directly from the graphic.
- e. Floor Plan graphics - The user interface shall provide graphic applications that summarize conditions on a floor. Floor plan graphics shall indicate thermal comfort using dynamic colors to represent zone temperature deviations from zone setpoint(s). Floor plan graphics shall display overall metrics for each zone in the floor.
- f. Aliasing - Many graphic displays representing part of a building and various building components are exact duplicates, with the exception that the various variables are bound to different field values. Consequently, it shall be possible to bind the value of a graphic display to aliases, as opposed to the physical field tags.
- g. Graphic editing tool - A graphic editing tool shall be provided that allows for the creation and editing of graphic files. The graphic editor shall be capable of performing/defining all animations, and defining all runtime binding.
  - 1) The graphic editing tool shall provide a library of standard HVAC equipment, floor plan, lighting, security and network symbols.
  - 2) The graphic editing tool shall provide for the creation and positioning of library symbols by dragging from tool bars or drop-downs and positioning where required.
  - 3) The graphics editing tool shall permit the importing of AutoCAD drawings for use in the system.
  - 4) The graphic editing tool shall be able to add additional content to any graphic by importing images in the SVG, PNG or JPG file formats.
- 9. Historical trending and data collection
  - a. Each Automation Engine shall store trend and point history data for all analog and digital inputs and outputs, as follows:
    - 1) Any point, physical or calculated, may be designated for trending. Two methods of collection shall be allowed:
      - (a) Defined time interval
      - (b) Upon a change of value
      - (c) Each Automation Engine shall have the capability to store multiple samples for each physical point and software variable based upon available memory, including an individual sample time/date stamp. Points may be assigned to multiple history trends with different collection parameters.
  - b. Trend and change of value data shall be stored within the engine and uploaded to a dedicated trend database or exported in a selectable data format via a provided data export utility. Uploads to a dedicated database shall occur based upon one of the following: user-defined interval, manual command, or when the trend buffers are full. Exports shall be as requested by the user or on a time scheduled basis.
- 10. Trend data viewing and analysis
  - a. Provide a trend viewing utility that shall have access to all database points.
  - b. It shall be possible to retrieve any historical database point for use in displays and reports by specifying the point name and associated trend name.
  - c. The trend viewing utility shall have the capability to define trend study displays to include multiple trends
  - d. Displays shall be able to be single or stacked graphs with on-line selectable display characteristics, such as ranging, color, and plot style.
  - e. Display magnitude and units shall both be selectable by the operator at any time without reconfiguring the processing or collection of data. This is a zoom capability.
  - f. Display magnitude shall automatically be scaled to show full graphic resolution of the data being displayed.
  - g. The Display shall support the user's ability to change colors, sample sizes, and types of markers.
- 11. Database Management

- a. Where a separate SQL database is utilized for information storage the System shall provide a Database Manager that separates the database monitoring and managing functions by supporting two separate windows.
- b. Database secure access shall be accomplished using standard SQL authentication including the ability to access data for use outside of the Building Automation application.
- c. The database managing function shall include summarized information on trend, alarm, event, and audit for the following database management actions:
  - 1) Backup
  - 2) Purge
  - 3) Restore
- d. The Database Manager shall support four tabs:
  - 1) Statistics - shall display Database Server information and Trend, Alarm (Event), and Audit information on the databases.
  - 2) Maintenance - shall provide an easy method of purging records from the Server trend, alarm (event), and audit databases by supporting separate screens for creating a backup prior to purging, selecting the database, and allowing for the retention of a selected number of day's data.
  - 3) Backup - Shall provide the means to create a database backup file and select a storage location.
  - 4) Restore - shall provide a restricted means of restoring a database by requiring the user to log into an Expert Mode in order to view the Restore screen.
- e. The Status Bar shall appear at the bottom of all Database Manager Tabs and shall provide information on the current database activity. The following icons shall be provided:
  - 1) Ready
  - 2) Purging Record from a database
  - 3) Action Failed
  - 4) Refreshing Statistics
  - 5) Restoring database
  - 6) Shrinking a database
  - 7) Backing up a database
  - 8) Resetting internet information Services
  - 9) Starting the Device Manager
  - 10) Shutting down the Device Manager
  - 11) Action successful
- f. The Database Manager monitoring functions shall be accessed through the Monitoring Settings window and shall continuously read database information once the user has logged in.
- g. The System shall provide user notification via taskbar icons and e-mail messages when a database value has exceeded a warning or alarm limit.
- h. The Monitoring Settings window shall have the following sections:
  - 1) General - Shall allow the user to set and review scan intervals and start times.
  - 2) Email - Shall allow the user to create and review e-mail and phone text messages to be delivered when a Warning or Alarm is generated.
  - 3) Warning - shall allow the user to define the Warning limit parameters, set the Reminder Frequency, and link the e-mail message.
  - 4) Alarm - shall allow the user to define the Alarm limit parameters, set the Reminder Frequency, and link the e-mail message.
  - 5) Database login - Shall protect the system from unauthorized database manipulation by creating a Read Access and a Write Access for each of the Trend, Alarm (Event) and Audit databases as well as an Expert Mode required to restore a database.
- i. The Monitoring Settings Taskbar shall provide the following informational icons:
  - 1) Normal - Indicates by color and size that all databases are within their limits.

- 2) Warning - Indicates by color and size that one or more databases have exceeded their Warning limit.
  - 3) Alarm - Indicates by color and size that one or more databases have exceeded their Alarm limit.
- j. The System shall provide user notification via Taskbar icons and e-mail messages when a database value has exceeded a warning or alarm limit.

#### 2.04 NETWORK AUTOMATION ENGINES (NAE)

- A. The Network Automation Engine (NAE) shall be a fully user-programmable, supervisory controller. The NAE shall monitor the network of distributed application-specific controllers, provide global strategy and direction, and communicate on a peer-to-peer basis with other Network Engines.
- B. Automation network - The NAE shall reside on the automation network and shall support a subnet of system controllers.
- C. User Interface - Each NAE shall have the ability to deliver a web based User Interface (UI) as previously described. All computers connected physically or virtually to the automation network shall have access to the web based UI.
- D. The web based UI software shall be imbedded in the NAE. Systems that require a local copy of the system database on the user's personal computer are not acceptable.
- E. Network Automation Engines supporting 100 or fewer field controllers shall support a minimum of two (2) concurrent users. Network Engines with multiple field buses or supporting more than 100 field controllers shall support a minimum of four (4) concurrent users.
- F. The web based user shall have the capability to access all system data through one NAE.
- G. Remote users connected to the network through an Internet Service Provider (ISP) or telephone dial up shall also have total system access through one NAE.
- H. Systems that require the user to address more than one NAE to access all system information are not acceptable.
- I. The NAE shall have the capability of generating web based UI graphics. The graphics capability shall be imbedded in the NAE.
- J. Systems that support UI Graphics from a central database or require the graphics to reside on the user's personal computer are not acceptable.
- K. The web based UI shall support the following functions using a standard version of Microsoft Internet Explorer:
  1. Configuration
  2. Commissioning
  3. Data Archiving
  4. Monitoring
  5. Commanding
  6. System Diagnostics
    - a. Systems that require workstation software or modified web browsers are not acceptable.
    - b. The NAE shall allow temporary use of portable devices without interrupting the normal operation of permanently connected modems.
    - c. Processor - The NAE shall be microprocessor-based with a minimum word size of 32 bits. The NAE shall be a multi-tasking, multi-user, and real-time digital control

- processor. Standard operating systems shall be employed. NAE size and capability shall be sufficient to fully meet the requirements of this Specification.
- d. Memory - Each NAE shall have sufficient memory to support its own operating system, databases, and control programs, and to provide supervisory control for all control level devices.
  - e. Hardware Real Time Clock - The NAE shall include an integrated, hardware-Based, real-time clock.
  - f. Communications Ports - Network Automation Engines supporting 100 or fewer field controllers shall provide the following ports for operation of operator Input/Output (I/O) devices, such as industry-standard computers, modems, and portable operator's terminals.
    - 1) USB port
    - 2) URS-232 serial data communication port
    - 3) RS-485 port
    - 4) Ethernet port
7. Network Automation Engines with multiple field buses or supporting more than 100 field controllers shall provide the following ports for operation of operator Input/Output (I/O) devices, such as industry-standard computers, modems, and portable operator's terminals.
    - a. Two (2) USB port
    - b. Two (2) URS-232 serial data communication port
    - c. Two (2) RS-485 port
    - d. One (1) Ethernet port
  8. Diagnostics - The NAE shall continuously perform self-diagnostics, communication diagnosis, and diagnosis of all panel components. The Network Automation Engine shall provide both local and remote annunciation of any detected component failures, low battery conditions, or repeated failures to establish communication.
  9. Power Failure - In the event of the loss of normal power, The NAE shall continue to operate for a user adjustable period of up to 10 minutes after which there shall be an orderly shutdown of all programs to prevent the loss of database or operating system software.
  10. During a loss of normal power, the control sequences shall go to the normal system shutdown conditions. All critical configuration data shall be saved into Flash memory.
  11. Upon restoration of normal power and after a minimum off-time delay, the controller shall automatically resume full operation without manual intervention through a normal soft-start sequence.
  12. Certification - The NAE shall be listed by Underwriters Laboratories (UL).

## 2.05 NETWORK CONTROL ENGINE (NCE)

- A. The Network Control Engine (NCE) shall meet all of the programming, supervisory and communications requirements of the Network Automation Engine described above plus provide the additional features and capabilities described below.
- B. The Network Control Engine (NCE) shall be a fully user-programmable, digital controller that includes a minimum of 33 I/O points. It shall reside on the automation network and shall support a subnet of 32 Field Controllers
- C. User Interface - Each NCE shall have the ability to deliver a web based User Interface (UI) as previously described for Network Automation Engines.
- D. The NCE shall employ a finite state control engine to eliminate unnecessary conflicts between control functions at crossover points in their operational sequences. Suppliers using non-state based DDC shall provide separate control strategy diagrams for all controlled functions in their submittals as well as four (4) hours per controller per warranty year per controller to re-tune

loops according to current system conditions. This time shall be equally divided between the change from heating season to cooling season and back to heating season.

- E. The NCE shall be factory programmed with a continuous adaptive tuning algorithm that senses changes in the physical environment and continually adjusts loop tuning parameters appropriately. Controllers that require manual tuning of loops or perform automatic tuning on command only shall not be acceptable.
- F. The NCE shall be assembled in a plenum-rated plastic housing with flammability rated to UL94-5VB.
- G. The NCE shall support the following number and types of inputs and outputs:
  - 1. Ten Universal Inputs - shall be configured to monitor any of the following:
    - a. Analog Input, Voltage Mode
    - b. Analog Input, Current Mode
    - c. Analog Input, Resistive Mode
    - d. Binary Input, Dry Contact Maintained Mode
    - e. Binary Input, Pulse Counter Mode
    - f. Eight Binary Inputs - shall be configured to monitor either of the following:
      - g. Dry Contact Maintained Mode
      - h. Pulse Counter Mode
  - 2. Four Analog Outputs - shall be configured to output either of the following
    - a. Analog Output, Voltage Mode
    - b. Analog Output, Current Mode
  - 3. Seven Binary Outputs - shall output the following:
    - a. 24 VAC Triac
  - 4. Four Configurable Outputs - shall be configured to output either of the following:
    - a. Analog Output, Voltage Mode
    - b. Binary Output, 24 VAC Triac Mode
  - 5. The NCE shall have the ability to monitor and control a network of sensors and actuators over a Sensor-Actuator Bus (SA Bus). The SA Bus shall be a Master-Slave/Token-Passing (MS/TP) Bus supporting BACnet Standard protocol SSPC-135, Clause 9.
  - 6. The NCE shall have the capability to execute complex control sequences involving direct wired I/O points as well as input and output devices communicating over the Field Trunk or the SA Bus.
  - 7. All Network Control Engines shall be provided with a panel mountable Local Controller Display either as an integral part of the NCE or as a remote device communicating over the SA Bus.
  - 8. The Display shall use a BACnet Standard SSPC-135, clause 9 Master-Slave/Token-Passing protocol and shall allow the user to view monitored points without logging into the system.
  - 9. The Display shall provide password protection with User adjustable password time-out. It shall also allow the user to view and change setpoints, modes of operation, and parameters.
  - 10. The Display shall be menu driven with separate paths for:
    - a. Input/Output
    - b. Parameter/Setpoint
    - c. Overrides
  - 11. The Display shall use easy-to-read English text messages and shall allow the user to select the points to be shown and in what order.
  - 12. The Display shall support a back lit Liquid Crystal Display (LCD) with adjustable contrast and brightens and automatic backlight brightening during user interaction.
  - 13. The display shall be a minimum of 4 lines and a minimum of 20 characters per line

14. The NCE shall be microprocessor-based with a minimum word size of 32 bits. The processor shall be a multi-tasking, multi-user, and real-time digital control processor. Standard operating systems shall be employed. NCE size and capability shall be sufficient to fully meet the requirements of this Specification.
15. Each NCE shall have sufficient memory to support its own operating system, databases, and control programs, and to provide supervisory control for all control level devices.
16. The NCE shall employ nonvolatile Flash memory to store all programs and data. The NCE shall employ a data protection battery to save data and power the real time clock when primary power is interrupted.
17. Communications Ports - The NCE shall provide the following ports for operation of operator Input/Output (I/O) devices, such as industry-standard computers, modems, and portable operator's terminals.
  - a. USB port
  - b. RS-232 serial data communication port
  - c. RS-485 port
  - d. RJ-45 Ethernet port
  - e. RJ-12 jack
  - f. The NCE shall support an optional internal modem with RJ-12 6-pin telephone line connector.
18. Diagnostics - The NCE shall continuously perform self-diagnostics, communication diagnosis, and diagnosis of all panel components. The Network Control Engine shall provide both local and remote annunciation of any detected component failures, low battery conditions, or repeated failures to establish communication.
19. Power Failure - In the event of the loss of normal power, The NCE shall continue to operate for a user adjustable period of up to 10 minutes after which there shall be an orderly shutdown of all programs to prevent the loss of database or operating system software.
20. During a loss of normal power, the control sequences shall go to the normal system shutdown conditions. All critical configuration data shall be saved into Flash memory.
21. Upon restoration of normal power and after a minimum off-time delay, the controller shall automatically resume full operation without manual intervention through a normal soft-start sequence.
22. Field Controller Bus - The NCE shall support the same communication protocols as described for the Network Engines.

## 2.06 DDC SYSTEM CONTROLLERS

### A. Field Equipment Controller (FEC)

1. The Field Equipment Controller (FEC) shall be a fully user-programmable, digital controller that supports and communicates via BACnet Standard MS/TP Bus Protocol ASHRAE SSPC-135, Clause 9 on the controller network. It shall be BACnet Testing Labs (BTL) certified as a BACnet Application Specific Controller (B-ASC) and carry the BTL Label.
2. The FEC shall employ a finite state control engine to eliminate unnecessary conflicts between control functions at crossover points in their operational sequences. Suppliers using non-state based DDC shall provide separate control strategy diagrams for all controlled functions in their submittals as well as four (4) hours per warranty year per controller to re-tune loops according to current system conditions. This time shall be equally divided between the change from heating season to cooling season and back to heating season.
3. Controllers shall be factory programmed with a continuous adaptive tuning algorithm that senses changes in the physical environment and continually adjusts loop tuning parameters appropriately. Controllers that require manual tuning of loops or perform automatic tuning on command only shall not be acceptable.
4. The FEC shall be assembled in a plenum-rated plastic housing with flammability rated to UL94-5VB. It shall include troubleshooting LED indicators.

5. The FEC shall support the following types of direct wired inputs and outputs:
  - a. Universal Inputs - shall be configured to monitor any of the following:
    - 1) Analog Input, Voltage Mode
    - 2) Analog Input, Current Mode
    - 3) Analog Input, Resistive Mode
    - 4) Binary Input, Dry Contact Maintained Mode
    - 5) Binary Input, Pulse Counter Mode
  - b. Binary Inputs - shall be configured to monitor either of the following:
    - 1) Dry Contact Maintained Mode
    - 2) Pulse Counter Mode
  - c. Analog Outputs - shall be configured to output either of the following:
    - 1) Analog Output, Voltage Mode
    - 2) Analog Output, current Mode
  - d. Binary Outputs - shall output the following:
    - 1) 24 VAC Triac
  - e. Configurable Outputs - shall be capable of the following:
    - 1) Analog Output, Voltage Mode
    - 2) Binary Output Mode
6. The FEC shall have the ability to reside on a Field Controller Bus (FC Bus).
7. The FC Bus shall be a Master-Slave/Token-Passing (MS/TP) Bus supporting BACnet Standard protocol SSPC-135, Clause 9.
8. The FC Bus shall support communications between the FECs and NAE(s) or NCE(s).
9. The FC Bus shall also support Input/Output Module (IOM) communications with the FEC and with the NAE or NCE.
10. The FEC shall have the ability to monitor and control a network of sensors and actuators over a Sensor-Actuator Bus (SA Bus). The SA Bus shall be a Master-Slave/Token-Passing (MS/TP) Bus supporting BACnet Standard Protocol SSPC-135, Clause 9.
11. The FEC shall support, but not be limited to, the following applications:
  - a. Optional chilled water/central plant optimization applications
  - b. Heating central plant applications
  - c. Built-up air handling units for special applications
  - d. Terminal & package units
  - e. Special programs as required for systems control
12. The FEC shall support the same Local Controller Display previously described for use with the Network Control Engine. All FEC controllers located indoors serving mechanical equipment other than ceiling hung terminal units shall be provided with their own Local Controller Display.

## 2.07 FIELD DEVICES

- A. Input/Output Module (IOM)
  1. The Input/Output Module (IOM) provides additional inputs and outputs for use in the FEC.
  2. The IOM shall communicate with the FEC over the FC Bus or the SA Bus.
  3. The IOM shall support BACnet Standard MS/TP Bus Protocol ASHRAE SSPC-135, Clause 9 on the controller network.
    - a. The IOM shall be BACnet Testing Labs (BTL) certified and carry the BTL Label.
    - b. The IOM shall be tested and certified as a BACnet Application Specific Controller (B-ASC).
    - c. A BACnet Protocol Implementation Conformance Statement shall be provided for the FEC.
  4. The IOM shall be assembled in a plenum-rated plastic housing with flammability rated to UL94-5VB.

B. Networked Thermostat (TEC)

1. The networked thermostat shall be capable of controlling two- or four-pipe fan coils, cabinet unit heaters, reheat coil valves or other similar equipment.
2. The TEC shall communicate over the Field Controller Bus using BACnet Standard MS/TP Bus Protocol ASHRAE SSPC-135, Clause 9.
3. The TEC shall be BACnet Testing Labs (BTL) certified and carry the BTL Label.
  - a. The TEC shall be tested and certified as a BACnet Application Specific Controller (B-ASC).
  - b. A BACnet Protocol Implementation Conformance Statement shall be provided for the TEC.
4. The Networked Thermostat shall support remote read/write and parameter adjustment from the web based User Interfaceable through a Network Automation Engine.
5. The Networked Thermostat shall include an intuitive User Interface providing plain text messages.
  - a. Two line, 8 character backlit display
  - b. LED indicators for Fan, Heat, and Cool status
  - c. Five (5) User Interface Keys
    - 1) Mode
    - 2) Fan
    - 3) Override
    - 4) Degrees C/F
    - 5) Up/Down
  - d. The display shall continuously scroll through the following parameters:
    - 1) Room Temperature
    - 2) System Mode
    - 3) Schedule Status - Occupied/Unoccupied/Override
    - 4) Applicable Alarms
6. The Networked Thermostat shall provide the flexibility to support any one of the following inputs:
  - a. Integral Indoor Air Temperature Sensor
  - b. Duct Mount Air Temperature Sensor
  - c. Remote Indoor Air Temperature Sensor with Occupancy Override and LED Indicator
  - d. Two configurable binary inputs
7. The Networked Thermostat shall provide the flexibility to support any one of the following outputs:
  - a. Three Speed Fan Control
  - b. Two On/Off
  - c. Two Floating
  - d. Two Proportional (0 to 10V)
8. The Networked Thermostat shall provide a minimum of six (6) levels of keypad lockout.
9. The Networked Thermostat shall provide the flexibility to adjust the following parameters:
10. Adjustable Temporary Occupancy from 0 to 24 hours
11. Adjustable heating/cooling deadband from 2° F to 5° F
12. Adjustable heating/cooling cycles per hour from 4 to 8
13. Where required by application and indicated on plans or room schedules provide the Networked Thermostat with an integral Passive Infra-Red (PIR) occupancy sensor.
14. The Networked Thermostat shall employ nonvolatile electrically erasable programmable read-only memory (EEPROM) for all adjustable parameters.

2.08 SYSTEM TOOLS

A. System Configuration Tool (SCT)

1. The Configuration Tool shall be a software package enabling a computer platform to be used as a stand-alone engineering configuration tool for a Network Automation Engine (NAE).
2. The configuration tool shall provide an archive database for the configuration and application data.
3. The configuration tool shall have the same look-and-feel at the User Interface (UI) regardless of whether the configuration is being done online or offline.
4. The configuration tool shall include the following features:
  - a. Basic system navigation tree for connected networks
  - b. Integration of MultiSITE, Metasys N1, Tracer, LonWorks, and BACnet enabled devices
  - c. Customized user navigation trees
  - d. Point naming operating parameter setting
  - e. Graphic diagram configuration
  - f. Alarm and event message routing
  - g. Graphical logic connector tool for custom programming
  - h. Downloading, uploading, and archiving databases
5. The configuration tool shall have the capability to automatically discover field devices on connected buses and networks. Automatic discovery shall be available for the following field devices:
  - a. BACnet Devices
  - b. LonWorks devices
6. The configuration tool shall be capable of programming the Field Equipment Controllers.
  - a. The configuration tool shall provide the capability to configure, simulate, and commission the Field Equipment Controllers.
  - b. The configuration tool shall allow the FECs to be run in Simulation Mode to verify the applications.
  - c. The configuration tool shall contain a library of standard applications to be used for configuration.
7. The configuration tool shall be capable of programming the field devices.
  - a. The configuration tool shall provide the capability to configure, simulate, and commission the field devices.
  - b. The configuration tool shall allow the field devices to be run in Simulation Mode to verify the applications.
  - c. The configuration tool shall contain a library of standard applications to be used for configuration
8. A wireless access point shall allow a wireless enabled portable PC to make a temporary Ethernet connection to the automation network.
  - a. The wireless connection shall allow the PC to access configuration tool through the web browser using the User Interface (UI).
  - b. The wireless use of configuration tool shall be the same as a wired connection in every respect.
  - c. The wireless connection shall use the Bluetooth Wireless Technology.

## 2.09 INPUT DEVICES

### A. General Requirements

1. Installation, testing, and calibration of all sensors, transmitters, and other input devices shall be provided to meet the system requirements.

### B. Temperature Sensors

1. General Requirements:
  - a. Sensors and transmitters shall be provided, as outlined in the input/output summary and sequence of operations.

- b. The temperature sensor shall be of the resistance type, and shall be either two-wire 1000 ohm nickel RTD, or two-wire 1000 ohm platinum RTD.
- c. The following point types (and the accuracy of each) are required, and their associated accuracy values include errors associated with the sensor, lead wire, and A to D conversion:

| Point Type       | Accuracy  |
|------------------|-----------|
| Accuracy         | +/- .5°F  |
| Room Temp        | +/- .5°F  |
| Duct Temperature | +/- .5°F  |
| All Others       | +/- .75°F |

- 2. Room Temperature Sensors
  - a. Room sensors shall be constructed for either surface or wall box mounting.
  - b. Room sensors shall have the following options:
    - 1) Setpoint reset slide switch providing a +3 degree (adjustable) range.
    - 2) A momentary override request push button for activation of after-hours operation.
- 3. Room Temperature Sensors with Integral Display
  - a. Room sensors shall have an integral display when specified in the sequence of operations or elsewhere in these documents.
- 4. Thermo wells
  - a. When thermo wells are required, the sensor and well shall be supplied as a complete assembly, including wellhead and Greenfield fitting.
  - b. Thermo wells shall be pressure rated and constructed in accordance with the system working pressure.
  - c. Thermo wells and sensors shall be mounted in a threadolet or 1/2" NPT saddle and allow easy access to the sensor for repair or replacement.
  - d. Thermo wells shall be constructed of 316 stainless steel.
- 5. Outside Air Sensors
  - a. Outside air sensors shall be designed to withstand the environmental conditions to which they will be exposed. They shall also be provided with a solar shield.
  - b. Sensors exposed to wind velocity pressures shall be shielded by a perforated plate that surrounds the sensor element.
  - c. Temperature transmitters shall be of NEMA 3R construction and rated for ambient temperatures.
- 6. Duct Mount Sensors
  - a. Duct mount sensors shall mount in an electrical box through a hole in the duct, and be positioned so as to be easily accessible for repair or replacement.
  - b. Duct sensors shall be insertion type and constructed as a complete assembly, including lock nut and mounting plate.
  - c. For outdoor air duct applications, a weatherproof mounting box with weatherproof cover and gasket shall be used.
- 7. Averaging Sensors
  - a. For ductwork greater in any dimension than 48 inches and/or where air temperature stratification exists, an averaging sensor with multiple sensing points shall be used.
  - b. For plenum applications, such as mixed air temperature measurements, a string of sensors mounted across the plenum shall be used to account for stratification and/or air turbulence. The averaging string shall have a minimum of 4 sensing points per 12-foot long segment.
  - c. Capillary supports at the sides of the duct shall be provided to support the sensing string.
- 8. Acceptable Manufacturers: Johnson Controls, Trane, LG, Setra.

C. Humidity Sensors

1. The sensor shall be a solid-state type, relative humidity sensor of the Bulk Polymer Design. The sensor element shall resist service contamination.
2. The humidity transmitter shall be equipped with non-interactive span and zero adjustments, a 2-wire isolated loop powered, 4-20 mA, 0-100% linear proportional output.
3. The humidity transmitter shall meet the following overall accuracy, including lead loss and Analog to Digital conversion. 3% between 20% and 80% RH @ 77 Deg F unless specified elsewhere.
4. Outside air relative humidity sensors shall be installed with a rain proof, perforated cover. The transmitter shall be installed in a NEMA 3R enclosure with sealtite fittings and stainless steel bushings.
5. A single point humidity calibrator shall be provided, if required, for field calibration. Transmitters shall be shipped factory pre-calibrated.
6. Duct type sensing probes shall be constructed of 304 stainless steel, and shall be equipped with a neoprene grommet, bushings, and a mounting bracket.
7. Acceptable Manufacturers: Johnson Controls, Bapi, Trane, LG, Veris Industries, and Mamac.

D. Differential Pressure Transmitters

1. General Air and Water Pressure Transmitter Requirements:
  - a. Pressure transmitters shall be constructed to withstand 100% pressure over-range without damage, and to hold calibrated accuracy when subject to a momentary 40% over-range input.
  - b. Pressure transmitters shall transmit a 0 to 5 VDC, 0 to 10 VDC, or 4 to 20 mA output signal.
  - c. Differential pressure transmitters used for flow measurement shall be sized to the flow sensing device, and shall be supplied with Tee fittings and shut-off valves in the high and low sensing pick-up lines to allow the balancing Contractor and Owner permanent, easy-to-use connection.
  - d. A minimum of a NEMA 1 housing shall be provided for the transmitter. Transmitters shall be located in accessible local control panels wherever possible.
2. Building Differential Air Pressure Applications (-1" to +1" w.c.)
  - a. The differential pressure transmitter shall be of industrial quality and transmit a linear, 4 to 20 mA output in response to variation of differential pressure or air pressure sensing points.
  - b. The differential pressure transmitter shall have non-interactive zero and span adjustments that are adjustable from the outside cover and meet the following performance specifications:
    - 1) -1.00 to +1.00 w.c. input differential pressure ranges. (Select range appropriate for system application)
    - 2) 4-20 mA output.
    - 3) Maintain accuracy up to 20 to 1 ratio turndown.
    - 4) Reference Accuracy: +0.2% of full span.
  - c. Acceptable Manufacturers: Johnson Controls, Trane, LG, and Setra.
3. Low Differential Air Pressure Applications (0" to 5" w.c.)
  - a. The differential pressure transmitter shall be of industrial quality and transmit a linear, 4 to 20 mA output in response to variation of differential pressure or air pressure sensing points.
  - b. The differential pressure transmitter shall have non-interactive zero and span adjustments that are adjustable from the outside cover and meet the following performance specifications:
    - 1) (0.00 - 1.00" to 5.00") w.c. input differential pressure ranges. (Select range appropriate for system application.)
    - 2) 4-20 mA output.

- 3) Maintain accuracy up to 20 to 1 ratio turndown.
    - 4) Reference Accuracy: +0.2% of full span.
  - c. Acceptable Manufacturers: Johnson Controls, Dwyer, Trane, LG, and Setra.
- E. Status and Safety Switches
  - 1. General Requirements
    - a. Switches shall be provided to monitor equipment status, safety conditions, and generate alarms at the BMS when a failure or abnormal condition occurs. Safety switches shall be provided with two sets of contacts and shall be interlock wired to shut down respective equipment.
  - 2. Current Sensing Switches
    - a. The current sensing switch shall be self-powered with solid-state circuitry and a dry contact output. It shall consist of a current transformer, a solid state current sensing circuit, adjustable trip point, solid state switch, SPDT relay, and an LED indicating the on or off status. A conductor of the load shall be passed through the window of the device. It shall accept over-current up to twice its trip point range.
    - b. Current sensing switches shall be used for run status for fans, pumps, and other miscellaneous motor loads.
    - c. Current sensing switches shall be calibrated to show a positive run status only when the motor is operating under load. A motor running with a broken belt or coupling shall indicate a negative run status.
    - d. Acceptable manufacturers: Veris Industries, Functional Devices, Johnson Controls, Trane, LG
  - 3. Air Filter Status Switches
    - a. Differential pressure switches used to monitor air filter status shall be of the automatic reset type with SPDT contacts rated for 2 amps at 120VAC.
    - b. A complete installation kit shall be provided, including: static pressure tops, tubing, fittings, and air filters.
    - c. Provide appropriate scale range and differential adjustment for intended service.
    - d. Acceptable manufacturers: Johnson Controls, Dwyer, Cleveland Controls, Trane, LG.
  - 4. Air Flow Switches
    - a. Differential pressure flow switches shall be bellows actuated mercury switches or snap acting micro-switches with appropriate scale range and differential adjustment for intended service.
    - b. Acceptable manufacturers: Johnson Controls, Cleveland Controls, Trane, LG
  - 5. Air Pressure Safety Switches
    - a. Air pressure safety switches shall be of the manual reset type with SPDT contacts rated for 2 amps at 120VAC.
    - b. Pressure range shall be adjustable with appropriate scale range and differential adjustment for intended service.
    - c. Acceptable manufacturers: Johnson Controls, Cleveland Controls, Trane, LG.
  - 6. Low Temperature Limit Switches
    - a. The low temperature limit switch shall be of the manual reset type with Double Pole/Single Throw snap acting contacts rated for 16 amps at 120VAC.
    - b. The sensing element shall be a minimum of 15 feet in length and shall react to the coldest 18-inch section. Element shall be mounted horizontally across duct in accordance with manufacturers recommended installation procedures.
    - c. For large duct areas where the sensing element does not provide full coverage of the air stream, additional switches shall be provided as required to provide full protection of the air stream.
    - d. Acceptable manufacturers: Johnson Controls, Trane, LG.

## 2.10 OUTPUT DEVICES

### A. Actuators

1. General Requirements
  - a. Damper and valve actuators shall be electronic and/or pneumatic, as specified in the System Description section.
2. Electronic Damper Actuators
  - a. Electronic damper actuators shall be direct shaft mount.
  - b. Modulating and two-position actuators shall be provided as required by the sequence of operations. Damper sections shall be sized Based on actuator manufacturer's recommendations for face velocity, differential pressure and damper type. The actuator mounting arrangement and spring return feature shall permit normally open or normally closed positions of the dampers, as required. All actuators (except terminal units) shall be furnished with mechanical spring return unless otherwise specified in the sequences of operations. All actuators shall have external adjustable stops to limit the travel in either direction, and a gear release to allow manual positioning.
  - c. Modulating actuators shall accept 24 VAC or VDC power supply, consume no more than 15 VA, and be UL listed. The control signal shall be 2-10 VDC or 4-20 mA, and the actuator shall provide a clamp position feedback signal of 2-10 VDC. The feedback signal shall be independent of the input signal and may be used to parallel other actuators and provide true position indication. The feedback signal of one damper actuator for each separately controlled damper shall be wired back to a terminal strip in the control panel for trouble-shooting purposes.
  - d. Two-position or open/closed actuators shall accept 24 or 120 VAC power supply and be UL listed. Isolation, smoke, exhaust fan, and other dampers, as specified in the sequence of operations, shall be furnished with adjustable end switches to indicate open/closed position or be hard wired to start/stop associated fan. Two-position actuators, as specified in sequences of operations as "quick acting," shall move full stroke within 20 seconds. All smoke damper actuators shall be quick acting.
  - e. Acceptable manufacturers: Johnson Controls, Belimo, Honeywell, Mamac.
3. Electronic Valve Actuators
  - a. Electronic valve actuators shall be manufactured by the valve manufacturer.
  - b. Each actuator shall have current limiting circuitry incorporated in its design to prevent damage to the actuator.
  - c. Modulating and two-position actuators shall be provided as required by the sequence of operations. Actuators shall provide the minimum torque required for proper valve close-off against the system pressure for the required application. The valve actuator shall be sized Based on valve manufacturer's recommendations for flow and pressure differential. All actuators shall fail in the last position unless specified with mechanical spring return in the sequence of operations. The spring return feature shall permit normally open or normally closed positions of the valves, as required. All direct shaft mount rotational actuators shall have external adjustable stops to limit the travel in either direction.
  - d. Modulating Actuators shall accept 24 VAC or VDC and 120 VAC power supply and be UL listed. The control signal shall be 2-10 VDC or 4-20 mA and the actuator shall provide a clamp position feedback signal of 2-10 VDC. The feedback signal shall be independent of the input signal, and may be used to parallel other actuators and provide true position indication. The feedback signal of each valve actuator (except terminal valves) shall be wired back to a terminal strip in the control panel for trouble-shooting purposes.
  - e. Two-position or open/closed actuators shall accept 24 or 120 VAC power supply and be UL listed. Butterfly isolation and other valves, as specified in the sequence of operations, shall be furnished with adjustable end switches to indicate open/closed position or be hard wired to start/stop the associated pump or chiller.
  - f. Acceptable manufacturers: Johnson Controls, Belimo, Honeywell

**B. Control Valves**

1. All automatic control valves shall be fully proportioning and provide near linear heat transfer control. The valves shall be quiet in operation and fail-safe open, closed, or in their last position. All valves shall operate in sequence with another valve when required by the sequence of operations. All control valves shall be sized by the control manufacturer, and shall be guaranteed to meet the heating and cooling loads, as specified. All control valves shall be suitable for the system flow conditions and close against the differential pressures involved. Body pressure rating and connection type (sweat, screwed, or flanged) shall conform to the pipe schedule elsewhere in this Specification.
  2. Chilled water control valves shall be modulating plug, ball, and/or butterfly, as required by the specific application. Modulating water valves shall be sized per manufacturer's recommendations for the given application. In general, valves (2 or 3-way) serving variable flow air handling unit coils shall be sized for a pressure drop equal to the actual coil pressure drop, but no less than 5 PSI. Valves (3-way) serving constant flow air handling unit coils with secondary circuit pumps shall be sized for a pressure drop equal to 25% the actual coil pressure drop, but no less than 2 PSI. Mixing valves (3-way) serving secondary water circuits shall be sized for a pressure drop of no less than 5 PSI. Valves for terminal reheat coils shall be sized for a 2 PSIG pressure drop, but no more than a 5 PSI drop.
  3. Ball valves shall be used for hot and chilled water applications, water terminal reheat coils, radiant panels, unit heaters, package air conditioning units, and fan coil units except those described hereinafter.
  4. Modulating plug water valves of the single-seat type with equal percentage flow characteristics shall be used for all special applications as indicated on the valve schedule. Valve discs shall be composition type. Valve stems shall be stainless steel.
  5. Butterfly valves shall be acceptable for modulating large flow applications greater than modulating plug valves, and for all two-position, open/close applications. In-line and/or three-way butterfly valves shall be heavy-duty pattern with a body rating comparable to the pipe rating, replaceable lining suitable for temperature of system, and a stainless steel vane. Valves for modulating service shall be sized and travel limited to 50 degrees of full open. Valves for isolation service shall be the same as the pipe. Valves in the closed position shall be bubble-tight.
  6. Acceptable manufacturers: Johnson Controls, Belimo, Armstrong.
- C. Electronic Signal Isolation Transducers
1. A signal isolation transducer shall be provided whenever an analog output signal from the BMS is to be connected to an external control system as an input (such as a chiller control panel), or is to receive as an input signal from a remote system.
  2. The signal isolation transducer shall provide ground plane isolation between systems.
  3. Signals shall provide optical isolation between systems.
  4. Acceptable manufacturers: Advanced Control Technologies, Kele, Johnson Controls, Trane, LG.

## 2.11 MISCELLANEOUS DEVICES

- A. Local Control Panels
1. All control panels shall be factory constructed, incorporating the BMS manufacturer's standard designs and layouts. All control panels shall be UL inspected and listed as an assembly and carry a UL 508 label listing compliance. Control panels shall be fully enclosed, with perforated sub-panel, hinged door, and slotted flush latch.
  2. In general, the control panels shall consist of the DDC controller(s), display module as specified and indicated on the plans, and I/O devices-such as relays, transducers, and so forth-that are not required to be located external to the control panel due to function. Where specified the display module shall be flush mounted in the panel face unless otherwise noted.
  3. All I/O connections on the DDC controller shall be provide via removable or fixed screw terminals.

4. Low and line voltage wiring shall be segregated. All provided terminal strips and wiring shall be UL listed, 300-volt service and provide adequate clearance for field wiring.
5. All wiring shall be neatly installed in plastic trays or tie-wrapped.
6. A 120 volt convenience outlet, fused on/off power switch, and required transformers shall be provided in each enclosure.

### PART 3 - PERFORMANCE/EXECUTION

#### 3.01 BMS SPECIFIC REQUIREMENTS

- A. Graphic Displays
  1. Provide a color graphic system flow diagram display for each system with all points as indicated on the point list. All terminal unit graphic displays shall be from a standard design library.
  2. User shall access the various system schematics via a graphical penetration scheme and/or menu selection. .
- B. Remote Access:
  1. (Optional) Via Client Portal software provide the Owner the ability to use a smart device such as a tablet PC, I-phone or other smart hone, to remotely monitor and control the BMS system. Provide unique login passwords to limit the remote user to the AC unit associated with his/her space within the building.

#### 3.02 INSTALLATION PRACTICES

- A. BMS Wiring
  1. All conduit, wiring, accessories and wiring connections required for the installation of the Building Management System, as herein specified, shall be provided by the BMS Contractor unless specifically shown on the Electrical Drawings under Division 16 Electrical. All wiring shall comply with the requirements of applicable portions of Division 16 and all local and national electric codes, unless specified otherwise in this section.
  2. All BMS wiring materials and installation methods shall comply with BMS manufacturer recommendations.
  3. The sizing, type and provision of cable, conduit, cable trays, and raceways shall be the design responsibility of the BMS Contractor. If complications arise, however, due to the incorrect selection of cable, cable trays, raceways and/or conduit by the BMS Contractor, the Contractor shall be responsible for all costs incurred in replacing the selected components.
  4. Class 2 Wiring
    - a. All Class 2 (24VAC or less) wiring shall be installed in conduit unless otherwise specified.
    - b. Conduit is not required for Class 2 wiring in concealed accessible locations. Class 2 wiring not installed in conduit shall be supported every 5' from the building structure utilizing metal hangers designed for this application. Wiring shall be installed parallel to the building structural lines. All wiring shall be installed in accordance with local code requirements.
  5. Class 2 signal wiring and 24VAC power can be run in the same conduit. Power wiring 120VAC and greater cannot share the same conduit with Class 2 signal wiring.
  6. Provide for complete grounding of all applicable signal and communications cables, panels and equipment so as to ensure system integrity of operation. Ground cabling and conduit at the panel terminations. Avoid grounding loops.
- B. BMS Line Voltage Power Source
  1. 120-volt AC circuits used for the Building Management System shall be taken from panel boards and circuit breakers provided by Division 16.

2. Circuits used for the BMS shall be dedicated to the BMS and shall not be used for any other purposes.
  3. DDC terminal unit controllers may use AC power from motor power circuits.
- C. BMS Raceway
1. All wiring shall be installed in conduit or raceway except as noted elsewhere in this specification. Minimum control wiring conduit size 3/4".
  2. Where it is not possible to conceal raceways in finished locations, surface raceway (Wiremold) may be used as approved by the Architect.
  3. All conduits and raceways shall be installed level, plumb, at right angles to the building lines and shall follow the contours of the surface to which they are attached.
  4. Flexible Metal Conduit shall be used for vibration isolation and shall be limited to 3 feet in length when terminating to vibrating equipment. Flexible Metal Conduit may be used within partition walls. Flexible Metal Conduit shall be UL listed.
- D. Penetrations
1. Provide fire stopping for all penetrations used by dedicated BMS conduits and raceways.
  2. All openings in fire proofed or fire stopped components shall be closed by using approved fire resistive sealant.
  3. All wiring passing through penetrations, including walls shall be in conduit or enclosed raceway.
  4. Penetrations of floor slabs shall be by core drilling. All penetrations shall be plumb, true, and square.
- E. BMS Identification Standards
1. Node Identification. All nodes shall be identified by a permanent label fastened to the enclosure. Labels shall be suitable for the node location.
    - a. Cable types specified in Item A shall be color coded for easy identification and troubleshooting.
- F. BMS Panel Installation
1. The BMS panels and cabinets shall be located as indicated at an elevation of not less than 2 feet from the bottom edge of the panel to the finished floor. Each cabinet shall be anchored per the manufacturer's recommendations.
  2. The BMS contractor shall be responsible for coordinating panel locations with other trades and electrical and mechanical contractors.
- G. Input Devices
1. All Input devices shall be installed per the manufacturer recommendation
  2. Locate components of the BMS in accessible local control panels wherever possible.
- H. HVAC Input Devices - General
1. All Input devices shall be installed per the manufacturer recommendation
  2. Locate components of the BMS in accessible local control panels wherever possible.
  3. The mechanical contractor shall install all in-line devices such as temperature wells, pressure taps, airflow stations, etc.
  4. Outside Air Sensors
    - a. Sensors shall be mounted on the North wall to minimize solar radiant heat impact or located in a continuous intake flow adequate to monitor outside air conditions accurately.
    - b. Sensors shall be installed with a rain proof, perforated cover.
  5. Building Differential Air Pressure Applications (-1" to +1" w.c.):
    - a. Transmitters exterior sensing tip shall be installed with a shielded static air probe to reduce pressure fluctuations caused by wind.
    - b. The interior tip shall be inconspicuous and located as shown on the drawings.

6. Duct Temperature Sensors:
  - a. Duct mount sensors shall mount in an electrical box through a hole in the duct and be positioned so as to be easily accessible for repair or replacement.
  - b. The sensors shall be insertion type and constructed as a complete assembly including lock nut and mounting plate.
  - c. For ductwork greater in any dimension than 48 inches or where air temperature stratification exists such as a mixed air plenum, utilize an averaging sensor.
  - d. The sensor shall be mounted to suitable supports using factory approved element holders.
7. Space Sensors:
  - a. Shall be mounted per ADA requirements.
  - b. Provide lockable tamper-proof covers in public areas and/or where indicated on the plans.
8. Low Temperature Limit Switches:
  - a. Install on the discharge side of the first water or steam coil in the air stream.
  - b. Mount element horizontally across duct in a serpentine pattern insuring each square foot of coil is protected by 1 foot of sensor.
  - c. For large duct areas where the sensing element does not provide full coverage of the air stream, provide additional switches as required to provide full protection of the air stream.
9. Air Differential Pressure Status Switches:
  - a. Install with static pressure tips, tubing, fittings, and air filter.
10. Water Differential Pressure Status Switches:
  - a. Install with shut off valves for isolation.
- I. HVAC Output Devices
  1. All output devices shall be installed per the manufacturers recommendation. The mechanical contractor shall install all in-line devices such as control valves, dampers, airflow stations, pressure wells, etc.
  2. Actuators: All control actuators shall be sized capable of closing against the maximum system shut-off pressure. The actuator shall modulate in a smooth fashion through the entire stroke.
  3. Control Dampers: Shall be opposed blade for modulating control of airflow. Parallel blade dampers shall be installed for two position applications.
  4. Control Valves: Shall be sized for proper flow control with equal percentage valve plugs. The maximum pressure drop for water applications shall be 5 PSI. The maximum pressure drop for steam applications shall be 7 PSI.

### 3.03 TRAINING

- A. The BMS contractor shall provide the following training services:
  1. Forty (40) hours of on-site orientation by a system technician who is fully knowledgeable of the specific installation details of the project. This orientation shall, at a minimum, consist of a review of the project as-built drawings, the BMS software layout and naming conventions, and a walk through of the facility to identify panel and device locations.

### 3.04 COMMISSIONING

- A. Fully commission all aspects of the Building Management System work.
- B. Acceptance Check Sheet
  1. Prepare a check sheet that includes all points for all functions of the BMS as indicated on the point list included in this specification.
  2. Submit the check sheet to the Engineer for approval

3. The Engineer will use the check sheet as the basis for acceptance with the BMS Contractor.
- C. Promptly rectify all listed deficiencies and submit to the Engineer that this has been done.

**END OF SECTION 230923**

## PART 1 - GENERAL

## 1.01 DESCRIPTION OF WORK

- A. The work specified as part of this Section consists of the integration of equipment controls supplied as part of manufactured items, materials and equipment required by the Drawings and under Divisions 23 and 26 to achieve operational and coordinated Sequences of Operation as Specified. Work shall include management of the system start up and operational check out, coordination of functions of controllers supplied as part of equipment packages, sizing of control valves and damper operators for dampers, interconnection of systems, provision and installation of all accessory devices required for complete system operation including dampers, control valves and actuators not provided as part of equipment, coordination of start up and testing and demonstration of the operation of Sequences of Operation to the Owner and his representatives.

## 1.02 RELATED SECTIONS

- A. The General Conditions of the Contract, Supplementary Conditions, and General Requirements are a part of these Specifications and shall be used in conjunction with this Section as a part of the Contract Documents. Consult them for further instructions pertaining to this work. The Contractor is bound by the provisions of Division 00 and Division 01.
- B. The following Sections constitute related work:
  - 1. Section 230010 - General Mechanical Requirements
  - 2. Equipment and Systems specified under Division 23
  - 3. Division 26

## 1.03 QUALITY ASSURANCE

- A. System Installer Qualifications
  - 1. The Integrator shall have a minimum of five years experience in the integration of systems of a similar nature to those of this Project.
  - 2. The Integrator shall have an office within 50 miles of the project site and provide 24-hour response in the event of a customer call.
- B. Codes and Standards: Meet requirements of all applicable standards and codes, except when more detailed or stringent requirements are indicated by the Contract Documents, including requirements of this Section.
  - 1. Underwriters Laboratories: Products shall be UL-916-PAZX listed.
  - 2. National Electrical Code - NFPA 70.
- C. All products used in this installation shall be new, currently under manufacture, and shall have been applied in similar installations for a minimum of 2 years. This installation shall not be used as a test site for any new products unless explicitly approved by the Owner's representative in writing prior to bid date. Spare parts shall be available for at least 5 years after completion of this Contract.

## 1.04 SUBMITTALS

- A. Submit at the time of bid the name and qualifications of the firm that will be responsible for the Integration function along with the qualifications of the specific personnel proposed. The Owner and Architect/Engineer may choose to interview the personnel proposed for the project.
- B. Contractor shall provide shop drawings and manufacturer's standard specification data sheets on all materials and hardware to be provided. No work may begin on any segment of this project until the Architect/Engineer and Owner have reviewed submittals for conformity with the

Drawings and Specifications. All shop drawings shall be provided to the Owner electronically as .dwg or .dxf file formats.

- C. Submit a written sequence of operation for each system indicating which functions are to be controlled by controls provided as part of manufactured equipment and which functions will be under control of devices provided as part of this Section.
- D. Submit interconnecting wiring diagrams for all systems. These diagrams may rely on diagrams for controls of manufactured equipment provided that the interface points are clearly identified and copies of the manufactured item's control diagrams are submitted for information as part of the submittal package.
- E. Submit any additional information or data which is deemed necessary to determine compliance with these specifications or which is deemed valuable in documenting the system to be installed.
- F. Submit the following within 30 days of contract award:
  - 1. A work plan and schedule for the start up and check out of all systems including time requirements and resources required from all Sub-Contractors involved.
  - 2. A complete list of equipment to be used indicating quantity, manufacturer and model number.
  - 3. A schedule of all control valves including the valve size, model number (including pattern and connections), flow, CV, pressure rating, and location.
  - 4. A schedule of all control dampers. This shall include the damper size, pressure drop, manufacturer and model number.
  - 5. Provide manufacturers cut sheets for major system components. When manufacturer's cut sheets apply to a product series rather than a specific product, the data specifically applicable to the project shall be highlighted or clearly indicated by other means. Each submitted piece of literature and drawings shall clearly reference the specification and/or drawing that the submittal is being submitted to cover.
  - 6. The submittals required under this Section shall be considered as For Information Only. Review by the Architect/Engineer shall not relieve the Contractor from the responsibility of providing fully operational systems.

#### 1.05 WARRANTY

- A. Warrant all work as follows:
  - 1. Labor & materials for control system specified shall be warranted free from defects for a period of twelve (12) months after final completion acceptance by the Owner. Control System failures during the warranty period shall be adjusted, repaired, or replaced at no charge or reduction in service to the Owner. The Contractor shall respond to the Owner's request for warranty service within 24 hours during customary business hours.
  - 2. At the end of the final start-up/testing, if equipment and systems are operating in a manner satisfactory to the Owner and Architect/Engineer, the Owner shall sign certificates certifying that the control system's operation has been tested and accepted in accordance with the terms of this Specification. The date of Owner's acceptance shall be the start of warranty.

### PART 2 - PRODUCTS

#### 2.01 STANDARD OF QUALITY AND PERFORMANCE

- A. Products specified are not intended to form a complete scope of supply. They are intended to set a level of quality for items that the Contractor may need to supply to implement a complete Sequence of Operation. Products of a comparable quality and performance may be submitted for approval by the Architect/Engineer.

## 2.02 MOTORIZED DAMPERS

- A. Dampers shall be modulating double-acting opposed blade or parallel blade dampers as required, designed and tested in accordance with AMCA 500. Obtain and verify the location, size and pressure rating of each damper prior to fabrication and delivery. Verify the layout of equipment and ductwork before dampers are fabricated. Pressure drop shall not exceed 0.03 inches water gauge static pressure at 1000 fpm in the fully-open position, and shall be rated for at least 2000 fpm average velocity. Damper shut-off pressure rating shall exceed the fan maximum total head-pressure.
- B. Dampers shall be constructed of extruded aluminum or at least No. 16 gauge galvanized steel, with each blade being not more than 8 inches; wide damper frame channel shall be at least 5 inches deep. Each blade end shall have a 3/8 inch stainless steel or plated steel shaft rotating in self-lubricating bearings mounted in a damper channel frame. Blades mounted vertically shall be supported by thrust bearings. Control shaft shall be at least 1/2 inch diameter.
- C. Flat-steel damper blades shall be made rigid by folding the edges. Blades shall have interlocking edges and shall be provided with EPDM or neoprene compressible seals at point of contact. Foam seals are not acceptable. Provide compression-type stainless steel jamb seals continuously along blade edges.
- D. Each damper shall be assembled in the manufacturer's shop as a complete unit. Dampers, when closed, shall be guaranteed by the manufacturer not to leak in excess of 20 cfm per square foot at 4 inches w.g. static pressure. Provide dampers with operators having sufficient power to limit leakage to the rate specified.
- E. Damper seals shall be suitable for an operating range of minus 20 degrees F (or 20 degrees F below the heating outside design temperature, whichever is lower) at the lower end to 200 degrees F at the upper end.
- F. A complete damper assembly shall have blades no longer than 48 inches and no higher than 48 inches. Where greater length or height is required, the assembly shall be made of a combination of sections. Dampers shall be sized for the required air velocity and pressure classification.
- G. Approved Manufacturers:
  - 1. Arrow Damper & Louver or approved equal.
  - 2. Greenheck
  - 3. Ruskin

## 2.03 ELECTRONIC DAMPER/VALVE ACTUATORS

- A. The actuator shall have electronic overload or digital rotation sensing circuitry to prevent damage to the actuator throughout the rotation of the actuator.
- B. For power-failure/safety applications, an internal mechanical, spring return mechanism shall be built into the actuator housing.
  - 1. Damper actuators shall fail normally open or closed as described on the Drawings or as follows:
    - a. Outdoor Air Intake - normally closed.
    - b. Air Exhaust - normally closed.
    - c. Other applications - as required by the Sequence of Operation.
- C. All rotary spring return actuators shall be capable of both clockwise and counter clockwise spring return operation.

- D. Proportional actuators shall accept a 0-10 VDC or 0-20 ma control signal and provide a 2-10 VDC or 4-20 ma operating range.
- E. All 24 VAC/DC actuators shall operate on Class 2 wiring and shall not require more than 10 VA for AC or more than 8 W for DC applications. Actuators operating on 120 VAC or 230 VAC shall not required more than 11 VA.
- F. All non-spring return actuators shall have an external manual gear release to allow manual positioning of the damper when the actuator is not powered. Spring return actuators with more than 60 in-lb. torque capacity shall have a manual crank for this purpose.
- G. Actuators shall be provided with a conduit fitting and a minimum 1 meter electrical cable and shall be pre-wired to eliminate the necessity of opening the actuator housing to make electrical connections.
- H. All modulating actuators shall have an external, built-in switch to allow the reversing of direction of rotation
- I. Actuators shall be Underwriters Laboratories Standard 873 listed.
- J. Actuators shall be designed for a minimum of 60,000 full stroke cycles at the actuator's rated torque.
- K. Provide a single damper actuator when dampers are less than 4 feet in width. Otherwise provide two damper actuators (one on each side of the ductwork).
- L. Approved Manufacturers
  - 1. Belimo
  - 2. Honeywell
  - 3. Johnson Controls

#### 2.04 CONTROL VALVES

- A. Control valves shall be two-way or three-way type for two-position or modulating service as required.
- B. Close-off (differential) Pressure Rating: Valve actuator and trim shall be furnished to provide the following minimum close-off pressure ratings:
  - 1. Water Valves:
    - a. Two-way: 150% of total system (pump) head.
    - b. Three-way: 300% of pressure differential between ports A and B at design flow or 100% of total system (pump) head.
  - 2. Steam Valves: 150% of operating (inlet) pressure.
- C. Valve Failure Position:
  - 1. Valves shall fail normally open or closed as indicated on the Drawings or as follows:
    - a. Heating coils in air handlers - normally open.
    - b. Chilled water control valves - normally closed
    - c. Other applications - as scheduled or as required by Sequence of Operation.
  - 2. Zone valves shall be sized to meet the control application and they shall maintain their last position in the event of a power failure.
- D. Water Valves:
  - 1. Body and trim materials shall be as specified in "Pipe, Valve & Fittings" specification. Equal percentage ports for modulating service.

2. Sizing Criteria:
  - a. Three-way Modulating Service: Pressure drop equal to twice the pressure drop through the coil exchanger (load), [5] psi maximum.
  - b. Contractor shall verify sizing criteria with manufacturer.
- E. Approved Manufacturers:
  1. Griswold Controls
  2. Johnson Controls
  3. Armstrong
  4. Bray

## 2.05 TEMPERATURE SENSORS

- A. Temperature sensors shall be Resistance Temperature Device (RTD) or Thermistor.
- B. Duct sensors shall be rigid or averaging as required. Averaging sensors shall be a minimum of 5 feet in length.
- C. Immersion sensors shall be provided with a separable stainless steel well. Pressure rating of well is to be consistent with the system pressure in which it is to be installed.
- D. Space sensors shall be equipped with set-point adjustment, override switch, display, and communication port.
- E. Provide matched temperature sensors for differential temperature measurement. Differential accuracy shall be within 0.2 degrees F.
- F. The space temperature, setpoint, and override confirmation shall be annunciated by a digital display for each zone sensor. The setpoint shall be selectable utilizing buttons.

## 2.06 HUMIDITY SENSORS

- A. Room Humidity sensors shall have an accuracy of  $\pm 1\%$  25°C from 10% to 80% RH with One-point adjustment calibration. The operating temperature range shall be -10° to 150°F max.
- B. Duct sensors shall have a sensing range of 20% to 80% with accuracy of  $\pm 1\%$  R.H. Duct sensors shall be provided with a sampling chamber.
- C. Outdoor air humidity sensors shall have a sensing range of 20% to 95% R.H. and shall be suitable for ambient conditions of -40 degrees F to 170 degrees F.
- D. Humidity sensor's drift shall not exceed 1% of full scale per year.

## 2.07 STATIC PRESSURE SENSORS

- A. Sensor shall have linear output signal. Zero and span shall be field-adjustable.
- B. Sensor sensing elements shall withstand continuous operating conditions plus or minus 50% greater than calibrated span without damage.
- C. Water pressure sensor shall have stainless steel diaphragm construction, proof pressure of 150 psi minimum. Sensor shall be complete with 4-20 ma output, required mounting brackets, and block and bleed valves. Mount in location accessible for service.
- D. Water differential pressure sensor shall have stainless steel diaphragm construction, proof pressure of 150 psi minimum. Over-range limit (DP) and maximum static pressure shall be

3,000 psi. Transmitter shall be complete with 4-20 ma output, required mounting brackets, and five-valve manifold. Mount in a location accessible for service.

#### 2.08 LOW LIMIT THERMOSTATS

- A. Safety low limit thermostats shall be vapor pressure type with an element 20 ft minimum length. Element shall respond to the lowest temperature sensed by any one foot section.

#### 2.09 FLOW SWITCHES

- A. Flow-proving switches shall be either paddle or differential pressure type, as shown on the Drawings or as specified.
- B. Paddle type switches (water service only) shall be UL listed, SPDT snap-acting with pilot duty rating (125 VA minimum). Adjustable sensitivity with NEMA 1 Type enclosure unless otherwise specified:
- C. Differential pressure type switches (air or water service) shall be UL listed, SPDT snap-acting, pilot duty rated (125 VA minimum), NEMA 1 Type enclosure, with scale range and differential suitable for intended application, or as specified.
- D. Current sensing relays may be used for flow sensing or terminal devices.

#### 2.10 RELAYS

- A. Control relays shall be UL listed plug-in type with dust cover. Contact rating, configuration, and coil voltage suitable for application.
- B. Time delay relays shall be UL listed solid-state plug-in type with adjustable time delay. Delay shall be adjustable plus or minus 200% (minimum) from set-point shown on plans. Contact rating, configuration, and coil voltage suitable for application. Provide NEMA 1 Type enclosure when not installed in local control panel.

#### 2.11 TRANSFORMERS AND POWER SUPPLIES

- A. Control transformers shall be UL listed, Class 2 current-limiting type, or shall be furnished with over-current protection in both primary and secondary circuits for Class 2 service.
- B. Unit output shall match the required output current and voltage requirements. Current output shall allow for a 50% safety factor. Output ripple shall be 3.0 mV maximum Peak-to-Peak. Regulation shall be 0.10% line and load combined, with 50 microsecond response time for 50% load changes. Unit shall have built-in over-voltage protection.
- C. Unit shall operate between 0 degrees C and 50 degrees C.
- D. Unit shall be UL recognized.

#### 2.12 CURRENT SWITCHES

- A. Current-operated switches shall be self-powered, solid state with adjustable trip current. The switches shall be selected to match the current of the application and output requirements of the control system.

### 2.13 LOCAL CONTROL PANELS

- A. All indoor control cabinets shall be fully enclosed NEMA 1 or NEMA 4 rating as required. Provide cabinet with hinged door, key-lock latch, and removable sub-panels. A single key shall be common to all field panels and sub-panels.
- B. Interconnections between internal and face-mounted devices pre-wired with color-coded stranded conductors neatly installed in plastic troughs and/or tie-wrapped. Terminals for field connections shall be UL listed for 600-volt service, individually identified per control/interlock drawings, with adequate clearance for field wiring. Control terminations for field connection shall be individually identified per control drawings.
- C. Provide on/off power switch with over-current protection and main air gauge for control power sources to each local panel.

### 2.14 AIR FLOW MEASURING STATIONS

- A. Air flow measuring stations shall be multi-point, multi-axis flow ring or cross sensor. Single point or flow bar sensors are not acceptable. The airflow measurement station shall measure from 15 percent to 100 percent of unit nominal airflow. The air flow measuring station shall adjust for temperature variations and shall provide a 2 to 10 Vdc signal that corresponds to actual airflow for controlling and documenting airflow. The accuracy of the airflow measurement station shall be +/- 5 percent.
- B. Air flow measuring stations shall be provided by the air handler manufacturer or the VAV box manufacturer. See air handler or VAV box specification section for more details.

## PART 3 - EXECUTION

### 3.01 GENERAL WORKMANSHIP

- A. Install equipment, piping, wiring/conduit parallel to building lines (i.e. horizontal, vertical, and parallel to walls) wherever possible.
- B. Provide sufficient slack and flexible connections to allow for vibration of piping and equipment.
- C. Install all equipment in readily accessible location as defined by Chapter 1 Article 100 part A of the NEC. Control panels shall be attached to structural walls unless mounted in equipment enclosure specifically designed for that purpose. Panels shall be mounted to allow for unobstructed access for service.
- D. Verify integrity of all wiring to ensure continuity and freedom from shorts and grounds.
- E. All equipment, installation, and wiring shall comply with acceptable industry specifications and standards for performance, reliability, and compatibility and be executed in strict adherence to local codes and standard practices.

### 3.02 WIRING

- A. All control and interlock wiring shall comply with the national and local electrical codes and Division 26 of these Specifications. Where the requirements of this Section differ with those in Division 26, the requirements of this Section shall take precedence.
- B. Do not install Class 2 wiring in conduit containing Class 1 wiring. Do not use boxes and panels containing high voltage for low voltage wiring except for the purpose of interfacing the two (e.g. relays and transformers).

- C. Control wiring located in a plenum space that is not installed in a conduit shall be plenum rated.
- D. All wire-to-device connections shall be made at a terminal block or terminal strip. All wire-to-wire connections shall be at a terminal blocks, or with a crimped connector. All wiring within enclosures shall be neatly bundled and anchored to permit access and prevent restriction to devices and terminals.
- E. Maximum allowable voltage for control wiring shall be 120V. Provide and install step down transformers.
- F. All wiring shall be installed as continuous lengths, where possible. Any required splices shall be made only within an approved junction box or other approved protective device.
- G. Maintain fire rating at all penetrations in accordance with other Sections of this Specification and local codes.
- H. Size of conduit and size and type of wire shall be the design responsibility of the Contractor, in keeping with the manufacturer's recommendations and the NEC.
- I. Locate control and status relays in designated enclosures only. These relays may also be located within packaged equipment control panel enclosures. These relays shall not be located within Class 1 starter enclosures.
- J. Follow manufacturer's installation recommendations for all communication and network cabling. Network or communication cabling shall be run separately from other wiring.
- K. Adhere to Division 26 requirements for installation of raceway.
- L. Maintain an updated (as-built) wiring diagram with terminations identified at the job site.
- M. Flexible metal conduits and liquid-tight, flexible metal conduits shall not exceed 3feet in length and shall be supported at each end. Flexible metal conduit less than 1/2" electrical trade size shall not be used. In areas exposed to moisture liquid tight, flexible metal conduits shall be used.

### 3.03 INSTALLATION OF SENSORS

- A. Install sensors in accordance with the manufacturer's recommendations.
- B. Mount sensors rigidly and adequate for the environment within which the sensor operates.
- C. Room temperature sensors shall be installed on concealed junction boxes properly supported by the wall framing.
- D. All wires attached to sensors shall be air sealed in their conduits or in the wall to stop air transmitted from other areas affecting sensor readings.
- E. Install duct static pressure tap with tube end facing directly down-stream of air flow.
- F. Sensors used in mixing plenums, and hot and cold decks shall be of the averaging type. Averaging sensors shall be installed in a serpentine manner horizontally across duct. Each bend shall be supported with a capillary clip.
- G. All pipe mounted temperature sensors shall be installed in wells. Install all liquid temperature sensors with heat conducting fluid in thermal wells.

- H. Wiring for space sensors shall be concealed in building walls. EMT conduit is acceptable within mechanical and service rooms.
- I. Install outdoor air temperature sensors on north wall complete with sun shield at designated location.

### 3.04 FLOW SWITCH INSTALLATION

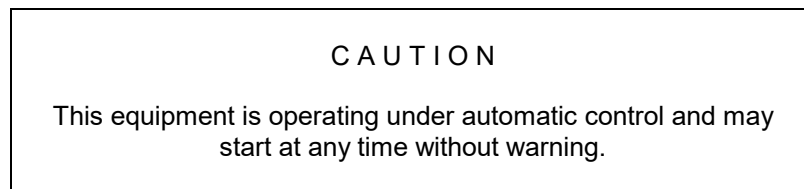

- A. Install using a thread-o-let in steel pipe. In copper pipe use C x C x F Tee, no pipe extensions or substitutions allowed.
- B. Mount a minimum of 5 pipe diameters upstream and 5 pipe diameters downstream or 2 feet whichever is greater, from fittings and other obstructions.
- C. Install in accordance with manufacturers' instructions.
- D. Assure correct flow direction and alignment.
- E. Mount in horizontal piping - flow switch on top of the pipe.

### 3.05 ACTUATOR INSTALLATION

- A. Mount and link control damper actuators per manufacturer's instructions.
- B. To compress seals when spring return actuators are used on normally closed dampers, power actuator to approximately 5 degrees open position, manually close the damper, and then tighten the linkage.
- C. Check operation of damper/actuator combination to confirm that actuator modulates damper smoothly throughout stroke to both open and closed positions.
- D. Valves - Actuators shall be mounted on valves with adapters approved by the actuator manufacturer. Actuators and adapters shall be mounted following manufacturer's recommendations.

### 3.06 WARNING LABELS

- A. Affix plastic labels on each starter and equipment automatically controlled. Label shall indicate the following:

### 3.07 IDENTIFICATION OF HARDWARE AND WIRING

- A. All wiring and cabling, including that within factory-fabricated panels, shall be labeled at each end within 2 inches of termination with a cable identifier and other descriptive information.
- B. Permanently label or code each point of field terminal strips to show the instrument or item served.

- C. Identify control panels with minimum 1-cm letters on laminated plastic nameplates.
- D. Identify all other control components with permanent labels. Identifiers shall match record documents. All plug-in components shall be labeled such that removal of the component does not remove the label.

### 3.08 CLEANING

- A. The Contractor shall clean up all debris resulting from his or her activities daily. The contractor shall remove all cartons, containers, crates, etc. under his control as soon as their contents have been removed. Waste shall be collected and placed in a location designated by the Construction Manager or General Contractor.
- B. At the completion of work in any area, the Contractor shall clean all of his/her work, equipment, etc., making it free from dust, dirt and debris, etc.
- C. At the completion of work, all equipment furnished under this Section shall be checked for paint damage, and any factory finished paint that has been damaged shall be repaired to match the adjacent areas. Any metal cabinet or enclosure that has been deformed shall be replaced with new material and repainted to match the adjacent areas.

### 3.09 PROTECTION

- A. The Contractor shall protect all work and material from damage by his/her work or workers, and shall be liable for all damage thus caused.
- B. The Contractor shall be responsible for his/her work and equipment until finally inspected, tested, and accepted. The Contractor shall protect his/her work against theft or damage, and shall carefully store material and equipment received on site that is not immediately installed. The Contractor shall close all open ends of work with temporary covers or plugs during storage and construction to prevent entry of foreign objects.

### 3.10 FIELD QUALITY CONTROL

- A. All work, materials and equipment shall comply with the rules and regulations of applicable local, state, and federal codes and ordinances as identified in Part 1 of this Section.
- B. Contractor shall continually monitor the field installation for code compliance and quality of workmanship. All visible piping and or wiring runs shall be installed parallel to building lines and properly supported.
- C. Contractor shall arrange for field inspections by local and/or state authorities having jurisdiction over the work.

### 3.11 ACCEPTANCE

- A. The control systems will not be accepted as meeting the requirements of completion until all tests described in this Specification have been performed to the satisfaction of both the Engineer and Owner.
- B. The full range of operation for all Sequences of Operation shall be demonstrated. Where sequences are dependent on season or outside conditions these conditions may be simulated for the purpose of demonstration if approved by both the Architect/Engineer and the Owner. If simulations cannot be acceptably created the Contractor shall perform the demonstration during the proper period.

- C. Any tests that cannot be performed due to circumstances beyond the control of the Contractor may be exempt from the Completion requirements if stated as such in writing by the Owner's representative. Such tests shall then be performed as part of the warranty.

**END OF SECTION 230991**

## PART 1 - GENERAL

## 1.01 DESCRIPTION OF WORK

- A. The Work specified as part of this Section consists of the work required to achieve operational and coordinated Sequences of Operation as described. Work includes coordination of functions of controllers supplied as part of equipment packages, sizing of control valves, interconnection of systems, provision and installation of all accessory devices required for complete system operation including devices not provided as part of equipment, coordination of start up and testing and demonstration of the operation of Sequences of Operation to the Owner and his/her representatives.
- B. The control system operation of all equipment shall be subject to the operational modes, conditions and logic described in this Section and the controlled equipment manufacturer's recommendations.
- C. Training of the Owner's personnel in the operation, trouble shooting, adjustment and repair of all system controls.

## 1.02 RELATED SECTIONS AND WORK

- A. Section 230923 – Automatic Temperature Controls and Building Automation System
- B. Division 26
- C. Owner's Building Management System (BMS)
- D. Owner's Fire Alarm System (FAS)

## PART 2 - PRODUCTS

NOT USED.

## PART 3 - EXECUTION

## 3.01 GENERAL

- A. General
  - 1. Conform to the requirements of the Owner's standards for all electrical work and devices.
  - 2. System and system components shall be BACNet compatible.
  - 3. All set points and operating points shall be able to be transmitted to and set from the BMS system. Specific points to be enabled shall be at the discretion of the Owner.
  - 4. All systems shall be capable of operating independently of the BMS system based on set points and limits either input from the BMS system or manually.
  - 5. Coordinate all work with the requirements and characteristics of the BMS system and the equipment provided for the project under this phase or earlier phases.
  - 6. All space sensors and thermostats shall have an lcd display indicating their set point, the condition sensed and the mode of operation they are responding to.

## 3.02 GAS DETECTION SYSTEMS [GDS-1, GDS-2, GDS-SB-1]

- A. Refer to Specifications 236002 and 236002.22

## 3.03 ROOFTOP UNIT [RTU-208]

- A. Run Conditions - Scheduled:

- B. The unit shall run according to a user definable time schedule in the following modes:
  - 1. Occupied Mode:
    - a. 75°F (adj.) cooling setpoint
    - b. 70°F (adj.) heating setpoint
  - 2. Unoccupied Mode (night setback):
    - a. 85°F (adj.) cooling setpoint.
    - b. 55°F (adj.) heating setpoint.
- C. Alarms shall be provided as follows:
  - 1. High Zone Temp: If the zone temperature is greater than the cooling setpoint by a user definable amount (adj.).
  - 2. Low Zone Temp: If the zone temperature is less than the heating setpoint by a user definable amount (adj.).
- D. Freeze Protection:
  - 1. The unit shall shut down and generate an alarm upon receiving a freezestat status.
- E. Supply Fan:
  - 1. The supply fan shall run anytime the unit is commanded to run, unless shutdown on safeties. To prevent short cycling, the supply fan shall have a user definable (adj.) minimum runtime.
- F. Alarms shall be provided as follows:
  - 1. Supply Fan Failure: Commanded on, but the status is off.
- G. Cooling Stages:
- H. The controller shall measure the zone temperature and stage the cooling to maintain its cooling setpoint. To prevent short cycling, there shall be a user definable (adj.) delay between stages, and each stage shall have a user definable (adj.) minimum runtime.
  - 1. The cooling shall be enabled whenever:
    - 2. Outside air temperature is greater than 60°F (adj.).
    - 3. AND the economizer (if present) is disabled or fully open.
    - 4. AND the zone temperature is above cooling setpoint.
    - 5. AND the supply fan status is on.
    - 6. AND the heating is not active.
- I. Heating Coil Valve:
- J. The controller shall measure the zone temperature and modulate the heating coil valve to maintain its heating setpoint.
- K. The heating shall be enabled whenever:
  - 1. Outside air temperature is less than 65°F (adj.).
  - 2. AND the zone temperature is below heating setpoint.
  - 3. AND the supply fan status is on.
  - 4. AND the cooling is not active.
- L. The heating coil valve shall open whenever the freezestat (if present) is on.
- M. Economizer:
  - 1. The controller shall measure the zone temperature and modulate the economizer dampers in sequence to maintain a setpoint 2°F less than the zone cooling setpoint. The outside air dampers shall maintain a minimum adjustable position of 20% (adj.) open whenever occupied.

2. The economizer shall be enabled whenever:
    - a. Outside air temperature is less than 65°F (adj.).
    - b. AND the outside air temperature is less than the return air temperature.
    - c. AND the supply fan status is on.
  3. The economizer shall close whenever:
    - a. On loss of supply fan status.
    - b. OR the freezestat (if present) is on.
  4. The outside and exhaust air dampers shall close and the return air damper shall open when the unit is off. If Optimal Start Up is available, the mixed air damper shall operate as described in the occupied mode except that the outside air damper shall modulate to fully closed.
- N. Minimum Outside Air Ventilation - Fixed Percentage:
1. The outside air dampers shall maintain a minimum position (adj.) during building occupied hours and be closed during unoccupied hours.
- O. Dehumidification:
1. The controller shall measure the return air humidity and override the cooling sequence to maintain return air humidity at or below 60% rh (adj.).
  2. During dehumidification, the heating shall modulate to maintain a setpoint 1°F (adj.) less than the zone cooling setpoint.
  3. Dehumidification shall be enabled whenever:
    - a. The supply fan status is on.
    - b. AND zone temperature is greater than the cooling setpoint.
- P. Space Humidity:
1. The controller shall monitor the space humidity and use as required for economizer control or humidity control.
- Q. Alarms shall be provided as follows:
1. High Space Humidity: If the return air humidity is greater than 70% (adj.).
  2. Low Space Humidity: If the return air humidity is less than 35% (adj.).
- R. Return Air Temperature:
1. The controller shall monitor the return air temperature and use as required for economizer control
  2. Alarms shall be provided as follows:
    - a. High Return Air Temp: If the return air temperature is greater than 90°F (adj.).
    - b. Low Return Air Temp: If the return air temperature is less than 45°F (adj.).
- S. Supply Air Temperature:
1. The controller shall monitor the supply air temperature.
  2. Alarms shall be provided as follows:
    - a. High Supply Air Temp: If the supply air temperature is greater than 120°F (adj.).
    - b. Low Supply Air Temp: If the supply air temperature is less than 45°F (adj.).

### 3.04 DEDICATED OUTDOOR AIR UNIT [DOAS-1]

- A. Factory Controller: Controller shall be provided with required sensors and programming for rooftop unit. Controller shall be factory programmed, mounted and tested. Controller shall have an LCD readout for changing set points and monitoring unit operation.
- B. UNIT START COMMAND
1. Factory mounted and wired outdoor air and recirculated air damper actuators are powered.
  2. Exhaust fan starts after a (adj.) delay.

3. Supply fan starts after a (adj.) delay.
  4. Tempering options and energy wheel options to function as described below.
- C. UNIT STOP COMMAND (OR DE-ENERGIZED):
1. Supply fan, exhaust fan, energy wheel and tempering options de-energized.
  2. Outdoor air damper actuator is spring return close, and the recirculated air damper actuator is spring open.
- D. OCCUPIED/UNOCCUPIED MODES: Shall be based on a 7-day time clock internal to the controller. The schedule shall be set by the end user via the BMS
1. Occupied Mode:
    - a. Damper control per below
    - b. Energy wheel control per below.
    - c. Exhaust fan ON.
    - d. Supply fan ON.
    - e. Heating per below.
    - f. Cooling per below.
  2. Unoccupied mode (Cycle on Room Temp): The unit will cycle to maintain unoccupied room set points if there is a call for unoccupied heating, cooling or dehumidification.
    - a. Supply fan OFF
    - b. Exhaust fan OFF
    - c. Recirculation air damper open.
    - d. Outdoor air damper closed.
    - e. On a call for heating (room temp set point – differential) supply fan cycles ON, and the heating increases the room temperature. Unit cycles off when room temperature reaches the unoccupied set point (adj.).
    - f. On a call for cooling (room temp set point + differential) supply fan cycles ON, and the cooling decreases the room temperature. Unit cycles off when room temperature reaches the unoccupied set point (adj.)
- E. MORNING WARMUP/COOL DOWN: Prior to occupancy, the unit will run using the warmup or cool down sequence until the occupied set point is achieved. The heating or cooling mode must not be locked out and the space temperature is below or above set point by the unoccupied hysteresis (adj.)
- F. SUPPLY BLOWER SEQUENCE: The supply blower is provided with a factory mounted variable frequency drive. The supply blower speed will be controlled with the following sequence.
- G. BMS Control: The supply blower is modulated based upon a command from the Building Management System.
- H. Outdoor Air Damper Control: The outdoor air damper is factory mounted and wired with a non-modulating actuator. When the unit is enabled/occupied the outdoor air damper will open to 100%
- I. EXHAUST BLOWER SEQUENCE: The exhaust blower is provided with a factory mounted variable frequency drive. The exhaust blower speed will be controlled with the following sequence.
- J. BMS Control: The exhaust blower is modulated based upon a command from the Building Management System.
- K. COOLING SEQUENCE: The cooling is controlled to maintain the supply temperature set point. The mechanical cooling will be locked out when the outside air is < 55 F (adj.).
1. Packaged DX Cooling (Digital Scroll): The controller will provide a modulating signal for cooling. From 10-50%, the digital scroll will be controlled to maintain discharge

- temperature. From 50-100% the second stage will be on in combination with the digital scroll compressor to maintain the discharge temperature.
2. Modulating Hot Gas Reheat Sequence: During dehumidification the modulating HGRH is controlled to maintain the supply temperature set point.
  3. Modulating Head Pressure Control: Lead condenser fan will have an EC motor and will modulate to maintain a head pressure set point.
- L. DEHUMIDIFICATION CONTROL SEQUENCE: The cooling is controlled to maintain the cooling-coil set point. The dehumidification sequence will be locked out when the OA is < 10 F(adj.) above the cold-coil set point (adj.)
1. Cold Coil Set Point Control: The controller will control the cooling to maintain a cold coil set point. The active set point will set to local control (55 F, adj.) from the factory and can be field adjusted locally or by the BMS.
- M. REHEAT SEQUENCE: While the unit is in dehumidification mode the outdoor air will be reheated via Modulating Hot Gas Reheat for space neutral applications.
1. Modulating Hot Gas Reheat: The controller will modulate the hot gas reheat valve with a 0-10 V signal to maintain the supply temperature set point (adj.).
- N. HEATING SEQUENCE: The heating is controlled to maintain the supply temperature set point. The heating will be locked out when the outside air is > 80 F (adj.). Maximum allowable discharge air set point is 100 F.
1. Hot Water Coil: The controller will modulate a hot water valve (field provided) to maintain the supply temperature set point (adj.). Coil Freeze protection must be provided by others in the field.
- O. TEMPERATURE CONTROL SEQUENCE: The unit will maintain the supply air discharge setpoint per the following. Adjustable locally or by BMS.
1. Space Setpoint Control: The supply setpoint will adjust between minimum (adj.) and maximum (adj.) limits, to satisfy the desired space temperature setpoint. Adjustable locally or by BMS.
- P. BUILDING FREEZE PROTECTION: If the supply air temperature drops below 35 F (adj.) for 300s (adj.), the controller will de-energize the unit and activate the alarm output.
- Q. TEMPERATURE PROTECTION: The controller will enable the supply fan to modulate down to help the unit keep up with heating demand in the event of wheel failure or the unit operating outside design conditions. (This can be enabled under the manufacturer menu in the controller)
- R. ENERGY WHEEL FROST CONTROL: Frost control for the energy wheel is enabled when frost is present on the wheel; based on the outside air temperature and the pressure drop across the wheel. If the outdoor air temperature is below 5 F adj. and the differential pressure across the wheel is about 1.5", adj. frost control will enable.
1. Wheel VFD (Modulate Wheel): When frosting is occurring, the VFD modulates the wheel down to a slow rotational speed to defrost wheel. Once either the pressure drop decreases below the pressure switch setpoint, or the outdoor air temperature increases about the temperature set point, the unit will resume normal operation.
- S. ECONOMIZER SEQUENCE: When the application requires cooling, and the outdoor air conditions are suitable for free cooling, the controller will modulate the energy wheel speed to maintain the discharge temperature setpoint. If the energy wheel speed modulates to the economizer set point and the supply air temperature is not met, the controller will increase the call for cooling to meet the supply air temperature and could engage mechanical cooling.
1. Temp./Enthalpy: The economizer will be locked out when: the outdoor air is < 40 F DB (adj.) or > 75 F DB (adj.) or > 55 F dew point (adj.); the unit is operating in dehumidification mode; or there is a call for heating

**T. ENERGY WHEEL SEQUENCE**

1. Modulate Wheel: When economizer mode is enabled and there is a signal for cooling, the wheel VFD modulates wheel speed to maintain the supply air temperature set point.

**U. ALARMS INDICATION:** The controller will display alarms and have one digital output for remote indication of an alarm condition. Possible alarms include:

1. Building Management System: The controller will send all alarms to the BMS.
2. Dirty Filter Alarm: A digital signal is sent to the controller indicating an increased pressure drop across the outdoor, exhaust, or supply air filters (Must be adjusted in field during start up). The controller will then provide a dirty filter alarm.
3. Dirty Wheel Alarm: The controller monitors pressure across the wheel and sends an alarm in the case of an increased pressure drop.
4. Wheel Rotation Alarm: The controller monitors wheel rotation, if the wheel does not rotate for a set period-of-time (adj.) an alarm will generate.
5. Supply and Exhaust Air Alarm: The controller monitors the proving switch on each blower and sends an alarm in the case of either blower proving switch not engaging.
6. DX Alarm: The controller monitors the refrigerant pressure. In the case of low refrigerant pressure, the compressors will shut down until refrigerant pressure returns to normal values and the controller will send an alarm. In the case of high refrigerant pressure, the compressors will shut down, requiring a manual reset and the controller will send an alarm.
7. Temperature Sensor Alarm: The controller sends an alarm in the case of a failed air temperature sensor.
8. Humidity Sensor Alarm: The controller sends an alarm in the case of a failed humidity sensor.

**V. ACCESSORIES:** The following accessories will be included with the unit to expand the functionality or usability of the controller.

1. BMS Interfacing: A BMS port or serial card is provided with the controller for field interfacing with a building management system. Each card is sent out with the default parameters, and the controls contractor must change the appropriate addresses to match the BMS settings.
2. Make-Up Air Unit [MAU-1] See Kitchen Exhaust System Diagrams

**3.05 VRF SYSTEM [EU/IU/FCU-X] (TYPICAL OF 19) [CU-1,2,3]**

- A. Occupied and unoccupied modes of the unit's will be interlocked with the occupied/ unoccupied schedules of the respective zone schedules from the BMS. Units will be indexed to run and maintain room temperature setpoints under their own controls. During the unoccupied mode, the room temperature setpoint will be set back.

**3.06 BOILER SYSTEM: INTEGRATION TO BMS VIA BACNET MS/TP (GATEWAY BY MANUFACTURER)**

- A. The boiler system shall be enabled to run whenever:
  1. Outside air temperature is less than 65°F (adj.).
- B. The boiler shall run subject to its own internal safeties and controls.
- C. The boiler system shall also run for freeze protection whenever the outside air temperature is less than 38°F (adj.).
- D. Boiler Lead/Standby Operation:
  1. The two boilers shall operate in a lead/standby fashion staging will occur based on the boiler's internal controls.
  2. Alarms shall be provided as follows:

- a. Boiler 1,2 Failure: Commanded on but the status is off.
  - b. Lead Boiler Failure: The lead boiler is in failure and the standby boiler is on.
- E. Hot Water Supply Temperature Setpoint:
  - 1. The boiler shall maintain a hot water supply temperature setpoint as determined by its own internal controls.
- F. Primary Hot Water Temperature Monitoring:
  - 1. The following temperatures shall be monitored:
    - a. Primary hot water supply.
    - b. Primary hot water return.
  - 2. Alarms shall be provided as follows:
  - 3. High Primary Hot Water Supply Temp: If greater than 200°F (adj.).
  - 4. Low Primary Hot Water Supply Temp: If less than 100°F (adj.).

### 3.07 HEATING HOT WATER LOOP PUMPS [HWP-1,2,3,4,5,6]

- A. Hot Water Pump Run Conditions:
  - 1. The hot water pumps shall be enabled whenever:
    - a. Outside air temperature is less than 54°F (adj.)
  - 2. To prevent short cycling, the pump shall run for a minimum time and be off for a minimum time (both user adjustable).
- B. Hot Water Pump Lead/Lag Operation:
  - 1. The two variable speed hot water pumps shall operate in a lead/lag fashion.
    - a. The lead pump shall run first.
    - b. On failure of the lead pump, the lag pump shall run and the lead pump shall turn off.
- C. Pump Speed will be controlled based on the pumps self-sensing differential pressure transmitter.
- D. The designated lead pump shall rotate upon one of the following conditions (user selectable):
  - 1. manually through a software switch
  - 2. if pump runtime (adj.) is exceeded
  - 3. daily
  - 4. weekly
  - 5. monthly
- E. Alarms shall be provided as follows:
  - 1. Hot Water Pump Failure: Commanded on, but the status is off.
- F. Hot Water Temperature Monitoring:
  - 1. The following temperatures shall be monitored:
    - a. Hot water supply temperature (Building, Radiant, Unit Heaters).
    - b. Hot water return temperature (Building, Radiant, Unit Heaters).
  - 2. Alarms shall be provided as follows:
    - a. High Hot Water Supply Temp: If the hot water supply temperature is greater than 200°F (adj.).
    - b. Low Hot Water Supply Temp: If the hot water supply temperature is less than 100°F (adj.).

### 3.08 CABINET HEATER [CUH-A, B,126]

- A. Run Conditions - Scheduled:
  - 1. The unit shall run according to a user definable time schedule in the following modes:

- a. Occupied Mode: The unit shall maintain a heating setpoint of 70°F (adj.).
  - b. Unoccupied Mode (night setback): The unit shall maintain a heating setpoint of 65°F (adj.).
- B. Alarms shall be provided as follows:
  - 1. Low Zone Temp: If the zone temperature is less than the heating setpoint by a user definable amount (adj.).
- C. Fan:
  - 1. The fan shall run anytime the zone temperature is below heating setpoint, unless shutdown on safeties.
- D. Heating Coil Valve:
  - 1. The controller shall measure the zone temperature and open the heating coil valve to maintain its heating setpoint.
  - 2. The heating shall be enabled whenever:
    - a. Outside air temperature is less than 65°F (adj.).
    - b. AND the zone temperature is below heating setpoint.
    - c. AND the fan is on.
- E. Fan Status:
  - 1. The controller shall monitor the fan status.
  - 2. Alarms shall be provided as follows:
    - a. Fan Failure: Commanded on, but the status is off

### 3.09 UNIT HEATER [UH-1,2,3,4]

- A. Run Conditions - Scheduled:
  - 1. The unit shall run according to a user definable time schedule in the following modes:
    - a. Occupied Mode: The unit shall maintain a heating setpoint of 70°F (adj.).
    - b. Unoccupied Mode (night setback): The unit shall maintain a heating setpoint of 65°F (adj.).
- B. Alarms shall be provided as follows:
  - 1. Low Zone Temp: If the zone temperature is less than the heating setpoint by a user definable amount (adj.).
- C. Fan:
  - 1. The fan shall run anytime the zone temperature drops below heating setpoint, unless shutdown on safeties.
- D. Heating Coil Valve:
  - 1. The controller shall measure the zone temperature and modulate the heating coil valve to maintain its heating setpoint.
- E. The heating shall be enabled whenever:
  - 1. Outside air temperature is less than 65°F (adj.).
  - 2. AND the zone temperature is below heating setpoint.
  - 3. AND the fan is on
  - 4. Convective / Fin Tube Heater (typical of 1)

### 3.10 FIN TUBE HEATERS [FTR-X] (TYPICAL OF 22)

- A. Run Conditions - Continuous:
  - 1. The unit shall run continuously and shall maintain a heating setpoint of 70°F (adj.).

- B. Alarms shall be provided as follows:
  - 1. Low Zone Temp: If the zone temperature is less than the heating setpoint by a user definable amount (adj.).
- C. Heating Coil Valve:
  - 1. The controller shall measure the zone temperature and open the heating coil valve to maintain its heating setpoint.
- D. The heating shall be enabled whenever:
  - 1. Outside air temperature is less than 65°F (adj.).
  - 2. AND the zone temperature is below heating setpoint.

### 3.11 RADIANT HEATING ZONES [RFM-X] (TYPICAL OF 8)

- A. Run Conditions - Continuous:
  - 1. The unit shall run continuously and shall maintain a heating setpoint of 70°F (adj.).
- B. Alarms shall be provided as follows:
  - 1. Low Zone Temp: If the zone temperature is less than the heating setpoint by a user definable amount (adj.).
- C. Heating Coil Valve:
  - 1. The controller shall measure the zone temperature and open the heating coil valve to maintain its heating setpoint.
- D. The heating shall be enabled whenever:
  - 1. Outside air temperature is less than 65°F (adj.).
  - 2. AND the zone temperature is below heating setpoint.

### 3.12 EXHAUST FAN [TX-1]

- A. Run Conditions - Scheduled:
  - 1. The unit shall run according to a user definable time schedule:
- B. Fan:
  - 1. The fan shall have a user definable (adj.) minimum runtime.
- C. Exhaust Air Damper:
  - 1. The exhaust air damper shall open anytime the unit runs and shall close anytime the unit stops. The exhaust air damper shall close 30 sec (adj.) after the fan stops.
- D. Fan Status:
  - 1. The controller shall monitor the fan status.
- E. Alarms shall be provided as follows:
  - 1. Fan Failure: Commanded on, but the status is off

### 3.13 SEQUENCE OF OPERATION - CEILING PROPELLER FANS HVLS-SB-1, 2, 3

- A. General:
  - 1. Greenheck control system shall automatically adjust fans based on temperature.

## 3.14 SEQUENCE OF OPERATION - GAS FIRED RADIANT CEILING HEATERS, GFRH-SB-1,2,3

- A. If space temperature falls below 55F (user adjustable) the thermostat shall call for heating and the unit shall operate in order to maintain the set point temperature. Reznor control system shall control gas valve position and fan operation.
- B. Upon satisfaction of the set point temperature, the unit shall turn off.
- C. Heaters shall be interlocked with bay doors. If one or more doors are open, heaters shall turn off. When all doors are proven closed, heaters shall restart.

## 3.15 SEQUENCE OF OPERATION - ELECTRIC WALL HEATER, WMH-SB-1

- A. General:
  - 1. Each wall heater shall be provided with a unit mounted digital thermostat.
- B. Heating:
  - 1. The heating set point temperature shall be 70 degrees (adj.). When the space temperature falls below the set point temperature, the heater shall turn on in order to maintain the set point temperature.

## 3.16 SEQUENCE OF OPERATION - EXHAUST FANS, GXF-SB-2

- A. General:
  - 1. The exhaust fan shall run continuously 24 hours a day, 7 days a week.

## 3.17 SEQUENCE OF OPERATION - EXHAUST FANS, GXF-SB-1

- A. General:
  - 1. Provide a 30 minute spring timer, thermostat and gas detection system to serve fans.
- 2. Operation
  - a. Off: Fans with associated motorized dampers shall be off and Apparatus Bay intake motorized dampers sleeved in louver assembly shall be closed.
  - b. On: Apparatus Bay intake motorized dampers in louver assembly shall open, the fans shall operate and all associated motorized dampers shall be open.
  - c. Timer: Apparatus Bay intake motorized dampers sleeved in louver assembly (LV-SB-2,3,4) shall open and the fan shall operate.
  - d. Exhaust fan shall be enabled and associated motorized damper (MD-SB-1) when the space temperature rises above setpoint (85 degrees F (adj.)) or alarm from gas detection panel or manually via spring timer. Refer to Vehicle Exhaust Gas Detection System sequence for more information.

## 3.18 SEQUENCE OF OPERATION - EXHAUST FAN, TXF-SB-1

- A. General:
  - 1. The exhaust fan shall run according to a user definable time schedule.

## 3.19 SEQUENCE OF OPERATION - VARIABLE REFRIGERANT FLOW (VRF) UNITS AC-SB-1 &amp; ACCU-SB-1

- A. Cooling Operation:
  - 1. The unitary controller will call for cooling when measured room temperature is 1.8FDB above setpoint and adjust refrigerant flow and capacity based on differential from setpoint. The unit will remain in an active call for cooling until the measured room temperature is 1.8FDB below setpoint. Cooling setpoint shall be 74F, adjustable.

2. The indoor fan will operate based on user selected fan speed setting at the unitary controller and will allow for High, Medium, and Low selection. The fan speed will remain constant in the cooling mode regardless of the cooling cycle being called for.

B. Heating Operation

1. The unitary controller will call for heating when measured room temperature is 1.8FDB below setpoint and adjust refrigerant flow and capacity based on differential from setpoint. The unit will remain in an active call for heating until the measured room temperature is 1.8FDB above setpoint. Heating setpoint shall be 68F, adjustable.
2. The indoor fan will operate based on user selected fan speed setting at the unitary controller and will allow for High, Medium, and Low selection. The fan speed will remain constant during heating/and or cooling operation.

- C. Provide 7-day programmable thermostat.

**END OF SECTION 230993**

## PART 1 - GENERAL

## 1.01 DESCRIPTION OF WORK

- A. This Section describes the pipe, valves, fittings, and joining materials for use with the piping systems described in this Section and as shown on the Drawings.

## 1.02 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.
- B. Section 079201 - Non-Fire Rated Sleeves and Seals
- C. Section 230529 - Pipe Hangers and Supports
- D. Section 230555 - Mechanical System Identification
- E. Section 230700 - Pipe Insulation
- F. Section 232007 - Piping Specialties

## 1.03 ABBREVIATIONS

- A. The following are standard abbreviations:
  - 1. CWP: Cold working pressure.
  - 2. EPDM: Ethylene-propylene-diene-terpolymer rubber.
  - 3. NRS: Nonrising stem.
  - 4. OS&Y: Outside screw and yoke.
  - 5. PTFE: Polytetrafluoroethylene plastic.
  - 6. SWP: Steam working pressure.
  - 7. TFE: Tetrafluoroethylene plastic.
  - 8. NPS: Nominal Pipe Size

## 1.04 SUBMITTALS

- A. Product Data: For each type of valve indicated: Include body, seating, and trim materials; valve design; pressure and temperature classifications; end connections; arrangement; dimensions; and required clearances. Include list indicating valve and its application. Include rated capacities; shipping, installed, and operating weights; furnished specialties; and accessories.
- B. Product data on pipe, fittings, gaskets, and bolts. Include dimensions, specifications, and manufacturer. Provide pipe and valve application schedule.
- C. Provide product data, including but not be limited to dimensions, specifications, manufacturer, installation and operation instructions, temperature and pressure ratings, end connections, and required clearances on piping specialties included in this Specification.
- D. Welder Certifications - Furnish the names of pipe welders and welding operators employed by the Contractor to perform the Work who have been qualified to use the welding procedures which have been qualified in accordance with the specified pressure piping codes or AWS or NFPA standards.
- E. Shop Drawings
  - 1. Where deviations from the Drawings and Specifications are proposed for any reason, submit shop drawings identifying proposed deviations showing layout of all piping, fittings,

materials, dimensions, and fabrication and installation details. Submit a comparison table of the specified features and ratings of the specified item and those of the proposed deviation to allow a direct comparison.

2. The review of deviations will be for pressure drop only. The review will not address clearances or accessibility. No dimensional or coordination check will be made.
3. The Contractor has the sole responsibility to review the Drawings, coordinate piping fabrication, and provide clearances and access for installation, maintenance and balancing of this Work, and Work of other trades. Unless specifically dimensioned, Drawings indicate approximate locations only. The Contractor has the sole responsibility to locate and route the piping.
4. Submit all layout shop drawings on not less than ¼ inch equals 1 foot scale drawings.

#### 1.06 DELIVERY, STORAGE, AND HANDLING

- A. Prepare valves for shipping as follows:
  - 1. Protect internal parts against rust and corrosion.
  - 2. Protect threads, flange faces, grooves, and weld ends.
  - 3. Set angle, gate, and globe valves closed to prevent rattling.
  - 4. Set ball and plug valves open to minimize exposure of functional surfaces.
  - 5. Set butterfly valves closed or slightly open.
  - 6. Block check valves in either closed or open position.
- B. Use the following precautions during storage:
  - 1. Maintain valve end protection.
  - 2. Store valves indoors and maintain at higher than ambient dew-point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.
- C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use hand wheels or stems as lifting or rigging points.
- D. Protect all flange faces with wood, plastic or soft metal to prevent damage to parts.
- E. Protect all pipe threads from damage with plastic plugs or caps.
- F. Mark and identify all piping materials in accordance with the Reference Standards specified herein.

#### PART 2 - PRODUCTS

##### 2.01 GENERAL

- A. When two or more valves of the same type are used in the same service, furnish all valves of this type from the same manufacturer.
- B. Specific manufacturer's model numbers are cited in the following Piping Material Schedules to establish the desired quality and performance for each type valve or material. Equivalent products by other approved manufacturers are also acceptable. Approval shall be subject to review by the Architect/Engineer.

##### 2.02 HEATING HOT WATER PIPING

| Item   | Pipe Size             | Description                                                   | Manufacturer/<br>Model No.         |

| Item              | Pipe Size              | Description                                                                                                                                                                                                                                                                          | Manufacturer/<br>Model No.  |
|-------------------|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| Fittings          | 2 inches and smaller   | Cast copper alloy or wrought copper ASME B16.18 or ASME B16.22                                                                                                                                                                                                                       | Nibco                       |
|                   | 2 ½ inches and larger  | Standard Weight, Seamless steel, butt welded, ASTM A234                                                                                                                                                                                                                              | Weldbend                    |
| Flanges           | 2 ½ inches and larger  | 150#, forged steel, weld neck, bore to match pipe ID, ASTM A181                                                                                                                                                                                                                      | Weldbend                    |
| Bolts             | All sizes              | Alloy Steel, Hex Head Bolts and Nuts, ASTM A307 Grade B                                                                                                                                                                                                                              |                             |
| Unions            | 2 inches & smaller     | Wrought copper, solder unions, ASME B16.22                                                                                                                                                                                                                                           | Nibco                       |
| Dielectric Unions | 2 1/2 inches & smaller | Dielectric Type, Copper to Steel                                                                                                                                                                                                                                                     | Watts Regulator Series 3000 |
| Gaskets           | All Sizes              | Spiral wound metallic gaskets                                                                                                                                                                                                                                                        | Flexitallic Style LS/LSI    |
| Ball Valves       | 2 inches & smaller     | Two-piece, full-port, soldered ends, bronze body, type 316 stainless-steel vented ball and stem, reinforced TFE seats, 150 psig SWP and 600-psig CWP ratings. MSS SP-110, ASTM B 584 Alloy C84400, ASME B1.20.1                                                                      | Nibco S-585-70-66           |
| Check Valves      | 2 inches & smaller     | Class 125, Y-pattern swing type, soldered connections, bronze body with TFE seat disc. MSS-SP80, ASTM B 62                                                                                                                                                                           | Nibco S413-Y                |
|                   | 2 ½ inches & larger    | Class 125, swing-type, flanged connections, cast iron body with bronze trim, non asbestos gasket. MSS-SP71, ASTM A-126 Class B                                                                                                                                                       | Nibco F918-B                |
| Butterfly Valves  | 2 ½ inches & larger    | Full-lug type with ductile-iron body, one-piece Type 416 stainless-steel stem, copper bushing, aluminum-bronze disc, and molded-in EPDM seat. Valve sizes 2 ½" through 6" shall have lever lock operator; valve sizes 8" and larger shall have weatherproof gear operator. MSS SP-67 | Nibco LD-2000-3/5           |

## PART 3 - EXECUTION

## 3.01 GENERAL INSTALLATION REQUIREMENTS

- A. Unless otherwise shown, route piping in the most direct manner parallel to building lines in accordance with the Drawings. Group piping whenever practical at common elevations.
- B. Accurately align, support and connect piping without forcing.
- C. Locate piping so that access to and clearance around equipment, and minimum piping headroom of 7 feet is maintained, except where otherwise shown.
- D. Space piping so that insulation and flanges, if any, have at least 1 inch clearance after maximum movement.
- E. Where pipe elevations are not shown, pitch supply and return lines to positive drain points and/or coils.

- F. Provide accessible flanges or union connections on the supply and return connections of terminal equipment and other items which must be disconnected for maintenance. Where unions are furnished as an integral part of the equipment, additional unions are not required unless required for access to or removal of components. Arrange equipment piping connections so that maintenance can be made without removing large sections of pipe or relocating the equipment.
- G. In Domestic Water Systems, connect branch lines to the top of the line. For all other liquid systems, connect branch lines to the bottom or lower half of the line, preferably the bottom.
- H. Use fittings for all changes of direction. Bending of steel pipe is not permissible.
- I. Clean all piping materials before installation to remove grease, loose dirt, mill scale and other foreign matter.
- J. Provide air vents at all high points of water piping, and valved drains at all low points of water piping for complete venting, draining and flushing of the piping system. Locate and provide air vents at multiple high points that are necessary to prevent air binding in the piping system. Install additional air vents and drains if directed by the Architect/Engineer, at no cost to the Owner. As a minimum provide drains and air vents
  1. In each section of piping separated by valves.
  2. On all coils.
  3. For each riser, where riser or runout to riser has a valve installed.
  4. In low point of piping to each down fed convector or radiator.
- K. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment. Provide loops, pipe offsets and anchors.
- L. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welding.
- M. Install gate or ball valves for shut-off and to isolate equipment, parts of systems, or vertical risers.
- N. Sleeve pipes passing through partitions, walls and floors.
- O. Identify piping under provisions of "Mechanical System Identification" Specification.
- P. Provide escutcheons at all locations where piping installed exposed to view penetrates wall, partitions, floors and ceilings.
- Q. Conceal all pipe installations in walls, pipe chases, utility spaces, above ceilings, below grade or floors, unless indicated to be exposed to view.
- R. Install flexible connectors at inlet and discharge connections of pumps and other vibration producing equipment.
- S. Install strainers on the supply side of each control valve, pressure regulating valve, solenoid valve, trap, and elsewhere as indicated.
- T. For pressurized liquid piping systems installed horizontally make reductions in pipe sizes using eccentric reducer fitting installed with the level side up to allow air venting.
- U. For all nipples up to and including six inches in length provide extra-heavy shoulder type. For all nipples over six inches in length provide corresponding material, quality and thickness as the

pipe on which they are used. Do not use close nipples. Provide nipples with designation mark of the manufacturer conforming to the ASTM pipe specifications for system served.

- V. Make connections to all cooling and heating units with single or multiple cooling or heating coils in accordance with the manufacturer's instructions and labeling on equipment
- W. For pressures over 15 psig, use nipples and caps instead of plugs for permanent closures. Plugs in equipment provided by equipment manufacturers are acceptable.
- X. Do not install piping above electrical panels. Route piping around panels.

### 3.02 THREADED CONNECTIONS

- A. Ream pipe ends to remove burrs.
- B. Use only standard ANSI taper threads. Threads shall be full, sharp, clean, and free of fins and burrs.
- C. Apply joint sealing tape or paste to male threads only. Do not use paste on compressed air lines. When sealing fuel oil piping, use a thread-sealing compound suitable for oil when making up joints. When sealing natural gas piping, use a thread-sealing compound suitable for natural gas when making up joints.
- D. Do not use close or short nipples of a size where the length of unthreaded pipe is less than the width of a pipe wrench.
- E. Thredolets or similar code-approved fittings may be used for branch connections.
- F. Provide unions at all threaded valve locations to facilitate the removal of the valve.
- G. Joint Sealing Compound; Hercules, RectorSeal or approved equal.

### 3.03 WELDED CARBON STEEL CONNECTIONS

- A. Perform welding using qualified welders and procedures following specified reference standards.
- B. Do not use mitered welds for elbows.
- C. Welded branch connections may be used in place of welding tees provided that requirements of the applicable ASME Code for pressure piping, B31.1 and/or B31.9 are met.
- D. Weldolets or similar code-approved fittings may be used for branch connections.
- E. Qualifications of welders, welding procedures, performance of welders and welding operators are required complying with the requirements of ASME B31.9 and ASME Boiler and Pressure Vessel Code, Section IX. Keep records and certifications required by code on file and available for inspection.
- F. Whenever welding is done close to walls, floors or building structure, thoroughly clean the surfaces of weld splatter. Remove weld splatter from the surface of all welds, pipe and pipe supports.
- G. Provide long radius pattern for welding elbows unless otherwise shown on the Drawings.
- H. Examine and inspect welded pipe joints as follows:

1. Visually examine all welded pipe joints for imperfections using qualified representatives. Submit qualifications to the Architect/Engineer.
2. Make available to the Architect/Engineer records of visual examinations upon request.
3. Remove weld defects by grinding or chipping and repair or replace joints in accordance with approved procedures.
4. Make shop and field welded joints available to the Owner for nondestructive inspection and examination upon request.

#### 3.04 FLANGED CONNECTIONS

- A. Arrange flange bolt holes to straddle the pipe vertical and horizontal centerlines, and match the orientation of mating flanges.
- B. Install piping to equipment without strain.
- C. Provide gaskets at all flanged connections suitable for the design and temperature of the fluid contained, and in accordance with Part 2 of this Section.
- D. Mate flat face flanges together and raised face flanges together.

#### 3.05 COPPER TUBING CONNECTIONS

- A. Provide soldered or brazed in accordance with Part 2 of this Section.
- B. Make soldered and brazed connections in accordance with the procedures in the current edition of the Copper Tube Handbook of the Copper Development Association.
- C. Qualifications of brazers, brazing procedures, and performance of brazers and brazing operators are required in compliance with the requirements of ASME B31.1, ASME B31.9, and the Boiler and Pressure Vessel Code, Section IX. Keep records and certifications required by the code on file and available for inspection.
- D. Make solder joints on all copper water piping with 95/5 solder. Absolutely no lead-based solder will be accepted.
- E. Clean joints thoroughly before soldering.
- F. Remove excess solder and flux with a cloth or brush to leave a uniform clean fillet.
- G. For refrigeration copper tubing connections, comply with ASME B31.5. Make brazed joints on all refrigeration piping.

#### 3.06 CONNECTIONS OF DISSIMILAR METALLIC MATERIALS

- A. Isolate connections between dissimilar metallic materials using dielectric connections. Use dielectric unions or flanges that provide a complete isolation of the two ends, including bolts for flanges, using materials suitable for the design pressure, temperature and fluid contained.

#### 3.07 VALVES

- A. Provide valves of the same size as the pipe in which they are installed, unless shown otherwise on the Drawings. At pumps, match valve size to pipe size and not pump connection size.
- B. Install valves with the stem on or above the horizontal. Install valves with the stem horizontal if requirements of headroom, access or chain operation must be met.

- C. Pack valves and adjust glands before final acceptance.
- D. Install valve extension stems or chain operators where the center of valve hand wheels is more than 6 feet-6 inches above the floor and valve is 2 ½" and larger. Provide chain hooks where required to prevent fouling of chains on equipment and to clear walkways. Terminate chains approximately 3 feet-6 inches above the floor. Provide worm gear operators or impact hand wheels for all valves 6 inches and larger.
- E. Extended Stems: Where insulation is indicated or specified, provide extended stems arranged to receive insulation and a protective sleeve that allows operation of the valve without breaking the vapor seal or disturbing the insulation.
- F. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
- G. Locate valves for easy access and provide separate support where necessary.
- H. Install check valves for proper direction of flow and as follows:
  - 1. Swing Check Valves: In horizontal position with hinge pin level.
  - 2. Lift Check Valves: With stem upright and plumb
- I. Install butterfly valves with stems horizontal to allow support for the disc and the cleaning action of the disc.
- J. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.
- K. Install balancing valves with lengths of straight pipe upstream and downstream of valve as per manufacturer's instructions such that calibrated accuracy is maintained. As a minimum provide straight lengths as per the following table;

REQUIRED STRAIGHT LENGTHS

| Valve Size | Upstream<br>(In Pipe Diameters) | Downstream<br>(In Pipe Diameters) |
|------------|---------------------------------|-----------------------------------|
| ½"-3"      | 3                               | 1                                 |
| 4"-12"     | 5                               | 2                                 |

- L. Chain wheel Actuators- Valve actuation assembly with sprocket rim, brackets, and chain.
  - 1. Sprocket rim with Chain guides: Ductile Iron (Aluminum for applications exposed to weather), of type and size required for valve.
  - 2. Brackets: Type, number, size, and fasteners required to securely mount actuator on valve.
  - 3. Chain: Stainless steel, of size required to fit sprocket rim.
  - 4. Manufacturers:
    - a. Babbitt Steam Specialty Co.
    - b. Roto Hammer Industries

### 3.08 CONTROL VALVE INSTALLATION

- A. Install all control valves so that the stem position is not more than 60 degrees from the vertical up position.
- B. Install valves in accordance with the manufacturer's recommendations.

- C. Install control valves so that they are accessible and serviceable, and such that actuators may be serviced and removed without interference from structure or other pipes, ducts and/or equipment.
- D. Install isolation valves at control valves such that control valve body may be serviced without draining the supply/return side piping system. Install unions at all connections to screwed type control valves.

### 3.09 PRESSURE TESTING, FLUSHING AND CLEANING

- A. Pressure test piping systems in accordance with applicable codes and as described herein.
- B. Pressure testing - Schedule pressure testing so that it may be witnessed by the Architect/Engineer, Owner, or their representative. Perform tests in accordance with the following procedures:
  - 1. Before testing, complete the installation of each pipe line, including final supports, hangers and anchors. Perform testing before insulation or paint is applied for examination during the test. Clean piping and equipment of metal cuttings and foreign matter as they are installed.
  - 2. Codes - Pressure test piping to assure integrity of material and workmanship in accordance with the applicable ASME Code for pressure piping (B31) and New York State Code.
  - 3. Protection of Equipment - Protect equipment, instruments and piping specialties which are not included in the test by either disconnecting from the piping and blanking off the end of the pipe with a blind flange, plug or cap, or isolating by insertion of a line blind or spool piece as required. Disconnect pneumatic control lines and close all openings.
  - 4. Provide temporary restraints for expansion joints that cannot sustain reactions due to test pressure. If temporary restraints are impractical, isolate expansion joints from testing.
  - 5. Piping may be tested in sections or circuits as required for the progress of the work.
  - 6. Provide all systems to be pressurized with the appropriate gauges, certified calibrated by the manufacturer, and pressure-relieving devices.
  - 7. Install relief valve set at a pressure no more than 1/3 higher than the test pressure, to protect against damage by expansion of liquid or other source of overpressure during the test. Do not allow test pressure to exceed maximum pressure for any vessel, pump, valve, or other component in system under test.
  - 8. Records - Provide records of all tests showing line designation, test pressure, ambient temperature, date of test, retests and signature of witness.
- C. Pneumatic Test Procedures - Perform pneumatic testing in accordance with ASME B31.9
  - 1. Prior to application of full pneumatic test pressure, perform a preliminary test at 10 psig for a minimum of ten (10) minutes to reveal any major leaks.
  - 2. After the preliminary test, apply pressure gradually in stages until test pressure is reached.
  - 3. Test durations:
    - a. For all systems the minimum test duration is that required to thoroughly examine the system for leaks.
    - b. Natural gas piping; Maintain test pressure for a minimum of one hour but not less than ½ hour for each 500 cubic feet of pipe volume. After test, purge the entire system of test gas.
    - c. For all other systems maintain test pressure for a minimum of ten (10) minutes without fluctuation.
  - 4. Check all joints, valves, etc. for leaks with a thick soap-water solution.
  - 5. Repair leaks as specified under "Repair of Line Leaks".
  - 6. Repeat pneumatic test until there are no leaks.
  - 7. Ensure that adequate protection is provided to prevent injury to persons or property during leak testing.

8. Test systems to the pressure indicated under "Pressure Testing Schedule"
- D. Hydrostatic Test Procedures - Perform hydrostatic testing in accordance with ASME B31.9.
  1. Perform test using the pressure indicated under "Pressure Testing Schedule"
  2. After hydrostatic test pressure has been applied for at least two hours, examine piping, joints, and connections for leakage while maintaining test pressure. Repeat hydrostatic test until there are no leaks.
  3. Repair leaks as specified under "Repair of Line Leaks"
- E. Service Testing - Perform service testing in accordance with ASME B31.9.
  1. For gases and steam and condensate service not over 15 psig, and for nontoxic, noncombustible, nonflammable liquids at pressures not over 100 psig and temperatures not over 200 degrees F a system test with the service fluid is acceptable. This exemption does not apply to natural gas piping.
  2. Bring the piping system up to operating pressure gradually with visual examination at a pressure between one-half and two-thirds of design pressure. Make a final examination at operating pressure.
  3. Repair leaks as specified under "Repair of Line Leaks"
  4. Repeat service test until there are no leaks.
- F. Repair of Line Leaks - Comply with the following procedures for repair of leaks. In each case retest after repairs are made.
  1. Soldered/Brazed Joints - Remove solder/brazing alloy and reapply with proper flux.
  2. Flanged Joints - Check to determine flange end alignment and that all bolts are uniformly tightened with the required torque. If leak persists, depressurize the line, remove gasket, examine flange end face, and insert new gasket.
  3. Threaded Joints - Tighten joint to a required torque. If leak does not stop, replace pipe and/or fittings. Do not use pipe dope, cement or seal weld to stop pipe leaks.
  4. Gasketed Joints - Remove existing gasket and insert new gasket.
  5. Welded Steel Joints - Repair pipe in accordance with applicable ASME B31 code.
  6. Leaks in Material - Leaks located in pipe or fitting material require the replacement of that section of pipe or fitting and a repeat of the entire system using the complete procedure required for that system. Caulking, welding or epoxy is not permitted. Repair all damage caused by leaks.
- G. Flushing - Complete pressure testing requirements prior to flushing. Performance of the flushing may be witnessed by the Architect/Engineer, Owner, or their representative, provide ample notification to all parties in advance of flushing any system. Perform system flushing in accordance with the following procedures:
  1. Flush all main and branch steam and liquid piping systems after pressure testing is complete with new potable water while draining the system at all low points. Isolate all connected equipment and flush individually.
  2. Flushing for piping and equipment will be considered complete when water samples taken at all low points indicate clear discharge-with no visible solids. If not clear, continue flushing and sampling until discharge is clear.
- H. Cleaning - Complete flushing requirements prior to cleaning. Performance of the cleaning may be witnessed by the Architect/Engineer, Owner, or their representative, provide ample notification to all parties in advance of cleaning any system. Perform system cleaning in accordance with the following procedures:
  1. Clean all steam and condensate lines by blowing them out with live steam. Discharge steam and condensate from each main and branch safely to atmosphere for a minimum of five minutes.
  2. Clean all compressed air, instrument air, and fuel oil lines with oil-free dry compressed air at design pressure through each section so that they are blown free of dirt and debris.

3. Clean domestic water lines by flushing with water until effluent is visibly as clean as the flushing medium.
4. Clean hot water/chilled water lines as described below:
  - a. When flushing discharge is clear, fill piping systems with water and sufficient approved alkaline cleaning material to remove dirt, oil and grease. Include all connected equipment in the cleaning.
  - b. Vent system and place in operation, with automatic controls operating at set point temperature or an operating temperature designated by the Architect/Engineer. Circulate the solution through the system for a minimum of 4 consecutive hours.
  - c. After 4 hours, drain system and flush with clean water until the pH at the farthest drain matches the clean water input. Keep strainers unplugged during the cleaning operations. Refill system with clean water.
5. Clean temporary pump strainers and strainers at coils, etc. every 2 hours periodically during cleaning procedures. Do not remove temporary strainers until all cleaning steps are completed and the operation of the system indicates that the system is free of all foreign matter.
6. Blow out all piping and equipment after cleaning and final flushing is completed and the system is drained with clean dry instrument air for a minimum of 15 minutes or until all water is expelled from the system. Upon completion seal the system by closing all drains and vents.
7. Following the Architect/Engineers approval of the above flushing and cleaning procedures, immediately fill each system and chemically treat and monitor in accordance with the "Chemical Treatment Systems" specifications.

I. Pressure Testing Schedule:

| Service                           | Test Type   | Design Operating Pressure (psig) | Test Pressure (psig)                                          |
|-----------------------------------|-------------|----------------------------------|---------------------------------------------------------------|
| Heating Hot Water Supply & Return | Hydrostatic |                                  | 1.5 times maximum working pressure, but not less than 100 psi |

3.10 PAINTING

- A. Upon completion of the installation, remove all protecting materials, thoroughly remove all scale and grease and leave in a clean condition for painting. Paint in accordance with the requirements of the "Painting" Specification Section.

**END OF SECTION 232000**

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. Pipe, pipe fittings, valves, and connections for piping systems.
- B. Condensate Drain.

## 1.02 RELATED SECTIONS

- A. Section 230529 - Pipe Hangers and Supports
- B. Section 230555 - Mechanical System Identification
- C. Section 230700 - Piping Insulation.

## 1.03 REFERENCES

- A. Section 014500 - Quality Control: Requirements for references and standards.
- B. ASTM D 1784 - Rigid Vinyl Compounds.
- C. ASTM D 1785 - PVC Plastic Pipe, Schedule 40
- D. ASTM D 2466 - PVC Plastic Fittings, Schedule 40
- E. ASTM D 2665 - PVC Drain, Waste, and Vent Pipe and Fittings
- F. ASTM D 2564 - Solvent Cements for PVC Pipe and Fittings
- G. ASTM D 2321 - Underground Installation of Thermoplastic Pipe (non-pressure applications)
- H. ASTM F 1668 - Procedures for Buried Plastic Pipe
- I. ASTM F 1866 - Fabricated PVC DWV Fittings

## 1.04 SUBMITTALS FOR REVIEW

- A. Section 013300 - Submittals: Procedures for submittals.
- B. Product Data: Provide data on pipe materials, pipe fittings, and accessories. Provide manufacturers catalog information.

## 1.05 QUALITY ASSURANCE

- A. Perform Work in accordance with State of New York and Town code.
- B. Identify pipe with marking including size, ASTM material classification and ASTM specification.

## 1.06 REGULATORY REQUIREMENTS

- A. Perform Work in accordance with the State of New York and the Town code.

## 1.07 DELIVERY, STORAGE, AND PROTECTION

- A. Section 016500 – Product Delivery, Storage, and Handling: Transport, handle, store, and protect products.
- B. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.
- C. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.

## 1.08 ENVIRONMENTAL REQUIREMENTS

- A. Section 014536 – Environmental Quality Control: Moisture control affecting products on site.

## PART 2 - PRODUCTS

## 2.01 CONDENSATE DRAIN PIPING (DIAMETER LESS THAN OR EQUAL TO 1")

- A. Copper Type L Pipe and Fitting System.
- B. Pipe and fittings shall be manufactured from Type L Copper.
- C. Pipe and fittings shall be manufactured as a system and be the product of one manufacturer.
- D. Pipe and fittings shall conform to National Sanitation Foundation (NSF) Standard 61 or the health effects portion of NSF Standard 14.
- E. Testing with or transport/storage of compressed air or gas in Copper pipe or fittings shall not be permitted.
- F. The system is intended for pressure drainage applications where the temperature will not exceed 140°F.

## 2.02 CONDENSATE DRAIN PIPING (DIAMETER GREATER THAN 1")

- A. Type L copper solid wall pipe and type L copper fitting system.
- B. Pipe and fittings shall be manufactured as a system and be the product of one manufacturer.
- C. Pipe and fittings shall conform to National Sanitation Foundation (NSF) Standard 14.
- D. Testing with or transport/storage of compressed air or gas in copper pipe or fittings shall not be permitted.
- E. The system is intended for non-pressure drainage applications where the temperature will not exceed 140°F.

## 2.03 PVC SCHEDULE 40 SOLID WALL PIPE AND PVC DWV FITTING SYSTEM.

- A. Pipe and fittings shall be manufactured from virgin rigid PVC (polyvinyl chloride) vinyl compounds with a Cell Class of 12454 per ASTM D 1784.
- B. PVC Schedule 40 pipe shall be iron pipe size (IPS) conforming to ASTM D 1785 and ASTM D 2665.

- C. Injection molded PVC DWV fittings shall conform to ASTM D 2665. Fabricated PVC DWV fittings shall conform to ASTM F 1866.
- D. Pipe and fittings shall be manufactured as a system and be the product of one manufacturer.
- E. Pipe and fittings shall conform to National Sanitation Foundation (NSF) Standard 14.
- F. Testing with or transport/storage of compressed air or gas in PVC pipe or fittings shall not be permitted.
- G. Buried pipe shall be installed in accordance with ASTM D 2321 and ASTM F 1668.
- H. Solvent cement joints shall be made in a two step process with primer manufactured for thermoplastic piping systems and solvent cement conforming to ASTM D 2564.
- I. Primer shall conform to ASTM F 656.
- J. The system shall be protected from chemical agents, fire stopping materials, thread sealant, plasticized vinyl products, or other aggressive chemical agents not compatible with PVC compounds.
- K. The system is intended for non-pressure drainage applications where the temperature will not exceed 140°F.

### PART 3 - EXECUTION

#### 3.01 EXAMINATION

- A. Section 013100 - Project Management and Coordination: Verification of existing conditions before starting work.

#### 3.02 PREPARATION

- A. Ream pipe and tube ends. Remove burrs.
- B. Remove scale and dirt, on inside and outside, before assembly.
- C. Prepare piping connections to equipment with flanges or unions.

#### 3.03 INSTALLATION

- A. Install in accordance with manufacturer's instructions and the requirements of the Plumbing Code of New York State.
- B. Route piping in orderly manner and maintain gradient. Route parallel and perpendicular to walls. Effect changes in size with reducing fittings.
- C. Install piping to maintain headroom, conserve space, and not interfere with use of space.
- D. Group piping whenever practical at common elevations.
- E. Provide clearance in hangers and from structure and other equipment for installation of insulation and access to fittings. Refer to Section 230700.
- F. Provide access where valves and fittings are not exposed. Coordinate size and location of access doors with Section 083113 - Access Doors and Frames.

- G. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welding.
- H. Sleeve pipes passing through partitions, walls and floors.
- I. Identify piping under provisions of Section 230555.

#### 3.04 APPLICATION

- A. Install unions downstream at equipment or apparatus connections.

#### 3.05 ERECTION TOLERANCES

- A. Section 014500 - Quality Control: Tolerances.
- B. Establish invert elevations, slopes for drainage to  $\frac{1}{4}$  inch per foot minimum. Maintain gradients.

#### 3.06 FIELD QUALITY CONTROL

- A. Drainage System: Test plug all system openings with the exception of the system's highest point. Fill system with water to the point of overflow and subject the highest point to 10-foot head of water. The system shall be considered tight if the pressure is held for not less than 30 minutes without signs of leakage.

**END OF SECTION 232001**

## PART 1 - GENERAL

## 1.01 DESCRIPTION OF WORK

- A. This section describes the thermometers and pressure gauges for monitoring liquids and gases in mechanical equipment and systems to be provided as part of the Work.

## 1.02 SUBMITTALS

- A. Product Data: Submit manufacturer's catalog sheets and specifications.
- B. Certification - Submit certified accuracy for all products specified.

## PART 2 - PRODUCTS

## 2.01 APPROVED MANUFACTURERS

- A. Subject to compliance with the specifications, provide products from the following manufacturers.
  - 1. Weksler Instruments
  - 2. H.O. Trerice Co.
  - 3. Taylor Instrument Co.
  - 4. Moeller Instrument Co.

## 2.02 THERMOMETERS FOR MEASURING LIQUID TEMPERATURE

- A. Thermometer Scale Ranges: Provide thermometers, with scale range 1-1/2 times the actual working temperature required for the particular application, as approved. Provide maximum of 2 degrees between graduations and 10 degrees between numerals. When scale ranges are in excess of 100 degrees, the maximum range between numerals may be 20 degrees, or as otherwise approved for the particular application.
- B. Thermometers: Provide red reading or magnified column industrial type, with wide angle of vision. Thermometers containing mercury are not permitted. Design and materials as follows:
  - 1. Case: Heavy one piece cast aluminum or extruded brass construction, with a clear acrylic plastic or glass lens. (Adjustable Angle)
  - 2. Scale: White enamel background with bold black figures and graduations. Provide 7 inch scale length for installation in piping and 9 inch length for installation in tanks and similar equipment.
  - 3. Separable Thermowell: Provide thermometers with matching brass (for water service) or stainless steel (for steam service) separable socket thermometer wells in accordance with manufacturer's recommendations.
  - 4. Stem: Swivel neck design.
  - 5. Locking Device: Adjustable case locknut and adjusting screw function independently to provide full 360 degree positioning of thermometer case and stem to provide optimal visibility.

## 2.03 PRESSURE GAUGES

- A. Provide pressure gauges with 4½" dial size with a flangeless stainless steel case, stainless steel friction ring and acrylic window. Provide brass movement with a bronze bourdon tube and brass socket.
- B. Dial face: white with black figures; pointer with zero adjustment screw.
- C. Accuracy: ±1% of scale range, ASME B40.1 Grade 1A.

- D. Approved manufacturers: Terice No. 620 or approved equal.
- E. Provide stainless steel needle valves for all pressure gauges, Terice or approved equal.
- F. Provide steel coil siphons for gauges on steam service, Terice No. 885 or approved equal.
- G. Provide pressure snubbers for gauges on any service where pressure surges or pulsations are possible, Terice No. 872 or approved equal.

#### 2.04 COMBINATION PRESSURE/TEMPERATURE TEST STATIONS

- A. Provide test stations where shown on the Drawings.
- B. Test stations: "Pete's Plug II", 1/4" solid brass fitting to receive either a 1/8" OD temperature or pressure probe with two valve cores of Neoprene (Max 200°F at 500 PSI), or Nordel (Max 275°F at 500 PSI). Provide fitting with a color coded cap strap with gasket, rated at 1000 PSI at 140°F. Provide material compatible with piping system that test station is installed in as per manufacturer's recommendations.
- C. When installed in insulated lines, test connection provide Pete's XL plug, extended stem type.
- D. Supply to the Owner, upon completion of the Work, a pressure and temperature test kit consisting of a 0-100 PSI, 0-230 ft. of water pressure gauge with a Number 500 gauge adapter attached, one 25-125°F and one 0-220°F pocket testing thermometer, an extra number 500 gauge adapter, and a protective carrying case.
- E. Approved Manufacturer: - Pete's Plug II by Peterson Equipment.

#### 2.05 RANGES FOR TEMPERATURE AND PRESSURE GAUGES

|                 |           |              |
|-----------------|-----------|--------------|
| Thermometer     | Hot Water | 60° to 240°F |
| Pressure Gauges | Hot Water | 0 to 60 psi  |

Note: Select the proper range so that the average operating pressure and temperature falls approximately in the middle of the scale selected. It is the Contractor's responsibility to determine the average operating range and select the scale appropriately.

### PART 3 - EXECUTION

#### 3.01 INSTALLATION

- A. Thermometers:
  1. Install thermometers, of type and scale range as required for the particular application, at locations indicated on the Drawings or as required by the Specifications.
  2. Install thermometers of type, scale range, and with case style, as required for the particular application, at locations indicated on the Drawings or Specified. Angle each thermometer so that it can be easily read from a standing position at floor level.
  3. Where thermometers are installed in piping with insulation 2 inches thick or greater, provide thermometer wells with extension necks. Omit extension necks where thermometers are used on bare pipe or pipe with insulation less than 2 inches thick.
  4. Where thermometer wells are installed in piping 2 ½ inches and smaller, increase the pipe size by a minimum of one pipe diameter to avoid restricting the flow in the pipe or install thermometers at elbows such that the stems protrude into the flowing medium.

- B. Pressure Gauges:
  - 1. Install gages, of type and scale range as required for the particular application, at locations indicated on the Drawings or as required by the Specifications.
  - 2. For measuring liquid pressure, install gauges complete with stop cocks and drain cocks.
  - 3. Install siphon loops on pressure gauges when installing in steam lines.
- C. Pressure Snubbers and Impulse Dampers:
  - 1. Install "pressure snubbers" in the piping connections to all gages installed in the suction and discharge piping connections to close coupled and base mounted circulating pumps driven by motors under 10 HP.

**END OF SECTION 232003**

## PART 1 - GENERAL

## 1.01 DESCRIPTION OF WORK

- A. This Section describes the hydronic specialties, including Expansion Tanks, Air Separators, Triple Duty Valves, Suction Diffusers, Automatic Water Tempering/Mixing Valves, Water Hammer Arrestors and Thermostatic Radiator Valves for hydronic heating and cooling piping systems.

## 1.02 REFERENCES

- A. ASME - Boilers and Pressure Vessel Codes, SEC 8-D-Rules for Construction of Pressure Vessels.

## 1.03 SUBMITTALS

- A. Product Data: Provide product data for manufactured products and assemblies required for the Work. Include component sizes, rough-in requirements, service sizes and finishes. Include product description, model and dimensions.
- B. Submit manufacturer's instructions for maintenance and repair.
- C. Provide a valve and specialty application schedule.

## 1.04 OPERATION AND MAINTENANCE DATA

- A. Maintenance Data: Include installation instructions, assembly views, lubrication instructions and replacement parts list.

## 1.05 RELATED WORK

- A. Section 232000 - Pipe, Valves and Fittings

## 1.06 QUALIFICATIONS

- A. Companies specializing in making products specified with at least 5 years of experience and products that have been on the market for at least 3 years.

## PART 2 - PRODUCTS

## 2.01 ASME PARTIAL BLADDER TYPE EXPANSION TANKS

- A. Manufacturers:
  - 1. Taco, Inc; Model PAX (size and capacity as called for on plans)
  - 2. ITT Bell & Gossett
  - 3. Amtrol Inc
  - 4. Approved equal.
- B. Construction: Welded steel, designed, tested and stamped in accordance with ASME (BPV code sec VIII, div 1); supplied with National Board Form U-1, rated for working pressure of 125 psi , with flexible seamless heavy duty butyl rubber bladder. (optional 150 psi ) All wetted components to be fabricated of FDA approved materials. Bladder shall be able to accept the partial volume of the expansion tank and shall be removable and replaceable. The bladder shall be connected to the top of the tank via a hose/tube that with distribution holes that facilitate even expansion of the bladder.

- C. System connection shall be via a ½ inch 304 stainless steel NPT connection on the top of the tank. A Schrader valve fitting shall be installed at the top of the tank to allow external pressurization of the bladder. Valve shall be protected by a 1½ "coupling welded to the tank.
- D. Accessories: Pressure gage (field installed in adjacent piping by others) and air-charging fitting; precharge to pressure indicated on plans.

## 2.02 AIR AND DIRT SEPARATORS

- A. Manufacturers:
  - 1. Taco, Inc; 4900 (size and capacity as called for on plans)
  - 2. Spirotherm.
  - 3. Flamco
  - 4. Approved equal.
- B. Air and dirt removal device shall be constructed of steel. It shall be designed, fabricated and stamped per ASME Section VIII Division 1 with a maximum working pressure of 125 psi at 270°F/. Manufacturer shall be holder of ASME U stamp. Optional 250 psi and 150 psi ASME units.
- C. Units up to three 3-inch in size shall be provided with threaded connections as standard. Units four 4-inch and larger shall be provided with flanged system connections as standard. Inlet and outlet connections to be inline with piping system. Both inlet and outlet to be in the same horizontal and vertical planes.
- D. Each air and dirt removal device shall be equipped with a brass conical shaped air venting chamber designed to minimize system fluid from fouling the venting assembly. The air vent shall be able to be closed to allow flushing and purging of dirt via side port without dirt passing through vent on initial system fill.
- E. A brass flushing cock shall be located on the side of each separator to facilitate system fast-fill and removal of the floating impurities from the air system interface within the separator.
- F. A blow down valve shall be provided by the unit manufacturer on the bottom of each unit to allow blow down and cleaning. On units 2 ½" and smaller the valve and all of its fittings shall be 1". On units three 3" and larger the valve and all openings shall be 2".
- G. The air and dirt removal device shall remove air down to 18 microns and shall remove dirt/debris down to 35 microns. The unit shall be 100% efficient at removing dirt down to 90 microns in 100 passes or less.
- H. The unit manufacturer shall provide the owner and design engineer third party independent test data certifying that their unit performs to the above standards. Suppliers not providing these independent performance test results will not be acceptable.
- I. The air and dirt separator shall employ the use of high surface area pall rings to achieve optimal separation of air and dirt with minimal pressure drop. The pall rings shall be made of stainless steel. Stainless steel will be the only acceptable material used for suppressing turbulence and increasing surface area for high efficiency air and dirt removal. Inferior materials of construction such as copper for the straining medium will not be acceptable.
- J. Manufacturer must have at least 15 years of experience with microbubble coalescing and dirt removal technology.

- K. (OPTIONAL) The unit shall be manufactured with a removable cover to facilitate removal, inspection, and cleaning of the pall ring basket. The entire pall ring basket shall be constructed of stainless steel. For safety and ease of service the unit shall be accessed from the top and the pall ring basket shall be accessed as one complete assembly housed in a stainless steel cage.

### 2.03 TRIPLE DUTY VALVES

- A. Furnish and install as shown on Drawings, a valve designed to perform the functions of a center guided nonslam check valve, shutoff valve and calibrated balancing valve.
- B. Heavy-duty cast iron construction.
- C. 2" and smaller: NPT connections per ANSI B1.20.1-83 suitable for 175 psi working pressure for operating temperatures up to 250°F.
- D. 2 1/2" and larger: 125 psi ANSI flanged connections suitable for 175 psi working pressure connections for operating temperatures up to 250°F.
- E. Fit valve with a bronze seat, replaceable bronze disc with EPDM seat insert, stainless steel stem, and chatter preventing stainless steel spring. Design to permit repacking under full system pressure.
- F. Provide Cv rating at every 10% increment opening for read-out of flow determination and system pressure drop.
- G. Equip with brass readout valves (with integral check valve) to facilitate taking differential pressure readings across the orifice for accurate system balance. Manufacture valve at an ISO 9001 approved facility.
- H. Approved manufacturers:
  - 1. ITT Bell & Gossett
  - 2. Taco, Inc.
  - 3. Watts

### 2.04 SUCTION DIFFUSERS

- A. Furnish and install as shown on the Drawings, angle pattern flow straightening fitting equipped with a combination diffuser strainer-orifice cylinder, flow straightening vanes, start-up strainer and adjustable support foot. Design the combination diffuser-strainer-orifice cylinder to withstand pressure differential equal to the system pump shutoff head with a free area equal to five times the cross section area of the pump suction opening. Provide flow straightening vanes no less than 2 1/2 times the diameter of the system pump suction connection in length.
- B. Cast Iron NPT and Flanged Models Rated for a Maximum Working Pressure of 175 PSIG.
- C. 2" and smaller: Cast iron flow straightening fitting with NPT system and NPT pump connections.
- D. 2 1/2" and larger: Cast iron flow straightening fitting with flanged system and flanged pump connections.
- E. Stainless steel combination diffuser-strainer-orifice cylinder with 3/16" diameter perforations to protect the system pump. Full length stainless steel flow straightening vanes to provide nonturbulent flow to the suction side of the system pump. Bronze start-up strainer with 16 mesh. Construct so that all internal components are replaceable.

- F. Approved manufacturer: ITT Bell & Gossett.

### PART 3 - EXECUTION

#### 3.01 INSTALLATION

- A. Install specialties in accordance with manufacturer's instructions and as shown on the Drawings.
- B. Air separator and expansion tank to be installed on the suction side of the system pumps. Expansion tank to be tied into system piping in close proximity to air separator and system fill line.
- C. Provide all necessary steel supporting members to support the expansion tank in an approved manner. Support vertical tanks with steel legs or base. Support horizontal tanks with steel saddles.
- D. Provide pump suction fitting on suction side of base mounted centrifugal pumps where indicated. Remove temporary strainers after cleaning systems.
- E. Provide combination pump discharge valve on discharge side of base mounted centrifugal pumps where indicated.
- F. Support pump fittings with floor mounted pipe and flange supports.
- G. Provide radiator valves on water inlet to terminal heating units such as radiation, unit heaters, and fan coil units.
- H. Provide radiator balancing valves on water outlet from terminal heating units such as radiation, unit heaters, and fan coil units.
- I. Provide relief valves on expansion tanks.
- J. Select system relief valve capacity so that it is greater than make-up pressure reducing valve capacity. Select equipment relief valve capacity to exceed rating of connected equipment.
- K. Pipe relief valve outlet to nearest floor drain.

**END OF SECTION 232006**

## PART 1 - GENERAL

## 1.01 DESCRIPTION OF WORK

- A. This section describes the pipe specialties for piping systems including, but not limited, to the following:
  - 1. Drain Valves
  - 2. Pressure Reducing Fill Valves
  - 3. Pressure Relief Valves
  - 4. Strainers
  - 5. Air Vents
  - 6. Prefabricated Expansion Compensation Loops
  - 7. Escutcheons
  - 8. Flexible Stainless Steel Hoses
  - 9. Double Check Valves
  - 10. Dielectric Connections

## 1.02 REFERENCES

- A. ASME - Boilers and Pressure Vessel Codes, SEC 8-D-Rules for Construction of Pressure Vessels.

## 1.03 SUBMITTALS

- A. Product Data: Submit product data for manufactured products and assemblies required for this project. Include component sizes, rough-in requirements, service sizes and finishes. Include produce description, model and dimensions.
- B. Submit manufacturer's instructions for maintenance and repair.
- C. Submit a valve and specialty application schedule.

## 1.04 OPERATION AND MAINTENANCE DATA

- A. Maintenance Data: Include installation instructions, assembly views, lubrication instructions and replacement parts list.

## 1.05 RELATED WORK

- A. Section 232000 - Pipe, Valves and Fittings

## 1.06 QUALIFICATIONS

- A. Companies specializing in making products specified with at least 5 years of experience and products that have been on the market for at least 3 years.

## PART 2 - PRODUCTS

## 2.01 DRAIN VALVE

- A. Provide drain valves, ball type with  $\frac{3}{4}$  inch hose connector, at all low points of water systems, on strainers, and in all locations as shown on the Drawings. Provide minimum  $\frac{3}{4}$  inch drain size. Provide caps or plugs with chain at all drain and fill valves.

## 2.02 PRESSURE REDUCING FILL VALVE

- A. Provide a pressure reducing fill valve with built in strainer, by-pass and all separation valves for hot water heating system.
- B. Adjustable range of 10 TO 25 PSIG or 25 to 60 PSIG.
- C. Install pressure reducing valve with unions on inlet and outlet to facilitate removal.
- D. Approved Manufacturer: Bell & Gossett

## 2.03 PRESSURE RELIEF VALVE

- A. Make Up Water Systems:
  - 1. Engineered in accordance with Section IV of the ASME boiler and pressure code for heating boilers with capacities certified by the National Board of Boiler and Pressure Vessel Inspectors.
  - 2. Bronze body and EPDM diaphragm
  - 3. Rated for maximum operating temperature of 250 degrees F and maximum working pressure of 125 psig.
  - 4. Approved Manufacturer: Bell and Gossett
- B. Boilers:
  - 1. Furnished by boiler supplier and sized as per ASME Boiler and Pressure Vessel Code.

## 2.04 STRAINERS

- A. General:
  - 1. Provide strainers ahead of all pumps, automatic control valves, as specified for piping installations, as shown on the Drawings, and as required for proper functioning of equipment.
- B. Steam and Water Strainers
  - 1. "Y" type or "Basket" type, as shown on the Drawings.
  - 2. Provide a strainer screen blow down valve the full size of the blow-off tapping for each strainer. Provide gate valves for steam service and ball valve with ½ inch hose end for water service.
  - 3. Stainless steel strainer screens with perforations as follows:

| Pipe Size<br>(Inches) | Water Service<br>Perforations (Inches)                  | Steam Service<br>Perforations (Inches) |
|-----------------------|---------------------------------------------------------|----------------------------------------|
| Thru 4                | 1/16<br>(except at cooling tower<br>pumps shall be 1/8) | 1/32                                   |
| Over 4                | 1/8                                                     | 3/64                                   |

- 4. Select the length of the nipple connecting the blow-off valve to the strainer basket flange so that the blow-off valve is clear of the insulation.
- 5. Select strainers with bodies compatible with connected piping from the following schedule for the service intended.

| Size                | Manufacturer            | Strainer Type | Model No. | Description                                                 |
|---------------------|-------------------------|---------------|-----------|-------------------------------------------------------------|
| 2 inches & smaller  | Mueller Steam Specialty | Y             | 11M       | Cast iron body, threaded ends, ANSI Class 250               |
| 2 inches & smaller  | Mueller Steam Specialty | Y             | 358S      | Bronze body, soldered ends, ANSI Class 125, for copper pipe |
| 2 ½ inches & larger | Mueller Steam Specialty | Y             | 758       | Cast iron body, flanged ends, ANSI Class 125                |
| 2 inches & smaller  | Mueller Steam Specialty | Basket        | 125       | Cast iron body, screwed ends, ANSI Class 125                |
| 2 inches & smaller  | Mueller Steam Specialty | Basket        | 125B      | Bronze body, screwed ends, ANSI Class 150, for copper pipe  |
| 2 ½ inches & larger | Mueller Steam Specialty | Basket        | 166       | Cast iron body, flanged ends, ANSI Class 250                |

## 2.05 AIR VENTS

### A. Automatic Air Vents:

1. Float actuated high capacity air vent designed to purge free air from the system and provide shutoff at pressures up to 150 psig at a maximum temperature of 250 degrees F. Design to prevent air from entering the system if system pressure drops below atmospheric pressure and to purge free air at pressures up to 150 psig during normal system operation.
2. Cast iron and fitted with components of stainless steel, brass, and EPDM.
3. Provide a shutoff ball valve before the automatic air to isolate the air vent from the system.
4. Approved Manufacturer: ITT Bell & Gossett Model 107A.

### B. Manual Air Vents:

1. ½ inch ball valves with ½ inch hose ends.

## 2.06 PREFABRICATED EXPANSION COMPENSATION LOOPS

- A. Provide flexible expansion loops of size and type noted on Drawings.
- B. Two flexible sections of hose and braid, two 90 degree elbows, and a 180 degree return assembled in such a way that the piping does not change direction, but maintains its course along a single axis.
- C. Factory supplied, center support nut located at the bottom of the 180 degree return, and a drain/air release plug. Design flexible loops so that no thrust loads are imparted to system support anchors or building structure.
- D. Install in a neutral, pre-compressed or pre-extended condition as required for the application. For steam service, install loops with flexible legs horizontal to prevent condensate buildup. Install and guide per manufacturer's recommendations.
- E. Select materials of construction and end fitting type to be consistent with pipe material and equipment/ pipe connection fittings. Connectors A.G.A. certified natural gas service. Connectors UL classified in accordance with ANSI/NSF 61-1977 standards for potable water service.
- F. Approved Manufacturer: The Metraflex Company, Chicago, IL.

## 2.07 ESCUTCHEONS

- A. Provide escutcheons with spring-catch fasteners at all locations where insulated or uninsulated piping, installed exposed to view, penetrates wall, partitions, floors, and ceilings.
- B. Plain pattern, chrome-plated brass for all piping except galvanized steel.
- C. Galvanized around galvanized steel pipe.
- D. Deep recess to cover sleeves at floor penetrations.

## 2.08 FLEXIBLE STAINLESS STEEL HOSE

- A. Stainless steel braid and carbon steel fittings.
- B. End connections: Sizes 2 ½ "and smaller, threaded male nipples. Sizes 3" and larger, flanged.
- C. Minimum lengths as tabulated below:

| SIZE (INCHES) | MINIMUM SIZE (INCHES) | SIZE (INCHES) | MINIMUM LENGTH (INCHES) |
|---------------|-----------------------|---------------|-------------------------|
| 1/2           | 9                     | 4             | 15                      |
| 3/4           | 10                    | 6             | 20                      |
| 1             | 11                    | 8             | 22                      |
| 1 1/4         | 12                    | 10            | 26                      |
| 1 1/2         | 13                    | 12            | 28                      |
| 2             | 14                    | 14            | 30                      |
| 2 1/2         | 18                    | 16            | 32                      |
| 3             | 14                    |               |                         |

- D. Approved Manufacturer: Type BSS as manufactured by Mason Industries, Inc.

## 2.09 DOUBLE CHECK VALVE ASSEMBLY

- A. Conform to AWWA C510-92.
- B. Include a tightly closing resilient-seated shut-off valve at each end of the body. Fit with four (4) resilient-seated test cocks.
- C. Two (2) independent and internally loaded check valves with replaceable seats
- D. Internal parts easily accessible from the top of the device without removing the check valve body from the line. Install the device in horizontal position.
- E. Rated to 175 psi working pressure and to withstand water temperatures from 32 deg F to 140 deg F.
- F. Valve body bronze with stainless steel springs and threaded ends.
- G. Strainer: Body and cover ASTM B-63 bronze. Screen ASTM A478, Type 304 stainless steel standard 20 mesh. Include body, screen, cap, gasket and self-cleaning blow-off plug with NPT threads.

H. Approved Manufacturer: Febco Model 850

## 2.10 DIELECTRIC CONNECTIONS

A. Approved Manufacturer: Watts Regulator Series 3000 Dielectric Unions and Flange Systems

## 2.11 SAFETY AND RELIEF VALVES

- A. General Requirements: Valves shall be as specified by ASME Code governing manufacture of such valves within scope of their particular usage, i.e., Heating Boilers, Power Boilers, Unfired Pressure Vessels, etc., shall be tested, rated and listed by National Board of Boiler and Pressure Vessel Inspections and shall bear symbol of ASME and NBB and PVI, unless otherwise specified. Liquid relief valves do not require ASME tagging or marking, or NBB and PVI Certification. Valves for applications specified shall conform to the ASME Code, Section IV, Heating Boilers and the following:
1. Valves for hot water heating boilers shall conform to the requirements of the ASME Code and have a maximum pressure setting of 30 psig. Valves shall be of Safety Relief type, i.e., shall lift slowly to relieve normal thermal pressure build-up and "pop" to relieve excessive pressure due to "runaway" conditions, caused by the failure of any pressure control device and shut-down firing mechanism on excessive pressure indication. Valve bodies shall be bronze or cast iron, with non-vulcanizing synthetic discs and with seats of bronze.
  2. Valves for direct fired domestic hot water boilers shall conform to requirements of ASME Code, Section IV, Paragraph HG 400.2 (a). Valves shall be of temperature-pressure type, rated at 125 psig test pressure. Thermostatic element shall, on rising temperature, cause the valve to open at 188 degrees F. and valve shall deliver its rated capacity at 208 degrees F. and close drip tight at 183 degrees F. Valves for use on gas fired heaters shall be AGA approved and shall be so stamped or marked.
  3. Valves for combination domestic hot water heater and storage tanks shall conform to the requirements of ASME Code, Section IV and USA Standard Z21.22 and shall be NBB listed. Valves shall be of the temperature - pressure type. Thermostatic element shall, on rising temperature, cause the valve to open at 200 degrees F. and valve shall deliver its rated capacity at 210 degrees F. and close drip tight at 195 degrees F. Valves shall be sized in accordance with Unfired Vessel Code.
  4. Valves for Unfired Pressure Vessels: Safety and safety relief valves on secondary side of unfired pressure tanks, water heaters and heat exchangers shall comply with Code requirements governing applicable equipment as outlined in ASME Code, Section IV, Article 4, Paragraph HG 400.3 and as follows: Secondary side of heat exchanger shall be protected by officially rated valves, set for same pressure or temperature as heretofore specified, when secondary side furnishes steam or hot water for purpose equivalent to purposes for which a boiler would be installed; valves for this purpose shall be sized in accordance with Unfired Vessel Code.
  5. End Connections: Unless otherwise specified, safety valves, relief valves and safety relief valves, in sizes 3/4 inch to 3 inches IPS inclusive, may be furnished with male or female pipe thread inlet and female pipe thread outlet; valves over 3 inches IPS must be furnished with 125 lb. or 250 lb. flanged inlet and may be equipped with female threaded or 125 lb. flanged outlet.

## PART 3 - EXECUTION

### 3.01 GENERAL INSTALLATION

A. Install work in accordance with manufacturer's instructions and as shown on the Drawings.

- B. Furnish and connect to all valves, brass tags, polished or lacquered, with stamp lettering or numbers filled in with black paint. Identify each zone.
- C. See "Pipe, Valve and Fitting" Specification for more information.
- D. Secure escutcheons to the pipe or insulation and flush with the building surface.
- E. Clean the valves and place them in final operating position

### 3.02 STRAINER INSTALLATION

- A. Installed strainers so they are readily accessible
- B. Remove start-up strainer screen from suction diffusers and strainers and install permanent screens prior to balancing water systems.

### 3.03 FLEXIBLE CONNECTOR INSTALLATION

- A. Install flexible Connectors at all locations where piping connects to cooling towers, chillers, air handlers, pumps, or compressors and other places shown on the Drawings.
- B. Install Flexible Rubber Connectors only in equipment rooms. Where flexible connectors are required in ceilings or other construction away from equipment rooms and when temperatures exceed 250 degrees F, install Flexible Stainless Steel Hoses.
- C. Where Flexible Rubber Connectors can not be installed due to temperature and pressure limitations install Flexible Stainless Steel Hoses.
- D. Install connectors the equipment side of the shut-off valves horizontally and parallel to the equipment shafts wherever possible.
- E. Install expansion joints in piping gaps equal to the length of the expansion joints under pressure.

### 3.04 RELIEF VALVE INSTALLATION

- A. Furnish and connect to all relief valves, etc., brass tags with stamp lettering or numbers filled in with black paint indicating the working pressure or set pressure.
- B. If, in the opinion of the Architect/Engineer, relief valves, vents and drains have been installed so as to create a hazardous and unsafe condition, make corrections as directed without additional charge.

### 3.05 IR VENT INSTALLATION

- A. Provide automatic air vents with 1/4 inch copper drip lines to the nearest floor or roof drain.
- B. Install air vents where shown on the Drawings and at the high points of all systems and at other locations as required to allow complete venting of air from the system.

### 3.06 DIELECTRIC CONNECTIONS

- A. Isolate connections between dissimilar metallic materials. Use dielectric unions or flanges that provide a complete isolation of the two ends, including bolts for flanges, using materials suitable for the design pressure, temperature and fluid contained.

**END OF SECTION 232007**

## PART 1 - GENERAL

## 1.01 DESCRIPTION OF WORK

- A. Provide variable speed pump control systems as specified herein, as shown of the Drawings and as needed for a complete and proper installation.

## 1.02 SUBMITTALS

- A. Product Data
  - 1. Submit manufacturer's pump specifications, installation and start-up instructions, and current accurate pump characteristic performance curves with selection points clearly indicated.
- B. Shop Drawings
  - 1. Submit manufacturer's assembly-type shop drawings indicating dimensions, weight loading, required clearances and methods of assembly of components.
- C. Wiring Diagrams
  - 1. Submit manufacturer's electrical requirements for power supply wiring to HVAC pumps. Submit manufacturer's wiring diagrams for interlock and control wiring. Clearly differentiate between portions of wiring that are factory-installed and portions to be field-installed.
- D. Maintenance Data
  - 1. Submit maintenance data and parts lists for each type of pump, control, and accessory; including "trouble-shooting" maintenance guide. Include this data, product data, shop drawings and wiring diagrams in maintenance manual; in accordance with requirements of Division 1.
- E. Warranty
  - 1. Submit warranty for each pump with complete description of the warranty procedures.

## 1.03 QUALITY ASSURANCE

- A. Manufacturer's Qualifications
- B. Firms regularly engaged in manufacture of centrifugal pumps with characteristics, sizes and capacities required, whose products have been in satisfactory use in similar service for not less than five (5) years.
- C. Codes and Standards
  - 1. HI Compliance: Design, manufacture and install HVAC pumps in accordance with HI "Hydraulic Institute Standards".
  - 2. UL Compliance: Design, manufacture and install HVAC pumps in accordance with UL 778 "Motor Operated Water Pumps".
  - 3. UL and NEMA Compliance: Provide electric motors and components which are listed and labeled by Underwriters Laboratories and comply with NEMA Standards.
- D. Certification, Pump Performance
- E. Supply name plate data on pumps and drives: Each pump shall be provided with the following data : GPM, FT of Head, HP and actual Voltage.

## 1.04 DELIVERY, STORAGE AND HANDLING

- A. Handle HVAC pumps and components carefully to prevent damage, breaking, denting and scoring. Do not install damaged HVAC pumps or components; replace with new.
- B. Store HVAC pumps and components in clean dry place. Protect from weather, dirt, fumes, water, construction debris and physical damage.
- C. Comply with Manufacturer's rigging and installation instructions for unloading HVAC pumps and moving them to final location.

## PART 2 - PRODUCTS

## 2.01 VERTICAL CLOSED COUPLED PUMPS

- A. The pumps shall be single stage end suction rear pull out design. The seal shall be serviceable without disturbing the piping connections. The capacities and characteristics shall be as called for in the plans/schedules.
- B. Pump casing shall be constructed of ASTM A48 class 30 cast iron. The pump casing/volute shall be rated for 250 psi working pressure for all jobs. The pump flanges shall be matched to suit the working pressure of the piping components on the job, with either ANSI Class 125 flanges or ANSI class 250 flanges. The pump casing shall be drilled and tapped for gauge ports on both the suction and discharge connections and for a drain port at the bottom of the casing. The casing shall have an additional tapping on the discharge connection to allow for the installation of a seal flush line. The pump cover shall be drilled and tapped to accommodate a seal flush line which can be connected to the corresponding tapping on the discharge connection, or to an external source to facilitate cooling and flushing of the seal faces.
- C. All casings shall be flanged. Threaded casings not allowed unless extra unions and fittings are provided with that pump to allow servicing.
- D. The pump shall have a factory installed vent/flush line to insure removal of trapped air from the casing and mechanical seal cooling. The vent/flush line shall run from the seal chamber to the pump discharge.
- E. The impeller shall be ASTM B584-836/875 bronze and hydraulically balanced. The impeller shall be dynamically balanced to ANSI Grade G6.3 and shall be fitted to the shaft with a key. The impeller shall be cast by the hydraulically efficient lost foam technique to ensure repeatability of high quality.
- F. The pump shall incorporate a dry shaft design to prevent the circulating fluid from contacting the shaft. The pump shaft shall be AISI 1045 carbon steel with field replaceable bronze SAE 660 shaft sleeve. In order to improve serviceability and reduce the cost of ownership the shaft sleeve must be slip on (press on not allowable) and must be easily replaced in the field.
- G. The pump shall be fitted with a single mechanical seal, with EPT elastomers and Carbon/Ceramic faces, rated up to 250°F. This seal must be capable of being flushed externally via a tapping in the pump cover adjacent to the seal cavity. The entire pump line shall use no more than three different sizes of seals.
- H. The pump shall be close coupled to a NEMA standard JM frame motor.
- I. In order to both simplify and reduce the total cost of ownership, the manufacturer shall standardize on no more than three sizes of mechanical seals through out the entire range of the family of pumps. The manufacturer shall not use multiple part numbers for the same part.

## J. Approved Manufacturers:

1. Taco
2. Bell & Gosset
3. Armstrong
4. Approved Equal

## 2.02 PUMP LOGIC CONTROLLER

- A. The controller operation shall operate the system using a tested and proven program that safeguards against undesirable or damaging conditions including:
1. Motor overload
  2. Pump flow surges
  3. Hydraulic cycling (hunting)
  4. End of curve unstable operation: The pump logic controller, through a factory pre-programmed algorithm, shall be capable of protecting the pumps from hydraulic damage due to operation beyond their published end-of-curve. This feature requires a flow meter for activation. The operator interface shall include an owner adjustable flow set point to set the parameters for this routine
- B. The pump logic controller shall be capable of starting, unloading, and stopping pumps based on a system performance program that will minimize energy consumption , provide reliable performance and bumpless transitions.
- C. The integrated logic controller shall be capable of running four different hydronic optimization sub-routines:
1. Setup one: This subroutine shall allow the pump package to track a quadratic system curve and will optimize a secondary distribution loop. It shall use a technology that allows the pump, drive, and motor package to translate the hydronic data from both a pump and system curve and translate it to electrical data. This allows the drive to know exactly where it is in the hydronic world
  2. Setup two: This subroutine shall allow two pumps to run as backup for each other and shall alternate the pumps based on a real time clock.
  3. Setup three: This subroutine shall allow the package to run in a customer defined flow rate. The package will always seek to run at the user defined flow even with fouling causing system changes. It shall use a technology that allows the pump, drive, and motor package to translate the hydronic data from both a pump and system curve and translate it to electrical data. This allows the drive to know exactly where it is in the hydronic world.
  4. Setup four: This subroutine shall incorporate a traditional external sensing and control platform. It shall allow the option of controlling the pumps with three zones of differential pressure or central plant differential temperature. This optional setup shall allow the owner the option of external sensing without adding an external controller. This feature shall be equal to Taco System Logic (TSL) or equal
- D. The control platform shall include a subroutine equal to the Taco Self-Sensing Series with ProBalance™. This subroutine shall allow for the automatic balancing of secondary system distribution pumps. The package shall automatically run system distribution pumps to a user defined duty point and will recognize that duty point and hold the pumps at a speed that matches the actual installed system quadratic system curve. The package will then use this data to set up a new duty point as the max point for the quadratic control curve. Use of external balancing devices or contractors will not be needed.
- E. The package shall serve as a flow metering device and will display pump flow at the user interface.

## 2.03 VARIABLE FREQUENCY DRIVES

- A. The VFD shall convert incoming fixed frequency three-phase ac power into an adjustable frequency and voltage for controlling the speed of three-phase ac motors. The motor current shall closely approximate a sine wave. Motor voltage shall be varied with frequency to maintain desired motor magnetization current suitable for the driven load and to eliminate the need for motor derating. When properly sized, the VFD shall allow the motor to produce full rated power at rated motor voltage, current, and speed without using the motor's service factor. VFDs utilizing sine weighted/coded modulation (with or without 3rd harmonic injection) must provide data verifying that the motors will not draw more than full load current during full load and full speed operation.
- B. The VFD shall include an input full-wave bridge rectifier and maintain a fundamental (displacement) power factor near unity regardless of speed or load.
- C. The VFD shall have a dual 5% impedance DC link reactor on the positive and negative rails of the dc bus to minimize power line harmonics and protect the VFD from power line transients. The chokes shall be non-saturating. Swinging chokes that do not provide full harmonic filtering throughout the entire load range are not acceptable. VFDs with saturating (non-linear) dc link reactors shall require an additional 3% AC line reactor to provide acceptable harmonic performance at full load, where harmonic performance is most critical.
- D. The VFD's full load output current rating shall meet or exceed nec table 430-150. The VFD shall be able to provide full rated output current continuously, 110% of rated current for 60 seconds and 120% of rated torque for up to 0.5 second while starting.
- E. The VFD shall provide full motor torque at any selected frequency from 20 hz to base speed while providing a variable torque v/hz output at reduced speed. This is to allow driving direct drive fans without high speed derating or low speed excessive magnetization, as would occur if a constant torque v/hz curve was used at reduced speeds. Breakaway current of 160% shall be available.
- F. A programmable automatic energy optimization selection feature shall be provided standard in the VFD. This feature shall automatically and continuously monitor the motor's speed and load to adjust the applied voltage to maximize energy savings.
- G. The VFD must be able to produce full torque at low speed to operate direct drive fans.
- H. Output power circuit switching shall be able to be accomplished without interlocks or damage to the VFD.
- I. An automatic motor adaptation algorithm shall measure motor stator resistance and reactance to optimize performance and efficiency. It shall not be necessary to run the motor or de-couple the motor from the load to perform the test.
- J. Galvanic isolation shall be provided between the VFD's power circuitry and control circuitry to ensure operator safety and to protect connected electronic control equipment from damage caused by voltage spikes, current surges, and ground loop currents. VFDs not including either galvanic or optical isolation on both analog i/o and discrete digital i/o shall include additional isolation modules.
- K. VFD shall minimize the audible motor noise through the used of an adjustable carrier frequency. The carrier frequency shall be automatically adjusted to optimize motor and VFD operation while reducing motor noise. VFDs with fixed carrier frequency are not acceptable.

- L. All VFDs shall contain integral emi filters to attenuate radio frequency interference conducted to the ac power line.
- M. The drive enclosure shall be standard as NEMA 12 (ip 55) and optional shall be NEMA 4X (ip 66). See schedules for project requirements.
- N. Protective features:
  - 1. A minimum of class 20 i2t electronic motor overload protection for single motor applications shall be provided. Overload protection shall automatically compensate for changes in motor speed.
  - 2. Protection against input transients, loss of AC line phase, output short circuit, output ground fault, over voltage, under voltage, VFD over temperature and motor over temperature. The VFD shall display all faults in plain language. Codes are not acceptable.
  - 3. Protect VFD from input phase loss. The VFD should be able to protect itself from damage and indicate the phase loss condition. During an input phase loss condition, the VFD shall be able to be programmed to either trip off while displaying an alarm, issue a warning while running at reduced output capacity, or issue a warning while running at full commanded speed. This function is independent of which input power phase is lost.
  - 4. Protect from under voltage. The VFD shall provide full rated output with an input voltage as low as 90% of the nominal. The VFD will continue to operate with reduced output, without faulting, with an input voltage as low as 70% of the nominal voltage.
  - 5. Protect from over voltage. The VFD shall continue to operate without faulting with a momentary input voltage as high as 130% of the nominal voltage.
  - 6. The VFD shall incorporate a programmable motor preheat feature to keep the motor warm and prevent condensation build up in the motor when it is stopped in a damp environment by providing the motor stator with a controlled level of current.
  - 7. VFD shall include a "signal loss detection" algorithm with adjustable time delay to sense the loss of an analog input signal. It shall also include a programmable time delay to eliminate nuisance signal loss indications. The functions after detection shall be programmable.
  - 8. VFD shall function normally when the keypad is removed while the VFD is running. No warnings or alarms shall be issued as a result of removing the keypad.
  - 9. VFD shall catch a rotating motor operating forward or reverse up to full speed without VFD fault or component damage.
  - 10. Selectable over-voltage control shall be provided to protect the drive from power regenerated by the motor while maintaining control of the driven load.
  - 11. VFD shall include current sensors on all three output phases to accurately measure motor current, protect the VFD from output short circuits, output ground faults, and act as a motor overload. If an output phase loss is detected, the VFD will trip off and identify which of the output phases is low or lost.
  - 12. If the temperature of the VFD's heat sink rises to 80°C, the VFD shall automatically reduce its carrier frequency to reduce the heat sink temperature. It shall also be possible to program the VFD so that it reduces its output current limit value if the VFD's temperature becomes too high.
  - 13. In order to ensure operation during periods of overload, it must be possible to program the VFD to automatically reduce its output current to a programmed value during periods of excessive load. This allows the VFD to continue to run the load without tripping.
  - 14. The VFD shall have temperature controlled cooling fan(s) for quiet operation, minimized losses, and increased fan life. At low loads or low ambient temperatures, the fan(s) may be off even when the VFD is running.
  - 15. The VFD shall store in memory the last 10 alarms. A description of the alarm, and the date and time of the alarm shall be recorded.
  - 16. When used with a pumping system, the VFD shall be able to detect no-flow situations, dry pump conditions, and operation off the end of the pump curve. It shall be programmable to take appropriate protective action when one of the above situations is detected.

## O. Internal Control Algorithm

1. This is a standard HVAC drive that has been upgraded and modified by pump experts for hydronic applications. It is set up with a closed loop internal control sequence that will optimize life cycle, system comfort, and minimize energy consumption.

## P. Interface Features

1. Hand, off and auto keys shall be provided to start and stop the VFD and determine the source of the speed reference. It shall be possible to either disable these keys or password protect them from undesired operation.
2. There shall be an "info" key on the keypad. The info key shall include "on-line" context sensitive assistance for programming and troubleshooting.
3. The VFD shall be programmable to provide a digital output signal to indicate whether the VFD is in hand or auto mode. This is to alert the building automation system whether the VFD is being controlled locally or by the building automation system.
4. Password protected keypad with alphanumeric, graphical, backlit display can be remotely mounted. Two levels of password protection shall be provided to guard against unauthorized parameter changes.
5. All VFDs shall have the same customer interface. The keypad and display shall be identical and interchangeable for all sizes of VFDs.
6. To set up multiple VFDs, it shall be possible to upload all setup parameters to the VFD's keypad, place that keypad on all other VFDs in turn and download the setup parameters to each VFD. To facilitate setting up VFDs of various sizes, it shall be possible to download from the keypad only size independent parameters. Keypad shall provide visual indication of copy status.
7. Display shall be programmable to communicate in multiple languages including english, spanish and french.
8. A red fault light, a yellow warning light and a green power-on light shall be provided. These indications shall be visible both on the keypad and on the VFD when the keypad is removed.
9. A quick setup menu with factory preset typical HVAC parameters shall be provided on the VFD. The VFD shall also have individual fan, pump, and compressor menus specifically designed to facilitate start-up of these applications.
10. A four-feedback PID controller to control the speed of the VFD shall be standard.
  - a. This controller shall accept up to four feedback signals. It shall be programmable to compare the feedback signals to a common setpoint or to individual setpoints and to automatically select either the maximum or the feedback signal as the controlling signal. It shall also be possible to calculate the controlling feedback signal as the average of all feedback signals or the difference between a pair of feedback signals.
  - b. The VFD shall be able to apply individual scaling to each feedback signal.
  - c. For fan flow tracking applications, the VFD shall be able to calculate the square root of any or all individual feedback signals so that a pressure sensor can be used to measure air flow.
  - d. The VFD's PID controller shall be able to actively adjust its setpoint based on flow. This allows the VFD to compensate for a pressure feedback sensor which is located near the output of the pump rather than out in the controlled system.
11. The VFD shall have three additional PID controllers which can be used to control damper and valve positioners in the system and to provide setpoint reset.
12. Floating point control interface shall be provided to increase/decrease speed in response to contact closures.
13. Five simultaneous meter displays shall be available. They shall include at a minimum, frequency, motor current, motor voltage, VFD output power, VFD output energy, VFD temperature in degrees, among others.
14. Programmable sleep mode shall be able to stop the VFD. When its output frequency drops below set "sleep" level for a specified time, when an external contact commands that the VFD go into sleep mode, or when the VFD detects a no-flow situation, the VFD may be

programmed to stop. When the VFD's speed is being controlled by its PID controller, it shall be possible to program a "wake-up" feedback value that will cause the VFD to start. To avoid excessive starting and stopping of the driven equipment, it shall be possible to program a minimum run time before sleep mode can be initiated and a minimum sleep time for the VFD.

15. A run permissive circuit shall be provided to accept a "system ready" signal to ensure that the VFD does not start until dampers or other auxiliary equipment are in the proper state for VFD operation. The run permissive circuit shall also be capable of initiating an output "run request" signal to indicate to the external equipment that the VFD has received a request to run.
16. VFD shall be programmable to display feedback signals in appropriate units, such as inches of water column (in-wg), pressure per square inch (psi) or temperature (°f).
17. VFD shall be programmable to sense the loss of load and signal this condition via a keypad warning, relay output and/or over the serial communications bus. To ensure against nuisance indications, this feature must be based on motor torque, not current, and must include a proof timer to keep brief periods of no load from falsely triggering this indication.

Q. Standard Control And Monitoring Inputs And Outputs

1. Six dedicated, programmable digital inputs shall be provided for interfacing with the systems control and safety interlock circuitry.
2. Two terminals shall be programmable to act as either as digital outputs or additional digital inputs.
3. Two programmable relay outputs, Form C 240 V AC, 2 A, shall be provided for remote indication of VFD status.
4. Each relay shall have an adjustable on delay / off delay time.
5. Two programmable analog inputs shall be provided that can be either direct-or-reverse acting.
  - a. Each shall be independently selectable to be used with either an analog voltage or current signal.
  - b. The maximum and minimum range of each shall be able to be independently scalable from 0 to 10 V dc and 0 to 20 mA.
  - c. A programmable low-pass filter for either or both of the analog inputs must be included to compensate for noise.
  - d. The VFD shall provide front panel meter displays programmable to show the value of each analog input signal for system set-up and troubleshooting,
6. One programmable analog current output (0/4 to 20 mA) shall be provided for indication of VFD status. This output shall be programmable to show the reference or feedback signal supplied to the VFD and for VFD output frequency, current and power. It shall be possible to scale the minimum and maximum values of this output.
7. It shall be possible through serial bus communications to read the status of all analog and digital inputs of the VFD.
8. It shall be possible to command all digital and analog output through the serial communication bus.

R. Standard programmable firefighter's override mode allows a digital input to control the VFD and override all other local or remote commands. It shall be possible to program the VFD so that it will ignore most normal VFD safety circuits including motor overload. The VFD shall display firemode whenever in firefighter's override mode. Firemode shall allow selection of forward or reverse operation and the selection of a speed source or preset speed, as required to accommodate local fire codes, standards and conditions.

S. A real-time clock shall be an integral part of the VFD.

1. It shall be possible to use this to display the current date and time on the VFD's display.
2. Ten programmable time periods, with individually selectable ON and OFF functions shall be available. The clock shall also be programmable to control start/stop functions,

- constant speeds, PID parameter setpoints and output relays. It shall be possible to program unique events that occur only during normal work days, others that occur only on non-work days, and others that occur on specific days or dates. The manufacturer shall provide free PC-based software to set up the calendar for this schedule.
3. All VFD faults shall be time stamped to aid troubleshooting.
  4. It shall be possible to program maintenance reminders based on date and time, VFD running hours, or VFD operating hours.
  5. The real-time clock shall be able to time and date stamp all faults recorded in the VFD fault log.
- T. The VFD shall be able to store load profile data to assist in analyzing the system demand and energy consumption over time.
- U. The VFD shall include a sequential logic controller to provide advanced control interface capabilities. This shall include:
1. Comparators for comparing VFD analog values to programmed trigger values
  2. Logic operators to combine up to three logic expressions using Boolean algebra
  3. Delay timers
  4. A 20-step programmable structure
- V. The VFD shall include a cascade controller which allows the VFD to operate in closed loop set point (PID) control mode one motor at a controlled speed and control the operation of 3 additional constant speed motor starters.
- W. Serial communications
1. The VFD shall include a standard eia-485 communications port and capabilities to be connected to the following serial communication protocols at no additional cost and without a need to install any additional hardware or software in the VFD:
    - a. Johnson Controls Metasys N2
    - b. Modbus RTU
    - c. Siemens FLN
    - d. BACnet MS/TP
  2. Optional communication shall include:
    - a. LonWorks Free Topology (FTP)
  3. VFD shall have standard rs-485 port for direct connection of personal computer (pc) to the VFD. The manufacturer shall provide no-charge pc software to allow complete setup and access of the VFD and logs of VFD operation through the rs-485 port. It shall be possible to communicate to the VFD through this USB port without interrupting VFD communications to the building management system.
  4. The VFD shall have provisions for an optional 24 v DC back-up power interface to power the VFD's control card. This is to allow the VFD to continue to communicate to the building automation system even if power to the VFD is lost.
- X. Adjustments
1. The VFD shall have a manually adjustable carrier frequency that can be adjusted in 0.5 khz increments to allow the user to select the desired operating characteristics. The VFD shall also be programmable to automatically reduce its carrier frequency to avoid tripping due to thermal loading.
  2. Four independent setups shall be provided.
  3. Four preset speeds per setup shall be provided for a total of 16.
  4. Each setup shall have two programmable ramp up and ramp down times. Acceleration and deceleration ramp times shall be adjustable over the range from 1 to 3,600 seconds.
  5. Each setup shall be programmable for a unique current limit value. If the output current from the VFD reaches this value, any further attempt to increase the current produced by the VFD will cause the VFD to reduce its output frequency to reduce the load on the VFD.

If desired, it shall be possible to program a timer which will cause the VFD to trip off after a programmed time period.

6. If the VFD trips on one of the following conditions, the VFD shall be programmable for automatic or manual reset: external interlock, under-voltage, over-voltage, current limit, over temperature, and VFD overload.
7. The number of restart attempts shall be selectable from 0 through 20 or infinitely and the time between attempts shall be adjustable from 0 through 600 seconds.
8. An automatic "start delay" may be selected from 0 to 120 seconds. During this delay time, the VFD shall be programmable to either apply no voltage to the motor or apply a DC braking current if desired.
9. Four programmable critical frequency lockout ranges to prevent the VFD from operating the load at a speed that causes vibration in the driven equipment shall be provided. Semi-automatic setting of lockout ranges shall simplify the set-up.

Y. Service conditions

1. Ambient temperature, continuous, full speed, full load operation:
  - a. -10 to 45°C (14 to 113°F) through 125 hp @ 460 and 600 volt, through 60 hp @ 208 volt
  - b. -10 to 40°C (14 to 104°F) 150 hp and larger
2. 0 to 95% relative humidity, non-condensing.
3. Elevation to 3,300 feet without derating.
4. AC line voltage variation, -10 to +10% of nominal with full output.
5. No side clearance shall be required for cooling.
6. All power and control wiring shall be done from the bottom.
7. All VFDs shall be plenum rated.

### PART 3 - EXECUTION

#### 3.01 INSPECTION

- A. Examine areas and conditions under which HVAC pumps are to be installed. Do not proceed with work until unsatisfactory conditions have been corrected in manner acceptable to the Engineer.

#### 3.02 INSTALLATION

A. General

1. All pumps shall be fitted with a discharge multi-purpose balancing valve or other means of providing system balance, isolation, and check feature for reverse flow. The valve shall be straight or angle pattern and shall be field convertible between the two. The valve shall be ductile iron and rated for 250 psi working pressure for all jobs. The valve flanges shall be matched to suit the working pressure of the piping components on the job; with either ANSI class 125 psi flanges or ANSI class 250 flanges. The valve shall include the following components; non-slam check valve with spring-loaded bronze disc and seat, stainless steel stem, and calibrated adjustment permitting flow regulation. Valve shall be serviceable under full system pressure. The valve shall be a Taco model MPV Plus Two multi-purpose valve or equivalent.
2. All pump suctions to be fitted with a multifunction inlet suction diffuser fitting equal to that as manufactured by Taco, Inc. The suction guide body and cover plate shall be ductile iron and be rated for 250 psi for all jobs. The guide flanges shall be matched to suit the working pressure of the piping components on the job; with either ANSI class 125 flanges or ANSI class 250 flanges. The suction guide shall include the following components; full length S.S. straightening vanes, permanent S.S. strainer, disposable 16 mesh bronze start up strainer, blow down ports, and metering ports. For those pumps where an inlet guide fitting is not installed, there should be five pipe diameters of straight undisturbed flow going

- into the pump suction. The fitting shall be a Taco model SD inlet suction elbow or equivalent.
3. All pumps shall be fitted with one 4 ½" dial pressure gauge piped to the inlet and outlet pump flanges. The gauge is to be isolated from each flange via ¼" ball valve. This gauge is to be used to take the differential across the pump unless otherwise indicated.
  4. Contractor shall install pump in accordance with the manufacturer's instructions. Contractor shall level each pump.
  5. Pipe connections to pumps shall be made in such a manner so as not to exert any stress on pump housings. If necessary to meet this requirement, provide additional pipe supports and flex connectors.
  6. Pumps shall NOT be run dry to check rotation.
  7. Change start-up strainers to permanent strainer upon acceptance of the job. Provide a blowdown valve on each strainer and terminate with hose thread or extend blowdown line to nearest floor drain.
- B. Electrical Wiring
1. Install electrical devices furnished by manufacturer but not specified to be factory-mounted. Furnish copy of manufacturer's wiring diagram submittal to Electrical Contractor.
  2. Provide the control wiring between field-installed controls, indicating devices, and pump control panels and the control wiring specified in HVAC Controls specification.
  3. Interlock wiring between pumps; and between pumps and field-installed control devices which are not factory installed.
- C. Verify that electrical wiring installation is in accordance with manufacturer's submittal and installation requirements of Division-16 sections. Do not proceed with equipment start-up until wiring installation is acceptable to equipment manufacturer.

### 3.03 TEST AND BALANCE

- A. Refer to the "Balancing System" Section.

### 3.04 ADJUSTING AND CLEANING

- A. Check alignment, and where necessary, realign shafts of motors and pumps within tolerances recommended by the manufacturer and in presence of manufacturer's service representative and the Engineer.
- B. Lubricate pumps before start-up. Start-up in accordance with manufacturer's instructions and in presence of manufacturer's service representative.
- C. Cleaning: Clean factory-finished surfaces. Repair any marred or scratched surfaces with manufacturer's touch-up paint.

**END OF SECTION 232123**

## PART 1 - GENERAL

## 1.01 WORK INCLUDED

- A. This Section governs the materials and installation of closed hydronic systems associated with building heating and cooling. The following systems, where applicable, shall be installed as specified herein.

## 1.02 EQUIPMENT SUBSTITUTION

- A. Most items in this DIVISION are eligible for substitution in accordance with the General Conditions and Supplements thereto. Where a proprietary specification is written for a particular item, then only that item may be used. All items eligible for substitution require submission of request for substitution 10 days prior to bid date. This submittal shall include specific models and capacities of equipment and not just manufacturer's literature. Only those manufacturers listed and those receiving written prior approval communicated via addendum shall be considered for review. Verbal approvals will not be given.

## 1.03 TESTING &amp; APPROVING AGENCIES

- A. Where items of equipment are required to be provided with compliance to U.L., A.G.A., or other testing and approving agencies, the contractor may submit a written certification from any nationally recognized testing agency, adequately equipped and competent to perform such services, that the item of equipment has been tested and conforms to the same method of test as the listed agency would conduct.

## 1.04 SUBMITTAL DATA

- A. See Section 01300 for general submittal requirements.
- B. Provide manufacturer's literature for all products specified in this Section, which will be installed under this project.
- C. Provide performance curves for all pumps. Plot the specified operating point for each pump on its respective curve.
- D. Provide complete literature for all components of packaged systems. These include pump performance, heat exchanger calculations, expansion tank capacity, data for all accessories and valves and complete wiring diagrams specific to the exact unit to be supplied. The wiring diagram shall indicate all required field and factory wiring.

## PART 2 - PRODUCTS

## 2.01 IN-LINE WET ROTOR PUMPS.

- A. The pumps shall be single stage, canned-rotor type, in-line design. The capacities and characteristics shall be as called for in the plans / schedules. Pump casing shall be constructed of EN-GJL-250 or ASTM-A 48 Class 35 cast iron. The pump casing / volute shall be rated for 175psi working pressure for all jobs. The pump flanges shall be matched to suit the working pressure of the piping components on the job, with ANSI Class 125 flanges.
- B. All casings shall be flanged connections.
- C. The impeller and shaft shall be Class 304 stainless steel.

- D. The pump and motor form an integral unit without a mechanical seal. The bearings are lubricated by the pumped liquid. No petroleum lubricated bearings will be accepted.
- E. The pumps shall be able to operate as single or parallel variable speed pumps, where the speed is regulated by an integrated variable speed drive. The integrated electronics shall allow these pumps to run in parallel, standby or alternating modes.
  - 1. Parallel pump communication via Ethernet cabling
  - 2. 24 hour run time automatic operation
  - 3. Main/standby operation in the event of failure
  - 4. Simultaneous parallel operation as required by system demand
- F. The commissioning and set up of the pump shall be accessed via:
  - 1. A web interface (data exchange) and use HTML 1.1 web language. The pump shall provide a port for a RJ-45 cable connection.
  - 2. A user interface located on the face of the speed controller
  - 3. The user interface:
    - a. Adjusts modes and mode values
    - b. LED display reads real time mode set values, flow, head, speed and power
    - c. Lockouts unauthorized adjustment of the pump
- G. The electronics shall provide "Auto" as factory default whereas the slope of the proportional curve will automatically match the required system curve, constant pressure control (?p-c), variable differential pressure control (?p-v), and constant curve duty (uncontrolled pump), RPM regulation. RPM (speed) regulation can be accomplished by:
  - 1. Manual (via user interface or HTML)
  - 2. Remote via 0-10Vdc
  - 3. Modbus RTU data protocol
- H. The pump electronics shall come standard with multiple digital inputs and one external digital output to be available for additional mechanical room control and pump status monitoring.
- I. The wiring / electronics enclosure shall be class 2, IP44.
- J. Pumps shall meet UL 778, 1004-1, 508C, CAN/CSA C22.2 #108, #100, #107.1, EMC (89/366 EEC): EN 61000, LVD (73/23/EC): EN 60335-1, EN 60335-2-51, and machine safety (98/37/EC): EN ISO 12100.
- K. The pumps shall be electronically protected, be rated for continuous duty and have a built-in startup circuit. The pump electronics shall provide overcurrent, line surge and current limit protection, thermal monitoring, heat sink status and over temperature protection.
- L. The pump shall be capable of being monitored 24/7 via integrated internet link.
- M. The pump must be driven by an electrically commutated electrical motor (ECM) with permanent magnet rotor. The rotor magnets shall be time stable, non-toxic ceramic magnets (Sr-Fe). The electrically commutated electrical motor shall be driven by a frequency converter with an integrated PFC filter.

## 2.02 APPROVED MANUFACTURERS:

- A. Taco
- B. Bell & Gosset

- C. Armstrong
- D. Approved equal

### PART 3 - EXECUTION

#### 3.01 GENERAL

- A. Contractor shall install pump in accordance with the manufacturer's instructions. Pipe connections to pumps shall be made in such a manner so as not to exert any stress on pump housings. Pumps may be suspended direct in the pipes provided the piping can support the pump. If necessary to meet this requirement, provide additional pipe supports and flex connectors.
- B. The pump shaft shall be installed horizontally. The pump may be installed in horizontal or vertical pipes as long as the pump shaft is parallel to the ground.
- C. Arrows on the pump housing indicate the liquid flow direction through the pump. The liquid flow direction can be horizontal or vertical, depending on the pump motor and wiring box (as a group). Motor/wiring box may be turned to various positions and is described in the manufacturer's instructions.
- D. For indoor use only.
- E. Pumps shall NOT be run dry to check rotation.

**END OF SECTION 232123.12**

## PART 1 - GENERAL

## 1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. Requirements of the following Division 23 Sections apply to this section:
  - 1. Section 230010 - General Mechanical Requirements.
  - 2. Section 230529 - Pipe Hangers And Supports
  - 3. Section 230555 - Mechanical System Identification
  - 4. Section 230700 - Pipe Insulation

## 1.02 SUMMARY

- A. This Section includes refrigerant piping used for air conditioning applications. This Section includes:
  - 1. Piping, tubing, fittings, and specialties.
  - 2. Special duty valves.
  - 3. Refrigerants.
- B. Products installed but not furnished under this Section include pre-charged tubing, refrigerant specialties, and refrigerant accessories furnished as an integral part of or separately with packaged air conditioning equipment.

## 1.03 SUBMITTALS

- A. Product data for the following products:
  - 1. Each type of valve specified.
  - 2. Each type of refrigerant piping specialty specified.
- B. Shop Drawings showing layout of refrigerant piping, specialties, and fittings including, but not necessarily limited to, pipe and tube sizes, valve arrangements and locations, slopes of horizontal runs, wall and floor penetrations, and equipment connection details. Show interface and spatial relationship between piping and proximity to equipment.
- C. Brazer's Certificates signed by Contractor certifying that brazers comply with requirements specified under "Quality Assurance" below.
- D. Maintenance data for refrigerant valves and piping specialties, for inclusion in Operating and Maintenance Manual specified in Division 01 and Division 23.

## 1.04 QUALITY ASSURANCE

- A. Qualify brazing processes and brazing operators in accordance with ASME "Boiler and Pressure Vessel Code," Section IX, "Welding and Brazing Qualifications".
- B. Regulatory Requirements: Comply with provisions of the following codes:
  - 1. ANSI B31.5: ASME Code for Pressure Piping - Refrigerant Piping.
  - 2. ANSI/ASHRAE Standard 15: Safety Code for Mechanical Refrigeration.
- C. Mechanical Code of New York State

## 1.05 SEQUENCING AND SCHEDULING

- A. Coordinate the installation of roof piping supports, and roof penetrations.

## PART 2 - PRODUCTS

## 2.01 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products which may be incorporated in the Work include, but are not limited to, the following:
- B. Refrigerant Valves and Specialties:
  - 1. Alco Controls Div, Emerson Electric
  - 2. Danfoss Electronics, Inc
  - 3. EATON Corporation, Control Div
  - 4. Henry Valve Company
  - 5. Parker-Hannifin Corporation, Refrigeration and Air Conditioning Division
  - 6. Sporlan Valve Company

## 2.02 PIPE AND TUBING MATERIALS

- A. General: Refer to Part 3, Article "PIPE APPLICATIONS" for identification of systems where the below specified pipe and fitting materials are used.
- B. Copper Tubing: ASTM B 280, Type ACR, hard-drawn straight lengths, and soft-annealed coils, seamless copper tubing. Tubing shall be factory cleaned, ready for installation, and have ends capped to protect cleanliness of pipe interiors prior to shipping.
- C. Copper Tubing: ASTM B 88, Type L, hard-drawn straight lengths, and soft-annealed coils, seamless copper tubing.

## 2.03 FITTINGS

- A. Wrought-Copper Fittings: ANSI B16.22, streamlined pattern for hard drawn and soft copper.

## 2.04 JOINING MATERIALS

- A. Brazing Filler Metals: AWS A5.8, Classification BAg-1 (Silver)

## 2.05 VALVES

- A. General: Complete valve assembly shall be UL-listed and designed to conform to ARI 760.
- B. Globe: 450 psig maximum operating pressure, 275 deg. F maximum operating temperature; cast bronze body, with cast bronze or forged brass wing cap and bolted bonnet; replaceable resilient seat disc; plated steel stem. Valve shall be capable of being repacked under pressure. Valve shall be straight through or angle pattern, with solder-end connections.
- C. Check Valves - Smaller Than 7/8 inch: 500 psig maximum operating pressure, 300 deg. F maximum operating temperature; cast brass body, with removable piston, Teflon seat, and stainless steel spring; straight through globe design. Valve shall be straight through pattern, with solder-end connections.
- D. Check Valves - 7/8 inch and Larger: 450 psig maximum operating pressure, 300 deg. F maximum operating temperature; cast bronze body, with cast bronze or forged brass bolted bonnet; floating piston with mechanically retained Teflon seat disc. Valve shall be straight through or angle pattern, with solder-end connections.

- E. Solenoid Valves: 250 deg. F temperature rating, 400 psig working pressure; forged brass, with Teflon valve seat, two-way straight through pattern, and solder end connections. Provide manual operator to open valve. Furnish complete with NEMA 1 solenoid enclosure with 1/2 inch conduit adapter, and 24 volt, 60 Hz. normally closed holding coil.
- F. Hot Gas Bypass Valve: adjustable type, sized to provide capacity reduction beyond the last step of compressor unloading; and wrought copper fittings for solder end connections.

## 2.06 REFRIGERANT PIPING SPECIALTIES

- A. General: Complete refrigerant piping specialty assembly shall be UL-listed and designed to conform to ARI 760.
- B. Strainers: 500 psig maximum working pressure; forged brass body with monel 80-mesh screen, and screwed cleanout plug; Y-pattern, with solder end connections.
- C. Moisture/liquid Indicators: 500 psig maximum operation pressure, 200 deg. F maximum operating temperature; forged brass body, with replaceable polished optical viewing window, and solder end connections.
- D. Filter-driers: 500 psig maximum operation pressure; steel shell, flange ring, and spring, ductile iron cover plate with steel capscrews, and wrought copper fittings for solder end connections. Furnish complete with replaceable filter-drier core kit, including gaskets. Standard capacity desiccant sieves to provide micronic filtration.
- E. Flanged Unions: 400 psig maximum working pressure, 330 deg. F maximum operating temperature; two brass tailpiece adapters for solder end connections to copper tubing; flanges for 7/8 inch through 1-5/8 inch unions shall be forged steel, and for 2-1/8 inch through 3-1/8 inch shall be ductile iron; four plated steel bolts, with silicon bronze nuts and fiber gasket. Flanges and bolts shall have factory-applied rust-resistant coating.
- F. Flexible Connectors: 500 psig maximum operating pressure; seamless tin bronze or stainless steel core, high tensile bronze braid covering, solder connections, and synthetic covering; dehydrated, pressure tested, minimum 7 inch in length.

## 2.07 REFRIGERANT

- A. Refrigerant No. 410A, in accordance with ASHRAE Standard 34.

## PART 3 - EXECUTION

### 3.01 EXAMINATION

- A. Examine rough-in for refrigerant piping systems to verify actual locations of piping connections prior to installation.

### 3.02 PIPE APPLICATIONS

- A. Use Type L, or Type ACR drawn copper tubing with wrought copper fittings and brazed joints above ground, within building. Use Type K, annealed temper copper tubing for 2 inch and smaller without joints, below ground and within slabs. Mechanical fittings (crimp or flair) are not permitted.
- B. Install annealed temper tubing in pipe duct. Vent pipe duct to the outside.

- C. If other than Type ACR tubing is used, clean and protect inside of tubing as specified in Article "CLEANING" below.

### 3.03 PIPING INSTALLATIONS

- A. General: Install refrigerant piping in accordance with ASHRAE Standard 15 - "The Safety Code for Mechanical Refrigeration."
- B. Install piping in as short and direct arrangement as possible to minimize pressure drop.
- C. Install piping for minimum number of joints using as few elbows and other fitting as possible.
- D. Arrange piping to allow normal inspection and servicing of compressor and other equipment. Install valves and specialties in accessible locations to allow for servicing and inspection.
- E. Provide adequate clearance between pipe and adjacent walls and hanger, or between pipes for insulation installation. Use sleeves through floors, walls, or ceilings, sized to permit installation of full thickness insulation.
- F. Insulate suction lines. Liquid line are not required to be insulated, except where they are installed adjacent and clamped to suction lines, where both liquid and suction lines shall be insulated as a unit.
- G. Do not install insulation until system testing has been completed and all leaks have been eliminated.
- H. Install branch tie-in lines to parallel compressors equal length, and pipe identically and symmetrically.
- I. Install copper tubing in rigid or flexible conduit in locations where copper tubing will be exposed to mechanical injury.
- J. Slope refrigerant piping as follows:
  - 1. Install horizontal hot gas discharge piping with 1/2" per 10 feet downward slope away from the compressor.
  - 2. Install horizontal suction lines with 1/2 inch per 10 feet downward slope to the compressor, with no long traps or dead ends which may cause oil to separate from the suction gas and return to the compressor in damaging slugs.
  - 3. Liquid lines may be installed level.
- K. Install traps and double risers where indicated, and where required to entrain oil in vertical runs.
- L. Use fittings for all changes in direction and all branch connections.
- M. Install exposed piping at right angles or parallel to building walls. Diagonal runs are not permitted, unless expressly indicated.
- N. Install piping free of sags or bends and with ample space between piping to permit proper insulation applications.
- O. Conceal all pipe installations in walls, pipe chases, utility spaces, above ceilings, below grade or floors, unless indicated to be exposed to view.
- P. Install piping tight to slabs, beams, joists, columns, walls, and other permanent elements of the building. Provide space to permit insulation applications, with 1 inch clearance outside the insulation. Allow sufficient space above removable ceiling panels to allow for panel removal.

- Q. Locate groups of pipe parallel to each other, spaced to permit applying insulation and servicing of valves.
- R. Exterior Wall Penetrations: Seal pipe penetrations through exterior walls using sleeves and mechanical sleeve seals. Pipe sleeves smaller than 6 inch shall be steel; pipe sleeves 6 inch and larger shall be sheet metal.
- S. Fire Barrier Penetrations: Where pipes pass through fire rated walls, partitions, ceilings, and floors, maintain the fire rated integrity. Refer to Division 7 for special sealers and materials.
- T. Make reductions in pipe sizes using eccentric reducer fittings installed with the level side down.
- U. Install strainers immediately ahead of each expansion valve, solenoid valve, hot gas bypass valve, compressor suction valve, and as required to protect refrigerant piping system components.
- V. Install moisture/liquid indicators in liquid lines between filter/driers and thermostatic expansion valves and in liquid line to receiver.
- W. Install moisture/liquid indicators in lines larger than 2-1/8 inch OD, using a bypass line.
- X. Install unions to allow removal of solenoid valves, pressure regulating valves, expansion valves, and at connections to compressors and evaporators.
- Y. Install flexible connectors at the inlet and discharge connection of compressors.

### 3.04 HANGERS AND SUPPORTS

- A. General: Hanger, supports, and anchors are specified in Division 23 Section "PIPE HANGERS AND SUPPORTS." Conform to the table below for maximum spacing of supports:
- B. Install the following pipe attachments:
  - 1. Adjustable steel clevis hangers for individual horizontal runs less than 20 feet in length.
- C. Support horizontal copper tubing in accordance with MSS SP-69 Tables 3 and 4, excerpts of which follow below:

| NOMINAL PIPE SIZE<br>(Inches) | ROD DIAMETER<br>(Inches) | MAXIMUM SPACING<br>(Feet) |
|-------------------------------|--------------------------|---------------------------|
| 1/2 to 3/4                    | 3/8                      | 5                         |
| 1                             | 3/8                      | 6                         |
| 1-1/4                         | 3/8                      | 6                         |
| 1-1/2                         | 3/8                      | 8                         |
| 2                             | 3/8                      | 8                         |

- D. Support vertical runs at each floor.

### 3.05 PIPE JOINT CONSTRUCTION

- A. Brazed Joints: Comply with the procedures contained in the AWS "Brazing Manual."
- B. WARNING: Some filler metals contain compounds which produce highly toxic fumes when heated. Avoid breathing fumes. Provide adequate ventilation.

- C. CAUTION: When solenoid valves are being installed, remove the coil to prevent damage. When sight glasses are being installed, remove the glass. Remove stems, seats, and packing of valves, and accessible internal parts of refrigerant specialties before brazing. Do not apply heat near the bulb of the expansion valve.
- D. Fill the pipe and fittings during brazing, with an inert gas (i.e., nitrogen or carbon dioxide) to prevent formation of scale.
- E. Heat joints using oxy-acetylene torch. Heat to proper and uniform brazing temperature.

### 3.06 VALVE INSTALLATIONS

- A. General: Install refrigerant valves where indicated, and in accordance with manufacturer's instructions.
- B. Install globe valves on each side of strainers and driers, in liquid and suction lines at evaporators, and elsewhere as indicated.
- C. Install a full sized, 3-valve bypass around each drier.
- D. Install solenoid valves ahead of each expansion valve and hot-gas bypass valve. Install solenoid valves in horizontal lines with coil at the top.
- E. Electrical wiring for solenoid valves is specified in Division 26. Coordinate electrical requirements and connections.
- F. Thermostatic expansion valves may be mounted in any position, as close as possible to the evaporator.
- G. Where refrigerant distributors are used, mount the distributor directly on the expansion valve outlet.
- H. Install the valve in such a location so that the diaphragm case is warmer than the bulb.
- I. Secure the bulb to a clean, straight, horizontal section of the suction line using two bulb straps. Do not mount bulb in a trap or at the bottom of the line.
- J. Where external equalizer lines are required make the connection where it will clearly reflect the pressure existing in the suction line at the bulb location.
- K. Install pressure regulating and relieving valves as required by ASHRAE Standard 15.

### 3.07 EQUIPMENT CONNECTIONS

- A. The Drawings indicate the general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to equipment to allow servicing and maintenance.

### 3.08 FIELD QUALITY CONTROL

- A. Inspect, test, and perform corrective action of refrigerant piping in accordance with ASME Code B31.5, Chapter VI.
- B. Repair leaking joints using new materials, and retest for leaks.

### 3.09 CLEANING

- A. Before installation of copper tubing other than Type ACR tubing, clean the tubing and fitting using following cleaning procedure:
  - 1. Remove coarse particles of dirt and dust by drawing a clean, lintless cloth through the tubing by means of a wire or an electrician's tape.
  - 2. Draw a clean, lintless cloth saturated with trichloroethylene through the tube or pipe. Continue this procedure until cloth is not discolored by dirt.
  - 3. Draw a clean, lintless cloth, saturated with compressor oil, squeezed dry, through the tube or pipe to remove remaining lint. Inspect tube or pipe visually for remaining dirt and lint.
  - 4. Finally, draw a clean, dry, lintless cloth through the tube or pipe.

### 3.10 ADJUSTING AND CLEANING

- A. Verify actual evaporator applications and operating conditions, and adjust thermostatic expansion valve to obtain proper evaporator superheat requirements.
- B. Clean and inspect refrigerant piping systems in accordance with requirements of Division-23 General Mechanical Requirements
- C. Adjust controls and safeties. Replace damaged or malfunctioning controls and equipment with new materials and products.

### 3.11 COMMISSIONING

- A. Charge system using the following procedure:
  - 1. Install core in filter dryer after leak test but before evacuation.
  - 2. Evacuate refrigerant system with vacuum pump; until temperature of 35 deg F is indicated on vacuum dehydration indicator.
  - 3. During evacuation, apply heat to pockets, elbows, and low spots in piping.
  - 4. Maintain vacuum on system for minimum of 5 hours after closing valve between vacuum pump and system.
  - 5. Break vacuum with refrigerant gas, allow pressure to build up to 2 psi.
  - 6. Complete charging of system, using new filter dryer core in charging line. Provide full operating charge.
  - 7. Train Owner's maintenance personnel on procedures and schedules related to start-up and shut-down, troubleshooting, servicing, and preventative maintenance of refrigerant piping valves and refrigerant piping specialties.
- B. Review data in Operating and Maintenance Manuals. Refer to Division 01 section "Project Closeout."
- C. Schedule training with Owner with at least 7 days advance notice.

**END OF SECTION 232300**

## PART 1 - GENERAL

## 1.01 DESCRIPTION OF WORK

- A. This Section describes the galvanized steel, flexible, and aluminum ductwork for HVAC duct systems in accordance with SMACNA Duct Construction Standards, except as otherwise specified.
- B. The construction material for each ductwork system shall be as listed in the "Ductwork Material Schedule" at the end of this Section.
- C. This Section also describes the fittings, access doors, hangers and supports, manual volume dampers and sealants for each ductwork system as required.

## 1.02 RELATED WORK

- A. Section 230594 - Balancing of Air and Hydronic Systems.

## 1.03 REFERENCES

- A. ASHRAE - Handbook Fundamentals; Latest Edition.
- B. SMACNA - HVAC Duct Construction Standards Metal And Flexible (latest issue)
- C. ASTM A 653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process
- D. ASTM B 209 - Specifications for Aluminum and Aluminum-Alloy Sheet and Plate.
- E. NFPA 90A - Installation of Air Conditioning and Ventilating Systems.
- F. UL 555 S - Fire Dampers & Smoke Dampers.
- G. NFPA 96 - Standard for Commercial Cooking Operations
- H. New York State Mechanical Code.

## 1.04 REGULATORY REQUIREMENTS

- A. Construct ductwork to NFPA 90A and New York State Mechanical Code standards.

## 1.05 SUBMITTALS

- A. Ductwork shop drawings for approval:
  - 1. Coordinate layout duct drawings that differ from ductwork shown on the Drawings.
  - 2. The review of deviations will be for pressure drop only. The review will not address clearances or accessibility to maintain or balance the air systems. No dimensional or coordination check of the shop drawings will be made. The Contractor has the sole responsibility to review the Drawings, coordinate ductwork fabrication, and provide clearances and access for installation, maintenance and balancing of this work, and work of other trades. Unless specifically dimensioned, Drawings indicate approximate locations only. The Contractor has the sole responsibility to locate and route the ductwork.
  - 3. Deviations such as changing direction or transforming or dividing ductwork must maintain ductwork cross-sectional area and not exceed transformation taper of 15 degrees.
  - 4. Plans and section showing all equipment and accessories.

5. Minimum 3/8 in. scale, double line, showing sizes, transverse joints, transitions, elevations, clearances and accessories; sections where required.
- B. Shop details and catalog cuts of:
  1. Ductwork construction, including gauge and bracing schedule.
  2. Supports.
  3. Dampers.
  4. Turning vanes.
  5. Fire dampers.
  6. Access doors.
  7. Flexible connections.
  8. Other accessories.

#### 1.06 QUALITY ASSURANCE

- A. Construct all ductwork in accordance with referenced SMACNA Standards, except as otherwise stated. Ductwork pressure classifications shall be in accordance with referenced SMACNA Standards, except as otherwise specified.
- B. For all uninsulated ductwork casings and plenums located outdoors, the reinforcement members shall be galvanized steel or stainless steel.
- C. Construction pressure classification of ductwork are shown on the Drawings. If not shown, the pressure classification shall be greater than or equal to the maximum operating static pressure (minimum 2" w.c. pressure classification).
- D. All ductwork shall be free from pulsation, chatter, vibration and objectionable noise. If any of these defects appear after a system is in operation, correct by removing and replacing, or reinforcing the ductwork, at no additional cost to the Owner.
- E. For all galvanized steel ductwork, zinc coating shall be minimum G90 per ASTM A 653.

### PART 2 - PRODUCTS

#### 2.01 GALVANIZED STEEL RECTANGULAR DUCTS AND FITTINGS

- A. Construct ducts of galvanized sheet steel meeting ASTM A 653 with G90 coating designation, and in accordance with the latest SMACNA HVAC Duct Construction Standards Metal And Flexible and pressure classifications as stated on the Drawings (minimum 2" w.c. pressure classification).
- B. No ducts shall be less than No. 22 U.S. Gauge.
- C. Piping, conduit and structure shall not penetrate ductwork. Where this condition cannot be avoided and with the written permission of the Architect/Engineer, follow SMACNA HVAC Duct Construction Standards Metal and Flexible, except that sides of transition sections shall slope a maximum of 15 degrees.
- D. Provide 90-degree full-radius elbows with a centerline radius 1.5 times the duct width in the plane of the bend.
- E. For elbows with centerline radius less than 1.5 times the width of the duct in the plane of the bend, provide turning vanes.
- F. Provide square throat elbows with manufactured turning vanes.

- G. All dissimilar metals shall be connected with flanged joints made up with fiber or neoprene gaskets to prevent contact between dissimilar metals. Flanges shall be fastened with bolts protected by ferrules and washers made of the same materials as the gaskets.
- H. For split fittings, the split shall be proportional to the air flow. Construct per SMACNA HVAC Duct Construction Standards- Metal and Flexible.
- I. Transitions and Offsets shall follow SMACNA HVAC Duct Construction Standards Metal and Flexible, except that sides of transitions shall slope a maximum of 15 degrees.
- J. All branch take-offs perpendicular to the main shall be a 45 degree entry.
- K. Longitudinal seams shall be of the Pittsburgh Lock type outlined in the SMACNA HVAC Duct Construction Standards Metal and Flexible.
- L. Duct transverse joints shall be selected and used consistent with the static pressure class, applicable sealing requirements, materials involved, duct support intervals and other provisions for proper assembly of ductwork outlined in the SMACNA HVAC Duct Construction Standards - Metal and Flexible. Transverse joints T-25a, T-25b (Ductmate) shall only be used. Metal clips will only be allowed (NO PVC). Ductmate shall not be used for the following (use transverse joints T-15 through T-24 in these cases):
  - 1. The Ductmate '45' system shall not be used for applications with duct gauges heavier than 10 or lighter than 22.
  - 2. The Ductmate '35' system shall not be used for applications with duct gauges heavier than 16 GA. or lighter than 26 GA.
  - 3. The Ductmate '25' system shall not be used for application with duct gauges heavier than 20 GA. or lighter than 26 GA.

## 2.02 TURNING VANES

- A. Manufactured with same material as ductwork that it is installed in and to the same pressure classification as ductwork that they are installed in.
- B. Provide turning vanes in all square duct elbows and as noted on the Drawings.
- C. Vanes shall be single thickness Small Vane as detailed in SMACNA HVAC Duct Construction Standards Metal and Flexible.
- D. Where a rectangular duct changes in size at a square-throat elbow fitting, use single thickness turning vanes with trailing edge extensions aligned with the sides of the duct.

## 2.03 ACCESS DOORS

- A. For access doors for use in ductwork receiving Fire Rated Blanket Insulation see Ductwork Insulation Section for requirements. Fabricate all other access doors in accordance with SMACNA Duct Construction Standards Metal And Flexible and as indicated.
- B. For HVAC duct systems, construct doors of the same material as the ductwork. Minimum size of access doors shall be 8 inches by 8 inches, unless shown otherwise.
- C. Provide walkthrough doors where shown. These doors shall have a minimum clear width of 18 inches. Provide doors with 8 inch square double pane wire glass windows. Locate windows not to exceed 5 feet-6 inches to centerline above finished floor of installed casing. Walk-through doors shall be operable from both sides of the door.

- D. Access doors shall be insulated same as duct.
- E. Provide with continuous neoprene gaskets around perimeter of access doors for airtight seal.
- F. Provide all access doors with cam lock latches.
- G. Provide access doors with watertight gaskets in shower room exhaust ductwork. Doors shall be of extra-heavy stainless construction.
- H. All access doors serving a fire damper shall be painted red and shall have a label with white letters not less than ½ inch high reading "FIRE DAMPER". No external ductwork insulation shall conceal a fire damper access door unless there is a label attached to the insulation indicating the exact location of the access door.
- I. Provide access doors in following locations:
  - 1. Heaters and coils in ducts: entering and leaving side.
  - 2. Automatic dampers: linkage side.
  - 3. Fire damper, on both sides of ducts.
  - 4. Smoke detection heads.
  - 5. On both sides of ducts where necessary to provide maintenance accessibility to equipment on either side.
  - 6. VAV boxes
  - 7. Heating and Cooling coils.
  - 8. Fan Plenums.
  - 9. In-Line Fans (suction and discharge sides)
  - 10. Other items requiring access for service/maintenance
- J. Where duct access doors are concealed the Contractor shall furnish and pay for installation of access doors to be mounted in the fire rated walls and ductwork enclosures. The access doors must be fire resistive and minimum 6" larger on each side than the duct access door for the above mentioned applications.

#### 2.04 MANUAL VOLUME DAMPER

- A. Fabricate in accordance with SMACNA Duct Construction Standards Metal And Flexible, and as indicated.
- B. Fabricate single blade dampers for duct sizes up to 6 inches in height.
- C. Fabricate multi-blade damper of opposed blade pattern with maximum blade sizes of 4 inches for ducts above 6 inches in height. Assemble center and edge crimped blades in prime coated or galvanized channel frame with suitable hardware.
- D. Except in round ductwork 12 inches and smaller, provide end bearings. On multiple blade dampers, provide oil-impregnated nylon or sintered bronze bearings.
- E. Provide locking, indicating quadrant regulators on single and multi-blade dampers. Where rod lengths exceed 30 inches, provide regulator at both ends.
- F. On insulated ducts mount quadrant regulators on stand-off mounting brackets, bases, or adapters.
- G. Volume damper shall be provided at each duct branch and also where shown on the Drawings. Volume dampers must be installed at each branch even if they are not shown on the Drawing.

- H. Approved Manufacturers:
1. Ruskin Mfr. Co.
  2. Arrow Damper & Louver.
  3. Imperial Damper Co.

#### 2.05 BACKDRAFT DAMPERS

- A. Dampers shall be low-leakage, parallel-blade type. Damper sizes shall be suitable for duct sizes noted on the Drawings. The dampers shall be suitable for a minimum 4000 fpm velocity.
- B. Damper frames shall be minimum No. 12 gauge galvanized steel blades shall be minimum No. 16 gauge galvanized steel or Type 6063-T5 aluminum with press-fit ball bearings.
- C. Dampers shall be complete with adjustable counterweights and linkage for duty at .20 inches w.g. and 3500 fpm.
- D. Provide neoprene or silicone rubber blade seals.
- E. Approved manufacturers - Ruskin Manufacturing Company.

#### 2.06 DUCT TEST HOLES

- A. Cut or drill temporary test holes in ducts as required. Cap with neat patches, neoprene plugs, threaded plugs, or threaded or twist-on metal caps.
- B. Permanent test holes shall be factory fabricated, air tight flanged fittings with screw cap. Provide extended neck fittings to clear insulation.

#### 2.07 DUCT HANGERS AND SUPPORTS

- A. Provide trapeze, strap or angle iron hangers meeting SMACNA HVAC Duct Construction Standards Metal and Flexible.
- B. Materials of hangers, supports and fasteners shall conform to the manufacturer's load ratings.
- C. Hangers, supports, upper attachments and inserts shall be hot-dip galvanized steel or stainless steel.
- D. Fasteners for HVAC duct systems shall be hot-dip galvanized steel, cadmium-plated steel or stainless steel.
- E. Secure ductwork hangers attached to concrete structures and slabs with embedded inserts, anchor bolts or concrete fasteners. A safety factor of 5 should be used in selection of all inserts and expansion bolts (if applicable safety factor shall be determined by analysis of seismic loads and the greater safety factor shall be used).
- F. Provide hangers and supports not more than 12 inches from each face of a horizontal elbow.
- G. Plenums shall be supported to permit personnel to enter the plenum. If no structural steel design is shown on the Drawings, it is the responsibility of the Contractor to provide the services of a licensed structural engineer in the in which the project is to be constructed to submit a structural design for review.

## 2.08 SEALANTS

- A. Where ducts are not continuously welded or soldered, provide sealants and gaskets as required to meet the specified duct leakage allowance.
- B. Provide Gaskets, Sealers, Mastics and Tapes as manufactured by Ductmate.

## 2.09 FIRE DAMPERS

- A. Fabricate and install in accordance with NFPA 90A and UL Safety Standard 555, and AMCA Standard 500.
- B. Fire Resistance: For penetrations through construction rated less than 3 hours, 1 ½ hours. For penetrations through construction rated for 3 hours or more, 3 hours.
- C. Pressure Differential Rating: 4 in. w. g.
- D. Velocity Rating: 2000 fpm
- E. Fabricate curtain type dampers of galvanized steel with interlocking blades. Provide stainless steel closure springs and latches for horizontal installations. Configure with blades in air stream. Fabricate fire dampers for vertical and horizontal position.
- F. Fabricate multiple blade fire dampers with 16 gage galvanized steel frame and blades, oil-impregnated bronze or stainless steel sleeve bearings and plated steel axles, 1/8 x 1/2 inch plated steel concealed linkage, stainless steel closure spring, blade stops, and lock.
- G. Fusible links, UL 33, shall separate at 165 degrees F.
- H. Acceptable Manufacturers:
  - 1. Greenheck Model DFD 150, 200 and 350
  - 2. Ruskin Mfr. Co.
  - 3. Arrow Damper & Louver.
  - 4. Imperial Damper Co.

## 2.10 COMBINATION FIRE SMOKE DAMPERS

- A. Fabricate and install in accordance with NFPA 90A and UL Safety Standards 555 & 555S, and AMCA Standard 500.
- B. Fire Resistance: For penetrations through construction rated less than 3 hours, 1 ½ hours. For penetrations through construction rated for 3 hours or more, 3 hours.
- C. Leakage Class: Leakage Class II per UL 555S
- D. Fusible links, UL 33, shall separate at 165 degrees F.

OR

- E. Resettable links shall be provided in lieu of a fusible link. Resettable link shall interrupt power to the actuator causing the actuator's spring return mechanism to cause the damper to close at 165 degrees F. Resettable link to be provided with an electric sensor (thermostat). Sensor to be of the manual reset type and shall be capable of being reset after the temperature has cooled down below the sensor set point.

- F. Pressure Differential Rating: 4 In. w. g.
- G. Air Flow Velocity: 2000 fpm
- H. Elevated Temperature Rating: 350 Deg. F per UL555S
- I. Fabricate multiple blade fire dampers with 16 gage galvanized steel frame and blades, oil-impregnated bronze or stainless steel sleeve bearings and plated steel axles, 1/8 x 1/2 inch plated steel concealed linkage, stainless steel closure spring, blade stops, and lock.
- J. Actuators: 24 VDC, 2-position, external mounting
- K. Acceptable Manufacturers:
  - 1. Greenheck Model FSD-200
  - 2. Ruskin Mfr. Co.
  - 3. Arrow Damper & Louver.
  - 4. Imperial Damper Co.

#### 2.11 KITCHEN EXHAUST DUCTWORK (PRE-FABRICATED)

- A. Furnish single-wall, factory built, grease duct for use with Type I kitchen hoods, which conforms to the requirements of NFPA-96. Products shall be ETL listed to UL-1978 and CAN/ULC-S662 for venting air and grease vapors from commercial cooking operations as described in NFPA-96.
- B. The duct wall shall be constructed of .036 and .047 thick stainless steel and be available in diameters 8" through 24".
- C. All supports, fan adapters, hood connections, fittings and expansion joints required to install grease duct shall be included.
- D. Roof penetrations shall comply with listed clearance to combustibles. The grease duct will terminate at the fan adapter plate, will be fully welded to the fan adapter plate and the fan adapter plate will be fastened to the curb using a suitably sized fastener provided by others. See manufacturers installation instructions for more details.
- E. Grease duct joints shall be held together by means of formed vee clamps and sealed with 3M Fire Barrier 2000+. Screws used to secure the vee clamps shall be of the hex-head type with flanged stops and tapered "lead in" threads for easy starting. Nuts shall be retained by means of a free-floating cage to allow easy alignment.
- F. Grease duct installed outside of the building shall be protected against accidental damage or vandalism.
- G. Support vertically installed grease duct from the building structure using rigid structural supports. Anchor supports to the structure by welding or bolting steel expansion anchors or concrete inserts. Support horizontally installed grease duct from the building structure using above method. 1/2" Threaded rod and saddles may also be used for the support of horizontal grease duct.
- H. Fans shall be supported independently from the grease duct sections. Protect grease duct from twisting or movement caused by fan torque or vibration.
- I. Duct shall slope not less than one-fourth unit vertical in 12 units horizontal toward a grease reservoir. If a grease reservoir is not provided, slope shall be towards the hood.

## 2.12 ALUMINUM DUCTWORK

- A. Construct ducts of minimum No. 20 gauge aluminum sheet meeting ASTM B 209, Series 3000 Alloy.
- B. Construct ductwork as per "GALVANIZED STEEL RECTANGULAR DUCTS AND FITTINGS" section above unless otherwise noted in this section.
- C. At shower room locations, pitch horizontal ductwork minimum ¼ inch per foot such that low point is at shower room.

## 2.13 CLOTHES DRYER EXHAUST DUCTWORK

- A. Construct ducts of rigid metal and shall have a smooth interior finish.
- B. Exhaust system shall be independent of all other systems.
- C. Fire dampers, combination fire/smoke dampers, and any similar device that will obstruct the exhaust flow, shall be prohibited in clothes dryer exhaust ducts.
- D. Each vertical riser shall be provided with a means for cleanout.
- E. Terminations at building exterior shall be provided with a backdraft damper. Screens shall not be installed at the duct termination.
- F. Ducts shall not be connected or installed with sheet metal screws or other fasteners that will obstruct the exhaust flow. The male end of the duct at overlapped duct joints shall extend in the direction of airflow.
- G. Clothes dryer transition ducts used to connect the appliance to the exhaust duct system shall be limited to single lengths not to exceed 8 feet and shall be listed and labeled for the application. Transition ducts shall not be concealed within construction.
- H. Clothes dryer exhaust ducts shall not be connected to a vent connector, vent, or chimney.
- I. Clothes dryer exhaust ducts shall not extend into or through ducts or plenums.
- J. Install in accordance with the manufacturer's instructions and the Mechanical Code of New York State.

## 2.14 STANDARD FLEXIBLE CONNECTIONS

- A. Provide fabric flexible duct connections.
- B. Fabric shall be UL approved, fire-retardant, closely-woven glass, double coated with neoprene, and a minimum of 4 inches wide.
- C. Shall be installed at duct connections to all ceiling hung fans and where vibration will be transmitted through ductwork.
- D. Approved Manufacturers:
  - 1. "Ventglas" by Vent Fabrics, Inc.

## 2.15 FLEXIBLE DUCTS

- A. Comply with SMACNA HVAC Flexible Duct Construction Standards and NFPA 90A.

- B. Provide where indicated on the Drawings Flexmaster Type TL- M Flexible Metal UL181 Class I Air Duct.
- C. The duct shall be constructed of .005" thick 3003-H14 aluminum alloy in accordance with ASTM B209.
- D. The duct shall be spiral wound into a tube and spiral corrugated to provide strength and flexibility.
- E. The internal working pressure rating shall be at least 10" w.g. positive and 10" w.g. negative with a bursting pressure of at least 2½ time the working pressure.
- F. The duct shall be rated for a velocity of at least 5500 feet per minute.
- G. The duct must be suitable for continuous operation at a temperature range of -40° F to +250° F.
- H. Factory insulate the flexible duct with fiberglass insulation. The R value shall be at least 4.2 at a mean temperature of 75° F.
- I. Cover the insulation with a fire retardant metalized vapor barrier jacket reinforced with crosshatched scrim having a permeance of not greater than 0.05 perms when tested in accordance with ASTM E96, Procedure A.
- J. Install flexible metal duct as per SMACNA HVAC Duct Construction Standards Metal and Flexible (Latest Edition).
- K. Flexible ductwork shall only be installed where shown on the Drawings.

#### 2.16 GALVANIZED STEEL ROUND DUCTS AND FITTINGS

- A. Construct ducts of galvanized sheet steel meeting ASTM A 653 with G90 coating designation, and in accordance with the latest SMACNA HVAC Duct Construction Standards Metal and Flexible (Latest Edition), and pressure classifications as stated on the Drawings (minimum 2" w.c. pressure classification). When the ductwork pressure classification of these standards is exceeded, construct galvanized steel round exhaust ductwork in accordance with SMACNA Round Industrial Duct Construction Standards.
- B. For ductwork through 60 inches in diameter, provide ducts of spiral lock-seam construction.
- C. For ductwork over 60 inches in diameter, provide ducts of welded longitudinal seam construction.
- D. For ductwork through 36 inches in diameter, use beaded sleeve transverse joints.
- E. For ductwork over 36 inches in diameter, use gasketed-flanged Van Stone transverse joints. Gasket shall be "440 Gasket Tape" by Ductmate Industries, Inc.
- F. For ductwork under a positive pressure through 96 in. diameter and 10 in. w. g. no reinforcing is required. For ductwork under a negative pressure in exposed areas use duct gauge that will minimize the use of reinforcing as appropriate for the pressures involved.
- G. Draw band joints will not be permitted.
- H. All elbows shall be constructed with a centerline radius equal to 1.5 times the duct diameter.
- I. Provide matching galvanized steel fittings with continuously welded seams and joints.

- J. All take-off connections to duct headers shall be made using tee (90 degrees), lateral (45 degrees), tee cross, lateral cross and "Y" branch fittings of the conical type. All fittings fabricated as separate fittings shall have continuous welds along all seams and joints.
- K. The use of two-piece mitered, vaned elbows will be permitted only with specific written approval from the Architect/Engineer. Provide turning vanes as per SMACNA HVAC Duct Construction Standards Metal and Flexible.

## PART 3 - EXECUTION

### 3.01 INSTALLATION - GENERAL

- A. Install ductwork in accordance with applicable SMACNA Duct Construction Standards Metal And Flexible and approved submittals, and as shown on the Drawings. Duct sizes shown are inside clear dimensions. Where internal duct liners are used, duct sizes shown are inside clear of liner. For ductwork located outside, provide reinforcing sufficient to support wind and snow loads.
- B. The Drawings indicate general locations of ducts. Make additional offsets or changes in direction as required at no additional cost to the Owner.
- C. Wherever ductwork is divided, maintain the cross-sectional area.
- D. Do not exceed 15-degree taper when constructing duct transitions.
- E. Close the open ends of ducts during construction to prevent debris and dirt from entering.
- F. Secure casings and plenums to curbs according to the requirements of the SMACNA HVAC Duct Construction Standards Metal and Flexible.
- G. Make changes in direction with long radius bends.
- H. All unused portions of HVAC supply air and exhaust louvers shall be blanked off with Louver Blank Off Panels, see Ductwork Insulation Section.
- I. All welded and scratched galvanized steel surfaces shall be touched up with zinc-rich paint.
- J. 2 Hr. rated wall penetration: Where small size duct (up to 6 inches x 6 inches) is penetrating a 2 Hr wall the duct shall be constructed of 16 gauge galvanized sheet metal.
- K. Locate ducts with sufficient space around equipment to allow normal operating and maintenance activities.
- L. Patch and repair all wall penetrations.
- M. Insulation: Where Drawings and Specifications indicate that ducts are to be insulated make provisions for neat insulation finish around damper operating quadrants, splitter adjusting clamps, access doors, and similar operating devices. Metal collar equivalent in depth to insulation thickness and of suitable size to which insulation may be finished to be mounted on duct.

### 3.02 FITTING INSTALLATION

- A. Use minimum of four sheet metal screws per joint.

- B. Apply approved sealant on duct-to-duct joint before assembly. Apply additional sealant after assembly to make joint airtight.

### 3.03 HANGER AND SUPPORT INSTALLATION

- A. Support ductwork hung from building structure using trapeze, strap or angle iron hangers conforming to SMACNA HVAC Duct Construction Standards Metal and Flexible. Provide supplemental structural steel to span joists where required.
- B. Do not support ductwork from furring, hung ceilings, metal floor deck, metal roof deck or from another duct or pipe.
- C. Do not hang lighting fixtures or piping from ductwork.
- D. Do not use perforated band iron.
- E. Support ductwork at each change in direction.
- F. Where duct connects to or terminates at masonry openings or at floors where concrete curbs are not used, provide a continuous 1 ½ inch by 1 ½ inch by 3/16 inch galvanized steel angle support around the ductwork. Bolt and seal the supports to the building construction using expansion bolts and caulking compound. Seal shall be watertight at floor or wall and duct such that a spill will not pass down through the opening.
- G. Fasten plenums and casings connected to concrete curbs using continuous 1 ½ inch by 1 ½ inch by ¼ inch galvanized steel angle support. Set the angle support in a continuous bead of caulking compound and anchor it to the curb with 3/8 inch diameter anchors on 16 inch centers. Terminate sheet metal at curb and bolt to angle support. Seal sheet metal to curb with a continuous bead of caulking.
- H. For insulated ductwork, install hangers on the outside of the insulation. To maintain the insulation value, inset a piece of 1 inch thick, 6 pcf fiberglass board with a foil/scrim/kraft (FSK) jacket at these supports.

### 3.04 SEALING

- A. Where ductwork is not continuously welded, soldered or gasketed, make seams and joints airtight with sealants.
- B. Install the sealants in accordance with the sealant manufacturer's instructions and recommendations.
- C. Seal all ductwork seams, joints, fastener penetrations and fittings connections with sealants in accordance with SMACNA Seal Classifications as required by SMACNA Duct Pressure Classification. All ductwork, regardless of pressure classification, shall have a minimum Seal Class B.
- D. Completely fill all voids when liquid sealing ductwork. Several applications may be necessary to fill voids caused by shrinkage or runout of sealant.

### 3.05 DUCT-MOUNTED DEVICES AND ACCESS DOORS

- A. Install all dampers, coils, airflow measuring stations, humidifiers and other duct-mounted devices, specified in other sections of the specifications or as shown and provide transformations to dimensions as required. Install devices in accordance with manufacturer's recommendations. Install dampers and coils a minimum of 4 feet away from changes

indirection or transitions. Allow five (5) equivalent diameters of straight ductwork upstream and one (1) equivalent diameter of straight ductwork downstream of airflow measuring devices.

- B. Install access doors in ductwork, plenums and where specified and as shown. Provide access doors for inspection and cleaning automatic dampers, at fire dampers, and elsewhere as indicated. Provide minimum 18 x 18 inch size for shoulder access and as indicated. Install access doors in the bottom of the ductwork unless they are inaccessible in this location; then install the access doors in either the side or top of the ductwork, whichever is more accessible.
- C. Provide fire damper at locations indicated, and where outlets pass through fire rated components and where required by authorities having jurisdiction. Install with required perimeter mounting angles, sleeves, breakaway, duct connections, corrosion resistant springs, bearings, bushings and hinges.
- D. Demonstrate re-setting of fire dampers to authorities having jurisdiction and Engineer.
- E. Provide flexible connections immediately adjacent to equipment in ducts associated with motorized equipment. Cover connections to medium pressure fans with leaded vinyl sheet, held in place with metal straps.
- F. Pilot Ports: Locate pilot ports for measuring airflow in each main supply duct at the downstream end of the straightest run of the main and before the first branch take-off. Form pilot ports by drilling 7/16 inches holes in the duct, lined up perpendicular to airflow on maximum 8-inch centers and at least three to a duct, evenly spaced. Holes to be plugged with plastic plugs. Provide access to these for future rebalancing.

### 3.06 CONTROL DAMPER INSTALLATION

- A. Duct openings shall be free of any obstruction or irregularities that might interfere with blade or linkage rotation or actuator mounting. Duct openings shall measure 1/4" larger than damper dimensions and shall be square, straight, and level.
- B. Individual damper sections, as well as entire multiple section assemblies, must be completely square and free from racking, twisting, or bending. Measure diagonally from upper corners to opposite lower corners of each damper section. Both dimensions must be equal  $\pm 1/8"$ .
- C. Follow manufacturer's instructions for field installation of control dampers. Unless specifically designed for vertical blade application, dampers must be mounted with blade axis horizontal.
- D. Install extended shaft or jackshaft per manufacturer's instructions. (Typically, a sticker on the damper face shows recommended extended shaft location. Attach shaft on labeled side of damper to that blade.)
- E. Damper blades, axles, and linkage must operate without binding. Before system operation, cycle damper after installation to assure proper operation. On multiple section assemblies, all sections must open and close simultaneously.
- F. Provide a visible and accessible indication of damper position on the drive shaft end.
- G. Support ductwork in area of damper when required to prevent sagging due to damper weight.
- H. After installation of low-leakage dampers with seals, caulk between frame and duct or opening to prevent leakage around perimeter of damper.
- I. Dampers that are to be installed with air flow measuring stations shall be installed in duct runs with a minimum amount of straight duct upstream and downstream of the damper to allow

accurate flow readings by the air flow measuring station. The Contractor shall verify with the manufacturer the length of straight duct runs required.

### 3.07 SMOKE DAMPER INSTALLATION

- A. Install dampers in accordance with manufacturer's UL Installation Instructions, labeling, and NFPA 90A at locations indicated on the Drawings.
- B. Dampers shall be accessible to allow inspection, adjustment, and replacement of components. Access doors in ductwork, plenums, walls, ceilings, or other general building construction shall be provided. Coordinate with other trades.
- C. Where a damper is installed within a duct, a smoke detector shall be installed in the duct within 5 feet of the damper with no air outlets or inlets between the detector and the damper. The detector shall be listed for the air velocity, temperature and humidity anticipated at the point where it is installed. Other than in mechanical smoke control systems, dampers shall be closed upon fan shutdown where local smoke detectors require a minimum velocity to operate.
- D. Where a damper is installed above smoke barrier doors in a smoke barrier, a spot-type detector listed for releasing service shall be installed on either side of the smoke barrier door opening.
- E. Where a damper is installed within an unducted opening in a wall, a spot-type detector listed for releasing service shall be installed within 5 feet horizontally of the damper.
- F. Where a damper is installed in a corridor wall or ceiling, the damper shall be permitted to be controlled by a smoke detection system installed in the corridor.
- G. Where a total-coverage smoke detector system is provided within areas served by an HVAC system, dampers shall be permitted to be controlled by the smoke detection system.

### 3.08 DUCTWORK AND EQUIPMENT LEAK TESTING

- A. Leak test each ductwork system within ten working days of ductwork installation and before ductwork is insulated and concealed.
- B. All HVAC ductwork shall be tested. Follow general procedures and use apparatus as outlined in the SMACNA HVAC Air Duct Leakage Test Manual.
- C. Test all ductwork at 100 percent of the pressure classifications indicated.
- D. Air testing during erection shall include separate leakage air tests of air riser, horizontal distribution system, and, after all ductwork is installed and the central stations apparatus is erected, leakage testing of the whole system.
- E. Use Appendix C in the SMACNA HVAC Air Duct Leakage Test Manual to determine allowable leakage rates for each duct section tested.
- F. All devices, including access doors, airflow measuring devices, sound attenuators, damper casings, sensors, test ports, etc. that are furnished and/or installed in duct systems shall be included as part of the duct system leakage allowance. All joints shall be inspected and checked for audible leakage, repaired, if necessary, and retested. Duct leakage shall be limited to the following:

| Average Size of Run<br>Diameter or Equivalent | *A/100 ft. Run |
|-----------------------------------------------|----------------|
| 12 inches or less                             | 10             |

| <b>Average Size of Run<br/>Diameter or Equivalent</b> | <b>*A/100 ft. Run</b> |
|-------------------------------------------------------|-----------------------|
| 20 inches or less                                     | 15                    |
| 30 inches or less                                     | 25                    |
| 40 inches or less                                     | 30                    |
| 50 inches or less                                     | 30                    |
| * (A) = Permissible loss in cfm                       |                       |

- G. Total system leakage shall not exceed 10 percent of the scheduled design capacity of the system when tested as per SMACNA testing methods.

### 3.09 DUCTWORK AND EQUIPMENT LEAK TESTING - GREASE EXHAUST AND WATER LEAK PROOF DUCTWORK

- A. Prior to use, covering or concealment of any ductwork perform a leakage test in the presence of the Owner and Authority Having Jurisdiction.
- B. Perform a light test or other approved test to determine that all welded or brazed joints are liquid tight.
- C. Light test shall be performed by passing a lamp having a power rating of not less than 100 watts through the entire section of duct to be tested.
1. The lamp shall be open so as to emit light in all directions.
- D. Repair any visible light leakage.

### 3.10 PAINTING

- A. Upon completion of the installation, remove all protecting materials, thoroughly remove all scale and grease and leave in a clean condition for painting. Ductwork to be painted shall be as shown on the Drawings. Painting shall be in accordance with the requirements of the "Painting" Specification Section.

### 3.11 DUCTWORK MATERIAL SCHEDULE

| <b>AIR SYSTEM</b>                      | <b>DUCTWORK MATERIAL</b>     |
|----------------------------------------|------------------------------|
| Supply, Outside Air & Exhaust Ductwork | Galvanized Steel             |
| Kitchen Exhaust                        | Black Iron / Stainless Steel |
| Shower Room Exhaust                    | Aluminum                     |
| Ductwork Exposed to Weather            | Aluminum                     |
| Clothes Dryer Exhaust                  | Rigid Metal                  |

**END OF SECTION 233113**

## PART 1 GENERAL

## 1.01 SUMMARY

- A. Section Includes
  - 1. The ceiling-mounted circulation fan is the model scheduled with the capacities indicated. The fan shall be furnished with standard mounting hardware and variable speed control to provide cooling and destratification.
- B. Summary of Work
  - 1. Installation of the fan, miscellaneous or structural metal work (if required), field electrical wiring, cable, conduit, fuses and disconnect switches, other than those addressed in the installation scope of work, shall be provided by others. Consult the appropriate installation scope of work for information on the available factory installation options, overview of customer and installer responsibilities, and details on installation site requirements.

## 1.02 REFERENCES

- A. National Fire Protection Association (NFPA)
- B. Underwriters Laboratories (UL)
- C. Restriction of Hazardous Substances (RoHS)
- D. International Organization for Standardization (ISO)
- E. National Electrical Manufacturers Association (NEMA)
- F. National Electrical Code (NEC)
- G. Occupational Safety and Health Administration (OSHA)

## 1.03 SUBMITTALS

- A. Shop Drawings: Drawings detailing product dimensions, weight, and attachment methods.
- B. Product Data: Specification sheets on the ceiling-mounted fan, specifying electrical and installation requirements, features and benefits, and controller information.
- C. Installation Guide: The manufacturer shall furnish a copy of all operating and maintenance instructions for the fan. All data is subject to change without notice.
- D. Schedule
- E. Ceiling fan sizing, placement, and performance shall be verified using computational fluid dynamics (CFD) analysis. At a minimum, the input data for the CFD analysis shall include the ceiling fan(s), significant obstructions to airflow at the floor level, and the actual space dimensions. As verification of performance, the submittal shall include results of the CFD analysis including, at a minimum, the following performance metrics determined in accordance with ANSI/ASHRAE Standard 55-2017: average air speed, minimum, maximum and average cooling effect from elevated air speed, Predicted Mean Vote, and Predicted Percentage Dissatisfied for seated and standing occupants in each occupied zone.

## 1.04 QUALITY ASSURANCE

- A. Certifications

1. The fan assembly, as a system, shall be Intertek/ETL-certified and built pursuant to the guidelines set forth by UL standard 507.
  2. The fan shall be compliant with NFPA 13-Standard for the Installation of Sprinkler Systems, NFPA 72-National Fire Alarm and Signaling Code, and NFPA 70-2011-National Electrical Code (NEC).
  3. Controllers shall comply with National Electrical Code (NEC) and Underwriters Laboratory (UL) standards and shall be labeled where required by code.
- B. Manufacturer Qualifications
1. The fan and any accessories shall be supplied by Greenheck or approved equal.
  2. ISO 9001-certified
  3. The manufacturer shall not be listed on the Air Movement and Control Association International Inc. (AMCA) Certified Ratings Program (CRP) Non-Licensed Products report in the previous 36 months.

#### 1.05 DELIVERY, STORAGE, AND HANDLING

- A. Deliver product in original, undamaged packaging with identification labels intact. The fan shall be new, free from defects, and factory tested.
- B. The fan and its components must be stored in a safe, dry location until installation.

#### 1.06 WARRANTY

- A. The manufacturer shall replace any products or components defective in material or workmanship for the customer free of charge (including transportation charges within the USA) pursuant to the complete terms and conditions of the Greenheck Warranty in accordance to the following schedule:
- |                 |                                         |
|-----------------|-----------------------------------------|
| 1. Mechanical†  | 15 years                                |
| 2. Electrical†† | 7 years (standard); 15 years (extended) |
| 3. Labor        | 1 year                                  |
- a. "Mechanical" is defined as mechanical components of the fan, including, the gearbox, fan hub, motor frame, mounting, airfoils, and winglets.
  - b. "Electrical" is defined as electrical and electronic components of the fan, including the motor, motor drive, variable frequency drive, and any standard controller or accessories.
  - c. All reasonable costs of repair or replacement will be paid or reimbursed provided customer obtains pre-approval.
  - d. See the complete warranty for more details.
- B. The warranty shall not require the submission of a post installation form or photographs of the installed fan(s) to the manufacturer for the warranty to be in effect.
- C. The warranty shall not require the periodic submission of maintenance records for the warranty to remain in effect.

### PART 2 PRODUCT

#### 2.01 MANUFACTURER

- A. Big Ass Fans
- B. Greenheck
- C. Thermotek

## 2.02 HIGH VOLUME, LOW SPEED FANS

## A. Complete Unit

1. Regulatory Requirements:
  - a. The entire fan assembly (with or without light kit) shall be Intertek/ETL-certified and built pursuant to the construction guidelines set forth by UL standard 507.
  - b. The controller shall be compliant with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) The device may not cause harmful interference, and (2) The device must accept any interference received, including interference that may cause undesirable operation.
2. Sustainability Characteristics:
  - a. The fan shall be designed to move an effective amount of air for cooling and destratification in a variety of applications (including industrial and agricultural) over an extended life. The fan components shall be designed specifically for high volume, low speed fans to ensure lower operational noise. Sound levels from the fan operating at maximum speed measured in a laboratory setting shall not exceed 55 dBA. Actual results of sound measurements in the field may vary due to sound reflective surfaces and environmental conditions.
  - b. The controller shall be designed to control fans and lighting systems from a secure, centralized location. The system shall be designed specifically for high volume, low speed fans to ensure maximum control. The system shall include optional smart functionality to maximize energy savings. Smart functionality shall provide the capability to automatically control the speed of the fans using information from user-determined settings and built-in temperature and humidity sensors.
3. Good workmanship shall be evident in all aspects of construction. Field balancing of the airfoils shall not be necessary.

## B. Onboard Fan Control

1. The onboard fan controller shall be constructed using a variable frequency drive (VFD) that is pre-wired to the motor and factory-programmed to minimize the starting and braking torques for smooth and efficient operation. The onboard controller shall be prewired to the motor using a short run of flexible conduit with a dedicated ground conductor to minimize electromagnetic interference (EMI) and radio frequency interference (RFI). A 15-ft incoming power cord shall be pre-wired to the controller with one of the following plugs: NEMA L6-20P Twist-Lock Plug, NEMA L6-30P Twist-Lock Plug, NEMA L15-20P Twist Lock Plug, NEMA L16-20P Twist-Lock Plug.
2. For fans with single-phase input, conversion to three-phase output takes place at the VFD.

## C. Blade System

1. The fan shall be equipped with six (6) airfoils of precision extruded aluminum alloy. The airfoils shall be connected by means of two (2) high strength locking bolts per airfoil. The airfoils shall be connected to the hub and interlocked with zinc plated steel retainers.
2. The fan shall be equipped with six (6) winglets (standard) on the ends of the airfoils.

## D. Motor

1. The fan motor shall be an AC induction type inverter rated at one of the following:
  - a. 1725 RPM, 200-240/400-480 VAC, 50/60 Hz, three-phase
  - b. 1725 RPM, 575-600 VAC, 50/60 Hz, three-phase
2. The motor shall be totally enclosed, fan cooled (TEFC) with an IP44 NEMA classification. A NEMA 56C standard frame shall be provided for ease of service. The motor shall be manufactured with a double baked Class F insulation and be capable of continuous operation in 32 degrees F to 122 degrees F ambient conditions.

## E. Gearbox

1. The fan gearbox shall be a NitroSeal™ Drive designed specifically for the Powerfoil X series. The gearbox shall include a high-efficiency, hermetically sealed, nitrogen-filled, offset helical gear reducer with two-stage gearing, a hollow output shaft, cast iron housing, double lip seals, high quality SKF Explorer Series bearings with crowned cages for optimal lubrication flow, and precision machined gearing to maintain backlash less than 11 arc-minutes over the life of the unit. Lubrication shall be high-grade, low-foaming synthetic oil with extreme pressure additives and a wide temperature range, and shall be lubricated for the life of the product (no oil changes required).
  2. The gearbox shall be equipped with a hollow shaft threaded to accept a ¾" NPT fitting in which wiring, piping, etc., can be routed to below the fan. A standard junction box can be affixed to this hollow shaft to allow for installing optional features such as lights or cameras. The inclusion of the hollow shaft shall be specified at the time of order.
- F. Mounting Post
1. The fan shall be equipped with a mounting post that provides a structural connection between the fan assembly and extension tube. The mounting post shall be formed from A36 steel, contain no critical welds, and be powder coated for corrosion resistance and appearance.
- G. Mounting System
1. The fan mounting system shall be designed for quick and secure installation on a variety of structural supports. The design of the upper mount shall provide two axes of rotation. This design shall allow for adjustments to be made after the mount is installed to the mounting structure to ensure the fan will hang level from the structure.
  2. The upper mount shall be of ASTM A-36 steel, welded construction, at least 3/16" thick, and powder coated for appearance and corrosion resistance. No mounting hardware or parts substitutions, including cast aluminum, are acceptable.
  3. All mounting bolts shall be SAE Grade 8 or equivalent.
- H. Hub
1. The fan hub shall be 19" (48 cm) in diameter and shall be made of precision cut aluminum for high strength and light weight. The hub shall consist of two (2) aluminum plates, eight (8) aluminum spars, and one (1) aluminum spacer fastened with a pin and collar rivet system. The overall design shall provide a flexible assembly such that force loads experienced by the hub assembly shall be distributed over a large area to reduce the fatigue experienced at the attachment point for the fan blade.
  2. The hub shall be secured to the output shaft of the gearbox by means of (10) high strength bolts. The hub shall incorporate five (5) safety retaining clips made of 1/4" (0.6 cm) thick steel that shall restrain the hub/airfoil assembly.
- I. Safety Cables
1. The fan shall be equipped with an upper safety cable that provides an additional means of securing the fan assembly to the building structure. The upper safety cable shall have a diameter of Ø3/8" (1 cm).
  2. The fan shall be equipped with two lower safety cables pre-attached to the fan hub that shall provide an additional means of securing the fan to the extension tube. The lower safety cables shall have a diameter of 1/4" (0.6 cm).
  3. The safety cables shall be fabricated out of 7 x 19 galvanized steel cable. The end loops shall be secured with swaged Nicopress® sleeves, pre-loaded and tested to 3,200 lbf (13,345 N).
  4. Field construction of safety cables is not permitted.
- J. Digital Variable Speed Wall Controller
1. The fan shall be equipped with a digital variable speed wall controller. The controller user interface shall be a wall-mounted, touch interface.
  2. The controller shall be mounted to a standard rectangular or square outlet box.

3. A 150-ft (45.7-m) CAT5 cable shall be provided for connecting the controller to the fan's VFD and to provide power to the controller.
  4. The controller mounting location shall meet the requirements of OSHA standard 29 CFR 1910.303(g) for accessibility minimum clearances.
  5. The controller shall have an IP65 rating.
  6. The controller shall provide fan start/stop, speed, and direction control functions.
  7. The controller shall provide diagnostic and fault history information for the connected fan, as well as the ability to configure fan parameters with the assistance of Big Ass Fans Customer Service.
  8. The controller interface shall be able to be secured with a passcode to prevent unauthorized access to fan controls and settings.
  9. The controller shall operate out of the box without setup and upon connection to CAT5 cable.
- K. Fire Control Panel Integration
1. Includes a 10-30 VDC pilot relay for seamless fire control panel integration. The pilot relay can be wired Normally Open or Normally Closed in the field.
- L. Guy Wires
1. Included for installations with extension tubes 4 ft (1.2 m) or longer to limit the potential for lateral movement.

### PART 3 EXECUTION

#### 3.01 PREPARATION

- A. Fan location shall have a typical bar joist or existing I-beam structure from which to mount the fan. Additional mounting options may be available.
- B. Mounting structure shall be able to support weight and operational torque of fan. Consult structural engineer if necessary.
- C. Fan location shall be free from obstacles such as lights, cables, or other building components.
- D. Check fan location for proper electrical requirements. Consult installation guide for appropriate circuit requirements.
- E. Each fan requires dedicated branch circuit protection.
- F. Before the controller is installed, the fan system shall be installed by a factory-certified installer according to the instructions in the fan Installation Guide.
- G. Install a rectangular or square outlet box at the controller mounting location.
- H. If the controller will be mounted more than 250 ft (76.2 m) from the fan or if multiple fans will be daisy chained, ensure the optional Accessory Kit is included. The accessory kit shall be installed by a factory- certified installer according to the instructions included with the kit.

#### 3.02 INSTALLATION

- A. The fan and controller shall be installed by a factory-certified installer according to the manufacturer's Installation Guide, which includes acceptable structural dimensions and proper sizing and placement of angle irons for bar joist applications. Big Ass Fans recommends consulting a structural engineer for installation methods outside the manufacturer's recommendation and a certification, in the form of a stamped print or letter, submitted prior to installation.

- B. Minimum Distances
  - 1. Airfoils shall be at least 14 ft above the floor.
  - 2. Installation area shall be free of obstructions such as lights, cables, sprinklers, or other building structures with the airfoils at least 2 ft (0.61 m) clear of all obstructions.
- C. The fan shall not be located where it will be continuously subjected to wind gusts or in close proximity to the outputs of HVAC systems or radiant heaters. Additional details are in the Installation Manual.
- D. In buildings equipped with sprinklers, including ESFR sprinklers, fan installation shall comply with all of the following:
  - 1. The maximum fan diameter shall be 24 ft (7.3 m).
  - 2. The HVLS fan shall be centered approximately between four adjacent sprinklers.
  - 3. The vertical clearance from the HVLS fan to the sprinkler deflector shall be a minimum of 3 ft (0.9 m).
  - 4. All HVLS fans shall be interlocked to shut down immediately upon receiving a waterflow signal from the alarm system in accordance with the requirements of NFPA 72 - National Fire Alarm and Signaling Code.
- E. Mount the controller to a flat, readily accessible surface that is free from vibration and away from foreign objects and moving equipment. The controller mounting location must meet the requirements of OSHA standard 29 CFR 1910.303(g) for accessibility minimum clearances.
- F. If the smart feature will be used, the controller must not be mounted adjacent to or above a radiant heat source, near HVAC ventilation intakes/exhausts, on a poorly insulated exterior wall, or in a different temperature/humidity environment than the fans it will control. Additional mounting guidelines can be found in the Installation Guide.

**END OF SECTION 233400**

## PART 1 - GENERAL

## 1.01 DESCRIPTION OF WORK

- A. Provide exhaust fans, as specified herein, of sizes and capacities scheduled and in locations shown on drawings.

## 1.02 REFERENCE CODES AND STANDARDS

- A. AMCA 99 - Standards Handbook
- B. AMCA 210 - Laboratory Methods of Testing Fans for Rating
- C. AMCA 300 - Reverberant Room Method for Sound Testing of Fans
- D. ASHRAE Handbook, HVAC Applications Volume "Sound and Vibration Control"
- E. UL listed and labeled.

## 1.03 SUBMITTALS

- A. Shop Drawings - Show fan layout, housing, materials, gauges, dimensions, weights and installation details
- B. Product data - Manufacturer's fan performance (data includes cfm, rpm, bhp, motor nameplate data, tip speed, outlet velocity and static pressure) and sound performance (data includes sound power level ratings by octave bands) as tested in accordance with AMCA Standards 210 and 300.
- C. Fan performance curves - Submit curves for all fans with system performance shown, and for plus or minus 10 percent and plus or minus 20 percent change in fan rpm. Curves shall include plotted rpm, horsepower, cfm, static pressure, and fan surge line and operating point.
- D. Certified AMCA Ratings - Submit ratings for air and sound performance.
- E. UL Listing - Submit listing if specified.

## 1.04 QUALITY ASSURANCE

- A. Factory balance each fan statically and dynamically, test run before shipment, and key fan wheel to fan shaft. Fans shall operate quietly and without pulsation or vibration. Conduct sound power level tests for each type fan at the factory in accordance with AMCA 300.
- B. Fans shall operate in the stable range of their performance curves.
- C. The fan external static pressures shown in the schedules are those required by the ductwork and apparatus, and do not include the internal and intake fan losses, inlet vanes or integral outlet dampers, inlet screens, outlet velocity heads or drive losses.
- D. Factory performance test each fan assembled in or as part of apparatus specified to be performance tested. Test shall display scheduled performance characteristics, using certified, calibrated testing instruments provided by the manufacturer of the apparatus.
- E. All fan performance ratings shall be based up on factory tests performed in accordance with AMCA 210. One fan of each type specified shall have actual factory performance tests performed prior to shipment. All fans shall be certified by AMCA and carry its seal.

## PART 2 - PRODUCTS

## 2.01 CENTRIFUGAL DOWNBLAST FANS

- A. Roof mounted exhaust fans shall be of the downblast direct drive type.
- B. The fan housing shall consist of the motor cover, shroud, curb cap and lower windband, and shall be constructed of heavy-gauge aluminum. Housing shall have a rigid internal support structure and leakproof design. The fan shroud shall be one-piece with a rolled bead for extra strength, which directs exhaust air downward. The low windband shall be one piece with formed edges for added strength and the curb cap shall include prepunched mounting holes to ensure correct attachment to the roof.
- C. The fan wheel shall be centrifugal, non overload, backward-inclined, constructed of aluminum and shall include a wheel cone carefully matched to the inlet cone for precise running tolerances. Wheels shall be statically and dynamically balanced.
- D. Motors shall be permanently lubricated and carefully matched to the fan loads. Motors shall be readily accessible for maintenance. Motors shall be mounted on true vibration isolators, out of the airstream. Each vibration isolator shall be sized to match the weight of each fan.
- E. A NEMA 1 disconnect switch shall be provided as standard. Factory wiring shall be provided from motor to the handy box.
- F. All fans shall bear the AMCA Certified Ratings Seal for both sound and air performance.
- G. Each fan shall bear a permanently affixed manufacturer's nameplate containing the model number and individual serial number for future identification.
- H. Approved Manufacturers:
  - 1. Greenheck
  - 2. Cook
  - 3. Ruppaire

## 2.02 DIRECT DRIVEN CENTRIFUGAL IN-LINE EXHAUST FANS

- A. General Description:
  - 1. Base fan performance at standard conditions (density 0.075 Lb/ft<sup>3</sup>)
  - 2. Performance capabilities up to 5,000 cubic feet per minute (cfm) and static pressure to 1.75 inches of water gauge
  - 3. Fans are available in thirteen sizes with nominal wheel diameters ranging from 8 inches through 16 inches (60 - 160 unit sizes)
  - 4. Normal operating temperature up to 130 Fahrenheit (54.4 Celsius)
  - 5. Applications include: intake, exhaust, return, or make-up air systems
  - 6. Each fan shall bear a permanently affixed manufacturer's engraved metal nameplate containing the model number and individual serial number
- B. Wheel:
  - 1. Non-overloading, backward inclined centrifugal wheel
  - 2. Constructed of aluminum
  - 3. Statically and dynamically balanced in accordance to AMCA Standard 204-05
  - 4. The wheel cone and fan inlet will be matched and shall have precise running tolerances for maximum performance and operating efficiency
  - 5. Single thickness blades are securely riveted or welded to a heavy gauge back plate and wheel cone.

- C. Motors:
  - 1. AC Induction Motor
    - a. Motor enclosures: Open dripproof
    - b. Motors are permanently lubricated, heavy duty ball bearing type to match with the fan load and pre-wired to the specific voltage and phase
- D. Housing/Cabinet Construction
  - 1. Construction material: Galvanized
  - 2. Square design constructed of heavy gauge galvanized steel and shall include square duct mounting collars
  - 3. Housing and bearing supports shall be constructed of heavy gauge bolted and welded steel construction to prevent vibration and to rigidly support the shaft and bearing assembly.
- E. Housing Supports and Drive Frame:
  - 1. Housing supports are constructed of structural steel with formed flanges
  - 2. Drive frame is welded steel which supports the motor
- F. Disconnect Switches:
  - 1. NEMA rated: 1
  - 2. Positive electrical shut-off
  - 3. Wired from fan motor to junction box
- G. Duct Collars:
  - 1. Square design to provide a large discharge area
  - 2. Inlet and discharge collars provide easy duct connection
- H. Access Panel:
  - 1. Two sided access panels, permit easy access to all internal components
  - 2. Located perpendicular to the motor mounting panel
- I. Options/Accessories:
  - 1. Dampers:
    - a. Types: Gravity and motorized (see schedules on Drawing H2.0 for more information)
    - b. Galvanized frames with prepunched mounting holes
    - c. Balanced for minimal resistance to flow
  - 2. Isolation:
    - a. Type: Neoprene/Rubber Mount
    - b. Sized to match the weight of each fan
  - 3. Motor Cover:
    - a. Constructed of galvanized steel
    - b. Covers motor and drives for safety
    - c. Standard on unit specified with UL
- J. Fans shall be Model SQ as manufactured by Greenheck or approved equal.

## PART 3 - EXECUTION

### 3.01 GENERAL

- A. Install fans, including all necessary structural supports and bracing as scheduled and located on the contract drawings in accordance with manufacturer's instructions and approved submittals.
- B. Connect duct to fans to allow for straight and smooth air flow.

- C. Provide flexible connections (minimum of 4") between fan and duct.
- D. Install fan level: +/- 5 degrees vertical. Final installation shall be free of all leaks from both fan and associated ductwork.

**3.02 START-UP, TESTING, DEMONSTRATION**

- A. Start-up fans after checkout to insure proper alignment and phased electrical connections.
- B. Test fans individually and as part of system.
- C. Insure fans are properly interlocked with supply fans and with control system.
- D. Demonstrate operation to Owner and instruct maintenance personnel in operation of equipment.

**END OF SECTION 233416**

## PART 1 - GENERAL

## 1.01 DESCRIPTION OF WORK

- A. This Section describes the outdoor air inlets as specified herein, with capacities, and sizes as scheduled on the Drawings.
- B. Products listed in Part 2 of this Section include:
  - 1. Outdoor Air Louvers

## 1.02 RELATED WORK

- A. Section 061000: Rough Carpentry
- B. Section 076200: Flashing and Sheet Metal
- C. Section 079200: Joint Sealants
- D. Section 230010: General Mechanical Requirements
- E. Section 230594: Balancing of Air Systems

## 1.03 REFERENCES

- A. ASHRAE 70 – Method of Testing for Rating the Airflow Performance of Outlets and Inlets.
- B. NFPA 90A – Installation of Air Conditioning and Ventilation Systems

## 1.04 SUBMITTALS

- A. Product data – Submit catalog cuts and installation instructions for all products specified, including standard color samples.
- B. Submit published manufacturer's performance data for all of the different types of louvers.
- C. Performance data – For each size and type, submit the following:
  - 1. Free area
  - 2. Maximum airflow in cfm
  - 3. AMCA 511 performance data

## PART 2 - PRODUCTS

## 2.01 OUTSIDE AIR INTAKE / EXHAUST LOUVERS

- A. Aluminum Louvers:
  - 1. Furnish and install louvers of the sizes and capacities as shown on the Drawings.
  - 2. Provide louvers 4 or 6 inches deep (coordinate with architectural drawings) with extruded blades on 37½-degree slope, heavy channel frame, with 3/4-inch expanded, flattened aluminum bird screen.
  - 3. Fabricate from minimum 6063-T5 extruded aluminum.
  - 4. Finish shall be factory finished 70% PVDF. Coordinate with Architectural plans for finish color.
  - 5. Coordinate color with Owner & Architectural drawings or specification. Provide color chips for review by architect/owner.
  - 6. Approved Manufacturers:
    - a. Greenheck
    - b. Ruskin
    - c. Arrow
    - d. Approved equal

## PART 3 - EXECUTION

## 3.01 INSTALLATION

- A. Install louvers in locations shown on the Drawings.
- B. Install louvers plumb, level, in plane of wall, and in alignment with adjacent work.
- C. Install joint sealants as specified in Section 079200.
- D. Coordinate with other work, and provide sheet metal, gaskets, and all other materials and work required to ensure an air-tight seal between intake plenum and outside air intake air opening. Blank-off and seal unused louver openings air tight with galvanized steel sheet metal.

**END OF SECTION 233700**

## PART 1 - GENERAL

## 1.01 DESCRIPTION OF WORK

- A. This Section describes the air terminals as specified herein, with capacities, distribution patterns and connection sizes as scheduled on the Drawings.
- B. Products listed in Part 2 of this Section include:
  - 1. Grilles and Registers.
  - 2. Ceiling Diffusers.

## 1.02 RELATED WORK

- A. Section 233113: Sheet Metal Work

- H. SMACNA - HVAC Duct Construction Standards - Metal and Flexible.
- I. Mechanical Code of New York State

## 1.04 QUALITY ASSURANCE

- A. Air Terminals will not be accepted until acoustical test results have been submitted and approved.

## 1.05 SUBMITTALS

- A. Product data - Submit catalog cuts and installation instructions for all products specified, including standard color samples.
- B. Submit published manufacturer's performance data for all of the different types of diffusers, registers and grilles, based on testing in accordance with ASHRAE Standard 70, latest edition.
- C. Performance data - For each size and type of air terminal , submit the following:
  - 1. Inlet static pressure in inches w.g.
  - 2. Maximum and minimum airflow in cfm.
  - 3. Throw in feet at maximum cfm (and 25 percent of cfm) for terminal velocities of 50 and 100 fpm.

4. Noise Criteria (NC) curve at maximum air terminal cfm rating with blades in full-open and closed positions.

## PART 2 - PRODUCTS

### 2.01 CEILING DIFFUSERS

#### A. Stamped Ceiling Diffusers:

1. Furnish and install stamped ceiling diffusers of the sizes and capacities as shown on the Drawings.
2. Manufacture the diffuser from corrosion-resistant steel or extruded aluminum as indicated on the Drawings.
3. Construct the diffuser with four die-formed concentric cones in all sizes. Construct the inner cone assembly to be removable using a spring clip arrangement that permits quick, easy installation and removal.
4. Provide units with radial opposed blade dampers. Provide the diffuser with a removable plug for screwdriver adjustment of the damper without removing the inner core.
5. Manufacture diffusers with trim to allow for recessed mounting in into ceiling grids or for surface mount in other ceiling types.
6. Manufacturer: Nailor Industries Inc, Model Series RNS or approved equal.
7. Coordinate color with Owner

#### B. Round Ceiling Diffusers:

1. Furnish and install round ceiling diffusers of the sizes and capacities as shown on the Drawings.
2. Manufactured the diffuser from corrosion-resistant steel or extruded aluminum as indicated on the Drawings.
3. Round, stamped or spun, multi-core diffuser to discharge air in 360 degree pattern, with sectorizing baffles where indicated. Size diffuser collar to project not more than one inch above ceiling.
4. Provide a radial opposed blade damper and multi-louvered equalizing grid with damper adjustable from diffuser face.
5. Manufacture diffusers with trim to allow for recessed mounting into ceiling grids or for surface mount in other ceiling types.
6. Manufacturer: Nailor Industries Inc. Model Series RNR or approved equal.
7. Coordinate color with Owner.

#### C. Architectural Ceiling Diffusers:

1. Furnish and install architectural ceiling diffusers of the sizes and capacities as shown on the Drawings.
2. Manufacture the diffuser from corrosion-resistant steel or extruded aluminum as indicated on the Drawings.
3. Construct the units of a stamped outer core and with the inner core having a plaque style face. Construct the face with a double skinned inner face panel with a hemmed edge. Manufacture the inner core assembly to be removable using a spring clip arrangement that permits quick, easy installation and removal.
4. Manufacture diffusers with trim to allow for with face panel flush with the ceiling line into ceiling grids or for surface mount in other ceiling types.
5. Provide an opposed blade radial volume damper, with an operating arm to adjust the damper without removing the core. Unit collar height; 1 1/4" in height.
6. Provide an equalizing grid for field installation for each diffuser.
7. Manufacturer: Nailor Industries Inc., Model Series UNI or approved equal.
8. Coordinate color with Owner.

#### D. Architectural High Ceiling Perforated Diffusers:

1. Furnish and install architectural high ceiling perforated diffusers of the sizes and capacities as shown on the Drawings.
  2. Manufacture the diffuser from corrosion-resistant steel.
  3. Construct the units of a stamped one-piece outer cone and a heavy gauge inner face panel with a hemmed edge.
  4. Perforated face shall have 3/8" diameter holes on 5/8" staggered centers.
  5. Provide an opposed blade radial volume damper, with an operating arm to adjust the damper without removing the core. Unit collar height; 1 1/4" in height.
  6. Manufacturer: Nailor Industries Inc., Model Series UNI-PD or approved equal.
  7. Coordinate color with Owner.
- E. Architectural High Ceiling Adjustable Downblast Diffusers:
1. Furnish and install architectural high ceiling perforated diffusers of the sizes and capacities as shown on the Drawings.
  2. Manufacture the diffuser from corrosion-resistant steel.
  3. Construct the units of a stamped one-piece outer cone and a inner core that has a square face plate and includes a round, easily adjustable radial vane in the center.
  4. The radial vane shall have a ring operator that allows for pole operation.
  5. Provide an opposed blade radial volume damper, with an operating arm to adjust the damper without removing the core. Unit collar height; 1 1/4" in height.
  6. Manufacturer: Nailor Industries Inc., Model Series UNI-AD or approved equal.
  7. Coordinate color with Owner.

## 2.02 RETURN GRILLES

- A. Furnish and install return grilles of the type and size as shown on the Drawings. Construct the grilles with 45 degree deflection fixed blades and frames that have reinforced mitered corners.
- B. Provide an opposed blade damper operable from the face of the grille for grilles connected to ductwork.
- C. Manufacture grilles with trim to allow for recessed mounting into ceiling grids or for surface mount in other ceiling types. Provide concealed mounting using concealed mounting straps or concealed screw holes in neck. Countersunk screw holes in the frame face are not acceptable or frame face-mounting screws.
- D. Construct the units of extruded aluminum or corrosion resistant steel as shown on the Drawings.
- E. Manufacturer: Nailor Industries Inc, Model Series 6145H-O or approved equal.
- F. Coordinate color with Owner.

## 2.03 HEAVY DUTY STEEL RETURN GRILLES

- A. Furnish and install heavy duty return grilles of the type and size as shown on the Drawings. Construct the grilles with 45 degree deflection fixed 14 gauge steel blades spaced on 1/2" centers and a heavy duty 16 gauge steel welded frame.
- B. Provide an opposed blade damper operable from the face of the grille for grilles connected to ductwork.
- C. Manufacture grilles with trim to allow for recessed mounting into ceiling grids or for surface mount in other ceiling types. Provide concealed mounting using concealed mounting straps or concealed screw holes in neck. Countersunk screw holes in the frame face are not acceptable or frame face-mounting screws.

- D. Construct the units of extruded aluminum or corrosion resistant steel as shown on the Drawings.
- E. Manufacturer: Nailor Industries Inc, Model Series 6145H-HD-O or approved equal.
- F. Coordinate color with Owner.

#### 2.04 HEAVY DUTY ALUMINUM RETURN GRILLES

- A. Furnish and install heavy duty return grilles of the type and size as shown on the Drawings. Construct the grilles with 0 degree deflection aluminum blades spaced on  $\frac{1}{2}$ " centers and a heavy duty aluminum welded frame.
- B. Provide an opposed blade damper operable from the face of the grille for grilles connected to ductwork.
- C. Manufacture grilles with trim to allow for recessed mounting into ceiling grids or for surface mount in other ceiling types. Provide concealed mounting using concealed mounting straps or concealed screw holes in neck. Countersunk screw holes in the frame face are not acceptable or frame face-mounting screws.
- D. Construct the units of extruded aluminum or corrosion resistant steel as shown on the Drawings.
- E. Nailor Industries Inc, Model Series 51FH-HD-OA or approved equal.
- F. Coordinate color with Owner.

#### 2.05 SUPPLY GRILLES

- A. Furnish and install supply grilles of the type and size as shown on the Drawings. Construct the grilles with a dual set of streamlined shaped, roll-formed, corrosion-resistant blades that are adjustable, and spaced on  $\frac{3}{4}$ " centers and frame with reinforced mitered corners.
- B. Manufacture grilles with trim to allow for recessed mounting into ceiling grids or for surface mount in other ceiling types. Provide concealed mounting using concealed mounting straps or concealed screw holes in neck. Countersunk screw holes in the frame face are not acceptable nor are frame face-mounting screws.
- C. Construct the units of extruded aluminum or corrosion resistant steel as shown on the Drawings.
- D. Manufacturer: Nailor Industries Inc., Model Series 61DH-O or approved equal.
- E. Coordinate color with Owner.

#### 2.06 CURVED SPIRAL DUCT GRILLES

- A. Furnish and install curved spiral duct grilles of the type and size as shown on the Drawings. Construct the grilles with a dual set of extruded aluminum blades that are spaced on  $\frac{3}{4}$ " centers. The frame shall be corrosion-resistant steel and rolled to match the specified radius.
- B. Provide each unit with a damper extractor constructed of heavy gauge corrosion-resistant steel and operable from the face of the grille (Nailor Industries Inc. Model DEX).
- C. Manufacturer: Nailor Industries Inc., Model Series 61DVC or approved equal.

## PART 3 - EXECUTION

## 3.01 DIFFUSER, REGISTER AND GRILLE APPLICATION

- A. See the Drawings for types, sizes, materials and installation requirements.

## 3.02 INSTALLATION

- A. Install diffusers, grilles and registers in locations shown on the Drawings.
- B. Consult the Drawings for type of ceiling in which the terminals are to be installed and match air outlet edge trim to the requirements of the ceiling type in which they are installed.
- C. Install equalizing grids flush with take-off collar connection to supply duct with vanes perpendicular to air flow approaching diffuser.
- D. Install in accordance with manufacturer's published recommendations as well as applicable sections of SMACNA manual and as specified above.
- E. Install ceiling mounted grilles and registers with the blade deflection facing away from the line of sight.
- F. Coordinate with other work, including ductwork and ductwork accessories, as necessary to interface installation of air outlets and inlets with other work

**END OF SECTION 233713**

## PART 1 - GENERAL

## 1.01 PROVISIONS

- A. Requirements of the General Mechanical Requirements of Division 23 and General Requirements of Division 1 applies to all work under this Section.
- B. Throughout the specifications, types of materials may be specified by manufacturer's name and catalogue number in order to establish standards of quality and performance and not for the purpose of limiting competition.

## 1.02 WORK INCLUDED

- A. Provide the following equipment as specified herein and in locations shown on drawings:
  - 1. Kitchen Hood and its appurtenances.

## 1.03 RELATED WORK

- A. Section 233113: Sheet Metal Work
- B. Section 238216: Coils

## 1.04 REFERENCES

- A. NFPA 96 - Ventilation Control and Fire Protection of Commercial Cooking Operations
- B. NFPA 17A - Standard for Wet Chemical Extinguishing Systems
- C. UL - Underwriters Laboratories, Inc. (UL)

## 1.05 QUALITY CONTROL

- A. The Kitchen Hood shall be constructed as UL listed and UL labeled, and shall bear the National Sanitation Foundation seal of Approval. The Kitchen Hood shall be built in accordance with NFPA # 96, and ASHRAE recommendations. The hood manufacturer shall provide on request, the necessary data that confirms compliance with above mentioned code authorities.
- B. The Restaurant Fire Suppression System shall be constructed as UL listed and labeled and shall be constructed in accordance with NFPA # 96 and NFPA #17A.
- C. All wiring and electrical equipment shall comply with NFPA 70, NEC.
- D. The hood shall be ETL-listed to standard UL710, ULC710, and ULC-S646 when installed in accordance with these installation instructions and National Fire Protection Association Standard "NFPA 96, Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations."
- E. The hood shall be built-in compliance with NSF/ANSI Standard 2.
- F. The hood shall be ETL Listed as:
  - 1. "Exhaust Hood Without Exhaust Damper."
  - 2. ETL Sanitation Listed and built in accordance with NFPA 96.
  - 3. The ETL label shall list temperature rating(s) and minimum CFM/ft rating(s).

## 1.06 WARRANTY

- A. All units shall be provided with the following standard warranty:
  - 1. This equipment is warranted to be free from defects in materials and workmanship, under normal use and service, for a period of 2-years from date of shipment.
- B. The manufacturer shall not be liable for incidental and consequential losses and damages potentially attributable to malfunctioning equipment. Should any part of the equipment prove to be defective in material or workmanship within the 2-year warranty period, upon examination by the manufacturer, such part will be repaired or replaced by manufacturer at no charge. The buyer shall pay all labor costs incurred in connection with such repair or replacement. Equipment shall not be returned without manufacturer's prior authorization, and all returned equipment shall be shipped by the buyer, freight prepaid to a destination determined by the manufacturer.
- C. Refer to Manufacturer's Operation, Installation, and Maintenance (OIM) Manual for detailed descriptions of what is/is not covered and contact information for warranty claims.

## 1.07 SUBMITTALS

- A. Submit shop drawings and product data to Engineer. Provide manufacturer's data of the Hood design for this project. The data for the Hood shall also contain the data for the fire suppression system. Incomplete documents will be rejected.
- B. The manufacturer shall supply complete computer generated submittal drawings, including hood section view(s) and hood plan view(s). These drawings must be available to the engineer, architect, and owner for their use in construction, operation, and maintenance.

## PART 2 - PRODUCTS

## 2.01 COOKING EQUIPMENT KITCHEN HOOD

- A. Design basis (or provide approved equal to the following):
  - 1. Captive Aire ND-2 Series Type I, wall canopy hood for use over 600°F cooking surface temperature.
  - 2. PSP Accessory
  - 3. Stainless Steel Captrate Solo filter with hook.
- B. The exhaust only canopy hood shall be rated for all types of cooking equipment. The hood shall have the size, shape and performance specified on drawings.
- C. Construction shall be type 430 stainless steel with a #3 or #4 polish where exposed. Individual component construction shall be determined by the manufacturer and ETL. Construction shall be dependent on the structural application to minimize distortion and other defects. All seams, joints and penetrations of the hood enclosure to the lower outermost perimeter that directs and captures grease-laden vapor and exhaust gases shall have a liquid-tight continuous external weld in accordance with NFPA 96 and have stainless steel on exposed surfaces. Hood shall be wall type with a minimum of four connections for hanger rods. Corner hanging angles have a 5/8" x 1-1/2" slot pre-punched at the factory, allowing hanging rods to be used for quick and safe installation.
- D. Hood shall be equipped with a minimum of four connections for hanger rods. Hood lengths greater than 12' will have added hangers.

- E. Ventilator shall be furnished with U.L. classified high efficiency stainless steel baffle filters, supplied in size and quantity as required by ventilator. The filters shall extend the full length of the hood and the filler panels shall not be more than 6" in width. Filters shall be ETL Listed. Particulate capture efficiency: 85% efficient at 9 microns, 76% efficient at 5 microns.
- F. The hood manufacturer shall supply complete computer generated submittal drawings including hood sections view(s) and hood plan view(s). These drawings must be available to the engineer, architect and owner for their use in construction, operation and maintenance.
- G. Exhaust duct collar to be 4" high with 1" flange. Duct sizes, CFM and static pressure requirements shall be as shown on drawings. Static pressure requirements shall be precise and accurate; air velocity and volume information shall be accurate within 1-ft increments along the length of the ventilator.
- H. Lighting shall be recessed round LED fixture and LED light, 3500K Warm output.
- I. The hood shall have:
  - 1. A double wall insulated front. The insulation shall have a flexural modulus of 475 EI, meet UL 181 requirements and be in accordance with NFPA 90A and 90B.
  - 2. An integral front baffle to direct grease laden vapors toward the exhaust filter bank.
  - 3. A built-in wiring chase provided for outlets and electrical controls on the hood face and shall not penetrate the capture area or require an external chaseway.
  - 4. A grease drain system which shall be an enclosed integral part of the hood back and have slopes with an exposed, removable 1/2 grease cup to facilitate cleaning.
  - 5. An exposed, removable grease cup for easy cleaning.
  - 6. Performance enhancing lip
  - 7. Perforated supply plenum which shall provide make-up air discharged below the cooking equipment
  - 8. Perforated diffuser plates
  - 9. Hood Mounted Utility Cabinet which can store listed fire suppression system, listed components, pre-wired electrical controls.
  - 10. Stainless steel vertical end and backsplash panels.
- J. The hood shall be ETL Listed as "Exhaust Hood Without Exhaust Damper", ETL Sanitation Listed and built in accordance with NFPA 96. The hood shall be listed for 600°F cooking surfaces at 200 CFM/ft. The hood shall be ETL Listed as "Exhaust Hood Without Exhaust Damper".
- K. Unexposed surfaces shall be constructed of aluminized steel. Plenum shall be insulated to prevent condensation.
- L. condensation.
- M.
- N. Refer to drawings for additional accessories.

## 2.02 ANSUL R-102 RESTAURANT FIRE SUPPRESSION SYSTEM

- A. The restaurant fire suppression system shall be an automatic fire suppression system using a wet chemical agent for grease related fires.
- B. The system shall be pre-engineered in accordance with UL guidelines.
- C. The system shall be installed and serviced by personnel trained by the manufacturer.

- D. The system shall be capable of protecting cooking appliances by utilizing either dedicated appliance protection and/or overlapping appliance protection.
- E. The system shall consist of a regulated release assembly that includes a regulated release mechanism and a wet chemical storage tank housed within a single enclosure. Nozzles, blow-off caps, detectors, cartridges, agent, fusible links, and pulley elbows shall be provided in the quantities needed for fire suppression system arrangements. Additional equipment shall include remote manual pull station and pressure switches.
- F. Wet Chemical Agent:
  - 1. The extinguishing agent shall be an aqueous solution of organic salts with a pH range between 7.8 - 8.2, designed for flame knockdown and foam securement of grease related fires.
- G. Agent Tank:
  - 1. The agent tanks shall be installed in a stainless steel enclosure or wall bracket. The tank shall be constructed of stainless steel. The tank shall include an adaptor/tube assembly containing a burst disc union.
- H. Regulated Release Mechanism:
  - 1. The regulated release mechanism shall be a spring-loaded, mechanical/pneumatic type capable of providing the expellant gas supply to the agent tank(s). It shall contain a factory installed regulator.
  - 2. It shall have automatic actuation by a fusible link detection system and remote manual actuation by a mechanical pull station.
  - 3. The regulated release mechanism shall contain a release assembly, regulator, expellant gas hose, and agent storage tank housed in a stainless steel enclosure with cover. The enclosure shall contain knock-outs for conduit. The cover shall contain an opening for a visual status indicator.
  - 4. The regulated release mechanism shall be compatible with mechanical gas shut-off devices; or, when equipped with a field or factory-installed switch, it shall be compatible with electric gas line or appliance shut-off devices.
- I. Regulated Actuator Assembly:
  - 1. When more than two agent tanks are required, the regulated actuator shall be available to provide expellant gas for additional tanks. It shall be connected to the cartridge receiver outlet of the regulated release mechanism providing simultaneous agent discharge. The regulator actuator assembly shall contain a regulated actuator, regulator, expellant gas hose, and agent tank housed in a stainless steel enclosure with cover. The enclosure shall contain knockouts to permit installation of the expellant gas line.
- J. Discharge Nozzles:
  - 1. Each discharge nozzle shall be tested and listed with the R-102 system for the specific application. Nozzle tips shall be stamped with the flow number designation. Each nozzle shall have a metal or rubber blow-off cap to keep the nozzle tip orifice free of cooking grease build-up.
- K. Distribution Piping:
  - 1. Shall be Schedule 40 black iron, chrome-plated, or stainless steel pipe conforming to ASTM A120, A53, or A106.
- L. Detectors:
  - 1. Shall be the of the fusible link style designed to separate at a specific temperature.
- M. Cartridges:

1. Shall be a sealed steel pressure vessel containing either carbon dioxide or nitrogen gas. The cartridge seal shall be designed to be punctured by the releasing device supplying the required pressure to expel wet chemical agent from the storage tank.
- N. Agent Distribution Hose:
  1. Kitchen appliances manufactured with or resting on casters (wheels/rollers), which have the Fire Suppression System hard piped, shall include a UL Listed agent distribution hose as a component of the suppression system. Hose assembly shall include a restraining cable kit.
- O. Pull Station Assembly:
  1. The Fire Suppression System shall include a remote pull station for manual system actuation. The pull station shall be designed to include a built-in guard for pull handle protection. The pull station shall be red in color.
- P. The Ansul system shall be manufactured by Tyco Fire Suppression & Building Products or approved equal.

#### 2.03 KITCHEN HOOD CENTRIFUGAL UTILITY SET EXHAUST FANS

- A. Utility set exhaust fan shall be suitable for use with a Type I kitchen hood serving cooking equipment that produces grease laden vapors. Fan shall be UL762 Listed for restaurant duty.
- B. Fan shall have a vented motor cover.
- C. Fan housing shall be continuously welded.
- D. Fan shall have a clean out door.
- E. Fan shall have a grease drain.
- F. Provide exhaust fan model BI-CARM by CaptiveAire or approved equal.

#### 2.04 KITCHEN HOOD CONTROLS

- A. EMS Series control system by CaptiveAire.
- B. Controls shall be listed by ETL (UL 508A).
- C. The Energy Management System (EMS) shall be capable of saving energy during idle cooking periods. The EMS shall be designed to automatically reduce exhaust and supply airflow quantities while ensuring hood performance is maintained. The EMS shall use high and low speeds that shall be adjusted by variable frequency drives. A temperature switch in the exhaust duct shall control airflow set points and modulate the fans during cooking operation to maximize energy savings. A 100% airflow override button shall be supplied with an adjustable timer.
- D. The control interface shall include (1) fan switch, (1) hood light switch, (1) 100% airflow override push button and indicator lights. Indicator lights shall include a "power" light, a "fans on" light, and a "100% airflow override" light. The control interface shall be screen printed on stainless steel and be able to be installed on the face of the hood, face of the utility cabinet, or on the face of the control enclosure.
- E. The control enclosure shall be NEMA 1 rated and listed for installation inside of the exhaust hood utility cabinet. The control enclosure may be constructed of stainless steel or painted steel.

- F. Variable frequency drives shall allow full adjustment of high speed and low speed airflows for proper kitchen balance. Drives shall contain motor thermal overload protection and control inputs for up to 7 preset speeds. Acceleration and deceleration times shall be fully adjustable as well as fan speed at each of the 7 different inputs. Drives shall also allow for a minimum and maximum frequency set-point. Drives are capable of controlling up to 5 HP each.
- G. Adjustable temperature switch shall be mounted in the exhaust hood riser. One sensor shall be installed per exhaust fan. The temperature sensor shall be of the digital Resistance Temperature Detector (RTD) type. Temperature probe shall be constructed of Stainless Steel. Temperature switch shall be factory set at 130°F for 600°F cooking applications and 90°F for 400°F cooking applications. The temperature sensor shall be fully modulating and shall adjust on temperature changes. The riser mounted temperature sensor shall constantly monitor the exhaust air temperature and work in conjunction with a panel mounted temperature controller to modulate the system based on the temperature.
- H. The timer shall contain one instantaneous contact and one delayed contact. Time shall be adjustable from .05 seconds to 30 days. Timer is energized with the 100% Airflow Override button. When button is depressed, time starts and fans go to high speed. Upon timeout, fans return to low speed or speed dictated by temperature switch.
- I. The EMS shall be provided with a factory pre-wired panel capable of controlling up to four inverter duty motors. The control panel shall be factory pre-wired to shut down the supply fans in a fire condition.

#### 2.05 ROOF MOUNTED, BELT DRIVE, UPBLAST CENTRIFUGAL EXHAUST FAN

- A. Spun aluminum centrifugal roof exhausters are engineered to discharge grease laden vapors, fumes and other contaminants vertically away from the building.
- B. All models shall be ETL Listed and comply with UL705 (electrical) and UL762 Standards and CSA Std C22.2, No 113. Fan shall bear the AMCA certified ratings seal for sound and air performance.
- C. Housing: The fan windband shall be constructed of heavy gauge aluminum and shall be spun on an automatic lathe to provide consistent dimensions. Horizontal and vertical internal supports shall be used to securely fasten the windband to the discharge apron to provide rigidity for hinging and added strength to reduce shipping damage. The discharge apron shall have a rolled bead for added strength.
- D. Base: The base shall be constructed of galvanized steel for improved rigidity. Base corners shall be welded to provide strength and support for hinging and cleaning and to prevent leakage into the building.
- E. Wheel: The fan wheel shall be centrifugal backward inclined and non-overloading. Wheels shall be balanced in two planes and done in accordance with AMCA standard 204-96, Balance Quality and Vibration Levels for Fans. The wheel blades shall be aerodynamically designed to minimize turbulence, increase efficiency and reduce noise. The wheel blades shall be welded to the wheel inlet cone. In the event that balancing weights are required they shall be riveted to the blades or wheel. The wheel inlet shall overlap the fan base inlet for maximum performance and efficiency. The wheel shall be firmly attached to the motor shaft with two set screws.
- F. Motor and motor Compartment: Motors shall be heavy duty ball bearing type, mounted out of the airstream and furnished at the specified voltage, phase and enclosure. Motor mounting plate shall be constructed of heavy gauge galvanized steel and isolated from the fan structure with vibration isolators. The motor compartment shall be cooled by outside air drawn through an extruded aluminum conduit tube. To seal the conduit tube passage and prevent noise silicone

rubber grommets shall isolate the conduit tube from the fan housing. The motor compartment shall be of a two-piece construction with the top cap having quick release clips to provide quick and easy access to the motor compartment.

- G. **Shaft and Bearings:** Shafts shall be precision ground and polished. Heavy duty, pre-lubricated bearings shall be selected for a minimum (L50) life in excess of 200,000 hours of operation at maximum cataloged operating speed. They shall be designed for and individually tested specifically for use in air handling applications.
- H. **Belts and Drives:** Belts shall be oil and heat resistant, non-static type. Drives shall be cast type, precision machined and keyed and secured attached to the fan and motor shafts. Drives shall be sized for a minimum of 150% of the installed motor horsepower. Fan operating speed shall be factory set using adjustable pitch motor pulleys.
- I. **Grease Spout:** A grease spout made of aluminum tubing shall be welded to the fan housing. The weld shall be factory tested to ensure it will not leak.
- J. **Nylon Washers:** To provide a tight seal all fasteners in the fan housing shall be backed with nylon washers.
- K. **Safety Disconnect Switch:** A safety disconnect switch shall be standard on all NCA-FA units with open drip proof motors. Switches shall be installed in a NEMA3R enclosure and mounted to exterior of windband for easy access.
- L. **Provide exhaust fan model NCA-FA by CaptiveAire.**

#### 2.06 INLINE HYDRONIC HEAT MAKE UP AIR UNIT

- A. A Modular Packaged Heating, Cooling and ventilating unit(s), as indicated on the drawings shall be furnished. Hydronic Heating Make-up Air Unit(s) shall bear the ETL label. Orientation shall be horizontal, down or side discharge. Unit(s) shall be factory assembled, tested and shipped as a complete packaged assembly, for outdoor mounting, consisting of the following:
  - 1. Hot water piping
  - 2. Centrifugal blower (forward-curved double width/double inlet)
  - 3. Motor starter with thermal overload protection
  - 4. Motor and drive assembly
  - 5. Fuel burning and safety equipment
  - 6. Temperature control system
  - 7. Pre-piped and charged condenser(s)
- B. **Housing:**
  - 1. Unit housing shall be constructed of 20 gauge G-90 galvanized steel. The wall panels and roof panels shall be fabricated by forming double-standing, self-locking seams that require no additional support. The floor and wall panels shall be caulked air tight with a silicone caulk. All casing panels shall be attached with sheet metal screws or rivets, which can be removed to field service large components. The unit base shall be suitable for curb or flat mount. Housing construction should be suitable for outdoor installation.
  - 2. Internal ridged board 1" x 1.5" foil face installation shall be installed on roof, walls and base of casing.
- C. **Base:**
  - 1. The base shall be constructed of galvanized steel for improved rigidity. Base shall be structurally reinforced to accommodate the blower assembly and burner.
- D. **Blower:**

1. Blower(s) shall be forward-curved, centrifugal, Class I or II (depending on application requirements), double width, double inlet, constructed G-90 galvanized steel. Unit shall have a heavy-duty, solid-steel shaft. Wheels shall be balanced in two planes and done in accordance with AMCA standard 204-96, Balance Quality and Vibration Levels for Fans. The wheel blades shall be aerodynamically designed to minimize turbulence, increase efficiency and reduce noise. The wheel blades shall be securely attached to the wheel inlet ring. The wheel shall be firmly attached to the fan shaft with setscrews and keys. The blower assembly shall be isolated from the fan structure with vibration isolators.
  2. Blower capacity shall be as noted on the drawings.
  3. All blowers shall be tested and set at rated speed after being installed in the factory-assembled unit.
- E. Motor and Motor Compartment:
1. Motors shall be heavy-duty ball bearing type and furnished at the specified voltage, phase and enclosure. Motor mounting plate shall be constructed of heavy gauge galvanized steel and shall be designed to provide easy adjustment of the belt tension. Blower motor shall be Open Drip Proof.
- F. Shaft and Bearings:
1. Shafts shall be precision ground and polished. Heavy duty, pre-lubricated bearings shall be selected for a minimum (L50) life in excess of 200,000 hours of operation at maximum cataloged operating speed. They shall be designed for, and individually tested, specifically for use in air handling applications.
- G. Belts and Drives:
1. Belts shall be oil and heat resistant, non-static, grip-notch type. Drives shall be cast type, precision machined and keyed, and secured attached to the fan and motor shafts. Fan operating speed shall be factory set using adjustable pitch motor pulleys. All drives shall be a minimum of 2 grooves above 2 HP.
- H. Cooling Equipment:
1. All cooling equipment should conform to local code requirements. All gas manifold components shall be piped and wired at the factory.
  2. Components shall include:
    - a. 14 SEER minimum condenser
    - b. Thermal Expansion Valve
    - c. Filter/Dryer
    - d. Hard Start Kit for Condenser
    - e. Insulated Suction Lines
    - f. Multiple Stages where required
    - g. Pre Charged System
    - h. R-410A Refrigerant
- I. Safety Controls:
1. Safety controls shall include:
    - a. Motor starter with adjustable overloads
    - b. Air-flow safety switch
    - c. Electronic flame-safety relay
    - d. High-temperature limit switch
    - e. Two safety shutoff valves
    - f. Stainless Steel Burner
    - g. Adjustable burner ON/OFF inlet air duct-stat to shut off heat when inlet air is sufficiently warm to maintain space temperature
    - h. Non-Fused Disconnect
    - i. Casing insulation shall be 1" x 1.5" density with a foil face

- J. Accessories shall include, but not be limited to, the following:
1. Inlet Dampers: Manufacturer shall provide and install on unit, when possible, a two-position, motor-operated damper with internal end switch to energize the blower-starter circuit, when damper is 80% open. Blades shall be a maximum of 6" wide 16-gauge G-90 galvanized steel and shall be made to guarantee the absence of noticeable vibration at design air velocities. Damper blades are to be mounted on friction-free synthetic bearings. Damper edges shall have PVC coated polyester fabric mechanically locked into blade edge. Jamb seals used are flexible metal, compression type.
  2. Fresh-Air Inlet Hood/Filter Combination: Shall be constructed of G-90 galvanized steel with bird screen and (2") cleanable filters supported by internal slides mounted in the inlet face of the hood.
  3. Curb: 20" curb shall be constructed of 18-gauge aluminized steel as a completed welded assembly.
  4. Cooling Coil Section: Cooling coil section shall be field bolted directly to discharge of blower section. Coil section to be designed to fit onto common curb with main unit. Base of coil section to be constructed with double pitch stainless steel drain pan for coil, same as main unit. Casing and roof to be 20-gauge G-90 galvanized construction. Inside of section to be fully insulated with foil back insulation. DX or chilled water coil to meet scheduled requirements.
- K. Temperature Control Systems:
1. Discharge Temperature Control: Use for building exhaust-air replacement to maintain a constant discharge temperature of supply air. The burner flame modulates to compensate for outdoor temperatures. The optional manual SUMMER-OFF/WINTER selector switch and exhaust system interlock controls the heater-blower operation. Supplied with optional remote-control panel with temperature selector dial and SUMMER-OFF/WINTER selector.
- L. Wiring and Electrical:
1. Each condenser shall have a separate circuit enabling the supply fan motor to accept signals from a VFD without interfering with condenser operation.
  2. Unit(s) shall be complete with all items such as relays, starters, switches, safety controls, conduit and wire as previously mentioned, and as required for proper operation. All factory-mounted controls shall be factory pre-wired to the unit control panel. A safety disconnect switch shall be standard on all units and shall be sized according to the unit.
- M. Unit(s) shall be operated, tested and set at the factory using job-site conditions for electrical input. All operating and safety controls shall be tested and set at the factory. Adjustable or fixed sheaves shall be set for proper RPM at specified conditions. Gas-pressure regulator shall be set for specified burning rate at specified inlet pressure.
- N. The supplier shall furnish as built wiring connection and control-circuit diagrams, dimension sheets and a full description of the unit(s). Service manuals, showing service and maintenance requirements, shall be provided with each unit.
- O. Modular Packaged Cooling Unit with Hydronic Heat for 100% Outdoor Air applications shall be model DU85HFA by CaptiveAire.

## PART 3 - EXECUTION

### 3.01 INSTALLATION

- A. Install kitchen hood in locations shown on drawings.
- B. Installation to be in accordance with manufacturer's published recommendations as well as applicable sections of SMACNA manual and as specified above.

- C. Provide all steel structural support screws, bolts, nuts, inserts, and material required for installation of the Hood against the wall and for attaching exhaust and supply ducts to the Hood.
- D. Install complete fire suppression system for each hood.
- E. Provide all interlocks between suppression system, exhaust fans, and make-up air fans. Electrical contractor shall provide all relays between fire suppression system and fire alarm panel.

### 3.02 EXHAUST FANS

- A. Ensure enough clearances are around unit as recommended by the manufacturer and NFPA standard.
- B. Connect duct to fans to allow for straight and smooth airflow.
- C. Provide hard connection to duct work. The fan shall be connected to the ductwork by flanges securely bolted. Do not use flexible connectors. Connections shall be made as per NFPA 96. Use 1500 deg F rated gaskets.

### 3.03 INLINE MAKE UP AIR UNIT

- A. Ensure enough clearances are around unit as recommended by the manufacturer and NFPA standard.
- B. Avoid transitions and turns near the outlet of the fan.

### 3.04 TESTING

- A. Check work for satisfactory installation and performance.
- B. Check duct connections for leakage or condensation. Correct any deficiencies.
- C. Test the performance of kitchen exhaust system. Adjust dampers for proper direction of air flow. Conduct final test of hood and hood fire suppression system in the presence of the Engineer.

**END OF SECTION 233813**

## PART 1 - GENERAL

## 1.01 SCOPE

- A. The provisions of Section , Mechanical General specifications apply to all work in this Section.
- B. This Section includes all specifications relating to the furnishing and installing of Double Wall Positive Pressure Vent Systems.
  - 1. SUBMITTALS
    - a. Submit the following items in accordance with Section :
      - 1) Catalogue cuts / Diagrams / Descriptions
      - 2) Sizing calculations
      - 3) Installation Instructions
      - 4) Installation Drawings
      - 5) Copy of product warranties
- C. CODES AND APPLICABLE STANDARDS
  - 1. All products furnished under this Section shall conform to the requirements of The National Fuel Gas Code, ANSI Z223.1 / NFPA-54 where applicable and shall comply with and be listed to UL 1738, the
  - 2. U.S. Standard for Venting Systems for Gas –Burning Appliances, Category II, III and IV and ULC- S636, the Canadian Standard for Type BH gas vent systems. Components coming in direct contact with products of combustion shall carry the appropriate listing.
- D. WARRANTIES
  - 1. The Manufacturer shall warrant the Positive Pressure Vent System against defects in material and workmanship for a period of 15 years from the date of original installation. Any portion of the vent repaired or replaced under the warranty shall be warranted for the remainder of the original warranty period.

## PART 2 - PRODUCTS

## 2.01 POSITIVE PRESSURE VENT

- A. The vent shall be of double wall, factory built type, designed for use in conjunction with Category I, II, III or IV condensing or non-condensing gas fired appliances or as specified by the heating equipment manufacturer.
- B. Maximum continuous flue gas temperature shall not exceed 480°F (249°C).
- C. Vent shall be listed for a minimum positive pressure rating of 6" W.C. and shall have passed at 35" W.C.
- D. The vent system shall be continuous from the appliance's flue outlet to the vent termination outside the building. All system components shall be Intertek ETL and supplied from the same manufacturer.
- E. The vent shall be constructed with an inner and outer tube, where the annular space between the tubes is 2-inch and filled with glass fiber insulation.
  - 1. The inner tube (flue gas conduit) shall be constructed from AL29-4C® stainless steel. The AL29- 4C stainless steel will have a wall thickness of .015" for 3" through 9" diameter vents, .020" for 10" through 16" and .024" for 18" through 24" diameter vents.
  - 2. The outer tube (jacket) shall be constructed from 441 stainless steel with a minimum wall thickness of .015" for 3" through 9" diameter vents, .020" for 10" through 16" and .024" for 18" through 22" diameter vents.

3. All system components such as vent supports, roof or wall penetrations, terminations, appliance connectors and drain fittings require to install the vent system shall be Intertek ETL listed and provided by the vent manufacturer.
4. Vent layout shall be designed and installed in compliance with manufacturer's installation instructions, its listing, and all applicable local/ state codes.

## 2.02 APPROVED MANUFACTURERS

- A. Security Chimneys
- B. Jeremias
- C. Enervex

## PART 3 - EXECUTION

### 3.01 VENT SYSTEM LAYOUT

- A. The vent system shall be routed to maintain minimum clearance to combustibles as specified by the manufacturer.
- B. Vent installation shall conform to the manufacturer's installation instructions, its listing and state / local codes.
- C. The vent system and breechings shall be inspected and cleaned before the final connection to the appliances.
- D. MECHANICAL EQUIPMENT
  1. If dampers or fans are installed in conjunction of the vent system, such equipment shall be supported independently from the vent system. Protect the vent system from twisting or movement due to fan torque or vibration.

**END OF SECTION 235133**

## PART 1 – GENERAL

## 1.01 RELATED DOCUMENTS

- A. ANSI Z21.13 – American National Standard for Gas-Fired Low Pressure Steam and Hot Water Boilers
- B. ASME Section IV – Rules for Construction of Heating Boilers
- C. NFPA 54 – National Fuel Gas Code
- D. NFPA 70 – National Electrical Code
- E. ASME CSD-1 – Controls and Safety Devices for Automatically Fired Boilers
- F. AHRI, BTS-2000

## 1.02 SCOPE

- A. The work to be performed includes all equipment, labor and materials required to furnish and install ultra-high efficiency Riello Array Condensing Hydronic Boilers as described in this specification.

## 1.03 SUMMARY

- A. This section includes gas-fired, water-tube condensing stainless steel boilers for heating hot water.
- B. Related sections include, but are not limited to, the following:
  - 1. Section 23 51 33 "Prefabricated Chimneys"

## 1.04 SUBMITTALS

- A. Product Data: Include performance data, operating characteristics, furnished specialties, and accessories.
- B. Shop Drawings: For boilers, boiler trim, and accessories. Include dimensions, weights, loadings, required clearances, components, and location and size of each field connection.
- C. Wiring Diagrams: Schematic wiring diagram of boiler control system that shows all Components, interlocks, etc.
- D. Manufacturer's Quality-Control Test Reports: Indicate and interpret test results for compliance with performance requirements before shipping.
- E. Field Quality-Control Test Reports: Indicate and interpret test results for compliance with performance requirements before shipping.
- F. Manufacturer's Operation and Maintenance Manual: Include support details, connection requirements, start up instructions, cleaning procedures and replacement part list, maintenance and repair data, etc.
- G. Warranty: Submit manufacturer warranty and ensure that forms have been completed in owner's name and registered with manufacturer.

## 1.05 COORDINATION

- A. Equipment shall be handled, stored and installed in accordance with the manufacturer's instructions.

## 1.06 QUALITY ASSURANCE

- A. The equipment shall, as a minimum, be in strict compliance with the requirements of this specification, shall perform as specified and shall be the manufacturer's standard commercial product unless specified otherwise. Custom designed products intended to meet these listed specifications are unacceptable.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. ASME Compliance: Boilers shall bear ASME "H" stamp.
- D. CSD-1 Compliance: Control devices and control sequences according to requirements of CSD-1.
- E. ETL: Boiler shall be ETL certified.
- F. AHRI: Boiler shall be AHRI listed and certified.
- G. SCAQMD: Boiler shall be SCAQMD certified for relevant jurisdictions.
- H. ASHRAE 90.1: Boiler shall comply with the energy efficiency requirements of the latest edition of the ASHRAE 90.1 standard.
- I. The entire boiler system as installed shall conform to the manufacturer's instructions, applicable codes and associated National Board requirements.
- J. Manufacturer's Qualifications: The boiler manufacturer shall regularly engage in the production of welded stainless steel helical coil pressure vessels. The boiler manufacturer shall have a history and experience of producing water tube condensing hydronic boilers, and such water tube condensing boilers have been in satisfactory use and service for not less than twenty-five (25) years. Those companies without twenty-five years of experience in standard production condensing water tube boilers shall not be considered.
- K. Manufacturer's Failure Rate: The boiler manufacturer shall produce its own heat exchangers. Boiler manufacturer shall have a history of producing over 100,000 heat exchangers with a heat exchanger failure rate of no more than 0.01% during the warranty period.
- L. Manufacturer's Long-Term Viability: To ensure the long term viability of the manufacturer (necessary for replacement parts and warranty claims), the manufacturer shall have revenue in excess of US\$500 million annually, and must follow Sarbanes-Oxley accounting practices. Publicly traded or privately held companies shall be considered, but those companies not practicing Sarbanes-Oxley general accounting principles shall not be allowed.
- M. Quality Control: The manufacturer shall follow strict quality control standards. For the selected model boiler, it must be standard practice to live fire test 100% of all units produced. The manufacturer shall also validate test all components from outside vendors prior to utilizing such components in their standard production design.

- N. Buy American Act: Manufacturer shall meet the standards of the Buy American Act and its products shall be accepted for federal government installations.
- O. Environmental Responsibility: The manufacturer shall consider environmental responsibility as one of its fundamental core company policies. Manufacturer shall regard quality of performance, economy, and environmental responsibility as equal objectives. Manufacturer shall strictly adhere to all environmental laws and regulations. All packaging materials used shall be environmentally-friendly and recyclable.

#### 1.07 WARRANTY

- A. The boiler manufacturer shall warrant each boiler, including boiler, trim, boiler control system, and all related components and accessories against defects in workmanship and material for a period of 18 months from date of shipment or 12 months from date of installation, whichever comes first.
- B. The mesh burner head shall be warranted for a period of five (5) years from the date of manufacture when installed, operated, and maintained in accordance with the manufacturer's installation and operation manual.
- C. Heat exchanger shall be warranted for a period of ten (10) years non-prorated from date of manufacture. This 10 year non-prorated warranty includes coverage of damage caused by corrosion, leakage and materials when installed, operated, and maintained in accordance with the manufacturer's installation and operation manual. The heat exchanger shall be warranted against damage from thermal shock for the lifetime of the boiler when installed, operated, and maintained in accordance with the manufacturer's installation and operation manual.
- D. The manufacturer will replace, exchange or credit at their option, FOB factory, any parts per the terms above, provided the equipment has been installed, operated and maintained in accordance with the Installation, Operation & Maintenance Manual.

### PART 2 – PRODUCTS

#### 2.01 ACCEPTABLE MANUFACTURERS

- A. Riello
- B. Weil-McLain
- C. Laars
- D. The manufacturer must have factory employed service personnel. In addition, the boiler manufacturer must offer a factory service training program, where third-party/local service technicians may become 'factory-certified' trained in the start-up, operation, maintenance and service of the specified boiler model. The manufacturer must offer these training classes on a regular basis, with a minimum of at least six classes scheduled annually.
- E. The manufacturer shall be capable of meeting the performance and design specifications with their standard-production product offering. Custom designed or 'one-off' models shall not be considered.
- F. CONSTRUCTION
  - 1. Furnish and install factory fabricated, assembled and tested stainless steel (AISI 316L or 316Ti) water-tube condensing boiler. Each boiler shall be complete with all components

and accessories necessary for a complete and operable boiler as hereinafter specified. Each boiler shall be assembled with required wiring and piping as a self-contained unit.

2. Design: The boiler shall be a gas floor standing condensing boiler with multiple helical coil stainless steel heat exchangers for redundancy. To ensure redundancy boilers with single heat exchangers shall not be accepted.
3. Each module is fully independent and "stand alone" thus allowing boiler operation even if an adjacent module is turned off. The boiler shall be ETL certified as a condensing boiler. The boiler shall operate with natural gas or propane and have an ETL certified input rating as noted on the drawings, and shall be listed with AHRI and shall have a minimum thermal efficiency rating of 96.1% at rated input. The boiler shall be designed for a minimum of 20:1 turn down with constant CO<sub>2</sub> over the turn down range. Oxygen levels in exhaust shall remain below 5.9 percent throughout entire operating range. To ensure optimum efficiency, boilers operating above 5.9% excess oxygen at any firing rate shall not be allowed. The boiler will use a direct ignition system. The design shall provide quiet burner ignition and operation. The burner shall be pre-mix radial type and fire in a 360 degrees pattern.

## 2.02 CONSTRUCTION

### A. Casing

1. The frame shall be made of extruded aluminum alloy (EN AW-6060) and finished with a baked enamel powder coat (RAL7016). The panels shall be made of 18 and 22 gauge carbon steel and finished with a baked enamel powder coat (RAL9006).
2. The cabinet shall include hinged front door(s) and removable access panels for ease of service & maintenance. All removable panels shall include a keyed locking mechanism to prevent unauthorized access.
3. Panels shall include gasketed seals to reduce any potential air infiltration to/from the cabinet.
4. Cabinet shall include removable feet to reduce overall height during installation process.
5. The boiler shall have fork truck provisions for lifting from the sides or front.

### B. Heat Exchanger

1. The heat exchanger shall be a water tube design. Firetube heat exchangers shall not be accepted.
  - a. The heat exchanger shall be manufactured by the boiler manufacturer and consist of a dual helical coil design. Each helical coil shall consist of a single continuous tube, connected only at the ends. Coils constructed with multiple tubes or multiple connections to a common manifold shall not be accepted.
  - b. The heat exchanger shall have water-backed reservoirs on each end of the helical coils. Such reservoirs shall allow expansion and contraction of the coil with minimal mechanical stress.
  - c. The shape of the tubing shall be such to prevent pooling or collecting of condensation anywhere on the surface of the tubing.
  - d. The water tube shall have a minimum equivalent diameter of 1". To minimize the negative potential effects of internal scaling, heat exchangers with tube sizes less than 1" equivalent diameter shall not be accepted.
  - e. To reduce the possibility of internal scaling, the helical coil shall have a water velocity of at least 1.8 ft/s. Heat exchangers with a water velocity of less than 1 ft/s shall not be accepted.
  - f. The water tube (AISI 316L/316Ti) stainless steel heat exchangers shall be inspected and tested to ASME Section IV requirements and shall bear the ASME section IV seal of approval.
  - g. The heat exchangers shall have welded construction (no gaskets) consisting of two pipes working in parallel. Each coil shall have no more than two welded joints (one at each end). The heat exchanger shall be a fully condensing cylindrical counter-flow water tube design with AISI stainless steel tubes and headers.

- h. The heat exchanger shall consist of 316L or 316Ti stainless steel. 400 Series ferritic stainless steel, such as 439 stainless, shall not be acceptable due to its relatively low pitting resistance equivalent number and relatively low ultimate tensile strength. Due to their unproven/relatively short historical track record in condensing boilers, Duplex Alloy materials are also unacceptable.
- i. Carbon steels (including but not limited to SA-516 Gr.70 & SA-53 Gr.B) shall not be allowed anywhere potential condensing may occur (in both the firing and condensing chambers of the boiler), regardless of whether the potential condensing is a result of normal or abnormal operating conditions.
- j. Boilers using cast iron, cast aluminum or copper finned tube heat exchangers are unacceptable.
- k. The pressure vessel shall be fully insulated with high temperature insulation.
- l. The heating surface of each module shall be a minimum 27 SQ.FT/400,000BTU
- m. Each module shall be fully independent and "stand alone" with maximum working pressure of 80 psig (550 kPa).
- n. For ease of removal and replacement, the gas and water connections for the heat exchanger shall include O-ring compression seals. Threaded connections are unacceptable. The heat exchanger shall include a roller tray to slide the exchanger from the boiler cabinet. The individual modules shall be removable from the boiler while the other modules remain firing. The removal and replacement of such heat exchanger shall not require welding or hoisting equipment.
- o. The boiler shall be capable of operating with a minimum outlet water temperature of 68 °F.
- p. Each heat exchanger shall be accessible for visual inspection and cleaning of all internal fire side surfaces.

C. Combustion Chamber

- 1. The boiler shall have sealed combustion capability with an engineered gas/air chamber that ensures proper mixing for stable combustion at all firing rates.
- 2. The combustion chamber shall be a stainless steel construction and an integral part of the heat exchanger which shall be a cylindrical stainless steel counter-flow design.
- 3. A window view port shall be provided for visual inspection of the boiler combustion during firing.
- 4. The firing chamber shall consist of 316L or 316Ti stainless steel. Carbon steel firing chambers shall not be accepted due to the possibility of condensing in such area in the event of abnormal operating conditions.

D. Gas Train

- 1. Each boiler shall be provided with a factory assembled, piped and wired main gas train.
- 2. The main gas train shall consist a low gas pressure switch (manual reset) and a high gas pressure switch (manual reset) as required by code.
- 3. Each heat exchanger shall have its own zero governing gas valve to include dual safety shut off. Each heat exchanger shall also have its own manual gas shutoff valves; one upstream of the zero governing gas valve and one between the zero governing gas valve and the blower.
- 4. The boiler shall be LPG convertible.
- 5. The boiler shall operate on 4"-14" W.C. gas pressure when operating with natural gas and 8"-13" W.C. gas pressure when operating with propane gas.
- 6. The boiler shall need no component changes to operate at high altitude.
- 7. Each heat exchanger module shall have an air/gas ratio control gas valve. The air/gas ratio gas valve shall sense the pressure across the venturi and supply gas to premix with air. This operation shall provide seamless modulation through the entire range of firing rate.

E. Burner

1. The burner shall be a premix burner with a stainless steel knitted metal fiber construction. Ceramic or non-metallic burners are unacceptable.
  2. The burner shall be fully modulating; multi-staged burners with 'stepped' firing rates shall not be accepted.
  3. The burner shall operate with a 5:1 turn down on each module
  4. Alternate boilers claiming higher turndown for a given BTU input must provide references for at least five (5) installations of similar capacity operating at the claimed turndown for at least (3) complete heating seasons.
  5. The burner shall be direct-ignition and include a single self-grounding electrode designed for both ignition and flame monitoring. Separate ignition and flame rods are not acceptable. The use of glow plugs shall not be accepted in lieu of spark ignition.
  6. Flame monitoring shall be flame rod (rectification) type. The use of thermocouple, thermopile or other temperature based flame monitoring shall not be accepted due to their slow response times. Infra-red or ultraviolet sensors shall not be accepted due to their high replacement costs.
  7. Air/Gas ratio control gas valve shall operate on the principle of negative pressure and modulate to maintain combustion characteristics across the full operating range, which shall provide safe operation even in the case of blocked air intake.
  8. The air-gas ratio control valve shall be self-compensating. It shall automatically compensate for changes in draft, backpressure, or air density resulting from changes in ambient air temperature.
  9. The combustion air/gas mixing blower shall be a fully modulating variable speed design capable of matching the burner turndown.
  10. The exhaust venting shall be made of 316L stainless steel. Polypropylene plastic venting shall not be acceptable inside the boiler cabinet. The seams shall be positively secured to prevent leaks.
- F. Emissions
1. The burner shall not produce more than 0.04% of carbon monoxide (CO) at all firing rates.
  2. The burner shall be certified for Oxides of Nitrogen (NOx) of 9 ppm corrected to 3% oxygen.
  3. The burner shall operate with natural gas or propane at no more than 5.1% excess oxygen at all firing rates.
- G. Burner Control
1. Each heat exchanger module shall include its own individual burner control.
  2. Each burner control shall employ a direct spark igniter with 3 trials for ignition followed by lockout. The ignition control sequence shall include times for pre-purge, pre-ignition, ignition, and post-purge.
  3. Each individual burner control shall monitor the heat exchanger's inlet and outlet water temperatures as well as the flue gas temperature. The controller shall continuously monitor the temperature differential across the heat exchanger and shall automatically shutdown the module in the event the operating parameters fall outside of normal range.
  4. The control shall monitor the flue gas temperature of each individual heat exchanger and shutdown the module if the temperature is excessive.
  5. Each burner control shall include its own individual temperature controller. In the event of loss of communication with the system temperature sensor or other heat exchanger modules, each burner control will continue to operate independently in 'emergency mode' by maintaining its own individual temperature setpoint.
  6. Each burner control will monitor the water flow rate through each individual heat exchanger on a continuous real-time basis. The controller will shutdown the burner/heat exchanger if low flow conditions are detected. The flow monitoring shall be performed by a vortex flow meter which provides a continuous analog signal to the burner control. Mechanical flow switches or pressure switches are not acceptable means for monitoring the water flow rate.

7. Each burner control will have its own on/off switch to isolate the power if servicing is necessary.
8. The burner control shall have plug-type electrical connections for ease of servicing in the event replacement is necessary. The plugs shall be factory attached to the wires (without screw terminal connections) to prevent removal and potential mis-wiring by field service technicians.

#### H. Boiler Controls

1. The boiler shall have a touchscreen display located outside the front door panel and a service screen located inside the front door panel. The service screen shall be password protected to prevent unauthorized access to safety critical parameters.
2. The outer display shall consist of a 7" color touchscreen and shall provide full diagnostics including real time data logging, error history, and current operating status/data. Annunciation shall include a minimum of the last ten error codes. Operation data such as temperature and firing rates shall be annunciated with a graphic trend display.
3. The operator touchscreen and service display are intended for annunciation purposes and shall not be control devices. In the event of a touchscreen failure, the boiler shall continue to operate normally without any disruption.
4. The touchscreen shall display the amount of water flow going through each module.
5. The control shall automatically cascade the internal modules to main temperature control. Cascade sequencing shall be designed to optimize boiler efficiency by maintaining a maximum number of modules on, at minimal firing rates while maintaining overall temperature setpoint. Controller shall also automatically rotate the lead boiler and heat exchanger to evenly distribute 'wear-and-tear' of components.
6. The control shall be capable of lead/lag sequencing up to eight 8 boilers in "Cascade".
7. Operational data and error history from lag boilers may be accessed through a single touchscreen on the lead boiler.
8. The touchscreen shall display any error codes whether automatically reset or manually reset.
9. The controller shall include functions such as frost protection, system de-aeration, Domestic Hot Water (DHW) priority, and touchscreen shall annunciate when such functions are activated.
10. The boiler shall be provided as a standard with ModBus RS485 communication capabilities. The RS485 ModBus communication shall be capable of annunciating status and operating data from all boilers through the touchscreen or Building Automation System.
11. Optional protocol converter for ModBus Lonworks, N2, BacNet MS/TP or BacNet IP shall be available as an optional accessory.
12. The boiler control system shall be capable of accepting 0-10VDC remote external analog signal to control the temperature set point.
13. The control system shall be capable of resetting the set point based on outdoor air temperature with the optional outside air temperature sensor (included for field installation). Graphic display of the reset curve shall be available through the operator touchscreen.
14. The boiler safety control shall be furnished with common interlock controls for low gas pressure, high gas pressure, water pressure and secondary low water cut off.
15. Each heat exchanger module within the boiler shall be furnished with the following safety control devices: blocked flue, blocked condensate, water temperature high limit, exhaust stack temperature limit, water flow meter and primary low water cutoff. If any of these safety interlocks detect an abnormal condition, they will shutdown the individual burner/heat exchanger module while allowing the other heat exchanger modules to operate without disruption.
16. The control shall graphically show the firing rate of each module in the boiler and each boiler in the cascade.
17. The firmware of the boiler touchscreen shall have the capability to be upgraded via USB stick.

18. The boiler shall display service reminder notifications.

I. Boiler Trim

1. The boiler shall be equipped with an ASME certified pressure relief valve on each heat exchanger. The relief valve drains shall be manifolded internally within the boiler cabinet to a single outlet connection.
2. Each heat exchanger module shall be equipped with a dedicated water pump, flow meter, pressure and temperature gauge, condensate trap and drain valve.
3. Boiler shall include a system temperature sensor with thermowell
4. Boiler shall include an outdoor temperature sensor.

J. Venting

1. The boiler shall be designed for vertical or horizontal category IV venting, up to 100 equivalent feet of combined air intake and exhaust length.
2. Air may be taken from the room or ducted directly to the boiler using up to up to 100 equivalent feet of combined air intake and exhaust length. Boiler exhaust will be positive pressure type, and ductwork of exhaust venting must be sealed to prevent flue gases from entering boiler room.
3. The following category IV vent materials shall be utilized:
  - a. AL29-4C Stainless for all system applications
  - b. PP, polypropylene for all system applications
  - c. CPVC
  - d. The following guideline shall be used to determine the suitability of vent material:

| Vent Material               | Maximum Flue Temperature (°F)         |
|-----------------------------|---------------------------------------|
| <b>CPVC</b>                 | 194                                   |
| <b>Polypropylene</b>        | 230                                   |
| <b>AL29-4C</b>              | 300+, limited only by rating of seals |
| <b>316L Stainless Steel</b> | 300+, limited only by rating of seals |

4. The boiler shall be equipped with factory installed flue exhaust damper on each module, which allows common venting of Array boilers in cascade.
5. The venting shall be supported by mechanical means other than the boiler. The boiler connections shall not be used to support any structural load from the vent or air intake ductwork.
6. The vent may be horizontal or vertical, with such incline or other means to drain any condensation.

### PART 3 – EXECUTION

#### 3.01 INSTALLATIONS

- A. Installation shall be performed by the contractor in accordance with the requirements of the applicable codes and manufacturer's instructions. Contractor shall review the boiler and installation for compliance with requirements and/or issues that may affect boiler performance. Installation should not proceed until unsatisfactory conditions have been corrected.
- B. Equipment Mounting:
  1. Install boilers level on concrete base. Concrete base is specified in Division 23 Section "Common Work Results for HVAC", and concrete materials and installation requirements are specified in Division 03.

2. The boiler must be installed on a level housekeeping pad at least 3" above the floor for proper condensate drainage and boiler operation.
  3. Comply with requirements of vibration isolation devices.
- C. Install gas-fired boilers according to NFPA 54 and ANSI Z223.1
- D. Assemble and install boiler trim.
- E. Install electrical devices furnished with boiler but not specified to be factory mounted.
- F. Install control wiring to field-mounted electrical devices.
- G. Provide and complete gas and water piping installation as required by manufacturer for operation of system.
- H. Provide and install air intake and exhaust piping, size and type as recommended by the manufacturer.

### 3.02 CONNECTIONS

- A. Piping
1. Each boiler shall be provided with all necessary inlet and outlet connections. Refer to specific Boiler's specification sheet for connection sizes. Piping installation requirements are specified in other Division 23 Sections such as Section 23 20 00 "HVAC Piping and Pumps". Drawings indicate general arrangement of piping, fittings, and specialties.
  2. Check manufacturer's installation manual for clearance dimensions and install piping adjacent to boiler to allow service and maintenance.
  3. Provide and Install piping from equipment drain connection to nearest floor drain. Piping shall be at least full size of connection and adhere to proper codes for neutralization. Provide an isolation valve if required. Relief valve drain shall be a minimum of 2.5" NPT size.
  4. Condensate drain shall be a minimum of 1" size. Installer shall supply a means to neutralize the condensate water prior to draining it into the building's drainage piping.
  5. Connect piping to boilers, except safety relief valve connections, with flexible connectors of material suitable for service. Flexible connectors and their installation are specified in Division 23 Section "Common Work results for HVAC".
  6. The gas and water connections shall not be designed to support any external structural load from the piping system.
- B. Venting
1. Install air intake and exhaust venting system per manufacturer's recommendations and state/provincial codes.
  2. Components shall comply with requirements in Section 23 51 33 "Prefabricated Chimneys".
- C. Electrical Requirements
1. Voltage shall be 120 VAC, 1-phase, 60 Hz (Phase - Neutral).
  2. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems".
  3. Connect wiring according to Division 26 Section "Low Voltage Electrical Power Conductors and Cables".

### 3.03 DEMONSTRATION

- A. Engage a factory authorized service representative to train Owner's maintenance personnel as specified below:

1. Operate boiler, including accessories and controls, to demonstrate compliance with requirements.
2. Train Owner's maintenance personnel on procedures and schedules related to startup and shutdown, troubleshooting, servicing, and preventive maintenance.
3. Review data in the maintenance manuals. Refer to Division 1 Section "Contract Closeout" AND "Operation and Maintenance Data".
4. Schedule training with Owner with at least 7 days advance notice.

**END OF SECTION 235216**

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. A. Dual channel, self-contained gas detection system with integral carbon monoxide (CO) sensor, remote natural gas (methane - CH<sub>4</sub>) sensor, and remote horn strobe combo.

## 1.02 SUBMITTALS

- A. Submit product data on control panel and sensors including power requirements, wiring diagrams, dimension drawings, installation and operation manuals.

## PART 2 - PRODUCTS

## 2.01 DUAL CHANNEL SELF-CONTAINED GAS DETECTION SYSTEM

- A. Supply a dual channel, self-contained gas detection system for the monitoring of Carbon Monoxide (CO), housed in a rugged wall mount, water/dust tight ABS/PVC enclosure with hinged, secured door. The system shall have one integral electrochemical CO sensor with measurement range of 0 - 200 ppm CO in air and accommodate one remote mount, External catalytic sensor head in a Barrel type housing with measurement range of 0 - 50 % LEL in air (powered by the controller).
- B. The monitor shall provide an LED indicating light for power, low alarm, high alarm, and fault condition plus channel indication LEDs, one audible alarm and two SPDT dry contact alarm relays, each rated 5A at 240VAC. The system must be accurate enough to measure to government workplace hazardous gas exposure standards. The system shall also provide field adjustable time delays for "delays on make" and "delays on break" for each sensor to allow custom configuration of fan control by the system relays. The gas detector shall have CEF (Calibration Extending Firmware) that takes into account the aging of the CO and Combustible sensors so that less frequent calibrations are required in less-critical applications such as parking garages. Yearly sensor calibration maintenance can be achieved externally through the front door using magnetic access. The Monitor shall be UL tested for electrical safety.
- C. The controller shall provide a circuit test button to allow the user to confirm system operation and exhaust system control from the controller. The controller shall also provide a push-button to allow the user to override the system control and operate exhaust fan continuously for 15-minute segments to ventilate air in the space being monitored.
- D. System power shall be low voltage 24V (nominal) or line voltage 90-240 VAC nominal in the same enclosure. External transformer not required.

2.02 REMOTE NATURAL GAS (METHANE - CH<sub>4</sub>) SENSOR

- A. Supply a remote mount, catalytic sensor with measurement range of 0 - 50 % LEL Natural Gas (Methane - CH<sub>4</sub>). The External Sensor Head shall be housed in a "Barrel" type housing that fits into a standard electrical junction box (J-Box).
- B. The remote sensor Head shall connect to the controller with a 4 wire stranded shielded cable wire in conduit.

## 2.03 REMOTE HORN STROBE COMBO

- A. Provide remote horn strobe combo constructed of rainproof, high impact polycarbonate housing.

- B. Siren Output shall be over 100 dB.
- C. The remote mount Horn Strobe Combo shall operate on power supplied by the control panel.

#### 2.04 APPROVED MANUFACTURERS

- A. Critical Environment Technologies
- B. RKI Instruments
- C. Honeywell
- D. Bacararch

### PART 3 - EXECUTION

#### 3.01 INSTALLATION

- A. Install the dual-channel, self-contained gas detection system with integral carbon monoxide sensor in the boiler room as indicated in the Drawings. Exact location shall be coordinated in the field. Install at approximately 4 ft to 6 ft from the floor.
- B. Installation height for the natural gas (methane - CH<sub>4</sub>) sensor shall be on or near the ceiling, above the source of the natural gas (methane - CH<sub>4</sub>).
- C. Permissible area of monitoring coverage is 5,000 to 7,000 square feet per sensor for the Carbon Monoxide sensor and 2,500 to 3,500 square feet for the ESH-CCH<sub>4</sub> Catalytic methane sensor.
- D. Install the Remote Horn Strobe Combo at the entrance to the Boiler Room.
- E. The contractor shall provide all wiring, conduit and interconnection required for installation. All wiring shall be done in EMT.

#### 3.02 EXECUTION

- A. System relays shall be normally energized in non-gas-alarm state so they act in fail-safe operation.
- B. Upon detection of 25 ppm CO in air, or 10% LEL Methane (CH<sub>4</sub>) the system shall illuminate the Low alarm LED (amber) and the low gas alarm relay shall de-energize activating the exhaust system (if applicable).
- C. Upon detection of 100 ppm CO in air, or 20% LEL Methane (CH<sub>4</sub>) the system shall illuminate the High alarm LED (red), the system audible alarm shall be activated, and the high gas alarm relay shall de-energize and shut down the operation all integrated burners.
- D. The system audible alarm shall be capable of being silenced from the front panel push button.
- E. In the event of a sensor or system fail condition, the system audible alarm shall be activated and the fail LED on the front panel shall illuminate red and the relays shall de-energize, all integrated burners shall be shut down, and the ventilation system shall operate until the fail condition is resolved (if applicable).

**END OF SECTION 236002**

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. Dual-Channel, Self-Contained Gas Detection System.
- B. Remote Horn Strobe Combo.

## 1.02 SUBMITTALS

- A. Submit product data on control panel and sensors including power requirements, wiring diagrams, dimension drawings, installation and operation manuals.

## PART 2 - PRODUCTS

## 2.01 DUAL-CHANNEL, SELF-CONTAINED GAS DETECTION SYSTEM

- A. The dual-channel, self-contained gas detection system shall be suitable for the monitoring of Carbon Monoxide (gas engine exhaust) and Nitrogen Dioxide (diesel engine exhaust).
- B. Detection system enclosure shall be wall mounted, self-contained, of water/dust tight ABS/PVC construction with hinged, secured door and splash guard.
- C. The system shall have two integral electrochemical sensors, one Carbon Monoxide with measurement range of 0-200 ppm Carbon Monoxide in air and one Nitrogen Dioxide with measurement range of 0-10 ppm Nitrogen Dioxide in air. Area of monitoring coverage shall be up to 5,000 to 7,000 square feet per sensor.
- D. System power shall be low voltage 24V (nominal) or line voltage 90-240 VAC nominal in the same enclosure. External transformer not required.
- E. Any conduit entry into the system enclosure must utilize liquid tight conduit bus.
- F. The monitor shall provide an LED indicating light for power, low alarm, high alarm, and fault condition plus channel indication LEDs, one audible alarm and two SPDT dry contact alarm relays, each rated 5A at 240VAC. Monitor enclosure shall have a splash guard attached to the front sensor vent to prevent damage to internal sensors in wash down applications. The system must be accurate enough to measure to government workplace hazardous gas exposure standards. The system shall also provide field adjustable time delays for "delays on make" and "delays on break" for each sensor to allow custom configuration of fan control by the system relays. The gas detector shall have CEF (Calibration Extending Firmware) that takes into account the aging of the CO and NO2 sensors so that less frequent calibrations are required in less-critical applications such as parking garages. Yearly sensor calibration maintenance can be achieved externally through the front door using magnetic access. The Monitor shall be UL tested for electrical safety.
- G. The controller shall provide a circuit test button to allow the user to confirm system operation and exhaust fan control from the panel. The controller shall also provide a push-button to allow the user to override the system control and operate exhaust fans continuously for 15-minute segments to evacuate air from specific parts of the parking garage.

## 2.02 REMOTE HORN STROBE COMBO

- A. Provide remote horn strobe combo constructed in a water dust tight high impact polycarbonate housing for every 7,000 square feet of monitored area in high noise environments. Model RSH-24W

- B. Siren Output shall be over 100 dB.
- C. The remote mount Horn Strobe Combo shall operate on power supplied by the control panel.
- D. Provide Model RSH-24W Remote Horn Strobe Combo by Critical Environment Technologies or approved equal.

### 2.03 APPROVED MANUFACTURERS

- A. Critical Environment Technologies
- B. RKI Instruments
- C. Honeywell
- D. Bacararch

## PART 3 - EXECUTION

### 3.01 INSTALLATION

- A. Install the dual-channel gas detection system as indicated in the Drawings. Exact location shall be coordinated in the field. Installation height shall be 4 feet to 6 feet from the floor.
- B. Install the Remote Horn Strobe Combo as indicated in the Drawings.
- C. The contractor shall provide all wiring, conduit and interconnection required for installation. All wiring shall be done in EMT.

### 3.02 EXECUTION

- A. The system relays shall be normally energized in non-gas-alarm state so they act in fail-safe operation.
- B. The digital display shall indicate the real time gas value.
- C. Upon detection of 25 ppm Carbon Monoxide in air or 0.7 ppm Nitrogen Dioxide in air, the system shall illuminate the Low alarm LED (amber) and the low gas alarm relay shall de-energize activating the single-speed exhaust fans or low speed of two-speed exhaust fans and open the motorized damper(s) serving the make-up air intake louver(s).
- D. Upon detection of 100 ppm Carbon Monoxide in air, or 1.5 ppm Nitrogen Dioxide in air, the system shall illuminate the High alarm LED (red), the system audible alarm shall be activated and the high gas alarm relay shall de-energize activating high speed of two-speed exhaust fans or remote alarm devices. The audible alarm shall be able to be silenced from the front panel push button.
- E. In the event of a fail condition, the system audible alarm shall be activated and the fail LED on the front panel shall illuminate red.

**END OF SECTION 236002.22**

## PART 1 - GENERAL

## 1.01 DESCRIPTION OF WORK

- A. Outdoor roof curb mounted, electronically controlled, heating and cooling unit utilizing hermetic scroll compressors with crankcase heaters for cooling duty and gas combustion for heating duty. Units shall discharge supply air vertically or horizontally as shown on contract drawings.

## 1.02 RELATED SECTIONS

- A. Sheet Metal Work: Section 233113.
- B. Division 26.

## 1.03 SUBMITTALS

- A. Submit unit performance data including: capacity, nominal and operating performance.
- B. Submit Mechanical Specifications for unit and accessories describing construction, components and options.
- C. Submit drawings indicating overall dimensions as well as installation, operation and services clearances. Indicate lift points and recommendations and center of gravity. Indicate unit shipping, installation and operating weights including dimensions.
- D. Submit data on electrical requirements and connection points. Include recommended wire and fuse sizes or MCA, sequence of operation, safety and start-up instructions.
- E. Contract Closeout Submittals – Operation and Maintenance Data: Deliver 2 copies, covering the installed products, to the Director's Representative.

## 1.04 QUALITY ASSURANCE

- A. Regulatory Requirements:
  - 1. Unit shall be factory tested and the design, construction and installation shall be in accordance with the following: ARI Standard 210, NFPA, ASHRAE 15 (latest edition), Safety Code for Mechanical Refrigeration, and all State and Local codes or regulations having jurisdiction.
  - 2. Unit shall be listed by ETL as a total package.
  - 3. Rate cooling capacities in accordance with ARI Standard 210.
  - 4. Electrical components shall be UL listed.
  - 5. Gas heat equipped units shall be designed to conform with ANSI Standard Z21.47, Gas-Fired Central Furnaces.
  - 6. Roof curb shall be designed to NRCA criteria per Bulletin B-1986.
  - 7. Insulation and adhesive shall meet NFPA 90A requirements for flame spread and smoke generation.

## 1.05 PRODUCT DELIVERY

- A. Comply with manufacturer's installation instructions for rigging, unloading, and transporting units.
- B. Protect units from physical damage. Leave factory shipping covers in place until installation.
- C. Units to be secured via base rail tie-down locations.

- D. Deliver each unit as an integral factory packaged assembly.

#### 1.06 MAINTENANCE

- A. Maintenance Service: A fully equipped authorized service organization capable of guaranteeing response within 8 hours to service calls shall be available 24 hours a day, 7 days a week to service the completed Work.
- B. Extra Materials: Provide with each unit, four spare sets of air filters. Suitable box and label spare filters as to their usage.

#### 1.07 WARRANTY

- A. Provide parts warranty extending either 12-months from date of unit start-up or a maximum of 18-months from unit ship date.
- B. Provide twenty-five year heat exchanger limited warranty from unit ship date.
- C. 5 year compressor warranty for units 25 tons and below.

### PART 2 - PRODUCTS

#### 2.01 EQUIPMENT

- A. General Specification
  - 1. Unit(s) furnished and installed shall be packaged outdoor air unit(s) as scheduled on contract documents and described in these specifications. Unit(s) shall be designed for dehumidification, cooling and/or heating of 100% Outdoor Air. For dehumidification and cooling modes the evaporator temperature shall be monitored, reported at unit controller. Compressor controls shall modulate capacity to maintain evaporator leaving set point for dehumidification mode. Hot Gas Bypass shall not be used to control compressor capacity. Compressor Hot Gas Reheat (HGRH) shall be factory installed. To prevent rehydration of evaporator condensate the reheat coil face shall be located a minimum of 6" downstream from the leaving face of the evaporator coil. Heating system shall include modulating controls. Compressor on-off only or primary heating on-off only controls shall not be acceptable control strategies.
  - 2. Unit(s) shall have labels, decals, and/or tags to aid in the service of the unit and indicate caution areas.
- B. Cabinet
  - 1. Cabinet panels: 2" double-wall foamed panel with thermal break construction throughout the indoor section of unit to provide nonporous, cleanable interior surfaces. All interior seams exposed to airflow shall be sealed.
  - 2. Insulation: 2" polyurethane foam metal encapsulated with no exposed edges. Initial R value of 6.6 per inch of thickness.
  - 3. Cabinet base shall be double wall construction designed to prevent trapping or ponding of water within the unit base. Cabinet base pan shall be insulated with 2" thick polyurethane foam. Foam insulation shall be fully enclosed with galvanized steel insulation cover. Insulation shall not be applied to underside of unit base.
  - 4. Cabinet Base Rails: Side and end base rails shall include openings for forklift and tie-down access. To protect unit base from fork damage side rails shall include removable heavy gauge fork pockets.
  - 5. Shipping anchors attach to and/or through unit base rails. Straps over unit shall not be used to secure unit for shipping.

6. Cabinet material interior and base rails: shall be G-90 zinc-coated galvanized steel. Material gauge shall be a minimum of 14-gauge for base rails, 16-gauge for structural members and 22-gauge for access doors and cabinet panels.
  7. Exterior Corrosion Protection: Exterior cabinet panels shall be a base coat of G-90 galvanized steel with both exterior and interior surfaces cleaned, phosphatized and finished with a weather-resistant baked enamel finish. Unit's surface shall be in compliance with ASTM B45 salt spray testing at a minimum of 627 hour duration.
  8. Cabinet construction shall provide hinged panels providing easy access for all parts requiring routine service.
  9. Cabinet top cover shall be one piece construction or where seams exist, it shall be double-hemmed and gasket-sealed.
  10. Hinged Access Panels: Water- and air-tight hinged access panels shall provide access to all areas requiring routine service including air filters, heating section, electrical and control cabinet sections, optional ERV and power exhaust fan section, supply air fan section, evaporator and reheat coil sections. Insulated doors shall be constructed to allow the access door to open in either direction or be removed without removal of a hinge.
    - a. Hold-open devices shall be factory installed on all hinged access doors. Chains shall not be used as hold-open devices.
    - b. Latches with locking hasp or tool operated closure devices shall be factory installed on all hinged access panels.
  11. Drain Pan material shall be Type 304 Stainless steel drain and constructed to slope in two directions to ensure positive drainage with corners exposed to standing water and drain fittings welded liquid tight to prevent leaks. Pan shall have a minimum depth of 2". Base of drain pan shall be insulated with 1" thick foam insulation minimum.
  12. Provide openings either on side of unit or thru the base for power, control and gas connections.
  13. Cabinet shall include optional interior liner constructed of Type 304 stainless steel with sealed seams.
  14. Air inlet hood shall be factory installed and shall not require field assembly. Hood shall include 2" thick removable aluminum mesh mist eliminators sized for a velocity not to exceed 500 FPM at maximum unit rated airflow. Service access shall be hinged and held in place with thumb latches that shall not require tools for service access.
  15. Unit shall be equipped with a 6" filter rack upstream of the evaporator. Frame shall be field-adjustable to match any filter combination specified in the following section.
- C. Air Filters
1. Unit inlet hood shall include 2" thick aluminum mesh removable mist eliminators with hinged access cover. Inlet velocity shall not exceed 500 FPM.
  2. Evaporator Inlet shall include a full complement of pleated media air filters. Filters shall be:
    - a. 2" deep MERV 13
- D. Dampers
1. Unit shall include a motor operated outdoor air damper constructed of galvanized steel.
  2. Damper blades shall be v-groove design with rubber edge seals designed not to exceed a 4 CFM/SQ FT leakage rate exceeding ASHRAE 90.1 damper leakage requirements.
  3. Damper actuator shall be factory mounted and wired sealed spring return and either two-position or fully modulating.
  4. Dampers air velocity shall not exceed 2000 fpm.
- E. Compressors
1. All units shall have direct-drive, scroll type compressors.
  2. Optional Digital Scroll Compressor
    - a. Circuit One and Circuit Two
  3. Motor shall be suction gas-cooled and shall have a voltage utilization range of plus or minus 10 percent of unit nameplate voltage.

4. Internal overloads shall be provided with the scroll compressors.
  5. Each compressor shall have a crankcase heater or equivalent to minimize the amount of liquid refrigerant present in the oil sump during off cycles.
  6. Each compressor shall be mounted on rubber vibration isolators, to reduce the transmission of noise.
  7. Provide each unit with hermetically sealed refrigerant circuit(s) factory-supplied completely piped with liquid line filter-drier, liquid line charging port, suction and liquid line pressure ports, sight glass, and thermal expansion valve.
  8. Provide each circuit with automatic reset high and low pressure and high temperature switches for safety control.
- F. Coils
1. Evaporator, Condenser and Hot Gas Reheat coils shall be constructed with copper tubes mechanically bonded to configured aluminum plate fins.
  2. Coils shall be factory leak tested in accordance ANSI/ASHRAE 15-1992 at a minimum pressure of 500 PSIG.
  3. The condenser coil shall have a fin designed for ease of cleaning.
  4. Evaporator coil shall include (six / four) rows of cooling interlaced for superior sensible and latent cooling with a maximum of 14 FPI for ease of cleaning.
  5. Reheat coil shall be fully integrated into the supply airstream and be capable of delivering design supply air temperature.
  6. To prevent re-hydration of condensate from evaporator coil, the evaporator coil face and the hot gas reheat coil face shall be separated by a minimum of six inches.
  7. Condenser coil hail guards shall be factory installed.
- G. Condenser Section
1. Outdoor Fans: Shall be direct drive vertical discharge design with low-noise corrosion resistant glass reinforced polypropylene props, powder coated wire discharge guards and electro-plated motor mounting brackets.
  2. Fans shall be statically and dynamically balanced.
- H. Compressor Capacity Control
1. (Mechanical Control: shall be equipped with Refrigerant Capacity Control (RCC) on the lead circuit to modulate compressor capacity during Dehumidification or Cooling modes to prevent evaporator frosting or freezing. RCC shall be (standard mechanical). Hot gas by pass shall not be an acceptable compressor capacity control strategy. The RCC setpoint is factory set, and field adjustable, to maintain desired suction pressure and compressor discharge pressure.
    - a. Electronic Control: (Requires Digital Scroll Compressor or Variable Speed Compressor be selected in compressor section of this specification.) Compressor output capacity shall be controlled by the Main Control Module. (refer to unit control and sequence sections of this specification)
- I. Fans and Motors
1. Indoor fan shall be direct drive plenum fan, factory installed and wired to on-board Variable Frequency Drive and shall be equipped with slide out service access.
  2. All fan motors shall be premium efficiency ODP and meet the U.S. Energy Policy Act of 2005/10 (EPACT).
  3. All fan motors shall either be permanently lubricated and/ or have internal thermal overload protection.
  4. Outdoor fans shall be direct drive with premium efficiency motors, statically and dynamically balanced, draw through in the vertical discharge position.
  5. Provide shafts constructed of solid hot rolled steel, ground and polished, with key-way, and protectively coated with lubricating oil.
- J. Modulating Indirect Gas Fired Heating Systems

1. Completely assembled and factory installed heating system shall be located in the primary heating position located beneath the indoor fan assembly and be integral to unit and approved for use downstream from refrigerant cooling coils in units mounted outdoors. Threaded gas connection shall terminate at field provided manual shut-off valve. Provide capability for sidewall gas piping.
  2. Heaters shall include high turn-down burners firing into individual stainless steel tubular heat exchangers. Heat exchangers shall be constructed of type 439 stainless steel and be a high efficiency dimpled tubular design capable of draining internal condensate. Units with multiple heaters shall include one fully modulating high turndown heater with additional on-off heater sections. Total heater turndown shall be based on heater gas input capacity 5:1 when <150 MBH or a minimum of 10:1 when >150 MBH.
  3. Heater outdoor air inlet shall be hooded and include internal baffle system to prevent rain blow thru. To prevent recirculation of flue gas and to prevent flue gas condensate from draining onto and obstructing the heater air inlet the inlet shall be hooded and shall be located a minimum of 8" beneath the flue outlet. Inlet hood shall include bird screen.
  4. Heater flue outlet(s) shall include hooded outlet with wire cloth all constructed of Type 430 stainless steel. Hooded outlet shall be sealed to prevent flue gas recirculation.
  5. Gas Burner Safety Controls: Provide safety controls for the proving of combustion air prior to ignition, continuous air proving monitoring following ignition and continuous electronic flame supervision.
  6. Unit controls shall monitor heat output and shall discontinue all heating attempts and or unit operation in the event the heating section fails to ignite or fails to maintain programmed supply air temperature/time.
  7. Inducer fan shall be direct drive high pressure centrifugal type with two speeds and shall include built- in thermal overload protection.
  8. Limit controls: High temperature automatic reset limits shall be located on blower wall and in indoor fan chamber to shut off gas flow in the event of excessive temperatures resulting from restricted indoor airflow, or loss of indoor airflow.
  9. Flame roll-out safeties shall provide continuous monitoring of proper burner operation.
- K. Electrical Ratings and Connections
1. All high voltage power components such as fuses, switches and contactors shall include a service personnel protection barrier or shall be a listed as touch-safe design.
  2. Field wiring access to be provided thru unit base into isolated enclosure with removable cover.
  3. Power wiring to be single point connection.
  4. Wiring internal to the unit shall be colored and numbered for identification.
  5. Unit shall be factory wired to field wiring terminal block mounted in isolated enclosure.
  6. Factory wired main power disconnect and overcurrent device shall be rated for total unit connected power
  7. Unit SCCR rating shall be a minimum of 5kA
  8. Optional unit SCCR rating shall be a minimum of 65kA
  9. Factory wired Voltage/Phase monitor shall be included as standard. In the event of any of the following, the units will be shut down and a fault code will be stored in the monitor for the most recent 25 faults. Upon correction of the fault condition the unit will reset and restart automatically.
    - a. Phase Unbalance Protection: Factory set 2%
    - b. Over/Under/Brown Out Voltage Protection: +/-10% of nameplate voltage
    - c. Phase Loss/Reversal
  10. Factory to mount and wire optional 120 volt convenience outlet. Field wiring of convenience outlet not acceptable.
  11. All low voltage field wiring connections shall be made at factory installed low voltage terminal strip.

L. Unit Controls

1. Main Unit Controller (MCM) shall be a microprocessor based controller with resident control logic. Controller program logic shall include
    - a. Include single program with field selectable
      - 1) Discharge Air control with unit conditioning modes enabled based on outdoor air conditions and controlled to maintain discharge air setpoints.
      - 2) Space control with unit conditioning modes enabled and controlled to maintain space setpoints.
    - b. Multi-Zone Variable Air Volume Control (MZVAV) with unit conditioning modes enabled based on discharge air temperature setpoint and supply fan controlled within design minimum and maximum performance ratings to maintain a duct pressure setpoint monitored by the factory furnished, field installed duct pressure sensor.
  2. MCM shall:
    - a. Prevent simultaneous operation of any conditioning modes.
    - b. Accept separate setpoints for Occupied and Unoccupied states.
    - c. Call for Dehumidification based on dew point setpoints. When no call for Dehumidification is present MCM shall control calls for Cooling, Heating and Economizer modes based on sensible or enthalpy temperature setpoints. MCM shall have onboard clock and scheduling function for occupancy.
    - d. Include non-volatile memory to retain all programmed values without the use of a battery, in the event of a power failure.
    - e. Enable HGRH dehumidification and cooling modes and control modulation to maintain (discharge air temperature / space temperature).
    - f. Unit shall include minimum discharge air control.
  3. System Sensors shall include: Factory installed and wired Outdoor Air Temperature, Outdoor Air Humidity and Evaporator Leaving Air Temperature and factory furnished, field installed Discharge Air Temperature.
    - a. Space Control or Single Zone VAV: Factory shall furnish Space Temperature and Space Humidity sensor for field installation and connection to the unit
    - b. Economizer Option includes Return Air Temperature and Humidity sensor
    - c. ERV Option includes exhaust air leaving temperature sensor
    - d. Powered Exhaust with Economizer includes duct pressure sensor to be field installed.
  4. System controls shall include:
    - a. Anti-cycle timing.
    - b. Minimum compressor run/off-times.
  5. Optional Smoke Detectors to sense (Return Air / Discharge Air / Return and Discharge Air) stream(s) shall be factory installed and wired.
- M. Power Exhaust
1. Provide a factory installed power exhaust assembly that shall be designed to ventilate return air to atmosphere.
  2. Plenum mounted direct drive airfoil design exhaust wheel material shall be heavy gauge aluminum, welded construction and rated for up to Class III speed/pressure performance. Factory install and wire fan motor to on-board Variable Frequency Drive. Belt-drive and/or forward curve plenums fans shall not be used.
  3. Exhaust to discharge through powered isolation dampers located on each side of unit cabinet.
- N. Outdoor Air Section Energy Recovery
1. The rotor media shall be made of aluminum, formed into a honeycomb structure to minimize pressure loss and avoid plugging. Paper, plastic or fibrous media are not acceptable. The rotor media must be coated to resist corrosion. All surfaces must be coated with a non-migrating desiccant layer to insure that adequate latent capacity is provided. The desiccant coating must be firmly bonded to the aluminum surface and will not be dislodged when challenged with high velocity air up to 5000 feet per minute. Products that lose desiccant when served with high velocity air are not acceptable. The

- cassette must be a slide out design for serviceability. The media shall be cleanable with low temperature steam, hot water or light detergent without degrading the latent recovery.
2. Sensible and latent recovery efficiencies must be clearly documented through a testing program conducted in accordance with ASHRAE Standard 84 and AHRI 1060. The testing must have been conducted by a qualified independent organization. The performance test reports must be provided for engineering review as part of the submittals for this project.
  3. The rotor design shall ensure laminar airflow to minimize parasitic pressure loss and to optimize the operating efficiency of the system fans. The pressure loss across the media shall be no greater than the scheduled pressure loss values. The energy wheel shall operate effectively up to 180 degrees F.
  4. The rotor media shall be permanent, with an anticipated life of 20 years. It must be tested in accordance with ASTM Standard E-84 and provide smoke and flame spread ratings of less than 25 and 50 as required by NFPA 90A and UL 1995. A copy of the ASTM E-84 test report confirming the method of test and results shall be provided with the submittal. Heat recovery wheels incorporating "throw-away" media and tested to UL900 for Class 2 filters are not acceptable.
  5. The wheel manufacturer must have been producing energy recovery wheels for a minimum of ten years.
  6. The rotor shall be supplied with perimeter brush seals and face contact seals to minimize air leakage and wheel bypass.
  7. The rotor media shall be supported by a structural aluminum hub and aluminum reinforcing spoke system. The rotor bearings must be greaseable and provide L10 life in excess of 20 years.
  8. The cassette framework shall be made of galvanized steel to prevent corrosion.
  9. The rotor must be driven by long-life polyurethane/polyester composite link belt system. The rotor/cassette shall be designed so that belt can be removed or serviced without the removal of the bearing. A 3 phase A/C gear motor shall be utilized to accommodate variable speed applications.
- O. Roof Curb
1. Contractor shall provide factory supplied 14" tall roof curb, 18 gauge perimeter made of zinc coated steel with supply and return air gasketing and wood nailer strips. Ship knocked down and provided with instructions for easy assembly.
  2. Curb shall be manufactured in accordance with the National Roofing Contractors Association guidelines
- P. Approved Manufacturers:
1. LG
  2. Trane
  3. Carrier
  4. York
  5. Approved equal.

### PART 3 - EXECUTION

#### 3.01 INSTALLATION

- A. Roof Curbs:
1. Install curbs in complete accordance with the manufacturer's printed instructions, and as indicated.
  2. Deliver roof curbs to construction contractor for installation.
- B. Air Conditioners:
1. Install equipment on roof curbs in complete accordance with the manufacturers' printed instructions, and as indicated.

2. Provide all piping, electrical and ductwork connections to equipment through roof curb openings under units.

### 3.02 FIELD QUALITY CONTROL

- A. Preliminary Requirements: Employ the services of a Company Field Advisor of the rooftop air conditioner manufacturer for the following:
  1. Inspect air conditioner installations prior to start-up.
  2. Supervise initial start-up of machine.
  3. Instruction of State Personnel.
  4. Service.
- B. Pre-Start-Up, Start-Up and Instruction: Upon completion of the installation of the air conditioner, to the satisfaction of the Company Field Advisor, start-up and preliminary testing shall be accomplished under the Company Field Advisor's supervision. When all necessary adjustments have been made and air conditioner is properly operating, the Company Field Advisor shall instruct State Personnel in the operation and maintenance of the air conditioner and accessories.

**END OF SECTION 237433**

## PART 1 - GENERAL

## 1.01 DESCRIPTION OF WORK

- A. Unit(s) furnished and installed shall be packaged rooftop(s) as scheduled on contract documents and these specifications. Cooling capacity ratings shall be based on AHRI Standards. Unit(s) shall consist of insulated weather-tight casing with compressor(s), air-cooled condenser coil, condenser fans, evaporator coil, return-air filters, supply motors and unit controls.

## 1.02 RELATED SECTIONS

- A. Section 233113 - Sheet Metal Work.
- B. Division 26.

## 1.03 SUBMITTALS

- A. Submit unit performance data including: capacity, nominal and operating performance.
- B. Submit Mechanical Specifications for unit and accessories describing construction, components and options.
- C. Submit shop drawings indicating overall dimensions as well as installation, operation and services clearances. Indicate lift points and recommendations and center of gravity. Indicate unit shipping, installation and operating weights including dimensions.
- D. Submit data on electrical requirements and connection points. Include recommended wire and fuse sizes or MCA, sequence of operation, safety and start-up instructions.
- E. Contract Closeout Submittals - Operation and Maintenance Data: Deliver 2 copies, covering the installed products, to the Director's Representative.

## 1.04 QUALITY ASSURANCE

- A. Regulatory Requirements:
  - 1. Unit shall be factory tested and the design, construction and installation shall be in accordance with the following: ARI Standard 210, NFPA, UL, ASHRAE 15, Safety Code for Mechanical Refrigeration, and all State and Local codes or regulations having jurisdiction.
  - 2. Unit shall be listed by ETL as a total package.
  - 3. Unit shall be rated in accordance with AHRI Standard 210/240 and 340/360.
  - 4. Electrical components shall be UL listed.
  - 5. Insulation and adhesive shall meet NFPA 90A requirements for flame spread and smoke generation.
  - 6. Unit shall meet ASHRAE 90.1 minimum efficiency requirements.
  - 7. 3 phase units shall be Energy Star certified.

## 1.05 PRODUCT DELIVERY

- A. Deliver each unit as an integral factory packaged assembly.
- B. Unit shall be stored and handled per manufacturer's recommendations.
- C. Unit shall only be stored or positioned in the upright position.

## 1.06 WARRANTY

- A. Provide parts warranty (excluding refrigerant) for one year from start-up or 18 months from shipment, whichever occurs first.
- B. Provide five-year extended warranty for compressors.
- C. Provide ten-year heat exchanger limited warranty.

## 1.07 MAINTENANCE

- A. All work on units shall be accomplished by OEM factory trained and authorized servicing technicians.
- B. Provide quarterly, annual and bi-annual maintenance in compliance with or exceeding ASHRAE Standards
- C. Include maintenance items as outlined in manufacturer's operating and maintenance data.
- D. Submit copies of service call work order or report and include description of work performed.
- E. Extra Materials: Provide with each unit, four spare sets of air filters. Suitable box and label spare filters as to their usage.

## PART 2 - PRODUCTS

## 2.01 ELECTRIC COOLING PACKAGED ROOFTOP UNITS

- A. General
  - 1. Unit(s) shall be 100% factory run tested and fully charged with R-410A.
  - 2. Unit(s) shall have labels, decals, and/or tags to aid in the service of the unit and indicate caution areas.
  - 3. Units shall be convertible airflow design as manufactured.
  - 4. Wiring internal to the unit shall be colored and numbered for identification.
  - 5. All units shall be manufactured in a facility certified to ISO 9001 standards and the cooling performance shall be rated in accordance with DOE and AHRI test procedures. Units shall be CSA listed, classified to ANSI Z21.47 standards, UL 1995/CAN/CSA No. 236-M90 conditions.
- B. Unit casing
  - 1. Cabinet: Galvanized steel, phosphatized, and finished with a pre-applied baked polyurethane enamel. Structural members with access doors and removable panels shall be a minimum 22 gauge.
  - 2. Unit's cabinet surface shall be tested 750 hours in salt spray test in compliance with ASTM -B117.
  - 3. Cabinet construction shall allow for all service/ maintenance from one side of the unit.
  - 4. Cabinet top cover shall be one piece construction or where seams exist, it shall be double-hemmed and gasket-sealed.
  - 5. Access Panels: "Large" size, water- and air-tight panels with handles shall provide access to filters, heating section, return air fan section, supply air fan section, evaporator coil section, and unit control section.
  - 6. Unit's base pan shall have a raised 1 1/8 inch high lip around the supply and return openings for water integrity.

7. Condensate pan shall be internally sloped and conform to ASHRAE 62-89 self- draining standards. Condensate connection shall be a minimum of 1" I.D. female and be a ridged mount connection.
  8. Provide minimum ½ inch foil faced, fire retardant permanent, odorless glass fiber material. All edges must be captured so that there is no insulation exposed in the air stream.
  9. The base pan shall have no penetrations within the perimeter of the curb other than the raised 1 1/8 inch high down flow supply/return openings to provide and added water integrity precaution.
  10. Provide openings either on side of unit or through the base for power, control, condensate, and gas connections.
  11. The base of the unit shall have 3 sides for forklift provisions. The base of the units shall have rigging/lifting holes for crane maneuvering.
- C. Air Filters
1. Air Filters: Factory installed filters shall mount integral within the unit and shall be accessible through access panels. Two-inch thick glass fiber disposable media filters shall be provided. Unit filter track shall be designed to accommodate either 2" or 4" filters.
  2. Two inch MERV 8 and MERV 13 media filters shall be available option.
- D. Fans and Motors
1. Provide evaporator fan section with forward curved, double width, double inlet, centrifugal type fan.
  2. Provide self-aligning, grease lubricated, ball or sleeve bearings with permanent lubrication fittings.
  3. All 10 tons, 6 ton (074), 7½ to 8½ ton high efficiency units shall be equipped with a direct drive plenum fan design. Plenum fan design shall include a backward-curved fan wheel along with an external rotor direct drive variable speed indoor motor. All plenum fan designs will have a variable speed adjustment potentiometer located in the control box.
  4. Outdoor and Indoor Fans shall be permanently lubricated and have internal thermal overload protection.
  5. Outdoor fans shall be direct drive, statically and dynamically balanced, draw through in the vertical discharge position.
  6. Provide shafts constructed of solid hot rolled steel, ground and polished, with key-way, and protectively coated with lubricating oil.
  7. Fan performance measuring ports shall be provided on the outside of the cabinet to allow accurate air measurements of evaporator fan performance without removing panels or creating air by-pass of the coils.
- E. Hot Water Heating Coil
1. Hot Water Coil: Extended surface type, utilizing aluminum fins and DLP-type copper tubes with cast bronze supply and return connections. Coils shall be of serpentine design with horizontal tubes, vertical fins, and center supply and return connections. All tube bends shall be brazed. Tubes shall be mechanically bonded to the collars of the fins. Coils shall be capable of operating at hot water pressures and temperatures of 150 psig and 375 deg F.
- F. Evaporator Coil & Section
1. Provide configured aluminum fin surface mechanically bonded to copper tubing coil.
  2. Provide an independent expansion device for each refrigeration circuit. Factory pressure tested at 600 psig and leak tested at 465 psig.
  3. Provide a removable, reversible, cleanable double sloped drain pan for base of evaporator coil constructed of PVC.
  4. Provide clogged Filter Switch. The indication will be registered with either a zone sensor with status indication lights or an integrated comfort system. This option is available for microprocessor controlled units.

5. Provide Fan Failure Switch. The indication will be registered with either a zone sensor with status indication lights or an integrated comfort system. This option is available for microprocessor controlled units.
6. Provide Discharge Air Sensing Tube
7. Provide Novar Return Air Sensor
8. Provide Novar Zone Temp sensor
9. Provide a removable, reversible, cleanable double sloped drain pan for base of evaporator coil constructed of Stainless Steel
10. Unit shall include a condensate overflow switch to shut the unit down in the event that a clogged condensate drain line prevents proper condensate removal from the unit.

G. Condenser Section

1. Provide vertical discharge, direct drive fans with aluminum blades. Fans shall be statically balanced. Motors shall be permanently lubricated, with integral thermal overload protection in a weather tight casing.
  - a. Micro channel coil has flat streamlined tubes with small ports, and metallurgical tube to fin bond. Microchannel coil has better heat transfer performance. Microchannel condenser coil can reduce system refrigerant charge by up to 50% because of smaller internal volume, which reduces the unit weight. These all aluminum coils are recyclable. Galvanic corrosion is also minimized due to all aluminum construction. Strong aluminum brazed structure provides better fin protection and quality. In addition, flat streamlined tubes also make Microchannel coils more dust resistant and easier to clean.
  - b. Microchannel condenser coils are standard for all 3 to 10 ton standard efficiency models and 4,5,6, 7½, 8½ ton high efficiency models. The Microchannel type condenser coil is not offered on the 4 and 5 ton dehumidification model.
  - c. Tube and fin condenser coils are standard on the 3 and 5 ton EFLEX model. 4 ton is Microchannel.
  - d. Tube and fin condenser coils are standard on the 17 Plus models.
2. Provide tool-less factory installed corrosion resistant louvered hail/vandalism guards to protect condenser coils from hail or physical damage.
3. Provide corrosion protected Condenser Coil Option that shall include an all-aluminum Microchannel. Condenser coil protection shall consist of a corrosion resistant coating that shall withstand ASTM B117 Salt spray test for 6000 Hours and ASTM G85 A2 cyclic Acidified salt for test for 2,400 hours. This coating shall be added after coil construction covering all tubes , headers and fin edges, therefore providing optimum protection in more corrosive environments

H. Refrigeration System

1. All units shall have direct drive hermetic, scroll type compressors with centrifugal type oil pumps. Motor shall be suction gas cooled and shall have a voltage utilization range of plus or minus 10 percent of unit nameplate. Compressors shall be internally protected with internal high-pressure relief and over temperature protection. Compressors shall have internal spring isolation and sound muffling to minimize vibration and noise, and be externally isolated on a dedicated, independent mounting.
2. 17 Plus series shall be 2 stage scroll type compressors with centrifugal type oil pumps. Motor shall be suction gas cooled and shall have a voltage utilization range of plus or minus 10 percent of unit nameplate.
3. Eflex variable speed compressor shall be capable of speed modulation from 15Hz to a maximum of 60Hz. The minimum unit capacity shall be 25% of full load. The compressor motor shall be a permanent magnet type. Each variable speed compressor shall be matched with a specially designed refrigerant cooled , variable frequency drive which modulates the speed of the compressor motor and provides several compressor protection functions.

4. Provide with thermostatic temperature motor winding control for protection against excessive temperatures caused by over/under voltage operation or loss of charge. Also provide high and low pressure switches.
  5. Thermal Expansion valves are standard for all models.
  6. Units shall have cooling capabilities down to 0 degree F as standard with microprocessor controls (40 degrees F with electromechanical controls. For field-installed low ambient accessory, the manufacturer shall provide a factory-authorized service technician that will assure proper installation and operation.
  7. Provide each unit with <<CIRCUIT\_AMOUNT>> refrigerant circuit(s) factory-supplied completely piped with liquid line filter-drier, suction and liquid line pressure ports.
- I. Exhaust/Return Section
1. Provide, on down flow units from 3-10 tons above a factory supplied field installed power exhaust assembly that shall assist the barometric relief damper in the economizer in relieving building pressurization.
  2. Supply, Return and Plenum air smoke detector: If smoke is detected all unit operation will be shut down. Reset will be manual at the unit.
- J. Outdoor Air Section
1. Provide No fresh air 100% return air.
  2. Manual outside air damper 0-50%
  3. Low leak Economizer with <<economizer features>> dampers shall be provided with airfoil blades. Dampers shall have a leakage rate of 3 CFM/sq-ft a 1.0 in WC differential.
  4. Provide Fault Detection and Diagnostics (FDD) control.
  5. Motorized outside air damper 0-50%
  6. Provide economizer with <<ECONOMIZER\_FEATURES>>.
  7. Provide adjustable minimum position control located in the economizer section of the unit.
  8. Provide spring return motor for outside air damper closure during unit shut down or power interruption.
  9. Provide Remote Potentiometer for minimum position setting of the economizer
- K. Operating Controls
1. General: Microprocessor controls shall be provided for all 24 volt control functions. The resident control algorithms shall make all heating, cooling and ventilation decisions in response to electronic signals from sensors measuring indoor and outdoor temperatures. The control algorithm maintains accurate temperature control, minimizes drift from setpoint and provides better building comfort. A centralized microprocessor shall provide anti-short cycle timing and time delay between compressors to provide a higher level of machine protection.
  2. SZ VAV: Provide all necessary controls to operate a rooftop unit based on maintaining two temperature setpoints: discharge air and zone. During one zone vav cooling, the unit will maintain zone cooling setpoint by modulating the supply fan speed more or less to meet zone load demand; and the unit will maintain discharge temperature to the discharge cooling setpoint by modulating economizer if available and staging dx cooling.
  3. Provide a Human Interface that shall have a 5 inch color touchscreen display that conforms to fcc part 15 class B with an Ingress protection rating of IP24. The display text shall be readable by a person with 20/20 vision at a distance of 3 ft and 60 degree angle at lighting levels ranging from 100 lux-25000 lux. Also, the display shall operate at the temperatures of -40 centigrade to 70 deg centigrade.
  4. Clogged filter indication: Provide factory installed differential pressure switch to indicate filter replacement status. Differential pressure switch shall cause a contact closure to display a service indication and unit will continue to operate normally
  5. RTU-1&2: Provide Wall or duct mounted CO2 sensor to monitor space occupancy levels within the building by measuring the parts per million of CO2 (Carbon Dioxide) in the air. As CO2 Levels increase, the economizer fresh air damper shall modulate to meet the CO2 space ventilation requirements.

6. Provide Wall mounted humidity Sensor.
7. Provide factory-installed indoor evaporator defrost control to prevent compressor slugging by interrupting compressor operation.
8. Economizer Preferred Cooling (if supplied with economizer) - Compressor operation is integrated with economizer cycle to allow mechanical cooling when economizer is not adequate to satisfy zone requirements. Compressors are enabled if space temperature is recovering to cooling setpoint at a rate of less than 0.2 degrees per minute. Compressor low ambient lockout overrides this function.

L. Electrical Requirements

1. Phase Monitoring Protection: units with 3-phase power are equipped with phase monitoring protection as standard.
2. Through the base electrical with disconnect switch will be installed in the unit in a water tight enclosure with access through a swinging door. Wiring will be provided from the switch to the unit high voltage terminal block. The switch will be cULus agency recognized.
3. Through the base Electrical with circuit Breaker: A thermal magnetic, molded case, HSCR circuit breaker with provisions for through the base electrical connections. The circuit breaker will be installed in a water tight enclosure in the unit with access through a swinging door. Wiring will be provided from the switch to the unit high voltage terminal block. The circuit breaker will provide overcurrent protection, be sized per NEC and cULUS guidelines, and be agency recognized by cULus.
4. Through the Base Electrical Access: An electrical service entrance shall be provided allowing electrical access for both control and power connects inside the curb and through the base of the unit.
5. Powered Convenience outlet: A GFCI 120V/15 amp, 2 plug, convenience outlet. A service receptacle disconnect will be available. The convenience outlet is powered from the line side of the disconnect or circuit breaker, and will not be affected by the position of the disconnect or circuit breaker. This option can only be ordered when the through the base electrical option is ordered.
6. Wiring internal to the unit shall be colored and numbered for identification.

M. Factory Installed Options:

1. Hot gas reheat dehumidification [where specified]
2. Dirty Filter Switch - This factory mounted kit includes a differential pressure switch that energizes the fault light on the unit thermostat, indicating that there is an abnormally high pressure drop across the filters.
3. Phase Monitor - Designed to prevent unit damage. The phase monitor will shut the unit down in an out-of phase condition.
4. condenser hail Guard
5. Powered GFI Convenience Outlet
6. Low leak comparative enthalpy economizer.
7. Hinged access doors
8. 2" Pleated Filters, MERV 13
9. Disconnect Switch - For gas heat units and cooling units with electric heat, a HACR breaker sized to the unit is provided.

N. Approved Manufacturers:

1. Tempmaster
2. LG
3. Trane
4. Carrier
5. York
6. Approved equal.

## PART 3 - EXECUTION

## 3.01 INSTALLATION

- A. Air Conditioners:
  - 1. Install equipment in complete accordance with the manufacturers' printed instructions, and as indicated.
  - 2. Install with 14" curbs as shown on drawings.

## 3.02 FIELD QUALITY CONTROL

- A. Preliminary Requirements: Employ the services of a Company Field Advisor of the rooftop air conditioner manufacturer for the following:
  - 1. Inspect air conditioner installations prior to start-up.
  - 2. Supervise initial start-up of machine.
  - 3. Instruction of State Personnel.
  - 4. Service.
- B. Pre-Start-Up, Start-Up and Instruction: Upon completion of the installation of the air conditioner, to the satisfaction of the Company Field Advisor, start-up and preliminary testing shall be accomplished under the Company Field Advisor's supervision. When all necessary adjustments have been made and air conditioner is properly operating, the Company Field Advisor shall instruct State Personnel in the operation and maintenance of the air conditioner and accessories.

**END OF SECTION 238100**

## PART 1 - GENERAL

## 1.01 SYSTEM DESCRIPTION

- A. The Air Conditioner or heat pump system shall be a split system with Variable Speed Inverter Compressor technology. The system shall consist of a horizontal discharge, single phase outdoor unit, a matched capacity indoor section that shall be equipped with a wired wall mounted, and/or wireless wall mounted controller.

## 1.02 QUALITY ASSURANCE

- A. The units shall be tested by a Nationally Recognized Testing Laboratory (NRTL) and shall bear the ETL label.
- B. All wiring shall be in accordance with the National Electrical Code (N.E.C.).
- C. The units shall be rated in accordance with Air-conditioning Refrigeration Institute's (ARI) Standard 210 and bear the ARI Certification label.
- D. The units shall be manufactured in a facility registered to ISO 9001 and ISO 14001.
- E. A dry air holding charge shall be provided in the indoor section.
- F. A pressure charge of R410A refrigerant sufficient for up to twenty-five (25) feet of refrigerant tubing shall be provided in the outdoor condensing unit.

## 1.03 DELIVERY, STORAGE, AND HANDLING

- A. Unit shall be stored and handled according to the manufacturer's recommendations.
- B. The wireless controller shall be shipped inside the carton with the indoor unit able to withstand 105 degree F storage temperatures and 95% relative humidity without adverse effect.

## 1.04 WARRANTY

- A. The units shall have a manufacturer's parts and defects warranty for a period five (5) year from date of installation. The compressor shall have a warranty of seven (7) years from date of installation. If, during this period, any part should fail to function properly due to defects in workmanship or material, it shall be replaced or repaired at the discretion of the manufacturer. This warranty does not include labor.
- B. Manufacturer shall have over 30 years of continuous experience in the U.S. market.

## 1.05 SUBMITTALS

- A. Submit manufacturer's product data including capacity of unit, electrical requirements, airflow, sound pressure data, indoor and outdoor unit measurements, weight, control schematics, and wiring diagrams.

## PART 2 - PRODUCTS

## 2.01 APPROVED MANUFACTURERS

- A. LG
- B. Mitsubishi/Trane

## C. Daikin

## 2.02 WALL MOUNTED INDOOR UNIT

## A. General

1. The indoor unit shall be factory assembled, wired and tested. Contained within the unit shall be all factory wiring and internal piping, control circuit board and fan motor. The unit, in conjunction with the wired wall-mounted, wireless wall-mounted or wireless handheld controller, shall have a self-diagnostic function, 3-minute time delay mechanism, an auto restart function, and a test run switch. Indoor unit and refrigerant pipes shall be purged with dry air before shipment from the factory.

## B. Unit Cabinet

1. The cabinet shall be formed from high strength molded plastic with smooth finish, flat front panel design with access for filter. Cabinet color shall be white. The unit shall be wall mounted by means of a factory supplied, pre-drilled, mounting plate.

## C. Fan

1. The indoor unit fan shall be high performance, double inlet, forward curve, direct drive type fan with a single motor. The fans shall be statically and dynamically balanced and run on a motor with permanently lubricated bearings. The indoor fan shall consist of three (3) speeds. The fan shall have a selectable Auto fan setting that will adjust the fan speed based on the difference between controller set-point and space temperature.

## D. Vane

1. There shall be a motorized horizontal vane to automatically direct air flow in a horizontal and downward direction for uniform air distribution. The horizontal vane shall close the outlet port when operation is stopped. There shall also be a set of vertical vanes to provide horizontal swing airflow movement.

## E. Filter

1. Return air shall be filtered by means of a removable washable filter.

## F. Coil

1. The evaporator coil shall be of nonferrous construction with pre-coated aluminum strake fins on copper tubing. All tube joints shall be brazed. The coils shall be pressure tested at the factory. A condensate pan and drain shall be provided under the coil.
2. A drain pan level switch, designed to connect to the control board, shall be provided and installed on the condensate pan to prevent condensate from overflowing.
3. A condensate mini-pump shall be provided to provide a means of condensate disposal.

## 2.03 OUTDOOR UNIT

## A. General

1. The outdoor unit shall be compatible with the associated indoor unit. The connected indoor unit shall be of the same capacity as the outdoor unit.
2. The outdoor unit shall be equipped with an electronic control board that interfaces with the indoor unit to perform all necessary operation functions.
3. The outdoor unit shall be capable of cooling operation down to 0°F ambient temperature without additional low ambient controls. A wind baffle shall be provided with the unit.
4. The outdoor unit shall be completely factory assembled, piped, wired, and tested.

## B. Cabinet

1. The casing shall be constructed from galvanized steel plate, finished with an electrostatically applied, thermally fused acrylic or polyester powder coating for corrosion protection.
  2. Mounting feet shall be provided and shall be welded to the base of the cabinet and be of sufficient size to afford reliable equipment mount and stability.
  3. Easy access shall be afforded to all serviceable parts by means of removable panel sections.
  4. The fan grill shall be of ABS plastic.
- C. Fan
1. Unit shall be furnished with a DC fan motor.
  2. The fan motor bearings shall be permanently lubricated.
  3. The outdoor unit shall have horizontal discharge airflow. The fan shall be mounted in front of the coil, pulling air across it from the rear and dispelling it through the front. The fan shall be provided with a raised guard to prevent external contact with moving parts.
- D. Coil
1. The condenser coil shall be of copper tubing with aluminum fins. The coil shall be protected with an integral metal guard.
  2. Refrigerant flow from the condenser shall be controlled by means of an electronic linear expansion valve (LEV) metering device. The LEV shall be control by a microprocessor controlled step motor.
  3. All refrigerant lines between outdoor and indoor units shall be of annealed, refrigeration grade copper tubing, ARC Type, meeting ASTM B280 requirements, individually insulated in twin-tube, flexible, closed-cell, CFC-free (ozone depletion potential of zero), elastomeric material for the insulation of refrigerant pipes and tubes with thermal conductivity equal to or better than 0.27 BTU-inch/hour per Sq Ft / °F, a water vapor transmission equal to or better than 0.08 Perm-inch and superior fire ratings such that insulation will not contribute significantly to fire and up to 1" thick insulation shall have a Flame-Spread Index of less than 25 and a Smoke-development Index of less than 50 as tested by ASTM E84 and CAN / ULC S-102.
- E. Compressor
1. The compressor for wall mounted units shall be a Frame Compliant Scroll compressor with Variable Speed Inverter Drive Technology. The compressor recessed units shall be a DC twin-rotor rotary compressor with Variable Speed Inverter Drive Technology.
  2. The compressor shall be driven by inverter circuit to control compressor speed. The compressor speed shall dynamically vary to match the room load for significantly increasing the efficiency of the system which shall result in significant energy savings.
  3. To prevent liquid from accumulating in the compressor during the off cycle, a minimal amount of current shall be automatically, intermittently applied to the compressor motor windings to maintain sufficient heat to vaporize any refrigerant. No crankcase heater is to be used.
  4. The outdoor unit shall have an accumulator and high pressure safety switch. The compressor shall be mounted to avoid the transmission of vibration.

## PART 3 - EXECUTION

### 3.01 GENERAL

- A. Install all equipment, piping, and controls in accordance with manufacturer's installation instructions.
- B. Install refrigerant piping as per manufacturer's instructions and specification.
- C. Mount the outdoor condensing unit on a concrete equipment pad.

- D. Support the indoor unit as per the manufacturer's instructions.
- E. Mount the controller. Coordinate exact location with the owner.
- F. Install the drain line. Pitch drain line in the direction of flow.
- G. Install new filter on indoor unit.
- H. Clean all equipment after installation.

**END OF SECTION 238126**

PART 1 - GENERAL

1.01 SYSTEM DESCRIPTION

- A. The variable capacity, heat pump air conditioning system shall consist of multiple evaporators, refrigerant pipe joints and headers, a two-pipe refrigeration distribution system using PID control, and an air-cooled condensing unit. The condensing unit shall be a direct expansion (DX), air-cooled heat pump, multi-zone air-conditioning system with variable speed inverter driven compressors using R-410A refrigerant. The condensing unit shall be capable of connection to an indoor evaporator capacity up to 200% of the condensing unit capacity. All zones shall each be capable of operating separately with individual temperature control.
- B. The condensing unit shall be interconnected to indoor unit models in accordance with the manufacturer's recommendations. The indoor units shall be connected to the condensing unit utilizing manufacturer approved piping joints and headers to ensure correct refrigerant flow and balancing. T- style joints are not acceptable.
- C. Operation of the system shall permit either cooling or heating of all of the indoor units simultaneously. Each indoor unit or group of indoor units shall be able to provide set temperature independently via a local remote controller, an Intelligent Controller, an Intelligent Manager or a BMS interface.
- D. An outdoor air shall be delivered to the system via an energy recovery ventilator. The energy recovery ventilator shall incorporate a high-efficiency paper, cross-flow heat exchanger core in order to provide both sensible and latent heat recovery.

1.02 SYSTEM DESCRIPTION

- A. Advanced Zoning - A single system shall provide for up to 62 zones.
- B. Autocharging - Each system shall have a refrigerant auto-charging function.
- C. Oil Return Heating - Each system shall maintain continuous heating during oil return operation. Reverse cycle (cooling mode) oil return during heating operation shall not be permitted due to the potential reduction in space temperature.
- D. Independent Control - Each indoor unit shall use a dedicated electronic expansion valve for independent control.
- E. VFD Inverter Control - Each condensing unit shall use a high efficiency, variable speed "inverter" compressor coupled with inverter fan motors for superior part load performance.
- F. Compressor capacity shall be modulated automatically to maintain constant suction and condensing pressures while varying the refrigerant volume for the needs of the cooling or heating loads.
- G. Indoor units shall use PID to control superheat to deliver a comfortable room temperature condition and optimize efficiency.
- H. Flexible Design
  - 1. Systems shall be capable of up to 540 ft. (640 ft. equivalent) of linear piping between the condensing unit and furthest located indoor unit.
  - 2. Systems shall be capable of up to 3,280 ft. total "one-way" piping in the piping network.
  - 3. Systems shall have a vertical (height) separation of up to 295 ft. between the condensing unit and the indoor units.
  - 4. Systems shall be capable of up to 295 ft. from the first branch point.

5. The condensing unit shall have the ability to connect an indoor unit evaporator capacity of up to 200% of the condensing unit capacity.
6. Systems shall be capable of 49 ft. between indoor units.
7. Condensing units shall be supported with a fan motor ESP up to 0.32" WG as standard to allow connection of discharge ductwork and to prevent discharge air short circuiting.
- I. Simple Wiring - Systems shall use 16/18 AWG, 2 wire, multi-stranded, non-shielded and non-polarized daisy chain control wiring.
- J. Advanced Diagnostics - Systems shall include a self diagnostic, auto-check function to detect a malfunction and display the type and location.
- K. Each condensing unit shall incorporate contacts for electrical demand shedding.
- L. Advanced Controls - Each system shall have at least one remote controller capable of controlling up to 16 indoor units.
- M. Each system shall be capable of integrating with open protocol BACnet and LonWorks building management systems.

### 1.03 QUALITY ASSURANCE

- A. The units shall be tested by a Nationally Recognized Testing Laboratory (NRTL), in accordance with ANSI/UL 1995 - Heating and Cooling Equipment, and shall bear the Listed Mark.
- B. All wiring shall be in accordance with the National Electrical Code (N.E.C.).
- C. The units shall be rated in accordance with Air-conditioning Refrigeration Institute's (ARI) Standard 210 and bear the ARI Certification label.
- D. The system shall be manufactured in an ISO 9001 and ISO 14001 facility, which are standards set by the International Standard Organization (ISO). The system shall be factory tested for safety and function.
- E. The condensing unit shall be factory charged with R410A refrigerant.
- F. The energy recovery ventilator shall be certified in accordance with Air Conditioning, Heating, and Refrigeration Institute's (AHRI) Standard 1060 and bear the AHRI Certified label.
- G. The energy recovery heat exchanger core shall be tested in accordance with Underwriters Laboratories (UL) 723 and shall have a flame spread rating of not more than 25, and a smoke developed rating of not more than 50.
- H. The energy recover system efficiency shall meet or exceed 65% thermal efficiency and 40% enthalpy recovery efficiency.

### 1.04 DELIVERY, STORAGE, AND HANDLING

- A. Equipment shall be stored and handled according to the manufacturer's recommendations.

### 1.05 WARRANTY

- A. Condensing Unit
  1. The manufacturer shall warrant to the customer who is the original owner and user of the products specified above ("Customer") that under normal use and maintenance for comfort cooling and conditioning applications such products (the "Products") will be free from

defects in material or workmanship. This warranty shall apply to parts only and is limited in duration to one (1) year from the earlier to occur of (a) the date of original installation, whether or not actual use begins on that date, or (b) eighteen (18) months from the date of shipment. Customer must present proof of the original date of receipt and of installation of the Product in order to establish the effective date of this warranty. Otherwise the effective date will be deemed to be the date of manufacture plus sixty (60) days. Repaired or replacement parts shall be warranted for the balance of the warranty period applicable to the original part following the date on which the repaired or replacement part is provided to the Customer.

2. For its compressors only, the manufacturer shall provide the above warranty (which is applicable to parts only) for a seven (7) year period. This extended warranty for compressors shall be limited in duration to seven (7) years from the earlier to occur of (a) the date of original installation, whether or not actual use begins on that date, or (b) eighteen (18) months from the date of shipment, and applies to the compressor and compressor parts only. The effective date of this extended warranty shall be established as above.

**B. Indoor Unit**

1. The units shall have a manufacturer's warranty for a period of one (1) year from date of installation. The units shall have a limited labor warranty for a period of one (1) year from date of installation. The compressors shall have a warranty of seven (7) years from date of installation. During the stated period, should any part fail due to defects in material and workmanship, it shall be repaired or replaced at the discretion of the manufacturer according to their terms and conditions. All warranty service work shall be performed by a manufacturer factory trained service professional.

**C. Energy Recovery Unit**

1. The manufacturer shall warrant to the customer who is the original owner and user of the products specified above ("Customer") that under normal use and maintenance for comfort cooling and conditioning applications such products (the "Products") will be free from defects in material or workmanship. This warranty applies to parts only and is limited in duration to one (1) year from the earlier to occur of (a) the date of original installation, whether or not actual use begins on that date, or (b) eighteen (18) months from the date of shipment. Customer must present proof of the original date of receipt and of installation of the Product in order to establish the effective date of this warranty. Otherwise the effective date will be deemed to be the date of manufacture plus sixty (60) days. Repaired or replacement parts are warranted for the balance of the warranty period applicable to the original part following the date on which the repaired or replacement part is provided to the Customer.
2. For the core only, the manufacturer shall provide the above warranty for a six (6) year period. This extended warranty for the core is limited in duration to six (6) years from the earlier to occur of (a) the date of original installation, whether or not actual use begins on that date, or (b) twenty-four (24) months from the date of shipment. The effective date of this extended warranty shall be established as above.

**D. System Installation Requirements**

1. The system must be installed by a factory trained contractor/dealer. The bidders shall be required to submit training certification proof with bid documents. The mechanical contractor's installation price shall be based on the systems installation requirements. The mechanical contractor bids with complete knowledge of the HVAC system requirements. Untrained contractors who wish to bid this project shall contact the manufacturer to arrange training prior to bid day.

## 1.06 SUBMITTALS

- A. Submit manufacturer's product data including capacity of unit, electrical requirements, airflow, sound pressure data, indoor and outdoor unit measurements, weight, control schematics, and wiring diagrams.

## PART 2 - PRODUCTS

### 2.01 DESIGN BASIS

- A. All bidders shall furnish the minimum system standards as defined by the base bid model numbers, model families or as otherwise specified herein. In any event, the contractor shall be responsible for all specified items and intents of this document without further compensation.

### 2.02 CONDENSING UNIT

- A. General: The condensing unit shall be designed specifically for use with a variable refrigerant volume system.
  - 1. The condensing unit shall be factory assembled and pre-wired with all necessary electronic and refrigerant controls. The refrigeration circuit of the condensing unit shall consist of scroll compressors, motors, fans, condenser coil, electronic expansion valves, solenoid valves, 4-way valve, distribution headers, capillaries, filters, shut off valves, oil separators, service ports and refrigerant regulator.
  - 2. Liquid and suction lines shall be individually insulated between the condensing and indoor units.
  - 3. The connection ratio of indoor units to condensing unit shall be permitted up to 200%.
  - 4. The condensing unit shall be able to support the connection of multiple indoor units.
  - 5. The system shall automatically restart operation after a power failure. System settings shall be saved in the event of a power loss without the need for reprogramming.
  - 6. The unit shall incorporate an auto-charging feature.
  - 7. The condensing unit shall be modular in design and should allow for side-by-side installation with minimum spacing.
  - 8. The following safety devices shall be included on the condensing unit: high pressure sensor and switch, low pressure switch, control circuit fuses, crankcase heaters, fusible plug, overload relay, inverter overload protector, thermal protectors for compressor and fan motors, over current protection for the inverter and anti-recycling timers.
  - 9. To ensure the liquid refrigerant does not flash when supplying to the various indoor units, the circuit shall be provided with a sub-cooling feature.
  - 10. Oil recovery cycle shall be automatic occurring 2 hours after start of operation and then every 8 hours of operation. Each system shall maintain continuous heating during oil return operation. Reverse cycle (cooling mode) oil return during heating operation shall not be permitted due to the potential reduction in space temperature.
  - 11. The condensing unit shall be capable of heating operation at 0°F dry bulb ambient temperature without additional low ambient controls or an auxiliary heat source.
- B. Unit Cabinet:
  - 1. The condensing unit shall be completely weatherproof and corrosion resistant. The unit shall be constructed from rust-proofed mild steel panels coated with a baked enamel finish.
- C. Fan:
  - 1. The condensing unit shall consist of propeller type, direct-drive fan motor(s) that have multiple speed operation via a DC (digitally commutating) inverter.
  - 2. The condensing unit fan motor shall have multiple speed operation of the DC (digitally commutating) inverter type.

3. The fan shall be a vertical discharge configuration.
  4. The fan motor shall have inherent protection and permanently lubricated bearings and be mounted.
  5. The fan motor shall be provided with a fan guard to prevent contact with moving parts.
  6. Night setback control of the fan motor for low noise operation by way of automatically limiting the maximum speed shall be a standard feature.
- D. Condenser Coil:
1. The condenser coil shall be manufactured from copper tubes expanded into aluminum fins to form a mechanical bond.
  2. The heat exchanger coil shall be of a waffle louver fin and rifled bore tube design to ensure high efficiency performance.
  3. The heat exchanger on the condensing units shall be manufactured from Hi-X seamless copper tube with N-shape internal grooves mechanically bonded on to aluminum fins to an e-Pass Design.
  4. The fins shall be covered with an anti-corrosion acrylic resin and hydrophilic film type E1.
  5. The pipe plates shall be treated with powdered polyester resin for corrosion prevention. The thickness of the coating must be between 2.0 to 3.0 microns.
- E. Compressor:
1. The inverter scroll compressors shall be variable speed (PVM inverter) controlled and capable of changing the speed to follow the variations in total cooling and heating load as determined by the suction gas pressure as measured in the condensing unit. In addition, samplings of evaporator and condenser temperatures shall be made so that the high/low pressures detected are read every 20 seconds and calculated. With each reading, the compressor capacity (INV frequency or STD ON/OFF) shall be controlled to eliminate deviation from target value.
  2. The inverter driven compressor in each condensing unit shall be of highly efficient reluctance DC (digitally commutating), hermetically sealed scroll "G2-type" with a maximum speed of 7,980 rpm.
  3. Neodymium magnets shall be adopted in the rotor construction to yield a higher torque and efficiency in the compressor instead of the normal ferrite magnet type. At complete stop of the compressor, the neodymium magnets will position the rotor into the optimum position for a low torque start.
  4. The capacity control range shall be as low as 4% to 100%.
  5. Each non-inverter compressor shall also be of the hermetically sealed scroll type.
  6. Each compressor shall be equipped with a crankcase heater, high pressure safety switch, and internal thermal overload protector.
  7. Oil separators shall be standard with the equipment together with an intelligent oil management system.
  8. The compressor shall be spring mounted to avoid the transmission of vibration.
  9. In the event of compressor failure in a system with multiple compressors, the remaining compressors shall continue to operate and provide heating or cooling as required at a proportionally reduced capacity. The microprocessor and associated controls shall be designed to specifically address this condition.
  10. In the case of multiple condenser modules, conjoined operation hours of the compressors shall be balanced by means of the Duty Cycling Function, ensuring sequential starting of each module at each start/stop cycle, completion of oil return, completion of defrost or every 8 hours.
- F. Electrical:
1. Refer to equipment schedules located on drawings for power requirements.
  2. The control voltage between the indoor and condensing unit shall be 16VDC non-shielded, stranded 2 conductor cable.

3. The control wiring shall be a two-wire multiplex transmission system, making it possible to connect multiple indoor units to one condensing unit with one 2-cable wire, thus simplifying the wiring installation.
  4. The control wiring lengths shall be as shown below.
- G. Operating Range:
1. The operating range in cooling shall be 23°F DB ~ 122°F DB.
  2. The operating range in heating shall be 0°F DB - 77°F DB / -4°F WB - 60°F WB.

#### 2.03 4-WAY CEILING CASSETTE INDOOR UNITS (2'X2')

- A. General: The indoor unit shall be a ceiling cassette fan coil unit, operable with R-410A refrigerant, equipped with an electronic expansion valve, for installation into the ceiling cavity equipped with an air panel grill. Unit to be connected to outdoor unit heat pump or heat recovery model. It shall be a four-way air distribution type, white, impact resistant with a washable decoration panel. The supply air shall be distributed via motorized louvers which can be horizontally and vertically adjusted from 0° to 90°. Computerized PID control shall be used to control superheat for temperature control. The unit shall be equipped with a programmed drying mechanism that dehumidifies while limiting changes in room temperature. The unit shall be suitable for installation in a 24 inch x 24 inch ceiling grid.
- B. Performance: Refer to equipment schedule on drawings.
- C. Indoor Unit:
1. The indoor unit shall be completely factory assembled and tested. Included in the unit is factory wiring, piping, electronic proportional expansion valve, control circuit board, fan motor thermal protector, flare connections, condensate drain pan, condensate drain pump, condensate safety shutoff and alarm, self-diagnostics, auto-restart function, 3-minute fused time delay, and test run switch.
  2. Indoor unit and refrigerant pipes will be charged with dehydrated air prior to shipment from the factory.
  3. Both refrigerant lines shall be insulated from the outdoor unit.
  4. The 4-way supply air flow shall be adjustable to 3-way and 2-way airflow to accommodate various installation configurations including corner installations.
  5. Return air shall be through the concentric panel, which includes a resin net mold resistant filter.
  6. The indoor units shall be equipped with a condensate pan and condensate pump. The condensate pump shall provide up to 21" of lift and have a built in safety shutoff and alarm.
  7. The indoor units shall be equipped with a return air thermistor.
  8. All electrical components shall be accessed through the decoration panel.
  9. The indoor unit shall be separately powered. Refer to equipment schedule on drawings for electrical requirements.
- D. Unit Cabinet:
1. The cabinet shall be space saving and shall be located into the ceiling.
  2. The unit shall consist of multiple auto-swing positions.
  3. The airflow of the unit shall have the ability to shut down one or two sides allowing for simpler corner installation.
  4. Fresh air intake shall be possible by way of direct duct installation to the side of the indoor unit cabinet.
  5. A branch duct knockout shall exist for branch ducting supply air.
  6. The cabinet shall be constructed with sound absorbing foamed polystyrene and polyethylene insulation.
- E. Fan:

1. The fan shall be direct-drive turbo fan type with statically and dynamically balanced impeller with high and low fan speeds available.
  2. The airflow rate shall be available in high and low settings.
  3. The fan motor shall be thermally protected.
- F. Filter:
1. The return air shall be filtered by means of a washable long-life filter with mildew proof resin.
- G. Coil:
1. Coils shall be of the direct expansion type constructed from copper tubes expanded into aluminum fins to form a mechanical bond.
  2. The coil shall be of a waffle louver fin and high heat exchange, rifled bore tube design to ensure highly efficient performance.
  3. The coil shall be a 2-row cross fin copper evaporator coil with 17 FPI design completely factory tested.
  4. The refrigerant connections shall be flare connections.
  5. A condensate pan shall be located under the coil.
  6. A condensate pump shall be located below the coil in the condensate pan with a built in safety alarm.
  7. A thermistor will be located on the liquid and gas line.
- H. Electrical:
1. A separate power supply shall be required. Refer to equipment schedule on drawings for power requirements.
  2. Transmission (control) wiring between the indoor and outdoor unit shall be a maximum of 3,280 feet (total 6,560 feet).
  3. Transmission (control) wiring between the indoor unit and remote controller shall be a maximum distance of 1,640 feet.
- I. Control:
1. The unit shall have controls provided by the manufacturer to perform input functions necessary to operate the system.
  2. The unit shall be compatible with interfacing with a BMS system via optional LonWorks or BACnet gateways. Refer to schedule on drawings for options selected.

#### 2.04 CONCEALED CEILING DUCTED INDOOR UNITS (MEDIUM STATIC)

- A. General: The indoor unit shall be a built-in ceiling concealed fan coil unit, operable with refrigerant R-410A, equipped with an electronic expansion valve, direct-drive DC (ECM) type fan with auto CFM adjustment at commissioning, for installation into the ceiling cavity. It shall be constructed of a galvanized steel casing. Unit to be connected to outdoor unit heat pump or heat recovery model. It shall be a horizontal discharge air with horizontal return air configuration. Computerized PID control shall be used to control superheat for temperature control. The unit shall be equipped with a programmed drying mechanism that dehumidifies while limiting changes in room temperature. Included as standard equipment, a condensate drain pan and drain pump kit that pumps to 18-3/8" from the drain pipe opening.
- B. Performance: Refer to equipment schedule on drawings.
- C. Indoor Unit:
1. The indoor unit shall be completely factory assembled and tested. Included in the unit shall be factory wiring, piping, electronic proportional expansion valve, control circuit board, fan motor thermal protector, flare connections, condensate drain pan, condensate drain pump, condensate safety shutoff and alarm, self-diagnostics, auto-restart function,

- 3-minute fused time delay, and test run switch. The unit shall be equipment with automatically adjusting external static pressure logic that is selectable during commissioning for adjustment of airflow.
2. Indoor unit and refrigerant pipes shall be charged with dehydrated air prior to shipment from the factory.
  3. Both refrigerant lines shall be insulated from the outdoor unit.
  4. The indoor units shall be equipped with a condensate pan and condensate pump. The condensate pump shall provide up to 18-3/8" of lift from the center of the drain outlet and have a built in safety shutoff and alarm.
  5. The indoor units shall be equipped with a return air thermistor.
  6. The indoor unit shall be separately powered. Refer to equipment schedule on drawings for power requirements.
- D. Unit Cabinet:
1. The cabinet shall be located into the ceiling and ducted to the supply and return openings.
  2. The cabinet shall be constructed with sound absorbing foamed polystyrene and polyethylene insulation.
- E. Fan:
1. The fan shall be direct-drive DC (ECM) type fan, statically and dynamically balanced impeller with three fan speeds available.
  2. The unit shall be equipment with automatically adjusting external static pressure logic selectable during commissioning.
  3. The airflow rate shall be available in three settings.
  4. The fan motor shall be thermally protected.
  5. The fan motor shall be equipped as standard with adjustable external static pressure (ESP) settings.
- F. Coil:
1. Coils shall be of the direct expansion type constructed from copper tubes expanded into aluminum fins to form a mechanical bond.
  2. The coil shall be of a waffle louver fin and high heat exchange, rifled bore tube design to ensure highly efficient performance.
  3. The coil shall be a 3 row cross fin copper evaporator coil with 13 fpi design completely factory tested.
  4. The refrigerant connections shall be flare connections.
  5. A condensate pan shall be located under the coil.
  6. A condensate pump shall be located below the coil in the condensate pan with a built in safety alarm.
  7. A thermistor will be located on the liquid and gas line.
- G. Electrical:
1. A separate power supply will be required. Refer to equipment schedule on drawings for power requirements.
  2. Transmission (control) wiring between the indoor and outdoor unit shall be a maximum of 3,280 feet (total 6,560 feet).
  3. Transmission (control) wiring between the indoor unit and remote controller shall be a maximum distance of 1,640 feet.
- H. Control:
1. The unit shall have controls provided by the manufacturer to perform input functions necessary to operate the system.
  2. The unit shall be compatible with interfacing with a BMS system via optional LonWorks or BACnet gateways. Refer to equipment schedule on drawings for options selected.

2.05 SLIM DUCT CONCEALED CEILING INDOOR UNITS

- A. General: The indoor unit model shall be a Slim, built-in ceiling concealed fan coil unit, operable with R-410A refrigerant, equipped with an electronic expansion valve, for installation into the ceiling cavity. The unit shall be constructed of a galvanized steel casing. Unit to be connected to outdoor unit heat pump or heat recovery model. It shall be a horizontal discharge air with horizontal return air or bottom return air configuration. Computerized PID control shall be used to control superheat for temperature control. The unit shall be equipped with a programmed drying mechanism that dehumidifies while limiting changes in room temperature. Included as standard equipment, a long-life filter that is mold resistant and a condensate drain pan and drain pump kit.
- B. Performance: Refer to equipment schedule on drawings.
- C. Indoor Unit:
  - 1. The indoor unit shall be completely factory assembled and tested. Included in the unit is factory wiring, piping, electronic proportional expansion valve, control circuit board, fan motor thermal protector, flare connections, condensate drain pan, condensate drain pump, condensate safety shutoff and alarm, self-diagnostics, auto-restart function, 3-minute fused time delay, and test run switch. The unit shall have adjustable external static pressure capabilities.
  - 2. Indoor unit and refrigerant pipes shall be charged with dehydrated air prior to shipment from the factory.
  - 3. Both refrigerant lines shall be insulated from the outdoor unit.
  - 4. Return air shall be through a resin net mold resistant filter.
  - 5. The indoor units shall be equipped with a condensate pan and condensate pump. The condensate pump shall provide up to 23-5/8" of lift from the center of the drain outlet and have a built in safety shutoff and alarm.
  - 6. The indoor units shall be equipped with a return air thermistor.
  - 7. The indoor unit shall be separately powered. Refer to equipment schedule on drawings for power requirements.
  - 8. Switch box shall be reached from the side or bottom for service and maintenance.
- D. Unit Cabinet:
  - 1. The cabinet shall be located into the ceiling and ducted to the supply and return openings.
  - 2. The cabinet shall be constructed with sound absorbing foamed polystyrene and polyethylene insulation.
- E. Fan:
  - 1. The fan shall be direct-drive Sirocco type fan, statically and dynamically balanced impeller with high and low fan speeds available.
  - 2. The airflow rate shall be available in high and low settings.
  - 3. The fan motor shall be thermally protected.
  - 4. The fan motor shall be equipped as standard with adjustable external static pressure (ESP) settings.
  - 5. Fan motor external static pressure range for nominal airflow:
- F. Filter:
  - 1. The return air shall be filtered by means of a washable long-life filter with mildew proof resin.
- G. Coil:
  - 1. Coils shall be of the direct expansion type constructed from copper tubes expanded into aluminum fins to form a mechanical bond.

2. The coil shall be of a waffle louver fin and high heat exchange, rifled bore tube design to ensure highly efficient performance.
  3. The coil shall be a 2 or 3-row cross fin copper evaporator coil with 14 FPI design completely factory tested.
  4. The refrigerant connections shall be flare connections.
  5. A condensate pan shall be located under the coil.
  6. A condensate pump with a 23-5/8" lift shall be located below the coil in the condensate pan with a built in safety alarm.
  7. A thermistor will be located on the liquid and gas line.
- H. Electrical:
1. A separate power supply shall be required. Refer to equipment schedule on drawings for power requirements.
  2. Transmission (control) wiring between the indoor and outdoor unit shall be a maximum of 3,280 feet (total 6,560 feet).
  3. Transmission (control) wiring between the indoor unit and remote controller shall be a maximum distance of 1,640 feet.
- I. Control:
1. The unit shall have controls provided by the manufacturer to perform input functions necessary to operate the system.
  2. The unit shall be compatible with interfacing with a BMS system via optional LonWorks or BACnet gateways. Refer to equipment schedule on drawings for options selected.

## 2.06 CEILING SUSPENDED CASSETTE INDOOR UNITS

- A. General: The indoor unit shall be a ceiling suspended fan coil unit, operable with refrigerant R-410A, equipped with an electronic expansion valve, for installation onto a wall or ceiling within a conditioned space. Unit shall have a finished white casing. Unit to be connected to outdoor unit heat pump and heat recovery model. Computerized PID control shall be used to control superheat for temperature control. The unit shall be equipped with a programmed drying mechanism that dehumidifies while limiting changes in room temperature. A mildew-proof, polystyrene condensate drain pan and resin net mold resistant filter shall be included as standard equipment.
- B. Performance: Refer to equipment schedule on drawings.
- C. Indoor Unit:
1. The indoor unit shall be completely factory assembled and tested. Included in the unit is factory wiring, piping, electronic proportional expansion valve, control circuit board, fan motor thermal protector, flare connections, condensate drain pan, self-diagnostics, auto-restart function, 3-minute fused time delay, and test run switch. The unit shall have an auto-swing louver which ensures efficient air distribution, which closes automatically when the unit stops. The remote controller shall be able to set five (5) steps of discharge angle. The front grille shall be easily removed for washing. The discharge angle shall automatically set at the same angle as the previous operation upon restart. The drain pipe can be fitted to from the rear, top or left and right sides of the unit.
  2. Indoor unit and refrigerant pipes shall be charged with dehydrated air prior to shipment from the factory.
  3. Both refrigerant lines shall be insulated from the outdoor unit.
  4. Return air shall be through a resin net mold resistant filter.
  5. The indoor units shall be equipped with a condensate pan.
  6. The indoor units shall be equipped with a return air thermistor.
  7. The indoor unit shall be separately powered. Refer to equipment schedule on drawings for power requirements.

- D. Unit Cabinet:
  - 1. The cabinet shall be affixed to a factory supplied wall/ceiling hanging brackets and located in the conditioned space.
  - 2. The cabinet shall be constructed with sound absorbing foamed polystyrene and polyethylene insulation.
- E. Fan:
  - 1. The fan shall be a direct-drive cross-flow fan, statically and dynamically balanced impeller with high and low fan speeds available.
  - 2. The airflow rate shall be available in high and low settings.
  - 3. The fan motor shall be thermally protected.
- F. Coil:
  - 1. Coils shall be of the direct expansion type constructed from copper tubes expanded into aluminum fins to form a mechanical bond.
  - 2. The coil shall be of a waffle louver fin and high heat exchange, rifled bore tube design to ensure highly efficient performance.
  - 3. The coil shall be a 2-row cross fin copper evaporator coil with 15 fpi design completely factory tested.
  - 4. The refrigerant connections shall be flare connections.
  - 5. A thermistor will be located on the liquid and gas line.
  - 6. A condensate pan shall be located in the unit.
- G. Electrical:
  - 1. A separate power supply shall be required. Refer to equipment schedule on drawings for power requirements.
  - 2. Transmission (control) wiring between the indoor and outdoor unit shall be a maximum of 3,280 feet (total 6,560 feet).
  - 3. Transmission (control) wiring between the indoor unit and remote controller shall be a maximum distance of 1,640 feet.
- H. Control:
  - 1. The unit shall have controls provided by the manufacturer to perform input functions necessary to operate the system.
  - 2. The unit shall be compatible with interfacing with a BMS system via optional LonWorks or BACnet gateways. Refer to equipment schedule on drawings for options selected.
  - 3. The unit shall be compatible with a Daikin intelligent Touch advanced multi-zone controller or an intelligent Manager III customizable BMS. Consult with Daikin prior to applying controls.

## 2.07 FLOOR CONSOLE CONCEALED INDOOR UNITS

- A. General: The indoor unit shall be a floor or wall mounted console fan coil unit, operable with refrigerant R-410A, equipped with an electronic expansion valve, for installation within a conditioned space. It shall have a top discharge air grill and filtered bottom return air. The unit shall have an unfinished casing. Unit to be connected to outdoor unit heat pump or heat recovery model. The cabinets can be mounted on the floor with refrigerant and condensate lines directed downward or affixed to the wall with horizontal refrigerant and condensate knockouts. Computerized PID control shall be used to control superheat for temperature control. The unit shall be equipped with a programmed drying mechanism that dehumidifies while limiting changes in room temperature. A mold-resistant, resin net air filter shall be included as standard equipment.
- B. Performance: Refer to equipment schedule on drawings.

C. Indoor Unit:

1. The indoor unit shall be completely factory assembled and tested. Included in the unit is factory wiring, piping, electronic proportional expansion valve, control circuit board, fan motor thermal protector, flare connections, self-diagnostics, auto-restart function, 3-minute fused time delay, and test run switch. The unit shall have an auto-swing louver which ensures efficient air distribution, which closes automatically when the unit stops.
2. Indoor unit and refrigerant pipes shall be charged with dehydrated air prior to shipment from the factory.
3. Both refrigerant lines shall be insulated from the outdoor unit.
4. Return air shall be through a resin net mold resistant filter.
5. Condensate draining shall be made via gravity or external condensate pump.
6. The indoor units shall be equipped with a return air thermistor.
7. The indoor unit shall be separately powered. Refer to equipment schedule for power requirements.

D. Unit Cabinet:

1. The cabinet shall be affixed to a factory supplied wall mounting template and located in the conditioned space.
2. The cabinet shall be constructed with sound absorbing fiberglass urethane foam insulation.

E. Fan:

1. The fan shall be a direct-drive Sirocco type fan, statically and dynamically balanced impeller with high and low fan speeds available.
2. The airflow rate shall be available in high and low settings.
3. The fan motor shall be thermally protected.

F. Filter:

1. The return air shall be filtered by means of a washable long-life filter with mildew proof resin.

G. Coil:

1. Coils shall be of the direct expansion type constructed from copper tubes expanded into aluminum fins to form a mechanical bond.
2. The coil shall be of a waffle louver fin and high heat exchange, rifled bore tube design to ensure highly efficient performance.
3. The coil shall be a 3-row cross fin copper evaporator coil with 17 fpi design completely factory tested.
4. The refrigerant connections shall be flare connections.
5. A thermistor will be located on the liquid and gas line.

H. Electrical:

1. A separate power supply shall be required. Refer to equipment schedule on drawings for power requirements.
2. Transmission (control) wiring between the indoor and outdoor unit shall be a maximum of 3,280 feet (total 6,560 feet).
3. Transmission (control) wiring between the indoor unit and remote controller shall be a maximum distance of 1,640 feet.

I. Control:

1. The unit shall have controls provided by the manufacturer to perform input functions necessary to operate the system.
2. The unit shall be compatible with interfacing with a BMS system via optional LonWorks or BACnet gateways. Refer to equipment schedule on drawings for options selected.

## 2.08 OUTSIDE AIR PROCESSING UNITS

- A. General: The indoor unit shall be a built-in ceiling concealed fan coil unit, operable with refrigerant R-410A, equipped with an electronic expansion valve, for installation into the ceiling cavity. The unit shall be capable of introducing up to 100% outside air controlled to a fixed discharge air temperature. It shall be constructed of a galvanized steel casing. Unit to be connected to outdoor unit model heat pump and heat recovery model. It shall be a horizontal discharge air with horizontal return air configuration. All models feature a low height cabinet making them applicable to ceiling pockets that tend to be shallow. Computerized PID control shall be used to control superheat for temperature control.
- B. Performance: Refer to equipment schedule on drawings.
- C. Indoor Unit:
  - 1. The indoor unit shall be completely factory assembled and tested. Included in the unit is factory wiring, piping, electronic proportional expansion valve, control circuit board, fan motor thermal protector, flare connections, self-diagnostics, auto-restart function, 3-minute fused time delay and test run switch.
  - 2. Indoor unit and refrigerant pipes shall be charged with dehydrated air prior to shipment from the factory.
  - 3. Both refrigerant lines shall be insulated from the outdoor unit.
  - 4. The indoor units shall be equipped with a discharge air thermistor.
  - 5. The indoor unit shall be separately powered. Refer to equipment schedule on drawings for power requirements.
- D. Unit Cabinet:
  - 1. The cabinet shall be located into the ceiling and ducted to the supply and return openings.
  - 2. The cabinet shall be constructed with sound absorbing foamed polystyrene and polyethylene insulation.
- E. Fan:
  - 1. The fan shall be direct-drive Sirocco type fan, statically and dynamically balanced impeller with high and low fan speeds available.
  - 2. The fan motor shall be thermally protected.
  - 3. Fan motor external static pressure for nominal airflow:
- F. Coil:
  - 1. Coils shall be of the direct expansion type constructed from copper tubes expanded into aluminum fins to form a mechanical bond.
  - 2. The coil shall be of a waffle louver fin and high heat exchange, rifled bore tube design to ensure highly efficient performance.
  - 3. The coil shall be a 3 row cross fin copper evaporator coil with 13 fpi design completely factory tested.
  - 4. The refrigerant connections shall be flare connections.
  - 5. A thermistor will be located on the liquid and gas line.
- G. Electrical:
  - 1. A separate power supply shall be required. Refer to equipment schedule on drawings for power requirements.
  - 2. Transmission (control) wiring between the indoor and outdoor unit shall be a maximum of 3,280 feet (total 6,560 feet).
  - 3. Transmission (control) wiring between the indoor unit and remote controller shall be a maximum distance of 1,640 feet.

H. Control:

1. The unit shall have controls provided by the manufacturer to perform input functions necessary to operate the system.
2. The unit shall be compatible with interfacing with a BMS system via optional LonWorks or BACnet gateways. Refer to equipment schedule on drawings for options selected.

2.09 REFRIGERANT PIPING

- A. The system shall be capable of refrigerant piping up to 540 actual feet or 620 equivalent feet from the condensing unit to the furthest indoor unit, a total combined liquid line length of 3,280 feet of piping between the condensing and indoor units with 295 feet maximum vertical difference, without any oil traps.
- B. Piping joints and headers shall be used to ensure proper refrigerant balance and flow for optimum system capacity and performance. T style joints shall not be acceptable as this will negatively impact proper refrigerant balance and flow for optimum system capacity and performance.

2.10 APPROVED MANUFACTURERS

- A. LG
- B. MITSUBISHI/TRANE
- C. DAIKIN

PART 3 - EXECUTION

3.01 GENERAL

- A. Install all equipment, piping, and controls in accordance with manufacturer's installation instructions.
- B. Install refrigerant piping as per manufacturer's instructions and specification.
- C. Mount the outdoor condensing unit on a concrete equipment pad or equipment support rails.
- D. Support the indoor unit as per the manufacturer's instructions.
- E. Mount the controller. Coordinate exact location with the owner.
- F. Install the drain line. Pitch drain line in the direction of flow.
- G. Install new filter on indoor unit.
- H. Clean all equipment after installation.

**END OF SECTION 238126.12**

## PART 1 - GENERAL

## 1.01 RELATED SPECIFICATIONS

- A. Section 232000 - Pipes, Valves and Fittings
- B. Section 233813 - Kitchen Hood Systems

## 1.02 SUBMITTALS

- A. Shop Drawings: Certified shop drawings for all coils not furnished as part of factory prefabricated unitized mechanical equipment.
- B. Product Data: Submit manufacturer's catalog sheets, performance charts, test data, standard schematic drawings, specifications and installation instructions for each coil.
- C. Quality Control Submittals:
  - 1. Certificates: Prior to the approval of coils, the Director may at his option, require certified copies of coil performance and data sheets for all coils.

## 1.03 QUALITY ASSURANCE

- A. Heating coils and cooling coils shall meet the applicable fabrication and testing requirements of the Safety Code for Mechanical Refrigeration ASHRAE 15. Ratings of coils, with the exception of the direct expansion refrigerant type, shall be in accordance with ARI Standard 410, "Forced Circulation Air Cooling and Air Heating Coils" And bear the ARI symbol. Coils exceeding the scope of the manufacturer's certification and/or the range of ari's standard rating conditions will be considered provided the manufacturer is a current member of the ARI air-cooling and air-heating coils certification program and the coils have been rated in accordance to ARI standard 410.
- B. Published coil data, complete with sizing information, shall be available for all coils submitted for approval.
- C. Manufacturer must be ISO 9002 certified.

## PART 2 - PRODUCTS

## 2.01 APPROVED MANUFACTURERS

- A. Modine
- B. Carrier
- C. Greenheck

## 2.02 FLUID COIL DESIGN PRESSURES AND TEMPERATURES

- A. Coils shall be designed to withstand 250 psi maximum operating pressures and a maximum fluid temperature of 300°F for standard duty copper tube coils. Optional high pressure construction will include cupronickel tubes and headers to increase maximum operating pressure to 350 psi and maximum operating temperature to 450°F. For cleanable coils with removable heads, coils shall be designed to withstand 100 psi maximum operating pressures and a maximum fluid temperature of 150°F. Higher limits are available, depending on coil construction and/or materials used.

- B. For High Pressure/Normal temperature fluid coils, the following Schedule should be used:
1. 0-150 psi: Standard Construction-5/8" x 0.020" copper tubing, 0.065" wall copper headers, copper end caps, vent and drain located as required, coil tubes extended into the header.
  2. 150-300 psi: 5/8" x 0.025 copper tubing, 0.095" copper headers, Monel end caps, vent and drain located on the face (locating on end caps is not allowed), 5/8" x 0.049" adapter tube construction
  3. 300-400 psi: 5/8" x 0.035" copper tubing, 0.187" wall brass pipe headers, Monel end caps, vent and drain located on the face (located on end caps not allowed), 5/8" x 0.049" adapter tube construction

## 2.03 FACTORY TESTING REQUIREMENTS

- A. Coils shall be submerged in water and tested with a minimum of 315 psi air pressure for standard copper tube coils and 125 psi for cleanable coils with removable heads. A 500 psig hydrostatic and shock test is required for high pressure cupronickel construction. Coils must display a tag with the inspector's identification as proof of testing.

## 2.04 FINS

- A. Coils shall be of plate fin type construction providing uniform support for all coil tubes. Stainless steel fins shall be constructed of 304 & 316 stainless. Carbon steel fins shall be constructed of ASTM A109-83. Coils are to be manufactured with die-formed aluminum, copper, stainless steel or carbon steel fins with self-spacing collars which completely cover the entire tube surface. The fin thickness shall be 0.0075 +/- 5% unless otherwise specified.
- B. Manufacturer must be capable of providing self-spacing die-formed fins 4 through 14 fins/inch with a tolerance of +/- 4%.

## 2.05 TUBING

- A. Tubing and return bends shall be constructed from UNS 12200 seamless copper conforming to ASTM B75 and ASTM B251 for standard pressure applications. High pressure construction shall use seamless 90/10 Cupronickel alloy C70600 per ASTM B111. Stainless steel tubes shall be ASTM A249. Carbon steel tubes shall be W&D / ASTM A214 & seamless A179. Copper tube temper shall be light annealed with a maximum grain size of 0.040 mm and a maximum hardness of Rockwell 65 on the 15T scale.
- B. Design permits in-tube water velocities up to 6 ft/s for the standard seamless copper tubing, and up to 8 ft/s for optional seamless alloy C70600 cupronickel tubing.
- C. Tubes are to be mechanically expanded to form an interference fit with the fin collars. Coil tube size and wall thickness' are 5/8"x0.020 and 1/2"x0.016 and 1"x.035 standard for copper, with other options available. Steel tubes are offered as 5/8"x0.035 or 0.049.

## 2.06 HEADERS

- A. Headers shall be constructed from UNS 12200 seamless copper conforming to ASTM B75 and ASTM B251 for standard pressure applications. High-pressure construction is to incorporate seamless 90/10 Cupronickel alloy C70600 per ASTM B111. Stainless steel will be constructed of 304L & 316L (ASTM-A240) Sch-5 or Sch-10. Carbon steel headers shall be constructed of Sch-10 (ASTM-A135A) or Sch-40 (ASTM A53A) pipe.
- B. Coil return headers are to be equipped with factory-installed 1/2" fpt air vent connection placed at the highest point available on face of the header.

- C. Tube-to-header holes are to be intruded inward such that the landed surface area is three times the core tube thickness to provide enhanced header to tube joint integrity. all core tubes shall evenly extend within the inside diameter of the header no more than 0.12 inch.
- D. End caps shall be die-formed and installed on the inside diameter of the header such that the landed surface area is three times the header wall thickness.

## 2.07 CONNECTIONS

- A. Standard construction fluid connections are male pipe thread (MPT) and constructed from red brass conforming to ASTM B43 or Schedule 40 steel pipe as a minimum. Stainless steel will be 304L or 316L (ASTM-A240) Sch-40 or Sch

2.08 80. CARBON STEEL WILL BE A53A SCH-40, A106A SCH-40 OR SCH-80 OR A53B SCH-80 PIPE.

## 2.09 CLEANING

- A. All residual manufacturing oils and solid contaminants are removed internally and externally by completely submersing the coil in an environmentally and safety approved type degreasing solution, which is also chemically compatible with the coil material. This may vary for steel tube coils, depending on the application and/or customer specifications.

## 2.10 BRAZING

- A. Oxyfuel gas brazing, using fillet rod material of minimum 5% silver, is used for all non-ferrous tube joints to headers and connections. Depending on the application, ferrous to non-ferrous brazing material may contain upwards of 35% silver, or may be Tobin bronze.

## 2.11 WELDING

- A. Gas shielded arc welding is used for welded vessels constructed of stainless steel. Gas welding is used for welded vessels constructed of carbon steel.

## 2.12 CASING

- A. Coil casing and endplate shall be fabricated from Galvanized steel, as a standard construction, meeting ASTM and UL G90U requirements, Aluminum, 0.080" thick, optional, Copper, 0.063 " thick, optional, 16- or 14-gauge carbon steel or stainless steel, optional. double-flange casing shall be provided when coils are specified as vertical stacking.
- B. Standard coil intermediate tube sheets (center tube supports) shall be fabricated from the same gauge sheet stock and material as the end plates, and to the following schedule:

| FINNED LENGTH<br>(INCHES) | NUMBER OF TUBE<br>SHEETS |
|---------------------------|--------------------------|
| 6.00 – 48.00              | 0                        |
| 48.01 – 96.00             | 1                        |
| 96.01 – 144.00            | 2                        |
| 144.01 AND GREATER        | 4                        |

**PART 3 - EXECUTION**

**3.01 INSTALLATION**

- A. Coils to be installed in accordance with manufacturer's instructions and any applicable piping codes.

**3.02 LEAD TIME**

- A. Standard lead-time for custom made retrofit fluid coils of standard construction with OEM circuiting shall be 11-15 working days, with reduced lead-time emergency shipment options of 10 working days and 5 working days from order placement date and based upon production approval.
- B. Standard lead-time for custom made fluid coils of manufacturer's own standard design and circuiting shall be 10 working days, with reduced lead-time emergency shipment options for 5 working days, 48-hours and 24-hours from order placement date.
- C. All coils shall be quoted and offered as FOB Factory, Full Freight Allowed to any and all destinations within the Continental United States.

**END OF SECTION 238216**

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. Fan Coils
  - 1. Direct-Driven Air Handling Units - 0.8 square feet to 3.2 square feet of coil face area.

## 1.02 REFERENCES

- A. ANSI/NFPA 70 - National Electrical Code.
- B. NFPA 90 A & B - Installation of Air Conditioning and Ventilation Systems and Installation of Warm Air Heating and Air Conditioning Systems.
- C. UL 94 - Tests for Flammability of Plastic Materials for Parts in Devices and Appliances.
- D. AHRI 350- Standard for Sound Rating of Non-Ducted Indoor Air-Conditioning Equipment.
- E. ANSI S12.32 - Precision methods for the determination of sound power levels of discrete-frequency and narrow-band noise sources in reverberation rooms.
- F. ASHRAE Standard 62-89R - Ventilation for acceptable indoor air quality.
- G. UL 181 - Factory Made Air Ducts and Connectors.

## 1.03 QUALITY ASSURANCE

- A. Unit designed and tested in compliance with AHRI 260.

## 1.04 SUBMITTALS

- A. Submit unit performance data including: capacity, nominal operating performance and electrical consumption.
- B. Submit Mechanical Specifications for unit and accessories describing construction, components and options.
- C. Submit shop drawings indicating overall dimensions as well as installation, operation and service clearances. Indicate lift points and recommendations and center of gravity. Indicate unit shipping, installation and operating weights including dimensions.
- D. Submit data on electrical requirements. Include safety and start-up instructions.

## 1.05 REGULATORY REQUIREMENTS

- A. Units must be UL listed as a Fan-Coil Unit and meet UL 883 - Fan-Coil Units Standard for Safety requirements, and UL 94 - Tests for Flammability of Plastic Materials for Parts in Devices and Appliances.
- B. In the event the unit is not UL/CUL or ETL approved, the contractor shall, at his expense provide for a field inspection by a UL/CUL representative to verify conformance. If necessary, contractor shall perform modifications to the unit to comply with UL/CUL or ETL as directed by the representative, at no additional expense to the Owner.
- C. Manufacturers must participate in the AHRI Certification program. Unit performance data must be rated in accordance with AHRI Standard 440, and must display the AHRI Symbol on all

standard units. If a manufacturer does not participate in the AHRI Certification program, specified equipment must be witnessed by the engineer to meet the criteria of the specification.

- D. Conform to UL1995 for internal wiring of factory-wired equipment.

#### 1.06 DELIVERY, STORAGE, AND HANDLING

- A. Comply with manufacturer's installation instructions for rigging, unloading, and transporting units.
- B. Units shall ship fully assembled.
- C. Store in a clean dry place and protect from weather and construction traffic. Handle carefully to avoid damage to components, enclosures, and finish.
- D. Deliver units to site with factory mounted piping package. If piping package is not factory installed, contractor shall be responsible for all expenses associated with installation, and leak testing the assembly.

#### 1.07 START-UP AND OPERATING REQUIREMENTS

- A. Do not operate units for any purpose, temporary or permanent, until ductwork is clean, filters in place, condensate properly trapped, piping connections verified and leak-tested, all shipping braces removed, and fan has been test run under observation.
- B. Include manufacturers' descriptive literature, operating instructions, installation instructions, maintenance and repair data, including filter replacement.

#### 1.08 WARRANTY

- A. The equipment purchaser shall be provided, at no additional cost, a standard parts warranty that covers a period of one year from unit start-up or 18 months from shipment, whichever occurs first. This warrants that all products are free from defects in material and workmanship and have capacities and ratings set forth in the equipment manufacturer's catalog and bulletins.
- B. Provide labor warranty for one year.

### PART 2 - PRODUCTS

#### 2.01 SUMMARY

- A. The contractor shall furnish and install units as shown and scheduled in the plans. The units shall be installed in accordance with this specification and produce the specified performance in accordance with AHRI Standard 550/590-98.
- B. Base bid shall be a Sterling unit with approved alternates being Trane, Carrier and York. Alternates must comply with the performance and features called for in this specification. Job awarded on basis of specified unit. Alternates will be considered after the job is awarded.
- C. Manufacturer must clearly define any exceptions made to Plans and Specifications. Any deviations in layout or arrangement shall be submitted to engineer prior to bid date for approval. Mechanical Contractor is responsible for expenses that occur due to exceptions made.

#### 2.02 GENERAL UNIT DESCRIPTION

- A. Coils

1. Evenly spaced aluminum fins mechanically bonded to 3/8 inch OD minimum copper tubes, designed for 300 psi and 200 degrees F.
  2. A changeover sensor shall be provided for operation of a coil for both hydronic cooling and hydronic heating.
- B. Chassis and Cabinet:
1. Concealed: construction shall be minimum 18 gauge for framing, top panels, and side panels with all rounded edges on exposed corners.
  2. Vertical Cabinet: construction shall be minimum 16 gauge for the front panel and 18 gauge for framing, top panels, and side panels with all rounded edges on exposed corners.
  3. Recessed / Horizontal Cabinet: construction shall be minimum 18 gauge for the front/top/bottom panels, side panels and framing with all rounded edges on exposed corners.
  4. Discharge Arrangements:
    - a. Vertical concealed units shall have front toe space inlet and top duct collar outlet.
    - b. Vertical cabinet units shall have front bar grille inlet and top quad grille outlet.
    - c. Horizontal cabinet units shall have bottom stamped louver inlet and front bar grille outlet.
    - d. Horizontal recessed units shall have bottom stamped louver inlet.
    - e. Vertical recessed units shall have front stamped louver inlet and front stamped louver outlet.
  5. Vertical cabinet units shall have leveling feet.
  6. Cabinet and recessed units shall have a minimum of 14-inches available for the piping end pocket of the unit.
  7. Cabinet and recessed units shall key-operated locking access doors.
  8. Vertical cabinet units shall have 2" to 7" sub-bases constructed of 18 gauge steel and painted the same finish as the base of the unit.
  9. Vertical cabinet units shall have a 2" to 8" false back constructed of minimum 18 gauge steel and painted the same finish as the unit.
  10. Cabinet units shall have a recessing flange constructed of 18 gauge steel and painted the same finish as the unit.
- C. Cabinet Insulation:
1. Acceptable cabinet insulation shall include:
    - a. Closed cell insulation or foil-faced insulation shall be the only acceptable material for insulating in accordance with ASHRAE 62-89R. Matted or fiber-glass insulation of any type is not acceptable.
    - b. Insulation shall meet UL rating 94-5v for fire hazard classification which satisfies flame and smoke safety requirements.
    - c. The exposed side shall be high density erosion proof material suitable for use in airstreams up to 4500 FPM.
- D. Finish: Factory applied baked powder coat on visible surfaces of cabinet. Non-lead based paint must be used. To maintain a better long term appearance all bases, top control doors and grilles shall be black.
- E. Fans: Centrifugal forward-curved double-width, double-inlet corrosion resistant wheels, statically and dynamically balanced, direct driven. Fans shall be constructed of metal with metal housing for long-term high reliability and shall be in the blow through configuration.
- F. Motor: All motors shall be Brushless DC (BLDC)/Electronically Commutated Motors (ECM) factory programmed and run tested in assembled units.
1. The motor controller shall be mounted in a touch-safe control box with a built in integrated user interface and LED tachometer.

2. If adjustments are needed, changes to the motor parameters shall be made through the use of momentary contact switches accessible on the motor control board and adjustable without the need for factory service personnel.
  3. Motors shall have a soft ramp between speed changes to minimize the acoustical impact due to speed changes.
  4. Motors shall be operated at three speeds or with a field supplied variable speed controller. The motor will choose the highest will choose the highest speed, if there are simultaneous/conflicting speed requests.
  5. All motors shall have integral thermal overload protection with a maximum ambient operating temperature of 104F and shall be permanently lubricated.
  6. Motors shall be capable of starting at 50 percent of rated voltage and operated at 90 percent of rated voltage on all speed settings.
  7. Motors shall operate up to 10 percent over-voltage.
- G. Fan Speed Control: wall mounted or unit mounted fan speed controller will provide an interface to factory wiring, including variable speed/High-Medium-Low (HML) control. The control box will contain a line voltage to 24-volt transformer and ECM motor controller.
1. A unit mounted fan speed switch will be factory wired and electrically tested.
  2. The fan speed switch shall open a factory-installed outside air damper when a fan speed is selected, and close the outside damper when the fan speed switch is in the OFF position.
- H. Valve cycling control: The fan shall run continuously at the selected speed setting and the control valve shall cycle automatically to satisfy setpoint temperature setting. The unit controls shall be controlled by 24 volt relays and a factory-wired transformer.
- I. Controller Interface: An interface shall be provided to interface to a third party controller.
1. The control box contains:
    - a. Relay board
    - b. Line voltage to 24-volt transformer
    - c. Quiet contactors (for electric heat)
  2. All end devices shall be wired to a low voltage terminal block and run tested.
  3. When normally open valves are selected, inverting relays shall be provided for use with standard thermostats.
- J. DDC Control: The Application Specific Controller (ASC) shall allow the control valve or staged electric heat and 3-speed fan to work cooperatively to meet precise capacity requirements, while minimizing fan speed and valve position. The ASC shall be computer-commissioned and tested before shipping from the unit factory. The controller shall be used as a stand-alone application or with a compatible building automation system. The application specific controller shall be factory mounted by the unit manufacturer and shall meet the following "Standard - Open" LonMark Protocol:
1. Unit Mounted Controller Standard Interoperability
    - a. Unit Fan Coil Controllers shall reside on the LonTalk FTT-10a network, and provide data using LonMark standard network variable types and configuration properties.
    - b. Unit Fan-Coil Controllers shall support the LonMark Space Comfort Controller functional profile. The terminal unit controller supplier shall provide a list confirming their support for all mandatory data, and identify which optional network variables and configuration properties they support. Any vendor-defined network variables or configuration properties shall be described via an XIF file supplied with the product.
- K. Filter: Easily removable 1-inch, located before the coil.
- L. Tamperproof Locks: Fan coil units shall be provided with key operated locks on control access door. Filter section shall be removable without front panel removal.

## 2.03 APPROVED MANUFACTURERS:

- A. Modine
- B. Sterling
- C. Trane
- D. Approved Equal

## PART 3 - EXECUTION

## 3.01 EXAMINATION

- A. Verify that surfaces are ready to receive work and opening dimensions are as specified.
- B. Verify that required utilities are available, in proper location, and ready for use.
- C. Beginning of installation means installer accepts existing surfaces.

## 3.02 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Install fan coil units as indicated. Coordinate to assure correct recess size for recessed units.
- C. Protect units with protective covers during balance of construction.
- D. Contractor is responsible for providing hydronic units with shut-off valve on supply and lockshield balancing valve on return piping, as well as float operated automatic air vents with stop valve.
- E. Furnish copy of manufacturer's wiring diagram submittal. Verify that electrical wiring installation is in accordance with manufacturer's submittals and installation requirements of Division 26 sections.

## 3.03 CLEANING

- A. Clean work.
- B. After construction is completed, including painting, clean exposed surfaces of units. Vacuum clean coils and inside of cabinets.
- C. Touch-up marred or scratched surfaces of factory-finished cabinets, using finish materials available from manufacturer.
- D. Contractor shall clean the coil and remove, clean, and reinstall the drain pan prior to turnover of the project. A signed certificate or inspection by facility engineer is required prior to final contract payment is made.
- E. Install new filters.

**END OF SECTION 238219**

## PART 1 - GENERAL

## 1.01 RELATED WORK SPECIFIED ELSEWHERE

- A. Section 232000: Pipe, Valves, and Fittings.

## 1.02 SUBMITTALS

- A. Product Data:
  - 1. Manufacturer's catalog sheets, brochures, performance charts, standard finish chart, specifications and installation instructions for each item specified.
  - 2. Schedule: Itemize pipe or tube size and material, fin size and material, fin thickness, fin spacing per linear foot, actual finned length of each element, number of rows of element and rating in Btuh per linear foot of finned element (single or double row) and location of installation (room or space number).

## 1.03 PRODUCT DELIVERY

- A. Deliver equipment in original shipping containers, properly labeled as to type, size and finish.

## 1.04 MAINTENANCE

- A. Special Tools: One tool for each type and size vandal resistant fastener.

## PART 2 - PRODUCTS

## 2.01 - HOT WATER CONVECTORS

- A. Cover Assembly
  - 1. Furnish and install 350 Series model 351-14 baseboard cover assembly as manufactured by Slant/Fin Corp., consisting of one-piece, back and top panel, and one-piece front panel, formed of cold rolled steel. Bottom and top edges of back panel shall be formed to provide channels along entire length, to receive full-height support brackets. Brackets shall be die-formed of electro galvanized cold rolled steel, for rigid bracing and spring locking. Slide-action expansion cradles, formed of polypropylene, shall be inserted between heating element and support bracket. Cradles shall protect element bottom and sides from contact with brackets or cover, confining element to free lateral expansion for noiseless operation. All cover components with a 19-gauge front cover shall be painted in Nu-White thermosetting polyester enamel and all cover components with a 16-gauge front cover shall have a galvanized finish.
- B. H-1 Element
  - 1. Furnish and install H-1 baseboard heating element as manufactured by Slant/Fin Corp. consisting of 3/4" nominal copper tubing, with 3" x 3-1/4" x .024" aluminum fins, spaced 48 per linear foot. The tubing shall not be weakened by expansion in process of manufacture, but shall be forced through undersized fin holes to obtain a force-fit mechanical bond. A flange with four teeth shall be formed on each fin to increase thermal contact and to space and lock the fins uniformly in place. One end of each element tube shall be expanded to receive the unexpanded end of another, without couplings.

## PART 3 - EXECUTION

## 3.01 INSTALLATION

- A. Install the Work of this Section in accordance with the manufacturer's printed instructions unless otherwise shown or specified.

- B. Secure convector radiator enclosures to masonry wall construction with expansion shields and bolts, of size in number and on centers as recommended by the manufacturer.
- C. Install convector with air vents, isolation valves, and a balancing valve.
- D. Install access panels for each control, shutoff, and balancing valve installed in enclosure.

**END OF SECTION 238236**

## PART 1 - GENERAL

## 1.01 DESCRIPTION OF WORK

- A. Electric Wall Heaters.

## 1.02 REFERENCES

- A. Electric unit heaters shall meet the requirements of the National Electric Code (NEC) and shall be UL listed.

## 1.03 SUBMITTALS

- A. Submit under provisions of Section 013300 - SUBMITTALS.
- B. Submit manufacturer's product data and installation instructions to Engineer.
- C. Submittal data shall include capacity and size of each heater and wiring instructions.

## PART 2 - PRODUCTS

## 2.01 ELECTRIC WALL HEATERS

- A. Electric unit heater shall be Model AWF1501T as manufactured by Stelpro or approved equal. The heaters shall be UL listed and be designed for wall, recess, or surface mounting. Refer to equipment schedule for mounting type.
- B. Heater Assembly: The heater assembly shall consist of a fan panel upon which is mounted all of the operational parts of the heater.
- C. Heating Element: The heating element shall be of non-glowing design consisting of an 50/20 nickel chromium resistance wire enclosed in a steel sheath to which plate fins are copper brazed. It shall be warranted for 5 years.
- D. Fan and Fan Motor: The fan shall be five-bladed aluminum. The fan motor shall be totally enclosed.
- E. Fan Delay Switch: Fan control shall be of bi-metallic, snap action type, and shall activate fan after heating element reaches operating temperature. The fan shall continue to operate after the thermostat is satisfied and until the heating element is cool.
- F. Thermostat: The tamper-proof thermostat shall be of the bi-metallic, snap-action type with enclosed contacts. It shall be completely concealed behind the front cover to become tamper proof.
- G. Thermal Cutout: A thermal cutout shall be built into the system to shut off the heater in the event of over-heating.
- H. Disconnect Switch: A double-pole single throw disconnect switch shall be mounted on the back box for positive disconnect of power supply. It will be completely concealed behind the front grid panel.
- I. Back Box: The back box shall be designed for duty as a recessed rough-in box in either masonry or frame installations and for use with a surface mounting frame in surface mounting installations. The back box shall be 20-gauge galvanized steel and shall contain knockouts through which power leads are brought.

- J. Front Panel: The front panel shall be of the bar grille type and shall be constructed of 16 gauge cold rolled steel, welded into a uniform grille and finished in baked enamel to direct the warmed air toward the floor. The front grille shall be surrounded by a decorative satin-finish aluminum frame.
- K. Provide other accessories as described on the contract drawings.

### PART 3 - EXECUTION

#### 3.01 INSTALLATION

- A. Install unit in accordance with manufacturer's published installation instructions.
- B. Do not install horizontal unit heaters closer than 12 inches to combustible materials in any direction.
- C. Do not install vertical unit heaters closer than 18 inches from ceiling and 24 inches horizontally from combustible materials in any direction. The bottom of the unit must be a minimum of 8 feet above the floor.

**END OF SECTION 238239**

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. Unit Heaters.

## 1.02 RELATED SECTIONS

- A. Section 232007 - Piping Specialties
- B. Section 232001 - Pipes, Valves and Fittings
- C. Section 230993 - Sequence of Operations
- D. Section 230594 - Balancing of Air and Hydronic Systems

## 1.03 SUBMITTALS

- A. Product Data
- B. Submit manufacturer's catalog sheets, brochures, performance charts, specifications and installation instructions.
- C. Maintenance Data
- D. Submit maintenance instructions and spare parts lists. Include this data, product data, shop drawings and schedule in maintenance manuals in accordance with Division 1.

## 1.04 QUALITY ASSURANCE

- A. Manufacturer's Qualifications
- B. Firms regularly engaged in manufacture of unit heaters, of types and sizes required, whose products have been in satisfactory use in similar service for not less than five (5) years.

## 1.05 DELIVERY, STORAGE, AND HANDLING

- A. Unit heaters shall be shipped from the factory in suitable protective covering. Store unit heaters and components in clean dry place. Protect from weather, fumes, water, construction debris, and physical damage.

## PART 2 - PRODUCTS

## 2.01 UNIT HEATER

- A. Unit heater shall consist of an enclosed, extended-surface heating element with propeller-type fan, with capacity and electrical characteristics as shown on the drawings. The entire unit and controls shall be UL-labeled. Heater shall be mounted with threaded rod, unless directed otherwise by manufacturer, and be suitable for mounting with horizontal air discharge.
- B. Hot Water Coil: Extended surface type, utilizing aluminum fins and DLP-type copper tubes with cast bronze supply and return connections. Coils shall be of serpentine design with horizontal tubes, vertical fins, and center supply and return connections. All tube bends shall be brazed. Tubes shall be mechanically bonded to the collars of the fins. Coils shall be capable of operating at hot water pressures and temperatures of 150 psig and 375 deg F.

- C. Fan: Direct drive propeller type, statically and dynamically balanced, with fan guard/motor mounting bracket; horizontal models with permanently lubricated sleeve bearings. Aluminum construction secured to a steel hub.
- D. Cabinet shall be minimum 20 gauge steel treated to prevent corrosion and painted with a corrosion resistant, high solids gray-green finish. Casing top shall be provided with threaded rod connections for hanger rods, except models to be directly mounted to the supply and return piping as suggested by the manufacturer. Provide horizontal and vertical louvers on the discharge for direction of the air.

## 2.02 CONTROLS

- A. Controls shall consist of a wall-mounted, line voltage thermostat, with protective cover and lock. See section 230993 for sequence of operation.

## 2.03 ACCESSORIES REQUIRED (PROPELLER TYPE)

- A. Accessories required are as follows:
  - 1. Thermostats as required. Some thermostats will control (multiple) unit heaters. Refer to the contract drawings for the required number of thermostats.
  - 2. Galvanized Support brackets.

## 2.04 ACCEPTABLE MANUFACTURERS

- A. Unit heater shall be the make and model number shown on the drawings or equivalent products by:
  - 1. Modine
  - 2. Sterling
  - 3. Trane
  - 4. Approved Equal

## PART 3 - EXECUTION

### 3.01 INSTALLATION

- A. Install unit heaters using threaded rod, sized according to unit tappings. Secure to structural support as required.
- B. Install the unit heaters in the locations shown on the contract drawings.
- C. Make electrical connections for power and controls as required by code. Refer to the Sequence of Operation in Section 230993.
- D. Check the unit heater for proper operation, including safety controls.

## END OF SECTION 238239.12

## PART 1 - GENERAL

## 1.01 RELATED WORK SPECIFIED ELSEWHERE

- A. Section 232000: Pipe, Valves, and Fittings.

## 1.02 SUBMITTALS

- A. Product Data:
  - 1. Manufacturer's catalog sheets, brochures, performance charts, standard finish chart, specifications and installation instructions for each item specified.
  - 2. Schedule: Itemize burner section, length of each heater section, flue piping, and any other options.

## 1.03 PRODUCT DELIVERY

- A. Deliver equipment in original shipping containers, properly labeled as to type, size and finish.

## 1.04 MAINTENANCE

- A. Special Tools: Provide any special tools required for maintenance.

## PART 2 - PRODUCTS

## 2.01 - POSITIVE PRESSURE RADIANT HEATERS

- A. Provide model VPS gas-fired tubular radiant heaters. The heaters shall be model VPS/VPT, radiant tubular heating system with a power burner housed on a burner/control box firing into a 4" diameter combustion chamber tube. The burner/control box and tubular system shall be designed for horizontal suspension.
- B. Units shall be (80) MBH capacity, and shall be equipped for use with natural gas (supplied with propane conversion kit) with 115/1/60 supply voltage.
- C. Unit shall include a single-stage gas valve and a single-speed combustion fan. The burner control system shall have a 24-volt transformer; a multi-try direct spark ignition with soft lockout; single-stage combination gas valve; LED diagnostic light; power "ON" indicator light; a power burner with pre-purge and post purge; and a differential air pressure switch to monitor combustion air. Gas connection to the unit must be with approved flexible connector.
- D. The tubular system shall include Calcoat and rolled steel tubes. Tubes will be connected to each other with rolled steel couplings.
- E. System shall also include aluminized steel (400 series stainless steel) overlapping reflectors with reflector retainers, and end covers).
- F. The entire system will be suspended with aluminized steel suspension hangers, chain, and "S" hooks. System will be leveled by use of standard turnbuckle kits.
- G. Heater may be vented horizontally or vertically and may operate on inside combustion air. Reflectors may be positioned from horizontal to 55 degree angle.
- H. These units must be aproved for us in the United States and Canada. The manufacturer shall provide a 5-year limited warranty on the burner and all electrical and mechanical operating components and a 10-year limited warranty on the tubes, minimum.

PART 3 - EXECUTION

3.01 INSTALLATION

- A. Install the Work of this Section in accordance with the manufacturer's printed instructions unless otherwise shown or specified.
- B. Install access panels for each control, shutoff, and balancing valve installed in enclosure.

**END OF SECTION 238300**

## PART 1 - GENERAL

## 1.01 DESCRIPTION OF WORK

- A. Provide all labor, materials, and equipment as necessary to complete work as indicated on the Drawings and as specified herein. Section includes:
  - 1. Snow-Melting System Components
  - 2. Snow Melt Manifold Enclosures
  - 3. Snow Melt Slab Insulation

## 1.02 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.
- B. Section 079201 - Non-Fire Rated Sleeves and Seals
- C. Section 230529 - Pipe Hangers and Supports
- D. Section 230555 - Mechanical System Identification
- E. Section 230594 - Balancing of Air and Hydronic Systems
- F. Section 230700 - Pipe Insulation
- G. Section 232000 - Pipe, Valves, and Fittings
- H. Section 235216 - Fire Tube Condensing Boiler

## 1.03 REFERENCES

- A. ASHRAE Handbook - 2003 HVAC Applications, Snow Melting and Freeze Protection.

## 1.04 SYSTEM DESCRIPTION

- A. System shall be of hydronic type, field-assembled components including snow melt tubing and direct buried distribution piping. System shall consist of boiler, injection pump, zone circulation pumps, expansion tank, air separator, hydraulic separator, temperature and pressure gauges, balancing valves, valves and fittings, glycol feed unit, manifolds and fittings, direct buried supply mains (refer to drawings) distribution loops, and controls.

## 1.05 SNOW MELT SYSTEM DESIGN CRITERIA

- A. Snow Melt System design criteria/parameters:
  - 1. HWH Supply Temperature                      Max. 123.6°F
  - 2. Working Fluid                                      100% Water
  - 3. Heat Source - Boiler Plant                      228,627 BTU/Hr (Output)

## 1.06 EQUIPMENT AND SERVICES TO BE PROVIDED BY VENDOR

- A. Equipment:
  - 1. The Vendor shall design, supply, deliver, supervise installation (as described here-in), startup, balance and test the snow melt system, as rated and guaranteed in accordance with this Specification and as shown on the accompanying Drawings. The system shall consist of:

- a. Insulated zone distribution piping (direct buried). Above ground distribution piping to be provided by contract 'H' per section 230700 and 232000.
  - b. Manifolds with all fittings, valves, test-kit, etc. as required for a fully functioning system.
  - c. Snow melt tubing, un-coiler, tube cutter, tube installation tool, fixing wire, etc. as required to properly install tubing and piping per vendor specifications.
  - d. Slab and air temperature sensors, humidity sensors, snow/ice sensor.
- B. Services to be provided by the Vendor shall consist in general of the following:
1. Delivery of equipment specified.
  2. Preparation of shop drawings for equipment specified.
  3. Preparation of operations and maintenance manuals.
  4. Design, purchase, fabricate, assemble, and integrate components as described herein.
  5. Furnish and deliver ancillary components to the site for field installation.
  6. Startup of equipment and other items as indicated in this specification and attached drawings.
  7. Train Owner's personnel in equipment operation and maintenance.

#### 1.07 EQUIPMENT AND SERVICE BY OTHERS

- A. The following work shall be performed by other trades (part of project - work to be provided by GC). Vendor shall provide supervision, inspection of installed systems, and technical assistance.
1. Offloading of equipment
  2. Rigging, assembly and erection of equipment
  3. External power supply wiring to equipment (by electrical contractor)
  4. Snow melt manifold safety barrier (size requirements to be specified by snow melt system supplier)
  5. Building floor cutting, pipe sleeves and tubing conduits at slab and foundation wall penetrations.
  6. Site preparation (excavation, compacting of soil, rebar, concrete work, paving, etc.)
  7. Slab insulation, expansion joint sleeves, etc.
  8. Installation/construction of:
    - a. Installation of snow melt tubing
  9. Installation and wiring of field instrumentation and control valves (by controls contractor)
  10. Connection to facility controls, data/communications, security and fire alarms

#### 1.08 SUBMITTALS

- A. Shop Drawings for Snow Melt System: Include outdoor manifolds (and minimum dimensions for manifold vaults), PEX tubing, sensor socket and sensor, performance data, components and accessories, wiring diagrams, dimensions, weights and loadings, field connections, installation details for PEX tubing, and required clearances.
- B. Test Reports: Include operating test data submitted by the manufacturer's field service representative.
- C. Operation and Maintenance Data: Include approved selection data, start-up instructions, maintenance data, part lists, accessories, control and wiring diagrams, and test reports.
- D. Shop Drawings
1. Where deviations from the Drawings and Specifications are proposed for any reason, submit shop drawings identifying proposed deviations showing layout of all piping, fittings, materials, dimensions, and fabrication and installation details. Submit a comparison table

of the specified features and ratings of the specified item and those of the proposed deviation to allow a direct comparison.

2. The review of deviations will be for pressure drop only. The review will not address clearances or accessibility. No dimensional or coordination check will be made.
3. The Contractor has the sole responsibility to review the Drawings, coordinate piping fabrication, and provide clearances and access for installation, maintenance and balancing of this Work, and Work of other trades. Unless specifically dimensioned, Drawings indicate approximate locations only. The Contractor has the sole responsibility to locate and route the piping.
4. Submit all layout shop drawings on not less than ¼ inch equals 1 foot scale drawings.

#### 1.09 START-UP AND OPERATING REQUIREMENTS

- A. Do not operate system for any purpose, temporary or permanent, until piping connections have been verified, piping has been flushed, cleaned and pressure tested.

#### 1.10 QUALITY ASSURANCE

- A. Codes and Standards
  1. MMC 2003
  2. ASHRAE 90.1
  3. ASTM F876, "Standard Specification for Crosslinked Polyethylene (PEX) Tubing".

#### 1.11 WARRANTY

- A. Manufacturer shall furnish, at the completion of installation, as described herein, a Certificate of Inspection signed by his authorized representative. The minimum five (5) year system warranty shall be provided to the Owner by the Contractor.

### PART 2 - PRODUCTS

#### 2.01 ACCEPTABLE MANUFACTURERS

- A. Acceptable manufacturers of snow melt systems are:
  1. Wirsbo / Uponor
  2. Heat Link
  3. Snow Technology, Inc.

#### 2.02 PIPES, TUBING AND FITTINGS

- A. Underground distribution loop shall be cross-linked polyethylene, PEX-A with an oxygen diffusion barrier, rated at minimum 180 deg. F. and 100 psi working pressure, conform to ASTM standards F876/F877, and marked "SNOW MELT SYSTEM". Minimum tubing size is 5/8" nominal ID. Tubing shall have a minimum bend radius of not more than six times the tubing OD at 68 degree F. Tubing shall be UV stabilized. Approved Manufacturer: UPONOR he PEX plus, or approved equal.
  1. Tubing shall carry a twenty-five (25) year warranty. Warranty to be included with submittals.
- B. Underground piping mains shall be pre-insulated PEX pipe. System shall consist of PEX pipe with an oxygen diffusion barrier, CFC free PEX closed cell foam insulation, and a corrugated twin wall HDPE protective sheath. Provide brass PEX compression x MPT adapters as necessary. Installer shall provide additional brass fittings as necessary for a complete system. Approved Manufacturer: ECOFLEX TWIN THERMAL pre-insulated pipe with jacket, or approved equal.

- C. Mains above ground shall be Type L copper. See Section 232000 "Pipes, Valves, and Fittings"
- D. Distribution manifolds shall be constructed of copper, or approved equal. Provide isolation ball valves and thermometers in both the supply and return. Manifolds shall be compatible with tubing and shall have end caps tapped for manual air vents and a drain valve. Provide mini ball valves with PEX compression fittings for each loop for isolation and balancing. Installer shall provide a ball valve and circuit balancing valve with full shutoff capability for each manifold set.

### 2.03 MISCELLANEOUS EQUIPMENT/INSTRUMENTS/DEVICES

- A. A. Provide all ancillary components shown on drawings, flow diagrams or as necessary for a complete, fully functioning system, including balancing valves, isolation valves, multi-purpose (isolation & balancing) valves, pressure gauges, temperature gauges, temperature sensors, etc.

### 2.04 CONTROLS

- A. Provide a central control panel with touch screen user interface, housing all controllers as required to control and interlock boiler, pumps, and zone controls for a completely automatic functioning system. Control panel shall be provided with a lockable disconnect switch in a wall mountable (minimum NEMA 12) enclosure. All field wiring for instrumentation or control shall be wired to this panel for all system inputs and control outputs. Control panel shall require a single 120VAC power feeder. All step-down transformers/power supplies shall be included in the control panel for all field devices. Pump motors and boilers shall have separate individual power feeders and noted on equipment schedules.
- B. Control shall include slab sensors, snow/ice sensor, outdoor temperature sensor, supply and return glycol temperature sensors, overheat protection, and control valves as required. System shall be turned on and off automatically. An HOA switch shall be provided for each zone in order to select each zone to operate in 'Auto' mode, 'Hand' mode (manually enabled) or 'Off' (manually disabled).
- C. Snow/ice melting control shall regulate the rate at which heat is transferred into a snow melting slab, and determine the required supply glycol temperature from measurement of the slab temperature. Modulation of the heat delivery shall be accomplished by the heat injection pump. Snow/ice detector shall activate the snow/ice melting control upon the detection of snow/ice formation on the snow melting slab.
- D. Microprocessor-based snow/ice melting controller shall be provided that:
  - 1. Will indicate a general fault via a flashing red light at the main snow melt panel.
  - 2. Has built-in hardware interface capable to communicate via BAC-Net protocol meeting the latest ISO 16484-5 standard for future remote monitoring and basic control (on/off/override) of the snow melt system main controls. Programming and communication cabling will be performed at a future date. Only the physical communications interface hardware is required at this time.
- E. Preliminary Control Sequence Minimum Requirements. The controller shall be capable of the following control sequences/parameters. All parameters shall be user adjustable with appropriate password protection. All parameters shall be programmable at the local control panel. The noted parameters / status items shall be available for remote control/monitoring upon installation of future BACnet communications.
  - 1. Slab Protection (Delta T Max) - maximum temperature at cold start.
  - 2. Viscosity Compensation (Alt. Temp. Delta T Max) - Max temperature overshoot during warm up.
  - 3. Run Time - time delay for system shut down once slab temperature setpoint is achieved.
  - 4. Warm weather shut down temperature.

5. Cold weather cut out - shuts down the system in extremely cold temperatures.
6. Start-up idle temperature
7. Slab target temperature
8. Additional melt timer
9. Purge timer
10. Precipitation sensor calibration
11. Auto / Manual / Local / Remote Enable (local and remote capable)

F. Control Manufacturer: TACO iWORX, GREEN-LINK, or approved equal.

## 2.05 SLAB INSULATION

- A. A. Insulation shall be provided below the snow melt slab areas to provide thermal insulation between the heated slab and the sub-grade, sub-soil, aggregate base course, etc.
- B. B. Provide Extruded Polystyrene Insulation board, installed per manufacturer's instructions as follows:
  1. Standard Duty Concrete Sidewalks: ASTM C578 Type VI, 40 PSI min. compressive strength.
  2. Heavy Duty Concrete Pavement: ASTM C578 Type V, 100 PSI min. compressive strength.
- C. C. Insulation shall be Owens Corning FOAMULAR, DOW Styrofoam, or approved equal.

## PART 3 - EXECUTION

### 3.01 INSTALLATION

- A. Slab Preparation and Snow Melt System
  1. A complete snow melt system including tubing loop, manifolds, fittings, and sensors shall be installed in accordance with the manufacturers' recommendations. The Contractor shall follow the Shop Drawings for tube layout, tube spacing, and manifold and sensor locations.
  2. Stamp "Snow Melt System" all along the edge of the heated surface. Review layout with Project Representative prior to stamping.
  3. Distribution manifolds, attached to supply and return mains, shall be located inside a yard box adjacent to the heated slab section, as shown on drawings.
  4. A minimum of one supply and one return manifold is required for each zone as shown on drawings. Locate main piping under the walk as much as possible. Main piping located outside the walk shall be at least 36" below ground, and shall be protected by indicator warning tape. Provide flow balance for entire system.
  5. Reinforcing steel (6 x 6 - W1.4 x W1.4 minimum) shall be furnished by the Contractor and supported as required over entire heated area. All areas where snow melt system is to be installed shall have the required preparation including grading, compaction and under-slab insulation completely installed.
  6. 5/8"- inch pipe circuits shall be attached to reinforcing steel on 9" centers using 12 inch minimum return bends without fittings. All circuits shall be approximately 100 feet in length and form a continuous conduit without joints from supply to return manifolds. Maximum loop length shall not exceed 300 ft. All loops shall be of similar length with no more than +/- 10% variation from average loop length.
  7. Pipe circuits shall be embedded in concrete at specified depth. All pipe connections, fittings and distribution manifolds shall be free of concrete and arranged so as to be easily serviced by removal of access box cover.
  8. Distribution loop shall be pressure tested with water or air in accordance with the manufacturer's recommendations prior to concrete cover. The system shall remain at this

pressure during the concrete installation and for a minimum of 24 hours thereafter to insure system integrity.

9. Outdoor sensor shall be installed on the north or west wall with shield.
10. Connections
  - a. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
  - b. Install piping adjacent to machine to allow service and maintenance.
  - c. Install pressure gages on pump suction and discharge, at integral pressure-gage tapping, or install single gage with multiple input selector valve.
  - d. Install electrical connections for power, controls, and devices.

### 3.02 FIELD QUALITY CONTROL

- A. Manufacturer shall provide inspection service and technical assistance for the installation:
  1. Site preparation
  2. Testing
  3. Start-up and balance
  4. Annual maintenance shall be available for inspection, adjustment and lubrication of system equipment.

**END OF SECTION 238318**

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. Excavation and backfill for electrical work.
- B. Primary power wiring and distribution system.
- C. Secondary power wiring and distribution system.
- D. Lighting, including lamps.
- E. Wiring devices.
- F. Electrical control systems and interlock wiring.
- G. Wiring for built-in equipment.
- H. Distribution panels and switches.
- I. Engine generator system and automatic transfer switch.

## 1.02 RELATED WORK

- A. Foundations and pads required for equipment furnished under this division of specifications.
- B. Field painting, except such painting as is required to maintain shop coat painting and factory finish painting.
- C. Flashing and sealing of conduits through outside walls.
- D. Cutting and patching for electrical work, except for errors and omissions under this Division.

## 1.03 QUALITY ASSURANCE

- A. It is understood that the rights and benefits given the Owner by the guarantees found in the technical specifications are in addition to and not in derogation of any rights or benefits found in the special and general provisions of the contract.
- B. Electrical equipment provided under this Division shall be turned over in operating condition. Instruction on further operation and maintenance shall be included in the operating and maintenance instructions.

## 1.04 REFERENCES

- A. Perform work in accordance with standards listed below. Where these specifications are more stringent, they take precedence. In case of conflict, obtain a decision from the Engineer.
  - 1. NFPA-70: National Electrical Code
  - 2. NFPA-101: Life Safety Code
  - 3. New York State Energy Code
  - 4. New York State Building Code
  - 5. Applicable New York State Administrative Code
  - 6. Applicable Town Ordinances.
  - 7. Electric utility rules and regulations.
  - 8. Telephone utility rules and regulations.

### 1.05 PERMITS AND FEES

- A. The Contractor shall obtain and pay for all permits, construction charges, fees, licenses, certificates, inspections and other use charges required in connection with the work.
- B. Such permits include, but are not limited to:
  - 1. Transportation and disposal of debris.
  - 2. Temporary Electrical Services and Permanent Electrical Service.
  - 3. Telephone Service.
  - 4. Electrical Inspectors, Inc., or a pre-approved electrical inspection agency.
  - 5. Road opening permits.

## PART 2 - PRODUCTS

### 2.01 MATERIALS AND EQUIPMENT

- A. All materials and equipment used in carrying out these specifications shall have UL listing and label. Specifications and drawings indicate name, type, or catalog numbers of materials and equipment to be used as standards. Proposals shall be based on these standards. Contractor may use materials and equipment equivalent to those specified, subject to Engineer's approval.

## PART 3 - EXECUTION

### 3.01 COORDINATION

- A. Carefully examine specifications, drawings and project site to be thoroughly familiar with items which require electrical connections and coordination. Electrical drawings are diagrammatic and shall not be scaled for exact sizes.
- B. Notify other Contractors of any deviations or special conditions necessary for the installation of work. Interferences between work of various contractors to be resolved prior to installation. Work installed not in compliance with specifications and drawings and without properly checking and coordinating as specified above shall, if necessary, be removed and properly reinstalled without additional cost to the Owner. Engineer to be mediating authority in all disputes arising on project.
- C. Equipment shall be installed in accordance with manufacturer's recommendation. Where conflicts occur between contract documents and these recommendations, a clarification shall be requested of the Engineer for decision before preceding with such work.
- D. Insofar as it is possible to determine in advance, advise masonry tradesmen to leave proper chases and openings. Place all outlets, anchors, sleeves, and supports prior to pouring concrete or installation of masonry work. Should the Contractor neglect doing this, any cutting and/or patching required to be done is at this Contractor's expense.

### 3.02 CUTTING AND PATCHING

- A. Repair or replace routine damage caused by cutting in performance of work under this Division.
- B. Correct unnecessary damage caused due to installation of electrical work, brought about through carelessness or lack of coordination.
- C. Holes cut through floor slabs to be core drilled with drill designed for this purpose. All openings, sleeves, and holes in slabs to be properly sealed, fire proofed and waterproofed.

- D. Repairs to be performed with materials which match existing materials and to be installed in accordance with appropriate sections of these specifications.

### 3.03 TESTS

- A. On completion of work, installation shall be completely operational and entirely free from ground, short circuits, and open circuits. Perform a thorough operational test in presence of the Engineer. Balance all circuits so that feeders to panels are not more than 10% out of balance between phases with all available load energized and operating. Furnish all labor, materials and instruments for above tests.
- B. Furnish Engineer with a copy of such tests including identification of each circuit and readings recorded, also the main service ground resistance test as described in Section 260526 of these specifications. Test information to include ampere readings of all panels and major circuit breakers, isolation resistance reading of motors and transformers.

### 3.04 IDENTIFICATION OF EQUIPMENT

- A. Properly identify the following:
  - 1. Distribution panels.
  - 2. Disconnect switches.
  - 3. Transfer switches.
  - 4. Individually mounted circuit breakers.
  - 5. Relays.
  - 6. Pilot lights and control switches.
  - 7. Service entrance equipment and main circuit breaker.
- B. Use permanently attached black phenolic plates with 1/4-inch white engraved lettering on the face of each, attached with two sheet metal screws.
- C. Panelboard identification plates shall indicate panel by name.

### 3.05 INSTALLATION

- A. The Contractor shall carefully move and replace existing equipment, appliances and all related items, as required to conduct proposed work.
- B. Install and conduct all work per applicable NEC, State and local codes.

**END OF SECTION 260000**

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. Wires and cables.
- B. In general, the wires and cables included under this Section shall include, but not be limited to, the following:
  - 1. 600V power and control cable
  - 2. Communication cables
- C. All conductors to be continuous from origin to panel or equipment termination without splices.

## 1.02 REFERENCES

- A. ANSI/NFPA 70 - National Electric Code.
- B. NECA Standard of Installations.

## 1.03 SUBMITTALS

- A. Submit product data under provisions of Section 013300.

## 1.04 QUALITY ASSURANCE

- A. Products used in the work of this Section shall be produced by manufacturers regularly engaged in the manufacturing, installing and servicing of similar items with a history of successful production acceptable to the Engineer as specified herein and in accordance with the General Conditions.
- B. Contractor shall submit the following information pertaining to the manufacturer(s):
  - 1. Complete literature, performance, and technical data describing the proposed equipment and listing of items made by the manufacturer.
  - 2. Location of closest service office from which this equipment shall be serviced.
  - 3. Location of closest parts inventory for item installation.

## 1.05 COORDINATION

- A. Coordination:
  - 1. Coordinate wire and cable required with the equipment being furnished by others for the satisfactory operation of the equipment or system.
  - 2. Review installation procedures under other sections and contracts and coordinate them with the work specified herein.
  - 3. Notify other prime contractors in advance of the installation of the work included to provide them with sufficient time for installation and coordination of interrelated items that are included in their contracts and that must be installed in conjunction with the work included in this Section.

## 1.06 PROJECT CONDITIONS

- A. Verify that embedded conduit, in masonry and concrete, is installed as shown on the Drawings prior to the work being enclosed by others.
- B. The Contractor shall be present at all concrete pours made by the General Contractor.
- C. Conductor sizes are based on copper at 75°C.

- D. Wire and cable routing shown on Drawings is approximate unless dimensioned or specifically called for such as where conduit is to be embedded in concrete or masonry. Route wire and cable as required to meet project conditions and shall be routed above ceilings, directly under joists, in pipe trenches, where available, and in masonry. Where exposed conduit is permitted, it shall be run to maximize wall space.
- E. Field verify destination location to determine cable routing.
- F. Where wire and cable routing is not shown for proposed destination, determine exact routing and lengths required. Routing shall be reviewed with the Engineer.

## PART 2 - PRODUCTS

### 2.01 CONDUCTORS

- A. Install products in accordance with manufacturer's recommendations.
- B. Single copper conductors with 600-volt insulation.
- C. Minimum size of feeder conductors and grounds shall be No. 12 AWG.
- D. Insulation: No. 12 AWG and No. 10 AWG, provide ANSI/NFPA 70, Type THWN-2.
- E. Use solid conductor for feeder and branch circuits, 10 AWG and smaller.
- F. All conductors shall include complete set of manufacturer's markings for insulation and conductor size.
- G. Manufacturers shall be ANACONDA, TRIANGLE, ROME, or approved equal.
- H. Provide white colored neutral conductors; provide black, color coded phase conductors; provide green colored ground conductors.

### 2.02 4-PAIR CATEGORY 6 UNSHIELDED TWISTED PAIR CABLE

- A. Manufacturers: Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
  - 1. Belden Corporation, Carmel, IN (800) 246-2673.
  - 2. Avaya, Basking Ridge, NJ (800) 344-02232.
  - 3. Berk-Tek, Incorporated, New Holland, PA (800) 237-5835.
  - 4. CommScope, Hickory, NC (800) 982-1708.
  - 5. Draka Comteq, Franklin, MA (888) 541-7100.
  - 6. General Cable, Highland Heights, KY (800) 424-5666.
  - 7. Mohawk/CDT Leominster, MA (978) 537 9961.
  - 8. NORDX/CDT, Worcester, MA (800) 331-0779.
  - 9. Superior Essex, Atlanta, GA. (800) 685-4887.
  - 10. Tyco Electronics, Harrisburg, PA (800) 522-6752.
- B. Conductors: 4 twisted pair - 24 AWG, solid copper w/ RJ-45 connector ends
  - 1. Individually insulated plenum rated conductors under common plenum rated sheath unless entire cable is installed within conduit/EMT or if area where cable is installed is not considered a return air plenum according to any applicable codes.
  - 2. Complies with individual characteristics established in ANSI/TIA/EIA-568-B, and all addendums for Category 6 cable performance specification.
  - 3. Overall Nominal Diameter: .365 x .165 in.

4. Nominal Impedance: 100 ohms plus or minus 15 percent.
  5. Certified capable of performing to minimum 350 MHz.
- C. Mechanical Characteristics
1. Operating temperature: -20°C to +80°C
  2. Bulk cable weight: 29 lbs./1000 ft.
  3. Maximum recommended pulling tension: 45 lbs.
  4. Minimum bend radius: 1 in.
- D. Flame test: UL1666 Riser
- E. Electrical Characteristics:
1. Nom. Mutual Capacitance @ 1 KHz 15.0 pF/ft
  2. Maximum Capacitance Unbalance (pF/100 m) 49.2 pF/100 m
  3. Nominal Velocity of Propagation 70 %
  4. Maximum Delay (ns/100 m) 510 @ 100MHz ns/100 m
  5. Maximum Delay Skew (ns/100m) 25 ns/100 m
  6. Maximum Conductor DC Resistance @ 20 Deg. C 9 Ohms/100 m
  7. Maximum DCR Unbalance @ 20 Deg. C 3 %
  8. Max. Operating Voltage - UL 300 V RMS

### 2.03 MECHANICAL CONNECTORS

- A. Conductor tapping connectors shall be BURNDY Servit split bolt, Series KS and KS3, or approved equal.
- B. Split bolt connectors shall use BURNDY Type SC Servit cover on indoor applications.
- C. Terminal lugs shall be BURNDY Universal Terminal Series. Terminal lugs shall be sized for proper ampacity and proper number of conductor holes. Each conductor shall occupy only one hole on a terminal lug.
- D. Conductor tapping connectors for multiple conductors shall be BURNDY Series V-Tap with V-Tap covers, and V-Blok mounting platforms.

## PART 3 - EXECUTION

### 3.01 INSTALLATION

- A. General:
1. Make terminations in accordance with cable manufacturers instructions for the particular type of wire and cable.
  2. Splices are not allowed in the underground duct and manhole systems. If splices are required, the Contractor shall obtain approval in writing from the Engineer prior to splicing.
  3. All splices shall be in made in terminal boxes.
- B. Wire and Cable Sizes: The sizes of wire and cable shall be as shown on the Contract Drawings, or if not shown, as approved by the Engineer. Minimum size wire shall be No. 12 AWG for all power, lighting and receptacle circuits. Wires for control circuits shall be No. 14 AWG minimum. Wire for instrumentation circuits shall not be smaller than No. 16 AWG. If due to field routing the voltage drop exceeds 2.5%, the size of conductors shall be increased such that 2.5% is the maximum voltage drop incurred.
- C. Number of Wires: The number of wires indicated on the Contract Drawings for the various control, indications, and metering circuits were determined for general schemes of control and

for particular indication and metering systems. Coordinate wiring schemes with equipment schematics.

- D. **Wiring Identification:** All wiring shall have a unique wire number and be labeled at both ends. Wire numbers shall correspond with the equipment terminal wire numbers. Where no wire numbers are indicated, the Contractor shall assign wire numbers. Wire numbers shall not be duplicated.
- E. **Cable Identification Tags:** The Contractor shall furnish all labor and materials and affix in a permanent way to each cable in manholes, cable compartments and vaults, junction boxes, pull boxes and points of termination, a laminated plastic tag, bearing clearly printed, the cable number indicated on the Contract Drawings or some other approved identification number or symbol. All cables shall be temporarily tagged with its full ID number immediately after it has been pulled.
- F. **Wiring Supplies:** Only electrical wiring supplies manufactured under high standards of production and meeting the approval of the Engineer shall be used. Friction tape shall be in accordance with ASTM D69.
- G. **Training of Cable:** Furnish all labor and material required to train cables around cable vaults within buildings and in manholes in any outdoor underground duct system. Sufficient length of cable shall be provided in each manhole and vault so that the cable can be trained and racked in an approved manner. In training or racking, the radius of bend of any cable shall be not less than the manufacturer's recommendation. All manhole cables shall be arc and fireproofed.
- H. **Connections at Control Panels, Limit Switches and Similar Devices:**
  - 1. Where stranded wires are terminated at panels, and/or devices connections shall be made by solderless lug, crimp type ferrule or solder dipped.
  - 2. Where enclosure sizes and sizes of terminals at limit switches, solenoid valves, float switches, pressure switches, temperature switches, and other devices make 7-strand, No. 12 AWG, wire terminations impractical, the Contractor shall terminate external circuits in an adjacent junction box of proper size and shall install No. 14 AWG stranded wires to the junction box in a conduit.
- I. **Pulling Temperature:** Cable shall not be flexed or pulled when the temperature of the insulation or of the jacket is such that damage will occur due to low temperature embrittlement. When cable will be pulled with an ambient temperature within a three day period prior to pulling of 40°F or lower, cable reels shall be stored during the three day period prior to pulling in a protected storage with an ambient temperature not lower than 55 degrees F and pulling shall be completed during the work day for which the cable is removed from the protected storage.
- J. **Color Coding:**
  - 1. Conductor jacket shall be color coded as follows:

**AC POWER**

| <b>480V/277 Volt<br/>3 phase</b> |  | <b>208Y/120 Volt<br/>3 phase<br/>(NEC)</b> |  |  |

2. Equipment Ground - GREEN

3.02 IDENTIFICATION

- A. Identify wire and cable under provisions of Section 260553.
- B. Identify each conductor with its circuit number.

3.03 FIELD QUALITY CONTROL

- A. Perform field inspection and testing under provisions of Section 014500.
- B. Inspect wire and cable for physical damage and proper connection.
- C. Measure tightness of bolted connections and compare torque measurements with manufacturer's recommended values.
- D. Field Testing:
  - 1. Wires and cables shall be tested before being connected to motors, devices or terminal blocks.
  - 2. If tests reveal defects or deficiencies, the Contractor shall make the necessary repairs or shall replace the cable as directed by the Engineer, without additional cost to the Owner.
  - 3. All tests shall be made by and at the expense of the Contractor who shall supply all testing equipment.
- E. Continuity Tests: All cables, wires and shields shall be tested for continuity. Testing for continuity shall be by test light or buzzer.
- F. Insulation-Resistance Tests:
  - 1. 600V power and control cables and wires shall be tested for their insulation-resistance values. Test shall utilize a megohmmeter with applied voltage to be 1000VDC for one (1) minute. Insulation-resistance test shall be performed on each conductor with all other conductors grounded. The resistance value shall be 20 megohms or greater.

**END OF SECTION 260519**

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. Grounding electrodes and conductors.
- B. Equipment grounding conductors.
- C. Bonding.

## 1.02 REFERENCES

- A. ANSI/NFPA 70 - National Electric Code.

## 1.03 REGULATORY REQUIREMENTS

- A. Conform to requirements of ANSI/NFPA 70.
- B. Furnish products listed and classified by Underwriters Laboratories, Inc.

## PART 2 - PRODUCTS

## 2.01 COMPONENTS

- A. Ground clamps: OZ ELECTRICAL MANUFACTURING COMPANY, Type "CG", or equal by STEEL CITY or APPLETON.
- B. Raceways, conductors, outlet boxes, pull and junction boxes to be furnished in accordance with applicable sections of these specifications.
- C. Rod Electrode: Copper, 3/4-inch diameter, 10 feet long.
- D. Wire: Copper, sized to meet NFPA 70 requirements.

## PART 3 - EXECUTION

## 3.01 INSTALLATION

- A. General:
  - 1. Clean all conductive surfaces on equipment to be grounded, to assure good electrical continuity.
  - 2. Effectively bond all grounding conductors to grounding rod electrodes, equipment enclosures and ground busses.
  - 3. Locate all grounding attachments away from areas subject to physical damage. Provide protective covering as required.
  - 4. Install service entrance building ground as per NEC and Local Utility requirements.
  - 5. Service entrance shall be bonded to street side of first flange or coupling of incoming main water line with heavy duty ground clamp. Bonding conductor to be sized in accordance with NFPA 70.
  - 6. Building steel shall be bonded to ground bus on main service with a conductor the same size as in B.1 below.
  - 7. Install new service grounds and grounding systems for new service as per Local Utility and NEC requirements.
  - 8. Generators shall have a dedicated grounding system for a separately derived system for switching neutrals.

## B. Feeder/Branch Circuits:

1. All circuits shall have a separate green grounding conductor in conduit sized in accordance with NFPA 70. Minimum size of conductor shall be No. 12 AWG.
2. Flexible conduit will not be approved as achieving continuity of ground. All flexible conduit to have a jumper wire sized to ampacity of branch breaker and to be connected to conduit system on both ends; this applies to fixtures, motors, controls, etc.

## 3.02 TEST

- A. Test ground on main service. Ground system resistance shall be no greater than 10 ohms using test equipment similar to a "Biddle" test. Test data to be submitted to the Engineer for approval and such approved test data to become a part of the Record Documents.

**END OF SECTION 260526**

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. System of supporting devices and hangers for support or bracing for conduit, electrical equipment, safety switches, fixtures, panelboards, outlet boxes, junction boxes and cabinets.

## 1.02 REFERENCES

- A. ANSI/NFPA 70 - National Electric Code.

## 1.03 REGULATORY REQUIREMENTS

- A. Conform to requirements of ANSI/NFPA 70.
- B. Furnish products listed and classified by Underwriters Laboratories, Inc.

## PART 2 - PRODUCTS

## 2.01 EQUIPMENT REQUIREMENTS

- A. Provide appropriate corrosion-resistant supporting devices and hangers for electrical equipment, as manufactured by ERICO PRODUCTS, INC., CADDY FASTENERS, STEEL CITY, MINERALLAC or equivalent.
  - 1. "Z" purlin clips.
  - 2. Conduit clips.
  - 3. Beam clamps (universal and vertical flange).
  - 4. Beam clamps (set screw type).
  - 5. Combination push-in conduit clips.
  - 6. Combination conduit hanger clamps.
  - 7. Flexible conduit clips.
  - 8. Special combination conduit clips.
  - 9. One hole steel straps.
  - 10. Conduit hangers.
- B. Provide materials, sizes and types of anchors, fasteners and supports to carry the loads of equipment, wire in conduit and conduit.

## 2.02 CHANNEL SUPPORT SYSTEM

- A. Channel systems and supports shall be manufactured by KINDORF/THOMAS & BETTS, or approved equal.
- B. Channels shall be 1-1/2" x 1-1/2".
- C. Channels and all associated accessories and bolts shall be hot dipped galvanized.
- D. Channels shall have 9/16" bolt holes on 1-1/2" centers.
- E. Provide end caps for all channels.

## PART 3 - EXECUTION

## 3.01 INSTALLATION

- A. Secure conduits to within 3 feet of each outlet box, junction box, cabinet, fitting, etc., and at intervals not to exceed 10 feet in accordance with currently effective edition of the National Electric Code.
- B. In seismic zones, support conduits 1 inch and smaller at 6 foot intervals.
- C. Install clamps secured to structure for feeder and other conduits routed against structure. Use drop rods and hangers to support conduits run apart from the structure.
- D. Provide and install suitable angle iron, channel iron or steel metal framing with accessories to support or brace electrical equipment including safety switches, fixtures, panelboards, etc.
- E. Paint all supporting metal not otherwise protected, with rust inhibiting primer and then with a finish coat if appropriate to match the surrounding metal surfaces. Prepainted or galvanized support material is not required to be painted or repainted.
- F. Do not use chains, perforated iron, baling wire or tie wire for supporting conduit runs. Use of clips to support conduit to top of t-bar ceiling grid will not be permit-ted.
- G. Obtain permission from Engineer before drilling or cutting structural members.
- H. Install surface mounted cabinets and panelboards with a minimum of four anchors.
- I. Do not fasten supports to pipes, ducts, mechanical equipment and conduit.
- J. Install products in accordance with manufacturer's instructions.

**END OF SECTION 260529**

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. Conduit system with associated couplings, connectors and fittings. Conduits to be mechanically and electrically continuous from outlet to outlet and from outlets to cabinets, pull or junction boxes.
  - 1. Conduit Use - Rigid Galvanized Conduit:
    - a. All exterior circuits above ground.
    - b. All circuits concealed in CMU walls.
  - 2. Conduit Use - PVC Sch. 80
    - a. Secondary service power feeds from Central Hudson transformers only.
    - b. All exterior circuits below ground.
  - 3. Conduit Use - Electrical Metallic Tubing (EMT) Conduit:
    - a. All interior circuits above ground.
  - 4. Conduit Use - Metal Clad (MC) Cable:
    - a. All 15 and 20 amp branch circuits concealed in walls or ceilings.
  - 5. Conduit Use - Flexible Liquid-tight Metal Conduit:
    - a. Connecting motors, generators and other equipment subject to vibration, maximum length - 3 feet.
    - b. Passing through building expansion joints.
  - 6. Surface mounted raceway (Wiremold)
    - a. For use in finished areas on block walls and plaster walls, only.
  - 7. J-Hooks
    - a. For use above finished ceilings for telephone, PA, CAT 6 data and fire alarm cable only.
- B. Device Boxes: Provide each fixture switch, receptacle and other wiring device with a box of appropriate size and depth for its particular location use unless indicated otherwise.
- C. Pull boxes, junction boxes and wire troughs

## 1.02 REFERENCES

- A. ANSI C80.1 - Rigid Steel Conduit, Zinc Coated.
- B. ANSI/NFPA 70 - National Electric Code.
- C. NECA Standard of Installation.
- D. ANSI/NEMA FB 1 - Fittings, Cast Metal Boxes, and Conduit Bodies for Conduit and Cable Assemblies.
- E. NEMA TC 3 - PVC Fittings for use with Rigid PVC conduit and tubing.
- F. ANSI C80.3 - Electrical Metallic Tubing, Zinc Coated.
- G. ANSI/NEMA OS1 - Sheet-steel outlet boxes, device boxes, covers and box supports.
- H. NEMA 250 - Enclosures for electrical equipment (1000 volts maximum).

## 1.03 SUBMITTALS

- A. Submit product data under provisions of Section 013300.
- B. Working Drawings:

1. Prior to equipment submission, submit a list of proposed manufacturers with the products they produce proposed for the contract.
2. Manufacturer's catalog cuts for the conduit, boxes, fittings and supports proposed for use.
3. Construction details of conduit racks and other conduit support systems with seismic restraint details and calculations signed by a licensed Engineer.
4. Scaled working drawings showing proposed routing of all conduits, inclusive of conduits routed above grade on exterior support structures, embedded in structural concrete and conduits directly buried in earth. Drawings shall show locations of pull and junction boxes and all penetrations in walls and floor slabs.

#### 1.04 REGULATORY REQUIREMENTS

- A. Furnish products listed and classified by Underwriters Laboratories, Inc.
- B. Conform to requirements of ANSI/NFPA 70.

#### 1.05 PROJECT RECORD DOCUMENTS

- A. Submit under provisions of Section 017839.
- B. Accurately record actual routing of all conduits.

#### 1.06 FIELD SAMPLES

- A. Provide under provisions of Section 014500.
- B. Provide field sample of conduit two each at 2 feet in length.
- C. Provide field sample of expansion/deflection fitting, two each.

#### 1.07 DELIVERY, STORAGE AND HANDLING

- A. Deliver, store, protect, and handle products in accordance with manufacturers' recommendations.
- B. Accept conduit on site. Inspect for damage.
- C. Protect conduit from corrosion and entrance of debris by storing abovegrade. Provide appropriate covering.

#### 1.08 PROJECT CONDITIONS

- A. Verify all conduit routings by field measurements.
- B. Verify routing and termination locations of conduit prior to rough-in.
- C. Conduit routing is shown on Drawings in approximate locations unless dimensioned. Route as required to complete wiring system. Provide all required sweeps, boxes and fittings.

### PART 2 - PRODUCTS

#### 2.01 RIGID GALVANIZED CONDUIT

- A. Rigid conduit shall be hot dipped, galvanized, or electro-galvanized steel by Wheatland, Triangle, Republic or approved equal.

- B. Associated couplings, connectors and fittings shall be as manufactured by THOMAS & BETTS CORP., O.Z. GEDNEY CO., EFCOR or approved equal. Catalog numbers used below are those of THOMAS & BETTS CORP. based on 3/4-inch size and are considered standards by which equivalents are to be judged.
- C. ERICKSON couplings, Series 676 or approved equal, shall be used where neither length of conduit can be rotated.
- D. Conduit connectors shall be threaded type. Set screw and compression type connections ARE NOT acceptable.
- E. Sealing fitting locknuts shall be Series 142SL.
- F. Steel or malleable iron insulated bullet hub, Series 370-379, complete with sealing "O" ring. DO NOT use "die cast" material.
- G. Entrance ells shall be Series 1491 or approved equal.
- H. Combination coupling shall be Series 531 for connecting rigid galvanized conduit to electrical metallic tubing.

#### 2.02 PVC CONDUIT

- A. PVC conduit shall be manufactured by WHEATLAND, TRIANGLE REPUBLIC or approved equal.
- B. Description: NEMA TC 2; Schedule 80 PVC.
- C. Fittings and Conduit Bodies: NEMA TC3.

#### 2.03 ELECTRICAL METALLIC TUBING (EMT)

- A. Electrical metallic tubing shall be WHEATLAND, TRIANGLE, REPUBLIC, or approved equal.
- B. Associated couplings, connectors and fittings shall be as manufactured by THOMAS & BETTS CORP., O.Z. GEDNEY CO., EFCOR, or approved equal. Catalog numbers used below are those of THOMAS & BETTS CORP. based on 3/4-inch size and are considered standards by which equivalents are to be judged.
- C. EMT connectors shall be TC-2125C compression type with threaded locknut. Set screw connectors will not be acceptable.
- D. EMT couplings shall be TK-2125C compression type. Set screw connectors will not be acceptable.

#### 2.04 METAL CLAD CABLE (MC)

- A. Metal clad cable shall be manufactured by BICCGENERAL or approved equal.
- B. Associated couplings, connectors and fittings shall be as manufactured by THOMAS & BETTS CORP., O.Z. GEDNEY CO., EFCOR or approved equal.
- C. Conductors shall be types THHN and THWN. Ground wire shall be sized as per NEC with green THHN/THWN insulation. All conductors shall be cabled and wrapped in polyester tape. All conductors shall be rated for 600 VAC.

- D. Armor material shall be Aluminum Interlocked Armor.

#### 2.05 SURFACE MOUNTED RACEWAY (WIREMOLD)

- A. Manufacturer: Wire Mold shall be manufactured by LEGRAND or approved equal.
- B. Model: 700 Series - One-Piece Steel Surface Raceway.
- C. Paint wire mold to match existing wall color.
- D. UL5 and ADA compliant.
- E. UL and cUL Listed.

#### 2.06 HAZARDOUS LOCATION SEALING HUB

- A. Hazardous location sealing hubs shall be O-Z/GEDNEY EYH, EYH-SG or approved equal.
- B. Contractor shall provide hazardous sealing fittings of different types and configurations to facilitate the installation as manufactured by O-Z/GEDNEY or approved equal.
- C. Sealing compound and fiber shall be O-Z/GEDNEY type EYC and EYF.

#### 2.07 DUCT SEAL

- A. RectorSeal or approved equal.
- B. Model #: 81881

#### 2.08 J-HOOKS

- A. TO BE USED ABOVE FINISHED CEILING ONLY. FOR TELEPHONE, PA, CAT 6 DATA AND FIRE ALARM CABLE ONLY. ALL EXPOSED TELEPHONE, PA, CAT 6 DATA AND FIRE ALARM CABLE SHALL BE IN CONDUIT.
- B. Erico Caddy HP J. Hook Series or approved equal.
- C. Provide wire retainers for all.
- D. Provide mounting hardware and accessories as required.
- E. Spacing of J-Hooks and supports shall not exceed 5'-0" on center.

#### 2.09 FLEXIBLE LIQUID-TIGHT METAL CONDUITS AND FITTINGS

- A. Liquid-tight flexible metal conduit shall be ANACONDA or approved equal.
- B. Description: Interlocked steel construction with PVC jacket.
- C. Provide flexible liquid-tight conduits and fittings as manufactured by THOMAS & BETTS CORP., O.Z. GEDNEY CO. or approved equal. Catalog numbers used below are those of the THOMAS & BETTS CORP., based on 3/4" size and are to be considered as standards by which equivalents are to be judged. All conduit shall be liquid-tight flexible type, UL type UA, or suitable for exposure to continuous or intermittent moisture.
- D. Flexible liquid-tight connectors shall be Series 5333 or approved equal.

## 2.10 OUTLET AND DEVICE BOXES

- A. Acceptable Manufacturers: Raco, General Electric or approved equal.
- B. Sheet Metal Outlet Boxes - All concealed boxes shall be NEMA OSI, galvanized steel:
  - 1. Luminaire and Equipment Supporting Boxes: Rated for weight of equipment supported. Provide 1/2" male fixture stubs where required.
- C. Concrete Ceiling Boxes: Concrete type.
- D. Cast Boxes: All exposed surface mounted boxes shall be NEMA FB1, Type FD, cast fer alloy. Provide gasketed cover by box manufacturer.

## 2.11 PULL BOXES

- A. All pull boxes used for this project shall be minimum B-3-6 or specifically approved equal for all customer installed power and control circuits.
- B. Provide H-20 Cast-Iron Traffic Load Cover. Cover shall have 3" high logo "Electric".

## 2.12 JUNCTION BOXES

- A. Acceptable Manufacturers: RACO, GENERAL ELECTRIC or approved equal.
- B. Sheet metal boxes: NEMA OS1, galvanized steel.
- C. Covers: Galvanized steel.

## 2.13 WIRE TROUGH

- A. Wireways shall be manufactured by Square D, Class 526, rain tight trough or approved equal.
- B. Wireway shall be completely enclosed with removable covers.
- C. Construction: 16 Gauge Galvanized Steel. 8-inch and 12-inch wire trough shall be 14-gauge galvanized steel.
- D. Finish: ANSI-49 epoxy paint applied by cathodic electro-deposition paint process over a corrosion resistant phosphate preparation.
- E. UL listed.

## 2.14 EXTERIOR WIRE TROUGH

- A. Wireways shall be manufactured by SQUARE D, Class 526, rain tight.
- B. Wireway shall be completely enclosed with removable covers.
- C. Construction: Wireway shall be constructed of Type 304 stainless and shall have stainless steel screw clamps, and oil resistant gaskets.
- D. All hardware, bolts, brackets, and supports shall be constructed of Type 304 stainless steel.

## 2.15 ELECTRICALLY CONDUCTIVE CORROSION-RESISTANT THREAD COMPOUND

- A. KOPR-SHIELD or approved equal.

## PART 3 - EXECUTION

## 3.01 INSTALLATION OF CONDUITS

- A. Minimum size of conduits shall be 3/4-inch.
- B. Minimum conduit depth shall be 24" below grade, measured to the top of the conduit on exterior underground installations.
- C. Conduit joints shall be cut square, threaded, reamed smooth, and drawn up tight so conduit ends will butt in couplings, connectors and fittings.
- D. All threaded conduits and fittings shall have KOPR-SHIELD compound applied to all threads prior to assembly.
- E. Make bends or offsets with standard ells or field bends with an approved bender.
- F. Run concealed conduits in direct line with long sweep bends or offsets. Run exposed conduits parallel to and at right angles to building lines. Group multiple conduit runs in banks.
- G. Secure conduits to all boxes and cabinets with double locknuts and bushings so system will be electrically continuous from service to all outlets.
- H. Install conduit in accordance with NECA Standard of Installation.
- I. Cap ends of conduits to prevent entrance of water and other foreign material during construction.
- J. Complete all conduit systems before pulling conductors.
- K. Support conduits under provisions of Section 260529.
- L. Provide approved expansion joints or fittings and bonding jumpers where conduits in concrete pass through building expansion joints.
- M. Provide cable supports in conduits rising vertically in accordance with the National Electric Code, Article 300-19.
- N. Provide No. 12 AWG copper pull wires or nylon cord in all empty conduits. Steel wire not acceptable as pull wire.
- O. Install conduit to preserve fire resistance rating of partitions and other elements.
- P. Ground and bond conduit under provisions of Section 260526.
- Q. Where neither length of conduit can be rotated, ERICKSON couplings Series 676 shall be used.
- R. In areas where enclosed and gasketed fixtures and weatherproof devices are specified, where rigid conduit enters a sheet metal enclosure, junction box and outlet box, and not terminated in a threaded hub, a steel, or malleable iron nylon insulated bullet hub, complete with recessed sealing "O" ring, shall be used, Series 370-379 . DO NOT use die cast material.
- S. In concrete slabs block up conduit from forms and securely fasten in place. All conduits in slabs shall be installed below concrete slab.

- T. Where conduits running overhead pass through building expansion joints, install flexible liquid tight conduit of same size with sufficient slack to allow conduits on either side of expansion joint to move a minimum of 3-inches in any direction. Provide supports as required on each side of expansion joint, all in accordance with seismic requirements of specific area.
- U. Failure to route conduit through building without interfering with other equipment and construction shall not constitute a reason for an extra charge. Equipment, conduit and fixtures shall fit into available spaces in building and shall not be introduced into building at such times and manner as to cause damage to structure. Equipment requiring servicing shall be readily accessible.
- V. Arrange supports to prevent misalignment during wiring installation.
- W. Support conduit using coated steel or malleable iron straps, lay-in adjustable hangers, clevis hangers, and split hangers.
- X. Group related conduits; support using conduit rack. Construct rack using steel channel; provide space on each for 25 percent additional conduits.
- Y. Do not support conduit with wire or perforated pipe straps. Remove wire used for temporary supports.
- Z. Do not attach conduit to ceiling support wires.
- AA. Arrange conduit to maintain headroom and present neat appearance.
- AB. Route exposed conduit parallel and perpendicular to walls.
- AC. Route conduit installed above accessible ceilings parallel and perpendicular to walls.
- AD. Route conduit in and under slab from point-to-point.
- AE. Do not cross conduits in slab.
- AF. Maintain adequate clearance between conduit and piping.
- AG. Maintain 12-inch clearance between conduit and surfaces with temperatures exceeding 104°F (40°C).
- AH. Bring conduit to shoulder of fittings; fasten securely.
- AI. Use conduit hubs with sealing locknuts to fasten conduit in damp and wet locations.
- AJ. Install no more than equivalent of three 90-degree bends on interior locations between boxes. Use conduit bodies to make sharp changes in direction, as around beams. Use factory elbows for bends in metal conduit larger than 2-inch size.
- AK. Avoid moisture traps; provide junction box with drain fitting at low points in conduit system.
- AL. Do not use dissimilar strap or clamp supports. Provide dielectric tape, fittings, straps, and bushings where dissimilar metals are used.
- AM. Where fittings for liquid-tight flexible conduit are brought into an enclosure with a knockout, a gasket assembly, consisting of one piece "O" ring, with a Buna-R sealing material, Series 5200, shall be installed on outside of box. Fittings shall be made of either steel or malleable iron only, and shall have insulated throats or insulated bushings.

- AN. A copper ground wire sized in accordance with NEC shall be installed on the inside of the conduit as a jumper around flexible conduit to assure a continuity of ground.
- AO. Install a copper jumper across all flexible conduit including lighting fixtures, controls and other utilization equipment.
- AP. Install liquid-tight flexible conduit in such a manner as to prevent liquids from running on surface toward fittings.
- AQ. Allow sufficient slack conduit to reduce the effect of vibration.
- AR. Complete all conduit systems before pulling the conductors.
- AS. Support in accordance with requirements of National Electric Code.

### 3.02 INSTALLATION OF BOXES

- A. Install boxes concealed in finished walls.
- B. Locate boxes to prevent moisture from entering or accumulating within them.
- C. Support boxes independently of conduit, as required by the National Electric Code.
- D. Provide 4" x 1-1/2" octagonal, 4" x 1-1/2" square or 4" x 2-1/8" square ceiling outlet boxes.
- E. Where required to hang a specific fixture, provide a fixture stud of the no-bolt, self-locking type on ceiling outlets.
- F. Provide 2-1/2" x 3-3/4" one gang masonry boxes for switches and receptacles installed concealed in concrete block walls. For increased cubic capacity, provide 3-1/2" x 3-3/4" one gang masonry boxes. Where more than two conduits enter the box from one direction, provide 4" square boxes with square cut device covers not less than 1" deep specifically designed for this purpose. Use round edge plaster rings only if the block walls are to be plastered. Use sectional or gang-type outlet boxes only in drywall construction.
- G. Provide 4-11/16" square outlet boxes with square cut device corners for block walls or round edge plaster rings for plastered walls for telephone outlets. Single gang device boxes are not acceptable.
- H. Provide fittings with threaded hubs for screw connections and with the proper type covers for switches and receptacles served by exposed conduit. Use pressed steel outlet only for ceiling fixture outlets.
- I. Provide condulets with threaded hubs and covers and with proper configurations for all changes of direction of exposed conduits. Standard conduit ells may be used if they do not interfere or damage or mar the appearance of the installation.
- J. Use boxes of sufficient cubic capacity to accommodate the number of conductors to be installed, in accordance with the National Electric Code.
- K. Effectively close unused openings in boxes with metal plugs or plates.
- L. Set boxes so that front edges are flush with finished surfaces.
- M. Support boxes from structural members with approved braces.

- N. Install blank device plates on outlet boxes left for future use.
- O. Provide bushings in holes through which cords or conductors pass.
- P. Install boxes so that the covers will be accessible at all times.
- Q. Electrical boxes may be installed in vertical fire resistive assemblies classified as fire/smoke and smoke partitions without affecting the fire classification, provided such openings occur on one side only in each framing space and that openings do not exceed 16 square inches. All clearance between such boxes and the gypsum board shall be completely filled with joint compound or approved fire-resistive compound. The wall shall be built around outlet boxes larger than 16 square inches so as not to interfere with the wall rating.

### 3.03 INSTALLATION OF PULL BOXES, JUNCTION BOXES AND WIRE TROUGHS

- A. Provide junction boxes as shown on Drawings and otherwise where required, sized according to number of conductors in box or type of service to be provided. Minimum junction box size 4-inch square and 2-1/8-inches deep. Provide screw covers for junction boxes.
- B. Install boxes in conduit runs wherever necessary to avoid long runs or too many bends. Do not exceed 100-foot runs without pull boxes. Install pull boxes at all 90-degree bends.
- C. Rigidly secure boxes to walls or ceilings. Conduit runs will not be considered adequate support.
- D. Install boxes with covers in accessible locations. Size boxes in accordance with the National Electric Code.
- E. Do not install pull boxes or junction boxes for joint use of line voltage and signal or low voltage controls unless all conductors are insulated for the highest voltage being used in the same box.
- F. Coordinate installation of exterior pull boxes with General contractor to establish elevations of finished grades and pavements. All castings shall have chimney adjustment of + 6".

### 3.04 CONDUIT LOCATIONS

- A. Route all conduit concealed in walls or above finished ceilings. Provide boxes and conduits concealed in walls for all power and controls.
- B. Surface mounted conduits will only be allowed in utility rooms, and storage rooms. Surface mounted conduits shall only be permitted for vertical runs. All horizontal runs shall be installed above finished ceilings.
- C. Surface mounted raceway (wiremold) conduit will only be allowed on finished block walls or on plaster walls, where conduit cannot be run concealed. All horizontal runs shall be installed above finished ceilings, where drop ceilings are located.
- D. All conduit and wiremold shall be primed and painted to match existing adjacent wall color.
- E. J-Hooks are only permitted to be used above finished ceilings for telephone, PA, CAT 6 data and fire alarm cable.

**END OF SECTION 260533**

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. Nameplates and labels.
- B. Wire and cable markers.
- C. Conduit markers.

## 1.02 REFERENCES

- A. ANSI/NFPA 70 - National Electrical Code.

## 1.03 SUBMITTALS

- A. Submit under provisions of Section 013300.
- B. Product Data: Provide catalog data for nameplates, labels and markers.
- C. Manufacturer's Instructions: Indicate application conditions and limitations of use stipulated by Underwriters Laboratories, Inc. Include instructions for storage, handling, protection, examination, preparation and installation of product.

## 1.04 REGULATORY REQUIREMENTS

- A. Conform to requirements of ANSI/NFPA 70.
- B. Furnish products listed and classified by Underwriters Laboratories, Inc. as suitable for purpose specified and shown.

## PART 2 - PRODUCTS

## 2.01 NAMEPLATES AND LABELS

- A. Nameplates: Engraved three-layer laminated plastic, white letters on black background.
- B. Locations:
  - 1. Distribution panelboards.
  - 2. All control switches and pilot light devices.
  - 3. Transfer Switches.
  - 4. Generator Enclosure.
- C. Letter Size:
  - 1. Use 1/4 inch (6 mm) letters for identifying all control pilot lights.
- D. Labels: Embossed adhesive tape, with 3/16" (5mm) white letters on black background. Use for identifying existing equipment, distribution panels, switchboards, disconnect switches, and individual electrical devices.

## 2.02 WIRE MARKERS

- A. Manufacturers:
  - 1. 3M ELECTRICAL SPECIALTY DIV., Product Scotch Code.
  - 2. THOMAS & BETTS CORP., Product E-Z Code.
  - 3. Substitutions shall be permitted only after receiving written approval from the Engineer.

- B. Description: Epoxy film tape type wire markers.
- C. Locations: Each conductor at panelboards, auxiliary gutters, pull boxes, outlet and junction boxes, circuit breakers and each load connection.
- D. Legend:
  - 1. Power and Lighting Circuits: Branch circuit or feeder number indicated on drawings.
  - 2. Control Circuits: Control wire number indicated on interconnection diagrams on drawings.

### 2.03 CONDUIT MARKERS

- A. Manufacturers:
  - 1. THOMAS & BETTS CORP.
  - 2. Substitutions shall be permitted only after receiving written approval from the Engineer.
- B. Description: Self-sticking vinyl; black letters on orange background.
- C. Location: Furnish markers for each conduit longer than 6 feet (1.8 m).
- D. Spacing: 20 feet (6 m) on center.

### 2.04 UNDERGROUND WARNING TAPE

- A. Manufacturers:
  - 1. THOMAS & BETTS CORP., Model NAF-0700.
  - 2. Substitutions shall be permitted only after receiving written approval from the Engineer.
- B. Description: 6 inch (150 mm) wide plastic tape, detectable type, colored red with suitable warning legend describing buried electrical lines.

## PART 3 - EXECUTION

### 3.01 PREPARATION

- A. Degrease and clean surfaces to receive nameplates and labels.

### 3.02 APPLICATION

- A. Install nameplate and label parallel to equipment lines.
- B. Secure nameplate to equipment front using screws, rivets or adhesive.
- C. Secure nameplate to inside surface of door on panelboard that is recessed in finished locations.
- D. Apply conduit markers at 20 foot (6 m) intervals.
- E. Identify underground conduits using underground warning tape. Install one tape per trench at 3 inches (75 mm) below finished grade.

### 3.03 ELECTRICAL EQUIPMENT IDENTIFICATION

- A. The Contractor shall identify all existing circuits in existing distribution panels, switchboards and disconnect switches to remain.
- B. Label all circuits identifying the load served including all individual circuit breakers.

- C. Label all new circuit breakers and switches used for new feeder and branch circuits.
- D. Contractor shall furnish a minimum of 5 custom engrave three-layer laminated plastic labels with up to 20 words per label as directed by the engineer/owner in addition to the required labels for all pilot devices, switches, controls and timers.

**END OF SECTION 260553**

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. Surge protection device.

## 1.02 RELATED SECTIONS

- A. Section 012500 - Substitution Procedures.

## 1.03 STANDARDS

- A. The specified suppressor shall be designed, manufactured, tested and installed in compliance with:
  - 1. American National Standards Institute and Institute of Electrical and Electronic Engineers (ANSI/IEEE C62.11, C62.41 and C62.45).
  - 2. Federal Information Processing Standards Publication 94 (FIP PUB 94).
  - 3. National Electrical Manufacturer Association (NEMA LS-1).
  - 4. National Fire Protection Association (NFPA 20, 70, 75 and 78).
  - 5. Underwriters Laboratories (UL 1449).
  - 6. CAN/C22.2 No. 8-M1986; CSA Electrical Certification Notice No. 516.
  - 7. The system individual units shall be UL listed under UL 1449 Standard for Transient Voltage Surge Suppressions (TVSS) and the surge ratings shall be permanently affixed to the TVSS.

## PART 2 - PRODUCTS

## 2.01 MANUFACTURERS

- A. MCG ELECTRONICS, INC., Deer Park, New York.
- B. Approved equal.

## 2.02 MANUFACTURED UNITS

- A. Surge suppression shall be series Surge Free Model No. 200LS.

## 2.03 SYSTEM REQUIREMENTS

- A. The specified surge protective device shall provide effective high energy surge diversion for application ANSI/IEEE C62.41-1991 Location Category C3 environments. Testing per ANSI/IEEE C62.45-1992 using ANSI/IEEE C62.41 Category C3 waveforms and amplitudes. UL 1449 listing. The specified surge protective device shall provide:
  - 1. 200,000 transient amps, per phase of surge protection.
  - 2. Peak surge current ratings must be independently tested and verified.
  - 3. All mode protection, L-N, L-G, L-L, N-G.
  - 4. Integral disconnect with safety dead front.
  - 5. Each MOV protected from over-current, thermal overload and monitored individually.
  - 6. Self diagnostics with comprehensive LED bar graph on front panel showing the exact % level of protection available.
  - 7. Audible fault alarm with silence switch.
  - 8. Event counter, indication of time and date of last event (battery backup for time and date).
  - 9. Remote alarm relay contacts (surge protected), Form C.
  - 10. Micro-Z low impedance installation cable.
  - 11. Twenty year warranty on entire system.

12. LIFETIME "NO NONSENSE" WARRANTY ON FIELD REPLACEABLE POWER MODULES AND FUSES.

B. Environmental Requirements:

1. Magnetic Fields: Connection shall be made using low impedance Micro-Z cabling provided with the suppressor for maximum magnetic field cancellation. Unit shall be shunt-installed with no series connected elements.
2. Operating Temperature: Operating temperature range shall be -40° to +71° C (-40° to +160° F).
3. Storage Temperature: Storage temperature range shall be -40° to +85° C.
4. Relative Humidity: Operation shall be reliable in an environment with 0% to 95% non-condensing relative humidity.
5. Operating Altitude: The system shall be capable of operation up to an altitude of 13,000 feet above sea level.
6. Operating Voltage: Maximum continuous operating voltage shall be no less than 115% and no greater than 140% of the nominal rated line voltage.
7. Power Frequency: The power frequency range shall be 47 to 440 Hertz.

C. Electrical Requirements:

1. Unit Operating Voltage Requirements:

| <b>Voltage:</b>                          | <b>Description:</b>      | <b>Joules<br/>(8/20us):</b> | <b>Vpeak L-N<br/>(20kV, 10kA):</b> | <b>Vpeak L-N<br/>(6kV, 3kA):</b> |
|------------------------------------------|--------------------------|-----------------------------|------------------------------------|----------------------------------|
| <b>120/208V</b><br>Insert voltage<br>VAC | 3phase, 4W +<br>gnd, wye | 13,248                      | 644V                               | 900V                             |

2. Unit shall be installed in parallel with the protected equipment. No series connected protective elements shall be used.
3. The maximum surge current capacity per phase of the specified system, based on the standard IEEE 8/20 microsecond waveform, shall be at least: 1 Event at 200 kA. The surge life (8/20us) shall be at least 10,000 @ 10 kA occurrences. The transient suppression capability shall be bi-directional and suppress both positive and negative impulses.
4. The suppressor shall be capable of interrupting a 100 kAIC, short circuit current delivered from the AC power line. The interrupt capability must be confirmed and documented by a recognized independent testing laboratory.
5. The suppressor shall be designed so as to minimize the internal surge path impedance. Direct point-to-point internal wiring is inherently inductive and not acceptable. Connection to the power service shall be constructed for best performance.
6. Equipment shall be as manufactured by MCG Electronics, Inc.: Model: 200LS-Family or engineering department approved equal with supporting test data.

D. Protection System Components:

1. Replaceable modules: The suppressor shall be constructed using field replaceable protection modules. The suppressor shall have individually fused and monitored 40mm Metal Oxide Varistors (MOV's), including neutral to ground protection mode. Each module will provide five times (5X) redundant protection, with three modules per each phase and five fuses per module. The status of each module shall be locally monitored with a green LED that becomes red in a fault condition. The transient peak rating of the fuse shall be coordinated with the Ipeak handling capability of the MOV so that the surge path capability is not limited by the series fusing. In addition, each MOV shall incorporate a thermal disconnect means to remove a shorted MOV safely from the protection system.
2. Self-Diagnostics: Red, green and yellow solid state LED indicators shall be provided on the hinged front cover to indicate protection status. An illuminated green LED indicates

power is present at the protector on all phases, and an illuminated red LED shall indicate that one or more of the modules have reduced protection. An illuminated yellow LED shall indicate a suppression event. Both front panel and internal LEDs are required to provide power and fault indications in the event of even the loss of a single fuse or MOV. Relay operation shall be in a fail-safe operating mode (i.e., continuously energized so that power failure, reduced protection, or a break in the remote monitoring line will cause a fault indication at the remote monitor).

3. Remote Alarm Capability: Relay alarm contacts shall be provided for remote alarm monitoring capability of unit status. Form C normally open and normally closed contacts shall be provided with voltage and current limiting protection.
4. Audible Alarm: The specified system shall be equipped with an audible alarm which shall be activated when any one or more of the modules has a reduced protection condition. A mute option shall be provided for the audible alarm.
5. Advanced Diagnostic LED Display: A front panel, microprocessor controlled LED display, in the form of a bar graph, will indicate the protection status of each MOV on each phase including neutral to ground. A event counter will display number of suppressed transient events with a time and date stamp.
6. Integral Disconnect: Unit shall be provided with dead front disconnect to remove power from protector for maintenance access. The disconnect should not be accessed from the front panel unless the unit meets the minimum clamp voltage requirements.
7. NEMA 12 Enclosure: 14 gauge steel, with stainless steel hardware.

### PART 3 - EXECUTION

#### 3.01 INSTALLATION AND MAINTENANCE

- A. The unit shall be installed in accordance with the manufacturer's printed instruction to maintain warranty. All local and national codes must be observed.
- B. Units shall be installed as close as possible to the load side lugs of the main distribution panel board to which it is connected using low impedance Micro-Z cabling.
- C. A 3-pole disconnect shall be provided to insure safety of maintenance personnel.

#### 3.02 TWENTY YEAR WARRANTY

- A. Manufacturer to provide twenty (20) year warranty to cover repair or replacement with a new device. Manufacturer to provide no cost replacement of fused protection modules for the life of the suppressor.

**END OF SECTION 261823**

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. Distribution panelboards.

## 1.02 REFERENCES

- A. ANSI/NFPA 70 - National Electric Code.
- B. NECA Standard of Installation.
- C. NEMA AB1 - Molded Case Circuit Breakers.
- D. NEMA PB1 - Panelboards.
- E. NEMA PB1.1 - Instructions for Safe Installation, Operation and Maintenance of Panelboards Rated 600 Volts or Less.
- F. NEMA ICS2 - Industrial Control Devices, Controllers and Assemblies.
- G. NEMA KS1 - Enclosed Switches.

## 1.03 SUBMITTALS

- A. Submit product data under provisions of Section 013300.
- B. Indicate outline and support point dimensions, voltage, main bus ampacity, integrated short circuit ampere rating, and circuit breaker arrangement and sizes.

## PART 2 - PRODUCTS

## 2.01 MANUFACTURERS

- A. New Panelboards
  - 1. Panelboards shall be manufactured by Siemens.
  - 2. Approved equal.

## 2.02 PANELBOARD REQUIREMENTS

- A. Provide panelboards of circuit breaker, dead-front safety type, UL labeled, and meeting all applicable requirements of the National Electrical Manufacturers Association.
- B. Provide panelboards with lugs (both main lugs and branch circuit lugs) suitable and UL approved for both aluminum and copper conductors.
- C. Provide electrically isolated neutral bars.
- D. Provide separate ground bars complete with lugs or connectors on bar.
- E. Provide key operated door and door lock. Door shall prevent access to operate circuit breakers.
- F. Provide panelboards with sequence phased bus bars or distributed phase bussing for voltage and phase as indicated on drawings.
- G. Refer to drawings for numbers of branch circuits, their ratings, number of poles, arrangements, etc.

- H. Provide typed circuit directory cards.
- I. Provide front filler plates for unused breaker knockouts.
- J. Refer to drawings for Ratings and Features.
- K. All bus bars, including ground bars shall be tin-plated copper.
- L. All circuit breakers shall be bolt-on type.

### PART 3 - EXECUTION

#### 3.01 INSTALLATION

- A. Ground separate ground bars to panel boxes and to the main service entrance ground bus with a code-sized grounding conductor installed in the same conduit as the phase and neutral conductors under provisions of Section 260526.
- B. Install all circuits using a common neutral bus bay in accordance with the National Electric Code. Balance all circuits to achieve not greater than 7% unbalanced neutral current in panel feeders.
- C. Provide six circuit breaker handle lock-on devices for each lighting and miscellaneous power panelboard for installation by the contractor on circuits as directed by the Engineer to prevent unauthorized personnel from turning off circuits to controls, unit heaters, autodial alarm system, etc. Provide spare lock-on devices over to the Engineer.
- D. Install panelboards in accordance with NEMA PB 1.1.
- E. Install panelboards plumb.
- F. Height: 6 feet (2 m) to top of panel board.
- G. Provide typed circuit directory for each branch circuit panelboard. Handwritten circuit directory cards will not be accepted. Revise directory to reflect circuiting changes required to balance phase loads.
- H. Provide a typed circuit directory in accordance with NEC sections 110.22 and 408.4. Circuits shall be labeled with detailed information describing the switches function and equipment location.
- I. Revise directory to reflect circuiting changes required to balance phase loads.
- J. Provide engraved plastic nameplates under the provisions of Section 260553.

#### 3.02 FIELD QUALITY CONTROL

- A. Maintain proper phasing for multi-wire branch circuits.
- B. Visual and Mechanical Inspection: Inspect for physical damage, proper alignment, anchorage, and grounding. Check proper installation and tightness of connections for circuit breakers, fusible switches, and fuses.

### END OF SECTION 262400

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. Switches, receptacles, thermostats, device plates and other wiring devices as indicated on Drawings.

## 1.02 RELATED SECTIONS

- A. Section 260533 - Raceways and Boxes for Electrical Systems.

## 1.03 REFERENCES

- A. ANSI/NFPA 70 - National Electric Code.
- B. NEMA WD1 - General Purpose Wiring Devices.

## 1.04 SUBMITTALS

- A. Submit product data under provisions of Section 013300.
- B. Provide manufacturer's catalog information showing dimensions, colors and configuration.

## 1.05 REGULATORY REQUIREMENTS

- A. Furnish products listed and classified by Underwriters Laboratories, Inc. as suitable for purpose specified and shown.

## PART 2 - PRODUCTS

## 2.01 SWITCHES

- A. Manufacturers: HUBBELL, BRYANT, GENERAL ELECTRIC.
- B. Single pole, 20 amp, 120/277 VAC, NEMA WD-1, heavy duty, UL20.
- C. Device Plate: Stainless steel.

## 2.02 RECEPTACLES

- A. Manufacturers: HUBBELL, BRYANT, GENERAL ELECTRIC.
- B. 20 amp, 125 VAC, NEMA WD-1, heavy duty.
- C. 20 amp, 125 VAC, NEMA WD-1, heavy duty, ground fault circuit interrupter.
- D. Duplex type.
- E. Device Plate: Stainless steel.

## 2.03 EMERGENCY KILL MUSHROOM SWITCH

- A. Acceptable Manufacturers: SQUARE D Model No.: 9001KR9P1RH1321 or approved equal.
- B. Operator: 2-POSITION MAINTAINED PULL-MAINTAINED PUSH ILLUMINATED FLASHING mushroom head pushbutton. Switch head shall only be flashing in the "pushed" position.

- C. Mushroom Head: 2-1/4-inch diameter head.
- D. Nameplate: Large 2.92-inch square, Red nameplate with engraved logo "Emergency Stop", unless noted otherwise on drawings.
- E. Enclosure: Heavy duty, one opening, sheet steel enclosure, NEMA 12.

#### 2.04 MANUAL MOTOR RATED THERMAL SWITCH

- A. Acceptable Manufacturers: SQUARE D, Class 2510, Type KG1A, Type KG2C (3-pole, 600V) or approved equal.
- B. Contractor shall coordinate voltage, phase and current rating with equipment.

#### 2.05 CONTACTORS

- A. Manufacturers: Square D, Model No. LO1000V02.
- B. 4 pole, 30 amp, open type contactor.
- C. Electrically held coil, 120VAC.
- D. Quantity required: Refer to drawings

#### 2.06 TELEPHONE/DATA OUTLETS

- A. Provide combination telephone/data jacks compatible with RJ-45 and RJ-11 cable connections.
- B. Provide "Decora" type with matching vinyl cover plate.
- C. Colors shall be selected by the District.

### PART 3 - EXECUTION

#### 3.01 INSTALLATION

- A. Mounting:
  - 1. Mount all switches 46-inches above finished floor to center line of switch unless noted otherwise.
  - 2. Mount all receptacles 18-inches above finished floor to center line of receptacle unless noted otherwise.
  - 3. Install switches with OFF position down.
- B. Polarity: Properly wire all receptacles so that the hot wire, the neutral wire and the ground wire connect to the proper terminal on all receptacles.
- C. Grounding: Install all devices in boxes specified under Section 260533 and install a No. 12 green ground wire from device grounding terminal to the outlet box in accordance with the National Electric Code.
- D. Install device plates on switch, receptacle and blank outlets in full contact with wall surface.
- E. Provide new SO cord for all chemical pumps and install plug end to match receptacle.

3.02 FIELD QUALITY CONTROL

- A. Inspect each wiring device for defects.
- B. Operate each wall switch with circuit energized and verify proper operation.
- C. Verify that each receptacle device is energized.
- D. Test each receptacle device for proper polarity.
- E. Test each GFCI receptacle device for proper operation.

**END OF SECTION 262726**

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. Disconnect switches.
- B. Fuses.
- C. Enclosed Circuit Breakers.

## 1.02 REFERENCES

- A. NEMA KS-1 - Enclosed Switches.
- B. ANSI/UL 198C - High Intensity Capacity Fuses, Current Limiting Types.
- C. ANSI/UL 198E - Class R Fuses.
- D. FS W-S 865 - Switch, Box (Enclosed), Surface Mounted.
- E. NEMA AB1 - Molded Case Circuit Breakers.

## 1.03 SUBMITTALS

- A. Submit product data under provisions of Section 013300.
- B. Include outlet drawings with dimensions and equipment ratings for voltage, capacity, horsepower and short circuit current ratings.

## 1.04 RELATED SECTION

- A. Section 260553 - Identification for Electrical Systems.

## 1.05 COORDINATION

- A. Coordinate layout and installation of switches, circuit breakers, and components with equipment served and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

## PART 2 - PRODUCTS

## 2.01 DISCONNECT SWITCHES

- A. Disconnect switches shall be GENERAL ELECTRIC, heavy-duty Type TH or approved equal.
- B. 75°C conductor ratings.
- C. Ratings: 240VAC
- D. Quick-break, quick-make, load interrupter enclosed knife switch with externally operable handle interlocked to prevent opening front cover with switch in ON position. Handle lockable in OFF position.
- E. Suitable for use as service entrance equipment.
- F. UL listed for Class R 200,000 RMS amps, symmetrical IC.

- G. Class R fusing kit.
- H. Enclosures: Refer to drawings.

## 2.02 FUSES

- A. Fuses shall be Littlefuse KLNK Class RK1 or approved equal.
- B. Fuses shall be rated for 240 volts AC.
- C. Interrupting Rating: 200,000 RMS amps.

## 2.03 MOLDED CASE CIRCUIT BREAKERS

- A. Install molded case circuit breakers for Main Circuit Breaker, Generator Circuit Breaker and Panel Circuit Breakers.
- B. Molded Case Circuit Breaker:
  - 1. Manufacturer: SIEMENS
    - a. 125 Amp, 3 Pole Type ED6.
    - b. 250 Amp, 3 Pole Type HFD6.
    - c. 400Amp, 3 Pole Type HJD6.
    - d. 600Amp, 3 Pole Type HLD6.
    - e. 800Amp, 3 Pole Type HMD6.
  - 2. AIC Rating: 65,000 amperes.
  - 3. Thermal magnetic with interchangeable trip
- C. Enclosure
  - 1. Manufacturer: SIEMENS
  - 2. Rating: NEMA 1 (for interior use) or NEMA 3R (for exterior use).
  - 3. External Throw.
  - 4. Suitable for Service Entrance Equipment (where applicable).

## 2.04 EXTRA MATERIALS

- A. Provide one complete set based on number of poles of spare fuses for each fused disconnect switch. Provide to Owner.

## PART 3 - EXECUTION

### 3.01 INSTALLATION REQUIREMENTS

- A. Install individual wall-mounted switches and circuit breakers with tops at uniform height unless otherwise indicated.
- B. Temporary Lifting Provisions: Removed temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.
- C. Provide switches/enclosed circuit breakers at locations as indicated on drawings.
- D. Refer to disconnect switch schedule on drawings for ampacity ratings, fuse sizes, number of poles and enclosure ratings.
- E. Install fuses in fusible devices.

- F. Install engraved nameplates on each switch and enclosed circuit breaker identifying the following:
  - 1. Switch designated.
  - 2. Load served.
  - 3. Power origination.
  - 4. Fuse size as indicated on drawings.

**3.02 ADJUSTING**

- A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.
- B. Set field-adjustable circuit breaker trip ranges.

**END OF SECTION 262816**

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. Automatic transfer switch.

## 1.02 RELATED SECTIONS

- A. Section 012500 - Substitution Procedures.
- B. Section 260000 - Electrical.
- C. Section 260526 - Grounding and Bonding for Electrical Systems.
- D. Section 260553 - Identification for Electrical Systems.
- E. Section 263214 - Engine Generator Systems (Natural Gas)

## 1.03 REFERENCES

- A. NFPA 70 - National Electrical Code.
- B. NEMA ICS 1 - General Standards for Industrial Control and Systems.
- C. NEMA ICS 2 - Standards for Industrial Control Devices, Controllers, and Assemblies.
- D. NEMA ICS 6 - Enclosures for Industrial Controls and Systems.

## 1.04 SUBMITTALS

- A. Submit product data under provisions of Section 013300.
- B. Submit product data for transfer switches showing overall dimensions, electrical connections, electrical ratings, environmental restrictions, voltage, short circuit ratings, enclosure details and all accessories.
- C. Submit manufacturer's installation instructions. Include instructions for storage, handling, protection, examination, preparation, installation and starting of product.
- D. Submit manufacturer's operation and maintenance manual as part of shop drawing submittal.

## 1.05 OPERATION AND MAINTENANCE DATA

- A. Submit operation and maintenance data under provisions of Section 017823.
- B. Include instructions for operating equipment.
- C. Include instructions for operating equipment under emergency conditions.
- D. Identify operating limits which may result in hazardous or unsafe conditions, whether switch is being operated automatically or manually.
- E. Document ratings of equipment and each major component.
- F. Include manufacturer's recommended routine preventative maintenance schedule.
- G. List any special tools, maintenance materials and recommended spare parts.

### 1.06 EXTRA SERVICES

- A. The supplier shall include as a part of the package a 5-year warranty and 5-year planned maintenance agreement at no additional cost to the Owner. The agreement shall include, as a minimum, one service call per year. The services must be performed by the authorized distributor of the equipment furnished and may not be subcontracted. The following services shall be performed once a year.
  - 1. Check switches for loose, bare or broken wiring (replace as needed).
  - 2. Test transfer switch operation, time delays and manual operators.
  - 3. Test transfer switch operations and plant exerciser.
- B. Manufacturer's Instructions: The manufacturer's instructions shall indicate application conditions and limitations of use stipulated by product testing agency specified under regulatory requirements. Include instructions for storage, handling, protection, examination, preparation, installation and starting of product.

### 1.07 REGULATORY REQUIREMENTS

- A. Conform to all applicable national, state, city or local codes for standby electrical systems.

## PART 2 - PRODUCTS

### 2.01 MANUFACTURERS

- A. Transfer switch shall be ONAN Model X-Series. Sizing restrictions were designed with ONAN Model X-Series.
- B. Transfer switch shall be supplied and warranted for 5 years, including a five-year planned maintenance agreement by the single system source supplier. No exceptions.
- C. Proposal for any substitute equipment shall provide complete submittal data, as specified to the Engineer for approval or disapproval. Physical dimensions of transfer switches are based on ONAN Model X-Series. Substitute equipment shall be field verified for adequate equipment spacing relative to other equipment to be installed in the same locations.
- D. It is intended that all products specified herein be of standard ratings, therefore, the ampere ratings, withstand and closing ratings, etc., shall be the manufacturer's next available larger size of rating until the specifications are exactly met.

### 2.02 AUTOMATIC TRANSFER

- A. Description: NEMA ICS 2; automatic transfer switches.
- B. The switches shall be mechanically held, electrically operated and shall be interlocked mechanically and electrically to insure that normal power and emergency power mixing is impossible. The automatic transfer switches shall be suitable for use with emergency sources.

### 2.03 AUTOMATIC TRANSFER SWITCH

- A. Sequence of Operation: Automatic switching shall occur from normal power to emergency power when there is a phase reversal or when any phase of the normal power drops between an adjustable voltage range of 75 to 98% voltage and to automatically restore the load to normal when all phases are between an adjustable voltage range of 75 to 98% normal voltage or phase rotation is corrected.

- B. Main switch contacts shall be high-pressure silver alloy in order to improve interrupting and withstand capabilities. Main contacts shall be rated for 600 volts AC minimum. Contact assemblies shall have arc chutes for positive arc extinguishment. Arc chutes shall have insulating covers to prevent interphase flashover.
- C. Transfer switches shall be equipped with transparent protective covers over all live parts of the switch. These covers are to serve as protection to operators or service personnel from contact with live parts, and from contact with arcing by-products if the switches operate with the door open. Barriers shall be transparent to allow for visual inspection for contact position and for damage.
- D. Automatic transfer switches utilizing components of molded case circuit breakers are not acceptable.
- E. All transfer switches and accessories shall be UL listed and labeled, tested per UL Standard 1008 and CSA approved.
- F. Solid state undervoltage sensors shall simultaneously monitor all phases of both sources. Pick-up and drop-out setting shall be adjustable between 75 and 98% of system voltage. Voltage sensors shall allow for adjustment to sense partial loss of voltage on any phase. Voltage sensors shall have field calibration of actual supply voltage to nominal system voltage. Switches that do not monitor all three phases of both normal and emergency sources will not be acceptable.
- G. Provide frequency sensing relay which will not permit transfer to emergency power until the generator set is operating at 60 Hz.
- H. Control wiring shall be terminated interlocking, plug-type connectors. Operating current for the transfer shall be obtained from the source to which the load is to be transferred.
- I. The controls shall include latching diagnostic indicators to pinpoint the last successful step in the sequence of control functions, and to indicate the present status of the control functions in real time, as follows:
  - 1. Source 1 OK.
  - 2. Start Generator Set.
  - 3. Source 2 OK.
  - 4. Transfer Timing.
  - 5. Transfer Complete.
  - 6. Retransfer Timing.
  - 7. Retransfer Complete.
  - 8. Timing for Stop.

#### 2.04 RATINGS

- A. Ratings shall be as follows:
  - 1. Voltage: 120/208V, 3 phase, 4 wire.
  - 2. Switched Poles: 4, (overlapping neutral not acceptable).
  - 3. Load Inrush Rating: Combination Load.
- B. All automatic transfer switches shall meet the following withstand ratings as a minimum. In order to protect the system under current or possible future conditions, whether protected by circuit breakers or current limiting fuses, the transfer switches must meet both of the following molded case circuit breaker and current limiting fuse withstand and closing ratings as a minimum. Ratings are stated in symmetrical RMS amperes for three phase faults.
  - 1. Transfer Amperage: 400

2. WCR @ 480 Volts W/Molded Case C/B'S: 65,000
  3. WCR @ 480 Volts W/Current Limit Fuses: 200,000
- C. Transfer switches shall be continuously rated in ambient temperatures of -40 to +50 degrees C, relative humidity up to 95% (non-condensing), and altitudes up to 10,000 feet.

#### 2.05 AUTOMATIC SEQUENCE OF OPERATION

- A. Initiate Time Delay to Start Alternate Source Engine Generator: Upon initiation by normal source monitor.
- B. Time Delay to Start Alternate Source Engine Generator: 0 to 15 seconds, adjustable.
- C. Engine Start: Automatic controls shall signal the engine-generator set to start upon a signal from normal source sensors, after time delay to start has terminated.
- D. Initiate Transfer Load to Alternate Source: Upon initiation by normal source monitor and permission by alternate source monitor.
- E. Time Delay Before Transfer to Alternate Power Source: 2 to 120 seconds, adjustable.
- F. Initiate Retransfer Load to Normal Source: Upon permission by normal source monitor.
- G. Time Delay Before Retransfer to Normal Power: 0 to 30 minutes, adjustable; bypass time delay in the event of the alternate source failing.
- H. Time Delay Before Engine Shut Down: 0 to 10 minutes, adjustable, of unloaded operation; factory set at 5 minutes.
- I. Engine Exerciser: An Exerciser shall, once a week, start the generator set, transfer building load to the generator sets and after a set period of time, transfer the building load back to normal power. It shall be readily accessible and easy to start. Exercisers shall be furnished with load/no load selector switches. Provide bypass exerciser controls if the normal source fails during the exercise period.

#### 2.06 ENCLOSURE

- A. Enclosures: Transfer switch enclosure shall be NEMA 1. All controls which will be located on cabinets shall be key operated. Manual operating handles and all control switches, (other than key-operated switches) shall be accessible to authorized personnel only by opening the key-locking cabinet doors. Transfer switches with manual operating handles and/or non key-operated control switches located on the outside of the cabinet do not meet this specification and are not acceptable.

#### 2.07 ACCESSORIES

- A. Indicating Lights: Mounted in cover of enclosure to indicate the following. Source light for AC power loss shall be 30.5 mm heavy duty oiltight press-to-test by SIEMENS.
  1. NORMAL SOURCE AVAILABLE.
  2. EMERGENCY SOURCE AVAILABLE.
  3. NORMAL SWITCH POSITION.
  4. EMERGENCY SWITCH POSITION..
  5. AC POWER FAILURE.
- B. Emergency Kill Switch Pushbutton (Maintained): When depressed shall shut down generator. This switch shall be in series with new exterior emergency kill switch.

- C. Transfer Switch Main Shaft Auxiliary Contacts: Two normally open; two normally closed. Wired to terminal block for easy access for indication of switch position. Rated at 10 Amps continuous and 250 VAC maximum.
- D. Transfer switches are to be equipped with permanently attached operating handles and quick-break, quick-make mechanisms suitable for normal operation under load. Loose manual operating handles that need to be field attached for operation will not be acceptable.
- E. All transfer switches shall be provided with a field adjustable time delay during the switching in both directions, during which time the load is isolated from both power sources, to allow load residual voltage to decay before closure to opposite source. The delay feature shall have an adjustable range of 0 to 7.5 seconds. Phase angle monitor/inphase type monitors are not acceptable.
- F. Provide generator 20 light remote annunciator located inside the electrical room on the ATS Cubicle. Interface generator set controls with battery charger and fuel tank alarms for all status conditions. Provide all power, control wiring including conduits.

### PART 3 - EXECUTION

#### 3.01 INSTALLATION

- A. Installation of transfer switches shall be in accordance with manufacture requirements. Provide applicable U.L. labeling for installed system.

#### 3.02 POWER OUTAGE

- A. After the transfer switch is installed, the Contractor shall be responsible to inspect the installation and field verify that the switch has been installed per manufacturer's recommendations. Owner's operating personnel shall be instructed on the use and service requirements of the transfer switch by the manufacturer. A minimum of two (2) hours manufacturers training is required.

#### 3.03 DEMONSTRATION

- A. Demonstrate operation of transfer switch under provisions.

### END OF SECTION 262917

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. Automatic transfer switch.

## 1.02 RELATED SECTIONS

- A. Section 012500 - Substitution Procedures.
- B. Section 260000 - Electrical.
- C. Section 260526 - Grounding and Bonding for Electrical Systems.
- D. Section 260553 - Identification for Electrical Systems.
- E. Section 263214 - Engine Generator Systems (Natural Gas)

## 1.03 REFERENCES

- A. NFPA 70 - National Electrical Code.
- B. NEMA ICS 1 - General Standards for Industrial Control and Systems.
- C. NEMA ICS 2 - Standards for Industrial Control Devices, Controllers, and Assemblies.
- D. NEMA ICS 6 - Enclosures for Industrial Controls and Systems.

## 1.04 SUBMITTALS

- A. Submit product data under provisions of Section 013300.
- B. Submit product data for transfer switches showing overall dimensions, electrical connections, electrical ratings, environmental restrictions, voltage, short circuit ratings, enclosure details and all accessories.
- C. Submit manufacturer's installation instructions. Include instructions for storage, handling, protection, examination, preparation, installation and starting of product.
- D. Submit manufacturer's operation and maintenance manual as part of shop drawing submittal.

## 1.05 OPERATION AND MAINTENANCE DATA

- A. Submit operation and maintenance data under provisions of Section 017823.
- B. Include instructions for operating equipment.
- C. Include instructions for operating equipment under emergency conditions.
- D. Identify operating limits which may result in hazardous or unsafe conditions, whether switch is being operated automatically or manually.
- E. Document ratings of equipment and each major component.
- F. Include manufacturer's recommended routine preventative maintenance schedule.
- G. List any special tools, maintenance materials and recommended spare parts.

## 1.06 EXTRA SERVICES

- A. The supplier shall include as a part of the package a 5-year warranty and 5-year planned maintenance agreement at no additional cost to the Owner. The agreement shall include, as a minimum, one service call per year. The services must be performed by the authorized distributor of the equipment furnished and may not be subcontracted. The following services shall be performed once a year.
  - 1. Check switches for loose, bare or broken wiring (replace as needed).
  - 2. Test transfer switch operation, time delays and manual operators.
  - 3. Test transfer switch operations and plant exerciser.
- B. Manufacturer's Instructions: The manufacturer's instructions shall indicate application conditions and limitations of use stipulated by product testing agency specified under regulatory requirements. Include instructions for storage, handling, protection, examination, preparation, installation and starting of product.

## 1.07 REGULATORY REQUIREMENTS

- A. Conform to all applicable national, state, city or local codes for standby electrical systems.

## PART 2 - PRODUCTS

### 2.01 MANUFACTURERS

- A. Transfer switch shall be ONAN Model X-Series. Sizing restrictions were designed with ONAN Model X-Series.
- B. Transfer switch shall be supplied and warranted for 5 years, including a five-year planned maintenance agreement by the single system source supplier. No exceptions.
- C. Proposal for any substitute equipment shall provide complete submittal data, as specified to the Engineer for approval or disapproval. Physical dimensions of transfer switches are based on ONAN Model X-Series. Substitute equipment shall be field verified for adequate equipment spacing relative to other equipment to be installed in the same locations.
- D. It is intended that all products specified herein be of standard ratings, therefore, the ampere ratings, withstand and closing ratings, etc., shall be the manufacturer's next available larger size of rating until the specifications are exactly met.

### 2.02 AUTOMATIC TRANSFER

- A. Description: NEMA ICS 2; automatic transfer switches.
- B. The switches shall be mechanically held, electrically operated and shall be interlocked mechanically and electrically to insure that normal power and emergency power mixing is impossible. The automatic transfer switches shall be suitable for use with emergency sources.

### 2.03 AUTOMATIC TRANSFER SWITCH

- A. Sequence of Operation: Automatic switching shall occur from normal power to emergency power when there is a phase reversal or when any phase of the normal power drops between an adjustable voltage range of 75 to 98% voltage and to automatically restore the load to normal when all phases are between an adjustable voltage range of 75 to 98% normal voltage or phase rotation is corrected.

- B. Main switch contacts shall be high-pressure silver alloy in order to improve interrupting and withstand capabilities. Main contacts shall be rated for 600 volts AC minimum. Contact assemblies shall have arc chutes for positive arc extinguishment. Arc chutes shall have insulating covers to prevent interphase flashover.
- C. Transfer switches shall be equipped with transparent protective covers over all live parts of the switch. These covers are to serve as protection to operators or service personnel from contact with live parts, and from contact with arcing by-products if the switches operate with the door open. Barriers shall be transparent to allow for visual inspection for contact position and for damage.
- D. Automatic transfer switches utilizing components of molded case circuit breakers are not acceptable.
- E. All transfer switches and accessories shall be UL listed and labeled, tested per UL Standard 1008 and CSA approved.
- F. Solid state undervoltage sensors shall simultaneously monitor all phases of both sources. Pick-up and drop-out setting shall be adjustable between 75 and 98% of system voltage. Voltage sensors shall allow for adjustment to sense partial loss of voltage on any phase. Voltage sensors shall have field calibration of actual supply voltage to nominal system voltage. Switches that do not monitor all three phases of both normal and emergency sources will not be acceptable.
- G. Provide frequency sensing relay which will not permit transfer to emergency power until the generator set is operating at 60 Hz.
- H. Control wiring shall be terminated interlocking, plug-type connectors. Operating current for the transfer shall be obtained from the source to which the load is to be transferred.
- I. The controls shall include latching diagnostic indicators to pinpoint the last successful step in the sequence of control functions, and to indicate the present status of the control functions in real time, as follows:
  - 1. Source 1 OK.
  - 2. Start Generator Set.
  - 3. Source 2 OK.
  - 4. Transfer Timing.
  - 5. Transfer Complete.
  - 6. Retransfer Timing.
  - 7. Retransfer Complete.
  - 8. Timing for Stop.

#### 2.04 RATINGS

- A. Ratings shall be as follows:
  - 1. Voltage: 120/208V, 3 phase, 4 wire.
  - 2. Switched Poles: 4, (overlapping neutral not acceptable).
  - 3. Load Inrush Rating: Combination Load.
- B. All automatic transfer switches shall meet the following withstand ratings as a minimum. In order to protect the system under current or possible future conditions, whether protected by circuit breakers or current limiting fuses, the transfer switches must meet both of the following molded case circuit breaker and current limiting fuse withstand and closing ratings as a minimum. Ratings are stated in symmetrical RMS amperes for three phase faults.
  - 1. Transfer Amperage: 800

2. WCR @ 480 Volts W/Molded Case C/B'S: 65,000
  3. WCR @ 480 Volts W/Current Limit Fuses: 200,000
- C. Transfer switches shall be continuously rated in ambient temperatures of -40 to +50 degrees C, relative humidity up to 95% (non-condensing), and altitudes up to 10,000 feet.

#### 2.05 AUTOMATIC SEQUENCE OF OPERATION

- A. Initiate Time Delay to Start Alternate Source Engine Generator: Upon initiation by normal source monitor.
- B. Time Delay to Start Alternate Source Engine Generator: 0 to 15 seconds, adjustable.
- C. Engine Start: Automatic controls shall signal the engine-generator set to start upon a signal from normal source sensors, after time delay to start has terminated.
- D. Initiate Transfer Load to Alternate Source: Upon initiation by normal source monitor and permission by alternate source monitor.
- E. Time Delay Before Transfer to Alternate Power Source: 2 to 120 seconds, adjustable.
- F. Initiate Retransfer Load to Normal Source: Upon permission by normal source monitor.
- G. Time Delay Before Retransfer to Normal Power: 0 to 30 minutes, adjustable; bypass time delay in the event of the alternate source failing.
- H. Time Delay Before Engine Shut Down: 0 to 10 minutes, adjustable, of unloaded operation; factory set at 5 minutes.
- I. Engine Exerciser: An Exerciser shall, once a week, start the generator set, transfer building load to the generator sets and after a set period of time, transfer the building load back to normal power. It shall be readily accessible and easy to start. Exercisers shall be furnished with load/no load selector switches. Provide bypass exerciser controls if the normal source fails during the exercise period.

#### 2.06 ENCLOSURE

- A. Enclosures: Transfer switch enclosure shall be NEMA 1. All controls which will be located on cabinets shall be key operated. Manual operating handles and all control switches, (other than key-operated switches) shall be accessible to authorized personnel only by opening the key-locking cabinet doors. Transfer switches with manual operating handles and/or non key-operated control switches located on the outside of the cabinet do not meet this specification and are not acceptable.

#### 2.07 ACCESSORIES

- A. Indicating Lights: Mounted in cover of enclosure to indicate the following. Source light for AC power loss shall be 30.5 mm heavy duty oiltight press-to-test by SIEMENS.
  1. NORMAL SOURCE AVAILABLE.
  2. EMERGENCY SOURCE AVAILABLE.
  3. NORMAL SWITCH POSITION.
  4. EMERGENCY SWITCH POSITION..
  5. AC POWER FAILURE.
- B. Emergency Kill Switch Pushbutton (Maintained): When depressed shall shut down generator. This switch shall be in series with new exterior emergency kill switch.

- C. Transfer Switch Main Shaft Auxiliary Contacts: Two normally open; two normally closed. Wired to terminal block for easy access for indication of switch position. Rated at 10 Amps continuous and 250 VAC maximum.
- D. Transfer switches are to be equipped with permanently attached operating handles and quick-break, quick-make mechanisms suitable for normal operation under load. Loose manual operating handles that need to be field attached for operation will not be acceptable.
- E. All transfer switches shall be provided with a field adjustable time delay during the switching in both directions, during which time the load is isolated from both power sources, to allow load residual voltage to decay before closure to opposite source. The delay feature shall have an adjustable range of 0 to 7.5 seconds. Phase angle monitor/inphase type monitors are not acceptable.
- F. Provide generator 20 light remote annunciator located inside the electrical room on the ATS Cubicle. Interface generator set controls with battery charger and fuel tank alarms for all status conditions. Provide all power, control wiring including conduits.

### PART 3 - EXECUTION

#### 3.01 INSTALLATION

- A. Installation of transfer switches shall be in accordance with manufacture requirements. Provide applicable U.L. labeling for installed system.

#### 3.02 POWER OUTAGE

- A. After the transfer switch is installed, the Contractor shall be responsible to inspect the installation and field verify that the switch has been installed per manufacturer's recommendations. Owner's operating personnel shall be instructed on the use and service requirements of the transfer switch by the manufacturer. A minimum of two (2) hours manufacturers training is required.

#### 3.03 DEMONSTRATION

- A. Demonstrate operation of transfer switch under provisions.

### END OF SECTION 262917.11

PART 1 - GENERAL

1.01 SECTION INCLUDES

- A. Packaged engine generator set.
- B. Exhaust piping, fittings, silencer and insulation.
- C. Control panels.
- D. Battery and charger.
- E. Vibration isolation.

1.02 RELATED SECTIONS

- A. Section 012500 - Substitution Procedures.
- B. Section 262917 - Transfer Switch (Wall Mount)

1.03 REFERENCES

- A. NEMA AB1 - Molded Case Circuit Breakers.
- B. NEMA MG1 - Motors and Generators.
- C. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
- D. ANSI/NFPA 70 - National Electric Code.
- E. NFPA 110 - Emergency Standby Systems.
- F. NFPA 30 - Flammable and Combustible Liquids Code.
- G. NFPA 37 - Installation of Stationary Engines.
- H. NFPA 101 - Life Safety Code.

1.04 SUBMITTALS

- A. Submit product data under provisions of Section 013300.
- B. Shop Drawings: Indicate electrical characteristics and connection requirements. Show plan and elevation views with overall and interconnection point dimensions, fuel consumption rate curves at various loads, ventilation and combustion air requirements, electrical diagrams including schematic and interconnection diagrams.
- C. Product Data: Provide data showing dimensions, weights, ratings, interconnection points and internal wiring diagrams for engine, generator, control panel, battery, battery rack, battery charger, exhaust silencer, vibration isolators, radiator and derating schedules, operating performance, exhaust flow data, and cooling system data. Submit generator alternator output curves, deration curves and temperature data on the complete genset individual components.
- D. Test Reports: Indicate results of performance testing including 0.8 power factor test at 100 percent load.

- E. Prototype Test Reports: Submittals will not be received without submission of prototype test reports. No exceptions.
- F. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, installation and starting of product. Provide typical system interconnection wiring diagrams.
- G. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.
- H. Manufacturer's Field Reports: Submit under provisions of Section 017500. Indicate procedures and findings.

#### 1.05 OPERATION AND MAINTENANCE DATA

- A. Submit under provisions of Section 017823.
- B. Operation Data: Include instructions for normal operation.
- C. Maintenance Data: Include instructions for routine maintenance requirements, service manuals for engine and day tank, oil sampling and analysis for engine wear, and emergency maintenance procedures.

#### 1.06 QUALITY ASSURANCE

- A. Perform work in accordance with NFPA 110.

#### 1.07 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing the Products specified in this section with minimum ten years experience, and with an authorized distributor offering 24-hour parts and service availability within 50 miles of the project. The manufacturer shall fabricate the engines, generators and control panel. Automatic transfer switches and generator enclosures shall be supplied, warranted and serviced by a single system source supplier.
- B. Supplier: Authorized distributor of specified manufacturer with minimum six years documented experience with specified products and factory-trained service technicians. The supplier must be factory authorized to perform warranty service on the entire system, including but not limited to, the engines, generators, control panels and automatic transfer switches. The supplier must show proof of factory trained service technicians on all components.
- C. The complete engine generator system shall be standard of a single manufacturer. It shall be factory built, tested and shipped by this single manufacturer.

#### 1.08 REGULATORY REQUIREMENTS

- A. Conform to requirements of NFPA 70 and NFPA 110.
- B. Furnish products listed and classified by Underwriters Laboratories, Inc. as suitable for purpose specified and indicated.

#### 1.09 EXTRA SERVICES

- A. The single source supplier shall provide as part of the package a 5-year warranty and 5-year planned maintenance agreement at no additional cost to the Owner. This warranty shall cover the generator system, transfer switches and generator enclosures. Agreement shall include, as

a minimum, one service call per year. The services must be performed by the authorized distributor of the equipment furnished, and may not be subcontracted. The following services shall be performed once a year.

1. Replace engine-lubricating oil and remove used oil from premises.
2. Replace oil and fuel filters.
3. Check coolant system for proper levels and condition. Replace coolant filters and add corrosion inhibitor as needed.
4. Check air filter.
5. Check and clean crankcase breathers.
6. Check turbocharger free-spin and end play.
7. Check and adjust belts as required.
8. Check engine for loose, bare or broken wiring. Replace as needed.
9. Check entire equipment for fuel or water leaks.
10. Check condition of batteries and report any action necessary for recharging or replacing.
11. Start and run all engines, check temperatures and pressures.
12. Test engine safety shutdown systems.
13. Test all transfer switches operation and time delays.
14. Submit a report of this inspection to the Owner and advise of any further work required.

## PART 2 - PRODUCTS

### 2.01 MANUFACTURERS

- A. ONAN CORPORATION, Minneapolis, Minnesota, or specifically approved equal.
- B. Proposal for any substitute equipment shall provide complete submittal data, as specified in Section 012500 - Substitution Procedures and specified herein, to the Engineer for approval or disapproval. The supplier must submit detailed sizing calculations for each generator to verify models are capable of picking up the entire loads with voltage dips as herein specified.
- C. Approval of Substitute Equipment: Design has been based on ONAN Model Generators. If substitute equipment is approved, the contractor shall be responsible for the charges of any necessary revisions to the plans and specifications, drawings, and project documentation; and charges related to equipment spacing, enclosure sizes, foundation sizes, mounts, electrical wiring, ventilation equipment, fuel, exhaust components, etc., as well as any engineering costs. Also, the supplier must furnish a list of completed installations, including name, address and telephone number of at least five comparable installations which can prove the proposed products have operated satisfactorily for three years.
- D. It is intended that all products specified herein be of standard ratings, therefore, the KW and KVA, starting KVA and maximum allowable voltage dip, ratings, etc., shall be the manufacturer's next size or rating to exactly meet the specifications. No exceptions.

### 2.02 SYSTEM REQUIREMENTS

- A. The engine generator shall start and provide continuous power to the loads with 100 percent block loading at the time of transfer.

### 2.03 NATURAL GAS ENGINE GENERATOR SET

- A. Rating: The AC engine generator set, ONAN Model C60 N6 and shall be rated by the manufacturer for standby operation at 60 KW/75 KVA at 0.8 PF, 60 Hz, 1800 RPM for use at 120/208 volts, 3 phase, 4 wire. Ratings shall be at an elevation of 500 feet above sea level, and at 104 degrees F.
  1. Voltage regulation shall be plus or minus 1 percent of rated voltage for any constant load between no load and rated load.

2. Frequency regulation shall be isochronous under varying from no load to 100% rated load.
  3. Random Voltage Variation: The cyclic variations in RMS voltage shall not exceed plus or minus 1% of rated speed for constant loads from no load to rated load, with constant ambient and operating temperature.
  4. Random Frequency Variation: Speed variations for constant loads from no load to rated load shall not exceed plus or minus 0.25% of rated speed, with constant ambient and operating temperature.
  5. Telephone Harmonic Distortion: The sum of AC voltage waveform harmonics, from no load to full linear load, shall not exceed 5% of rated voltage (L-N, L-L, L-L-L) and no single harmonic shall exceed 3% of rated voltage.
  6. Telephone Influence Factor: TIF shall be less than 50 per NEMA MG1-22.43.
  7. The diesel engine generator set shall be capable of picking up 100% of nameplate KW and power factor in one step with the engine generator set at operating temperature, in accordance with NFPA Standard 110, Paragraph 5-13.2.6.
  8. The maximum allowable engine BMEP on the engine shall not exceed 224 psi at 100% rated load.
  9. The engine generator shall start and provide power to the loads in the following step starting sequence with a maximum instantaneous voltage dip of 30% and a maximum frequency dip of 10%.
  10. The generator shall at a minimum provide the following performance.
- B. The alternator performance shall be designed to provide a minimum of 350 locked rotor KVA at a maximum voltage dip of 35%.
- C. The following performance verifications shall be provided for substitute generators.
1. Submit five copies of generator sizing program based upon the specified step/starting sequence and associated voltage/frequency dips and required starting KVA.
  2. As part of the substitution requirements the contractor shall enter all design step/starting sequence loads into the manufacturer's generator sizing program in the presence of the engineer to verify model proposed by substitute manufacturer meets the specified requirements for ambient temperature, site altitude, voltage dip, frequency dip, and starting KVA.

#### 2.04 AC GENERATOR, REGULATOR AND EXCITER UNIT

- A. The AC generator, exciter and voltage regulator shall be designed and manufactured by the engine generator set manufacturer as a complete generator system.
- B. The AC generator shall be synchronous, four pole, revolving field, dripproof construction, single prelubricated sealed bearing, air cooled by a direct drive centrifugal blower fan and directly connected to the engine with flexible drive discs. The armature shall have skewed laminations of insulated electrical grade steel, two-thirds pitch windings in order to minimize field heating and voltage harmonics. The rotors shall have amortisseur (damper windings) layer wound mechanically wedged winding construction. The rotors shall be dynamically balanced. The exciters shall be brushless, three phase, with full wave silicon diodes mounted on the rotating shaft and a surge suppressor connected in parallel with the field winding. Field discharge resistors shall not be acceptable. Systems using three wire solid state devices (such as SCRs or transistors) mounted on the rotor shaft shall not be acceptable.
- C. All insulation system components shall meet NEMA MG1 standard temperature limits for Class H insulation system. Actual temperature rise measured by resistance method at full load shall not exceed 105 degrees C to provide additional allowance for internal hot spots. The main generator and exciter insulation systems must be suitably impregnated for operation in severe environments for resistance to sand, salt and sea spray.

- D. Generator shall be a Permanent Magnet Generator (PMG). Permanent magnet generators shall provide excitation power to the automatic voltage regulator for immunity from voltage distortion caused by nonlinear SCR controlled loads on the generator. The PMG's shall sustain main field excitation power for optimum motor starting and to sustain short circuit current for selective operation and coordination of system overcurrent devices.

## 2.05 ENGINE GENERATOR SET CONTROLS

- A. The generator sets shall be provided with microprocessor-based control systems which are designed to provide automatic starting, monitoring, and control functions for the generator set. The control systems shall also be designed to allow local monitoring and control of the generator sets, and remote monitoring and control as described in this specification. The controls shall be mounted on the generator sets, and shall be vibration isolated and prototype tested to verify the durability of all components in the system under vibration conditions encountered. The controls shall be UL-508 labeled, CSA282-M1989 certified, and meet IEC-8528 part 4. All switches, lamps and meters shall be oil-tight and dust-tight, and the enclosure doors shall be gasketed. There shall be no exposed points in the controls (with the door open) that operate in excess of 50 volts. The controls shall meet or exceed the requirements of Mil-Std 461C part 9, and IEC Std. 801.2, 801.3 and 801.5 for susceptibility, conducted and radiated electromagnetic emissions. The entire controls shall be tested and meet the requirements of IEEE587 for voltage surge resistance. The generator set mounted controls shall include the following features and functions:
1. Three position control switch labeled RUN/OFF/AUTO. In the RUN position the generator set shall automatically start, and accelerate to rated speed and voltage. In the OFF position the generator set shall immediately stop, bypassing all time delays. In the AUTO position the generator set shall be ready to accept a signal from a remote device to start and accelerate to rated speed and voltage.
  2. Red "mushroom-head" push-button EMERGENCY STOP switch. Depressing the emergency stop switch shall cause the generator set to immediately shut down, and be locked out from automatic restarting.
  3. Push-button RESET Switch: The RESET switch shall be used to clear a fault and allow restarting the generator set after it has shut down for any fault condition.
  4. Generator Set AC Output Metering: The generator set shall be provided with a metering set with the following features and functions:
    - a. 2.5-inch, 90 degree scale analog voltmeter, ammeter, frequency meter, and kilowatt (KW) meter. These meters shall be provided with a phase select switch and an indicating lamp for upper and lower scale on the meters. Ammeter and KW meter scales shall be color coded in the following fashion: readings from 0-90% of generator set standby rating: green; readings from 90-100% of standby rating: amber; readings in excess of 100%: red.
    - b. Digital metering set, 0.5% accuracy, to indicate generator RMS voltage and current, frequency, output current, output KW, KW-hours and power factor. Generator output voltage shall be available in line-to-line and line-to-neutral voltages, and shall display all three phase voltages (line to neutral or line to line) simultaneously.
  5. Generator Set Alarm and Status Message Display: The generator set shall be provided with alarm and status indicating lamps to indicate non-automatic generator status, and existing alarm and shutdown conditions. The lamps shall be high-intensity LED type. The lamp condition shall be clearly apparent under bright room lighting conditions. The generator set control shall indicate the existence of the following alarm and shutdown conditions on a digital display panel:
    - a. Low Oil Pressure (alarm)
    - b. Low Oil Pressure (shutdown)
    - c. Oil Pressure Sender Failure (alarm)
    - d. Low Coolant Temperature (alarm)
    - e. High Coolant Temperature (alarm)

- f. High Coolant Temperature (shutdown)
  - g. Engine Temperature Sender Failure (alarm)
  - h. Fail to Crank (shutdown)
  - i. Overcrank (shutdown)
  - j. Overspeed (shutdown)
  - k. Low DC Voltage (alarm)
  - l. Low Coolant Level (alarm or shutdown-selectable)
  - m. High DC Voltage (alarm)
  - n. Weak Battery (alarm)
  - o. Low Fuel-Daytank (alarm)
  - p. High AC Voltage (shutdown)
  - q. Low AC Voltage (shutdown)
  - r. Under Frequency (shutdown)
  - s. Over Current (warning)
  - t. Over Current (shutdown)
  - u. Short Circuit (shutdown)
  - v. Ground Fault (alarm)
  - w. Over Load (alarm)
  - x. Emergency Stop (shutdown)
    - 1) In addition, provisions shall be made for indication of two customer-specified or future alarm or shutdown conditions. These two alarm conditions shall be interfaced with leak detection/overfill alarm panel for overfill and leak detection. Labeling of the customer specified or future alarm or shutdown conditions shall be of the same type and quality as the above specified conditions. The non-automatic indicating lamp shall be red, and shall flash to indicate the generator set is not able to automatically respond to a command to start from a remote location.
6. Engine Status Monitoring: The following information shall be available from a digital status panel on the generator set control:
- a. Engine Oil Pressure (psi or kPa)
  - b. Engine Coolant Temperature for left and right block temperatures (degrees F or C; both)
  - c. Engine Oil Temperature (degrees F or C)
  - d. Engine Speed (rpm)
  - e. Number of Hours of Operation (hours)
  - f. Number of Start Attempts
  - g. Battery Voltage (DC volts)
7. Control Functions: The control system shall provide for the following functions:
- a. The control system provided shall include a cycle cranking system, which allows for user selected crank time, reset time, and number of cycles. Initial settings shall be for 3 cranking periods of 15 seconds each, with 15 second rest period between cranking periods.
  - b. The control system shall include an idle mode control, which allows the engine to run in idle mode in the RUN position only. In this mode, the alternator excitation system shall be disabled.
  - c. The control system shall include an engine governor control, which functions to provide steady state frequency regulation as noted elsewhere in this specification. The governor control shall include adjustments for gain, damping, and ramping function to control engine speed and limit exhaust smoke while the unit is starting. The governor control shall be suitable for use in paralleling applications without component changes.
  - d. The control system shall include time delay start (adjustable 0-300 seconds) and time delay stop (adjustable 0-600 seconds) functions.

- e. The control system shall include sender failure monitoring logic for speed sensing, oil pressure, and engine temperature which is capable of discriminating between failed sender or wiring components, and an actual failure condition.
- 8. Alternator Control Functions: The generator set control shall include the following alternator control functions:
  - a. The generator set shall include an automatic voltage regulation system which is matched and prototype tested with the governing system provided. It shall be immune from misoperation due to load-induced voltage waveform distortion and provide a pulse width modulated output to the alternator exciter. The voltage regulation system shall be equipped with three-phase RMS sensing and shall control build up of AC generator voltage to provide a linear rise and limit overshoot. The systems shall include a torque-matched characteristic, which shall reduce output voltage in proportion to frequency below a threshold of 58-59 HZ. The voltage regulator shall include adjustments for gain, damping and frequency roll-off. Adjustments shall be broad range, and made via digital raise-lower switches, with an alpha-numeric LED readout to indicate setting level.
  - b. The voltage regulation system shall include provisions for reactive load sharing and electronic voltage matching for paralleling applications. Motorized voltage adjust pot is not acceptable for voltage matching.
  - c. Controls shall be provided to monitor the output current of the generator set and initiate an alarm when load current exceeds 110% of the rated current of the generator set on any phase for more than 60 seconds. The controls shall shut down and lock out the generator set when output current level approaches the thermal damage point of the alternator.
  - d. Controls shall be provided to monitor the KW load on the generator set, and initiate an alarm condition when total load on the generator set exceeds the generator set rating for in excess of 5 seconds.
  - e. Controls shall include a load shed control, to operate a set of dry contacts (for use in shedding customer load devices) when the generator set is overloaded.
  - f. An AC over/under voltage monitoring system which responds only to true RMS voltage conditions shall be provided. The system shall initiate shutdown of the generator set when alternator output voltage exceeds 110% of the operator-set voltage level for more than 10 seconds, or with no intentional delay when voltage exceeds 130%. Under voltage shutdown shall occur when the output voltage of the alternator is less than 85% for more than 10 seconds.
  - g. A battery monitoring system shall be provided which initiates alarms when the DC control and starting voltage is less than 25VDC or more than 32VDC. During engine starting, the low voltage limit shall be disabled, and if DC voltage drops to less than 14.4 volts for more than two seconds a "weak battery" alarm shall be initiated.
  - h. The control system shall include a ground fault monitoring relay. The relay shall be adjustable from 100-1200 amps, and include adjustable time delay of 0-1.0 seconds. The relay shall be for indication only, and not trip or shut down the generator set. Note bonding and grounding requirements for the generator set, and provide relay which will function correctly in system as installed.
- 9. Control Interfaces for Remote Monitoring: All control and interconnection points from the generator set to remote components shall be brought to a separate connection box. No field connections shall be made in the control enclosure or in the AC power output enclosure. Provide the following features in the control system:
  - a. Form "C" dry common alarm contact set rated 2A @ 30VDC to indicate existence of any alarm or shutdown condition on the generator set.
  - b. One set of contacts rated 2A @ 30VDC to indicate generator set is ready to load. The contacts shall operate when voltage and frequency are greater than 90% of rated condition.
  - c. A fused 10 amp switched 24VDC power supply circuit shall be provided for customer use. DC power shall be available from this circuit whenever the generator set is running.

- d. A fused 20 amp 24VDC power supply circuit shall be provided for customer use. DC power shall be available from this circuit at all times from the engine starting/control batteries.
- e. The control shall be provided with provisions for connection of remote monitoring equipment as described herein or shown on the drawings.

## 2.06 ENGINES

- A. The natural gas engine shall be manufactured by Cummins Engine Company and designed specifically for generator set duty. The natural gas engine shall be 4 cycle, natural gas fueled, direct injection, 1800 RPM, with forged steel crankshaft and connecting rods. Minimum engines shall be 359 cubic inches. Engines shall have a minimum of 6 cylinders. The cylinder blocks shall be cast iron with replaceable wet liners and have four valves per cylinder. The engines shall be turbocharged and aftercooled.
- B. Two cycle engines will not be acceptable.
- C. Electronic governor systems shall provide automatic isochronous frequency regulation. The engine governing systems shall not utilize any exposed operating linkage.
- D. The engines shall be cooled by a unit-mounted closed loop radiator system including belt-driven pusher fan, coolant pump and thermostat temperature control. The cooling systems shall be rated for full rated load operation in 104 degrees F (40 degrees C) ambient condition. The cooling capability of the generator sets shall be demonstrated by prototype tests on a representative generator set model conducted by the generator set manufacturer; calculated data from the radiator manufacturer only is not sufficient. Radiators shall be provided with a duct adapter flange permitting the attachment of an air discharge duct to direct the radiator air outside according to the manufacturer's instructions.
- E. Rotating parts shall be guarded against accidental contact per OSHA requirements.
- F. The maximum radiator cooling air shall not exceed 5600 scfm. The maximum alternator cooling air shall not exceed 149.1 cfm for the genset. The maximum allowable static restriction shall not exceed 0.5 inches of water. The entire cooling air system is based on the above data. All costs incurred if an alternate manufacturer is purchased shall be the responsibility of the electrical contractor. These costs shall include costs to all other trades as well as any associated engineering fees.

## 2.07 ENGINE ACCESSORY EQUIPMENT

- A. The engine generator sets shall include the following accessories:
  - 1. Electric starters capable of three complete cranking attempts without overheating, before overcrank shutdown (75 seconds).
  - 2. Positive displacement, mechanical, full pressure, lubrication oil pumps. Full flow lubrication oil filters with replaceable spin-on canister elements and dipstick oil level indicators. Provide bypass oil filters.
  - 3. Replaceable heavy duty dry element air cleaners with restriction indicators and safety element.
  - 4. Engine mounted battery charging alternators, 45 ampere and solid-state voltage regulators.
  - 5. Anti-condensation heater for alternator.

## 2.08 BASES

- A. The engine-generator set shall be mounted on a heavy duty steel base to maintain proper alignment between components. The engine-generator set shall incorporate battery trays with

battery holddown clamps on the base rails. Provisions for stub up of electrical connections shall be within the footprint of the generator set base rails and within the basetanks as specified in the housing section of the specification. Vibration isolators, spring type, shall be provided to be mounted under the generator set base.

## 2.09 GENERATOR SETS CIRCUIT BREAKERS

- A. Generator main circuit breaker shall be solid state UL listed, molded case type, rated as listed below. Circuit breakers shall be mounted in a separate NEMA 1 enclosure and be shipped completely wired to the gensets. No exceptions. Enclosures shall include neutral blocks for field connection.
- B. Solid State circuit breakers shall be 100% rated: Refer to drawings for sizes.
- C. Circuit breaker (CB) shall be long time current and instantaneous pickup with solid state trip unit. CB shall have visible mechanical fault indicator and push button trip.
- D. Circuit breakers shall be rated at 65,000 AIC.
- E. Provide auxiliary contacts on breaker position.

## 2.10 EXHAUST SYSTEMS

- A. One exhaust silencer shall be provided for the generator set. The silencer shall be super critical grade. The silencer shall reduce total noise a minimum of 40 dBA at three feet.
- B. The exhaust silencer shall be HARCO super critical bottom inlet/side outlet Model 5214-SFH-8 shall be mounted inside the sound attenuated enclosure. Provide all fittings, reducers, couplings elbows and spool pieces.
- C. All exterior fittings, accessories and bolts shall be type 304 stainless steel. Provide heat resistant gaskets between all flanged connections to serve as dielectric protectors.
- D. The maximum gas flow shall not exceed 476 cfm. The exhaust gas temperature shall not exceed 1286 degrees F. The maximum back pressure shall not exceed 28.1 inches of water. The design of the entire exhaust system is based on the above data. If a substitution of model specified is made, all costs incurred to redesign as well as costs to other trades to modify the layout shall be the complete responsibility of the electrical contractor.
- E. Provide stainless steel flexible exhaust connections for the engine as required for connection between the engine exhaust manifolds and exhaust lines in compliance with applicable codes and standards.
- F. Provide an exhaust system condensation trap with manual drain valve to trap and drain off exhaust condensation and to prevent condensation from enter-ing the engine.
- G. Provide a suitable weather cap at the stack outlet with all necessary flanges and fittings for proper installa-tion. The weather cap shall have the proper counter weights attached to prevent banging while generator is unloaded.
- H. Thermal jacket for interior exhaust lines and silencer by FIRWIN CORP. or engineered approved equal. Jacket thickness shall be sufficient to maintain a surface temperature of less than 200 degrees F.
- I. Exhaust mufflers shall be installed by enclosure manufacturer so their weight is not supported by the engines.

**2.11 ACCESSORIES**

- A. Vibration isolators: Spring type.
- B. Starting and control Batteries: Two (2) 24 volt starting batteries each genset, lead acid type, 24 volt DC (12 volt DC will not be accepted), sized to accommodate 45 seconds of cranking at an ambient of 0 degrees F without being recharged.
- C. Battery Chargers: One 10 amp voltage regulated battery charger shall be provided for each engine-generator set. Input AC voltage and DC output voltage shall be as required. Chargers shall be equipped with float, taper and equalize charge settings. Operational monitors shall provide visual output along with individual form C contacts rated at 4 amps, 120 VAC, 30 VDC for remote indication of :
  - 1. Loss of AC Power - red light.
  - 2. Low Battery Voltage - red light.
  - 3. High Battery Voltage - red light.
  - 4. Power ON - green light (no relay contact).
- D. Block Heaters: Thermostatically controlled jacket water heater shall be supplied for each genset with a minimum size shall be 4990 watts. Input voltage of heaters shall be 208 VAC 1 phase.
- E. Provide generator 20 light remote annunciator located inside the electrical room on the ATS Cubicle. Interface generator set controls with battery charger and fuel tank alarms for all status conditions. Provide all power, control wiring including conduits.

**2.12 ENCLOSURE**

- A. The generator set shall be provided with a factory-installed sound attenuated housing which allows the generator set to operate at full rated load in the ambient conditions previously specified. The enclosure shall reduce the sound level of the generator set while operating at full rate load to a maximum of 75 dBA at any location 7 meters from the generator set in a free field environment. Housing materials used shall be steel. Fiberglass and plastic are not acceptable. Acoustical materials used shall be oil and water resistant. No foam materials shall be used.
- B. The enclosure shall include hinged doors for access to both sides of the engine and alternator, and the control equipment and a hinged rear see-through control door. Key-locking and padlockable door latches shall be provided for all doors. Door hinges shall be stainless steel.
- C. The enclosure shall be provided with an exhaust silencer which is mounted on top of the enclosure, and allows the generator set package to meet specified sound level requirements. Silencer and exhaust shall include a rain cap and rain shield.
- D. All sheet metal shall be primed for corrosion protection and finish painted with the manufacturers standard color using a two step electrocoating paint process, or equal meeting the performance requirements specified below. Metal part surfaces shall be prepared, primed and painted. The painting process shall result in a coating which meets the following requirements:
  - 1. Primer thickness, 0.5-2.0 mils. Top coat thickness, 0.8-1.2 mils.
  - 2. Gloss, per ASTM D523, 80% plus or minus 5%. Gloss retention after one year shall exceed 50%.
  - 3. Crosshatch adhesion, per ASTM D3359, 4B-5B.
  - 4. Impact resistance, per ASTM D2794, 120-160 inch pounds.
  - 5. Salt spray, per ASTM B117, 1000+ hours.
  - 6. Humidity, per ASTM D2247, 1000+ hours.
  - 7. Water Soak, per ASTM D2247, 1000+ hours.

- E. Painting of hoses, clamps, wiring harnesses, and other non-metallic service parts will not be acceptable. Fasteners used shall be corrosion resistant, and designed to minimize marring of the painted surface when removed for normal installation or service work. The enclosure shall be built and tested by the engine generator manufacturer.

### 2.13 SOURCE QUALITY CONTROL

- A. To provide proven reliability of the system, three series of tests shall be performed: prototype model tests, production model tests and field tests. The manufacturer shall provide documentation demonstrating satisfactory prototype and production test results. Generator sets that have not been prototype tested and factory tested at 0.8 PF will not be acceptable.
- B. Generator Set Factory Production Tests and Evaluation: These tests and evaluations must have been performed on a prototype generator set representative of the Model specified. A summary of the generator set testing results shall be submitted for review. The manufacturer's standard series of components development tests on the generator system, engine and other major components shall also be performed and available for review, but shall not be acceptable as a substitute for prototype testing on the complete representative generator set prototype.
- C. Torsiograph Analysis and Test: The manufacturer of the generator set shall verify that the engine generator set, as configured, is free from harmful torsional stresses. The analysis shall include correlation of empirical data from tests on a representative prototype. The empirical data must include spectrum analysis of the torsional transducer output within the operating speed range of the engine generator set. Calculations based on engine and generator separately are not acceptable.
- D. Temperature Rise Test: Complete thermal evaluation of a prototype generator rotor and starter must include actual measurement of internal generator and exciter temperatures by embedded detector method, and measurement of average temperature rise by resistance method. No position measured any place in the windings may exceed the temperature rise limits of NEMA for the particular type of insulation system used. Resistance method temperature rise data shall be confirmed by a full load test on the generator set prototype to include conducted and radiated heat from the engine.
- E. Short Circuit Test: A test on a prototype generator set shall have demonstrated that the generator set is designed to withstand the mechanical forces associated with a short circuit condition. With the generator set operating at rated load and speed, the generator terminals must be short circuited on all three phases for a duration of 20 seconds. At the conclusion of this test, the generator set must be capable of full load operation.
- F. Endurance Run Test: A minimum of 500 continuous hours of endurance testing with a representative generator set prototype operating as defined by the manufacturer's standby rating shall have been performed. Endurance testing shall be used to verify structural soundness and durability.
- G. Maximum Power Test: With the prototype generator set at normal operating temperature and with all power consuming auxiliaries in place, the maximum power available at rated speed shall be determined with the governor set at its fuel stop. The generator set shall maintain this power for a minimum of two minutes.
- H. Linear Vibration Test: A test for in-line motion of components occurring along a repeatable path shall meet the manufacturer's acceptance criteria.
- I. Cooling System Test: A cooling system test shall demonstrate the ability of the generator set cooling system to maintain normal operating temperature while operating at full rated load and power factor at the highest ambient temperature (122°F) of the system rating. Cooling air

requirements, radiator air flow and maximum allowable restriction at radiator discharge, shall be verified by this test.

- J. Maximum Motor Starting KVA: Motor starting KVA shall be determined by test, based on a sustained RMS recovery voltage of at least 90 percent of no load voltage with the specified load KVA at near zero power factor applied to the generator set.
- K. Transient Response, Steady State Speed Control and Voltage Regulation: Prototype generator set tests shall demonstrate consistent performance as follows; stable voltage and frequency at all loads from no load to full rated load, consistent frequency backwidth with steady state load, maximum voltage and frequency kp on load acceptance and rejection and restoration to steady state after sudden load changes. Transient response is a complete generator set (engine, generator, exciter, and regulator) performance criteria and cannot be established on generator data alone.
- L. Witnessed Generator Set Factory Production Tests: On the equipment to be shipped, an 8-hour test shall be performed at rated load and 0.8 PF. These tests shall include certified data to document the following: run at full load, maximum power, voltage regulation, transient and steady state governing, single step load pickup and safety shutdowns. Provide a factory certified test record of the production testing. Certified test record shall be sealed by a licensed professional engineer.

#### 2.14 WARRANTY

- A. Provide a 5-year manufacturer's limited warranty, including 100% parts and labor. The complete electrical power system, including but not limited to, generator set, controls, associated switches, enclosures, and accessories, as provided by the single source manufacturer, shall be warranted by the manufacturer against defects in materials and workmanship for a period of five (5) years from the date of system startup. Coverage shall include parts, labor, travel expenses, and labor to remove/reinstall the equipment, per ONAN's standard published limited warranty. Supplier must be factory authorized to perform warranty service on the entire system, including, but not limited to, the engine, the generator, the control panels, and the automatic transfer switches.

### PART 3 - EXECUTION

#### 3.01 INSTALLATION

- A. Install engine generator and all appurtenances in accordance with manufacturer's recommendations.
- B. Enclosure manufacturer shall install all exhaust components as shown on the drawings and as required to comply with NFPA 37 and local codes and regulations. Components shall be sized to assure full load operation without excessive backpressure sized as per manufacturer's recommendations with actual site dimensions when installed as shown on the drawing. Make provisions as required for pipe expansion and contraction.
- C. Coordinate installation of anchor bolts with generator enclosure manufacturer.
- D. Installation shall comply with applicable State and local codes as required by the authority having jurisdiction. Install equipment in accordance with manufacturer's instructions and instructions included in the listing or labeling of UL listed products.

**3.02 FIELD QUALITY CONTROL**

- A. Initial startup and field acceptance tests are to be conducted by the authorized representative of the system manufacturer who supplies the equipment.
- B. Test data shall be collected and recorded on the following: time of day, coolant temperature, operating oil pressure, battery charging rate, cranking time, crank-to-rated frequency time, voltage and frequency overshoot, load assumption-to-steady state voltage and frequency stabilization time, operating voltage, frequency, current, kilowatts and power factor. All data shall be taken every fifteen (15) minutes.
- C. Procedure: Generator manufacturer shall conduct a six (6) hour load bank test at 1.0 power factor for each generator set. Contractor shall provide load bank for testing generator set at 100% load. Contractor is not permitted to use load bank specified as part of the testing requirements. Load bank test shall test generator at full nameplate KW rating. Generator manufacturer's representative shall record test data, as described in (B) above. Test data shall be tabulated and typed for submission and approval by the engineer for final acceptance. No handwritten field notes will be allowed.

**END OF SECTION 263214**

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. Packaged engine generator set.
- B. Exhaust piping, fittings, silencer and insulation.
- C. Control panels.
- D. Battery and charger.
- E. Vibration isolation.

## 1.02 RELATED SECTIONS

- A. Section 262917 – Wall Mount Transfer Switch.

## 1.03 REFERENCES

- A. NEMA AB1 - Molded Case Circuit Breakers.
- B. NEMA MG1 - Motors and Generators.
- C. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
- D. ANSI/NFPA 70 - National Electric Code.
- E. NFPA 110 - Emergency Standby Systems.
- F. NFPA 30 - Flammable and Combustible Liquids Code.
- G. NFPA 37 - Installation of Stationary Engines.
- H. NFPA 101 - Life Safety Code.

## 1.04 SUBMITTALS

- A. Submit product data under provisions of Section 013300.
- B. Shop Drawings: Indicate electrical characteristics and connection requirements. Show plan and elevation views with overall and interconnection point dimensions, fuel consumption rate curves at various loads, ventilation and combustion air requirements, electrical diagrams including schematic and interconnection diagrams.
- C. Product Data: Provide data showing dimensions, weights, ratings, interconnection points and internal wiring diagrams for engine, generator, control panel, battery, battery rack, battery charger, exhaust silencer, vibration isolators, radiator and derating schedules, operating performance, exhaust flow data, and cooling system data. Submit generator alternator output curves, deration curves and temperature data on the complete genset individual components.
- D. Test Reports: Indicate results of performance testing including 0.8 power factor test at 100 percent load.
- E. Prototype Test Reports: Submittals will not be received without submission of prototype test reports. No exceptions.

- F. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, installation and starting of product. Provide typical system interconnection wiring diagrams.
- G. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.
- H. Manufacturer's Field Reports: Indicate procedures and findings.

#### 1.05 OPERATION AND MAINTENANCE DATA

- A. Operation Data: Include instructions for normal operation.
- B. Maintenance Data: Include instructions for routine maintenance requirements, service manuals for engine and day tank, oil sampling and analysis for engine wear, and emergency maintenance procedures.

#### 1.06 QUALITY ASSURANCE

- A. Perform work in accordance with NFPA 110.

#### 1.07 1.07 - QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing the Products specified in this section with minimum ten years experience, and with an authorized distributor offering 24-hour parts and service availability within 50 miles of the project. The manufacturer shall fabricate the engines, generators and control panel. Automatic transfer switches and generator enclosures shall be supplied, warranted and serviced by a single system source supplier.
- B. Supplier: Authorized distributor of specified manufacturer with minimum six years documented experience with specified products and factory-trained service technicians. The supplier must be factory authorized to perform warranty service on the entire system, including but not limited to, the engines, generators, control panels and automatic transfer switches. The supplier must show proof of factory trained service technicians on all components.
- C. The complete engine generator system shall be standard of a single manufacturer. It shall be factory built, tested and shipped by this single manufacturer.

#### 1.08 REGULATORY REQUIREMENTS

- A. Conform to requirements of NFPA 70 and NFPA 110.
- B. Furnish products listed and classified by Underwriters Laboratories, Inc. as suitable for purpose specified and indicated.

#### 1.09 EXTRA SERVICES

- A. The single source supplier shall provide as part of the package a 5-year warranty and 5-year planned maintenance agreement at no additional cost to the Owner. This warranty shall cover the generator system and transfer switches. Agreement shall include, as a minimum, one service call per year. The services must be performed by the authorized distributor of the equipment furnished, and may not be subcontracted. The following services shall be performed once a year.
  - 1. Replace engine-lubricating oil and remove used oil from premises.
  - 2. Replace oil and fuel filters.

3. Check coolant system for proper levels and condition. Replace coolant filters and add corrosion inhibitor as needed.
4. Check air filter.
5. Check and clean crankcase breathers.
6. Check turbocharger free-spin and end play.
7. Check and adjust belts as required.
8. Check engine for loose, bare or broken wiring. Replace as needed.
9. Check entire equipment for fuel or water leaks.
10. Check condition of batteries and report any action necessary for recharging or replacing.
11. Start and run all engines, check temperatures and pressures.
12. Test engine safety shutdown systems.
13. Test all transfer switches operation and time delays.
14. Submit a report of this inspection to the Owner and advise of any further work required.

## PART 2 - PRODUCTS

### 2.01 MANUFACTURERS

- A. ONAN CORPORATION, Minneapolis, Minnesota, or specifically approved equal.
- B. Proposal for any substitute equipment shall provide complete submittal data and specified herein, to the Engineer for approval or disapproval. The supplier must submit detailed sizing calculations for each generator to verify models are capable of picking up the entire loads with voltage dips as herein specified.
- C. Approval of Substitute Equipment: Design has been based on ONAN Model Generators. If substitute equipment is approved, the contractor shall be responsible for the charges of any necessary revisions to the plans and specifications, drawings, and project documentation; and charges related to equipment spacing, enclosure sizes, foundation sizes, mounts, electrical wiring, ventilation equipment, fuel, exhaust components, etc., as well as any engineering costs. Also, the supplier must furnish a list of completed installations, including name, address and telephone number of at least five comparable installations which can prove the proposed products have operated satisfactorily for three years.
- D. It is intended that all products specified herein be of standard ratings, therefore, the KW and KVA, starting KVA and maximum allowable voltage dip, ratings, etc., shall be the manufacturer's next size or rating to exactly meet the specifications. No exceptions.

### 2.02 SYSTEM REQUIREMENTS

- A. The engine generator shall start and provide continuous power to the loads with 100 percent block loading at the time of transfer.

### 2.03 NATURAL GAS ENGINE GENERATOR SET

- A. Rating: The AC engine generator set, ONAN Model C150N6 and shall be rated by the manufacturer for standby operation at 150KW/188 KVA at 0.8 PF, 60 Hz, 1800 RPM for use at 120/208 volts, 3 phase, 4 wire. Ratings shall be at an elevation of 150 feet above sea level, and at 105 degrees F.
  1. Voltage regulation shall be +/- 1.0 percent of rated voltage for any constant load between no load and rated load.
  2. Frequency regulation shall be isochronous under varying from no load to 100% rated load.
  3. Random Voltage Variation: The cyclic variations in RMS voltage shall not exceed +/- 1.0% of rated speed for constant loads from no load to rated load, with constant ambient and operating temperature.

4. Random Frequency Variation: Speed variations for constant loads from no load to rated load shall not exceed plus or minus 0.25% of rated speed, with constant ambient and operating temperature.
  5. Telephone Harmonic Distortion: The sum of AC voltage waveform harmonics, from no load to full linear load, shall not exceed 5% of rated voltage (L-N, L-L, L-L-L) and no single harmonic shall exceed 3% of rated voltage.
  6. Telephone Influence Factor: TIF shall be less than 50 per NEMA MG1-22.43.
  7. The natural engine generator set shall be capable of picking up 100% of nameplate KW and power factor in one step with the engine generator set at operating temperature, in accordance with NFPA Standard 110, Paragraph 5-13.2.6.
  8. The maximum allowable engine BMEP on the engine shall not exceed 224 psi at 100% rated load.
  9. The engine generator shall start and provide power to the loads in the following step starting sequence with a maximum instantaneous voltage dip of 30% and a maximum frequency dip of 10%.
  10. The generator shall at a minimum provide the following performance. Refer to generator load list.
- B. The alternator performance shall be designed to provide a minimum of 840 locked rotor KVA at a maximum voltage dip of 30%.
- C. The following performance verifications shall be provided for substitute generators.
1. Submit generator sizing program based upon the specified step/starting sequence and associated voltage/frequency dips and required starting KVA.
  2. As part of the substitution requirements the contractor shall enter all design step/starting sequence loads into the manufacturer's generator sizing program to verify model proposed by substitute manufacturer meets the specified requirements for ambient temperature, site altitude, voltage dip, frequency dip, and starting KVA. Contractor shall provide generator sizing program to engineer for review and approval.

#### 2.04 AC GENERATOR, REGULATOR AND EXCITER UNIT

- A. The AC generator, exciter and voltage regulator shall be designed and manufactured by the engine generator set manufacturer as a complete generator system.
- B. The AC generator shall be synchronous, four pole, revolving field, drip-proof construction, single prelubricated sealed bearing, air cooled by a direct drive centrifugal blower fan and directly connected to the engine with flexible drive discs. The armature shall have skewed laminations of insulated electrical grade steel, two-thirds pitch windings in order to minimize field heating and voltage harmonics. The rotors shall have amortisseur (damper windings) layer wound mechanically wedged winding construction. The rotors shall be dynamically balanced. The exciters shall be brush-less, three phase, with full wave silicon diodes mounted on the rotating shaft and a surge suppressor connected in parallel with the field winding. Field discharge resistors shall not be acceptable. Systems using three wire solid state devices (such as SCRs or transistors) mounted on the rotor shaft shall not be acceptable.
- C. All insulation system components shall meet NEMA MG1 standard temperature limits for Class H insulation system. Actual temperature rise measured by resistance method at full load shall not exceed 105 degrees C to provide additional allowance for internal hot spots. The main generator and exciter insulation systems must be suitably impregnated for operation in severe environments for resistance to sand, salt and sea spray.
- D. Generator shall be a Permanent Magnet Generator (PMG). Permanent magnet generators shall provide excitation power to the automatic voltage regulator for immunity from voltage distortion caused by nonlinear SCR controlled loads on the generator. The PMG's shall sustain

main field excitation power for optimum motor starting and to sustain short circuit current for selective operation and coordination of system overcurrent devices.

## 2.05 ENGINE GENERATOR SET CONTROLS

- A. The generator sets shall be provided with microprocessor-based control systems which are designed to provide automatic starting, monitoring, and control functions for the generator set. The control systems shall also be designed to allow local monitoring and control of the generator sets, and remote monitoring and control as described in this specification. The controls shall be mounted on the generator sets, and shall be vibration isolated and prototype tested to verify the durability of all components in the system under vibration conditions encountered. The controls shall be UL-508 labeled, CSA282-M1989 certified, and meet IEC-8528 part 4. All switches, lamps and meters shall be oil-tight and dust-tight, and the enclosure doors shall be gasketed. There shall be no exposed points in the controls (with the door open) that operate in excess of 50 volts. The controls shall meet or exceed the requirements of Mil-Std 461C part 9, and IEC Std. 801.2, 801.3 and 801.5 for susceptibility, conducted and radiated electromagnetic emissions. The entire controls shall be tested and meet the requirements of IEEE587 for voltage surge resistance. The generator set mounted controls shall include the following features and functions:
1. Three position control switch labeled RUN/OFF/AUTO. In the RUN position the generator set shall automatically start, and accelerate to rated speed and voltage. In the OFF position the generator set shall immediately stop, bypassing all time delays. In the AUTO position the generator set shall be ready to accept a signal from a remote device to start and accelerate to rated speed and voltage.
  2. Red "mushroom-head" push-button EMERGENCY STOP switch. Depressing the emergency stop switch shall cause the generator set to immediately shut down, and be locked out from automatic restarting.
  3. Push-button RESET Switch: The RESET switch shall be used to clear a fault and allow restarting the generator set after it has shut down for any fault condition.
  4. Generator Set AC Output Metering: The generator set shall be provided with a metering set with the following features and functions:
    - a. Digital metering set, 0.5% accuracy, to indicate generator RMS voltage and current, frequency, output current, output KW, KW-hours and power factor. Generator output voltage shall be available in line-to-line and line-to-neutral voltages, and shall display all three phase voltages (line to neutral or line to line) simultaneously.
  5. Generator Set Alarm and Status Message Display: The generator set shall be provided with alarm and status indicating lamps to indicate non-automatic generator status, and existing alarm and shutdown conditions. The lamps shall be high-intensity LED type. The lamp condition shall be clearly apparent under bright room lighting conditions. The generator set control shall indicate the existence of the following alarm and shutdown conditions on a digital display panel:
    - a. Low Oil Pressure (alarm)
    - b. Low Oil Pressure (shutdown)
    - c. Oil Pressure Sender Failure (alarm)
    - d. Low Coolant Temperature (alarm)
    - e. High Coolant Temperature (alarm)
    - f. High Coolant Temperature (shutdown)
    - g. Engine Temperature Sender Failure (alarm)
    - h. Fail to Crank (shutdown)
    - i. Overcrank (shutdown)
    - j. Overspeed (shutdown)
    - k. Low DC Voltage (alarm)
    - l. Low Coolant Level (alarm or shutdown-selectable)
    - m. High DC Voltage (alarm)
    - n. Weak Battery (alarm)

- o. Low Fuel-Daytank (alarm)
  - p. High AC Voltage (shutdown)
  - q. Low AC Voltage (shutdown)
  - r. Under Frequency (shutdown)
  - s. Over Current (warning)
  - t. Over Current (shutdown)
  - u. Short Circuit (shutdown)
  - v. Ground Fault (alarm)
  - w. Over Load (alarm)
  - x. Emergency Stop (shutdown)
  - y. In addition, provisions shall be made for indication of two customer-specified or future alarm or shutdown conditions. These two alarm conditions shall be interfaced with leak detection/overfill alarm panel for overfill and leak detection. Labeling of the customer specified or future alarm or shutdown conditions shall be of the same type and quality as the above specified conditions. The non-automatic indicating lamp shall be red, and shall flash to indicate the generator set is not able to automatically respond to a command to start from a remote location.
6. Engine Status Monitoring: The following information shall be available from a digital status panel on the generator set control:
- a. Engine Oil Pressure (psi or kPa)
  - b. Engine Coolant Temperature for left and right block temperatures (degrees F or C; both)
  - c. Engine Oil Temperature (degrees F or C)
  - d. Engine Speed (rpm)
  - e. Number of Hours of Operation (hours)
  - f. Number of Start Attempts
  - g. Battery Voltage (DC volts)
7. Control Functions: The control system shall provide for the following functions:
- a. The control system provided shall include a cycle cranking system, which allows for user selected crank time, reset time, and number of cycles. Initial settings shall be for 3 cranking periods of 15 seconds each, with 15 second rest period between cranking periods.
  - b. The control system shall include an idle mode control, which allows the engine to run in idle mode in the RUN position only. In this mode, the alternator excitation system shall be disabled.
  - c. The control system shall include an engine governor control, which functions to provide steady state frequency regulation as noted elsewhere in this specification. The governor control shall include adjustments for gain, damping, and ramping function to control engine speed and limit exhaust smoke while the unit is starting. The governor control shall be suitable for use in paralleling applications without component changes.
  - d. The control system shall include time delay start (adjustable 0-300 seconds) and time delay stop (adjustable 0-600 seconds) functions.
  - e. The control system shall include sender failure monitoring logic for speed sensing, oil pressure, and engine temperature which is capable of discriminating between failed sender or wiring components, and an actual failure condition.
8. Alternator Control Functions: The generator set control shall include the following alternator control functions:
- a. The generator set shall include an automatic voltage regulation system which is matched and prototype tested with the governing system provided. It shall be immune from misoperation due to load-induced voltage waveform distortion and provide a pulse width modulated output to the alternator exciter. The voltage regulation system shall be equipped with three-phase RMS sensing and shall control build up of AC generator voltage to provide a linear rise and limit overshoot. The systems shall include a torque-matched characteristic, which shall reduce output voltage in

- proportion to frequency below a threshold of [58-59] HZ. The voltage regulator shall include adjustments for gain, damping and frequency roll-off. Adjustments shall be broad range, and made via digital raise-lower switches, with an alpha-numeric LED readout to indicate setting level.
- b. The voltage regulation system shall include provisions for reactive load sharing and electronic voltage matching for paralleling applications. Motorized voltage adjust pot is not acceptable for voltage matching.
  - c. Controls shall be provided to monitor the output current of the generator set and initiate an alarm when load current exceeds 110% of the rated current of the generator set on any phase for more than 60 seconds. The controls shall shut down and lock out the generator set when output current level approaches the thermal damage point of the alternator.
  - d. Controls shall be provided to monitor the KW load on the generator set, and initiate an alarm condition when total load on the generator set exceeds the generator set rating for in excess of 5 seconds.
  - e. Controls shall include a load shed control, to operate a set of dry contacts (for use in shedding customer load devices) when the generator set is overloaded.
  - f. An AC over/under voltage monitoring system which responds only to true RMS voltage conditions shall be provided. The system shall initiate shutdown of the generator set when alternator output voltage exceeds 110% of the operator-set voltage level for more than 10 seconds, or with no intentional delay when voltage exceeds 130%. Under voltage shutdown shall occur when the output voltage of the alternator is less than 85% for more than 10 seconds.
  - g. A battery monitoring system shall be provided which initiates alarms when the DC control and starting voltage is less than 25VDC or more than 32VDC. During engine starting, the low voltage limit shall be disabled, and if DC voltage drops to less than 14.4 volts for more than two seconds a "weak battery" alarm shall be initiated.
  - h. The control system shall include a ground fault monitoring relay. The relay shall be adjustable from 100-1200 amps, and include adjustable time delay of 0-1.0 seconds. The relay shall be for indication only, and not trip or shut down the generator set. Note bonding and grounding requirements for the generator set, and provide relay which will function correctly in system as installed.
9. Control Interfaces for Remote Monitoring: All control and interconnection points from the generator set to remote components shall be brought to a separate connection box. No field connections shall be made in the control enclosure or in the AC power output enclosure. Provide the following features in the control system:
- a. Form "C" dry common alarm contact set rated 2A @ 30VDC to indicate existence of any alarm or shutdown condition on the generator set.
  - b. One set of contacts rated 2A @ 30VDC to indicate generator set is ready to load. The contacts shall operate when voltage and frequency are greater than 90% of rated condition.
  - c. A fused 10 amp switched 24VDC power supply circuit shall be provided for customer use. DC power shall be available from this circuit whenever the generator set is running.
  - d. A fused 20 amp 24VDC power supply circuit shall be provided for customer use. DC power shall be available from this circuit at all times from the engine starting/control batteries.
  - e. The control shall be provided with provisions for connection of remote monitoring equipment as described herein or shown on the drawings.

## 2.06 ENGINES

- A. The natural gas engine shall be manufactured by Cummins Engine Company and designed specifically for generator set duty. The natural engine shall be 4 cycle, natural gas fueled, direct injection, 1800 RPM, with forged steel crankshaft and connecting rods. Minimum engines shall be 543 cubic inches. Engines shall have a minimum of 6 cylinders. The cylinder blocks shall

be cast iron with replaceable wet liners and have four valves per cylinder. The engines shall be turbocharged and aftercooled.

- B. Two cycle engines will not be acceptable.
- C. Electronic governor systems shall provide automatic isochronous frequency regulation. The engine governing systems shall not utilize any exposed operating linkage.
- D. The engines shall be cooled by a unit-mounted closed loop radiator system including belt-driven pusher fan, coolant pump and thermostat temperature control. The cooling systems shall be rated for full rated load operation in 104 degrees F (40 degrees C) ambient condition. The cooling capability of the generator sets shall be demonstrated by prototype tests on a representative generator set model conducted by the generator set manufacturer; calculated data from the radiator manufacturer only is not sufficient. Radiators shall be provided with a duct adapter flange permitting the attachment of an air discharge duct to direct the radiator air outside according to the manufacturer's instructions.
- E. Rotating parts shall be guarded against accidental contact per OSHA requirements.
- F. The maximum radiator cooling air shall not exceed 8,800 scfm. The maximum allowable static restriction shall not exceed 0.5 inches of water. The entire cooling air system is based on the above data. All costs incurred if an alternate manufacturer is purchased shall be the responsibility of the electrical contractor. These costs shall include costs to all other trades as well as any associated engineering fees.

## 2.07 ENGINE ACCESSORY EQUIPMENT

- A. The engine generator sets shall include the following accessories:
  - 1. Electric starters capable of three complete cranking attempts without overheating, before overcrank shutdown (75 seconds).
  - 2. Positive displacement, mechanical, full pressure, lubrication oil pumps. Full flow lubrication oil filters with replaceable spin-on canister elements and dipstick oil level indicators. Provide bypass oil filters.
  - 3. Replaceable heavy duty dry element air cleaners with restriction indicators and safety element.
  - 4. Engine mounted battery charging alternators, 100 ampere and solid-state voltage regulators.
  - 5. Anti-condensation heater for alternator.

## 2.08 BASES

- A. The engine-generator set shall be mounted on a heavy duty steel base to maintain proper alignment between components. The engine-generator set shall incorporate battery trays with battery holddown clamps on the base rails. Provisions for stub up of electrical connections shall be within the footprint of the generator set base rails and within the basetanks as specified in the housing section of the specification. Vibration isolators, spring type, shall be provided to be mounted under the generator set base.

## 2.09 GENERATOR SETS CIRCUIT BREAKERS

- A. Generator main circuit breaker shall be solid state UL listed, molded case type, rated as listed below. Circuit breakers shall be mounted in a separate NEMA 1 enclosure and be shipped completely wired to the gensets. No exceptions. Enclosures shall include neutral blocks for field connection.
- B. Solid State circuit breakers shall be 100% rated: Refer to drawings for sizes.

- C. Circuit breaker (CB) shall be long time current and instantaneous pickup with solid state trip unit. CB shall have visible mechanical fault indicator and push button trip.
- D. Circuit breakers shall be rated at 65,000 AIC.
- E. Provide auxiliary contacts on breaker position.

## 2.10 EXHAUST SYSTEMS

- A. One exhaust silencer shall be provided for the generator set. The silencer shall be super critical grade. The silencer shall reduce total noise a minimum of 71.3 dB(A) at twenty-three feet.
- B. The exhaust silencer shall be bottom inlet/top outlet and shall be mounted inside the sound attenuated enclosure. Provide all fittings, reducers, couplings elbows and spool pieces.
- C. All exterior fittings, accessories and bolts shall be type 304 stainless steel. Provide heat resistant gaskets between all flanged connections to serve as dielectric protectors.
- D. The maximum gas flow shall not exceed 1,431 cfm (at full stand by). The exhaust gas temperature shall not exceed 1186 degrees F (at full stand by). The maximum back pressure shall not exceed 36.1 inches of water. The design of the entire exhaust system is based on the above data. If a substitution of model specified is made, all costs incurred to redesign as well as costs to other trades to modify the layout shall be the complete responsibility of the electrical contractor.
- E. Provide stainless steel flexible exhaust connections for the engine as required for connection between the engine exhaust manifolds and exhaust lines in compliance with applicable codes and standards.
- F. Provide an exhaust system condensation trap with manual drain valve to trap and drain off exhaust condensation and to prevent condensation from entering the engine.
- G. Provide a suitable weather cap at the stack outlet with all necessary flanges and fittings for proper installation. The weather cap shall have the proper counter weights attached to prevent banging while generator is unloaded.
- H. Thermal jacket for interior exhaust lines and silencer by FIRWIN CORP. or engineered approved equal. Jacket thickness shall be sufficient to maintain a surface temperature of less than 200 degrees F.
- I. Exhaust mufflers shall be installed by enclosure manufacturer so their weight is not supported by the engines.

## 2.11 ACCESSORIES

- A. Vibration isolators: Spring type.
- B. Starting and control Batteries: Two (2) 24 volt starting batteries each genset, lead acid type, 24 volt DC (12 volt DC will not be accepted), sized to accommodate 45 seconds of cranking at an ambient of 0 degrees F without being recharged.
- C. Battery Chargers: One 10 amp voltage regulated battery charger shall be provided for each engine-generator set. Input AC voltage and DC output voltage shall be as required. Chargers shall be equipped with float, taper and equalize charge settings. Operational monitors shall provide visual output along with individual form C contacts rated at 4 amps, 120 VAC, 30 VDC for remote indication of :

1. Loss of AC Power - red light.
  2. Low Battery Voltage - red light.
  3. High Battery Voltage - red light.
  4. Power ON - green light (no relay contact).
- D. Block Heaters: Thermostatically controlled jacket water heater shall be supplied for each genset with a minimum size shall be 4990 watts. Input voltage of heaters shall be 480 VAC 1 phase.
- E. Provide generator 20 light remote annunciator located inside the Electrical Room (ATS Room) on the ATS Cubicle. Interface generator set controls with battery charger and fuel tank alarms for all status conditions. Provide all power, control wiring including conduits.

## 2.12 ENCLOSURE

- A. The generator set shall be provided with a factory-installed sound attenuated housing which allows the generator set to operate at full rated load in the ambient conditions previously specified. The enclosure shall reduce the sound level of the generator set while operating at full rate load to a maximum of 71.3 dBA at any location 7 meters from the generator set in a free field environment. Housing materials used shall be steel. Fiberglass and plastic are not acceptable. Acoustical materials used shall be oil and water resistant. No foam materials shall be used.
- B. The enclosure shall include hinged doors for access to both sides of the engine and alternator, and the control equipment and a hinged rear see-through control door. Key-locking and padlockable door latches shall be provided for all doors. Door hinges shall be stainless steel.
- C. The enclosure shall be provided with an exhaust silencer which is mounted on top of the enclosure, and allows the generator set package to meet specified sound level requirements. Silencer and exhaust shall include a rain cap and rain shield.
- D. All sheet metal shall be primed for corrosion protection and finish painted with the manufacturers standard color using a two step electrocoating paint process, or equal meeting the performance requirements specified below. Metal part surfaces shall be prepared, primed and painted. The painting process shall result in a coating which meets the following requirements:
1. Primer thickness, 0.5-2.0 mils. Top coat thickness, 0.8-1.2 mils.
  2. Gloss, per ASTM D523, 80% plus or minus 5%. Gloss retention after one year shall exceed 50%.
  3. Crosshatch adhesion, per ASTM D3359, 4B-5B.
  4. Impact resistance, per ASTM D2794, 120-160 inch pounds.
  5. Salt spray, per ASTM B117, 1000+ hours.
  6. Humidity, per ASTM D2247, 1000+ hours.
  7. Water Soak, per ASTM D2247, 1000+ hours.
- E. Painting of hoses, clamps, wiring harnesses, and other non-metallic service parts will not be acceptable. Fasteners used shall be corrosion resistant, and designed to minimize marring of the painted surface when removed for normal installation or service work. The enclosure shall be built and tested by the engine generator manufacturer.

## 2.13 SOURCE QUALITY CONTROL

- A. To provide proven reliability of the system, three series of tests shall be performed: prototype model tests, production model tests and field tests. The manufacturer shall provide documentation demonstrating satisfactory prototype and production test results. Generator sets that have not been prototype tested and factory tested at 0.8 PF will not be acceptable.

- B. Generator Set Factory Production Tests and Evaluation: These tests and evaluations must have been performed on a prototype generator set representative of the Model specified. A summary of the generator set testing results shall be submitted for review. The manufacturer's standard series of components development tests on the generator system, engine and other major components shall also be performed and available for review, but shall not be acceptable as a substitute for prototype testing on the complete representative generator set prototype.
- C. Torsiograph Analysis and Test: The manufacturer of the generator set shall verify that the engine generator set, as configured, is free from harmful torsional stresses. The analysis shall include correlation of empirical data from tests on a representative prototype. The empirical data must include spectrum analysis of the torsional transducer output within the operating speed range of the engine generator set. Calculations based on engine and generator separately are not acceptable.
- D. Temperature Rise Test: Complete thermal evaluation of a prototype generator rotor and starter must include actual measurement of internal generator and exciter temperatures by embedded detector method, and measurement of average temperature rise by resistance method. No position measured any place in the windings may exceed the temperature rise limits of NEMA for the particular type of insulation system used. Resistance method temperature rise data shall be confirmed by a full load test on the generator set prototype to include conducted and radiated heat from the engine.
- E. Short Circuit Test: A test on a prototype generator set shall have demonstrated that the generator set is designed to withstand the mechanical forces associated with a short circuit condition. With the generator set operating at rated load and speed, the generator terminals must be short circuited on all three phases for a duration of 20 seconds. At the conclusion of this test, the generator set must be capable of full load operation.
- F. Endurance Run Test: A minimum of 500 continuous hours of endurance testing with a representative generator set prototype operating as defined by the manufacturer's standby rating shall have been performed. Endurance testing shall be used to verify structural soundness and durability.
- G. Maximum Power Test: With the prototype generator set at normal operating temperature and with all power consuming auxiliaries in place, the maximum power available at rated speed shall be determined with the governor set at its fuel stop. The generator set shall maintain this power for a minimum of two minutes.
- H. Linear Vibration Test: A test for in-line motion of components occurring along a repeatable path shall meet the manufacturer's acceptance criteria.
- I. Cooling System Test: A cooling system test shall demonstrate the ability of the generator set cooling system to maintain normal operating temperature while operating at full rated load and power factor at the highest ambient temperature (122°F) of the system rating. Cooling air requirements, radiator air flow and maximum allowable restriction at radiator discharge, shall be verified by this test.
- J. Maximum Motor Starting KVA: Motor starting KVA shall be determined by test, based on a sustained RMS recovery voltage of at least 90 percent of no load voltage with the specified load KVA at near zero power factor applied to the generator set.
- K. Transient Response, Steady State Speed Control and Voltage Regulation: Prototype generator set tests shall demonstrate consistent performance as follows; stable voltage and frequency at all loads from no load to full rated load, consistent frequency bandwidth with steady state load, maximum voltage and frequency kp on load acceptance and rejection and restoration to steady state after sudden load changes. Transient response is a complete generator set (engine,

generator, exciter, and regulator) performance criteria and cannot be established on generator data alone.

- L. Witnessed Generator Set Factory Production Tests: On the equipment to be shipped, an 8-hour test shall be performed at rated load and 0.8 PF. These tests shall include certified data to document the following: run at full load, maximum power, voltage regulation, transient and steady state governing, single step load pickup and safety shutdowns. Provide a factory certified test record of the production testing. Certified test record shall be sealed by a licensed professional engineer.

## 2.14 WARRANTY

- A. Provide a 5-year manufacturer's limited warranty, including 100% parts and labor. The complete electrical power system, including but not limited to, generator set, controls, associated switches, enclosures, and accessories, as provided by the single source manufacturer, shall be warranted by the manufacturer against defects in materials and workmanship for a period of five (5) years from the date of system startup. Coverage shall include parts, labor, travel expenses, and labor to remove/reinstall the equipment, as standard published limited warranty. Supplier must be factory authorized to perform warranty service on the entire system, including, but not limited to, the engine, the generator, the control panels, and the automatic transfer switches.

## PART 3 - EXECUTION

### 3.01 INSTALLATION

- A. Install engine generator and all appurtenances in accordance with manufacturer's recommendations.
- B. Enclosure manufacturer shall install all exhaust components as shown on the drawings and as required to comply with NFPA 37 and local codes and regulations. Components shall be sized to assure full load operation without excessive backpressure sized as per manufacturer's recommendations with actual site dimensions when installed as shown on the drawing. Make provisions as required for pipe expansion and contraction.
- C. Coordinate installation of anchor bolts with generator enclosure manufacturer.
- D. Installation shall comply with applicable State and local codes as required by the authority having jurisdiction. Install equipment in accordance with manufacturer's instructions and instructions included in the listing or labeling of UL listed products.

### 3.02 FIELD QUALITY CONTROL

- A. Initial startup and field acceptance tests are to be conducted by the authorized rep-representative of the system manufacturer who supplies the equipment.
- B. Test data shall be collected and recorded on the following: time of day, coolant temperature, operating oil pressure, battery charging rate, cranking time, crank-to-rated frequency time, voltage and frequency overshoot, load assumption-to-steady state voltage and frequency stabilization time, operating voltage, frequency, current, kilowatts and power factor. All data shall be taken every fifteen (15) minutes.

- C. Procedure: Generator manufacturer shall conduct a six (6) hour load bank test at 1.0 power factor for each generator set. Contractor shall provide load bank for testing generator set at 100% load. Contractor is not permitted to use load bank specified as part of the testing requirements. Load bank test shall test generator at full nameplate KW rating. Generator manufacturer's representative shall record test data, as described in (B) above. Test data shall be tabulated and typed for submission and approval by the engineer for final acceptance. No handwritten field notes will be allowed.

**END OF SECTION 263214.11**

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. Interior and exterior luminaries and accessories.
- B. Emergency lighting and units.

## 1.02 REFERENCES

- A. ANSI C78.379 - Electric Lamps - Incandescent and High-Intensity Discharge Reflector Lamps - Classification of Beam Patterns.
- B. ANSI C82.1 - Ballasts for Fluorescent Lamps - Specifications.
- C. ANSI C82.4 - Ballasts for High-Intensity Discharge and Low Pressure Sodium Lamps (Multiple Supply Type).
- D. NEMA WD 6 - Wiring Devices - Dimensional Requirements.
- E. NFPA 70 - National Electric Code.
- F. NFPA 101 - Life Safety Code.
- G. LM-79-08, IESNA Approved Method for the Electrical and Photometric Measurements of Solid-State Lighting Products
- H. LM-80-08, IESNA Approved Method for Measuring Lumen Maintenance of LED Light Sources

## 1.03 SUBMITTALS

- A. Submit product data under provisions of Section 013300.
- B. Shop Drawings: Indicate dimensions and components for each luminaire that is not a standard product of the manufacturer.
- C. Product Data: Provide dimensions, ratings, performance data and installation instructions.
- D. Submit manufacturer's installation instructions. Indicate application conditions and limitations of use stipulated by Product testing agency specified under Regulatory Requirements. Include instructions for storage, handling, protection, examination, preparation and installation of Product.
- E. All foot candle calculations and photometrics must be provided with substitute products. Photometrics shall include a room by room analysis showing walls, room names and room numbers. Calculation points shall be 2 feet on center, measured at 30" above the floor. Maintained foot candle levels shall meet or exceed those listed in Section 2.03B of this specification. On each drawing, provide a table showing the Room Name, Room Number, Maximum Light Level, Minimum Light Level, Average Light Level, Min:Max Ratio and, IES File Model Number.
- F. All substitute LED light fixtures and LED retrofit lighting kits must be Design Lights Consortium (DLC) qualified.
- G. All substitute LED replacement lamps must be listed by Energy Star as Certified Light Bulbs.

## 1.04 REGULATORY REQUIREMENTS

- A. Conform to requirements of ANSI/NFPA 70.
- B. Furnish products listed and classified by Underwriters Laboratories, Inc.

## 1.05 EXTRA PRODUCTS

- A. Section 017800 - Closeout Submittals.
- B. LED Fixtures: At completion of installation, deliver to Owner.
  - 1. 5 % of additional fixtures for each type specified listed on the light fixture schedule.  
Minimum of one (1) fixture of each type.

## PART 2 - PRODUCTS

## 2.01 LIGHTING UNITS

- A. Refer to lighting fixture schedule on drawings for fixture manufacturer, catalog number, and fixture description.
- B. Provide electronic energy saving ballasts. Where dimming is shown on drawings, provide dimmable type ballasts.
- C. Incandescent and high intensity discharge recessed lighting fixtures are to be furnished with thermal cut outs as required by NEC.
- D. All fixtures equipped with emergency battery packs shall have test light and switch accessible and visible from the room floor.

## 2.02 LIGHTING FIXTURE NOTES

- A. MOUNTING: Electrical Contractor is responsible for reviewing all mounting arrangements prior to ordering any products. Electrical Contractor is responsible for ordering all of the proper fixtures, mounting hardware and miscellaneous fasteners to complete project. Fixtures to be secured to the structure from a minimum of two points, at opposing ends of the fixture when ceiling recessed or surface mounted. Four points shall be secured where necessary for the fixture to be parallel and tight to underside of ceiling. All recessed fixtures to fit tight to ceiling to eliminate all light leaks. Trim kits, when not secured internally to fixture, shall be secured to structure at a minimum of two points.
- B. MOUNTING: Prior to submitting and ordering any light fixture, Contractor is responsible for verifying adequate mounting clearances for all light fixtures that are to be recessed into a grid type ceiling. Where new ceilings are to be installed, contractor shall coordinate with ceiling installers for exact mounting heights and required mounting spaces.
- C. FINISHES: All exposed portions (permanent or adjustable) of fixtures to be finished by the manufacturer in a finish as specified.
- D. Fixtures shall come pre-assembled and complete with all sockets (incandescent to be spring supported), lamp ends, ballasts, transformers, fixture ends, trim rings, plates, and low density mounting kits (as required) for a complete installation.
- E. LENSES:
  - 1. Fluorescent - Minimum 0.125" thick and to be virgin acrylic.

2. Low voltage - Tempered glass, to enclose lamp.
- F. LAMPS: Sylvania, Phillips or General Electric, as selected by the Electrical Contractor. Note, all lamps for one project to be furnished by the same manufacturer unless otherwise specified. At the end of the project, the Electrical Contractor shall turn over to the Owner one lamp envelope from each type installed. The Contractor shall be responsible for replacing all lamps which burn out during construction and up to ninety (90) days after Owner occupancy of the building.
- G. VOLTAGE: As noted on the lighting fixture schedule. Contractor is responsible for field verifying available voltage(s) and ordering fixtures, ballasts, and transformers accordingly.
- H. ORDERING: It is solely the responsibility of the Contractor to order fixtures, lamps, mounting brackets and accessories so that the fixtures will be installed and operating upon Owner Occupancy opening. Contractor is responsible for all delays because of his/her lack of effort to order the products in a timely manner.
- I. SHIPPING: The light fixture manufacturer shall mark the fixture type as indicated on the contract drawings and/or shop drawings on the respective carton when shipping luminaries. The Contractor shall be responsible for checking each carton immediately upon receipt for verification that fixtures are undamaged and no contents are missing. All discrepancies must be reported to shipper and manufacturer immediately; otherwise the Contractor shall be responsible for items which are lacking or damaged.

### 2.03 WARRANTY

- A. All light fixtures shall have a 5-year manufacturer's warranty. Warranty shall begin on date of substantial completion.

## PART 3 - EXECUTION

### 3.01 INSTALLATION

- A. Install fixtures in accordance with manufacturer's instructions.
- B. Mount fixtures in locations as shown on drawings and as called for in schedule on electrical drawings. Determine type of ceiling to be installed in each space from drawings and schedules and furnish fixtures suitable for the exact type.
- C. Joints in fixture wiring shall be made using wire nuts, pre-insulated Scotch locks, or other approved mechanical means of connection.
- D. Adjustable type fixtures shall be adjusted by the Contractor to illuminate intended area to satisfaction of the Engineer.
- E. Surface fixtures in or on plastered or drywall ceilings shall be supported from pieces of support channel spanning across main support channels and shall not depend on ceilings for support.
- F. Coordinate fixture locations to clear diffusers, ductwork, piping, etc.
- G. Maintain integrity of enclosures on all enclosed and gasketed fixtures. Minimize number of enclosure penetrations and make such penetrations water and dust tight with appropriate gasketing and fittings.
- H. Fixtures are to fit tight against construction to eliminate light leaks.

- I. Recessed downlights are to be provided with adjustable mounting bars/frames for drywall or lay-in ceilings as required. Fixtures shall be securely fastened to the ceiling framing member by mechanical means such as bolts, screws, rivets, or listed clips identified for use with the type of ceiling framing members and fixtures.
- J. Support recessed fixtures 2 foot x 2 foot and larger using a minimum of four independent wire hangers, one on each corner, of same gauge as ceiling suspension system supported from building structure independent of ceiling framing. Install earthquake clips to secure recessed grid-suspended luminaires in place.
- K. Wall-mounted fixtures shall be mounted plumb with building lines and installed with proper box and cover hardware.
- L. Surface-mounted fixtures are to cover mounting hardware. Use a canopy that is no longer than the length and width of the fixture and at a height that is no higher than required to mount the fixture absolutely vertical. Fixtures shall be plumb and shall align with building lines and with each other. Support surface mounted luminaires on grid ceiling directly from building structure. Secure to prevent movement.
- M. Stem-mounted fixtures are to be mounted to be absolutely vertical or horizontal. Install suspended luminaires using pendants supported from swivel hangers or in accordance with details shown in drawings. Provide pendant length required to suspend luminaire at indicated height. Support stem-mounted fixtures directly from the building structure.
- N. Install recessed luminaires using accessories and firestopping materials to meet regulatory requirements for fire rating. In fire rated ceilings, recessed luminaires must carry one-hour UL fire rating classification.
- O. Install all accessories specified with each fixture. Install recessed luminaires to permit removal from below.
- P. Bond products and metal accessories to branch circuit equipment grounding conductor.
- Q. At completion of installation and before turning over to owner, clean and remove all dirt and smudges from all lighting fixtures including lenses, louvers and reflectors.
- R. Relamp luminaires that have failed at completion of project.

**END OF SECTION 265000**

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. Main CB/current transformer/meter cabinet and meter pan.
- B. Transformer to be pole mounted on utility.
- C. Primary and secondary conduits, conductors, excavation, concrete and backfill.

## 1.02 RELATED SECTIONS

- A. Section 260526 - Grounding and Bonding for Electrical Systems.

## 1.03 REFERENCES

- A. ANSI/NFPA 70 - National Electric Code.

## 1.04 SUBMITTALS

- A. Submit product data under provisions of Section 013300.

## PART 2 - PRODUCTS

## 2.01 METERING EQUIPMENT

- A. Meter pans, meter, current transformers and ground fault circuit protection shall be on Local Utility's approved lists of manufacturers and models.
- B. CT Cabinets and Current Transformers shall be installed as per Local Utility specifications.

## 2.02 PULL BOXES

- A. Provide pull boxes including property line pull boxes as per Local Utility requirements for both primary and secondary services.
- B. Provide Local Utility approved type B-3-6 for secondary services 400 amperes and less.

## 2.03 CABLE

- A. Install new primary and secondary service conductors in conduit.
- B. Primary service conductors shall be 15 KV, copper size 1/0, type TR-XLPE with 220 mils insulation thickness as per Local Utility requirements.
- C. Secondary service conductors shall be copper type XHHW-2 as per Local Utility requirements.

## PART 3 - EXECUTION

## 3.01 INSTALLATION

- A. Coordinate primary and secondary service installation with Local Utility prior to beginning work.
- B. Provide secondary service to incoming service equipment, coordinate service requirements with Local Utility prior to commencing work.
- C. All metering equipment shall be installed in accordance with utility requirements.

- D. Contractor shall file application for new electrical service. Contractor shall coordinate with owner for all information related to the service application.

**END OF SECTION 267173**

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. Temporary electric service for construction.

## 1.02 REFERENCES

- A. ANSI/NFPA 70 - National Electric Code.

## 1.03 SUBMITTALS

- A. Submit under provisions of Section 013300.
- B. Shop Drawings: Indicate locations where temporary electric service will be located and routed.

## 1.04 REGULATORY REQUIREMENTS

- A. Obtain required permits from authorities.
- B. Notify affected utility companies before starting work and comply with their requirements.
- C. Do not close or obstruct egress width to exits.
- D. Do not turn off electric equipment without authorization from Owner and Engineer. Provide 72 hours advance notification.

## PART 2 - PRODUCTS

## 2.01 TEMPORARY ELECTRIC SERVICE

- A. Temporary service shall be available during the entire contract period and during all phases of work, day and night for Vails Gate FD storage building.
- B. Temporary service shall be installed and maintained per NEC, OSHA, N.Y. State Uniform Building Code and Local Utility requirements.
- C. The temporary electrical service shall be sized correctly for all of the new and existing loads.
- D. All existing equipment shall be protected against damage caused by the installation, operation and removal of the temporary service. Any equipment or items damaged shall be replaced at no cost to the Owner.
- E. Provide temporary lighting for new Vails Gate FD storage building. Minimum foot candle for temporary lighting: 30 F.C., measured at floor surface. The Contractor shall set up light to minimize glare.
- F. Provide wiring, utility poles, metering equipment, distribution panel and other equipment for temporary light and power to construction trailer. Contractor shall pay all fees required for temporary service and complete all required applications. Contractor shall pay all application and construction fees required for temporary service and complete all required applications. Contractor shall pay for all electrical consumption for temporary service.
- G. Provide Owner with three (3) keys to all distribution panels for temporary power for distribution to General Contractor and District Personnel.

- H. Wiring for temporary light, controls and power shall include a distribution panel for 120/208V, 3 Phase, 4 wire, 200 Amp. Feeders in building shall have branch circuits of #12 conductors minimum. Contractor shall pay all application and construction fees required for temporary service and complete all required applications
- I. Provide 20 amp branch circuits with fused ground type receptacle outlet for single phase power.
- J. Where distribution panels are provided for temporary power provide four (4) 20 amp circuits with #12 AWG SO cord pigtails with 20 amp plugs with strain relief. Provide one (1) 30 amp circuit with #10 AWG SO cord pigtail with 30 amp plug with strain relief.
- K. Provide lamps and fuses, including replacements required.
- L. Provide new materials for temporary light and power.
- M. Provide ground fault protection (such as portable plug-in type ground fault circuit interrupters) on single phase 20 amp receptacle outlets.
- N. Provide receptacle outlets, portable cord connectors and attachment plugs with standard NEMA configurations.
- O. Install all temporary light and power materials in accordance with National Electrical Code.
- P. Upon completion of the project, remove all temporary electric light and power work and restore all affected finishes, connections and sitework.

### PART 3 - EXECUTION

#### 3.01 EXAMINATION

- A. Verify existing system voltage characteristics and match to existing system voltage characteristics.
- B. Verify that the temporary service is sized to accommodate all loads.
- C. Determine locations and routings for temporary electric wires, cables and conduits with Engineer and Owner.

#### 3.02 TEMPORARY POWER

- A. Temporary wiring and power shall be installed so as not to be a hazard and shall be protected from damage. Separate circuits shall be provided for light and power. Over-current protective devices and switches shall be provided. All equipment, tools, metal cabinets and boxes shall be grounded.
- B. Disable existing power only to make final connections or when new service is to be installed.
- C. Remove and dispose of all temporary power and control feeds after receiving written approval from Engineer. Restore all finishes to original specified conditions.

### END OF SECTION 267174

## PART 1 -GENERAL

## 1.01 SECTION INCLUDES

- A. Fire Alarm Control Panels (FACP).
- B. Remote Annunciator.
- C. Addressable Manual Fire Alarm Stations.
- D. Addressable Smoke Detectors.
- E. Addressable Duct Mounted Smoke Detectors.
- F. Remote for Smoke Alarms.
- G. Addressable Heat Sensor.
- H. Audio/Visuals
- I. Visual Devices
- J. Pull Stations
- K. Carbon Monoxide Detector with Sounder Base

## 1.02 RELATED SECTIONS

- A. Section 260535 - Conduit.

## 1.03 REFERENCES

- A. NFPA 70 - National Electrical Code.
- B. NFPA 72, 72G, 72H - National Fire Alarm Code.
- C. NFPA 101 - Life safety code.

## 1.04 WORK INCLUDED

- A. Furnish and install as described in these specifications and as indicated on the drawings, fire alarm and smoke detection equipment with battery backup.
  - 1. All equipment shall be UL listed under category UOJZ as an integrated control system; equipment listed under category UOXX as a control unit accessory shall not be acceptable. The installation shall meet the applicable requirements of NFPA 72 and New York State Code, as well as those standards set by the authorities having jurisdiction (Nassau County Fire Marshal).
  - 2. All panels and peripheral devices shall be the standard product of a single manufacturer and shall display the manufacturer's name on each component. The catalog numbers specified under this section constitute the type, product quality, material and desired operating features.
  - 3. Provide all labor, materials and services to perform all operations required for the complete installation and related work shown on the drawings and as specified herein.
  - 4. All electrical work and equipment shall meet the requirements of NFPA 70 and 72.

## 1.05 SUBMITTALS

- A. Submit product data as required by Section 013300.
  - 1. Two copies of all submittals shall be submitted to the Architect/Engineer for review.
  - 2. All references to manufacturer's model numbers and other pertinent information herein is intended to establish minimum standards of performance, function and quality.
  - 3. Equivalent equipment (compatible UL-Listed) from other manufacturers may be substituted for the specified equipment as long as the minimum standards are met, and upon approval of the Architect/Engineer.
- B. Shop drawings:
  - 1. Provide a list (bill of materials) of all types of equipment and components provided.
  - 2. Provide annunciator layout and system wiring diagram showing each device and wiring connection required, including existing equipment. Provide a description of operation of the system. Provide system ampere load and time calculations to substantiate compliance with battery back up power requirements.
  - 3. Sufficient information, clearly presented shall be included to determine compliance with drawings and specifications.
  - 4. Include manufacturer's printed product data with name(s), model numbers, ratings, power requirements, equipment layout, device arrangement, complete wiring point-to-point diagrams, and conduit layouts.
- C. Manuals:
  - 1. Submit simultaneously with the shop drawings, complete operating and maintenance manual listing the manufacturers name(s) including technical data sheets.
  - 2. Wiring diagrams shall indicate internal wiring for each item of equipment and the interconnections between the items of equipment.
  - 3. Provide a clear and concise description of operation that gives, in detail, the information required to properly operate the equipment and system.
  - 4. Indicate application conditions and limitations of use stipulated by product testing agency.
  - 5. Include instructions for storage, handling, protection, examination, preparation, installation, and starting of products
- D. Test Reports and Certifications:
  - 1. Indicate satisfactory completion of required tests and inspections.
  - 2. Together with the shop drawing submittal, submit a certification from the major equipment manufacturer indicating that the proposed supervisor of installation and the proposed performer of contract maintenance is an authorized representative of the major equipment manufacturer. Include names and addresses in the certification.
- E. Contractor shall provide Engineer with a complete set of drawings, signed and sealed by a New York State Professional Engineer, (including all floors, crawl spaces, closets, open spaces) showing a complete survey of all new fire equipment devices and appliances prior to submission to Local Fire Marshal. Contractor shall provide Engineer with a complete list of all HVAC equipment, including their associated CFM ratings and all associated duct smoke detectors. Upon approval from Engineer, Contractor shall submit complete package, with New York professional engineer's stamp, to Local Fire Marshal as per local requirements. The Contractor shall have a licensed New York State Professional Engineer stamp all drawings and applications. Pay for all fees to obtain permits and approval.

## 1.06 PROJECT RECORD DOCUMENTS

- A. Submit under provisions of Section 017839.

- B. Record actual locations of initiating devices, signaling appliances, and end-of-line devices, including those that are existing.

#### 1.07 OPERATION AND MAINTENANCE DATA

- A. Submit under provisions of Section 017839.
- B. Maintenance and testing shall be on a semiannual basis or as required by the Authority Having Jurisdiction (AHJ). A preventive maintenance schedule shall be provided by the Contractor that shall describe the protocol for preventative maintenance. The schedule shall include:
  - 1. Systematic examination, adjustments and cleaning of all detectors, manual fire alarm stations, control panels, power supplies, relays and all accessories of the fire alarm system.
  - 2. Each circuit in the fire alarm system shall be tested semiannually.
  - 3. Each smoke detector shall be tested in accordance with the requirements of NFPA 72 Chapter 7.

#### 1.08 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing the products specified in this section with minimum ten (10) years documented experience, and with service facilities within fifty (50) miles of project location.
- B. Installer: Company specializing in installing the products specified in this section with minimum three (3) years documented experience, and certified by the State of New York as fire alarm installer.

#### 1.09 EXTRA MATERIALS

- A. Furnish under provisions of Section 017839.
- B. Provide twenty (20) of each type of automatic smoke detector.
- C. Provide twenty (20) of each type of automatic heat detector.
- D. Provide twenty (20) of each type of notification appliance.
- E. Provide twenty (20) of each type of pull station.
- F. Provide twenty (20) of each type of carbon monoxide detector.

### PART 2 - PRODUCTS

#### 2.01 MANUFACTURERS

- A. EDWARDS SYSTEM TECHNOLOGY (EST)
- B. APPROVED EQUAL.

#### 2.02 GENERAL

- A. All equipment and components shall be new, and the manufacturer's current model. The materials, appliances, equipment and devices shall be tested and listed by a nationally recognized approval agency for use as part of a protected premises protective signaling (fire alarm) system.

- B. All equipment and components shall be installed in strict compliance with manufacturers' recommendations. Consult the manufacturer's installation manuals for all wiring diagrams, schematics, physical equipment sizes, etc., before beginning equipment installation.
- C. All equipment shall be attached to walls and ceiling/floor assemblies and shall be held firmly in place (e.g., detectors shall not be supported solely by suspended ceilings). Fasteners and supports shall be adequate to support the required load.

### 2.03 CONDUIT AND WIRE

- A. Conduit:
  - 1. Conduit shall be in accordance with the National Electric Code (NEC), local and state requirements.
  - 2. All wiring shall be installed using plenum rated cable except for boiler, mechanical and electrical rooms and any other rooms with open ceilings.
  - 3. Cable must be separated from any open conductors, as per NEC Article 760-29.
  - 4. Wiring for 24 volt control, alarm notification, emergency communication and similar power-limited auxiliary functions may be run in the same conduit as initiating and signaling line circuits. All circuits shall be provided with transient suppression devices and the system shall be designed to permit simultaneous operation of all circuits without interference or loss of signals
  - 5. Conduit shall enter the Fire Alarm Control Panel, Remote Annunciator Panel and/or backboxes where conduit entry is designated and permitted by the FACP manufacturer.
  - 6. Conduit shall be ¾ inch (19.1 mm) minimum.
- B. Wire:
  - 1. All fire alarm system wiring shall be new.
  - 2. Wiring shall be in accordance with local, state and national codes (e.g., NEC Article 760), and as recommended by the manufacturer of the fire alarm system. Number and size of conductors shall be as recommended by the fire alarm system manufacturer, but not less than 18 AWG (1.02 mm) for Initiating Device Circuits and Signaling Line Circuits, and not less than 14 AWG (1.63mm) for Notification Appliance Circuits. All wiring shall be of the type recommended by the manufacturer.
  - 3. All wire and cable shall be listed and/or approved by a recognized testing agency for use with a protective signaling system.
  - 4. All wire and cable shall have a fire resistance rating suitable for the installation as indicated in NFPA 70, and shall test free from grounds or crosses between conductors.
  - 5. Wiring used for the multiplex communication loop shall be twisted and shielded and installed in conduit unless specifically excepted by the fire alarm equipment manufacturer. The system shall permit use of IDC and NAC wiring in the same conduit with the communication loop
  - 6. All field wiring shall be completely supervised.
- C. Terminal Boxes, Junction Boxes and Cabinets:
  - 1. All boxes and cabinets shall be UL listed for their use and purpose.
- D. Circuits shall be arranged to serve like categories (manual, smoke, horn, strobe). Mixed category circuitry shall not be permitted except on signaling line circuits connected to addressable reporting devices.

### 2.04 SEQUENCE OF OPERATIONS

- A. Basic Addressing and Circuiting Guidelines
  - 1. The addressable fire alarm system shall provide an individual multiplex data address for each addressable manual fire alarm station, addressable area smoke detector,

addressable duct smoke detector, addressable heat detector, addressable carbon monoxide detector, Monitor Zone Addressable Module (MZAM), Control Zone Addressable Module (CZAM) or Signal Zone Addressable Module (SZAM). The FACP shall be able to support up to a system total of two hundred fifty four (516) individual addresses.

2. The FACP shall provide NFPA Standard 72A, Style 4 (Class B, two wire) addressable data communications circuits (MAPNET) to provide connection of and communication with the addressable devices, as required by these Specifications and/or as shown on the Drawings. Each addressable data communications circuit (MAPNET) shall provide the capability of communicating with up to one hundred twenty-seven (127) addressable devices.

B. Fire Alarm System Sequence of Operation

1. The FACP central processing unit (CPU) shall provide for the monitoring of addressable, smoke sensors. Each smoke sensor shall be individually monitored for its normal output voltage level, which is a function of accumulating environmental factors such as dirt and dust. The normal output voltage level shall be digitized and transmitted to the FACP CPU every four (4) seconds. The FACP CPU shall maintain a moving average of these normal voltage outputs in an individual sensor average file. When smoke enters the sensor, the output voltage rises in direct proportion to the density of the smoke and the alarm condition of each smoke sensor is determined at the FACP CPU by comparing the current actual value with the sensor's normal average value combined with the alarm threshold programmed for that sensor. The alarm threshold may be individually programmed for each smoke sensor as a sensitivity percentage (0.5%, 1.0%, 1.5%, 2.0%, 2.5%, 3.0% and 3.7%) above its normal average value. The sensitivity percentage for each sensor may also be programmed to change as a function of the time of day and day of week. When an individual sensor's normal average value rises to a fixed, preset level due to excess accumulation of dirt and dust, a system trouble condition shall be generated and a "sensor dirty" message shall be displayed, for that sensor, on the FACP LCD display and entered into the system historical trouble log. If the sensor is not cleaned and further accumulation occurs that would degrade proper sensor operation, a second system trouble condition shall be generated and a "sensor excessively dirty" message shall be displayed and entered into the system historical trouble log.
2. Operation of any manual fire alarm station or activation of any smoke sensor (during the alarm verification sequence, if so programmed), area smoke detector (during the alarm verification sequence, if so programmed), duct smoke detector, heat detector or sprinkler waterflow switch shall automatically:
  - a. Sound all horns throughout the building with an individual Temporal Code. The alarm signals may be silenced during the alarm condition by operation of the FACP alarm silence switch. Subsequent alarm conditions shall resound the alarm horns.
  - b. Flash all alarm strobe lights throughout the building. The alarm strobe lights shall be turned off when the system is reset.
  - c. Display a general alarm indication and system status summary (numbers of alarm, supervisory and/or trouble conditions) on the FACP liquid crystal display (LCD). Pressing the alarm acknowledge key shall display, for thirty (30) seconds, the individual device or circuit display, to include the "alarm" status and custom label (up to forty characters and spaces) for the addressable device or circuit of alarm initiation on the liquid crystal display (LCD). At the end of the thirty (30) second period, the general alarm indication and system status summary shall again be displayed. The individual device/circuit display may be recalled at any time by repressing the alarm acknowledge key or until the alarm condition is reset to normal.
  - d. Enter the alarm condition custom label with time and date of occurrence into the FACP historical alarm log for future recall.
  - e. Shutdown all fans over 1000 CFM.
  - f. Activate circuit for to initiate alarm to central station. The Central station communicator and central station shall be furnished by owner.

## 2.05 MAIN FIRE ALARM CONTROL PANEL

- A. The fire alarm system control panel(s) shall be Edwards System Technology model iO1000 and comply with UL 864, "Control Units for Fire- Protective Signaling Systems."
- B. The following FACP hardware shall be provided:
  - 1. Power Limited base panel with beige cabinet and door, 20 VAC input power.
  - 2. 2,000 point capacity where (1) point equals (1) monitor (input) or (1) control (output).
  - 3. 2000 points of annunciation where one (1) point of annunciation equals:
    - a. 1 LED driver output on a graphic driver or 1 switch input on a graphic switch input module.
    - b. 1 LED on panel or 1 switch on panel.
    - c. Provide battery voltage and ammeter readouts from the LCD Display.
    - d. Municipal City Circuit Connection with disconnect switch. 24VDC Remote Station (reverse polarity) local energy, shunt master box, or a form "C" contact output.
    - e. One Auxiliary Electronically resettable fused 2A @ 24VDC Output, programmable disconnect operation for 4-wire detector reset door release auxiliary use.
    - f. One Auxiliary Relay, SPDT 2A @32VDC, programmable as a trouble relay either as normally energized or re-energized or as an auxiliary control.
    - g. Three (3) Class B or A (Style Y/Z) Notification Appliance Circuits (NAC: rated 3A @ 24VDC, resistive).
    - h. Four (4) form "C" Auxiliary Relay Circuits (Form C contacts rated 2A 24VDC, resistive), operation is programmable for trouble alarm, supervisory of other fire response functions. Relays shall be capable of switching up to ½ A @ 120VAC inductive.
    - i. The FACP shall support five (5) RS-232-C ports and one service port.
    - j. Remote Unit Interface: supervised serial communication channel for control and monitoring of remotely located annunciators and I/O panels.
    - k. Common Event DACT or Point Reporting DACT.
    - l. Service Port Modem for dial in passcode access to all fire control panel information.
- C. Cabinet: Lockable steel enclosure. Arrange unit so all operations required for testing or for normal care and maintenance of the system are performed from the front of the enclosure. If more than a single unit is required to form a complete control unit, provide exactly matching modular unit enclosures.
- D. Alphanumeric Display and System Controls: Panel shall include an 80 character LCD display to indicate alarm, supervisory, and component status messages and shall include a keypad for use in entering and executing control commands.
- E. Addressable Interface Module The addressable interface module(s) shall provide one (1) addressable data communications circuit (MAPNET) to enable the FACP to communicate with the addressable devices. Each addressable data communications circuit shall provide NFPA Standard 72A, Style 4 (Class B, two wire) supervised operation. Addressable data communications circuit wiring shall be supervised for opens in the circuit, shorts across the pair and ground faults. An addressable data communications circuit fault shall initiate a system trouble display and audible trouble signal at the FACP. Faults on one addressable data communication circuit shall not impede operation of other circuits. The module shall be readily disconnected for ease of servicing and shall be placement supervised by the Master Controller Module.

## 2.06 PERIPHERAL DEVICES

- A. Shall be EST Model SIGA-270 Series Addressable manual pull station. Red LEXAN or metal, and finished in red with molded raised letter operating instructions of contrasting color. Station

will mechanically latch upon operation and remain so until manually reset by opening with a key common with the control units.

- B. Lexan Protective Shield shall be STI Stopper II with tamperproof, clear LEXAN shield and red frame that easily fits over manual pull stations. when shield is lifted to gain access to the station. a battery powered piercing warning horn shall be activated. The horn shall be silenced by lowering and realigning the shield. The horn shall provide 85dB at 10 feet and shall be powered by a 9 VDC battery. All manual pull stations in public areas shall be provided with protective shield.

## 2.07 SMOKE SENSORS

- A. Shall be EST Model SIGA2PS Intelligent Photoelectric Detector and comply with UL 268, "Smoke Detectors for Fire Protective Signaling Systems," Include the following features:
  - 1. Operating Voltage: 24 VDC, nominal,
  - 2. Self-Restoring: Detectors do not require resetting or readjustment after actuation to restore normal operation,
  - 3. Plug-In Arrangement: Sensor and associated electronic components are mounted in a module that connects to a fixed base with a twist-Locking plug connection. Base shall provide break-off plastic tab that can be removed to engage the head/base locking mechanism. No special tools shall be required to remove head once it has been locked. Removal of the detector head shall interrupt the supervisory circuit of the fire alarm detection loop and cause a trouble signal at the control unit,
  - 4. Each sensor base shall contain LED that will flash each time it is scanned by the Control Unit (once every 4 seconds). In alarm condition, the [detector head][sensor base] LED shall be on steady.
  - 5. Each sensor base shall contain a magnetically actuated test switch to provide for easy alarm testing at the sensor location,
  - 6. Each sensor shall be scanned by the Control Unit for its type identification to prevent inadvertent substitution of another sensor type, Upon detection of a "wrong device", the control unit shall operate with the installed device at the default alarm settings for that sensor; 2.5% obscuration for photoelectric sensor, 135-deg F and 15-deg F rate-of-rise for the heat sensor, but shall indicate a "Wrong Device" trouble condition.
  - 7. The sensor's electronics shall be immune from false alarms caused by EMI and RFI.
  - 8. Addressability. Sensors include a communication transmitter and receiver in the mounting base having a unique identification and capability for status reporting to the FACP. Sensor address shall be located in base to eliminate false addressing when replacing sensors.
  - 9. Removal of the sensor head for cleaning shall not require the setting of addresses.
- B. Type: Smoke sensors shall be of the photoelectric type where acceptable per manufacturer specifications ionization type sensors may be used.
- C. Carbon monoxide sensor: EST model SIGA2-PCOS, intelligent photoelectric detector with carbon monoxide sensor.
- D. Duct Smoke Detector: Photoelectric type, with sampling tube of design and dimensions as recommended by the manufacturer for the specific duct size and installation conditions where applied.
  - 1. The Duct Housing shall provide a supervised relay driver circuit for driving up to 15 relays with a single "Form C., contact rated at 7 A@ 28VDC or 10A@ 120V AC.
  - 2. Duct Housing shall provide a relay control trouble indicator Yellow LED.
  - 3. Compact Duct Housing shall have a transparent cover to monitor for the presence of smoke. Cover shall secure to housing by means of four (4) captive fastening screws.
  - 4. Duct Housing shall provide two (2) Test Ports for measuring airflow and for testing. These ports will allow aerosol injection in order to test the activation of the duct smoke detector.

5. For maintenance purposes, it shall be possible to clean the duct housing sampling tubes by accessing them through the duct housing front cover.
6. Each duct detector shall have a Remote Test Station with an alarm LED and test switch. Duct Smoke Sensor housing shall be EST model SIGA-DH, photoelectric type with sampling tube of design and dimensions as recommended by the manufacturer for the specific duct size and installation conditions where applied. Provide remote alarm led indicators SIGA-LED and/or remote test station model SD-TRK as required.
7. Duct Housing shall provide a relay control trouble indicator Yellow LED.
  - a. Compact Duct Housing shall have a transparent cover to monitor for the presence of smoke. Cover shall secure to housing by means of four (4) captive fastening screws.
  - b. Duct Housing shall provide two (2) Test Ports for measuring airflow and for testing. These ports will allow aerosol injection in order to test the activation of the duct smoke sensor.
  - c. Duct Housing shall provide a magnetic test area and Red sensor status LED.
  - d. For maintenance purposes, it shall be possible to clean the duct housing sampling tubes by accessing them through the duct: housing front cover.
  - e. Each duct sensor shall have a Remote Test Station with an alarm LED and test switch.
  - f. All exterior duct detectors shall be provided with Weatherproof Duct Housing Enclosure.

## 2.08 HEAT SENSORS

- A. Shall be EST Model SIGA-HFS combination fixed-temperature and rate-of-rise unit with plug-in base and alarm indication lamp: 135-deg F fixed-temperature setting except as indicated.
- B. Thermal sensor shall be of the epoxy encapsulated electronic design. It shall be thermostat-based, rate-compensated, self- restoring and shall not be affected by thermal lag.
- C. Sensor shall have the capability to be programmed as a utility monitoring device to monitor for temperature extremes in the range from 32-deg F to 155-deg F.
- D. Hi-Heat Sensor (rate of rise heat detector) shall be EST model SIGA-HRS. Sensor shall detect temperatures of 15°F per minute.
- E. Weather proof heat detectors. Ge Security 302-AW series. Weatherproof heat detector shall be hermetically sealed for moisture proof and dust proof installations. The weather proof heat detector shall require no special back box when the all-weather leads are properly spliced to "THW" or equivalent type wire and splices are moisture proof. Heat detectors shall be rated for indoor or outdoor use. Provide 135°F, unless otherwise noted on the plans. Weatherproof heat detectors shall include an addressable monitor module (GE SIGA-CT1) mounted within the controlled (heated/conditioned) space. Only device wiring and the actual detector shall be located in the elements.

## 2.09 ANNUNCIATION DEVICES

- A. Visible/Only Shall be EST model GIRF-UM and shall be listed to UL 1971. The V/O shall consist of a xenon flash tube and associated lens/reflector system. The V/O enclosure shall mount directly to standard single gang, double gang or 4" square electrical box, without the use of special adapters or trim rings, and provide field selectable flash intensities of 15cd, 30cd, 75cd, 110cd. Provide a label inside the strobe lens to indicate the listed candela rating of the specific Visible/Only appliance.
- B. Audible Visible shall be EST model GIRF-HDVM and shall be listed to UL 1971 and UL 464. The strobe light shall consist of a xenon flash tube and associated lens/reflector system.

Provide a label inside the strobe lens to indicate the listed candela rating of the specific strobe. The horn shall have a minimum sound pressure level of 85 dBA @ 24VDC. The audible/visible enclosure shall mount directly to standard single gang, double gang or 4" square electrical box without the use of special adapters or trim rings.

#### 2.10 CARBON MONOXIDE DETECTOR WITH SOUNDER BASE

- A. Manufacturer: Edwards
  - 1. Model: SIGA2-COS
  - 2. Accessories: SIGA-AB4GT With SIGA-TCOR (Temporal '4' Pattern Generator)

#### 2.11 REMOTE CRTS AND PRINTERS

- A. Fire Alarm Control Unit shall be capable of operating remote CRT's and/or printers; output shall be ASCII from an RS-232-C connection with an adjustable baud rate.

#### 2.12 REMOTE LCD ANNUNCIATOR

- A. Provide [1] Remote LCD Annunciator with the same "look and feel" as the FACP operator interface. The Remote LCD Annunciator shall be EST Model 3-LCDANN and use the same Primary Acknowledge, Silence and Reset Keys, Status LEDs and LCD Display as the FACP.
- B. Annunciator shall have super-twist LCD display with two lines of 40 characters each. Annunciator shall be provided with four (4) programmable control switches and associated LEDs.
- C. Under normal conditions the LCD shall display a "SYSTEM IS NORMAL" message and the current time and date.
- D. Should an abnormal condition be detected the appropriate LED (Alarm, Supervisory or Trouble) shall flash. The unit audible signal shall pulse for alarm conditions and sound steady for trouble and supervisory conditions.
- E. The LCD shall display the following information relative to the abnormal condition of a point in the system:
  - 1. 40 character custom location label.
  - 2. Type of device (e.g smoke, pull station, water flow)
  - 3. Point status (e.g. alarm, trouble)
- F. Operator keys shall be key switch enabled to prevent unauthorized use. The key shall only be removable in the disabled position. Acknowledge, Silence and Reset operation shall be the same as the FACP.

#### 2.13 GRAPHIC MAP

- A. Contractor shall provide and install a weather proof map of the facility. Map shall be on 24" by 36" laminated paper. Contractor shall program descriptions for detection devices to include a location (example: room#, hallway, etc.) and closet column (example: Clmn68). Contractor shall coordinate with District for exact descriptions prior to programming. Map shall be provided with and installed in a weatherproof lockable enclosure, located adjacent to each remote annunciator and fire alarm control panel. District will provide contractor with a drawing of the facility in AutoCAD 2000 format.

## PART 3 - EXECUTION

## 3.01 INSTALLATION

- A. No installation shall begin without approved plans from the fire marshal or AHJ.
- B. The entire system shall be installed in a workmanlike manner, in accordance with approved manufacturer's wiring diagrams. The Contractor shall furnish all conduit, wiring, outlet boxes, junction boxes, cabinets and similar devices necessary for the complete installation.
- C. All penetrations of floor slabs and fire walls shall be fire stopped in accordance with all local fire codes.
- D. End of Line Devices (Resistors/Diodes/Capacitors): Shall be furnished as required for mounting as directed by the manufacturer.
- E. All wiring shall be color coded throughout, to National Electrical Code standards and a minimum of No. 18 AWG., unless otherwise noted. All wiring shall be of the type recommended by the manufacturer.
- F. All wires shall test free from grounds or crosses between conductors.
- G. Fire alarm system terminal and junction locations shall be identified in accordance with NFPA Standard 70, Section 760-3. Terminal and junction boxes shall be painted red and stenciled in white letters "FIRE ALARM", preventing unintentional interference with the fire alarm system wiring during testing, servicing and additional modifications to the system.
- H. The system shall be arranged to receive power from two/three-wire, 30 Ampere, 120 volt, 60 cycle alternating current supply through fused cut-out with emergency generator backup. All low voltage operation shall be provided from the FACP(s).
- I. All final connections between system equipment and the wiring shall be made under the supervision of a trained manufacturer's technical representative.
- J. The contractor shall submit to the Authority Having Jurisdiction (AHJ), all necessary drawings and equipment specifications required for a complete AHJ approved system. Drawings shall be prepared by the Contractor.
- K. The Contractor shall have a licensed New York State Professional Engineer Stamp all drawings and applications. Pay for all fees to obtain all necessary permits.
- L. All junction boxes housing relays must be labeled with P-Touch type labeler with relay point number and device it serves, i.e. (0001-Flow Switch 1).
- M. Contractor to review points list prior to programming with Owner. Contractor only to program approved points list. Any changes to program not previously approved by Owner will be done at Contractor's expense.

## 3.02 CLEAN UP

- A. Upon completion of the installation, all debris created by the installation shall be removed from the premises or disposed of as directed by the Owner.
- B. It shall be the responsibility of the installing contractor to assure that construction debris does not adversely affect any sensing devices installed as part of this project. Should it be deemed

necessary by the engineer, owner or AHJ, the installing contractor shall be responsible for the clearing of all devices prior to final acceptance.

### 3.03 TESTS

- A. Prior to the final acceptance test, the Contractor and a trained manufacturer's technical representative shall test the completed system for proper operation. The system shall be demonstrated to perform all of the functions as below listed in 3.04 C. Any system, equipment or wiring failures discovered during said test shall be repaired or replaced before requesting scheduling of the final acceptance test.
- B. The system shall be tested for final acceptance in the presence of the Owner's representative, Architect's representative, Engineer's representative, the local Code enforcement official, Contractor's representative and the Manufacturer's representative.
- C. During the final acceptance test:
  - 1. Every manual fire alarm station shall be tested.
  - 2. Every smoke detector shall be tested using Simplex tester or equivalent device.
  - 3. The sprinkler system waterflow alarm switches shall be tested by flowing water. The sprinkler system valve tamper switches shall be tested by closing sprinkler valves. On dry type sprinkler systems, the air pressure shall be measured.
  - 4. Every audible alarm signaling device shall be sounded.
  - 5. Every visual alarm signaling device shall be lit or flashed.
  - 6. Every system control function shall be tested for its proper operation.
  - 7. All supervised circuits shall be opened at two (2) locations to test for proper supervision.
- D. Upon successful completion of all final acceptance tests, the Contractor's and Manufacturer's representatives shall each author and sign a letter confirming the successful completion of testing. Two (2) copies of each letter shall be forwarded to the Owner's representative, the Architect's representative, the Engineer's representative and the local Code enforcement official.
- E. All final acceptance testing shall be done at a time convenient to the local Code enforcement official and the Owner's representatives and all testing costs shall be born by the Contractor as part of this Contract.

### 3.04 DOCUMENTATION AND TRAINING

- A. The Contractor shall provide the services of a trained manufacturer's employee for a period of four (4) hours, during normal business hours, to instruct the Owner's designated personnel on the operation and maintenance of the entire system. Where multiple shifts are present Contractor to provide a four (4) hour training period for each shift, maximum of 3.

### 3.05 MAINTENANCE AND TESTING AGREEMENT

- A. The equipment manufacturer shall provide to the Owner a price quotation for a one (1) year fire alarm system maintenance and testing agreement to begin upon final acceptance of the system. System Supplier shall have a local service organization with a minimum of 20 factory trained technicians. Technicians shall be NICET Level 2 certified.

### 3.06 SERVICE AND MAINTENANCE

- A. The equipment manufacturer shall make available a fully equipped service organization, capable of guaranteeing an on-site service response time within eight (8) hours to a service request call. Said service shall be available twenty-four (24) hours per day and seven (7) days per week.

- B. The equipment manufacturer shall make available, to the Owner, a price quotation for a one (1) year maintenance and testing agreement, to take effect on the date of final acceptance

### 3.07 DEMONSTRATION

- A. Provide systems demonstration under provisions of Section 016500.
- B. Provide instruction as required for operating the system. "Hands-on" demonstration of the operation of all system components and the entire system including program changes and functions shall be provided
- C. Demonstrate normal and abnormal modes of operation and required responses to each.
- D. The Contractor and/or the Systems Manufacturer's representative shall provide a typewritten "Sequence of Operation" to the Owner at the time of demonstration.
- E. Contractor to provide O&M manuals for the fire alarm equipment on disk format.

### 3.08 FAN SHUT DOWN

- A. The contractor shall provide fan shutdown for all equipment rated 1000 CFM or greater. All ducted equipment rated 2000 CFM or greater shall have return duct smoke detectors, remote LED indicators and fan shutdown control. All ducted equipment rated 15,000 CFM or greater shall have supply and return duct smoke detectors, remote LED indicators and fan shutdown control.
- B. All fan reset control shall be independent of fire alarm panel reset control.
- C. Provide all control modules; independent reset control modules and duct smoke detectors as required. Provide all required power and control wiring including motor starters.
- D. Contractor shall submit control drawings for architect/engineer approval.

### 3.09 GUARANTEE

- A. The Contractor shall guarantee all wiring to be free from inherent mechanical and electrical defects for one (1) year. Manufacturer shall make available to the Owner a local service department, which shall stock standard parts on the premises. Maintenance is to be provided during normal working hours, at no cost to the owner, for a period of twelve (12) months from the date of acceptance of the installation, unless damage is caused by misuse, abuse or accident.

**END OF SECTION 283100**

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. Remove and dispose of surface debris as required.
- B. Remove and dispose of paving, sidewalk, curbs, etc.
- C. Clear site or designated areas of the site of plant life and grass as required, and dispose of as required.
- D. Remove and dispose of trees and shrubs as required.
- E. Remove and dispose of stumps and root system of trees and shrubs as required.
- F. Removal and storage of topsoil.

## 1.02 RELATED SECTIONS

- A. Section 312316 - Excavation.

## 1.03 REGULATORY REQUIREMENTS

- A. Conform to applicable local code(s) for disposal of debris.
- B. Burning of materials on site is prohibited.
- C. Coordinate clearing work with utility companies.

## PART 2 - PRODUCTS

## 2.01 NOT USED

## PART 3 - EXECUTION

## 3.01 PREPARATION

- A. Verify existing conditions.
- B. Identify existing plant life designated to be removed. Verify with Owner and Engineer prior to removal.
- C. Verify limits of clearing.

## 3.02 PROTECTION

- A. Locate, identify and protect utilities that are to remain from damage.
- B. Protect trees, plant growth and features designated to remain as final landscaping.
- C. Protect benchmarks and existing structures from damage or displacement. Any damage to existing structures is to be promptly repaired at no additional cost to the Owner.

## 3.03 APPLICATION

- A. Clear areas required for access to site and execution of work.

- B. Remove paving, curbs, debris and sidewalks as required.
- C. Remove trees and shrubs designated to be removed. Remove stumps, main root ball, surface rock and perishable debris.
- D. Clear undergrowth and dead wood without disturbing subsoil.
- E. Remove paving, debris, rock and extracted plant life from site and dispose of in accordance with State and local ordinances.
- F. Excavate topsoil from areas to be further excavated, re-landscaped or regraded. Do not excavate wet topsoil.
- G. Stockpile topsoil in area designated on site to a height not exceeding 8 feet. Protect from erosion. Remove excess topsoil not being reused from site. Do not remove any topsoil from the site prior to obtaining the approval of the Engineer.

**END OF SECTION 311110**

## PART 1 GENERAL

## 1.01 SECTION INCLUDES

- A. Removal of subsoil.
- B. Rough grading and cutting, filling and rough contouring the site for placement of topsoil or pavement base for final grading.
- C. Finish grading.

## 1.02 RELATED REQUIREMENTS

- A. Section 311000 - SITE CLEARING.
- B. Section 312316 - EXCAVATION
- C. Section 312323 - FILL: Filling and compaction.
- D. Section 329219 - SEEDING: Finished ground cover.

## PART 2 PRODUCTS

## 2.01 MATERIALS

- A. Topsoil: See Section 312323 - FILL.
- B. Seed: See Section 329219 - SEEDING.
- C. Other Fill Materials: See Section 312323 - FILL.

## PART 3 EXECUTION

## 3.01 EXAMINATION

- A. Verify that survey bench mark and intended elevations for the Work are as indicated.

## 3.02 PREPARATION

- A. Identify required lines, levels, contours, and datum.
- B. Stake and flag locations of known utilities.
- C. Locate, identify, and protect from damage above- and below-grade utilities to remain.
- D. Protect site features to remain, including but not limited to bench marks, survey control points, existing structures, fences, sidewalks, paving, and curbs, from damage by grading equipment and vehicular traffic.

## 3.03 ROUGH GRADING

- A. Remove topsoil from areas to be further excavated, re-landscaped, or re-graded, without mixing with foreign materials.
- B. Do not remove topsoil when wet.
- C. Remove subsoil from areas to be further excavated, re-landscaped, or re-graded.

- D. Do not remove wet subsoil, unless it is subsequently processed to obtain optimum moisture content.
- E. When excavating through roots, perform work by hand and cut roots with sharp axe.
- F. See Section 312323 for filling procedures.
- G. Stability: Replace damaged or displaced subsoil to same requirements as for specified fill.

### 3.04 SOIL REMOVAL

- A. Stockpile topsoil to be re-used on site; remove remainder from site.
- B. Stockpile subsoil to be re-used on site; remove remainder from site.
- C. Stockpiles: Use areas designated on site; pile depth not to exceed 8 feet (2.5 m); protect from erosion.

### 3.05 FINISH GRADING

- A. Before Finish Grading:
  - 1. Verify subgrade has been contoured and compacted.
  - 2. Remove debris, roots, branches, stones, in excess of 1/2 inch (13 mm) in size. Remove soil contaminated with petroleum products.
- B. Where topsoil is to be placed, scarify surface to depth of 3 inches (75 mm).
- C. In areas where vehicles or equipment have compacted soil, scarify surface to depth of 3 inches (75 mm).
- D. Place topsoil in areas where seeding are indicated.
- E. Place topsoil where required to level finish grade.
- F. Place topsoil to thickness as scheduled.
- G. Place topsoil during dry weather.
- H. Remove roots, weeds, rocks, and foreign material while spreading.
- I. Near plants spread topsoil manually to prevent damage.
- J. Fine grade topsoil to eliminate uneven areas and low spots. Maintain profiles and contour of subgrade.
- K. Lightly compact placed topsoil.

### 3.06 TOLERANCES

- A. Top Surface of Subgrade: Plus or minus 0.10 foot (1-3/16 inches) (30 mm) from required elevation.
- B. Top Surface of Finish Grade: Plus or minus 0.04 foot (1/2 inch) (13 mm).

**3.07 REPAIR AND RESTORATION**

- A. Existing Facilities, Utilities, and Site Features to Remain: If damaged due to this work, repair or replace to original condition.
- B. Trees to Remain: If damaged due to this work, trim broken branches and repair bark wounds; if root damage has occurred, obtain instructions from Architect as to remedy.
- C. Other Existing Vegetation to Remain: If damaged due to this work, replace with vegetation of equivalent species and size.

**3.08 CLEANING**

- A. Remove unused stockpiled topsoil and subsoil. Grade stockpile area to prevent standing water.
- B. Leave site clean and raked, ready to receive landscaping.

**END OF SECTION 312200**

PART 1 - GENERAL

1.01 SECTION INCLUDES

- A. Excavation for building foundations.
- B. Excavation for slabs-on-grade, paving and landscaping.
- C. Excavation for site structures.
- D. Site excavation.

1.02 RELATED SECTIONS

- A. Section 312200 - Grading.
- B. Section 312323 - Fill: Backfilling excavated material.

1.03 QUALITY ASSURANCE

- A. Do not excavate wet or frozen materials without written approval from the Engineer.
- B. Provide safety barricades around open excavations.

1.04 FIELD MEASUREMENTS

- A. Verify that survey benchmark and intended elevations for the work are as indicated.

1.05 COORDINATION

- A. Coordinate work under provisions of Section 013100.

PART 2 - PRODUCTS

2.01 NOT USED.

PART 3 - EXECUTION

3.01 PREPARATION

- A. Identify required lines, levels, contours and datum.
- B. Identify known underground, above ground and aerial utilities. Stake and flag locations.
- C. Notify utility company to remove or relocate utilities, if required.
- D. Protect above and below grade utilities which are to remain.
- E. Protect plant life, lawns and other features remaining as a portion of final landscaping.
- F. Protect bench marks, existing structures, fences, sidewalks, paving and curbs from excavation equipment and vehicular traffic.
- G. Notify the Engineer prior to commencement of excavation.

**3.02 EXCAVATION**

- A. Underpin adjacent structures that may be damaged by excavation work, including utilities and pipe chases.
- B. Excavate subsoil required to accommodate landscaping and construction operations to the limits as indicated on the plans.
- C. Machine slope banks to angle of repose or less, until shored.
- D. Grade top perimeter of excavation to prevent surface water from draining into excavation.
- E. Hand trim excavation. Remove loose matter.
- F. Remove lumped subsoil, boulders, and rock.
- G. Notify Engineer of unexpected subsurface conditions and discontinue affected work in area until notified to resume work.
- H. Correct unauthorized excavation at no extra cost to Owner in accordance with Section 312323.13.
- I. Stockpile excavated material in area designated on site and remove excess material not being reused from site.

**3.03 FIELD QUALITY CONTROL**

- A. Perform field inspection and testing under provisions of Section 014500.
- B. Provide for visual inspection of bearing surfaces.

**3.04 PROTECTION**

- A. Protect work under provisions of Section 015000.
- B. Protect excavations by methods required to prevent cave-in or loose soil from falling into excavation.
- C. Protect bottom of excavations and soil adjacent to and beneath foundation from freezing.

**END OF SECTION 312316**

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. Excavate trenches for piping and utilities outside building.
- B. Compacted bedding and backfill around and over piping and utilities to subgrade elevations.
- C. Backfilling and compaction.

## 1.02 REFERENCES

- A. ASTM C136/C136M - Method for Sieve Analysis of Fine and Coarse Aggregates.
- B. ASTM D1557- Test Methods for Moisture-Density Relations of Soils and Soil-Aggregate Mixtures Using 10 lb (4.54 kg) Rammer and 18-inch (457 mm) Drop.

## 1.03 SUBMITTALS

- A. Submit under provisions of Section 013300 - SUBMITTALS.
- B. Test Reports: Submit a sieve analysis for bedding to be used.

## 1.04 QUALITY ASSURANCE

- A. Do not excavate wet or frozen materials without written approval from the Architect/Engineer.
- B. Do not backfill over or with wet or frozen materials.
- C. Provide safety barricades around open excavations.

## 1.05 FIELD MEASUREMENTS

- A. Verify that survey benchmark and intended elevations for the work are as shown on plans.

## 1.06 COORDINATION

- A. Coordinate trenching with installation of pipe or conduit.
- B. Coordinate trenching with installation and removal of sheeting.

## PART 2 - PRODUCTS

## 2.01 MATERIALS

- A. Bedding: Washed; free of silt, clay, loam, friable or soluble materials, or organic matter; graded in accordance with ANSI/ASTM C33-71a Size No. 67; within the following limits:

| Sieve Size | Percent Passing |
|------------|-----------------|
| 1"         | 100             |
| 3/4"       | 99              |
| 1/2"       | 63              |
| No. 4      | 6               |

- B. Subsoil: Reused, excavated material, free of lumps, rocks larger than 3 inches (75 mm) in size, debris and contaminants.

### PART 3 - EXECUTION

#### 3.01 EXAMINATION

- A. Verify existing site conditions and substrate.
- B. Verify fill materials to be reused are acceptable.
- C. Verify items to be buried during backfilling process have been inspected prior to backfilling.

#### 3.02 PREPARATION

- A. Identify required lines, levels, contours, and datum.
- B. Maintain and protect existing utilities remaining which pass through work area.
- C. Protect plant life, lawns, rock outcropping and other features remaining as a portion of final landscaping.
- D. Protect bench marks, existing structures, fences, sidewalks, paving and curbs from excavation equipment and vehicular traffic. Any item damaged by the contractor shall be promptly repaired at the contractor's expense.
- E. Protect above and below-grade utilities which are to remain.
- F. Cut out soft areas of subgrade not capable of insitu compaction. Backfill with subsoil fill and compact to density equal to or greater than requirements for subsequent backfill material.

#### 3.03 EXCAVATION

- A. Excavate subsoil required for piping.
- B. Cut trenches to the dimensions shown on the plans.
- C. Excavation shall not interfere with normal 45 degree bearing splay of foundations.
- D. Hand trim excavation. Hand trim for bell and spigot pipe joints. Remove loose matter.
- E. Remove lumped subsoil, boulders, and rock.
- F. For trenches made in solid rock, excavate to a depth of 1 foot (300 mm) below the proposed pipe invert.
- G. Correct unauthorized excavation at no cost to Owner in accordance with Section 312323 - FILL.
- H. Stockpile excavated material in area designated on site and remove excess material not being used from site. Remove excavated material from site.
- I. All trenches deeper than 5 ft (1.5 m) shall require sheeting.

#### 3.04 INSTALLATION - BEDDING

- A. Support pipe and conduit during placement and compaction of bedding fill.

- B. For trenches made in solid rock, place an additional 1 foot (300 mm) of bedding under pipe or conduit.
- C. Place bedding to the dimensions and limits as shown on the plans.
- D. Place bedding material against and to 1 foot (300 mm) over the top of the pipe or conduit in 6 inch (150 mm) compacted layers.
- E. All bedding material shall be compacted to 95 percent maximum dry density in accordance with ASTM D1557. Maintain optimum moisture content to attain required density.
- F. Place bedding simultaneously on both sides of the pipe or conduit.

### 3.05 BACKFILLING

- A. Backfill trenches to contours and elevations with unfrozen materials.
- B. Backfill to the dimensions and limits shown on the plans with reused subsoil.
- C. Do not backfill over porous, wet, frozen or spongy subgrade surfaces.
- D. Place and compact material in continuous layers not exceeding 6 inches (150 mm) compacted depth.
- E. Employ a placement method that does not disturb or damage conduit or pipe.
- F. All backfilled materials shall be compacted to 95 percent of maximum dry density in accordance with ASTM D1557. Maintain optimum moisture content to attain required density.
- G. Remove temporary sheeting as backfilling progresses.

### 3.06 TOLERANCES

- A. Maximum Variation From Top Surface of Backfilling Under Paved Areas: 1/4 inch (13 mm).
- B. Maximum Variation From Top Surface of General Backfilling: 1 inch (25 mm).

### 3.07 FIELD QUALITY CONTROL

- A. Field testing is to be performed under provisions of Section 014500 - QUALITY CONTROL.
- B. Tests and analysis of fill material are to be performed in accordance with ASTM D1557.
- C. If tests indicate work does not meet specified requirements, remove work, replace and retest at no cost to Owner.
- D. Unless additional testing is required by the Engineer, compaction tests shall be taken every 100 feet (30 m), at the springline of the pipe and every 2 vertical feet (610 mm) of backfill.

### 3.08 CLEANING

- A. Remove surplus backfill materials from site.
- B. Leave fill material stockpile areas completely free of excess fill materials.

3.09 PROTECTION

- A. Protect finished work under provisions of Section 015000.
- B. Recompect fills subjected to vehicular traffic.

**END OF SECTION 312318**

## PART 1 GENERAL

## 1.01 SECTION INCLUDES

- A. Filling, backfilling, and compacting for building volume below grade, slabs-on-grade, paving, and site structures.
- B. Backfilling and compacting for utilities outside the building.
- C. Filling holes, pits, and excavations generated as a result of removal (demolition) operations.

## 1.02 RELATED REQUIREMENTS

- A. Section 015000 - TEMPORARY FACILITIES AND CONTROLS: Slope protection and erosion control.
- B. Section 312316 - EXCAVATION: Removal and handling of soil to be re-used.

## 1.03 REFERENCE STANDARDS

- A. ASTM D1556/D1556M - Standard Test Method for Density and Unit Weight of Soil in Place by the Sand-Cone Method; 2015.
- B. ASTM D1557 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft<sup>3</sup> (2,700 kN m/m<sup>3</sup>)).
- C. ASTM D2167 - Standard Test Method for Density and Unit Weight of Soil in Place by the Rubber Balloon Method.
- D. ASTM D2487 - Standard Practice for Classification of Soils for Engineering Purposes (Unified Soil Classification System).
- E. ASTM D6938 - Standard Test Methods for In-Place Density and Water Content of Soil and Soil-Aggregate by Nuclear Methods (Shallow Depth).

## 1.04 SUBMITTALS

- A. See 013300 - SUBMITTALS for submittal procedures.
- B. Materials Sources: Submit name of imported materials source.
- C. Provide a letter certifying that each type of imported fill material has been provided by a NYSDEC certified clean fill source or has been tested in accordance with NYSDEC Unrestricted Soil Use Guidelines as defined in Subpart 375-6 Remedial Program Soil Cleanup Objectives.
- D. Test Reports: Submit sieve analysis and test results from NYSDEC Unrestrictive Soil Use Guidelines for each type of imported fill to be used.

## 1.05 QUALITY ASSURANCE

- A. Do not backfill wet or frozen materials.

## 1.06 DELIVERY, STORAGE, AND HANDLING

- A. When necessary, store materials on site in advance of need.
- B. When fill materials need to be stored on site, locate stockpiles where indicated.

1. Separate differing materials with dividers or stockpile separately to prevent intermixing.
2. Prevent contamination.
3. Protect stockpiles from erosion and deterioration of materials.

## PART 2 PRODUCTS

### 2.01 FILL MATERIALS

#### A. Imported Fill

1. All imported fill materials shall be provided by a NYSDEC certified clean fill source or meet the requirements of NYSDEC Unrestricted Soil Use Guidelines as defined in Subpart 375-6: Remedial Program Soil Cleanup Objectives.
2. Test samples of imported fill in accordance with the following table:

| Recommended Number of Soil Samples for Imported Soil |                                                                                                   |                                                |                                                                                             |
|------------------------------------------------------|---------------------------------------------------------------------------------------------------|------------------------------------------------|---------------------------------------------------------------------------------------------|
| Contaminant                                          | VOC's                                                                                             | SVOC's, Inorganics, PBC's/Pesticides Composite | SVOC's, Inorganics, PBC's/Pesticides Discreet Samples/Composite                             |
| Soil Quantity (cy)                                   | Discreet Samples                                                                                  |                                                |                                                                                             |
| 0-50                                                 | 1                                                                                                 | 1                                              | 3-5 discrete samples from different locations will comprise a composite sample for analysis |
| 50-100                                               | 2                                                                                                 | 1                                              |                                                                                             |
| 100-200                                              | 3                                                                                                 | 1                                              |                                                                                             |
| 200-300                                              | 4                                                                                                 | 1                                              |                                                                                             |
| 300-400                                              | 4                                                                                                 | 2                                              |                                                                                             |
| 400-500                                              | 5                                                                                                 | 2                                              |                                                                                             |
| 500-800                                              | 6                                                                                                 | 2                                              |                                                                                             |
| 800-1,000                                            | 7                                                                                                 | 2                                              |                                                                                             |
| >1,000                                               | Add an additional 2 VOC and 1 composite for each additional 1,000 cubic yards or consult with DER |                                                |                                                                                             |

3. Provide materials from the same source throughout the work. Change of source requires approval from Engineer.

#### B. General Fill (Type D): Subsoil excavated on-site.

1. Graded.
2. Free of lumps larger than 3 inches (75 mm), rocks larger than 2 inches (50 mm), and debris, no more than 15% passing No. 200 sieve; no more than 30% retained on 3/4" sieve.
3. Conforming to ASTM D2487 Group Symbol CL.

#### C. Topsoil: .

1. Graded.
2. Free of roots, rocks larger than 1/2 inch (12 mm), subsoil, debris, large weeds and foreign matter.
3. Acidity range (pH) of 5.5 to 7.5.
4. Containing a minimum of 5 percent and a maximum of 25 percent inorganic matter.
5. Conforming to ASTM D2487 Group Symbol OH.

- D. Type C - Sand: Natural river or bank sand; washed, free of silt, clay, friable or soluble materials, or organic matter; graded in accordance with ANSI/ASTM C136, within the following limits:

| Screen Size | Percent Passing |
|-------------|-----------------|
|-------------|-----------------|

|                    |         |
|--------------------|---------|
| No. 4 (4.75 mm)    | 100%    |
| No. 14 (1.18 mm)   | 10-100% |
| No. 50 (0.30 mm)   | 5-90%   |
| No. 100 (0.15 mm)  | 4-30%   |
| No. 200 (0.075 mm) | 0-1%    |

### PART 3 EXECUTION

#### 3.01 EXAMINATION

- A. Verify that survey bench marks and intended elevations for the Work are as indicated.
- B. Identify required lines, levels, contours, and datum locations.
- C. See Section 312200 - Grading for additional requirements.

#### 3.02 PREPARATION

- A. Cut out soft areas of subgrade not capable of compaction in place. Backfill with general fill.
- B. Compact subgrade to 95% maximum dry density in accordance with ANSI/ASTM D1557.
- C. Until ready to fill, maintain excavations and prevent loose soil from falling into excavation.

#### 3.03 FILLING

- A. Fill to contours and elevations indicated using unfrozen materials.
- B. Fill up to subgrade elevations unless otherwise indicated.
- C. Employ a placement method that does not disturb or damage other work.
- D. Systematically fill to allow maximum time for natural settlement. Do not fill over porous, wet, frozen or spongy subgrade surfaces.
- E. Maintain optimum moisture content of fill materials to attain required compaction density.
- F. Soil Fill: Place and compact material in equal continuous layers not exceeding 8 inches (200 mm) compacted depth.
- G. Slope grade away from building minimum 2 inches in 10 feet (50 mm in 3 m), unless noted otherwise. Make gradual grade changes. Blend slope into level areas.
- H. Correct areas that are over-excavated.
  - 1. Other areas: Use general fill, flush to required elevation, compacted to minimum 97 percent of maximum dry density.
- I. Compaction Density Unless Otherwise Specified or Indicated:
  - 1. Under paving, slabs-on-grade, and similar construction: 92 percent of maximum dry density.
- J. Reshape and re-compact fills subjected to vehicular traffic.

**3.04 TOLERANCES**

- A. Top Surface of General Filling: Plus or minus 1 inch (25 mm) from required elevations.
- B. Top Surface of Filling Under Paved Areas: Plus or minus 1 inch (25 mm) from required elevations.

**3.05 FIELD QUALITY CONTROL**

- A. See Section 014500 - QUALITY CONTROL, for general requirements for field inspection and testing.
- B. Perform compaction density testing on compacted fill in accordance with ASTM D1556/D1556M, ASTM D2167, or ASTM D6938.
- C. Proof roll compacted fill at surfaces that will be under slabs-on-grade.

**3.06 CLEANING**

- A. Remove unused stockpiled materials, leave area in a clean and neat condition. Grade stockpile area to prevent standing surface water.

**END OF SECTION 312323**

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. Wood Sheeting.
- B. Steel Sheeting
- C. Sheeting box.

## 1.02 RELATED SECTIONS

- A. Section 312316 - Excavation.
- B. Section 312323.13 - Backfilling.
- C. Section 312333 - Trenching.

## 1.03 REFERENCES

- A. Occupational Safety and Health Standards - Excavations; Final Rule (29 CFR Part 1926) - OSHA Standards.

## 1.04 QUALITY ASSURANCE

- A. Perform all work of this section in accordance with OSHA Standards and approved shop drawings.

## 1.05 COORDINATION

- A. Coordinate work under provisions of Section 013100.
- B. Coordinate work with all other sections requiring temporary sheeting and bracing.

## PART 2 - PRODUCTS

## 2.01 MATERIALS

- A. Wood Sheeting: Hardwood species of size and dimensions capable of being driven to the required depths and capable of supporting excavation sides and soil pressures when braced; free from wormholes, wind shakes, loose knots, decayed or unsound portions or defects which would impair its strength or tightness; 2 3 inches thick minimum.
- B. Steel Sheeting: ASTM A328, corrugated "Z" shape cross-section; of size and dimensions capable of being driven to the required depths and capable of supporting excavation sides and soil pressures when braced; structurally sound; special shapes for corner construction and transition points.

| Property                           | Method     | Characteristic Value |
|------------------------------------|------------|----------------------|
| Compressive Strength (ksi)         | ASTM D695  | 66.54                |
| Compressive Strength via CLC (ksi) | ASTM D6641 | 73.07                |
| Compressive Modulus (Mpsi)         | ASTM D695  | 3.88                 |
| Tensile Strength (ksi)             | ASTM D638  | 64.77                |
| Tensile Modulus (Mpsi)             | ASTM D638  | 3.86                 |

| SBS (psi)           | ASTM D2344 | 3727  |

| Property                           | Method     | Characteristic Value |
|------------------------------------|------------|----------------------|
| Compressive Strength (ksi)         | ASTM D695  | 21,44                |
| Compressive Strength via CLC (ksi) | ASTM D6641 | 21.09                |
| Compressive Modulus (Mpsi)         | ASTM D695  | 1.24                 |
| Tensile Strength (ksi)             | ASTM D638  | 7.78                 |
| Tensile Modulus (Mpsi)             | ASTM D638  | 1.02                 |
| Flexural Strength (ksi)            | ASTM D790  | 14.43                |
| Flexural Modulus (Mpsi)            | ASTM D790  | 1.11                 |
| Izod (ft. lb. /in )                | ASTM d256  | 4.33                 |
| SBS (psi)                          | ASTM D2344 | 1843                 |

- C. Sheeting Boxes: Steel, of size and dimensions capable of supporting excavation sides and soil pressures; structurally sound.

### PART 3 - EXECUTION

#### 3.01 EXAMINATION

- A. Verify existing soil substrate and site conditions and elevations are as indicated on the plans.
- B. Verify elevations and grades are as indicated on the plans.
- C. Verify proposed locations of excavations are as indicated on the plans.
- D. Monitor excavation support and protection systems daily during excavation progress and for as long as excavation remains open. Promptly correct bulges, breakage or other evidence of movement to ensure that systems are stable.
- E. Promptly repair damages to adjacent facilities caused by installing excavation support and protection systems.

#### 3.02 PREPARATION

- A. Excavate to a depth no greater than 4 feet from existing grade.
- B. Assemble and drive the sheeting in accordance with approved shop drawings.

#### 3.03 INSTALLATION - SHEETING

- A. Drive sheeting in place to thoroughly support both sides of the excavation using a sheeting hammer. Use a steam or pneumatic hammer for steel sheeting.
- B. Water jetting of sheeting will not be permitted. Do not loosen adjacent ground which might result in collapse.
- C. Install walls and braces or shores tight and in accordance with approved shop drawings prepared by the contractor's engineer.

**3.04 INSTALLATION - SHEETING BOX**

- A. Place box in trench utilizing a means which will not damage structural integrity of the box.
- B. Excavate ahead of the sheeting box only enough to advance the sheeting box and only immediately prior to moving the sheeting box.
- C. Backfill on both sides of the sheeting box as it is moved.

**3.05 REMOVAL OF SHEETING**

- A. Remove sheeting only as backfilling progresses.
- B. Carefully remove sheeting such that compacted backfill is not displaced. Add additional backfill to the areas vacated by the sheeting.
- C. All sheeting is to be removed from the site once its use is no longer required.
- D. Removing sheeting in stages to avoid disturbing underlying soils or damaging structures, pavements, facilities and utilities.

**3.06 CLEANING**

- A. Clean work under provisions of Section 017423.
- B. Clean site of any debris and sheeting materials at completion of the work.

**END OF SECTION 314116**

## PART 1 GENERAL

## 1.01 SECTION INCLUDES

- A. Aggregate base course.
- B. Paving aggregates.

## 1.02 REFERENCE STANDARDS

- A. ASTM C136/C136M - Standard Test Method for Sieve Analysis of Fine and Coarse Aggregates; 2019.
- B. ASTM D1557 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft<sup>3</sup> (2,700 kN m/m<sup>3</sup>)); 2012, with Editorial Revision (2015).
- C. NYSDOT Standard Specifications Section 703-02.
- D. ASTM D4318 - Standard Test Methods for Liquid Limit, Plastic Limit, and Plasticity Index of Soils; 2017, with Editorial Revision (2018).

## 1.03 DELIVERY, STORAGE, AND HANDLING

- A. Aggregate Storage, General:
  - 1. Separate differing materials with dividers or stockpile separately to prevent intermixing.
  - 2. Prevent contamination.
  - 3. Protect stockpiles from erosion and deterioration of materials.

## PART 2 PRODUCTS

## 2.01 MATERIALS

- A. Aggregate Base Course: Angular, crushed, recycled concrete; free of shale, clay, friable materials and debris; graded in accordance with ANSI/ASTM C136 within the following limits:

| # | Sieve Size | % Passing |
|---|------------|-----------|
| 1 | 2"         | 90-100    |
| 2 | 1/4"       | 30-65     |
| 3 | No. 40     | 5-40      |
| 4 | No. 200    | 0-10      |

- B. Material retained on the 1/2 inch (13 mm) sieve is coarse aggregate.
- C. Coarse aggregate shall not have more than 10 percent by weight of flat or elongated pieces. A flat or elongated piece is defined as being three times greater in the largest dimension as compared to its least dimension.
- D. The portion of the aggregate base course which passes the No. 40 (0.30 mm) screen shall have a plasticity index of one as tested in accordance with ASTM D4318.

## PART 3 EXECUTION

## 3.01 EXAMINATION

- A. Verify that survey bench marks and intended elevations for the work are as indicated.

- B. Verify substrate has been inspected, gradients and elevations are correct, and is dry.

### 3.02 PREPARATION

- A. Correct irregularities in substrate gradient and elevation by scarifying, reshaping, and re-compacting.
- B. Do not place aggregate on soft, muddy, or frozen surfaces.

### 3.03 INSTALLATION

- A. Place aggregate in maximum 3 inch (75 mm) layers and roller compact to 95% maximum dry density in accordance with ANSI/ASTM D1557.
- B. Level and contour surfaces to elevations and gradients indicated.
- C. Add small quantities of fine aggregate to coarse aggregate as appropriate to assist compaction.
- D. Add water to assist compaction. If excess water is apparent, remove aggregate and aerate to reduce moisture content.
- E. New pavement must be placed on properly compacted aggregate base course within 24 hours of final compaction. If aggregate base course is left open for more than 24 hours, re-compact and retest in accordance with ANSI/ASTM D1557.
- F. Use mechanical tamping equipment in areas inaccessible to compaction equipment.

### 3.04 TOLERANCES

- A. Flatness: Maximum variation of 1/4 inch (6.4 mm) measured with 10 foot (3 m) straight edge.
- B. Scheduled Compacted Thickness: Within 1/4 inch (6.4 mm).
- C. Variation From Design Elevation: Within 1/2 inch (12.8 mm).

### 3.05 CLEANING

- A. Remove unused stockpiled materials, leave area in a clean and neat condition. Grade stockpile area to prevent standing surface water.

## END OF SECTION 321123

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Aggregate base course.
- B. Single course bituminous concrete paving.
- C. Surface sealer.

1.02 RELATED REQUIREMENTS

- A. Section 099113 - Exterior Painting: Pavement markings.
- B. Section 312200 - Grading: Preparation of site for paving and base.
- C. Section 312323 - Fill: Compacted subgrade for paving.

1.03 REFERENCE STANDARDS

- A. AI MS-2 - Asphalt Mix Design Methods; 2015.

1.04 QUALITY ASSURANCE

- A. Perform Work in accordance with State of \_\_\_\_\_ Highways standard.
- B. Mixing Plant: Complying with State of \_\_\_\_\_ Highways standard.
- C. Obtain materials from same source throughout.

1.05 FIELD CONDITIONS

- A. Do not place asphalt when ambient air or base surface temperature is less than 40 degrees F (4 degrees C), or surface is wet or frozen.

PART 2 PRODUCTS

2.01 MATERIALS

- A. Aggregate for Base Course: In accordance with State of \_\_\_\_\_ Highways standards.

2.02 ASPHALT PAVING MIXES AND MIX DESIGN

- A. Asphalt Base Course: 3.0 to 6 percent of asphalt cement by weight in mixture in accordance with AI MS-2.

**END OF SECTION 321216**

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. Painted pavement delineation.
- B. Painted pavement symbols.

## 1.02 RELATED SECTIONS

- A. Section 321216 - Asphaltic Concrete Paving.

## 1.03 REFERENCES

- A. New York State Department of Transportation Standard Specifications.

## 1.04 SUBMITTALS

- A. Submit under provisions of Section 013300.
- B. Product Data: Provide data on paint.

## 1.05 DELIVERY, STORAGE AND HANDLING

- A. Deliver, store and handle products to the site under provisions of Section 016500.
- B. Deliver all materials to the site in their original containers.
- C. Store all materials in a cool, dry place.
- D. Do not expose paint to open flames or temperatures which may ignite the paint.
- E. Store all materials such that the paint is not contaminated.

## 1.06 ENVIRONMENTAL REQUIREMENTS

- A. Do not apply paint when the ambient temperature is below 40 degrees F.
- B. Do not apply paint to wet or frozen surfaces or when precipitation is occurring.

## PART 2 - PRODUCTS

## 2.01 MATERIALS

- A. Paint: Flexible, non-skinning paint; homogeneous, conforming to the requirements of Section 640 of the New York State Department of Transportation Standard Specifications; color as indicated on the plans or directed by Engineer.

## PART 3 - EXECUTION

## 3.01 EXAMINATION

- A. Verify that pavement is ready to receive work of this section.
- B. Beginning of application means applicator accepts existing conditions.

### 3.02 PREPARATION

- A. Remove all dirt, grease, oil or other foreign matter from pavement which might affect the bond between the pavement and the paint.
- B. Remove all temporary pavement markings without causing damage to the pavement.

### 3.03 APPLICATION

- A. Apply paint with spray type striping machines to achieve a dry film thickness of 14 mils to 16 mils at the locations and to the dimensions as indicated on the plans.
- B. Symbols may be rolled or brushed onto the pavement as long as a dry film thickness of 14 mils to 16 mils is achieved.
- C. All stripes and symbols shall have clean, sharp edges.

### 3.04 TOLERANCES

- A. Maximum offset from true position: 1 inch.

### 3.05 CLEANING

- A. Clean adjacent areas which received paint during work of this section.

### 3.06 PROTECTION

- A. Protect finished work under provisions of Section 015000.
- B. Protect painted markings from damage or discoloration until project is accepted by the Owner.

**END OF SECTION 321728**

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. Seeding.
- B. Mulch, fertilizer and other accessories.
- C. Maintenance.

## 1.02 REFERENCES

- A. Not Used

## 1.03 DEFINITIONS

- A. Weeds: Include Dandelion, Jimsonweed, Quackgrass, Horsetail, Morning Glory, Rush Grass, Mustard, Lambsquarter, Chickweed, Cress, Crabgrass, Canadian Thistle, Nutgrass, Poison Oak, Blackberry, Tansy Ragwort, Bermuda Grass, Johnson Grass, Poison Ivy, Nut Sedge, Nimble Will, Bindweed, Bent Grass, Wild Garlic, Perennial Sorrel and Brome Grass.

## 1.04 SUBMITTALS

- A. Product Data: Provide data on seed mixtures and lime.

## 1.05 QUALITY ASSURANCE

- A. Seed: Provide seed mixture in containers showing percentage of seed mix, year of production, net weight, date of packaging, and location of packaging.

## 1.06 REGULATORY REQUIREMENTS

- A. Comply with applicable regulatory agencies.

## 1.07 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, protect and handle products to site under provisions of Section 016500.
- B. Deliver grass seed mixture in original sealed containers. Seed in damaged packaging is not acceptable.
- C. Deliver materials in waterproof bags showing weight, chemical analysis and name of manufacturer.

## 1.08 ENVIRONMENTAL REQUIREMENTS

- A. Do not sow immediately following rain, during windy periods or if ground is frozen.
- B. Do not sow when the ambient temperature is expected to drop below 40 degrees F or rise above 90 degrees F during the time in which the seed will establish itself.
- C. Typical Planting Season: April 1st through May 15th or September 1st through October 15th.

## 1.09 COORDINATION

- A. Coordinate with grading and placement of topsoil.

## PART 2 - PRODUCTS

## 2.01 MATERIALS

- A. Seed: Dry, fresh, re-cleaned seed of the latest crops and of the following proportions:

| <b>Seed Species (% by weight)</b> | <b>lbs/1,000 ft<sup>2</sup></b> | <b>lbs/acre</b> |
|-----------------------------------|---------------------------------|-----------------|
| 65% Creeping red fescue           | 2.0-2.6                         | 85-114          |
| 20% Perennial ryegrass            | 0.6-0.8                         | 26-35           |
| 15% Fine fescue                   | 0.4-0.6                         | 19-26           |

- B. Topsoil: Fertile, agricultural soil, typical for locality, capable of sustaining vigorous plant growth, taken from drained site; friable loam; free of subsoil, clay or impurities, plants, weeds, roots, grass, stone and foreign matter; acidity range (pH) of 5.8 to 6.5; containing a minimum of 2.75 percent and a maximum of 25 percent organic matter. Topsoil may be reused from on-site if it meets these requirements

## PART 3 - EXECUTION

## 3.01 EXAMINATION

- A. Verify existing substrate and site conditions under provisions of 013100 - PROJECT MANAGEMENT AND COORDINATION.
- B. Verify that prepared soil base is ready to receive the work of this section.
- C. Beginning of installation means installer accepts existing conditions.

## 3.02 PREPARATION

- A. Seed Bed: Scarify soil to a depth of 6 inches in compacted areas. Smooth out unsightly variations, bumps, ridges, and depressions which will hold water. Remove stones, litter, or other objectionable material.
- B. Eliminate uneven areas and low spots. Remove and dispose of debris, roots, branches and stones in excess of 1/2 inch in size. Remove and dispose of subsoil contaminated with petroleum products.
- C. Scarify subsoil to depth of 6 inches where topsoil is scheduled to be placed. Scarify in areas where equipment used for hauling and spreading topsoil has compacted subsoil.

## 3.03 APPLICATION

- A. Do not seed areas in excess of that which can be mulched on same day.
- B. Roll seeded area with roller not exceeding 100 lbs per foot of width.
- C. Immediately following seeding and compacting, apply mulch at a rate of 92 lbs per 1,000 square feet. Maintain clear of shrubs and trees.
- D. Apply water with a fine spray immediately after each area has been mulched. Saturate to 4 inches of soil. Discontinue watering if washing begins to occur.

- E. Identify seeded areas with stakes and string around area periphery. Set string height to 24 inches. Space stakes at 8 feet on center.
- F. Cover seeded slopes where grade is 30 percent or greater with erosion fabric. Roll fabric onto slopes without stretching or pulling.
- G. Lay fabric smoothly on surface, bury top end of each section in 6 inch deep excavated topsoil trench. Provide 12 inch overlap of adjacent rolls. Backfill trench and rake smooth, level with adjacent soil.
- H. Secure outside edges and overlaps at 36 inch intervals with stakes.
- I. Lightly dress slopes with topsoil to ensure close contact between fabric and soil.
- J. At sides of ditches, lay fabric laps in direction of water flow. Lap ends and edges minimum 12 inches.

#### 3.04 MAINTENANCE

- A. Maintain grass until job is accepted by the Owner or until the grass exhibits a vigorous growing condition, as determined by at least 2 cuttings, whichever occurs last.
- B. Mow grass at regular intervals to maintain at a maximum height of 2-1/2 inches. Do not cut more than 1/3 of grass blade at any one mowing.
- C. Neatly trim edges and hand clip where necessary.
- D. Immediately remove clippings after mowing and trimming.
- E. Water to prevent grass and soil from drying out.
- F. Immediately reseed areas which show bare spots.

#### 3.05 PROTECTION

- A. Protect seeded areas with warning signs and temporary fencing during maintenance period.

**END OF SECTION 329219**

## PART 1 GENERAL

## 1.01 SECTION INCLUDES

- A. New trees, plants, and ground cover.
- B. Mulch and Fertilizer.
- C. Maintenance.

## 1.02 PRICE AND PAYMENT PROCEDURES

- A. Allowances:
  - 1. See Section 012100 - Allowances, for cash allowances affecting this section.
  - 2. Include the cash allowance listed in the proposal for the purchase of trees, plants, and groundcover.

## 1.03 DEFINITIONS

- A. Weeds: Include Dandelion, Jimsonweed, Quackgrass, Horsetail, Morning Glory, Rush Grass, Mustard, Lambsquarter, Chickweed, Cress, Crabgrass, Canadian Thistle, Nutgrass, Poison Oak, Blackberry, Tansy Ragwort, Bermuda Grass, Johnson Grass, Poison Ivy, Nut Sedge, Nimble Will, Bindweed, Bent Grass, Wild Garlic, Perennial Sorrel, and Brome Grass.
- B. Plants: Living trees, plants, and ground cover specified in this Section, and described in ANSI Z60.1.

## 1.04 REFERENCE STANDARDS

- A. ANSI/AHIA Z60.1 - American National Standard for Nursery Stock; 2014.
- B. ANSI A300 Part 1 - American National Standard for Tree Care Operations -- Tree, Shrub and Other Woody Plant Maintenance -- Standard Practices; 2017.

## 1.05 SUBMITTALS

- A. See Section 013000 - Administrative Requirements, for submittal procedures.
- B. Submit list of plant life sources.

## 1.06 QUALITY ASSURANCE

- A. Installer Qualifications: Company specializing in installing and planting the plants with two years experience.
- B. Non-native, Invasive Plant Species: Do not introduce, grow, or cultivate plant species that are non-native to the ecosystem of the project site, and whose introduction causes or is likely to cause economic or environmental harm or harm to human health.
  - 1. Comply with laws regulating non-native and invasive plant species in the State in which the Project is located.

## 1.07 DELIVERY, STORAGE, AND HANDLING

- A. Deliver fertilizer in waterproof bags showing weight, chemical analysis, and name of manufacturer.

- B. Protect and maintain plant life until planted.
- C. Deliver plant life materials immediately prior to placement. Keep plants moist.

#### 1.08 FIELD CONDITIONS

- A. Do not install plant life when ambient temperatures may drop below 35 degrees F (2 degrees C) or rise above 90 degrees F (32 degrees C).
- B. Do not install plant life when wind velocity exceeds 30 mph (48 k/hr).

#### 1.09 WARRANTY

- A. See Section 017800 - Closeout Submittals, for additional warranty requirements.
- B. Provide one year warranty.
- C. Warranty: Include coverage for one continuous growing season; replace dead or unhealthy plants.
- D. Replacements: Plants of same size and species as specified, planted in the next growing season, with a new warranty commencing on date of replacement.

### PART 2 PRODUCTS

#### 2.01 PLANTS

- A. Plants: Species and size identified in plant schedule, grown in climatic conditions similar to those in locality of the work.

#### 2.02 SOIL MATERIALS

- A. Topsoil: Fertile, agricultural soil, typical for locality, capable of sustaining vigorous plant growth, taken from drained site; free of subsoil, clay or impurities, plants, weeds and roots; minimum pH value of 5.4 and maximum 7.0.

#### 2.03 SOIL AMENDMENT MATERIALS

- A. Fertilizer: Containing fifty percent of the elements derived from organic sources; of proportion necessary to eliminate any deficiencies of topsoil, as indicated in analysis.
  - 1. Nitrogen: 10 percent.
  - 2. Phosphoric Acid: 6 percent.
  - 3. Soluble Potash: 4 percent.
- B. Peat Moss: Shredded, loose, sphagnum moss; free of lumps, roots, inorganic material or acidic materials; minimum of 85 percent organic material measured by oven dry weight, pH range of 4 to 5; moisture content of 30 percent.
- C. Bone Meal: Commercial, steamed finely ground material containing not less than 1.0 percent nitrogen and 11 percent phosphoric acid.

#### 2.04 MULCH MATERIALS

- A. Mulching Material: Oat or wheat straw, free from weeds, foreign matter detrimental to plant life, and dry. Hay or chopped cornstalks are not acceptable.

## 2.05 ACCESSORIES

- A. Wrapping Materials: Burlap.
- B. Stakes: Softwood lumber, pointed end.
- C. Cable, Wire, Eye Bolts : Non-corrosive, of sufficient strength to withstand wind pressure and resulting movement of plant life.

## PART 3 EXECUTION

### 3.01 EXAMINATION

- A. Verify that prepared subsoil and planters are ready to receive work.
- B. Saturate soil with water to test drainage.
- C. Verify that required underground utilities are available, in proper location, and ready for use.

### 3.02 PREPARATION OF SUBSOIL

- A. Prepare subsoil to eliminate uneven areas. Maintain profiles and contours. Make changes in grade gradual. Blend slopes into level areas.
- B. Remove foreign materials, weeds and undesirable plants and their roots. Remove contaminated subsoil.
- C. Scarify subsoil to a depth of 3 inches (75 mm) where plants are to be placed. Repeat cultivation in areas where equipment, used for hauling and spreading topsoil, has compacted subsoil.
- D. Dig pits and beds 6 inches (150 mm) larger than plant root system.

### 3.03 PLACING TOPSOIL

- A. Spread topsoil to a minimum depth of 4 inches (100 mm) over area to be planted. Rake smooth.
- B. Place topsoil during dry weather and on dry unfrozen subgrade.
- C. Remove vegetable matter and foreign non-organic material from topsoil while spreading.
- D. Grade topsoil to eliminate rough, low or soft areas, and to ensure positive drainage.
- E. Install topsoil into pits and beds intended for plant root balls, to a minimum thickness of 6 inches (150 mm).

### 3.04 FERTILIZING

- A. Apply fertilizer in accordance with manufacturer's instructions.
- B. Apply after initial raking of topsoil.
- C. Mix thoroughly into upper 2 inches (50 mm) of topsoil.
- D. Lightly water to aid the dissipation of fertilizer.

### 3.05 PLANTING

- A. Place plants for best appearance.
- B. Provide planting plan for review and approval by Owner and Engineer prior to placement.
- C. Set plants vertical.
- D. Remove non-biodegradable root containers.
- E. Set plants in pits or beds, partly filled with prepared plant mix, at a minimum depth of 6 inches (150 mm) under each plant. Remove burlap, ropes, and wires, from the root ball.
- F. Place bare root plant materials so roots lie in a natural position. Backfill soil mixture in 6 inch (150 mm) layers. Maintain plant life in vertical position.
- G. Saturate soil with water when the pit or bed is half full of topsoil and again when full.

### 3.06 INSTALLATION OF ACCESSORIES

- A. Wrap deciduous shade and flowering tree trunks and place tree protectors.

### 3.07 PLANT SUPPORT

- A. Brace plants vertically with plant protector wrapped guy wires and stakes to the following:
  - 1. Tree Caliper: 1 inch (25 mm); Tree Support Method: 1 stake with one tie
  - 2. Tree Caliper: 1 to 2 inches (25 to 50 mm); Tree Support Method: 2 stakes with two ties
  - 3. Tree Caliper: 2 to 4 inches (50 to 100 mm); Tree Support Method: 3 guy wires with eye bolts and turn buckles
  - 4. Tree Caliper: Over 4 inches (100 mm); Tree Support Method: 4 guy wires with eye bolts and turn buckles

### 3.08 FIELD QUALITY CONTROL

- A. Plants will be rejected if a ball of earth surrounding roots has been disturbed or damaged prior to or during planting.

### 3.09 MAINTENANCE

- A. Irrigate sufficiently to saturate root system and prevent soil from drying out.
- B. Neatly trim plants where necessary.
- C. Immediately remove clippings after trimming.
- D. Control growth of weeds. Apply herbicides in accordance with manufacturer's instructions.
- E. Remedy damage from use of herbicides and pesticides.

### END OF SECTION 329300

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. Corrugated polyethylene pipe.
- B. Fittings and accessories.

## 1.02 RELATED SECTIONS

- A. Section 312333 - Trenching.

## 1.03 REFERENCES

- A. ASTM D2321 - Underground Installation of Thermoplastic Pipe for Sewers and Other Gravity Flow Applications.
- B. ASTM F405 - Corrugated Polyethylene (PE) Tubing and Fittings.
- C. ASTM F667 - Large Diameter Corrugated Polyethylene Tubing and Fittings.

## 1.04 SUBMITTALS

- A. Submit under provisions of Section 013300.
- B. Product Data: Provide data on pipe, fittings and accessories.
- C. Manufacturer's Instructions: Indicate special procedures and conditions required to install products specified.

## 1.05 PROJECT RECORD DOCUMENTS

- A. Accurately record actual locations of pipe runs, connections and invert elevations.
- B. Identify and describe unexpected variations to subsoil conditions or discovery of uncharted utilities.

## 1.06 REGULATORY REQUIREMENTS

- A. Conform to applicable codes for materials and installation of the work of this section.
- B. Install pipe in accordance with ASTM D2321.

## 1.07 FIELD MEASUREMENTS

- A. Verify that field measurements are as indicated on the plans and as required by the manufacturer.

## 1.08 COORDINATION

- A. Coordinate pipe installation with the trenching.

## PART 2 - PRODUCTS

## 2.01 COMPONENTS

- A. Corrugated Polyethylene Pipe: ASTM F405 or ASTM F667 corrugated polyethylene; N-12 manufactured by ADVANCED DRAINAGE SYSTEMS, INC. or specifically approved equal.

## PART 3 - EXECUTION

## 3.01 EXAMINATION

- A. Verify existing conditions and substrate.
- B. Verify that trench cut is ready to receive work and excavations, dimensions and elevations are as indicated on the plans.

## 3.02 PREPARATION

- A. Remove large stones or other hard matter which could damage piping or impede consistent backfilling or compaction.
- B. Excavate under provisions of Section 312316.

## 3.03 INSTALLATION

- A. Install pipe and accessories in accordance with manufacturer's instructions and approved shop drawings.
- B. Lift or roll pipe into position. Do not drop or drag pipe over prepared bedding.
- C. Shore pipe to required position; retain in place until after compaction of adjacent fills. Ensure pipe remains in correct position and to required slope.
- D. Lay pipe to slope gradients noted on the plans, with maximum variation from true slope of 1/8 inch in 10 feet.
- E. Backfill under provisions of Section 312323.13.

## 3.04 TOLERANCES

- A. Maximum Variation from Intended Invert Elevation: 1/2 inch.
- B. Maximum Offset of Pipe from True Alignment: 1 inch.

## 3.05 FIELD QUALITY CONTROL

- A. Field inspection and testing will be performed under provisions of Section 014500.
- B. Request inspection prior to and immediately after placing aggregate cover over pipe.

## 3.06 PROTECTION

- A. Protect pipe from damage or displacement until backfilling operation is in progress.

**END OF SECTION 334116**

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. PVC pipe for drainage.
- B. Fittings and accessories.

## 1.02 RELATED SECTIONS

- A. Section 312333 - Trenching
- B. Section 312323.13 - Backfilling

## 1.03 REFERENCES

- A. ASTM D2321 - Standard Practice for Underground Installation of Thermoplastic Pipe for Sewers and other Gravity Flow Applications.
- B. ASTM D2729 - Polyvinyl Chloride (PVC) Sewer Pipe and Fittings.
- C. ASTM D2855 - Recommended Practice for Making Solvent-Cemented Joints with Polyvinyl Chloride (PVC) Pipe and Fittings.
- D. ASTM D3034 - Standard Specification for Type PDM Polyvinyl Chloride (PVC) Sewer Pipe and Fittings.
- E. ASTM D3212 - Standard Specifications for Joints for Drain and Sewer Plastic Pipes Using Flexible Elastomeric Seals.

## 1.04 SUBMITTALS

- A. Submit under provisions of Section 013300.
- B. Product Data: Provide data on pipe, fittings, accessories and marking tape.

## 1.05 PROJECT RECORD DOCUMENTS

- A. Submit under provisions of Section 017839.
- B. Accurately record actual locations of pipe runs, connections and invert elevations.
- C. Identify and describe unexpected variations to subsoil conditions or discovery of uncharted utilities.

## 1.06 REGULATORY REQUIREMENTS

- A. Conform to applicable codes for materials and installation of the work of this section.

## 1.07 FIELD MEASUREMENTS

- A. Verify that field measurements are as indicated on the plans and as required by the manufacturer.

## 1.08 COORDINATION

- A. Coordinate pipe installation with trenching and installation of drainage structures.

## PART 2 - PRODUCTS

## 2.01 MANUFACTURERS

- A. PVC Pipe: CERTAINTEED, JM, CARLON.
- B. Joint Lubricant: Manufacturer's standard.

## 2.02 MATERIALS

- A. PVC - ANSI/ASTM D3034, Type PSM, Polyvinyl Chloride (PVC) material; inside nominal diameter as indicated, integral bell and spigot end joints, class DR 18 or SDR 35 as indicated on plans. Joints meet or exceed ASTM D3212.

## PART 3 - EXECUTION

## 3.01 EXAMINATION

- A. Verify existing conditions and substrate.
- B. Verify that trench cut is ready to receive work and excavations, dimensions and elevations are as indicated on the plans.
- C. Inspect all pipe and fittings before installation. Remove defective pipe from site.

## 3.02 PREPARATION

- A. Remove large stones or other hard matter which could damage piping or impede consistent backfilling or compaction.
- B. Excavate under provisions of Section 312316. Excavate sufficient clearance at each bell or coupling to allow uniform bearing along the pipe barrel.

## 3.03 INSTALLATION

- A. Install pipe and accessories in accordance with ASTM D2321.
- B. Lift or roll pipe into position. Do not drop or drag pipe over prepared bedding.
- C. Shore pipe to required position; retain in place until after compaction of adjacent fills. Ensure pipe remains in correct position and to required slope.
- D. Lay pipe to slope gradients noted on the plans, with maximum variation from true slope of 1/8 inch in 10 feet.
- E. Repair surface damage to any pipe protective coating in accordance with manufacturer's recommendations.
- F. Backfill under provisions of Section 312323.13.
- G. After partially backfilling, install marking tape 18 to 24 inches above crown of pipe.
- H. Construct cleanouts at locations shown and as detailed on the drawings. Use PVC wyes, bends and pipe as appropriate. Extend cleanout pipe to grade and terminate with plug.

3.04 TOLERANCES

- A. Maximum Variation from Intended Invert Elevation: 1/2 inch.
- B. Maximum Offset of Pipe from True Alignment: 1 inch.

3.05 FIELD QUALITY CONTROL

- A. Perform field inspection under provisions of Section 014500.
- B. Request inspection prior to and immediately after placing aggregate cover over pipe.

3.06 PROTECTION

- A. Protect finished work under provisions of Section 015000.
- B. Protect pipe from damage or displacement until backfilling operation is in progress.

**END OF SECTION 334123**

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. Precast concrete catch basins and field inlets.
- B. Castings.

## 1.02 RELATED SECTIONS

- A. Section 312316 - Excavation.
- B. Section 312323.13 - Backfilling.
- C. Section 334116 -Corrugated Polyethylene Pipe.

## 1.03 REFERENCES

- A. ASTM A48 - Gray Iron Castings.
- B. ASTM A615 - Deformed and Plain Billet Steel Bars for Concrete Reinforcement.
- C. ASTM C55 - Concrete Building Brick.
- D. ASTM C150 - Portland Cement.

## 1.04 SUBMITTALS

- A. Submit under provisions of Section 013300.
- B. Shop Drawings: Indicate dimensions and details of catch basins and castings.

## 1.05 DELIVERY, STORAGE AND HANDLING

- A. Deliver, store and handle products to the site under provisions of Section 016500.
- B. Store products on firm and level ground.
- C. Handle products in such a manner which will not induce unnecessary stresses, cause cracks to occur or damage the product in any way.
- D. Any cracked or otherwise defective materials will be rejected.

## 1.06 ENVIRONMENTAL REQUIREMENTS

- A. Do not mix or place mortar if ambient temperature is below 40 degrees F.

## 1.07 COORDINATION

- A. Coordinate work under provisions of Section 013100.
- B. Coordinate with excavation, backfilling, installation of piping and all other work.

## PART 2 - PRODUCTS

## 2.01 MANUFACTURERS

- A. OLD CASTLE PRECAST, INC.
- B. PRECAST CONCRETE SALES, CO.
- C. MID HUDSON CONCRETE PRODUCTS.
- D. WOODARD'S CONCRETE PRODUCTS.
- E. Substitutions shall be permitted only after receiving written approval from the Engineer.

## 2.02 MATERIALS

- A. Catch Basin and Field Inlet Sections: Reinforced precast concrete, lipped male/female joint, of the following materials:
  - 1. Concrete: ASTM C150 normal Portland cement, Type 1; minimum 4,000 psi strength at 28 days.
  - 2. Reinforcement: ASTM A615 reinforcing bars.
  - 3. Castings: ASTM A48, Class 30B, cast iron construction, machined flat bearing surface, non-rocking; removable grate, capable of supporting the AASHTO HS-20-44 highway loading; free from blowholes, shrinkage, distortion, cracks or other defects; smooth and of uniform quality; size and pattern as indicated on the plans, manufactured by CAMPBELL FOUNDRY COMPANY or specifically approved equal.

## 2.03 ACCESSORIES

- A. Brick: ASTM C55, Grade N, Type I - Moisture Controlled; normal weight; nominal modular size as required.
- B. Mortar: A 1:1:5 ratio of Portland cement, masonry cement and sand, respectively. Add water as required to create a workable consistency.
- C. Catch Basin Steps: Cast iron rungs; pattern number 2589 as manufactured by CAMPBELL FOUNDRY COMPANY; pattern number R-1980-C as manufactured by NEENAH FOUNDRY COMPANY, or specifically approved equal.
- D. Concrete for Formed Invert: ASTM C150 Portland cement type I, cast in place; 3,000 psi minimum strength at 28 days; dimensions as indicated on the plans.

## 2.04 FABRICATION

- A. Fabricate and reinforce catch basin to the dimensions as indicated on the plans.
- B. Pipe Entry: Provide openings as required.
- C. Steps: Set or drilled and grouted in the catch basin wall at 18 inches on center vertically.

## PART 3 - EXECUTION

## 3.01 EXAMINATION

- A. Verify existing grades are as indicated on the plans.

- B. Verify items provided by other sections of work are properly sized and located.
- C. Verify that rough openings for piping are as required.

### 3.02 INSTALLATION

- A. Form bottom of excavation clean and smooth to correct elevation. Compact bottom of the excavation to a minimum of 95 percent of maximum dry density.
- B. Place catch basin, secure and level, to the proper elevation. Utilize a placement method which will not damage or crack the catch basin.
- C. Place catch basin sections plumb and level, trim to correct elevations.
- D. Cut and fit for pipe. Seal openings in wall around pipe with brick and mortar. Establish elevations and pipe inverts for inlets and outlets as indicated on the plans. Trowel surfaces smooth.
- E. When indicated on the plans, place concrete in base of catch basin as required to form invert to the dimensions indicated on the plans. Trowel smooth.
- F. Set slab top on catch basin in a 1 inch mortar bed.
- G. Mount casting in a 1 inch mortar bed over access opening. Install firm, level and to the required elevation.
- H. If required to achieve proper elevation of casting, adjust with brick and mortar. A maximum height of 5 inches is permitted between the catch basin and the base of the casting. Maintain a maximum of 1 inch thickness of mortar between all bricks.

### 3.03 TOLERANCES

- A. Maximum Variation from Proposed Rim Elevation: 1/4 inch.
- B. Maximum Variation from Proposed Location: 1/2 inch.

### 3.04 FIELD QUALITY CONTROL

- A. Field inspection and testing will be performed under provisions of Section 014500.
- B. Request inspection prior to backfilling around structure and prior to surface restoration.

### 3.05 PROTECTION

- A. Protect finished work under provisions of Section 015000.
- B. Protect catch basin from damage or displacement until project is accepted by the Owner.

### END OF SECTION 334413.13

## PART 1 - GENERAL

## 1.01 SECTION INCLUDES

- A. Precast concrete manhole sections with tongue-and-groove joints, covers, anchorage and accessories.

## 1.02 RELATED SECTIONS

- A. Section 312316 - Excavation.
- B. Section 312323.13 - Backfill.

## 1.03 REFERENCES

- A. ASTM A48 - Gray Iron Castings.
- B. ASTM A615 - Deformed and Plain Billet Steel Bars for Concrete Reinforcement.
- C. ASTM C55 - Concrete Building Brick.
- D. ASTM C150 - Portland Cement.
- E. ASTM C443 - Joints for Circular Concrete Sewer and Culvert Pipe Using Rubber Gaskets.
- F. ASTM C478 - Precast Reinforced Concrete Manhole Sections.

## 1.04 SUBMITTALS

- A. Submit under provisions of Section 013300.
- B. Shop Drawings: Indicate dimensions and details of manhole sections and castings.

## 1.05 DELIVERY, STORAGE AND HANDLING

- A. Deliver, store and handle products to the site under provisions of Section 016500.
- B. Store products on firm, level ground.
- C. Handle products in a manner which will not induce unnecessary stresses, cause cracks to occur or damage the product in any way.
- D. Any cracked or otherwise defective materials will be rejected.

## 1.06 ENVIRONMENTAL REQUIREMENTS

- A. Do not mix or place mortar if ambient temperature is below 40 degrees F.

## 1.07 COORDINATION

- A. Coordinate the work under provisions of Section 013100.
- B. Coordinate with installation of piping and all other work.

## PART 2 - PRODUCTS

## 2.01 MANUFACTURERS

- A. OLDCASTLE PRECAST, INC.
- B. COASTAL PIPELINE PRODUCTS, INC.
- C. Substitutions shall be permitted only after receiving written approval from the Engineer.

## 2.02 MATERIALS

- A. Manhole Sections: ASTM C478 reinforced precast concrete lipped male/female joint, ASTM C443 gaskets; of the following materials:
  - 1. Concrete: ASTM C150, normal Portland cement Type I, minimum 4,000 psi strength at 28 days.
  - 2. Reinforcement: ASTM A615 reinforcing bars.
- B. Castings: ASTM A48, Class 30B, cast iron construction, machined flat bearing surface, non-rocking, removable lid, open checkerboard grille lid design; able to support the AASHTO HS-20-44 highway loading; free from blowholes, shrinkage, distortion, cracks or other defects; smooth and of uniform quality; size and dimensions as indicated on the plans; manufactured by CAMPBELL FOUNDRY COMPANY or specifically approved equal.

## 2.03 ACCESSORIES

- A. Brick: ASTM C55, Grade N, Type I - Moisture Controlled; normal weight; nominal modular size as required.
- B. Mortar: A 1:1:5 ratio of Portland cement, masonry cement and sand, respectively. Add water as required to create a workable consistency.
- C. Manhole Steps: Cast iron rungs; pattern number 2589-2252 as manufactured by CAMPBELL FOUNDRY COMPANY, or specifically approved equal.
- D. Concrete for Formed Invert: ASTM C150 Portland cement Type I, cast in place; 3,000 psi minimum strength at 28 days; wood float finish; dimensions as indicated on the plans.

## 2.04 FABRICATION

- A. Shaft Construction: Concentric with cone top section; lipped male/female joints with rubber gasket; dimensions and reinforcement as indicated on the plans.
- B. Pipe Entry: Provide openings as required.
- C. Steps: Set or drilled and grouted into manhole wall at 18 inches on center vertically.

## PART 3 - EXECUTION

## 3.01 EXAMINATION

- A. Verify existing site conditions.
- B. Verify existing grades are as indicated on the plans.

- C. Verify items provided by other sections of Work are properly sized and located.
- D. Verify that rough openings for piping are as required.

### 3.02 INSTALLATION

- A. Form bottom of excavation clean and smooth to the correct elevation.
- B. Place base pad, secure and level, to the proper elevation. Utilize a placement method which will not damage or crack the manhole.
- C. Place manhole sections plumb and level, trim to correct elevations, anchor to base pad.
- D. Cut and fit for pipe. Seal openings in shaft wall around pipe with brick and mortar. Establish elevations and pipe inverts for inlets and outlets as indicated on the plans. Trowel surfaces smooth.
- E. Place concrete in base of manhole as required to form invert to the dimensions indicated on the plans. Trowel smooth.
- F. Mount castings in a 1 inch mortar bed over access opening. Install firm, level and to the required elevation.
- G. If required to achieve proper elevation of casting, adjust with brick and mortar.

### 3.03 TOLERANCES

- A. Maximum Variation from Proposed Rim Elevation: 1/4 inch.
- B. Maximum Variation from Proposed Location: 1/2 inch.

### 3.04 FIELD QUALITY CONTROL

- A. Perform field inspection and testing under provisions of Section 014500.
- B. Request inspection prior to backfilling around structure and prior to surface restoration.

### 3.05 PROTECTION

- A. Protect finished work under provisions of Section 015000.
- B. Protect manhole from damage or displacement until project is accepted by the Owner.

Re: Report on Subsurface Soil and Foundation Investigation  
Proposed Building-New Firehouse  
872 Blooming Grove Turnpike  
New Windsor, NY (CSA Job #20-226)

Dear Ms. Cerniglia:

In accordance with our proposal dated 24 November 2020 and your subsequent authorization, we have completed a Subsurface Soil and Foundation Investigation for the referenced site. The purpose of this study was to determine the nature and engineering properties of the subsurface soil and groundwater conditions for the new construction, to recommend a practical foundation scheme, and to determine the allowable bearing capacity of the site soils.

We understand that the planned construction will consist of a new 2-story firehouse. The proposed construction will also include a new storage building, new underground utilities, and new paved parking areas and driveways. To guide us in our study, you have provided us with a site plan that indicates the location of the proposed construction.

Our scope of work for this project included the following:

1. Reviewed the proposed layout, the existing site conditions, the expected soil conditions, and planned this study.
2. Retained General Borings Inc. to advance six (6) test borings at the subject site.
3. Laid out the boring locations in the field, provided full time inspection of the explorations, obtained soil samples, and prepared detailed logs and a Boring Location Plan.
4. Performed laboratory soil identification tests on selected soil samples.

5. Analyzed the field and laboratory test data and prepared this report containing the results of this study.

## **1.0 SITE DESCRIPTION**

The project site is located at 872 Blooming Grove Turnpike in New Windsor, New York. The site is currently occupied by an active fire station (Vails Gate Fire Co.) with a 2-story masonry building. There are also a few small structures in the rear of the property. The remainder of the site consists of an asphalt paved parking lot. The site grades are generally flat.

## **2.0 PROPOSED CONSTRUCTION**

We understand that the planned construction will consist of replacing the existing firehouse with a new 2-story firehouse. The new firehouse has a larger footprint than the existing building and will be located in the same general area. In addition, a new storage building is proposed in the eastern portion of the site. The storage building will be about 61 feet by 20.5 feet and located to the south of the existing training building. The finished floor elevations of the proposed buildings were unknown at the time of this report, but we understand that they will both be slab-on-grade structures.

The following evaluation is based on the limited information that has been provided to our office as of the date of this report. Once the project plans have been further developed, a copy of the plans should be forwarded to our office so that we can review them along with the recommendations in this report. At that time, any changes or additional recommendations can be provided, if required.

## **3.0 SUBSURFACE CONDITIONS**

To determine the subsurface soil and groundwater conditions at the site, six (6) test borings were advanced by General Borings Inc. at the locations shown on the enclosed Boring Location Plan. The borings were performed using hollow stem augers and split spoon sampling. The borings were completed in January 2021 under the full-time inspection of Carlin-Simpson & Associates. Detailed boring logs have been prepared and are included in this report. Our field engineer visually identified all of the soil samples obtained during the boring operations and select samples were tested in our laboratory. The results of these tests are also included in this report.

### **3.1 Soil and Rock**

The soil descriptions shown on the boring logs are based on the Burmister Classification System. In this system, the soil is divided into three components: Sand (S), Silt (\$) and Gravel (G). The major component is indicated in all capital letters, the lesser in lower case letters. The following modifiers indicate the quantity of each lesser component:

| <b><u>Modifier</u></b> | <b><u>Quantity</u></b> |
|------------------------|------------------------|
| trace (t)              | 0 -10%                 |
| little (l)             | 10% - 20%              |
| some (s)               | 20% - 35%              |
| and (a)                | 35% - 50%              |

The subsurface soil and rock conditions encountered in the borings can be summarized as follows:

|                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><u>Stratum 1A</u></b><br>Asphalt                    | The surface layer borings B-1 through B-3 consists of asphalt pavement that ranges from approximately 3 to 7 inches in thickness.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b><u>Stratum 1B</u></b><br>Topsoil                    | The surface layer in borings B-4 through B-6 consists of topsoil that ranges from approximately 2 to 8 inches in thickness.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b><u>Stratum 2</u></b><br>Existing Fill               | Beneath the surface layers in each of the borings is existing fill that generally consists of loose to medium dense brown, gray, black coarse to fine SAND, little (to and) Silt, little (to and) coarse to fine Gravel. Debris (i.e. ash, bricks, glass, and asphalt) was noted within this stratum. Cobbles and boulders were also encountered within this stratum at select locations. In boring B-1, a layer within the fill stratum consists of black SILT some, coarse to fine Sand, little coarse to fine Gravel. The existing fill in the borings extends to depths ranging from 5'0" to 8'6" below existing ground surface.                                      |
| <b><u>Stratum 3</u></b><br>Silty Sand with Gravel      | Beneath the existing fill in borings B-1, B-2, and B-5 is medium dense to dense brown coarse to fine SAND, little (to some) Silt, little (to some) coarse to fine Gravel. In the borings the Silty Sand with Gravel extends to depths ranging from 6'0" to 14'0" below the existing ground surface.                                                                                                                                                                                                                                                                                                                                                                       |
| <b><u>Stratum 4</u></b><br>Completely Weathered Gneiss | Underlying the existing fill in borings B-3, B-4, and B-6 and below the silty sand with gravel in boring B-5 is completely weathered shale. This layer is soil like in state, however, there could be denser pockets that cannot be conventionally excavated. The completely weathered Shale was encountered at depths ranging from about 5'11" to 8'0" below the existing ground surface at the referenced boring and transitions to harder Shale bedrock with depth.                                                                                                                                                                                                    |
| <b><u>Stratum 5</u></b><br>Shale Bedrock               | Auger refusal on probable Shale bedrock was encountered in borings B-1 and B-4 through B-6 at depths ranging from 10'0" to 14'6" below the existing ground surface. The upper portion of the Shale bedrock was cored at borings B-2 and B-3 starting at depths of 14'0" and 13'0" below the existing ground surface, respectively. The rock core recoveries were 100% and 94% and the rock quality designation (RQD) of the recovered cores were 45% and 8%, respectively. Based on the RQD and visual inspection, the upper portion of the bedrock ranges from very poor quality in a crushed condition to poor quality in a shattered, very blocky and seamy condition. |

### **3.2 Bedrock**

Based on our experience and the boring observations, the upper portion of the in-situ bedrock at the site will range from completely weathered rock in a soil-like state, to shattered, very block and seamy in a poor condition. The rock quality generally transitions to harder bedrock with increasing depth. The completely weathered rock was encountered at depths ranging from 5'11" to 8'0" below the ground surface. Auger refusal on harder bedrock was encountered at depths ranging from 10'0" to 14'6" below the existing ground surface. The bedrock observations are summarized in Table 1.

Based on the boring observations and the anticipated construction, completely weathered rock and harder bedrock are not expected to be encountered in the foundation excavations for either of the buildings.

### **3.3 Groundwater**

During this investigation, groundwater was encountered in 4 of the 6 borings at depths ranging from 5'6" to 6'0" below the existing ground surface. The groundwater observations are summarized in Table 1. Based on the boring observations and the planned construction, the building excavation will extend 1 to 2 feet below the groundwater table to remove the existing fill. Where groundwater is encountered during the construction, proper groundwater control measures (i.e. dewatering with sumps and pumps) will be required.

Variations in the location of the long-term water table may occur as a result of changes in precipitation, evaporation, surface water runoff, and other factors not immediately apparent at the time of this exploration.

### **3.4 Summary of Site Boring Observations**

A summary of the boring observations is provided in Table 1 below.

**Table 1 – Summary of Boring Observations**

| <b>Boring No.</b> | <b>Depth to Groundwater</b> | <b>Depth to Bottom of Existing Fill</b> | <b>Depth to Bedrock</b>   |
|-------------------|-----------------------------|-----------------------------------------|---------------------------|
| B-1               | 6'0"                        | 8'6"                                    | AR @ 12'0"                |
| B-2               | 5'6"                        | 5'0"                                    | C @ 14'0"                 |
| B-3               | No Reading                  | 8'0"                                    | CWR @ 8'0"<br>C @ 13'0"   |
| B-4               | NE to 10'0"                 | 6'11"                                   | CWR @ 6'11"<br>AR @ 10'0" |
| B-5               | 6'6"                        | 5'0"                                    | CWR @ 6'0"<br>AR @ 14'6"  |
| B-6               | 6'0"                        | 5'11"                                   | CWR @ 5'11"<br>AR @ 13'0" |

NE – Not Encountered

CWR – Completely Weathered Rock

AR – Auger or Bucket Refusal

C – Cored Bedrock

## **4.0 SUMMARY OF DESIGN RECOMMENDATIONS**

Below is a summary of the major design and construction considerations for this project. Additional recommendations are provided in the following sections of this report.

- *Subsurface Conditions (Section 3.0)*
  - Existing fill was encountered at each boring location to depths ranging from 5'0" to 8'5" below the existing ground surface.
  - Groundwater was encountered in 4 of the 6 borings at depths ranging from 5'6" to 6'0" below the existing ground surface.
  - Completely weathered rock and/or harder bedrock was encountered in each of the borings at depth ranging from 5'11" to 14'6" below the existing ground surface.
  - A summary of the subsurface observations is provided in Table 1.
- *Building Area Preparation (Section 5.1)*
  - Existing structures must be demolished and existing surface materials must be stripped from proposed building areas.
  - New backfill shall be compacted to at least 95% of its Maximum Modified Dry Density (ASTM D1557).
  - Existing fill is not suitable for support of the proposed building foundations or floor slabs in its current state.
- *Building Foundation Recommendations (Section 5.2)*
  - *Shallow Spread Foundation – Completely Remove and Replace Existing Fill*
    - Existing fill shall be completely removed from the proposed building areas and replaced with new structural fill.
    - Sumps and pumps will be needed during construction where the excavations extend below the water table.
    - The preparation of wet and sensitive subgrades with geotextile fabric and clean stone may also be necessary.
    - The new foundations may be designed as spread footing type foundations bearing on virgin soil, engineer-approved compacted fill, crushed stone, or weathered rock.
    - Net design bearing pressure is 4,000 psf.
    - Minimum depth for frost protection is 42 inches.
    - The virgin soil, new compacted fill, and weathered bedrock can be used for support of the proposed floor slabs.
    - The floor slabs may be designed as slab on grade.
    - Modulus of subgrade reaction is 200 pci.
    - Seismic Site Class is C or Very Stiff Soil or Soft Rock Profile.
  - *Ground Improvement Alternatives*
    - Rammed Aggregate Piers (RAP)
    - Rapid Impact Compaction (RIC)
- *Additional Site Recommendations (Section 6.0)*
  - Pavement: Densified existing fill, virgin soil, and new compacted fill may be used to support the new pavement.
  - Utilities: New utilities may bear in the densified existing fill, virgin soil, new compacted fill, or weathered rock.

## **5.0 BUILDING EVALUATION**

We understand that the planned construction will consist of replacing the existing firehouse with a new 2-story firehouse. The new firehouse has a larger footprint than the existing

building and will be located in the same general area. In addition, a new storage building is proposed in the eastern portion of the site. The storage building will be about 61 feet by 20.5 feet and located to the south of the existing training building. The finished floor elevations of the proposed buildings were unknown at the time of this report, but we understand that they will both be slab-on-grade structures.

Existing fill was encountered in each of the borings throughout the site to depths ranging from 5'0" to 8'5" below the existing ground surface. The depth of the existing fill is expected to be variable and may be deeper in unexplored areas of the site. The existing fill is not an acceptable bearing material for the new building foundations or floor slabs. The consistency and density of the soil fill are not predictable. Certain areas may contain clean dense soils while other areas may contain loose material, void spaces, and/or debris. The existing soil fill creates the possibility of intolerable differential settlements under loading.

To eliminate damaging differential settlement, the existing fill must be either completely removed from the building footprint and replaced with new compacted fill or the existing fill material must be improved. Ground improvement methods suitable for this project include rammed aggregate piers (RAP) system or rapid impact compaction (RIC). The ground improvement methods are further discussed in Section 5.3 of this report.

Provided that the proposed building areas are prepared as outlined in this report, it is our opinion that the virgin soil, new engineer-approved compacted fill, improved subgrade soils, and completely weathered rock can adequately support the new building foundations and floor slabs. Recommendations for preparation of the building areas are provided in Section 5.1. Foundation recommendations for the new buildings are provided in Section 5.2 and 5.3 below.

### **5.1 Building Area Preparation**

In order to prepare the site for construction, all surface materials such as asphalt, vegetation and topsoil shall be removed from the planned building areas, extending at least ten (10) feet beyond the new construction limits, where practical.

As part of the site development, the existing 2-story firehouse will be demolished. All debris resulting from the demolition of this structure must be completely removed from the new building footprint, extending at least ten (10) feet beyond the new building limit, where practical. This shall include the complete removal of all foundations, floor slabs, utilities, pavement, and miscellaneous debris. Where the removal of existing structures or associated materials extends below the planned building, the resulting excavations shall be backfilled with new compacted fill as described below.

Existing utilities, where they are encountered within the planned building areas, should be either abandoned or rerouted around the new structures. Once the utility has been rerouted or abandoned, the section of pipe and any associated structure within the building areas should be completely removed. The removal of the pipe and structure must also include any loose fill around the pipe or structure. After the pipe, associated structure, and associated loose backfill have been removed, the resulting excavation shall be backfilled with new controlled fill as described below.

### Installation of New Structural Fill

Where new fill is required to achieve final grades shall consist of either engineer-approved on-site soil or imported sand and gravel. Imported sand and gravel shall contain less than 20% by weight passing a No. 200 sieve. The new fill shall be placed in layers not exceeding one (1) foot in thickness and each layer shall be compacted to at least 95% of its Maximum Modified Dry Density (ASTM D1557). Each layer must be compacted, tested, and approved by Carlin-Simpson & Associates or a qualified geotechnical engineer prior to placing subsequent layers. The suitability of the on-site soil and rock for reuse as compacted fill is discussed in Section 6.7 below.

If imported structural fill will be required during construction, the imported structural fill shall meet the following specified gradation:

| <u>US Standard Sieve Size</u> | <u>Percent Finer By Weight</u> |
|-------------------------------|--------------------------------|
| 3-inch                        | 100                            |
| No. 4                         | 30-80                          |
| No. 40                        | 10-50                          |
| No. 200                       | 0-20                           |

## **5.2 Foundation Alternative #1 – Completely Remove and Replace Existing Fill**

Existing fill is present throughout the site to depths ranging from 5'0" to 8'5" below the existing ground surface. As discussed above, the existing fill is not a suitable bearing material for the new building foundations and floor slabs. For this alternative, where existing fill is encountered in the building areas, it shall be completely removed and replaced as described below.

The excavation of the existing fill will likely extend 1 to 2 feet below the groundwater table. Therefore, dewatering with sumps and pumps will be necessary. In addition, handling wet subgrade procedures may be necessary in the event that the subgrade becomes destabilized. Our recommendations for these situations are described below.

### **5.2.1 Removal of Existing Fill & Building Subgrade Preparation**

Where existing fill is present below the planned building subgrade elevation, the excavation shall extend through the existing fill down to the virgin soil or completely weathered rock. At the bottom of the excavation, the removal of the unsuitable material shall extend horizontally beyond the building limits a minimum distance of 1'0" plus a distance equal to the depth of the excavation below the planned foundation bearing elevation. For example, if the removal of the existing fill extends vertically 4'0" below the planned foundation bearing elevation, the excavation must extend horizontally a minimum of 5'0" (1'0" plus 4'0") beyond the new building limits at that location.

The removal of the existing fill from the proposed building areas shall be performed under the full time inspection of Carlin-Simpson & Associates or a qualified geotechnical engineer. The on-site representative shall direct the contractor during this operation to ensure that all of the unsuitable material has been removed from the proposed building areas.

During the removal of the unsuitable material, the contractor should segregate the potentially re-usable existing soil/fill material from the non-reusable fill (i.e. debris and topsoil). The on-site representative from Carlin-Simpson & Associates or the qualified geotechnical engineer shall evaluate the suitability of the excavated materials for use as compacted fill during the excavation and prior to its re-use. Potentially usable fill should be stockpiled and covered with tarps or plastic sheeting for protection from excess moisture. Any fill material that is or becomes wet must be dried prior to its re-use.

#### Densification of Subgrade Soils (Proofrolling)

After the surface materials, demolition debris and existing fill are removed as outlined above and prior to the placement of new structural fill, the exposed subgrade soil must be graded level shall be proofrolled with at least five (5) passes of a large vibratory drum roller (i.e. Dynapac CA 250 or equivalent). The proofrolling is necessary to densify the underlying soils. Proofrolling must be performed prior to the excavation for new foundations and/or the installation of new compacted fill in the building area.

A representative from Carlin-Simpson & Associates or a qualified geotechnical engineer shall observe the proofrolling operation. If any excessive movement is noted during the proofrolling, the soft soil shall be removed and replaced with new compacted fill. The on-site representative shall be responsible for determining what material, if any, is to be removed and will direct the contractor during this operation. The subgrade proofrolling may be eliminated, if in the opinion of the geotechnical engineer, the proofrolling will cause pumping or otherwise disturb the stability of the subgrade.

#### Handling Groundwater During Construction

Groundwater was encountered in 4 of the 6 borings at depths ranging from 5'6" to 6'0" below the existing ground surface. Based on the boring observations, we anticipate that groundwater will be encountered during the removal of existing fill within the firehouse building footprint. Proper groundwater control measures will be required during construction (i.e. sumps and pumps).

We anticipate that the use of sump pits and pumps for dewatering will be effective where the groundwater level is within one (1) or two (2) feet of the planned bottom of the excavation. Where utilized for temporary groundwater control, the sumps shall consist of a perforated pipe at least eight (8) inches in diameter, surrounded by crushed stone and filter fabric. The sump pits shall be installed just outside the excavation area and at least two (2) to three (3) feet below the lowest anticipated subgrade elevation. The sumps and pumps must be set and in operation prior to excavation. The pumps shall be used to temporarily lower the surrounding groundwater level and keep the excavation relatively dry. Electric pumps equipped with an automatic shut off and capable of operating 24 hours a day are recommended. Swales and ditches could be constructed to collect and direct the water seepage to the sump pits.

#### Handling Wet and Sensitive Subgrades

In the event that the exposed subgrade soil within the planned building area is wet or soft, stabilizing the subgrade surface will be required in order to place new structural fill and to

construct the foundations and floor slab. The subgrade should be stabilized with geotextile filter fabric and crushed stone.

To prepare the subgrade surface for the geotextile filter fabric and new fill, all surface water and soft soil should be removed from the limits of the excavation, extending a minimum of three (3) feet beyond the new building limits where practical. Sump pits and pumps should be used to remove the standing water and to control the groundwater during construction. An over-excavation of 12 to 18 inches may be required.

After the subgrade is approved by Carlin-Simpson & Associates or a qualified geotechnical engineer, the geotextile filter fabric should be laid out on the exposed subgrade. The geotextile filter fabric shall consist of Mirafi 500X or equivalent. Adjacent layers of geotextile filter fabric should be overlapped a minimum of 6 inches. As necessary, approximately 12 to 18 inches of 3/4-inch clean crushed stone will be installed on top of the filter fabric layer to provide a firm working surface, provide protection for the geotextile filter fabric, and minimize pumping of the subgrade soil.

The stone should be spread across the geotextile filter fabric and densified with lightweight tracked equipment. Care should be taken to avoid contact of the tracked equipment with the geotextile fabric. Alternatively, the placement of the stone fill could be achieved by placing the material with the bucket of a large excavator and densifying the material with a heavy vibratory plate tamper (i.e. Wacker BPU 3545A or equivalent). If subgrade pumping does occur, the filling operation should be halted until Carlin-Simpson & Associates or a qualified geotechnical engineer can evaluate the cause of the instability and make further recommendations.

#### Bedrock Special Construction Procedures

Based on the boring observations, bedrock is not expected to be encountered above the foundation subgrade elevations for the proposed buildings. In the event that weathered rock is encountered in isolated areas, "Special Construction Procedures" may be required. This will be determined by Carlin-Simpson & Associates or a qualified geotechnical engineer during construction. When continuous wall footings or closely spaced column footings (20 feet or less) bear on dissimilar material (i.e. rock and soil) the potential for differential movement exists. A footing bearing in rock will not move, whereas a footing bearing on soil will settle slightly due to the compressive nature of all soils when subjected to new loads. The area between movement and non-movement will develop a (shear) stress point. Cracks in foundations and walls will be the result from such movement. Therefore, continuous wall footings must bear either entirely on rock or entirely on soil for any individual structure. Alternatively, for larger structures, transition zones can be constructed to create a gradual transition from a soil to a rock bearing subgrade.

In the event that rock and soil both exist at the bearing elevation in a foundation excavation, the footings must either be lowered to bear entirely on rock, or a minimum of 18 inches of rock must be removed from below planned footing bottom. The over-excavated 18 inches must then be filled with a granular material having a maximum particle size of 1/2-inch and containing at least 10% but not more than 30% material by weight passing a No. 200 sieve. The fill shall be placed in six (6) inch layers and each layer shall be compacted to at least 95% of its Maximum Modified Dry Density (ASTM D1557). This procedure will create a "cushion" atop the rock and reduce the potential for differential movement. For soft, rippable rock, this procedure will not be required.

Adjacent column footings greater than 20 feet apart may bear on dissimilar material (i.e. soil and rock). Any individual column footing must bear entirely on the same type bearing material (i.e. all soil or all rock). In addition, new footings constructed on sloping bedrock must be keyed into the bedrock surface.

If during the excavation for continuous foundations, the transition from soil to rock is gradual (i.e. from medium dense soil to dense weathered rock to very dense rock) over a distance of 20 feet or more, the “Special Construction Procedures” may not be required. This would have to be evaluated in the field on a case-by-case basis by the representative from Carlin-Simpson & Associates or a qualified geotechnical engineer at the time of construction.

### **5.2.2 Foundation Design Parameters**

Once the planned building areas have been prepared as described above, the new foundations may be constructed on the virgin site soils, new compacted fill, or completely weathered rock.

The new building foundations may be designed as shallow spread footings using net design bearing pressures as listed in Table 2 below. All of the exterior footings shall bear at the minimum depth listed below for protection from frost. Interior column footings may bear on the virgin soil or new structural fill just below the floor slabs provided the structures are heated during winter. The footings shall have minimum dimensions as listed below.

**Table 2 – Building Foundation Design Parameters**

| <b>Description</b>          | <b>Value</b>                                               |
|-----------------------------|------------------------------------------------------------|
| Foundation Bearing Material | Virgin Soil, New Compacted Fill, Completely Weathered Rock |
| Net Design Bearing Pressure | 4,000 psf                                                  |
| Minimum Frost Depth         | 42 inches                                                  |
| Minimum Column Dimension    | 30 inches                                                  |
| Minimum Wall Dimension      | 18 inches                                                  |

The excavations for the new foundations shall be performed under the full-time inspection of Carlin-Simpson & Associates or a qualified geotechnical engineer. The on-site representative shall confirm that the foundation bearing material is capable of supporting the design bearing pressure.

Prior to the placement of formwork, reinforcement steel, and concrete, the bearing subgrade soil shall be cleaned of all loose soil and where soil is encountered at the subgrade elevation, it shall be compacted with several passes of a small vibratory drum trench compactor (i.e. Wacker Model RT560), a heavy vibratory plate tamper (i.e. Wacker BPU 3545A or equivalent), or “jumping jack” style tamper (i.e. Wacker Model BS 600). This must be performed under the observation of Carlin-Simpson & Associates or a qualified geotechnical engineer. If instability is observed during the compaction of the bearing subgrade, the soft soil shall be removed and replaced with new compacted fill.

### 5.2.3 Floor Slab on Grade

New fill for the floor slabs shall consist of either suitable on-site soil or imported sand and gravel. Imported sand and gravel shall contain less than 20% material by weight passing a No. 200 sieve. The new fill shall be placed in layers not exceeding one (1) foot in loose thickness and each layer shall be compacted to at least 92% of its Maximum Modified Dry Density (ASTM D1557). Fill layers shall be compacted, tested, and approved before placing subsequent layers.

The floor slabs may be designed as a slab on grade bearing on virgin soil or new engineer-approved structural fill. Floor slab design parameters are provided in Table 3 below. A minimum of 6 inches of 3/4-inch crushed stone is recommended beneath the concrete slabs for additional support and drainage.

**Table 3 – Building Floor Slab Design Parameters**

| <b>Description</b>               | <b>Value</b>                                 |
|----------------------------------|----------------------------------------------|
| Slabs Subgrade Material          | Densified Virgin Soil or New Structural Fill |
| Modulus of Subgrade Reaction (k) | 200 pci                                      |
| Crushed Stone Cushion Thickness  | 6 inches                                     |

### 5.3 Foundation Alternative #2 – Ground Improvement

As an alternative to completely removing the existing fill from the building areas with possible construction dewatering and replacing it with new compacted fill, the existing fill stratum could be improved with the use of ground improvement methods. A rammed aggregate pier (RAP) system or rapid impact compaction (RIC) could be considered for this project. After the building subgrade is improved, the new structure foundations and floor slabs may bear on the improved subgrade.

#### Rammed Aggregate Piers (RAP) Option

The RAP foundation system (such as the Geopier system) is not a pile foundation system. It is a proprietary ground improvement system consisting of columns of compacted stone that are used to strengthen subsoils for settlement control and for bearing capacity improvement.

We anticipate that Geopier's Impact® system may be suitable for this project. The Geopier Impact system creates RAP elements using a patented displacement mandrel to reinforce the underlying soils. The RAP elements are constructed by driving the mandrel and tamper foot into the ground to the design bearing depth. The displacement process allows for installation with no spoils and eliminates the need for casing of the RAP element hole to prevent collapse. Dense graded aggregate or clean crushed stone is placed into the hopper at the top of the hollow mandrel. The hollow mandrel is withdrawn approximately three feet allowing the aggregate to discharge at the bottom of the mandrel. The tamper is then driven back down two feet, which compacts the stone in approximate 12-inch lifts. Compaction is achieved through static down force and dynamic vertical ramming from the hammer. The beveled tamper head densifies the aggregate vertically and expands the stone bulb horizontally which increase the lateral confining stress on the soil cavity. The vertical and lateral displacement properties of this method result in stiff bearing elements as well as improved surrounding soils. The Impact System may require pre-augering due to the presence of debris and boulders in the existing fill.

The Geopier RAP systems are proprietary Geopier designs that must be designed by a licensed Geopier foundation installer. The designer will develop the required RAP system, RAP element diameter and spacing, and allowable foundation loads to limit total settlement to less than 1 inch and differential settlement to less than ½ inch.

We anticipate that the RAP system will allow the new foundations to be designed as shallow spread foundations bearing on the improved subgrade with an allowable bearing capacity of 4,000 to 6,000 psf. We also anticipate that the ground improvement will allow for the new floor slabs to be designed as slabs on grade. The final RAP system design and the allowable bearing capacity will be determined by the Geopier designer with input from Carlin-Simpson & Associates.

#### *Rapid Impact Compaction (RIC) Option*

Rapid impact compaction (RIC) may also be used to densify the existing fill in-place for support of the building foundations and floor slabs. RIC is a ground improvement method that uses a weight dropping from a controlled height onto a patented foot. Energy is transferred to the ground safely and efficiently as the RIC foot remains in contact with the ground. The compaction points are laid out in a grid pattern and multiple blows are applied at each point. Multiple passes will also be required to assure uniform densification of the soil layers.

If used, the RIC will result in craters on the site. Therefore, imported fill material will be required to level the site and to raise grades to the planned subgrade elevations. New fill required to achieve the planned subgrade elevations shall consist of suitable imported fill as described previously and shall be placed as compacted fill after the RIC has been completed.

Because RIC provides a low magnitude of impact loading at a very high frequency, the peak particle velocity (PPV) remains relatively low (less than 2 inches per second) at a distance of 30 feet from the drop point. This means that densification can be performed closer to property lines, adjacent structures, and/or existing utilities than other methods, such as deep dynamic compaction.

Based on our experience and the site conditions, we expect that the RIC program can be designed in a manner that will not detrimentally affect nearby structures. However, vibrations may be felt in the area surrounding the site. Because of the ground vibrations generated during RIC, the process must be closely monitored by a seismologist using a seismograph to ensure that the recommended peak particle velocities are not exceeded and nearby structures are not adversely affected. RIC must also be conducted prior to the excavation for new foundations or the installation of new utilities on the site. This is necessary to prevent damage to these items as a result of the RIC process.

The RIC program shall be designed by a New York State licensed professional engineer. Shop drawings and a work plan shall be submitted to Carlin-Simpson & Associates for review.

Once the building subgrade has been improved, the new foundations may be designed as shallow spread foundations bearing on the improved subgrade soil with an allowable bearing capacity of 2,000 psf. In addition, the floor slab can be designed as a slab on grade bearing on the improved subgrade soil. The other foundation and floor slab design parameters presented in Table 2 and Table 3 above are still applicable in this case.

## 5.4 Settlement

Settlement of individual footings, designed in accordance with recommendations presented in this report, is expected to be within tolerable limits for the proposed structure. For footings placed on natural soils or new engineer-approved compacted fill and constructed in accordance with the requirements outlined in this report, maximum total settlement is expected to be on the order of 1-inch or less. Maximum differential settlement between adjacent columns or load bearing walls is expected to be ½-inch or less.

The above settlement values are based on our engineering experience with similar soil conditions and the anticipated structural loading. These estimated settlements are intended to guide the structural engineer with their design. It is critical that Carlin-Simpson & Associates or a qualified geotechnical engineer be retained to observe the foundation bearing surfaces and to confirm the recommended bearing pressures during construction.

## 5.5 Seismic Design Considerations

From site-specific test boring data, the Site Class was determined from New York State Building Code Section 1613.2.2. The site-specific data used to determine the Site Class typically includes soil test borings to determine Standard Penetration resistances (N-values). Based on estimated average N-values in the upper 100 feet of soil profile, the site can be classified as Site Class C – Very Dense Soil and Soft Rock Profile.

New structures should be designed to resist stress produced by lateral forces computed in accordance with Section 1613 of the New York State Building Code. The values in Table 4 shall be used for this project.

**Table 4 – Seismic Design Values**

| <b>Description</b>                                                           | <b>Value</b>    |
|------------------------------------------------------------------------------|-----------------|
| Mapped Spectral Response Acceleration for Short Periods, [Fig 1613.2.1 (1)]  | $S_S=0.242g$    |
| Mapped Spectral Response Acceleration at 1-Second Period, [Fig 1613.2.1 (2)] | $S_1=0.058g$    |
| Site Coefficient [Table 1613.2.3 (1)]                                        | $F_a= 1.30$     |
| Site Coefficient [Table 1613.2.3 (2)]                                        | $F_v= 1.50$     |
| Max Considered Earthquake Spectral Response for Short Periods [Eq 16-36]     | $S_{MS}=0.314g$ |
| Max Considered Earthquake Spectral Response at 1-Second Period [Eq 16-37]    | $S_{M1}=0.086g$ |
| Design Spectral Response Acceleration for Short Periods [Eq 16-38]           | $S_{DS}=0.209g$ |
| Design Spectral Response Acceleration for 1-Second Period [Eq 16-39]         | $S_{D1}=0.058g$ |

## 6.0 SITE EVALUATION

Our recommendations for the proposed site development including new underground utilities, new pavement for driveways and parking areas, temporary construction excavations, and the suitability of the existing site soils for reuse as structural fill are provided below. A summary of the boring observations are provided in Table 1 above.

## **6.1     Utilities**

New utilities may bear in the densified existing fill, virgin site soils, new compacted fill, completely weathered rock, or bedrock. The bottom of all trenches should be excavated clean and shaped so a hard bottom is provided for the pipe support. If any soft or unsuitable soil conditions are encountered during construction, the unsuitable materials must be removed and replaced with new compacted fill.

In the event that weathered rock is encountered in the utility excavations, it must be removed to at least six (6) inches below planned pipe invert. The over-excavated six (6) inches shall then be filled with new sandy fill and compacted to at least 92% of its Maximum Modified Dry Density (ASTM D1557) to act as a cushion on the rock. Depending on the proposed utility invert elevations, trench hammering may be required in areas.

For areas where existing fill is encountered within the utility excavations, the subgrade at bottom of the utility excavation shall be compacted in place with a vibratory drum trench compactor or “jumping jack” style tamper. Carlin-Simpson & Associates or a qualified geotechnical engineer must evaluate these areas for the presence of soft or unsuitable material within the existing fill matrix. If instability is observed, portions of this fill may have to be removed and replaced with new compacted fill. Carlin-Simpson & Associates or the qualified geotechnical engineer will determine this during construction.

In the event that the trench bottom becomes soft due to the inflow of surface or trapped water, the soft soil shall be removed and the excavation filled with a minimum of six (6) inches of 3/4-inch clean crushed stone to provide a firm base for support of the pipe. Sump pits and pumps should be adequate to keep the excavations dry.

After the utility is installed, the trench must be backfilled with compacted fill. The fill shall consist of suitable on-site soil or imported sand and gravel. Imported fill shall contain less than 20% by weight passing a No. 200 sieve. Large rock fragments and boulders must not be placed directly against the pipe. Controlled compacted fill shall be placed in one (1) foot loose layers and each layer shall be compacted to at least 92% of its Maximum Modified Dry Density (ASTM D1557). The backfill must be free of topsoil, debris, and large boulders or rock fragments.

## **6.2     Pavement**

We understand that the proposed construction will also include new paved driveways and parking areas. The densified existing fill, virgin soil, and new compacted fill may be used to support the pavement.

To prepare the new pavement areas, the existing surface materials (i.e. topsoil, vegetation, etc.) must be removed from the planned pavement areas. In the proposed pavement areas, the existing structures and debris resulting from the demolition of these structures must be completely removed from the new pavement area, extending at least five (5) feet beyond the new paving limits, where practical. After all debris has been removed, the exposed subgrade soil that is either at or below the planned subgrade elevation shall be proofrolled with a large vibratory drum roller (i.e. Dynapac 250 or equivalent) to densify the underlying soils. The on-site representative from Carlin-Simpson & Associates or a qualified geotechnical engineer shall witness the proofrolling

operation. If any excessive movement is noted during the proofrolling, the soft or unsuitable soil shall be removed and replaced with new compacted fill.

Areas where existing fill is encountered shall be compacted in place. Carlin-Simpson & Associates or a qualified geotechnical engineer must evaluate these areas for the presence of soft or unsuitable material within the existing fill matrix. Portions of this fill may have to be removed and replaced with new compacted fill. Carlin-Simpson & Associates or the qualified geotechnical engineer will determine this during construction.

Where new fill is required to achieve final grades, it shall consist of either suitable on-site soil or imported sand and gravel. Imported sand and gravel shall contain less than 20% by weight passing a No. 200 sieve. New fill shall be placed in layers not exceeding one (1) foot in loose thickness and each layer shall be compacted to at least 92% of its Maximum Modified Dry Density (ASTM D1557).

#### Asphalt Pavement Section

After the planned subgrade has been proofrolled and new compacted fill has been placed as required, the new pavement subbase may be placed on the densified site soils and new compacted fill. A minimum of six (6) inches of dense graded aggregate (DGA) is recommended for the subbase layer for drainage and additional pavement support.

We recommend that the following pavement sections be used for the site. These pavement sections are subject to local government approval.

##### Light Duty – Parking Lots

|      |                                                |                 |
|------|------------------------------------------------|-----------------|
| 1.5" | Asphalt Top Course                             | NYSDOT, Type 6F |
| 3"   | Asphalt Base Course                            | NYSDOT, Type 3  |
| 6"   | Stone Subbase (DGA)                            | NYSDOT, Type 1  |
|      | Approved Compacted Subgrade (Minimum CBR = 10) |                 |

##### Heavy Duty – Driveways

|    |                                                |                 |
|----|------------------------------------------------|-----------------|
| 2" | Asphalt Top Course                             | NYSDOT, Type 6F |
| 4" | Asphalt Base Course                            | NYSDOT, Type 3  |
| 8" | Stone Subbase (DGA)                            | NYSDOT, Type 1  |
|    | Approved Compacted Subgrade (Minimum CBR = 10) |                 |

Based on the boring data, we anticipate that the densified existing site soils and new compacted fill will provide a CBR value that is equal to or greater than 10, which can adequately support the above pavement sections.

#### Rigid (Concrete) Pavement

We expect that the proposed construction may also include rigid concrete pavement in portions of the site. The rigid concrete pavement section design below is based on a 20-year design life and the anticipated fire truck traffic data. This pavement section is subject to local government approval.

|    |                                                |               |
|----|------------------------------------------------|---------------|
| 6" | Concrete Section                               | 4,000 psi     |
| 8" | Gravel Subbase Course                          | NYSDOT Type 4 |
|    | Approved Compacted Subgrade (Minimum CBR = 10) |               |

The rigid concrete pavement should be reinforced with welded wire fabric or reinforcing steel bars for crack control. Contraction joints should also be provided with a maximum spacing of 10 feet. The project structural engineer or the site engineer shall determine the type, size, and spacing of the reinforcement based on the anticipated loading.

### **6.3 Temporary Construction Excavations and Excavation Protection**

Temporary construction excavations shall be conducted in accordance with the most recent OSHA guidelines or applicable federal, state or local codes. A qualified person should evaluate the excavations at the time of construction to determine the appropriate soil or rock type and the allowable slope configuration. Based on the boring data, we believe the site soil and bedrock would have the following classifications as defined by the OSHA guidelines.

| <u>Soil/ Rock Type</u>        | <u>Possible Classification</u> | <u>Maximum Slope or Bench</u> |
|-------------------------------|--------------------------------|-------------------------------|
| Existing Fill                 | "C"                            | 1½H:1V                        |
| Virgin Soil/Improved Subgrade | "B"                            | 1H:1V                         |

Temporary support (i.e. trench boxes, sheeting and shoring, etc.) should be used for any excavation that cannot be sloped or benched in accordance with the applicable regulations, where necessary to protect adjacent property, utilities, driveways, and/or structures, or where saturated soils or water seepage is encountered within the excavation. In the event that water is encountered within the excavation, an evaluation of the excavation's stability must be performed. Perched water or groundwater encountered within the excavation will destabilize the sides of the excavation. Temporary support will be required to stabilize the excavation. Dewatering of the excavation will also be required.

A New York State licensed professional engineer must design all temporary and permanent support systems. The contractor will select the shoring type and submit design calculations for the proposed shoring method to Carlin-Simpson & Associates for review.

The soil adjacent to the temporary support system will exert a horizontal pressure against the system. This pressure is based on the soil unit weight, coefficient of active earth pressure, and depth of the excavation. In addition, the surcharge loads from adjacent driveways, construction equipment, or stored materials near the excavation must be incorporated into the design of the support system, as applicable. The design parameters for temporary excavation support systems are listed in Table 5 below.

**Table 5 – Temporary Sheet piling and Shoring Design Parameters**

| <b>Description</b>                                       | <b>Soil Value</b> |
|----------------------------------------------------------|-------------------|
| Moist Unit Weight (pcf)                                  | 130               |
| Friction Angle ( $\phi$ , deg)                           | 30                |
| Cohesion (c, psf)                                        | 0                 |
| Active Earth Pressure Coefficient ( $k_a$ ) <sup>1</sup> | 0.33              |

| Description                                               | Soil Value |
|-----------------------------------------------------------|------------|
| Equivalent Fluid Pressure (pcf)                           | 42.9       |
| Passive Earth Pressure Coefficient ( $k_p$ ) <sup>1</sup> | 3.0        |

#### **6.4 Suitability of the In-Situ Soil and Rock for Use as Compacted Fill**

The suitability of each stratum for use as compacted fill is discussed below.

**Stratum 2**  
Existing Fill      The existing fill generally consists of loose to medium dense brown, gray, black coarse to fine SAND, little (to and) Silt, little (to and) coarse to fine Gravel. Debris (i.e. ash, bricks, glass, and asphalt) was noted within this stratum. Cobbles and boulders were also encountered within this stratum at select locations. In boring B-1, a layer within the fill stratum consists of black SILT some, coarse to fine Sand, little coarse to fine Gravel. The existing fill is generally suitable for reuse, as long as it remains relatively dry for optimum compaction and all the debris is removed prior to reuse as compacted fill. The moderate to high silt content material will be moisture sensitive and may be difficult to reuse as compacted fill.

**Stratum 3**  
Silty Sand  
with Gravel      The silty sand with gravel consists of medium dense to dense brown coarse to fine SAND, little (to some) Silt, little (to some) coarse to fine Gravel. This stratum is generally suitable for reuse as compacted fill, as long as it remains relatively dry for optimum compaction.

**Stratum 4/5**  
Weathered  
Rock or  
Bedrock      Rock is not expected to be excavated during construction. In the event that completely weathered rock is excavated from select areas of the site, it may be used as fill material provided that the material is well graded and has been approved prior to use by Carlin-Simpson & Associates.

The boring data indicates that the on-site soils contain a varying percentage of silt (10% to greater than 50%). The higher silt content soils will be moisture sensitive. If the soil becomes too wet, it will be difficult to achieve adequate compaction. In addition, the site soils that extend below the groundwater table are completely saturated and are therefore, unsuitable for reuse.

Proper moisture conditioning of the soil will be required. New compacted fill should be within 2% (+/-) of its optimum moisture content at the time of placement. In the event that the on-site material is too wet at the time of placement and cannot be adequately compacted, the soil should be aerated and allowed to dry or the material removed and a drier cleaner fill material used. In the event that the on-site material is too dry at the time of placement and cannot be adequately compacted, water may be needed to increase the soil moisture content for proper compaction.

The in-situ soils which exist throughout the site may become soft and weave if exposed to excessive moisture and construction traffic. The instability will occur quickly when exposed to these elements and it will be difficult to stabilize the subgrade. We recommend that adequate site drainage be implemented early in the construction schedule and if the subgrade becomes wet, the contractor should limit construction activity until the soil has dried.

The minimum compaction requirements for the various areas of the site are summarized in Table 6 below.

**Table 6 – Minimum Compaction Requirements**

| <b>Area</b>                  | <b>Maximum Modified Dry Density<br/>(ASTM D1557)</b> |
|------------------------------|------------------------------------------------------|
| Below Foundations            | 95%                                                  |
| Below Floor Slabs            | 92%                                                  |
| Pavement Areas               | 92%                                                  |
| Exterior Slabs and Sidewalks | 92%                                                  |
| Utility Trenches             | 92%                                                  |
| Landscape Areas              | 90%                                                  |

## **7.0 GENERAL**

The findings, conclusions and recommendations presented in this report represent our professional opinions concerning subsurface conditions at the site. The opinions presented are relative to the dates of our site work and should not be relied on to represent conditions at later dates or at locations not explored. The opinions included herein are based on information provided to us, the data obtained at specific locations during the study and our past experience. If additional information becomes available that might impact our geotechnical opinions, it will be necessary for Carlin-Simpson & Associates to review the information, reassess the potential concerns, and re-evaluate our conclusions and recommendations.

Regardless of the thoroughness of a geotechnical exploration, there is the possibility that conditions between borings and test pits will differ from those encountered at specific boring or test pit locations, that conditions are not as anticipated by the designers and/or the contractors, or that either natural events or the construction process have altered the subsurface conditions. These variations are an inherent risk associated with subsurface conditions in this region and the approximate methods used to obtain the data. These variations may not be apparent until construction.

The professional opinions presented in this geotechnical report are not final. Field observations and foundation installation monitoring by the geotechnical engineer, as well as soil density testing and other quality assurance functions associated with site earthwork and foundation construction, are an extension of this report. Therefore, Carlin-Simpson & Associates should be retained by the owner to observe all earthwork and foundation construction, to document that the conditions anticipated in this study actually exist, and to finalize or amend our conclusions and recommendations. Carlin-Simpson & Associates is not responsible or liable for the conclusions and recommendations presented in this report if Carlin-Simpson & Associates does not perform the observation and testing services.

Therefore, in order to preserve continuity in this project, the owner shall retain the services of Carlin-Simpson & Associates to provide full time geotechnical related monitoring and testing during construction. At a minimum, this shall include the observation and testing of the following: 1) the removal of existing fill and unsuitable soil, where required; 2) the proofrolling of the subgrade soil prior to the placement of new compacted fill; 3) the placement and compaction

of controlled fill; 4) the excavation for the new foundations; 5) ground improvement methods, if used; and 6) the preparation of the subgrade for the floor slabs and pavement areas.

This report has been prepared in accordance with generally accepted geotechnical engineering practice. No other warranty is expressed or implied. The evaluations and recommendations presented in this report are based on the available project information, as well as on the results of the exploration. Carlin-Simpson & Associates should be given the opportunity to review the final drawings and site plans for this project to determine if changes to the recommendations outlined in this report are needed. Should the nature of the project change, these recommendations should be re-evaluated.

This report is provided for the exclusive use of H2M Architects + Engineers. and the project specific design team and may not be used or relied upon in connection with other projects or by other third parties. Carlin-Simpson & Associates disclaims liability for any such third-party use or reliance without express written permission. Use of this report or the findings, conclusions or recommendations by others will be at the sole risk of the user. Carlin-Simpson & Associates is not responsible or liable for the interpretation by others of the data in this report, nor their conclusions, recommendations or opinions.

If the conditions encountered during construction vary significantly from those stated in this report, this office should be notified immediately so that additional recommendations can be made.

Thank you for allowing us to assist you with this project. Should you have any questions or comments, please contact this office.

Very truly yours,

CARLIN-SIMPSON & ASSOCIATES

CATHERINE K. SIMPSON, E.I.T.  
Project Manager

ROBERT B. SIMPSON, P.E.

GENERAL NOTES:

1. GENERAL LAYOUT WAS OBTAINED FROM A DRAWING THAT WAS PREPARED BY H2M ARCHITECHS AND ENGINEERS, ENTITLED "SOIL BORING PLAN", DATED 13 NOVEMBER 2020, DRAWING NUMBER SB 100.00.
2. BORING WERE LAID OUT IN THE FIELD BY CARLIN-SIMPSON & ASSOCIATES (CSA).
3. THE BORINGS WERE PERFORMED BY GENERAL BORINGS, INC. IN JANUARY 2021 UNDER THE FULL TIME INSPECTION OF CSA.
4. LOCATIONS ARE APPROXIMATE.

LEGEND:

19. SCHEDULE A.

Current Collective Bargaining Agreements – All signatory  
Local unions.

## ARTICLE 1 – PREAMBLE

This Agreement for the Vails Gate Fire District Project entered into this 1<sup>st</sup> day of November, 2021, by and between the Vails Gate Fire District hereinafter ("Owner") and the Hudson Valley Building and Construction Trades Council (herein after "Unions" and "HVBCTC") and affiliated local unions having jurisdiction on the project located at 872 Blooming Grove Turnpike, New Windsor, New York.

WHEREAS this Project Labor Agreement ("Agreement") will foster the achievement of these goals including:

1. Standardizing the terms and conditions governing the employment of labor on the Project.
2. Open communication between the unions, owner and contractors through establishment of Labor Management Committee as referenced in the agreement.
3. Receiving negotiated adjustments as to work rules, wages/benefits and staffing requirements from those which otherwise might not provide the same.
4. Providing comprehensive and standardized mechanisms for the settlement of work disputes, including those related to jurisdiction.
5. Ensuring a reliable source of skilled and experienced local labor.
6. Furthering public policy objectives as to improved employment opportunities for local workers, minorities, women and the economically disadvantaged in the construction industry.
7. Avoiding the costly delays of potential strikes, slowdowns, walkouts, picketing and other disruptions arising from work disputes and promote labor harmony and peace for the duration of the Project.
8. Expediting the construction process and otherwise minimizing the public safety and inconvenience caused by ongoing construction; and,
9. Furthering public policy objectives by lawfully expanding work opportunities for minorities and women.
10. Elimination of Wicks Law, allowing for a single prime contractor.

WHEREAS the parties subject to the terms of this Agreement desire the stability, security and work opportunities afforded by a Project Labor Agreement.

Now, therefore, it is agreed as follows:

## **ARTICLE 2 – PARTIES COVERED BY THIS AGREEMENT AND GENERAL CONDITIONS**

### **Section 1. Parties by this Agreement**

The parties covered by and subject to the terms of this Agreement are:

- a. The Hudson Valley Building and Construction Trades Council together with its affiliated Local Unions as identified on signature page.
- b. Contractors and sub-contractors (regardless of tier) who have been awarded contracts pursuant to the bidding procedures applicable to this Project, including Construction Manager if utilized by the Vails Gate Fire District.
- c. Vails Gate Fire District as owner.
- d. All parties shall be required to sign this Agreement.

### **Section 2. Certain Definitions**

- a. Throughout this Agreement, the Hudson Valley Building and Construction Trades Council ("HVBCTC") and its affiliated Local Union members are sometimes referred to singularly and collectively as "Union(s)".
- b. "Schedule A" means those local union collective bargaining agreements of affiliated local unions with jurisdiction on the project.
- c. "Contractor(s)" means contractor(s) who have been awarded contracts for this Project and subcontractors of any tier engaged by Contractor(s) for on-site Project construction work including construction managers.
- d. "Employee(s)" means employee(s) of Contractor(s).

### **Section 3. Supremacy Clause**

This Agreement, together with the local Collective Bargaining Agreements appended hereto and referred to herein as "Schedule A" represents the complete understanding with respect to the Project and supersedes any national agreement, local agreement, or other collective bargaining agreement of any type which would otherwise apply to Project Work, in whole or in part, with the following exception: to the extent a Contractor is a signatory to the NTL Articles of Agreement, the National Stack/Chimney Agreement, the National Cooling Tower Agreement, the UA/BEW Joint National Agreement for Instrument and Control Systems Technicians, and the National Agreement of the International Union of Elevator Constructors, those agreements shall apply. Notwithstanding this exception, Articles 7.9 and 10 of this Agreement shall apply. Where a subject covered by the provisions of this Agreement is also covered by a Schedule A, the provisions of this Agreement shall prevail. If this Agreement is silent on any matter addressed in the applicable Schedule A agreement, the Schedule A agreement shall govern.

#### **Section 4. Liability**

The liability of any Contractor and/or any Union under this Agreement shall be several and not joint. The Owner and any Contractor shall not be liable for any violations of this Agreement by any other Contractor.

#### **Section 5. Bid Specifications**

- a. The bid specifications of the Project will require that all successful bidders, contractors, construction managers and subcontractors of whatever tier are bound by this Agreement. It is understood that nothing in this Agreement shall be construed as limiting the sole discretion of Owner in determining which bidder(s) shall be awarded contracts for the Project. It is further understood that Owner has sole discretion at any time to terminate, delay or suspend the Project, in whole or part. All Contractors will be required to sign a Letter of Assent acknowledging this Agreement and to allow purchase of benefits.

### **ARTICLE 3 – SCOPE OF THIS AGREEMENT**

This agreement shall be as defined and limited by the following sections of this Article 3.

#### **Section 1. The Work**

This Agreement applies only to all construction work on the owned or leased properties of the owner located at 872 Blooming Grove Turnpike, New Windsor, New York which includes but not limited to demolition, site work and new construction of 2 buildings. The construction work is a two phase project which will be bid separately.

#### **Section 2. Term**

This Agreement commences November 1, 2021 and shall remain in effect for the duration of the Project(s) on this site.

#### **Section 3. Excluded Persons**

The following persons are not subject to the provisions of the Agreement, even though performing non-construction work on the Project site:

- a. Project Managers, Superintendents, supervisors (excluding general and forepersons specifically covered in Schedule A) engineers, inspectors and testers, quality control/assurance personnel, timekeepers, mail carriers, clerks, office workers, deliverers, suppliers, messengers, non-manual employees, and all professional, engineering, administrative and management persons.
- b. Employees of the owner; not performing construction
- c. Persons engaged in laboratory or specialty testing or inspections not ordinarily done by a member of a Trade Union (excludes surveyors).

- d. Employees and entities engaged in off-site manufacture not covered by Schedule A agreement, modifications, repair, maintenance, assembly, painting, handling or fabrication of components, materials, equipment or machinery or involved in deliveries to and from the Project site, except for local deliveries of fill, ready mix, asphalt and granular materials which is covered under this agreement.
- e. Employees of the Contractor, other contractors or subcontractors of any tier excepting those performing manual, on-site construction labor who will be covered by this Agreement and Schedule A.
- f. Deliveries to the site with the exception of items specifically called out in Article 3, Section d.
- g. Employees engaged in on-site equipment maintenance/warrant work or start up work typically not performed by trades or when required for warranty or training purposes. When a Contractor has an employee already certified by the relevant manufacturer to make warranty repairs on that Contractor's equipment, that employee shall be used.
- h. Employees engaged in geophysical testing (whether land or water) other than boring for core samples.

## **ARTICLE 4 – REFERRAL AND EMPLOYMENT**

### **Section 1. Referral**

- a. Contractors agree to hire craft employees covered by this Agreement through the job referral systems and/or hiring halls (where the referrals meet the qualifications set forth in items 1. 2. 3 and 4 of subparagraph (b) established in the Local Unions' area Collective Bargaining Agreement or other sources so long as the Contractors do not unlawfully discriminate between prospective employees in violation of existing laws on the basis of Union affiliation, race, religion or gender.
- b. The Local Unions shall exert their utmost efforts to recruit sufficient numbers of skilled craft workers to fill the manpower requirements of the Contractor. The parties to this Agreement support the development of increased numbers of skilled construction workers from Orange County and its immediate vicinity to meet the needs of this Project and the requirements of the industry generally.

### **Section 2. Non-Discrimination in Referrals**

The local Unions represent that their hiring halls and/or referral systems will be operated in a non-discriminatory manner and in full compliance with all applicable federal, state and local laws and regulations which require equal employment opportunities. Referrals shall not be affected in any way by the rules, regulations, bylaws, constitutional provisions or any other aspects or obligations of union membership, policies or requirements and shall be subject to such other conditions as are established in this Article. No employment applicant shall be discriminated against by any referral system or hiring hall because of the applicant's union membership or lack thereof. Local unions agree to adhere to local labor policies if applicable to the project.

### **Section 3. Tag Along**

a. No more than 12 ½ per centum (12 ½ %) of the employees covered by this Agreement per Contractor by craft, shall be hired through the special provisions below (any fraction shall be rounded to the next highest whole number). Contractors (and their subcontractors) shall be entitled to assign to the Project (subject to the above provisions) one of the Contractor's "core" employees, and then must hire one journey person referred by the Local on the same day as "core" employee and 12 ½ % thereafter.

The local unions referral of persons who have applied to the Local for Project work or are currently employed by contractor performing work meet the following qualifications as determined by a Committee of three (3), designated respectively, by the Contractor, the applicable local union and a third party mutually agreed upon by the Building Trade Council and Construction Manager.

1. Possess any license required by NYS law for the Project work to be performed.
2. Have worked a total of at least 1000 hours in the construction craft during the prior 2 years.
3. Were on Contractor's active payroll for at least 60 out of 180 calendar days prior to the start of project work.
4. Have demonstrated ability to safely perform the basic functions of the applicable trade.

b. In the event the Local Union is unable to fill any request for qualified employees two working days after such request is made by the CONTRACTOR, the CONTRACTOR may employ qualified applicants from any other available source. In the event that the Local Union does not have a job referral system, the CONTRACTOR shall give the Local Union first preference to refer applicants, subject to the other provisions of this Article. The CONTRACTOR shall notify the Local Union of Project, craft employees hired within its jurisdiction from any source other than referral by the Union.

### **Section 4. Union Dues/Fringe Benefits**

- a. Nothing in this Agreement requires employees to join a union or pay dues or fees to a union as a condition of working on the covered project. This Agreement is not, however, intended to supersede independent requirements in applicable local union agreements as to contractors that are otherwise signatory to those agreement and as to employees of such employers performing covered work.
- b. In addition, each Contractor agrees to pay contributions to established and jointly trusted fringe benefit funds (the Funds), such as but not limited to Health and Welfare, Pension, Annuity, Legal Service, Education and Training, SUB, Apprenticeship, etc. in the amounts designated in the applicable collective bargaining agreement for. The Contractors agreed to be bound by the written terms of the legally established and jointly trusted Funds specifying the detailed basis on which payments are to be paid into, and benefits paid out of, such Funds but only with regard to project work and only for those employees for whom this Agreement requires such benefit payments. No union, or any union benefit fund trustees, or any other individual affiliated with the union or a Fund shall have any authority under this Agreement or otherwise to audit the financial records of the Construction Manager or any Contractor that is not

signatory to an existing collective bargaining agreement with the union except for the records related to compliance with contribution obligations set forth in the Agreement.

- c. However, with respect to any Contractor's employees not referred by the unions, a Contractor may, at its option, satisfy the above fringe benefit obligations by providing such employees with coverage under the Contractor's private benefit plan(s) or benefit plans under a collective bargaining agreement with a union not signatory to this Agreement (to the extent consistent with Section 220 of the NYS Labor Law) or electing to pay into the applicable jointly trusted Funds designated in the appropriate Schedule A collective bargaining agreement on their behalf.
- d.
  - 1. To insure the full and timely remittance of required fringe benefit contributions to the Funds and dues to the unions, the Construction Manager will work cooperatively with the Funds (or unions, in the case of dues) to verify that the required fringe benefit contributions or dues have been paid.
  - 2. If a Fund (or Union in the case of dues) considers that a Contractor is delinquent in the payment of fringe benefit contributions or dues, it will notify the Contractor in writing with a copy to the Construction Manager. The Contractor will have thirty (30) days to make the contributions requested by the Fund or dues, if requested by a union. If after 30 days, the Fund or Union is not satisfied that the Contractor has met its obligations, the Fund or Union will provide written notification to the Construction Manager and the Contractor at issue (given by certified mail, return receipt requested or email that a Contractor is delinquent in payment of fringe benefit contributions or dues.
  - 3. The Contractor will have fifteen (15) days from its receipt of the Union's notification to respond to the Union's notification or has not satisfied its obligation to the union. If the Contractor fails to respond to the Union's notification of delinquency, the Construction Manager will withhold from sums due to the Contractor the amount of such delinquencies and issue a joint check in the delinquent amount of sums due to the Contractor, and the Construction Manager and the Contractor will make all future payments to the Contractor by joint check to the appropriate fund (or Union, in the case of dues) and the Contractor up to the amount of the claimed delinquency. If the Construction Manager fails to withhold or there are no funds due to the Contractor which the Construction Manager can withhold, the Union involved may stop work for that specific Contractor. Nothing herein shall result in the Construction Manager being liable and/or responsible for payment of delinquent fringe benefit contributions or dues.
  - 4. If the Fund or Union disagrees with the Contractor's response and continues to believe that there are delinquencies, it will notify the Contractor in writing of such conclusion within fifteen (15) days after receiving the Contractor's response. The Union or Fund upon giving actual backup will provide a copy of such notification to the Construction Manager who will withhold from money owed to the Contractor an amount equal to the claimed delinquencies and any percent of those delinquencies as may be allowed under the applicable collective bargaining agreement. The Fund or Union may also require the Construction Manager to make all future payments to the Contractor by joint check to the appropriate Fund (or Union, in the case of dues) and the Contractor up to the amount of the claimed delinquency. The Contractor hereby consents to payments to be made by such joint check to the Fund (or Union, in the case of dues) until all payments of contributions or dues are current and the Fund (or Union, in the case of dues) notifies the Construction Manager of such in writing by certified mail, return receipt requested.

5. If the Contractor and the Fund (or Union, in the case of dues) are unable to resolve any claims for alleged delinquent contributions or dues, the Contractor will have the right to arbitrate the matter pursuant to this Agreement. If the Fund or Union prevails in such arbitration the Construction Manager will pay the delinquencies up to the amount it has withheld. If the Contractor prevails in such arbitration, the Construction Manager will then release any withholdings to the Contractor if the Contractor has otherwise qualified for payment of such withholdings.

6. The Labor Management Alliance Fund established by the Council may become part of this agreement if allowable by law.

7. The Construction Manager contact in reference to benefit delinquencies shall be:

NAME: \_\_\_\_\_ (TBD)

PHONE: \_\_\_\_\_

EMAIL: \_\_\_\_\_

## **Section 5. Craft Forepersons and General Forepersons**

The selection of craft forepersons and/or general forepersons and the number of forepersons required shall be solely the responsibility of the Contractor except where otherwise provided by specific provisions of an applicable Collective Bargaining Agreement, Schedule A. All forepersons shall take orders exclusively from the designated contractor representatives. Craft forepersons shall be designated as working forepersons at the request of the Contractor.

## **ARTICLE 5 – UNION REPRESENTATION**

### **Section 1. Local Union Representative**

Each Local Union representing on-site Project employees shall be entitled to designate representatives in writing to the Construction Manager who shall be afforded access to the Project. Union Representatives will not be able to interfere with the work and shall comply with visitor rules if required included but not limited to all safety protocols, PPE and required COVID process as required.

### **Section 2. Stewards**

- a. Each Local Union may have the right to designate a working journey person as a steward and shall notify the Contractor of the identity of the designated Steward prior to the assumption of such duties. Stewards shall not exercise supervisory functions, adhere to all safety, jobsite and Covid rules and regulations. Stewards must perform the actual work of their trade. There will be no non-working Stewards on the Project.
- b. In addition to their work as an employee of their specific trade, the Steward shall have the right to receive complaints or grievances and to discuss and assist in their adjustment with the Contractor's appropriate supervisor. Each Steward shall be concerned with the employees of the Stewards Contractor and, if applicable, subcontractors of that Contractor. The Contractor will not discriminate against the Steward in the proper performance of Union duties.

- c. The Stewards shall not have the right to determine when overtime shall be worked and who shall work overtime.
- d. The General Contractor/Prime Contractor shall employ the Labor Steward. This may be satisfied by making arrangements with another contractor to provide such employment during site work and demolition if general contractor does not have full time work for the Steward. The above referenced employer shall not be required to carry the Steward's if there is no work of that particular trade.
- e. Where Steward is used in Article 5, the same shall apply to Lead Engineer if a Lead Engineer is required by the Local 825 Collective Bargaining Agreement (Schedule A). Lead engineer shall be a working lead engineer.

### **Section 3. Layoff of a Steward**

Contractors agree to notify the appropriate Local Union twenty-four (24) hours prior to the layoff of a Steward, except in cases of discipline or discharge for just cause. If a Steward is protected against layoff by a Collective Bargaining Agreement, such provisions shall be recognized to the extent the Steward possesses the necessary qualifications to perform the work required. In any case in which a Steward is discharged or disciplined for just cause, the Local Union involved shall be notified immediately by the Contractor.

## **ARTICLE 6 – MANAGEMENT'S RIGHTS**

### **Section 1. Reservation of Rights**

Except as expressly limited by a specific provisions of this Agreement, Contractors retain full and exclusive authority for the management of their operations including, but not limited to: the right to direct the work force; including determination as to the number to be hired and the qualifications therefore; the promotion, transfer, or the discipline or discharge for a just cause of its employees; the assignment and schedule of work; the promulgation of reasonable Project work rules, and the requirement, timing and number of employees to be utilized for overtime work. Nothing contained herein shall be construed so as to allow direction of an Employee to perform work outside the jurisdiction of that Employees Labor Union affiliation, if any. No rules, customs, or practices as determined by the contractor which limit or restrict productivity or efficiency of the individual, and/or joint working efforts with other employees shall be permitted or observed.

### **Section 2. Materials, Methods & Equipment**

There shall be no limitation or restriction upon the Contractor's choice of materials, techniques, methods, technology or design, or regardless of source or location, upon the use and installation of equipment, machinery, package units, pre-cast, prefabricated, pre-finished (except that all rebar for use in the cast-in place, on-site construction will be cut and bent in accordance with local industry practices), or pre-assembled materials, tools or other labor-saving devises. Contractors may, without restriction, install or use materials, supplies or equipment regardless of their source. The on-site installation or application of such items shall be performed by the craft having jurisdiction over such work pursuant to Collective Bargaining Agreement; provided, however, it is recognized that other personnel having

special qualifications may participate, in a supervisory capacity, in the installation, check-off or testing of specialized or unusual equipment or facilities as designated by the Contractor. There shall be no restrictions as to work which is not performed at the Project site, unless specifically spelled out in Schedule A.

## **ARTICLE 7 – WORK STOPPAGE AND LOCKOUTS**

### **Section 1. No Strikes, No Lock Out**

There shall be no strikes, sympathy strikes, picketing, work stoppages, slowdown, hand billing, demonstrations or other disruptive activity at the Project site for any reason by any Local Union or Employee against any Contractor or Employer while performing work at the Project site, except for non-payment of wages and benefits as per Schedule A. There shall be no other Local Union or concerted Employee activity which disrupts or interferes with the operation of the Project. Failure of any Local Union or employee to cross any picket line established by any union signatory or non-signatory to this Agreement or the picket or demonstration line of any other organization, at or in proximity to the Project site is a violation of this Article 7. There shall be no lockout at the Project by Owner or any Contractor. Contractors and Local Unions shall take all steps necessary to ensure compliance with this Section 1.

### **Section 2. Discharge for Violation**

A Contractor may discharge any Employee violating Section 1 above and any such Employee will not be eligible thereafter for referral under this Agreement for a period of one hundred (100) days.

### **Section 3. Notification**

If a Contractor contends that any party covered by this Agreement has violated this Article 7, it will notify the CM and/or the Local Union involved advising of such fact with copy to the BCTC and to the Local Union. The BCTC shall instruct, order or otherwise use its best efforts to cause the Employees, Contractors and/or the Local Unions to immediately cease and desist from any violation of this Article 7. The BCTC complying with these obligations shall not be liable for the unauthorized acts of a Local Union or its members.

### **Section 4. Expedited Arbitration**

Any party alleging a violation of Section 1 of this Article 7 may utilize the expedited procedure set forth below (in lieu of, or in addition to, any actions at law or equity). Shall be mutually agreed upon between the Construction Manager and the Union.

- a. A party invoking this procedure shall notify The American Arbitration Association Arbitrator who shall act as Arbitrator Service under this expedited arbitration procedure. Copies of such notification will be simultaneously sent to the alleged violator, the CM or General Contractor and if a Local Union is alleged to be in violation, then to the HVBCTC.
- b. The Arbitrator shall thereupon, after notice to all parties covered as to time and place, hold a hearing within seventy-two (72) hours of receipt of the notice invoking the procedures if it is contended that the violation still exists. The hearing will not, however, be scheduled for less than seventy-two (72) hours after the notice to the BCTC required by Section 3, above.

- c. All notices pursuant to this Article 7, must be in writing to the parties involved. The hearing may be held on any day except Saturdays and Sundays. The hearing shall be completed in one session, which shall not exceed Eight (8) hours duration with no more than Four (4) hours being allowed to either side to present its case and conduct its cross examination unless otherwise agreed. A failure of any party to attend the hearing shall not delay the hearing of evidence by those present or the issuance of an award by the Arbitrator.
- d. The sole issue at the hearing shall be whether a violation of Section I above has occurred. If a violation is found to have occurred, the Arbitrator shall issue a Cease-and-Desist Order restraining such violation and serve copies on the party determined to be in violation. The Arbitrator shall have no authority to consider any matter in justification, explanation or mitigation of such violation or to award damages, which issue is reserved solely for other proceedings, if any. The decision shall be issued in writing within three (3) hours after the close of the hearing and may be issued without an opinion. If any involved party desires an opinion, one shall be issued within fifteen (15) calendar days, but its issuance shall not delay compliance with, or enforcement of, the decision.

A decision issued under this procedure may be enforced by any court of competent jurisdiction upon the filing of this Agreement together with the decision. Notice of the filing of such enforcement proceedings shall be given to the party involved. In any court proceeding to obtain a temporary or preliminary order enforcing the arbitrator's

Award as issued under this expedited procedure, the involved Party and Contractor waive their right to a hearing and agree that such proceedings may be exparte, provided notice is given to opposing counsel. Such agreement does not waive any party's right to participate in a hearing for a final court order of enforcement or in any contempt proceeding.

- e. Any rights created by statute or law governing arbitration proceedings which are inconsistent with this procedure set forth in this Article, or which interfere with compliance thereto, are hereby waived by the Contractors and Unions to whom they accrue.
- f. The fees and expenses of the Arbitrator shall be paid by the losing party.

## **Section 5. Arbitration of Discharges for Violation**

Procedures contained in Article 9 shall not be applicable to any alleged violation of this Article, with the single exception that an Employee discharged for violation of Section 1, above, may have recourse to the procedures of Article 9 to determine only if the Employee did, in fact, violate the provisions of Section 1 of this article; but not for the purpose of modifying the discipline imposed where a violation is found to have occurred.

## **ARTICLE 8 – LABOR MANAGEMENT COMMITTEE**

**Section 1.** The parties bound by this Agreement shall establish a local Labor Management Committee (LMC) to promote harmonious labor-management relations, ensure adequate communications and advance the proficiency of craft employees and the industry. This committee shall be chaired by the Labor Relations Coordinator which shall be mutually agreed upon by the unions and construction manager or general contractor, the LMC and will meet at periodically scheduled intervals for a discussion of the efficiency of the

Project as is consistent with this Agreement and any amendments or addenda thereto. Participation shall be encouraged from all incumbent Employers and Unions signatory to this Agreement. The Labor Relations Coordinator shall administer and coordinate the implementation of this Agreement, chair the LMC, develop policies and procedures of operation, and publish meeting agenda and issue minutes of each LMC meeting.

**Section 2.** The LMC will make every effort possible to anticipate jurisdictional conflicts or other potential and disruptive labor issues and take appropriate measure to minimize any adverse impact to the Project.

**Section 3.** The principal Union(s) and Labor Relations Coordinator (negotiators for this Agreement) shall rule on any Agreement interpretations or clarifications, which may be required. Such rulings or clarifications, as may be required, shall be reduced to writing, jointly signed by the LMC, distributed to the signatory parties and reviewed at the next LMC meeting. The Labor Relations Coordinator reserves the exclusive right to interpret this Agreement for all signatory Employers, program manager, construction managers, and subcontractors (at any tier). Such “reserved right” shall not apply to interpretations of this Agreement on behalf of the Unions.

**Section 4.** The functions, decisions, rulings and any directives that may be promulgated by the Labor Relations Coordinator, or LMC under this Agreement are exclusive to this Project(s) and shall not apply to other area projects.

**Section 5.** The Committee shall include the Labor Relation Coordinator, President of Council, 1 Officer from Council, a representative from the Construction Manager and a representative from the Owner.

## **ARTICLE 9 – GRIEVANCE & ARBITRATION PROCEDURE**

### **Section 1. Procedure for Resolution of Grievances**

Any question, dispute or claim arising out of, or involving the interpretation or application of this Agreement (other than jurisdictional disputes or alleged violation of Article 7, Section 1) shall be considered a grievance and shall be resolved pursuant to the exclusive procedures of the steps described below; provided, in all cases, that the question, dispute or claim arose during the term of this Agreement.

**Step 1:**

- a. When any party covered by this Agreement feels aggrieved by a claimed violation of this Agreement, the party shall, through the Local Union business representative, job steward or Contractor give notice of the claimed violation to the work site representative of the involved Contractor. To be timely, such notice of the grievance must be given within fourteen (14) calendar days after the act, occurrences or event giving rise to the grievance. The business representative of the Local Union, the job steward, the Party and the work site representative of the involved Contractor shall meet and endeavor to adjust the matter within forty-eight (48) hours after timely notice has been given. If they fail to resolve the matter within the prescribed period, the grieving party may, within fourteen (14) calendar days thereafter, pursue Step 2 of the grievance procedure by serving the involved Contractor and the CM or its assignee with written copies of the grievance setting forth a description of the claimed violation, the date on which the grievance occurred, and the provisions of the Agreement alleged to have been violated. Grievances and disputes settled at Step 1 are non-precedential except as to the specific Local Union, non-affiliated Party Employee and contractor directly involved unless the settlement is accepted in writing by Owner, or its designated representative as creating a precedent.
- b. Should any party to this Agreement have a dispute (excepting jurisdictional disputes or alleged violations of Article 7, Section 1) with any other party to this Agreement and, if after conferring, a settlement is not reached within fourteen (14) calendar days, the dispute shall be reduced to writing and proceed to Step 2 in the same manner as outlined in subparagraph (a) above for the adjustment of Employee grievances.

**Step 2:**

The Business Manager or designee of the involved party, together with the representatives of BCTC, the involved Contractor, and Owner, or its designated representative shall meet within seven (7) calendar days of service of the written grievance arrive at a satisfactory settlement.

**Step 3:**

- a. If the grievance shall have been submitted but not resolved in Step 2, any of the participating Step 2 entities may, within twenty-one (21) calendar days after the initial Step 2 meeting, submit the grievance in writing (copies to other participants) to J.J. Pierson or Richard Adelman Arbitrators under this procedure or such other arbitrators agreed to by the parties herein. The Labor Arbitration Rules of the American

Arbitration Association shall govern the conduct of the arbitration hearing, at which all Step 2 participants shall be parties. The decision of the arbitrator shall be final and binding on the involved Contractor, local union and employees. The fees and expenses of such arbitrations shall be paid by the losing party. Named Arbitrators shall be alternate beginning with J.J. Pierson or such other arbitrator agreed to by the parties herein.

- b. Failure of the grieving party to adhere to the time limits set forth in this Article shall render the grievance null and void. These time limits may be extended only by written consent of the parties at the particular step where the extension is agreed upon. The Arbitrator shall have authority to make decisions only on the issues presented to him

and shall not have the authority to change, add to, delete or modify any provision of this Agreement.

## **Section 2. Limitation as to Retroactivity**

No arbitration decision or award may provide retroactivity of any kind exceeding Sixty (60) calendar days prior to the date of service of the written grievance on the involved Contractor or Local Union.

## **Section 3. Participation by Owner or its Designated Representative**

Construction Manager shall be notified by the involved parties of all actions at Steps 2 and 3 and, at its election, may participate in full in all proceedings at these steps, including Step 3 arbitration.

# **ARTICLE 10 – JURISDICTIONAL DISPUTES**

## **Section 1. No Disruptions**

- a. There will be no strikes, sympathy strikes, work stoppages, slowdowns, picketing or other disruptive activity of any kind arising out of any jurisdictional dispute. Pending the resolution of the dispute, the work shall continue uninterrupted. No jurisdictional dispute shall excuse a violation of Article 7.
- b. No jurisdiction dispute shall affect coordination of the various contractors at the Project or the progress of the Project.
- c. The Signatories to this agreement adhere to the principle that jurisdictional disputes cannot and shall not interfere with the project.
- d. Every effort will be made by the Employer to resolve all anticipated disputes over work assignments. These efforts will include pre-job conferences, jurisdictional mark-up meetings and similar such conferences. Pre-job conferences must be held by each Employer prior to the field work actually starting. The Construction Manager is recognized as a party of interest in the resolution of any and all jurisdictional disputes and their Labor Relations Manager will be notified of all meetings and may attend and participate. Resolution of jurisdictional disputes will not include any "over manning" or the requirement to assign employees to any work functions other than the number that may be required to safely execute the work. No back pay or any other monetary penalty shall be assessed against any Employer in the resolution of jurisdictional disputes.

## **Section 2. Assignment**

The assignment of work will be solely the responsibility of the Contractor performing the work involved; and such work assignments will be in accordance with the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry (the "Plan") and where there are Memorandums or Agreements in place between the unions they shall apply without dispute.

### **Section 3. Procedure for Settlement of Disputes**

- a. Any Union having a jurisdictional dispute with respect to Project work assigned to another Union will submit the dispute in writing to the Administrator, Plan for the settlement of Jurisdictional Disputes in the Construction Industry within seventy-two (72) hours and send a copy of the letter to the other Contractor involved, and the Local Union involved. Upon receipt of a dispute letter from any Local Union, the Administrator will invoke the procedures set forth in the Plan to resolve the jurisdictional dispute. The jurisdictional dispute letter shall contain the information described in Article IV of the Plan.
- b. Any Contractor involved in a jurisdictional dispute on this Project shall continue working and without disruption of any kind.

### **Section 4. Limitations**

The Jurisdictional Dispute Arbitrator shall have no authority to assign work to a double crew, that is, to more employees than the minimum required by the Contractor to perform the work involved; nor to assign the work to employees who are not qualified to perform the work. This does not prohibit the establishment, with the Agreement of the involved Contractor, of composite crews where more than one employee is needed for the job. The aforesaid determinations shall decide only to whom the disputed work belongs.

### **Section 5. No Interference with Work**

There shall be no interference or interruption of any kind with the work of the Project while any jurisdictional dispute is being resolved. The work shall proceed as assigned by the Contractor until finally resolved under the applicable procedure of this Article. The award shall be confirmed in writing to the involved parties. There shall be no strike, work stoppage or interruption in protest of any such award.

## **ARTICLE 11 – HOURS OF WORK, PREMIUM PAYMENTS, SHIFTS & HOLIDAYS**

### **Section 1. Work Week and Work Day**

- a. The standard work week shall consist of forty (40) hours or work at straight time rates either a five (5) day work week Monday – Friday; eight (8) Hours per day, plus one half (1/2) hour unpaid lunch period each day, or a four (4) day work week Monday – Thursday; ten (10) hours per day, plus one half (1/2) hour unpaid lunch period each day. When on a 4-day 10 hour per day work week, Friday shall be used as a makeup and when 5-day 8 hour per day work week, Saturday shall be used as a make-up day to fulfill the forty (40) hour work week. Make up days shall be worked a minimal four (4) hours when on 5 (8's) or five (5) hours when on 4 (10's). No employee shall be disciplined for refusing to work the Saturday make up day.
- b. The Day Shift shall commence between the hours of 6:00 a.m. and 4:30 p.m. Starting and quitting times shall occur at the staging areas designated by the Contractor. Other shifts shall similarly commence and end at uniform times agreed upon by the Contractor and Union. Sub-contractor starting times maybe different then the

established starting time of the general contractor or construction manager but start no earlier than 6:00 am or later than 8:00 am.

- c. Notice – Contractors shall provide not less than seven (7) days prior notice to the Unions as to the workweek and work hour schedules to be worked or such lesser notice as may be mutually agreed upon.

## **Section 2. Overtime**

Overtime pay for hours outside of the standard work week and workday, described in Section 1, paragraph (a) above, shall be paid at time and a half, Saturdays shall be at time and a half and Sundays shall be at double time unless Schedule A requirement is less. There will be no restriction upon the Contractor's scheduling or overtime or the non-discriminatory designation of employees who shall be worked. The Contractor shall have the right to schedule work so as to minimize overtime.

## **Section 3. Starting Times and Shifts**

- a. There shall be a uniform start time for all Contractors and employees or each shift in accordance with Section 1 above.
- b. Flexible Schedules – To the extent that they do not have a cost impact on the Project, scheduling of shift work may remain flexible in order to meet Project schedules and existing Project conditions. Shifts must be worked with a minimum of five (5) consecutive workdays and must be scheduled with the involved unions with not less than three (3) workdays notice to the party. Regularly scheduled shifts will not be paid at overtime rate, but rather at a fixed percentage increase of fifty percent (50%) of the Schedule A shift differentials. For example: when Schedule A shift work is 20%, a 10% shift premium shall apply.
- c. Flexible Starting Times – Shift starting times will be adjusted by the Contractor as necessary to fulfill Project requirements subject to the notice requirements of paragraph (b).
- d. Shift work may be scheduled on either a five (5) day (5-8 hrs.) or four (4) day (4-10 hrs.) work week basis.

## **Section 4. Holidays**

- a. Schedule – There shall be eight recognized holidays on the Project:

|                |                  |
|----------------|------------------|
| New Year's Day | Labor Day        |
| Presidents Day | Veteran's Day    |
| Memorial Day   | Thanksgiving Day |
| Fourth of July | Christmas Day    |

All holidays shall be observed on the dates designated by Law. In the absence of such designation, they shall be observed on the calendar date except those holidays which occur on Saturday shall be observed on Friday and those holidays which occur on Sunday shall be observed on the following Monday.

- b. Payment – Regular holiday pay, if any, and/or premium pay for the work performed on such a recognized holiday shall be in accordance with the applicable Collective Bargaining Agreement. (Schedule A) but not to exceed double pay or straight time benefits regardless of Schedule A.
- c. Exclusivity – No holidays other than those listed in Section 4 – (a) above shall be recognized or observed.

#### **Section 5. Reporting Pay**

- a. Employees who report to the work location pursuant to regular schedule and who are not provided with work or whose work is terminated early by a Contractor, for whatever reason shall receive two (2) hours pay and benefits if not provided work or no work has started, four (4) hours pay and benefits if work starts and paid for actual hours worked including benefits for hours thereafter the fourth hour when on a five (5) day, eight (8) hour work week. When on a four (4) day, ten (10) hour per day work week, two and a half (2 ½), five (5) and actual hours worked after five (5) shall apply.
- b. When an employee who has completed a schedule shift and left the Project site is “called-out” to perform special work of a casual, incidental or irregular nature, the Employee shall receive pay for actual hours worked with a minimum guarantee as may be required by the applicable Collective Bargaining Agreement. (Schedule A).
- c. When an employee leaves the job or work location of his own volition or is discharged for cause or is not working as a result of the Contractor’s invocation of Section 7 below, he shall be paid only for the actual time worked.
- d. There shall be no pay for time not actually worked except as specifically set forth in this Article or as specifically provided in a Schedule A.

#### **Section 6. Payment Wages**

- a. Payday – Payment shall be made by check, drawn on a New York bank with branches located within commuting distance of the job site. Paychecks shall be issued by the Contractor at the job site by 10 a.m. on Thursdays. In the event that the following Friday is a bank holiday, paychecks shall be issued on Wednesday of that week. Not more than three days wages shall be held back in any period. Paycheck stubs shall contain the name and business address of the Contractor, together with an itemization of deductions from gross wages.
- b. Termination – Employees who are laid off or discharged for cause shall be paid in full for that which is due them at the time of termination. The Contractor shall also provide the employee with a written statement setting forth the date of lay off or discharge.

- c. Wages and Benefits shall be paid as per applicable schedule A unless modified in this agreement.

### **Section 7. Emergency Work Suspension**

A Contractor may, if considered necessary for the protection of life and/or safety of employees or others, suspend all or a portion of Project work. In such instances, employees will be paid for actual time worked; provided, however, that when a Contractor requests that employees remain at the job site available for work, employees will be paid for "stand-by" time at their hourly rate of pay, by the applicable Schedule A.

### **Section 8. Injury/Disability**

An employee, who, after commencing work, suffers a work-related injury or disability while performing work duties, shall receive no less than eight (8) Hours wages for that day. Further, the employee shall be rehired at such time as said employee is able to return to duties provided there is still work available on the Project for which the employee is qualified and able to perform.

### **Section 9. Time Keeping**

A Contractor may utilize brassing or other systems to check employees in and out. Each employee must check in and out. The Contractor will provide adequate facilities for checking in and out in an expeditious manner.

### **Section 10. Meal Period**

Employees shall have meal period of not more than one half (1/2) hour duration at the work location between the third and fifth hour of the scheduled shift. A Contractor may, for efficiency of operation, establish a schedule which coordinates the meal periods of two or more crafts. If an employee is required to work through the meal period, the employee shall be compensated in a manner established in the applicable Schedule A.

### **Section 11. Break Periods**

There will be one (1) ten (10) minute coffee break two (2) hours after the commencement of the workday. Afternoon break shall be as Schedule A. Lunch break shall be for (30) thirty minutes commencing approximately (4) hours after the start of the established workday. Coffee may be consumed at the employee's place of work as time permits.

## **ARTICLE 12 – APPRENTICES**

### **Section 1. Ratios**

Recognizing the need to maintain continuing supportive programs designed to develop adequate numbers of competent workers in the construction industry and to provide craft entry opportunities for minorities, women and economically disadvantaged non-minority males, Contractors will employ apprentices in their respective crafts to perform such work as is within their capabilities and which is customarily performed by the craft in which they are indentured. Contractors may utilize apprentices in a ratio not to exceed 25% of his work force by craft unless higher apprentice ratio is set forth in Schedule A in which it shall apply.

### **Section 2. Department of Labor**

To assist the Contractors in attaining a maximum effort on this Project, the parties agree to work in close cooperation with, and accept monitoring by the New York State Department of Labor to ensure that minorities and women from the Town of Newburgh and vicinity are afforded every opportunity to participate in apprenticeship programs which result in the placement of apprentices on this Project. The Local unions will cooperate with Contractor requests for minority, women or economically disadvantaged referrals to meet this Contractor effort and/or as provided in the Collective Bargaining Agreement. Effort shall be made to employ pre apprentices who are in a council affiliated program.

## **ARTICLE 13 – SAFETY AND PROTECTION OF PERSON AND PROPERTY**

### **Section 1. Safety Requirements**

Each Contractor will ensure that applicable OSHA requirements are at all times maintained on the Project. Employees of the Contractors must perform their work at all times in a safe manner and protect themselves and the property of the Contractor and Owner from injury or harm. Failure to do so will be grounds for discipline, including discharge.

### **Section 2. Inspections**

Owner retains the right to inspect incoming shipments of equipment, apparatus, machinery and construction materials of every kind.

## **ARTICLE 14 – Miscellaneous Provisions**

### **Section 1. Project Rules**

The Construction Manager or General Contractor shall establish such reasonable Project rules as are appropriate for the good order of the Project. These rules will be explained at the pre-job conference and posted at the Project site and may be amended thereafter as necessary. Failure of an employee of a Contractor to observe these rules and regulations shall be grounds for discipline, including discharge. The fact that no order was posted prohibiting a certain type of misconduct shall not be a defense to an employee disciplined or discharged for such misconduct when the action taken is for cause. Unless our project work rules violate the CBA or applicable law, the Owner, General Contractor or both shall have sole discretion over establishing rules onsite.

## **Section 2. Tools of the Trade**

The welding/cutting torch and chain fall are tools of the trade having jurisdiction over the work performed. Employees using these tools shall perform any of the work of the trade. There shall be no restrictions on the emergency use of any tools or equipment for the performance of work within the employee's jurisdiction.

## **Section 3. Supervision**

Employees shall work under the supervision of the craft foreperson or general foreperson.

## **Section 4. Travel Allowance**

There shall be no payment for travel expenses, travel time, subsistence allowance or other such reimbursements or special pay except as expressly set forth in this Agreement.

## **Section 5. Full Workday**

- a. Employees shall be at their staging area at the time established by the Contractor and shall be returned to their staging area by quitting time after performing their assigned functions under the supervision of the Contractor. The parties reaffirm their policy of a fair day's work for a fair day's wage.
- b. There shall be no non-working employees at the Project (e.g., employees whose only work consists of watching equipment, etc.,).

## **Section 6. Cooperation**

The parties will cooperate in seeking any New York State Department of Labor approvals that may be required for implementation of any terms of this Agreement.

## **Section 7. Veterans**

The employees and the Unions recognize a desire to facilitate the entry into the building and construction trades of veterans who are interested in careers in the building and construction industry. The Unions and the County and the Contractors agree to coordinate and maintain an integrated list of veterans from the County interested in working on the Project through the "Helmets to Hardhats" program and, to the extent permitted by law, the Unions will give credit to such veterans for bona fide, provable past experience.

# **ARTICLE 15 – FUTURE CHANGES IN COLLECTIVE BARGAINING AGREEMENT**

## **Section 1. Changes**

- a. Schedule A to this Agreement shall continue in full force and effect until the applicable Contractor and/or Union parties to the Schedule A CBAs notifies the Construction Manager/General Manager in writing of the mutually agreed upon changes in provisions of such Agreements which are applicable to the Project, and their effective dates.

- b. It is agreed that any work rule provisions negotiated into future Collective Bargaining Agreements will not apply to work on this Project if such provisions are less favorable to this Project than those contained in the expiring Collective Bargaining Agreements as they pertain to work rules; nor shall any provision be recognized or apply on this Project if it may be construed to apply exclusively, or predominantly, to work covered by this Agreement.
- c. Any disagreement over the incorporation into Collective Bargaining Agreements of provisions agreed upon in the re-negotiation of Area Collective Bargaining Agreement shall be resolved in accordance with the procedure set forth in this Agreement.

## **Section 2. Labor Disputes During Negotiation of Collective Bargaining Agreements**

The parties agree that there will be no strikes, work stoppages, sympathy actions, picketing, slowdown or other disruptive activity or other violations of this Agreement affecting the Project by any parties involved in the re-negotiation of Collective Bargaining Agreements nor shall there be any lockout on this Project affecting any party during the course of such re-negotiations.

## **ARTICLE 16 – SAVINGS AND SEPARABILITY**

### **Section 1. This Agreement**

In the event that the application of any provision of this Agreement is enjoined, on either an interlocutory or permanent basis, or otherwise found in violation of any law, the provision involved shall be rendered, temporarily or permanently, null and void but the remainder of this Agreement shall remain in full force and effect. In such event, this Agreement shall remain in effect for contracts already bid, awarded or in construction. The parties will enter into negotiations for a substitute provision in conformity with the law and the intent of the parties for contracts to be awarded in the future.

### **Section 2. The Bid Specifications**

In the event that Owner's bid specifications, or other action, requiring that a successful bidder be bound by this Agreement is enjoined, on either an interlocutory or permanent basis, or otherwise found in violation of law, such requirement shall be rendered, temporarily or permanently, null and void but this Agreement shall remain in full force and effect to the extent allowed by law. In such event, the Agreement shall remain in effect for contracts already bid, awarded or in construction. The parties will enter into negotiations as to modifications to the Agreement to reflect the court action taken and in the intent of the parties for contracts to be awarded in the future.

### **Section 3. Non – Liability**

In the event of an occurrence referenced in Section 1 or Section 2 of this Article 16, neither Owner nor any Contractor nor any Local Union shall be liable, directly or indirectly, for any action taken, or not taken, to comply with any court order, injunction or determination. Project bid specifications will be issued in conformance with court orders then in effect and

no retroactive payments or other action will be required if the original court determination is ultimately reversed.

## **ARTICLE 17 – PROJECT SPECIFIC**

### **Section 1. Workers Compensations ADR**

At the written option of the CM or Owner and with the written approval of the Hudson Valley Building and Construction Trades Council, all Local Unions, Contractors (including sub-contractors) working on this project agree to be bound by the Collectively Bargained Workers Compensation Alternative Dispute Resolution (ADR Agreement) and to the ADR program set forth therein, by and between the Construction Industry Council of Westchester and the Hudson Valley, Inc. and the Building and Construction Trades Council of Westchester and Putnam County, New York in which the "Council" is approved to participate in as amended.

### **Section 2. Cleanup/Housekeeping**

All cleanup during construction shall be performed by the trade having jurisdiction for cleanup. The general contractor is responsible for overall cleanup on the Project, the Owner will ensure a clean and safe workplace. The Owner or General Contractor may back charge contractors accordingly if clean up becomes unsatisfactory.

Once construction is complete and a building, section or floor is turned over for final cleaning to a professional cleaning company for final cleaning including windows and floor prep, up to 33% of the employees may be a direct employee of the cleaning company. Those direct employees shall be exempt from this Agreement.

### **Section 3. FFE**

Work related to furniture, fixtures and equipment that is free standing and requires no onsite assembly and is not fastened, mounted or anchored to any surface by glue, screws, nails, mechanical fastener or by other means in throughout the project is excluded. Accordingly, for the avoidance of doubt, all unloading, handling, assembly, installation and cleanup of all furniture, fixtures and equipment which requires fastening with but not limited to nails, screws, nuts, bolts, staples, anchors, wire or adhesive or requires any on site or designated off site assembly shall be included work under this agreement.

### **Section 5. Construction Manager**

Throughout this agreement where the term Construction Manager is used and there is no Construction Manager used it shall refer to the General Contractor. Owner reserves the right to retain a Construction Manager at any time during either Phase I or Phase II of the Project. In such case, the parties will be notified accordingly.

### **Section 6. Schedule A – CBA's**

Throughout this agreement the term Schedule A refers to the collective bargaining agreements as those local unions having jurisdiction on the project and signatory to this agreement.

**Schedule A – CBA's**

New Windsor NY 12553

**Re: Environmental Hazardous Materials Survey  
Demolition of Existing Firehouse: Asbestos, Lead and PCB in Sealant Survey  
872 Blooming Grove Turnpike  
New Windsor, NY 12553  
H2M Job No. VGFD2001**

Dear Mr. Lucchesi:

In accordance with your request, H2M architects + engineers (H2M) conducted an asbestos (ACM), lead based/containing paint (LBP/LCP), and polychlorinated biphenyls (PCB) inn sealant inspection at the above-referenced building which is scheduled for full demolition. It is our understanding that the buildings making up this structure were constructed during 4 separate building years. Original building in 1958 and new wing besides the boiler room, 2<sup>nd</sup> Floor Addition building in mid-1970's, Apparatus building in 1982 and New Sheds structures. There is no basement at this firehouse.

Since there are several distinct building sections with different construction dates, each section was sampled and grouped independently to precisely quantify any asbestos findings to that section and material homogeneity, rather than to generalize the whole space. H2M also conducted brick probes at various sections of the buildings with no suspect materials found between the brick wythe layers. Furthermore, bathroom floors were also inspected to rule out or test any vapor barriers that may be present.

### **Asbestos Sampling**

On April 21<sup>st</sup>, May 4<sup>th</sup>, and May 7<sup>th</sup> of 2021, H2M collected limited bulk samples of suspect asbestos containing materials (ACM) that were located at the above-mentioned property and are scheduled to be disturbed during the upcoming project. The materials sampled included various surfacing, miscellaneous, and thermal system insulation. Bulk samples were submitted to EMSL Analytical, Inc. (EMSL) of Carle Place, New York and AmeriSci Group (AmeriSci) of Manhattan, New York. EMSL is certified by the New York State Department of Health (NYSDOH), Environmental Laboratory Approval Program (ELAP), No. 11469. AmeriSci is certified by the New York State Department of Health (NYSDOH), Environmental Laboratory Approval Program (ELAP), No. 11480. Bulk samples were collected and submitted by New York State Department of Labor (NYS DOL) certified inspectors Mr. Frank J. Acciarito (NYSDOL Cert. No. 18-63276) and Mr. Douglas B. Milne (NYSDOL Cert. No. 13-14307).

### **Asbestos Results**

According to the federal Asbestos Hazard Emergency Response Act NESHAP (AHERA), the Occupational Safety and Health Administration (OSHA 1926.1101) and the NYSDOL (12 NYCRR Part 56); asbestos containing material (ACM) is defined as any material or product which contains greater than one percent (1%) of asbestos.

### **Lead Based Paint Sampling**

On April 21<sup>st</sup>, May 4<sup>th</sup>, and May 7<sup>th</sup> of 2021, H2M collected paint chip samples of suspect lead-based paint from painted surfaces of the Firehouse located at 872 Blooming Grove Turnpike, New Windsor, NY 12553. Sampling was performed by a US EPA Certified Lead Based Paint Risk Assessor, Mr. Frank J. Acciarito (LBP-R-I220104-1).

Paint Chip samples were submitted to EMSL Analytical, Inc. (EMSL) of Carle Place, New York. EMSL is certified by the New York State Department of Health (NYSDOH), Environmental Laboratory Approval Program (ELAP), No. 11469 and EPA 7000B, AAS.

### **Lead Based Paint Results**

According to the U.S. Environmental Protection Agency (US EPA) lead based paint is defined as paint containing equal to or more than 0.5% lead by weight in paint chip samples. Work practices shall comply with the related lead OSHA guidelines when impacting Lead Containing materials (LCM).

| <b>Table Notes:</b><br>1. Lead Based Paint (LBP) in Bold = EPA defined LBP or lead concentration equal to or above 0.5% by weight.<br>2. Lab detection reporting limit is 0.008%<br>* - Lead sample concentration above lab detection limit but below EPA threshold for LBP, refer to OSHA 29 CFR 1926.62 for training and handling guidance of Lead Containing Materials (LCM) or incidentally impacted Lead Based Paint (LBP) during construction. Contractor must hold awareness training and reference OSHA 29 CFR 1926.62 and 29 CFR 1910 in working with LCM including but not limited to wet methods, proper housekeeping, PPE and disposal. |                 |           |       |             |                |

### **Polychlorinated Biphenyls (PCB) in Sealant Sampling**

On April 21<sup>st</sup>, May 4<sup>th</sup>, and May 7<sup>th</sup> of 2021, H2M collected samples of suspect polychlorinated biphenyls (PCB) laden sealants caulks and putty from various surfaces of the windows, doors, brick and patio. Sampling was performed by Mr. Douglas B. Milne & Mr. Frank J. Acciarito.

Bulk samples were submitted to EMSL Analytical, Inc. (EMSL) of Carle Place, New York. EMSL is certified by the New York State Department of Health (NYSDOH), Environmental Laboratory Approval Program (ELAP), No. 11469 and EPA SW 846 3540C/8082A.

### **Polychlorinated Biphenyls (PCB) Results & Recommendations**

According to the U.S. Environmental Protection Agency (US EPA) EPA TSCA 40 CFR Part 761, samples of suspect PCB is defined as "hazardous" when sample is containing equal to or more than 50 PPM total PCB compound concentration. Proper handling, transportation, and disposal methods are required when a material contains PCB compound concentration of equal to or more than 50 PPM.

Universal Waste, E-waste, and light fixtures potentially containing PCB ballasts; Thermostats and bulbs that may contain mercury; shall be properly disposed of in accordance with local and state regulations.

H2M surveyed visible and accessible materials during this survey without destructive exploratory means along interiors. H2M certifies that the information contained herein is based on the physical data and visual inspections conducted by H2M and lab data collected during the inspection survey. All findings stated in this report are based upon facts and circumstances as they existed at the time of inspection and at the time that this report was prepared. A change in any of the site conditions, facts or circumstances upon which this report is based may affect the findings expressed in this report.

If you have any questions, please do not hesitate to contact Mr. Anthony Spantidakis at (631) 756-8000 extension 1637.

The following analytical report covers the analysis performed on samples submitted to EMSL Analytical, Inc. on 4/23/2021. The results are tabulated on the attached data pages for the following client designated project:

**872 Blooming Grove Tpke, New Windsor, NY**

The reference number for these samples is EMSL Order #012104148. Please use this reference when calling about these samples. If you have any questions, please do not hesitate to contact me at (856) 303-2500.

Approved By:

Phillip Worby, Environmental Chemistry  
Laboratory Director

The test results contained within this report meet the requirements of NELAP and/or the specific certification program that is applicable, unless otherwise noted.

NELAP Certifications: NJ 03036, NY 10872, PA 68-00367, CA ELAP 1877

The samples associated with this report were received in good condition unless otherwise noted. This report relates only to those items tested as received by the laboratory. The QC data associated with the sample results meet the recovery and precision requirements established by the NELAP, unless specifically indicated. All results for soil samples are reported on a dry weight basis, unless otherwise noted. This report may not be reproduced except in full and without written approval by EMSL Analytical, Inc.

**Definitions:**

MDL - method detection limit

J - Result was below the reporting limit, but at or above the MDL

ND - indicates that the analyte was not detected at the reporting limit

RL - Reporting Limit (Analytical)

D - Dilution Sample required a dilution which was used to calculate final results

#### Samples reviewed and approved by:

Daniel Clarke, Asbestos Laboratory Manager  
or Other Approved Signatory

NOB = Non Friable Organically Bound N/A = Not Applicable VCM = Vermiculite Containing Material

-In New York State, TEM is currently the only method that can be used to determine if NOB materials can be considered or treated as non-asbestos containing.

All samples examined for the presence of vermiculite when analyzed via NYS 198.1.

-NYS Guidelines for Vermiculite containing samples are available at [http://www.wadsworth.org/labcert/elapcert/forms/VermiculiteInterimGuidance\\_Rev070913.pdf](http://www.wadsworth.org/labcert/elapcert/forms/VermiculiteInterimGuidance_Rev070913.pdf) EMSL maintains liability limited to cost of analysis. This report relates only to the samples reported above and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. Samples were received in good condition unless otherwise noted.

This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the federal government. This report may contain data that is not covered by the NVLAP accreditation.

Samples analyzed by EMSL Analytical, Inc. Carle Place, NY NYS ELAP 11469, NVLAP Lab Code 101048-10

EMSL maintains liability limited to cost of analysis. Interpretation and use of test results are the responsibility of the client. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. The report reflects the samples as received. Results are generated from the field sampling data (sampling volumes and areas, locations, etc.) provided by the client on the Chain of Custody. Samples are within quality control criteria and met method specifications unless otherwise noted.

Analysis following Lead in Paint by EMSL SOP/Determination of Environmental Lead by FLAA. Reporting limit is 0.008% wt based on the minimum sample weight per our SOP. "<" (less than) result signifies the analyte was not detected at or above the reporting limit. Measurement of uncertainty is available upon request. Definitions of modifications are available upon request.

Samples analyzed by EMSL Analytical, Inc. Carle Place, NY Lab ID 102344 is accredited by AIHA LAP, LLC in the env. accreditation program for Lead in Paint, CT PH-0249, NYS ELAP 11469, CA 2339

EMSL maintains liability limited to cost of analysis. Interpretation and use of test results are the responsibility of the client. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. The report reflects the samples as received. Results are generated from the field sampling data (sampling volumes and areas, locations, etc.) provided by the client on the Chain of Custody. Samples are within quality control criteria and met method specifications unless otherwise noted.

Analysis following Lead in Paint by EMSL SOP/Determination of Environmental Lead by FLAA. Reporting limit is 0.008% wt based on the minimum sample weight per our SOP. "<" (less than) result signifies the analyte was not detected at or above the reporting limit. Measurement of uncertainty is available upon request. Definitions of modifications are available upon request.

Samples analyzed by EMSL Analytical, Inc. Carle Place, NY Lab ID 102344 is accredited by AIHA LAP, LLC in the env. accreditation program for Lead in Paint, CT PH-0249, NYS ELAP 11469, CA 2339

### Reporting Notes:

(1) Sample prepared for analysis by ELAP 198.6 method

Analyzed by: Jared C. Clarke  
Date: 5/11/2021

Reviewed by: Gabriella Morozov

\*NAD/NSD =no asbestos detected; NA =not analyzed; NA/PS=not analyzed/positive stop, (SOF-V) = Sprayed On Fireproofing containing Vermiculite; (SM-V) = Surfacing Material containing Vermiculite; PLM Bulk Asbestos Analysis using Motic, Model BA310 Pol Scope, Microscope, Serial #: 1190000326, by Appd E to Subpt E, 40 CFR 763 quantified by either CVES or 400 pt ct as noted for each analysis (NVLAP 200546-0), ELAP PLM Method 198.1 for NY friable samples, which includes the identification and quantitation of vermiculite, or ELAP 198.6 for NOB samples, or EPA 400 pt ct by EPA 600-M4-82-020 (NY ELAP Lab 11480); Note:PLM is not consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials. NAD or Trace results by PLM are inconclusive, TEM is currently the only method that can be used to determine if this material can be considered or treated as non asbestos-containing in NY State (also see EPA Advisory for floor tile, FR 59,146,38970,8/1/94) National Institute of Standards and Technology Accreditation requirements mandate that this report must not be reproduced except in full without the approval of the lab.This PLM report relates ONLY to the items tested. AIHA-LAP, LLC Lab ID 102843, RI Cert AAL-094, CT Cert PH-0186, Mass Cert AA000054, NJ Lab ID #NY031.

\*\*Quantitative Analysis (Semi/Full); Bulk Asbestos Analysis - PLM by Appd E to Subpt E, 40 CFR 763 or NYSDOH ELAP 198.1 for New York friable samples or NYSDOH ELAP 198.6 for New York NOB samples; TEM (Semi/Full) by EPA 600/R-93/116 (or NYSDOH ELAP 198.4; for New York samples). Analysis using Hitachi, Model H7000-Noran 7 System, Microscope, Serial #: 747-05-06. NAD = no asbestos detected during a quantitative analysis; NA = not analyzed; Trace = <1%; (SOF-V) = Sprayed On Fireproofing containing Vermiculite; (SM-V) = Surfacing Material containing Vermiculite; Quantitation for beginning weights of <0.1 grams should be considered as qualitative only; Qualitative Analysis: Asbestos analysis results of "Present" or "NVA = No Visible Asbestos" represents results for Qualitative PLM or TEM Analysis only (no accreditation coverage available from any regulatory agency for qualitative analyses): NVLAP (PLM) 200546-0, NYSDOH ELAP Lab 11480, AIHA-LAP, LLC (PLM) Lab ID 102843, NJ Lab ID #NY031.

Warning Note: PLM limitation, only TEM will resolve fibers <0.25 micrometers in diameter. TEM bulk analysis is representative of the fine grained matrix material and may not be representative of non-uniformly dispersed debris for which PLM evaluation is recommended (i.e. soils and other heterogenous materials).

4th Floor East  
538 Broad Hollow Road  
Melville, NY 11747

FILE NUMBER: 00-0724  
LICENSE NUMBER: 28582  
LICENSE CLASS: RESTRICTED  
DATE OF ISSUE: 12/11/2020  
EXPIRATION DATE: 12/31/2021

Duly Authorized Representative – Debra Mattina:

This license has been issued in accordance with applicable provisions of Article 30 of the Labor Law of New York State and of the New York State Codes, Rules and Regulations (12 NYCRR Part 56). It is subject to suspension or revocation for a (1) serious violation of state, federal or local laws with regard to the conduct of an asbestos project, or (2) demonstrated lack of responsibility in the conduct of any job involving asbestos or asbestos material.

This license is valid only for the contractor named above and this license or a photocopy must be prominently displayed at the asbestos project worksite. This license verifies that all persons employed by the licensee on an asbestos project in New York State have been issued an Asbestos Certificate, appropriate for the type of work they perform, by the New York State Department of Labor.

MR. PAUL J. MUCHA  
AMERICA SCIENCE TEAM NEW YORK, INC  
117 EAST 30TH ST  
NEW YORK, NY 10016

Certificate Expiration Date:  
April 01, 2022

Dear Mr. Mucha,

Enclosed are certificate(s) of approval issued to your environmental laboratory for the current permit year. The certificate(s) supersede(s) any previously issued one(s) and is(are) in effect through the expiration date listed. Please carefully examine the certificate(s) to insure that the categories, subcategories, analytes, and methods for which your laboratory is approved are correct. In addition, verify that your laboratory's name, address, lead technical director, and identification number are accurate.

Pursuant to NYCRR Subpart 55-2.2, original certificates must be posted conspicuously in the laboratory and copies shall be made available to any client of the laboratory upon request.

Pursuant to NYCRR Subpart 55-2.6, any misrepresentation of the fields of accreditation (category - method - analyte) for which your laboratory is approved may result in denial, suspension, or revocation of your certification. Any use of the Environmental Laboratory Approval Program (ELAP) or National Environmental Laboratory Accreditation Program (NELAP) name, reference to the laboratory's approval status, and/or using the NELAP logo in any catalogs, advertising, business solicitations, proposals, quotations, laboratory analytical reports, or other materials must include the laboratory's ELAP identification number and distinguish between testing for which the laboratory is approved and testing for which the laboratory is not approved.

If you have any questions, please contact us at the Environmental Laboratory Approval Program, Wadsworth Center, New York State Department of Health, Empire State Plaza, Albany NY, 12237; by phone at (518) 485-5570; by facsimile at (518) 485-5568; and by email at [elap@health.ny.gov](mailto:elap@health.ny.gov).

Sincerely,

Victoria Pretti
